RP312

INDEX

AASHEIM, Torbjörn : Effect of Stereoisomeric Tartrates on Root Elongation in *Lepidium*, 922
Abatement : Smoke, 741
Abbatt, John D., and others (edited by) : Advances in Radiobiology—Proceedings of the Fifth International Conference on Radiobiology held in Stockholm, 1956, *review* by Dr. O. A. Trowell, 660
Abel, Dr. Emil : *Obituary* by Dr. H. Tompa, 1765
Abel, Niels Henrik—Mathematician Extraordinary (Prof. Oystein Ore), *review* by Dr. Graham Higman, 1365
Abercrombie, Michael : Elected a Fellow of the Royal Society, 881
Aberrant Recombination at the *am* Locus in *Neurospora crassa* (J. A. Pateman), 1605
Aberration Formula : Relativistic (Dr. J. H. M.Whiteman), 560
Ability of Rat Liver Microsomes in a Cell-free System to incorporate Radioactive Amino-Acids into their Proteins : Effect of Hypophysectomy on the (Dr. A. Korner), 422
Ablett Prizes for 1957 of the Iron and Steel Institute awarded to C. E. H. Morris and R. N. Dale, 885
Abnormal Haemoglobins in 92 Maoris : Absence of the Diego Blood Group and (Dr. H. Lehmann, Dr. A. North and Dr. J. M. Staveley), 791
Abnormal Haemoglobins in some Groups of the Papua Population of Dutch New Guinea : Absence of (Prof. J. H. P. Jonxis, Dr. T. H. J. Huisman, G. J. da Costa and D. Metselaar), 1279
Abnormal Polarization of the Atmospheric Pulses reflected successively from the Ionosphere (Prof. S. R. Khastgir), 404
Abnormal Type of Lymphocyte (Dr. B. Brausil), 846
Abnormality (Enzymatic), in Erythrocytes of a Population sensitive to *Vicia faba* or Haemolytic Anaemia induced by Drugs (Dr. A. Szeinberg, Dr. Ch. Sheba and A. Adam), 1256
Abnormally Low Supercooling and Freezing Points in an Insect, *Bracon cephi* (Gahan) : Role of Glycerol in producing (R.W. Salt), 1281
Aborted Bovine Foetus : Isolation of *Salmonella infantis* from an (Dr. J. Mortelmans, C. Huygelen and F. Pinckers), 1539
Aboul-Ela, Dr. I. A. : Effects of Ultra-Violet Radiation on Oysters, 1013
Abraham, Dr. E. P. : Elected a Fellow of the Royal Society, 881
Abraham, K. C. (Schechtman, Prof. A. M., and) : Passage of Serum Albumins from the Mother to the Foetus, 120
Abramson, Dr. H. A. (edited by) : Neuropharmacology—Transactions of the Third Conference, 1956, Princeton, *review* by Dr. B. G. Ansell, 1430
Abramson, Dr. H. A., and others : Comparison of Effect of Lysergic Acid Diethylamide with Potassium Cyanide and other Respiratory Inhibitors on the Siamese Fighting Fish, 1136
Abrasion of the Insect Cuticle by Aqueous Suspensions of Small Particles (Prof. V. B.Wigglesworth), 779
Absence of Abnormal Haemoglobins in some Groups of the Papua Population of Dutch New Guinea (Prof. J. H. P. Jonxis, Dr. T. H. J. Huisman. G. J. da Costa and D. Metselaar), 1279
Absence of γ-Aminobutyric Acid from Brain Extracts containing Factor I (Dr. H. McLennan), 1807
Absence of the Diego Blood Group and Abnormal Haemoglobins in 92 Maoris (Dr. H. Lehmann, Dr. A. North and Dr. J. M. Staveley), 791
Absences (Systematic), and the X-Ray Diagram of Cellulose (K. C. Ellis and Dr. J. O. Warwicker), 1614
Absolute Configuration of Enantiomorphic Carbanions involved in the Aldolase and Triose Phosphate Isomerase Reactions (Ben Bloom and Yale J. Topper), 1128
Absolute Configuration of α-Quartz : Determination of the (A. de Vries), 1193
Absolute Zero : Resistance Thermometry near the (J. E. Kunzler, T. H. Geballe and G.W. Hull), 1245
Absorbed (Internally) Phenol Substrates : Induction of Melanin Patterns and of Hardening as Separate Processes in the Cuticle of Albino Locusts with (Dr. B. M. Jones and W. Sinclair), 926
Absorbing Heterologous Antibodies from Precipitating Sera : A Simple Method for (Dr. Joseph Böszörményi), 1344
Absorption of Glucose by the Locust, *Schistocerca gregaria* (Forsk.) : Facilitated Diffusion and Exchange in the (J. E. Treherne), 1280
Absorption (Auroral), of 18-Mc./s. Cosmic Radio Waves on February 11, 1958 (Dr. R. Fleischer), 1156
Absorption (Infra-Red), of OH Bonds in Micas (Dr. José M. Serratosa and Dr. W. E. Bradley), 111
Absorption (Ultrasonic), in Organic Liquids : Temperature Coefficient of (Dr. S. Parthasarathy, M. Pancholy and A. F. Chhapgar), 405
Absorption and Distribution in Rats of Radioactive Phosphorus biologically incorporated in Food (B. Kawin and R. F. Palmer), 127
Absorption and Translocation of Strontium and Caesium by Plants from Foliar Sprays (L. J. Middleton), 1330
Absorption Bands : Integration of (Dr. A. E. Martin), 1195
Absorption Spectra of Molecular Complexes (R. Foster), 337
Absorption Spectra of Rare Earths in Glasses (Dr. R. C. Vickery and R. Sedlacek), 39
Absorption Spectra (Infra-red), of Casein and Lactose (K. P. Norris and J. E. S. Greenstreet), 265
Absorption Spectra (Infra-red), of Lactose and Dried Milk : Effects of Crystallinity on the (J. D. S. Goulden and Jonathan W. White, jun.), 266
Absorption Spectrum of the OBr Radical (A. P. Zeelenberg), 42
Academia Sinica, Peking : *Acta Meteorologica Sinica*, 160
Academic Mobility (Discussion on, at the Home Universities Conference), 165
Academy of Sciences of the U.S.S.R. : International Geophysical Year—Bibliographical Index of Literature in the Russian Language for 1954-1957, 1702
Acceptance Sampling : Statistical Quality Control and (Birmingham College of Technology Course on), 1703
Acceptor Aldehyde for Transketolase : Formaldehyde as an, and the Biosynthesis of Triose (Prof. F. Dickens and D. H. Williamson), 1790
Accident at Windscale No. I Pile : Radioactivity of Plant Material collected after the (G. Kimber and A. Booth), 1391
Accident (Nuclear Reactor) : Iodine-131 in Sheep before and after a (Prof. L. Van Middlesworth), 256
Accretion of Cosmic Dust on the Earth : Rate of (Prof. Hans Pettersson), 330
Accumulation of α-Alanine and of Pyruvate in Diphtherial Culture Filtrate and its relation to Iron Deficiency of Medium (Prof. Masahiko Yoneda and Hiroshi Ishihara), 272
Accumulation of Radioactive Fall-out by Plants in the English Lake District (Eville Gorham), 1523
Acetate : Synthesis of Succinate from, by an Enzyme System of Pig Heart Muscle (Dr. D. D. Davies), 339
Acetate (Deoxycorticosterone) : Effect of Aldosterone Monoacetate and, on Alkaline Phosphatase Activity in the Liver of Rats (Dr. Amiya B. Kar and R. P. Das), 623
Acetic Acid (Indolyl), in Plants : A Possible Source of Error in the Chemical Detection of (R. Nichols), 919
Acetoacetate in the Perfused Heart : Formation of Lactate from (Dr. J. H. Ottaway and A. K. Sarkar), 1791
Acetone : Action of, on the Tonic Muscle of the Frog (Dr. Adolf Zeleny and Jaroslav Kozák), 1340, *errata*, 1510
Acetone-2,4-dinitrophenylhydrazone : The Reflectance Spectrum of (Dr. Harry Zeitlin and Alice Niimoto), 1616
Acetone-killed *Brucella abortus* : Distribution of Radioiodinated, in the Tissues of Normal and Immune Mice (Dr. D. Sulitzeanu), 495
O-Acetyl Content of the Cell Wall : Development of Lysozyme-Resistance in *Micrococcus lysodiekticus* and its Association with an Increased (Dr. W. Brumfitt and Dr. A. C. Wardlaw, and Dr. J. T. Park), 1783
2-Acetylaminofluorene : Conversion of 3-Hydroxyanthranilic Acid to Quinolinic Acid in presence of Rat Liver treated with (E. Quagliariello, S. Auricchio and E. Rinaldi), 624
Acetylated Paper (Fully) : Qualitative, Quantitative and Preparative Chromatography of Steroids on (F. J. Ritter and J. Hartel), 765
Acetylation of Trypsin in Organic Solvents (Spyros Vratsanos, M. Bier and Prof. F. F. Nord), 414
Acetylcholine : Effect of, on the Membrane Resistance and Threshold of Atrial Muscle Fibres (Dr. Edward A. Johnson and P. A. Robertson), 910
  Physical Release of, from the Thoracic Nerve Cord of *Periplaneta americana* L. (E. H. Colhoun), 490
Acetylcholine in Milk (V. P. Whittaker), 856
Acetylcholinesterase : Effect of ,on the Surviving Frog Heart (Prof. A. B. L. Beznák), 1190
Acheson, R. J. D. : Awarded a Mond Nickel Fellowship for 1957, 458
Achievements : Atomic Power (General Electric Co., Ltd.), 1039
Achlya : The Genus—Morphology and Taxonomy (Terry W. Johnson, Jr.), *review* by Dr. John Ramsbottom, 1297
Achyuthan, K., and others : Periodicity in Sea Roughness and Origin of Microseisms, 646
Acid (Free), in British Soils (Eville Gorham), 106
Acid-free Bacillus isolated from the Lungs of the Cape Hyrax, *Procavia capensis* (Pallas), (J. C. Wagner, Dr. G. Buchanan, V.Bokkenheuser and Shirley Leviseur), 284
α_1-Acid Glycoprotein (Human) : Effect of, on Blood Coagulation (Inga Marie Nilsson and Ikuo Yamashina), 711
Acidic Polysaccharide elaborated by *Aerobacter aerogenes* : Structure of an (Dr. S. A. Barker, Dr. A. B. Foster, I. R. Siddiqui, Prof. M. Stacey and S. J. Pirt), 999
Acidic Polysaccharide for Wound Healing : Importance of the Synthesis of (Dr. Laurence L. Layton, Doris R. Frankel, Irving H. Sher, Sylvia Scapa and Gladys Friedler), 1543
Acidity of Sprays used in Detecting Ketohexoses in Paper Chromatograms (Dr. R. W. Bailey), 836
Ackermann, Dr. Th. : Interaction in Ionic Solutions (Heat Capacity and Infra-red Absorption Spectra of Aqueous Acid and Alkali Solutions), 241
Acoustics (Biological), Committee for : Formation of a, 742
Acquired Immunological Tolerance to Bovine Ribonuclease (Dr. B. Cinader, J. H. Pearce and B. G. Carter), 1208
Acquired Resistance to Experimental Allergic Encephalomyelitis (I. A. Svet-Moldavskaya and G. J. Svet-Moldavsky), 1536
Acquired Tolerance of Turkeys to Rous Sarcoma Agent : Nature of the Antigens responsible for the (Dr. R. J. C. Harris and P. J. Simons), 1485
Acridids : Influence of Photoperiod on Imaginal Diapause in (M. J. Norris (Mrs. O. W. Richards)), 58
Acridoidea : Australian, *review* by Dr. B. P. Uvarov, 1628
Acta Meteorologica Sinica (Academia Sinica, Peking), 160
Actinide Elements : The Chemistry of the (Joseph J. Katz and Glenn T. Seaborg), *review* by Dr. L. E. J. Roberts, 1496

Actinomycete : Isolation of a New Flavin produced by an (Orio Ciferri and Marisa P. Machado), 484
Actinophages : Mutagenic Action of (S. I. Alikhanian and T. S. Iljina), 1476
Action of Acetone on the Tonic Muscle of the Frog (Dr. Adolf Zeleny and Jaroslav Kozák), 1340, *errata*, 1510
Action of Chelates in protecting against *Clostridium perfringens* Toxin : Mode of (Prof. Merwin Moskowitz), 550
Action of Cortisone : Immediate Effect of *l*-3:5:3'-Tri-iodothyroacetic Acid on Metabolic Rate and Body Temperature in Hypophysectomized Rats and the (Prof. Sz. Donhoffer, I. Várnai and E. Szlebert-Horváth), 345
Action of Deoxyribonuclease on Lampbrush Chromosomes (Prof. H. G. Callan and H. C. Macgregor), 1479
Action of Ethylene Dibromide on Hen Gonadotrophic Hormones (Dr. Eugenia Olomucki), *erratum*, 459
Action of High-Energy Radiation on Solids (Radiation Research Visiting Club Meeting in Cambridge on), 315
Action of Organophosphorus Insecticides : Mode of (Dr. K. van Asperen), 355
Action of Periodate on some Polysaccharides containing Aldoheptose Sugars (Dr. A. B. Foster, D. A. L. Davies and M. J. Crumpton), 412
Action of the *Shigella shigae* Toxin after Intracerebral Injection (Dr. H. Rašková and J. Vaneček), 1129
Action (Anomalous Bactericidal), of Bromamine (J. K. Johannesson), 1799
Action (Chemotherapeutic), of a Cyclic Nitrogen Mustard Phosphamide Ester (B 518-ASTA) in Experimental Tumours of the Rat (Herbert Arnold, Friedrich Bourseaux and Norbert Brock), 931
Action (Clearing), of Lysolecithin (Dr. L. Saunders, I. L. Thomas and N. Robinson), 782
Action (Complementary), of Gibberellic Acid and Auxin (P. W. Brian and H. G. Hemming), 1575
Action (Electrocapillary), of Corrosion Inhibitors (Harry C. Gatos), 1060
Action (Haemolytic), of Guinea Pig Complement : Effect of Histamine and an Anti-Histamine Drug on the (Dr. J. D. Hawkins), 1666
Action (Masculinizing), of Pregneninolone of Female Gonads in the Cyprinodont, *Lebistes reticulatus* R. (Dr. T. Mohsen), 1074
Action (Mutagenic), of Actinophages (S. I. Alikhanian and T. S. Iljina), 1476
Action (Novel), of Potassium on a Yeast and a Counteraction by Aluminium (Dr. E. J. Miller), 191
Action (Transferase) : Phosphorylation of Riboflavin by (Dr. Kunio Yagi and Jun Okuda), 1663
Action and Emission Spectra of the Luminescence of Green Plant Materials (Gordon Tollin, Eiji Fujimori and Prof. Melvin Calvin), 1266
Actions of Staphylococcal Toxin and Tiger Snake Venom : Antagonism between the (Dr. Edgar A. North and Hazel M. Doery), 1542
Activation of Cytochrome Oxidase by Synthetic Detergents (Takashi Yonetani, Shigeki Takemori, Ichiro Sekuzu and Prof. Kazuo Okunuki), 1339
Activation of a Permeability Factor in Plasma by Contact with Glass (Dr. J. Margolis), 635
Active Centre of a Permeability Mechanism : N-Terminal Histidine at the (W. D. Stein), 1662
Active Phase of End-Plate Potential : Direct Determination of the (Prof. Noriko Takeuchi and Akita Takeuchi), 779
Activities (Alpha-Ray), of Humans and their Environment (R. C. Turner, J. M. Radley and Prof. W. V. Mayneord), 518
Activities (Future), of the British Association : Interpretation of Science to the Public—, 8
Activity of Cytoplasmic Particles isolated from Apples (Dr. G. E. Neal and Dr. A. C. Hulme), 1469
Activity of Glucose-1-phosphate on Liver Steatosis (Giuliana Gialdroni-Grassi), 53
Activity of the Melanocytes in the Skin : Effect of Ovariectomy, Œstrogen and Progesterone on the (P. G. Bischitz and Dr. R. S. Snell), 1413
    Effect of Testosterone and Orchidectomy on the (P. G. Bischitz and Dr. R. S. Snell), 187
Activity of Photosynthetic Bacterial Chromatophores : Suppression of Carotenoid Synthesis and its Effect on the (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Dr. R. C. Fuller and I. C. Anderson), 252
Activity (Alkaline Phosphatase), in the Liver of Rats : Effect of Aldosterone Monoacetate and Deoxycorticosterone Acetate on (Dr. Amiya B. Kar and R. P. Das), 623
Activity (Anticholesterol), of α-Lipoic Acid (L. Angelucci and E. Mascitelli-Coriandoli), 911
Activity (Anti-inflammatory), of Salicylates and other Non-Hormonal Anti-Rheumatic Drugs : A Possible Basis for the (S. S. Adams and R. Cobb), 773
Activity (Antimitotic), of 5-Tertiary Butyl Benzimidazolone (Dr. H. C. Stoerk, R. N. Arison and J. E. Hawkins, jun.), *erratum*, 238
Activity (Bactericidal), of Macrophages *in vitro* against *Escherichia coli* (Dr. D. Rowley), 1738
Activity (Cambial) : Interaction between Indole-acetic Acid and Gibberellic Acid in (Dr. P. F. Wareing), 1744
Activity (Cholinesterase), in Individual End-plates of Normal and Denervated Gastrocnemius Muscle : Quantitative Determination of (M. Brzin and Prof. J. Zajicek), 626
Activity (β-Galactosidase-inducing) : Influence of Introduction of a Fructosyl Group into Galactosylglucoses on their (Gad Avigad), 554
Activity (Human Caeruloplasmin Oxidase) : Colorimetric Detection of, after Electrophoresis in Agar Plates or after Immuno-electrophoresis (José Uriel), 999
Activity (Lipase), in the Pectoralis Major Muscle of the Pigeon : Histochemical Demonstration of (Dr. J. C. George and K. S. Scaria), 783
Activity (Magnetic) : Equatorial Spread-*F* and (A. J. Lyon, N. J. Skinner and Dr. R. W. Wright), 1724
Activity (Muscular), prior to Venepuncture : Effect of, on the Respiration of Leucocytes *in vitro* (Sheenah K. Bisset and W. D. Alexander), 909
Activity (Neuromuscular Blocking), of Ethylene*bis*- (Trimethylammonium) : Reaction of Ethylene Bromide with Trimethylamine and the (Dr. Allan P. Gray and Thomas B. O'Dell), 634
Activity (Normal Muscular) : Mechanics of (Dr. R. J. Whitney), 942
Activity (Phagocytic), of the Reticulo-Endothelial System : Effect of Antibiotics on the (I. A. Sewell and Prof. T. Nicol), 1662
    Effect of certain Polyphenylated Aliphatic Hydrocarbons on the (Prof. T. Nicol, C. C. Ware and Dr. D. L. J. Bilbey), 1804
    Effect of various Stilbene Compounds on the (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 1538
Activity (Phosphorylase), of Primary Rat Liver Cancer (A. A. Hadjiolov and K. I. Dancheva), 547
Activity (Ribonuclease), and Ribonucleic Acid Content of Homologous Human Normal and Cancer Cells (L. Ledoux, S. Brändli and J. C. De Paepe), 913
Activity (Solar), and the Ionosphere (C. M. Minnis), 543
Activity (Solar), and Radio Communication (R. Naismith), 954
Activity (Teratogenic), of Hypervitaminosis-A : Influence of 4-Methyl-2-thiouracil on the (Dr. D. H. M. Woollam and Dr. J. W. Millen), 992
Activity (Transaminase), of Serum Protein Fractions separated by Paper Electrophoresis : Determination of (Dr. Miroslav Sevela), 915
Activity Rhythm (A Mammalian), independent of Temperature (Dr. G. Edgar Folk, jun., Mona R. Meltzer and Richard E. Grindeland), 1598
D-Acylase in Soil Bacteria : Occurrence of (Prof. Yukio Kameda, Etsuko Toyoura and Yukio Kimura), 1225
Adachi, Susumu : Formation of Lactulose and Tagatose from Lactose in Strongly Heated Milk, 840
Adam, A., and others : Enzymatic Abnormality in Erythrocytes of a Population sensitive to *Vicia faba* or Haemolytic Anaemia induced by Drugs, 1256
Adams, Dr. C. E., and others : Capacitation of Rabbit Spermatozoa, 1209
Adams, J. M. : Scope and Limits of Colour Measurement, 1705
Adams, Roger, and others (edited by) : Organic Reactions, Vol. 9, *review* by Prof. John Read, 147
Adams, S. S., and Cobb, R. : A Possible Basis for the Anti-inflammatory Activity of Salicylates and other Non-Hormonal Anti-Rheumatic Drugs, 773
Adaptation : Stress and, *review* by Prof. J. Z. Young, 1494
Adaptation to Serum-free Medium by a Phagocytic Cell Strain derived from a Murine Lymphoma (Dr. Alan S. Rabson, Frances Y. Legallais and Samuel Baron), 1343
Addison, G. H. (Henderson, M. R., and) : Malayan Orchid Hybrids, *review*, 517
Addition Reactions : An Electronic Mechanism of (Lakhbir Singh), 110 ; (D. W. Davies), 903
Adenine Nucleotides of Squid Muscle : Changes in (Tsuneyuki Saito, Ken-ichi Arai and Tsune Tanaka), 1127
Adenine (Methylated) Bases : Natural Occurrence of Thymine and Three, in several Ribonucleic Acids (Dr. J. W. Littlefield and Dr. D. B. Dunn), 254
Adenosine-5'-phosphates as the Stimulating Agent in Blood for inducing Gorging of the Mosquito (Teruhiko Hosoi), 1664
Adenosine Triphosphatase and Contraction in Dehydrated Muscle Fibres (Sheila M. V. Hunt and N. A. Matheson), 472
Adenosine Triphosphate : Effect of, on Cleavage of Sea Urchin Eggs (Louis Wolpert), 716
    Energy of (K. Burton), 1594
Adenosine Triphosphate (Cardiac), of Thyroxinized Rats : Effect of Creatine Phosphate Administration on the (L. Angelucci, R. Boldrini and E. Mascitelli-Coriandoli), 419
Adenosine Triphosphate Metabolism in the Rabbit Erythrocyte *in vivo* (Dr. Bertram A. Lowy, Dr. Bracha Ramot and Dr. Irving M. London), 324
Adherence and Viscosity of Blood Contacting Foreign Surfaces, and the Plasmatic Zone in Blood Cicrulation (Dr. Alfred L. Copley), 551
Adkins, Bernard : The General Theory of Electrical Machines, *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Adkins, John Edwards : Title of reader in applied mathematics in the University of Nottingham conferred on, 314
Administration and Defence in a Technical Age, 1751
Administration (Local), in a Technological Age, 583
Administration (Public), Royal Institute of (A Survey by a Study Group of the) : The Organization of British Central Government, 1914-1956 (edited by D. N. Chester, written by F. M. G. Willson), 141
Adoption of Inoculation for Smallpox in England and France (Dr. Geneviève Miller), *review* by Dr. W. R. Bett, 1690
Adrenal Cortical Hormones and the Formation of Histamine and 5-Hydroxytryptamine (R. Hicks and Dr. G. B. West), 1342
Adrenal Gland of the Rat : Adrenaline and Noradrenaline Content of the, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 423
Adrenal Glands during the Post-natal Development of Thermoregulation in the Rat : Significance of the (Dr. P. Hahn and O. Koldovsky), 847
Adrenal 17-Hydroxycorticosteroid Secretion in Dogs : Muscular Exercise and (Prof. T. Suzuki, K. Yamashita and T. Mitamura), 715
Adrenal Medulla of the Sheep Foetus : Response of the, to Asphyxia (Dr. R. S. Comline and Marian Silver), 283
Adrenalectomized Rats : Adrenocorticotrophic Hormone in the Blood of (G. S. Cox and Dr. J. R. Hodges), 420
Adrenaline and Noradrenaline Content of the Adrenal Gland of the Rat following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 423
Adrenocortical Function and Hypertension : Salt Intake, (Dr. Lewis K. Dahl), 989
Adrenocorticotrophic Hormone in the Blood of Adrenalectomized Rats (G. S. Cox and Dr. J. R. Hodges), 420
Adrenocorticotrophic Hormone and Melanocyte-stimulating Hormone : Behavioural Changes in Animals after Intracisternal Injection with (Prof. W. Ferrari), 925
Adsorbed Metal Ions on the Surface of Cellulose Microfibrils : Electron Diffraction Study of (D. S. Belford, A. Myers and Prof. R. D. Preston), 1516
Adsorption Chromatography on Silica-treated Paper (J. B. Roberts), 338
Adult Education : George Birkbeck, Pioneer of (Dr. Thomas Kelly), *review* by Prof. W. H. G. Armytage, 585
Adults of *Hevea brasiliensis* : Transmission of Juvenile Rooting Ability from Seedlings to (Prof. T. J. Muzik and H. J. Cruzado), 1288
Adults : Prolongation of the Life of *Drosophila subobscura* by a Brief Exposure of, to a High Temperature (J. Maynard Smith), 496
Adults (Immature), of the Desert Locust : An Olfactory Response of (W. Loher), 1280
Adults (Normal) : The Relationships between Electroencephalographic and Psychological Data in (Dr. P. F. Werre), *review* by Dr. Clifford Allen, 983
Advance (Technological), and European Free Trade, 1163

INDEX

Advanced Organic Chemistry, *review* by Dr. W. D. Ollis, 6
Advanced Technology : The Design of Teaching Laboratories in Universities and Colleges of (Royal Institute of British Architects Symposium on), 459
Advances in Applied Mathematics : Recent, *review* by Dr. R. K. Livesley, 979
Advances in Electronics and Electron Physics (edited by L. Marton), Vol. 9, *review* by Dr. J. A. Saxton, 1688
Advances in Jungian Psychology, *review* by Dr. Clifford Allen, 298
Advances in Nuclear Physics : Recent (Dr. A. M. Lane), 886
Advances in Pest Control Research (edited by R. L. Metcalf), Vol. 1, *review* by Dr. K. A. Lord, 1689
Advances in Polymer Technology : Recent (Institute of the Rubber Industry and the Plastics Institute Conference on), 89, 1303
Advances in Radiobiology—Proceedings of the Fifth International Conference on Radiobiology held in Stockholm, 1956 (edited by George Carl de Hevesy, Arne Gunnar Forssberg and John D. Abbatt), *review* by Dr. O. A. Trowell, 660
Adverse Effect of Nitrate Metabolic Products on Sheep Growth (N. D. Jamieson), 1601
Advice on Pets (Zoological Society of London), 1180
Advisory Council (London and Home Counties Regional), for Higher Technological Education : Ninth Annual Report, 1309
Aedes aegypti : Biting Behaviour of Mated and Unmated Females of an African Strain of (M. M. J. Lavoipierre), 1781
Aerobacter aerogenes : Structure of an Acidic Polysaccharide elaborated by (Dr. S. A. Barker, Dr. A. B. Foster, I. R. Siddiqui, Prof. M. Stacey and S. J. Pirt), 999
Aerobic Inhibition of Glycolysis (J. F. Turner and Dr. L. W. Mapson), 270
Aerodynamics, 671
Aerodynamics, *review* by Dr. J. H. Horlock, 1232
Aeronautical Meteorology (Royal Meteorological Society Discussion on), 1703
Aeronautical Research, 458
Aeronautical Society, Royal : Honorary Fellowship awarded to Sir Richard Southwell, 1646
  Honorary Companionship awarded to W. E. Nixon, 1646
  Gold Medal awarded to Sir Sydney Camm, 1646
  Silver Medal awarded to Dr. P. B. Walker, 1646
  Bronze Medal awarded to Dr. D. Williams, 1646
  British Gold Medal for Aeronautics awarded to S. D. Davies, 1646
  British Silver Medal for Aeronautics awarded to W. H. Lindsey and W. F. Saxton, 1646
  Wakefield Gold Medal awarded to W. Tye, 1646
  R. P. Alston Medal awarded to Mrs. Anne Burns, 1646
  N. E. Rowe Medal awarded to P. A. Champion, 1646
  Simms Gold Medal awarded to L. F. Nicholson, 1646
  George Taylor (Australia) Gold Medal awarded to R. L. Lickley and L. P. Twiss, 1646
  Edward Busk Memorial Prize awarded to Dr. D. Kuchemann, 1646
  Orville Wright Prize awarded to Prof. A. R. Collar, 1646
  Herbert Ackroyd Stuart Memorial Prize awarded to Dr. R. R. Jamison, 1646
  J. E. Hodgson Prize awarded to Prof. H. J. van der Maas, 1646
  Branch Prize for 1958 awarded to M. B. Morgan, 1646
  Navigation Prize awarded to W. Makinson and G. M. Hellings, 1646
  Usborne Memorial Prize awarded to D. G. Drake, 1646
  Office of president taken by Sir Arnold Hall, 1646
Aeronautics, College of (Cranfield) : Appointment of John Loxham to the chair of aircraft economics and production, 385
  Appointment of A. G. Smith to the chair of aircraft propulsion, 528
Aerosols : Atmospheric (Royal Meteorological Society Discussion on), 1703
Affinities (Electron), of Oxygen : Estimation of, by Extrapolations of Ionization Potentials (Dr. D. F. C. Morris and H. N. Schmeising), 469
Affinity for Collagen : Molecular Weight of Condensed Tannins as a Factor determining their (Dr. David G. Roux), 1793
Affinity of Neutral Red for Cells with Basophilic Cytoplasm (Dr. Winfield S. Morgan), 1132
Affinity (Chemical) : Time Variation of (Dr. W. Yourgrau and Dr. C. J. G. Raw), 480
Africa : Explorer (Satellite 1958α) over (Dr. David S. Evans), 1173
  The Grass Cover of (R. O. Whyte and J. M. Rattray), 80
  The Indigenous Cattle of the British Dependent Territories in (D. E. Faulkner and Dr. H. Epstein), (Colonial Advisory Council of Agriculture, Animal Health and Forestry, Publication No. 5), 1581
  Prehistoric, *review* by Miles Burkitt, 1095
  The Prehistory of (Prof. H. Alimen), translated by Alan Houghton Brodrick, *review* by Miles Burkitt, 1095
Africa South of the Sahara, Commission for Technical Co-operation in : To set up a Foundation for Mutual Assistance in Africa South of the Sahara, 601, 811
Africa South of the Sahara, Foundation for Mutual Assistance in : To be set up by the Commission for Technical Co-operation in Africa South of the Sahara, 601, 811
Africa (Europe and) : Distribution of Electrophoretically Different Haemoglobins among some Cattle Breeds of (A. D. Bangham and B. S. Blumberg), 1551
Africa (East) : Annual Rainfall Distribution in (J. F. Griffiths), 1331
  Artificial Stimulation of Rainfall in, by means of Rockets (J. H. Brazell and C. M. Taylor), 1421
  The Giant Rat of (J. G. Halcrow), 649
  Working Party on Higher Education to visit, 1308
Africa (Eastern and North-Eastern) : Birds of (C. W. Mackworth-Praed and Capt. C. H. B. Grant), second edition, *review*, 801
Africa (East) High Commission : Annual Report of the East African Virus Research Institute (1956-57), 1777
Africa (Tropical West) : Thermocline off the Coast of (J. C. D. Watts), 863
African Cattle in British Dependent Territories, 1581
African Strain of *Aedes aegypti* : Biting Behaviour of Mated and Unmated Females of an (M. M. J. Lavoipierre), 1781
African (East) Soils : Pattern of Humus Decomposition in (H. F. Birch), 788
African (East) Mountain Flora, *review* by Dr. G. Taylor, 1027
African (East) Virus Research Institute : Annual Report for 1956-57, 1777
African (Nigerian), Populations : Haptoglobin Types in British, Spanish Basque and (Dr. A. C. Allison, Dr. B. S. Blumberg and Mrs. ap Rees), 824
African (South) Clawed Frog, *Xenopus laevis* (Daudin) : Induction of Triploidy in the (Sheila Smith), 290
African (South) Council for Scientific and Industrial Research : Register of Current Scientific Research at South African Universities (1956), 1702
African (South) Research, 1702
African (South) Universities : Register of Current Scientific Research at, 1956 (South African Council for Scientific and Industrial Research), 1702
African (West) Cacao Research Institute, Ghana : Appointment of B. H. Kenten as biochemist, 459
  Appointment of J. F. Longworth as agronomist, 459
African (West) Environment : The Development of the (Second Interterritorial Conference of the West African Science Association), 1580
African (West) Science Association : Second Interterritorial Conference of the (The Development of the West African Environment), 1580
Afroalpine Vascular Plants (Olov Hedberg), *review* by Dr. G. Taylor, 1027
Agar as Specimen Carrier in Double-Beam Infra-Red Spectroscopy (J. G. Feinberg, H. D. C. Rapson and Mary P. Taylor), 763
Agar Double-Diffusion Precipitation Reaction : A Specific Diffusible Antigen on Rinderpest Virus demonstrated by the (G. White), 1409
Agar Double-Diffusion Precipitation Reaction applied to the Study of *Asterococcus mycoides* (G. White), 278
Agar Plates : Colorimetric Detection of Human Caeruloplasmin Oxidase Activity after Electrophoresis in, or after Immuno-electrophoresis (José Uriel), 999
Age : Variation with, of Shrinkage Temperature of Human Collagen (Patricia C. Brown and Dr. R. Consden), 349
Age of a Pilansberg Dyke of Palaeomagnetic Significance (G. D. L. Schreiner), 1330
Age of Young Dairy Calves : Effect of, on Dry-Matter Digestibility of Alfalfa Pellets (M. E. McCullough and L. R. Sisk), 57
Age (Technical) : Administration and Defence in a, 1751
Age (Technological) : Education for a, 95
  Local Administration in a, 583
Age Determination of Southern Ocean Waters (J. W. Brodie and R. W. Burling), 107
Age-Hardening Behaviour of Aluminium—Zinc Alloys : Anomaly in the (N. Gane and Dr. R. N. Parkins), 1198
Aged Bacterial Cultures : Occurrence and Filterability of Protoplast-like Elements in (Dr. J. Sinkovics), 566
Ageing : The Biology of (Institute of Biology Symposia No. 6, edited by W. B. Yapp and G. H. Bourne), *review* by Prof. P. L. Krohn, 74
  Ciba Foundation Colloquia on, Vol. 2, Ageing in Transient Tissues (edited by G. E. W. Wolstenholme and Elaine C. P. Millar) ; Vol. 3, Methodology of the Study of Ageing (edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by Prof. P. L. Krohn, 74
  Methodology of the Study of (Ciba Foundation Colloquia on Ageing, Vol. 3, edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by Prof. P. L. Krohn, 74
Ageing of *Amoeba proteus* and *A. discoides* Cells (Audrey Muggleton and Prof. J. F. Danielli), 1738
Ageing on the Factory Floor (F. Le Gros Clark), 744
Ageing Periosteum : Enzyme Changes in the (Dr. E. A. Tonna), 486
Ageing in Transient Tissues (Ciba Foundation Colloquia on Ageing, Vol. 2, edited by G. E. W. Wolstenholme and Elaine C. P. Millar), *review* by Prof. P. L. Krohn, 74
Ageing and Employment, 744
Agent (Stimulating), in Blood for inducing Gorging of the Mosquito : Adenosine-5'-phosphates as the (Teruhiko Hosoi), 1664
Agglutinability (Red Cell), affected by Disease (Dr. F. Stratton, P. H. Renton and Jeanne A. Hancock), 62
Agglutination Test : Failure of the, to Identify Types of *Pasteurella multocida* (Dr. G. R. Carter), 1138
Aggressiveness and Egg Production : Relationship between, in the Domestic Hen (G. McBride), 858
Agricultural or allied subjects : Scholarships in (Ministry of Agriculture, Fisheries and Food), 238
Agricultural Department, Northern Nigeria : Appointment of E. Jones as chemist, 459
Agricultural Ecology (Prof. Girolamo Azzi), *review* by A. D. Bradshaw, 443
Agricultural Engineers (British), Institution of : Bursaries, 885
Agricultural Experiment Stations, 1953-54 : Funds for Research in (United States National Science Foundation, Reviews of Data on Research and Development, No. 8), 160
Agricultural History Society, British : Sixth Conference, 949
  Election of Officers for 1958-59, 1443
  Annual Meeting, 1508
Agricultural History Society, British, and the Association of Agriculture : Joint Annual Conference, 536
Agricultural Holdings (Fragmented) : Consolidation of (Food and Agriculture Organization of the United Nations, Report of the Working Party of Specialists on the), 1114
Agricultural Products (Stored) : Control of Pests in, with special reference to Grain (Dr. J. A. Freeman), (European Productivity Agency of the Organization for European Economic Co-operation, Project No. 212), 1639
Agricultural Research, 160
Agricultural Research : Estimated Expenditure on, 671
Agricultural Research, New Zealand Journal of, Vol. 1, No. 1, 1310
Agricultural Research Council : Gift of £967 to the Department of Physiology in the University of Bristol, as renewal of the grant in aid of research on bovine acetonaemia, 602
  Retirement of Dr. Ivan de Burgh Daly from the directorship of the Institute of Animal Physiology, 882
  Appointment of Prof. J. H. Gaddum as director of the Institute of Animal Physiology, 882
  Appointment of J. D. Alston as a member, 1042
  Appointment of David Lowe as deputy chairman, 1042
Agricultural Rheology (Dr. G. W. Scott Blair and Prof. Markus Reiner), *review* by Dr. E. C. Childs, 1166
Agricultural Science : Fifth Easter School in (The Nutrition of the Legumes), (University of Nottingham School of Agriculture), 315
Agricultural Society of England, Royal : Research Medal awarded to Dr. W. A. Sexton and W. G. Templeman, 1506

Agricultural and other Soils : Restoration of (Association of Applied Biologists Meeting on), 390
Agricultural and Medical Research : Statistical Tables for Biological, (Prof. Sir Ronald A. Fisher and Dr. Frank Yates), fifth edition, *review*, 299
Agriculture : Atomic Energy and—a Symposium at the Atlanta Meeting of the American Association for the Advancement of Science and co-sponsored by the Oak Ridge Institute of Studies, 1955, (edited by C. L. Comar), *review* by Dr. R. F. Glascock, 1097
    Utilizing the Natural Resources of Lake Victoria for the Benefit of Fisheries and (R. S. A. Beauchamp), 1634
Agriculture in East and West, *review* by Sir John Russell, 144
Agriculture, Association of (British Agricultural History Society and the) : Joint Annual Conference, 536
Agriculture, European Commission on (Sub-Commission on Land and Water Use) : Report of the First Session of the Working Party on Consolidation of Fragmented Holdings (Lisbon, 1956) ; Report of the Second Session (Vienna, 1957), 1114
Agriculture for Scotland, Department of (Ministry of Agriculture, Fisheries and Food and the) : Postgraduate Scholarships in Husbandry, 603
Agriculture, Fisheries and Food, Ministry of : Retirement of G. M. Graham as director of fishery research, 158
    Appointment of R. S. Wimpenny as director of fishery research, 159
    Scholarships in Agricultural or allied subjects, 238
Agriculture, Fisheries and Food, Ministry of, and the Department of Agriculture for Scotland : Postgraduate Scholarships in Husbandry, 603
Agriculture, Fisheries and Food, Ministry of, and the Scottish Home Department (Development Commissioners, in association with the) : Award of Postgraduate Training Grants in Fishery Research, 1312
Agriculture (World) : Types of Rural Economy—Studies in (Prof. René Dumont), *review* by Sir John Russell, 144
Agriculturists : A Practical Guide to Plant Sociology for Foresters and (Prof. F. R. Bharucha and Dr. W. C. DeLeeuw), *review* by Maurice Ashby, 987
Agrotype Concept in Chemical Analysis of Tea (Dr. W. Wight), 1355
Agrotype Concept in Tea Taxonomy (Dr. W. Wight), 893
Aharoni, Dr. J. : Spin Functionals, 1385
Ahlmann, Prof. Hans : Awarded a Medal of the Tokyo Geographical Society, 20
Ahmed, Rais : Vowel Recognition in Clipped Speech, 210
Aid to Seed Production when widely separated *Solanum* Species are Crossed : 2,4-Dichlorophenoxyacetic Acid as an (Leo A. Dionne), 361
Aids to Decision Making (Operational Research Society Open Conference on), 949
Algrain, Prof. P., and others (edited by) : Progress in Semiconductors, Vol. 2, *review* by Dr. J. R. Tillman, 1168
Air : Detection of Viable Air-borne Spores in (Dr. J. Rishbeth), 1549
    Gamma-Radiation Catalysis of the Oxidation by, of Tri-isopropyl Phosphite (Dr. D. G. Coe), 1519
    The Impulse Break-down Characteristic of a Point-Plane Gap in (J. J. Kritzinger and Prof. G. R. Bozzoli), 1259
    Poisoned, *review* by R. S. Scorer, 1167
Air Drag : Effect of, on the Orbit of the Russian Earth Satellite 1957β—Comparison of Theory and Observation (D. G. King-Hele and Dr. D. C. M. Leslie), 1761
Air Force Cambridge Research Center (Electronic Research Directorate), Bedford, Mass. : Conference on Extremely High Temperatures, 1380
Air Ministry : Reorganization of the Meteorological Office, 241
    Annual Report on the Meteorological Office for 1956-57, 493
    Retirement of Dr. J. Glasspoole from the Meteorological Office, 1767
Air Pollution—Based on Papers given at a Conference held at the University of Sheffield, 1956 (edited by Prof. M. W. Thring), *review* by R. S. Scorer, 1167
    Measurement of—Recommended Methods for Deposited Matter, Smoke and Sulphur Dioxide (Fuel Research Board), 1244
Air Puffs : Apparatus for Stimulation of Insect Sense-Organs by (D. M. Miller and E. H. Colhoun), 126
Air Temperature Record : World Low, 1109
Airborne Monitor : A Survey of the Cosmic-Ray Nucleonic Component along 145° East Longitude using an (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 1155
Airborne Radioactivity (Natural), at Kjeller, Norway (S. H. Small, A. Lillegraven and P. B. Storebø), 1197
Airborne Spores (Viable), in Air : Detection of (Dr. J. Rishbeth), 1549
Aircraft : Hydraulic Systems in, *review*, 977
Aircraft Hydraulics (edited by H. G. Conway), Vol. 1, Hydraulic Systems ; Vol. 2, Component Design, *review*, 977
Aircraft Industry in Britain : Future of the, 1646
Aircraft-propulsion Studies at Cranfield, 528
Aitken, D., and Jennings, Dr. R. E. : The Microtron, 1726
Aitken, Dr. R. S. : Academic Mobility, 165
Akabori, Prof. A. : Enzyme Chemistry, 389
Akabori, Prof. Shiro, and others : A New Synthesis of Histidyl Peptides, 772
Akimoto, Syun-ito (Aramaki, Shigeo, and) : Remanent Magnetism, 812
Al-Mas'udi : Millenary Celebrations of (Institute of Islamic Studies, Aligarh, and the Indian Society for the History of Science), 883
α-Alanine and of Pyruvate : Accumulation of, in Diphtherial Culture Filtrate and its relation to Iron Deficiency of Medium (Prof. Masahiko Yoneda and Hiroshi Ishihara), 272
β-Alanine : Formation of, from Spermine and Spermidine by *Pseudomonas aeruginosa* (Dr. S. Razin, U. Bachrach and I. Gery), 700
Alaria and *Laminaria* : A Chimaera of, found in Nature (Jun Tokida, Hikoei Ohmi and Minoru Imashjma), 923
Albert (Parc National): Exploration du, Fasc. 3, Biotopes de Haute Altitude Ruwenzori, I (J. Heinzelin and H. Mollaret), 19
Albino Locusts with Internally Absorbed Phenol Substrates : Induction of Melanin Patterns and of Hardening as Separate Processes in the Cuticle of (Dr. B. M. Jones and W. Sinclair), 926
Albino Mouse : Heat Output and Body-weight in the Growing (E. G. C. Glarke and A. E. Hawkins), 1599
Albino Rats : Strain Sensitivity of, to Reserpine (Dr. R. E. Coupland), 930
Albinos : Colour Vision of Three (Prof. R. W. Pickford), 361
Albumin (Egg) : Carbohydrate Peptide Complex from (P. Johansen, Dr. R. D. Marshall and Prof. A. Neuberger), 1345
Albumin (Serum) : Site of Catabolism of (Dr. David Gitlin, James R. Klinenberg and Walter L. Hughes), 1064
Albumins (Serum) : Passage of, from the Mother to the Foetus (Prof. A. M. Schechtman and K. C. Abraham), 120
Alcaligenes haemolysans (Ellen J. Garvie and G. C. Cheeseman), 1540
Alchemy to Chemistry : Through (Prof. J. Read), *review* by Prof. J. R. Partington, 986
Alcohol (Selachyl) : Effects of Alkoxy-glycerols and especially, on the Bone Marrow in connexion with Irradiation Treatment and in Leukaemia Therapy (Astrid Brohult), 1484
Aldehyde (Acceptor), for Transketolase : Formaldehyde as an, and the Biosynthesis of Triose (Prof. F. Dickens and D. H. Williamson), 1790
Aldehyde Blockades (Histochemical) : Effect of Periodic Acid on (Dr. P. H. Staple), 288
Alderman, Prof. A. R. : Elected president for 1957-58 of the Geological Society of Australia, 1041
Aldhous, J. R., and others : Exotic Trees in Great Britain (Forestry Commission, Bulletin No. 30), 747
Aldoheptose Sugars : Action of Periodate on some Polysaccharides containing (Dr. A. B. Foster, D. A. L. Davies and M. J. Crumpton), 412
Aldolase in Rubber-bearing Plants : Coenzyme *A* and (J. A. Gascoigne, Dr. W. G. Overend, G. F. J. Moir and Dr. G. Hübscher), 628
Aldolase and Triose Phosphate Isomerase Reactions : Absolute Configuration of Enantiomorphic Carbanions involved in the (Ben Bloom and Yale J. Topper), 1128
Aldosterone Monoacetate and Deoxycorticosterone Acetate : Effect of, on Alkaline Phosphatase Activity in the Liver of Rats (Dr. Amiya B. Kar and R. P. Das), 623
Aldrin and Dieldrin Residues : Persistence of, in Sheep Fleece (I. R. Harrison and C. A. Johnson), 1267
Alexander, D. H. : Fellowship of the City and Guilds of London Institute conferred on, 884
Alexander, Dr. F., and Chowdhury, A. K. : Enzymes in the Ileal Juice of the Horse, 190
Alexander, Prof. M. (Engel, M. S., and) : Culture of *Nitrosomonas europaea* in Media Free of Insoluable Constituents, 136
Alexander, W. D. (Bisset, Sheenah K., and) : Effect of Muscular Activity prior to Venepuncture on the Respiration of Leucocytes *in vitro*, 909
Alexopoulos, Prof. C. : Nominated as national representative for Greece on the North Atlantic Treaty Organization Science Committee, 739
Alfalfa Mosaic Virus : Size and Shape of (Prof. John B. Bancroft and Prof. Paul Kaesberg), 720
Alfalfa Pellets : Effect of Age of Young Dairy Calves on Dry-Matter Digestibility of (M. E. McCullough and L. R. Sisk), 57
Alfrey, Dr. G. F., and others : Grain Boundaries and Electroluminescence in Gallium Phosphide, 109
Alfvén, Prof. H., and Åström, Ernst : Energy Spectrum of Cosmic Radiation, 330
Alga (Blue-Green) : Occurrence of a, in the Nodules of *Trifolium alexandrinum* (S. Bhaskaran and G. S. Venkataraman), 277
Alga (Brown) : Effect of Potassium Cyanide on Apparent Free Space in a (P. L. Bergquist), 1270
    Extracellular Products in Pure Cultures of a (Dr. G. E. Fogg and G. T. Boalch), 789
Alga (Brown), *Ascophyllum nodosum* (L.) Le Jol. : Chemical Composition of the—Presence of Reducing Compounds in *Ascophyllum nodosum* (Bjørn Larsen and Arne Haug), 1224 ; Influence of Habitat on the Chemical Composition of *Ascophyllum nodosum* (Arne Haug and Bjørn Larsen), 1224
Alga (Green) : Effect of Plasmolysis on the Rate of Respiration of a (Dr. F. J. Taylor), 136
Algae (Fossil), in India (Prof. L. Rama Rao), 544
Algal Metabolism and Ecology : Role of Plant Hormones in (Dr. Joyce A. Bentley), 1499, *erratum*, 1703
Algebra (W. L. Ferrar), second edition, *review* by S. A. Stigant, 1691
Alikhanian, S. I., and Iljina, T. S. : Mutagenic Action of Actinophages, 1476
Alimen, Prof. H. : The Prehistory of Africa (translated by Alan Houghton Brodrick), *review* by Miles Burkitt, 1095
Aliphatic Hydrocarbons (Polyphenylated) : Effect of certain, on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, C. C. Ware and Dr. D. L. J. Bilbey), 1804
Alivisatos, Dr. Spyridon G. A. : Formation of Histamine-containing Dinucleotides by Enzymatic Interaction of Histamine and Coenzyme I, 271
N Alkali : Relative Instability of Chlorpromazine in (Dr. I. Gordon Fels, Marty Kaufman and A. G. Karczmar), 1266
Alkali, etc., Works Order, 1958 : Debate in the House of Commons on the motion for the annulment of the, 1572
Alkaline Phosphatase Activity in the Liver of Rats : Effect of Aldosterone Monoacetate and Deoxycorticosterone Acetate on (Dr. Amiya B. Kar and R. P. Das), 623
Alkoxyglycerols and especially Selachyl Alcohol : Effects of, on the Bone Marrow in connexion with Irradiation Treatment and in Leukaemia Therapy (Astrid Brohult), 1484
N-Alkylamines : Dealkylation of, by Model Systems (James R. Gillette, James V. Dingell and Bernard B. Brodie), 898
N-Alkyl Anilines : The Basicities of (H. T. Taylor), 265
Alkyl Phosphates in Wheat Leaves : Formation of (V. C. Runeckles), 1470
Allegro, J. M. : Awarded a Grant by the Leverhulme Trust, 1442
Allele (Third) at the Serum β-Globulin Locus in Humans (Dr. O. Smithies), 1203
S Allele Action : Time of the (Dr. K. K. Pandey), 1220
Alleles at the *T* Locus in the House Mouse : Influence of Time of Mating on the Segregation Ratio of (Dr. A. W. H. Braden), 786
Allelomorphism and the Chemical Differences of the Human Haemoglobins *A*, *S* and *C*, (J. A. Hunt and Dr. V. M. Ingram), 1062
Allen, Dr. Clifford : The Problem of Personality, *review*, 5
    Advances in Jungian Psychology, *review*, 298
    The Relationships between Electroencephalographic and Psychological Data in Normal Adults, *review*, 983
Allen, Prof. C. W. : The Transition from the Ionosphere to Interplanetary Space, 1238
Allen, Fergus H. : Appointed director of the Hydraulics Research Station of the Department of Scientific and Industrial Research, Wallingford, 235 ; work of, 235
Allen, Dr. K. W. : Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions (Straight-tube Discharges of Short Duration), 805
Allen, M. Delia : Shaking of Honeybee Queens prior to Flight, 68

Allen, Dr. N. L., and others : Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
Allen, Prof. R. G. D. : Economic Theory, *review*, 1027
Allen-Williams, Dr. D. J. F. : Appointed to the chair of mechanical engineering in the University of Western Australia, 86 ; work of, 86
Allergic Encephalomyelitis (Experimental) : Acquired Resistance to (I. A. Svet-Moldzvskaya and G. J. Svet-Moldavsky), 1536
Allibone, Dr. T. E., and others : Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
Allison, Dr. A. C., and others : Haptoglobin Types in British, Spanish Basque and Nigerian African Populations, 824
Allison, K., and Walsh, A. D. : Structure and Reactivity of Electronically Excited Species, 320
Allocyclic Segments of Chromosomes : High Chiasma Frequency in (Dr. N. E. Virkki), 1148
Allo-*iso*leucine : *Iso*leucine and (Mrs. Anna W. I. vàn Dam-Bakker), 116, *erratum*, 673
Allokainic Acid : Structure of Kainic Acid and its Isomer (I. Nitta, H. Watase and Dr. Y. Tomiie), 761
Alloy Pt_3Fe between 20 and 900 Degrees Absolute : Magnetic Susceptibility of the (Prof. J. Crangle), 644
Alloys : Thermoelectric Properties of Bismuth Telluride and its (D. A. Wright), 834
  Vacancies and other Point Defects in Metals and (Metal Physics Committee of the Institute of Metals Symposium on), 449
Alloys (Aluminium—Zinc) : Anomaly in the Age-Hardening Behaviour of (N. Gane and Dr. R. N. Parkins), 1198
Alloys (Engineering Metals and) : Industrial Failure of—a Symposium organized by the National Metallurgical Laboratory, 1953 (edited by Dr. B. R. Nijhawan), *review* by Prof. F. C. Thompson, 1498
Allweis, C., and Magnes, Dr. J. : Metabolism of the Perfused Cat Brain during Metrazol Convulsions and Electroshock, 626
Almaglà, Prof. Roberto : Awarded the Victoria Medal of the Royal Geographical Society, 810
Almond, Dr. J. K. : Awarded the Arthur Claudet Student's Prize of the Institution of Mining and Metallurgy, 1375
Alonzo, Nicholas F., and others : Cytolipin *H*, a Pure Lipid Hapten isolated from Human Carcinoma, 1803
Alper, Tikvah, and Gillies, Dr. N. E. : Dependence of the Observed Oxygen Effect on the Post-Irradiation Treatment of Micro-organisms, 961
α_1-Acid Glycoprotein (Human) : Effect of, on Blood Coagulation (Inga Marie Nilsson and Ikuo Yamashina), 711
α-Alanine and of Pyruvate : Accumulation of, in Diphtherial Culture Filtrate and its relation to Iron Deficiency of Medium (Prof. Masahiko Yoneda and Hiroshi Ishihara), 272
α-Amino-butyric Acid : Role of Oxygen in the Formation of, by a Staphylococcus (P. B. Riley and H. K. Robinson), 905
α-Amino*iso*butyric Acid, β-Hydroxyleucine, and γ-Methylproline from the Hydrolysis of a Natural Product (Prof. G. W. Kenner and R. C. Sheppard), 48
α-Casein from Goat Milk : Inhomogeneity of (Dr. T. Hofman), 633
α-Galactosyl Transfer : Enzymic Synthesis of Nitrogen-containing Disaccharides by (Dr. Winifred M. Watkins), 117
α-Keto Acids : A New Reaction for the Differentiation of *cis*- and *trans*-isomers of Nitrophenylhydrazones of some (Hirohiko Katsuki, Köichirö Sumizu, Tarumi Moriwaki, Shözö Tanaka and Ichirö Hayashi), 639
α-Ketoglutaric and other Keto-acids : Detection of, on Paper Chromatograms with Ninhydrin (Dr. R. Rabson and N. E. Tolbert), 50
α-Lactalbumin (Bovine) : Possible Polymorphism of (B. S. Blumberg and M. P. Tombs), 683
α-Lipoic Acid : Anticholesterol Activity of (L. Angelucci and E. Mascitelli-Coriandoli), 911
α-Naphthaleneacetic Acid : Responses of a Fern Apex to Gibberellic Acid, Kinetin and (Prof. C. W. Wardlaw and G. C. Mitra), 400
α-Particle Intensity (Primary), at Sunspot Maximum (Cosmic Rays and the Sunspot Cycle), (P. S. Freier, Prof. E. P. Ney and P. H. Fowler), 1319
α-Picoline from *Rumex obtusifolius* L. (S. Wilkinson), 636
α-Quartz : Determination of the Absolute Configuration of (A. de Vries), 1193
α-Ray Activities of Humans and their Environment (R. C. Turner, J. M. Radley and Prof. W. V. Mayneord), 518
α-Titanium : Effect of Hydrogen on the Deformation Characteristics of (E. Smith), 902
α-β Transformation in Keratin (A. R. B. Skertchley), 639 ; (H. J. Woods), 761
  A Quantitative X-Ray Study of (V. D. Gupta), 113
Alston, A. H. G. : *Obituary* by Dr. John Ramsbottom, 1306
Alston, J. D. : Appointed a member of the Agricultural Research Council, 1042
Alston (R. P.) Medal of the Royal Aeronautical Society awarded to Mrs. Anne Burns, 1646
Altamirano-Orrego, R. (Loewenstein, Prof. Werner R., and) : Generation and Propagation of Impulses during Refractoriness in a Pacinian Corpuscle, 124
Alterations in the Ultrastructure of the Blood—Air Barrier in the Mouse Lung after Inhalation of Colloidal Gold Particles (Dr. N. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1418
Alternative Pathway for the Degradation of Cholic Acid by Micro-organisms (Shohei Mayakawa, Yasuo Saburi, Keizo Tamaki and Hideyuka Hoshijima), 906
Altitude : Barometric Pressure and (E. S. Williams), 1527
Altman, K. I. (Konno, K., and) : Isolation of a Glycine-carbohydrate Residue from Muscle Collagen, 994
Aluminium : Novel Action of Potassium on a Yeast and a Counteraction by (Dr. E. J. Miller), 191
Aluminium—Zinc Alloys : Anomaly in the Age-Hardening Behaviour of (N. Gane and Dr. R. N. Parkins), 1198
Aluminium—Zinc Single Crystals : Unloading Effects in (A. T. Thomas), 1728
Aluminium Nitride Precipitates in Steel : Fine (Prof. C. C. Hsiao), 1527
Alveolar Wall of the Lung : Fine Structure of the (Dr. M. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1066
Alves, F. A., and others : A New Class of Antibiotic Salts of Reduced Toxicity, 182
am Locus in *Neurospora crassa* : Aberrant Recombination at the (J. A. Pateman), 1605
Amarasingham, R. D. (Kiang, Dr. A. K. and) : Phytochemistry (The Isolation and Separation of Alkaloids of *Kopsia singapurensis*), 466
Amazon : Wai-Wai—Through the Forests North of the (Nicholas Guppy), *review* by Dr. Audrey J. Butt, 1563
Amazon Forest, *review* by Dr. Audrey J. Butt, 1563
Ambient Medium : Influence of the, on the Breakdown Voltage of Sheet Insulating Materials (W. P. Baker), 1726
Ambrose, E. J., and others : A Correlation between Electrical Surface Charge and some Biological Characteristics during the Stepwise Progression of a Mouse Sarcoma, 1586
Ambrose, H. B. : Appointed research officer, Nyasaland, 458
Ameloblasts, Odontoblasts and Cells of the Oral Epithelium : Sudanophil Inclusions in (Prof. J. T. Irving), 569
Amenities : Conserving Wild Life and, in the South-East of England (South-Eastern Union of Scientific Societies Conference on), 315
America (Latin) : Universities for (J. C. J. Metford), 609
American Association for the Advancement of Science, and co-sponsored by the Oak Ridge Institute of Studies : Symposium on Atomic Energy and Agriculture, Atlanta, 1955 (edited by C. L. Comar), *review* by Dr. R. F. Glascock, 1097
American Chemical Society, and others : Gift of a bronze bust of Joseph Willard Gibbs, to be placed in the Hall of Fame for Great Americans at the University of New York, 87
American Cockroach (*Periplaneta americana* L.) : Muscle Fibres of the Fast and the Slow Contracting Muscles of the Mesothoracic Leg of the (W. A. Smit), 1073
American Geophysical Union : William Bowie Medal awarded to Prof. J. T. Thijsse, 1378
American Hall of Fame, 87
American Industry : Industrial Research and Development Costs in, 1638
American Institute of Geonomy and Natural Resources : John A. Fleming Medal for 1958 awarded to Dr. and Mrs. J. B. Hersey, 1640
American Institute of Physics : *Physics of Fluids*, Vol. I, No. I, 601
American Mathematical Society : Applied Probability (Vol. 7 of Proceedings of Symposia in Applied Mathematics), 245
American Museum of Natural History : Bulletin No. 114, Art. 2, Silicified Permian Fossils from Texas and New Mexico—Pleurotomariacea (Prof. R. L. Batten), 1639
American Ornithologists Union (Committee of the) : Check-List of North American Birds, *review* by Dr. W. Rydzewski, 590
American Philosophical Society : Memoirs, Vol. 43, Franklin and Newton—an Enquiry into Speculative Newtonian Experimental Science and Franklin's Work in Electricity as an Example Thereof, *review* by Dr. M. A. Hoskin, 295
American Phytopathological Society : Fiftieth Anniversary, 813
American Society of Mechanical Engineers : Gift of a bronze bust of George Westinghouse, to be placed in the Hall of Fame for Great Americans at the University of New York, 87
American Society for Testing Materials (Committee *E*-14), (Mass Spectrometry Panel of the Hydrocarbon Research Group of the Institute of Petroleum and) : Conference on Mass Spectrometry, 1771
American (North) Birds : Check-List of (Committee of the American Ornithologists Union), *review* by Dr. W. Rydzewski, 590
American (North) Snakes, *review*, 872
Amines (Volatile), of Herring Flesh (Dr. R. B. Hughes), 1281
Amino-Acid Composition of Haemoglobin from *Thunnus thynnus* (C. De Marco and E. Antonini), 1128
Amino-Acid Composition of Scleroprotein of the Sponge *Hippospongia equina* (Dr. J. Saper and W. E. White), 285
Amino-Acids : Chloramphenicol-Resistant Incorporation of, into *Staphylococci* and Cell-Wall Synthesis (Dr. J. Mandelstam and Dr. H. J. Rogers), 956
Amino-acids in Anthracite (Dr. R. Heijkenskjöld and Dr. H. Möllerberg), 334
Amino-Acids (Free), and Peptides in Sea-Urchin Eggs and Embryos (Pure Species and Hybrids) : Species-Specific Differences in (Dr. P. S. Chen and Prof. F. Baltzer), 98
Amino-acids (Labelled), separated on Paper Chromatograms : Distribution of Carbon-14 in (K. H. Hallowes, Dr. F. P. W. Winteringham and Dr. W. J. Le Quesne), 336
Amino-acids (N-Terminal), of Bovine Eye Lens Proteins (H. Bloemendal and Prof. G. Ten Cate), 340
Amino-Acids (Radioactive), into their Proteins : Effect of Hypophysectomy on the Ability of Rat Liver Microsomes in a Cell-free System to Incorporate (Dr. A. Korner), 422
Para-Amino-Benzoic Acid and Sulphanilamide in the Nutrition of *Neurospora crassa* (Prof. D. V. Siva Sankar), 629
α-Amino-butyric Acid : Role of Oxygen in the Formation of, by a Staphylococcus (P. B. Riley and H. K. Robinson), 905
γ-Aminobutyric Acid : Absence of, from Brain Extracts containing Factor I (Dr. H. McLennan), 1807
γ-Amino-Butyric Acid in Ocular Tissue (Prof. K. Kojima, M. Mizuno and M. Miyazaki), 1200
γ-Aminobutyrylcholine (K. Kuriaki, T. Yakushiji, T. Noro, the late Prof. T. Shimizu and Sh. Saji), 1336
α-Amino*iso*butyric Acid, β-Hydroxyleucine, and γ-Methylproline from the Hydrolysis of a Natural Product (Prof. G. W. Kenner and R. C. Sheppard), 48
Aminomalonic Acid from Ketomalonic Acid : Enzymatic Formation of (Hideo Nagayama, Michiko Muramatsu and Dr. Kensuke Shimura), 417
Aminopeptidase (Leucine), in Rat Parathyroid and its relation to Parathyroid Hormone Production (Dr. A. G. E. Pearse and Dr. G. Tremblay), 1532
Amino-sugar Compounds (Uridine Diphosphate), from *Staphylococcus aureus* inhibited by Penicillin (Eiji Ito, Nobutoshi Ishimoto and Masahiro Saito), 906
Ammonium and Sulphate : Effect of the Nitrogen and Sulphur Content of Organic Matter on the Production of (N. J. Barrow), 1806
Ammonium Salts of the Heteropolyacids as Cation Exchangers (Dr. J. van R. Smit), 1530
Ammonium Sulphate Treatment of a Tea Soil : Rate of Calcium Loss resulting from (N. G. Gokhalé), 426
Amnion in Epithelium (Human) : Sex Chromatin in Polyploid Nuclei of (Harold P. Klinger and Hans G. Schwarzacher), 1150

Amoeba proteus and *A. discoides* Cells : Ageing of (Audrey Muggleton and Prof. J. F. Danielli), 1738
Amoroso, Prof. E. C., and others : Ovaries of some Foetal and Prepubertal Giraffes, *Giraffa camelopardalis* (Linnaeus), 487
Amoroso, Prof. E. C., and others : Ovaries of some Foetal and Prepubertal Giraffes, *Giraffa camelopardalis* (Linnaeus), 487
Amos, Dr. A. J. (Kent-Jones, Dr. D. W., and) : Modern Cereal Chemistry, fifth edition, *review* by Dr. J. B. Hutchinson, 1361
Ampère : Colloquium (1957), (Proceedings of the Sixth), 1443
Amphibia of Ceylon (P. Kirtisinghe), *review* by Miss A. G. C. Grandison, 1758
Amphibian Eggs : Effects of β-Mercaptoethanol on Morphogenesis in (Prof. J. Brachet), 1736
Amphibian Embryo : Electron Micrographs of a Crystalline Lattice Structure in Yolk Platelets of the (Shuichi Karasaki and Tsutomu Komoda), 407
Amphibian Gastrulae : A Ribonucleoprotein from (A. S. G. Curtis), 185
Amphoteric Soaps (Non-Ionic and) : A Colour Reaction for (Dr. J. E. Lovelock and T. Nash), 1263
Amplifier : A Travelling-Wave Parametric (Prof. A. L. Cullen), 332
Amphioxus (*Branchiostoma*) : Nervous Control of Cilia in (Quentin Bone), 193
Amplitude of a Quartz Plate vibrating in Liquids (Dr. S. Parthasarathy and Harkrishan Singh), 260
Amylase from Pancreatic Juice of the Rat : Spontaneous Crystallization of (Dr. N. G. Heatley), 1069
Amylase (Crystalline Saccharogenic), of Moulds : Specificity of (Yoshio Tsujisaka, Juichiro Fukumoto and Takehiro Yamamoto), 770
Anaemia (Haemolytic), induced by Drugs : Enzymatic Abnormality in Erythrocytes of a Population sensitive to *Vicia faba* or (Dr. A. Szeinberg, Dr. Ch. Sheba and A. Adam), 1256
Anaemia (Nutritional), in Mink (Dr. A. Helgebostad and Dr. E. Martinsons), 1660
Anaemic : Isolation of an Erythropoietic Fraction from the Plasma of Rabbits made severely, with Phenylhydrazine (Peter H. Lowy, Geoffrey Keighley, Henry Borsook and Ashton Graybiel), 1802
Anaerobic Conditions : Effect of, on Imbibed Lettuce Seeds (Walter Heydecker), 1140
Analogue : Use of an, to resolve Stoke's Paradox (Sir Richard Southwell), 1257
Analyses (Monte Carlo), of Genetic Models (A. S. Fraser), 208
Analysis : Elementary Fourier (Imperial College of Science and Technology Refresher Course on), 1510
  Principles of, *review* by C. O. Harvey, 869
  Quantitative Inorganic (Prof. G. Charlot and Denise Bézier), translated by Dr. R. C. Murray, *review* by C. O. Harvey, 869
  Volumetric, *review* by E. I. Johnson, 800
  Volumetric (Prof. I. M. Kolthoff and R. Belcher, with the co-operation of V. A. Stenger and G. Matsuyama), Vol. 3, Titration Methods, Oxidation-Reduction Reactions, *review* by E. I. Johnson, 800
  Waterhammer (John Parmakian), *review* by T. M. Charlton, 1495
Analysis of Engineering Structures (Dr. A. J. S. Pippard and Dr. J. F. Baker), third edition, *review* by Prof. W. F. Cassie, 1498
Analysis (Chemical), of Holothurian Schlerites (John S. Hampton), 1608
Analysis (Chemical), of Tea : Agrotype Concept in (Dr. W. Wight)), 1355
Analysis (Gas Chromatographic) : Molecular Sieves as Subtractors in (Nathaniel Brenner and Vincent J. Coates), 1401
Analysis (Microdiffusion), and Volumetric Error (Prof. Edward J. Connor), fourth edition, *review* by E. I. Johnson, 1029
Analysis (Statistical), of Stationary Time Series (Dr. Ulf Grenander and Prof. Murray Rosenblatt), *review* by Porf. M. G. Kendall, 1494
Analysis (Sugar), International Commission for Uniform Methods of : Twelfth Session, 1182
Analysis (Theoretical), of Doppler Radio Signals from Earth Satellites (Dr. William H. Guier and George C. Weiffenbach), 1525
Analysis (Thermal), of Clays, *review*, 1561
Analysis (X-Ray) : A Three-Dimensional Model of the Myoglobin Molecule obtained by (Dr. J. C. Kendrew, Dr. G. Bodo, Dr. H. M. Dintzis, Dr. R. G. Parrish, Dr. H. Wyckoff and Dr. D. C. Phillips), 662
Analytical Chemistry, Society of : Election of Officers, 812
Analytical Microscopy (Dr. T. E. Wallis), second edition, *review* by S. B. Challen, 1758
Analytical Psychology : New Developments in (Michael Fordham), *review* by Dr. Clifford Allen, 298
Anaphase Estimation of Radiation-induced Chromosome Exchange : Inaccuracies of (Dr. J. M. Thoday), 932
Anbar, Michael, and Lewitus, Dr. Zigmund : Rate of Body-Water Distribution studied with Triple Labelled Water, 344
Ancient Bricks : Remanent Magnetization of (H. A. Atwater and R. T. Ellickson), 404
Ancient Man, *review* by M. C. Burkitt, 1234
Ancona, L., and others : At the thirteenth International Congress of Applied Psychology (A Fresh Approach to the Study of Vocational Interests), 1580
Anderson, Arthur B., and others : Nature of some Decay-retardant Extractive Components in Incense Cedar Heartwood (*Libocedrus decurrens* Torrey), 1275
Anderson, Dr. Edgar : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Anderson, I. C. (Fuller, Dr. R. C., and) : Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria—Suppression of Carotenoid Synthesis and its Effect on the Activity of Photosynthetic Bacterial Chromatophores, 252
Anderson, Dr. N. G. : Rapid Sedimentation of Proteins through Starch, 45
Anderson, jun., Paul S., and Cowles, Prof. Philip B. : Role of Phage Antibodies in the Development of Non-toxigenic Cultures of *Corynebacterium diphtheriae*, 350
Anderson-Berry (David) Prizes for 1958 of the Royal Society of Edinburgh awarded to W. M. Court Brown and Dr. Richard Doll, and to Dr. C. E. Ford, 1571
Andreae, W. A., and others : Formation of a Glycoside of Maleic Hydrazide in Plants, 1535
Andrewartha, Dr. H. G., and Browning, Dr. T. O. : Williamson's Theory of Interspecific Competition, 1415
Angell, B. C., and others : Long-Distance Radio Propagation above 30 Mc./s. (Tropospheric Propagation), 1186
Angelucci, Dr. L. : Influence of Cocarboxylase on Tolerance to Morphine in the Rat, 967
Angelucci, Dr. L., and Mascitelli-Coriandoli, E. : Anticholesterol Activity of α-Lipoic Acid, 911
Angelucci, Dr. L., and others : Effect of Creatine Phosphate Administration on the Cardiac Adenosine Triphosphate of Thyroxinized Rats, 419
Angiotensin : A Suggested Revision of Nomenclature— (Dr. Eduardo Braun-Menendez and Dr. Irvine H. Page), 1061
Anglo-American Co-operation : The Basis of, 1091
Angola, Servico Meteorologico de : Miscelanea Geofisica publicada em Commemoracao do X Aniversario do Servico Meteorologico Nacional, *review* by G. A. Bull, 1299
Ångström Radiation as Phenomenon and as Tool, *review* by Prof. A. J. C. Wilson, 727
Anguilla vulgaris Turt : Use of Tidal Streams by Migrating Elvers (F. Creutzberg), 857
Angus, S. : Foundations of Thermodynamics, *review*, 1755
Anhydrous Sodium Sulphate : Effect of Water upon the Polymorphic Transitions in (E. L. Kreidl and Ivan Simon), 1529
Anilines (N-Alkyl) : The Basicities of (H. T. Taylor), 265
Animal Cell (Non-Multiplying) : Turnover of Protein in a (Dr. H. Harris and J. W. Watts), 1582
Animal Economy : Calcium in the, *review* by Dr. N. M. Hancox, 799
Animal Health in Great Britain (Dr. G. Lapage), 889
Animal Health Services in Great Britain, 1956 : Report on the, 889
Animal Health Trust : The Farm Livestock Research Centre of the (Dr. W. R. Wooldridge), 76
Animal Hypnosis : Changes in the Topographical Distribution of Glycogen in the Brain during (Dr. D. Svorad), 775
Animal Physiology at Cambridge, 882
Animal Tissues : Reduction of Organic Hydroperoxides by Micro-organisms and (Dr. D. M. Updegraff and Dr. F. A. Bovey), 890
Animal Welfare, Universities Federation for : Report of a Symposium on Humane Technique in the Laboratory, London, 1957 (Laboratory Animals Bureau, Collected Papers, Vol. 6), 1187, 1444
Animals : Behavioural Changes in, after Intracisternal Injection with Adrenocorticotrophic Hormone and Melanocyte-stimulating Hormone (Prof. W. Ferrari), 925
  Embryology of Pogonophora and Classifications of (Dr. S. M. Manton), 748
  Laboratory (Dr. G. Lapage), 1449
  Photoperiodism in Plants and (Photobiology Committee of the United States National Research Council International Symposium on), 535
Anion Exchange : Separation of Lanthanum from Thorium by (Tatsuya Sekine and Prof. Nobufusa Saito), 1464
Anionic Polyelectrolyte, Polyethylene Sulphonate, as a New Anti-neoplastic Agent (Dr. William Regelson and James F. Holland), 46
Annals of the International Geophysical Year, Vol. 4, Parts 1-7 ; Vol. 5, Parts 1-3, *review* by G. A. Bull, 1097
Annan, R. : Honorary membership of the Institution of Mining and Metallurgy conferred on, 1375
Annau, E. : A Purified Complement-fixing Antigen from *Mycobacterium johnei*, 1206
Annelids (Larval) : Dried Organic Substances as Food for (Dr. D. I. D. Howie), 1486
Annual of the British School at Athens No. 50 (1955), No. 51 (1956), *review* by R. M. Cook, 1560
Annual Rainfall Distribution in East Africa (J. F. Griffiths), 1331
Annual Review of Entomology (edited by Edward A. Steinhaus in association with Ray F. Smith), Vol. 3, *review* by Dr. P. T. Haskell, 1756
Anodic Dissolution : Mechano-Chemical (Dr. T. P. Hoar and J. M. West), 835
Anomalous Atmospheric Refraction at Sea (Dr. B. M. Cwilong), 181
Anomalous Bactericidal Action of Bromamine (J. K. Johannesson), 1799
Anomalous Behaviour of β-Diketone Complexes of the Lanthanons in Organic Solvents (Dr. N. K. Dutt and P. Bandyopadhyay), 1682
Anomaly in the Age-Hardening Behaviour of Aluminium—Zinc Alloys (N. Gane and Dr. R. N. Parkins), 1198
Anopheles funestus : Colonization of (M. W. Service and D. Oguamah), 1225
Anopheles stephensi : Partial Inhibitory Effect of *Plistophora culicis* on the Sporogonic Cycle of *Plasmodium cynomolgi* in (Miss L. Bano), 430
Anoxia : Relationship between Chlorpromazine and (Dr. V. Lindaur), 1341, *errata*, 1510
Ansell, Dr. G. B. : Drugs and the Brain, *review*, 1430
Ansevin, Allen T., and others : Polymerization—Depolymerization of Tobacco Mosaic Virus Protein, 1338
Answers (Fifty Straight), to Fifty Fair Questions : You Yourself—(Seekers and Finders, Book 3), (Amabel Williams-Ellis), *review* by T. H. Hawkins, 1628
Antagonism between the Actions of Staphylococcal Toxin and Tiger Snake Venom (Dr. Edgar A. North and Hazel M. Doery), 1542
Antagonism (Folic Acid), in Chickens : Perosis and (J. H. Arundel), 343
Antarctic : Arctic and, *review* by Dr. G. C. L. Bertram, 729
  'Whistlers' in the (L. H. Martin), 1796
Antennae of Hemiptera : 'Compensatory Hyper-regeneration' in the (Dennis Leston), 931
Anthelmintics : A New Series of (F. C. Copp, O. D. Standen, J. Scarnell, Deirdre A. Rawes and R. B. Burrows), 183
Anthocyanidins of the Primulaceae (J. B. Harborne), 26
Anthocyanins in Blackcurrant Fruits (B. V. Chandler and K. A. Harper), 131
Anthocyanins in the Flowers of *Primula sinensis* (H. S. A. Sherratt), 26
Anthony, Dr. H. D. : The Origins of Modern Science, 1300-1800, *review*, 731
Anthracite : Amino-acids in (Dr. R. Heijkenskjöld and Dr. H. Möllerberg), 334
Anthropochronology (Physical and Cultural) : Man's Journey through Time, a First Step in (Prof. L. S. Palmer), *review* by M. C. Burkitt, 1691
Anthropological Institute, Royal : Election of Dr. J. A. Fraser Roberts as president for 1957-59, 315
Anti-allergic Effect of Cortisone (Dr. E. R. Trethewie), 625
Antibiotic : Flavofungin, a New Crystalline Antifungal—Origin and Biological Properties (Dr. J. Url and I. Békési), 908
  Mycobacillin, a New Antifungal, produced by *Bacillus subtilis* (S. K. Majumdar and Dr. S. K. Bose), 134
Antibiotic produced by a *Bacillus* sp., active against *Haemophilus pertussis* (Dr. A. Ian Tiffin), 907

Antibiotic Salts of Reduced Toxicity : A New Class of (F. A. Alves, M. F. C. A. N. Graça and H. L. Baptista), 182
Antibiotics : Biochemistry of (Papers given at the first European Symposium on), 20
  Effect of, on the Phagocytic Activity of the Reticulo-Endothelial System (I. A. Sewell and Prof. T. Nicol), 1662
  Lymphotrophic (Dr. P. Málek, M. Herold, J. Hoffman and J. Kolc), 706
  Thermal Decomposition of some (Prof. Wesley W. Wendlandt and Morris Zief), 1207
Antibiotics (Sakaguchi-positive) : Micro-chemical Method for the Determination of (Dr. I. Szilágyi and I. Szabó), 52
Antibodies on Antigen—Polystyrene Conjugates : Isolation of (L. Gyenes, B. Rose and Dr. A. H. Sehon), 1465
Antibodies (Heterologous), from Precipitating Sera : A Simple Method for absorbing (Dr. Joseph Böszörményi), 1344
Antibodies (Leucocyte), in Sera from Pregnant Women (J. J. van Rood, J. G. Eernisse and Miss A. van Leeuwen), 1735
Antibodies (Phage) : Role of, in the Development of Non-toxigenic Cultures of *Corynebacterium diphtheriae* (Paul S. Anderson, jun., and Prof. Philip B. Cowles), 350
Antibodies (Precipitating), in Serum following Infection with the Virus of Foot-and-Mouth Disease : Immunoelectrophoretic Evidence for the Presence of Two (Dr. F. Brown), 1130
Antibody in Passive Transplantation Immunity to Crocker Tumour in Mice : Demonstration of, using the Schultz-Dale Technique (Prof. B. D. Baruah), 624
Antibody Formation : A Theory of, involving Eosinophils and Reticulo-endothelial Cells (Dr. Robert S. Speirs), 681
Antibody Formation by Isolated Cells of Hen Spleen after mixing with Antigen *in vitro* and Transfer to Chicks (Dr. Z. Trnka), 55
Antibody Production by Lymphocytes after *in vitro* Contact with Bacterial Antigen and Transfer to New-born Rabbits (Dr. Miroslav Holub), 122
Antibody Production by Single Cells (G. J. V. Nossal and Prof. Joshua Lederberg), 1419
Anticholesterol Activity of α-Lipoic Acid (L. Angelucci and E. Mascitelli-Corlandoli), 911
Anticonvulsant ('Trimedal') and to Phenobarbital : An Attempt to adapt Explanted Tissues to an (E. Holečková and Dr. Z. Servít), 1541
Antifungal Antibiotic : Flavofungin, a New Crystalline—Origin and Biological Properties (Dr. J. Uri and I. Békési), 908
  Mycobacillin, a New, produced by *Bacillus subtilis* (S. K. Majumdar and Dr. S. K. Bose), 134
Antigen : Js, a 'New' Blood Group, found in Negroes (Dr. Eloise R. Giblett), 1221
Antigen *in vitro* : Antibody Formation by Isolated Cells of Hen Spleen after mixing with, and Transfer to Chicks (Dr. Z. Trnka), 55
Antigen of Rinderpest Virus (A Specific Diffusible), demonstrated by the Agar Double-Diffusion Precipitation Reaction (G. White), 1409
Antigen (Bacterial) : Antibody Production by Lymphocutes after *in vitro* Contact with, and Transfer to New-born Rabbits (Dr. Miroslav Holub), 122
Antigen (Diego Blood Group), in Sarawak and Burma : Haemoglobin E and the (M. J. Colbourne, Elizabeth W. Ikin, Dr. A. E. Mourant, Dr. H. Lehmann and H. Thein), 119
Antigen (A Lipopolysaccharide), of the *Treponema* (Prof. Giuseppe D'Alessandro and Carla del Carpio), 991
Antigen (A Purified Complement-fixing), from *Mycobacterium johnei* (E. Annau), 1206
Antigen—Polystyrene Conjugates: Isolation of Antibodies on (L. Gyenes, B. Rose and Dr. A. H. Sehon), 1465
Antigenic Formulae for the Genus *Clostridium* (Dr. Raouf S. Moussa), 123
Antigenicity of Avidin (Dr. D. V. Siva Sankar, Barbara J. Cossano, Henry W. Theis and Carol R. Marks), 619
Antigenicity of a Bacterial Deoxyribonucleic Acid (Dr. John H. Phillips, Prof. Werner Braun and Dr. Otto J. Plescia), 573
Antigens responsible for the Acquired Tolerance of Turkeys to Rous Sarcoma Agent : Nature of the (Dr. J. C. Harris and P. J. Simons), 1485
Antigens (Soluble), in Microsomes and other Cell-Fractions of Rat Liver (Dr. P. Perlmann and Dr. V. D'Amelio), 491
Antigens (Surface), of *Haemophilus pertussis* (Armand Guérault and Prof. H. B. Maitland), 122
Anti-Histamine Drug : Effect of Histamine and an, on the Haemolytic Action of Guinea Pig Complement (Dr. J. D. Hawkins), 1666
Anti-Inflammatory Activity of Salicylates and other Non-Hormonal Anti-Rheumatic Drugs : A Possible Basis for the (S. S. Adams and R. Cobb), 773
Anti-Locust Research Centre : Current Research on Orthoptera, 742
  Report of the Director for 1956-57, 1037
Anti-Matter in Bulk : Possible Existence of (Philip J. Wyatt), 1194
Antimitotic Activity of 5-Tertiary Butyl Benzimidazolone (Dr. H. C. Stoerk, R. N. Arison and J. E. Hawkins, jun.), *erratum*, 238
Anti-neoplastic Agent (New) : The Anionic Polyelectrolyte, Polyethylene Sulphonate, as a (Dr. William Regelson and James F. Holland), 46
Antioxidant Determinations by the Use of a Stable Free Radical (Marsden S. Blois), 1199
Antiquity : Special Evolution number to commemorate the Darwin—Wallace Centenary, 812.
Antiquity : The Exact Sciences in (Dr. O. Neugebauer), second edition, *review* by Dr. A. Armitage, 1097
Anti-Rheumatic Drugs (Non-Hormonal) : A Possible Basis for the Anti-Inflammatory Activity of Salicylates and other (S. S. Adams and R. Cobb), 773
Antitumour Factors : Passive Transfer of, through Milk in Rats (Prof. B. Sekla), 1600
Antoine, Robert : A Staining Technique for Detecting Ratoon Stunting Disease in Sugar Cane, 276
Antonini, E. (De Marco, C., and) : Amino-Acid Composition of Haemoglobin from *Thunnus thynnus*, 1128
Apartheid : University, 671
Apex (Fern) : Responses of a, to Gibberellic Acid, Kinetin and α-Naphthaleneacetic Acid (Prof. C. W. Wardlaw and G. C. Mitra), 400
Aphid (A New), on Chicory : Virus Transmission by *Dactynotus cichoricola* H.R.L., (Dr. J. Semal), 721
Aphids : Effect of Caffeine and other Purines upon the Ribonucleic Acid/Deoxyribonucleic Acid Ratio in Leaves, and the Suitability of these Leaves for (Dr. B. Kessler, Dr. E. Swirski and Dr. A. S. Tahori), 1595
  Influence of Parasitization on Form Determination in (Dr. Bruce Johnson), 205
Apical Meristem : Cytological Techniques and the (Prof. C. W. Wardlaw), 237
Apices (Severed Pea) : Regeneration of (H. F. Gulline and R. Walker), 530
Apparatus : Scientific Instruments and (Pyhsical Society Annual Exhibition of), 673 ; Handbook of (Physical Society), 743
Apparatus for Stimulation of Insect Sense-Organs by Air Puffs (D. M. Miller and E. H. Colhoun), 126
Apparent Beneficial Effect of Gamma-Radiation on the Flour Mite (Dr. Colin Melville), 1403
Apparent Free Space in a Brown Alga : Effect of Potassium Cyanide on (P. L. Bergquist), 1270
Apparent Requirement for Vitamin K of Rumen Strains of *Fusiformis nigrescens* (Dr. M. Lev), 203
Apple Fruit (Rotting) : Oxidation Products of Leucoanthocyanins as Inhibitors of Fungal Polygalacturonase in (M. Cole), 1596
Apples : Activity of Cytoplasmic Particles Isolated from (Dr. G. E. Neal and Dr. A. C. Hulme), 1469
Apples (Stored) : A Method of Reducing the Losses caused by *Gloeosporium* spp. in (Dr. D. M. Spencer and Dr. E. H. Wilkinson), 1603
  Reduction of Low-Temperature Injury to, by Modulaticn of Environmental Conditions (W. Hugh Smith), 275
Appleton, Sir Edward : Reason and Chance in Scientific Discovery, *review*, 983
Application of the Kurie Plot to the Standardization of Pure Beta-Emitters (R. A. Lloyd), 1055
Application to Preference Matrices : The General Relationship between Test Factors and Person Factors—(Patrick Slater), 1225
Application of Science to Industry (R. E. Prentice), 1108
Application (Choice and), of Fungicides to Plantation Crops, with special reference to *Hevea brasiliensis* (E. J. Risdon), 1017
Applications of Electron and Nuclear Resonance in Chemistry (Chemical Society Symposium on), 161
Applications of the Electron Microscope : Techniques and (Cornell University Summer Laboratory Course in), 743
Applications (Atomic Energy), with reference to Underdeveloped Countries (B. C. Netschert and S. H. Schurr), *review* by Sir John Cockcroft, 1167
Applications (Engineering), of Automation : British Group for (Constitution of Group A of the British Conference on Automation and Computation), 672
Applied Bacteriology, Society for : Annual Meeting and Summer Conference, 1182
Applied Biologists, Association of : Meeting on the Restoration of Agricultural and other Soils, 390
  Election of Officers for 1958-59, 1246
Applied Chemistry : Reports on the Progress of (Society of Chemical Industry), Vol. 41, 1956, *review* by Prof. J. R. Partington, 1432
Applied Mathematics at Durham, 312
Applied Mathematics (Proceedings of Symposia, Vol. 7, Applied Probability), (American Mathematical Society), 245
  Recent Advances in, *review* by Dr. R. K. Livesley, 979
Applied Physics (Pure and), International Union of : 1958 International Conference on Semi-conductors, 885
Applied Physics (Pure and), International Union of, and Unesco : International Congress on Nuclear Physics (Low Energy Nuclear Interactions and Nuclear Structure), 459
Applied Probability (Vol. 7 of Proceedings of Symposia in Applied Mathematics of the American Mathematical Society), 245
Applied Psychology : International Congress of (Prof. John Cohen), 1579
Apprenticeship and Technical Education, 1293
Aqueous Solutions of Guanylic Acid and Guanosine : Effect of Ionizing Radiation on (G. Hems), 1721
Aqueous Suspensions of Small Particles : Abrasion of the Insect Cuticle by (Prof. V. B. Wigglesworth), 779
Aqueous Systems : Formation of $>C{=}O$ Bonds in the Radiation-induced Oxidation of Protein in (Michael E. Jayko and Warren M. Garrison), 413
Arabia (Southern) : Fishes of the Red Sea and (Henry W. Fowler), Vol. I, Branchiostomida to Polynemida, *review* by Dr. E. Trewavas, 298
Arai, Ken-ichi, and others : Changes in Adenine Nucleotides of Squid Muscle, 1127
Aramaki, Shigeo, and Akimoto, Syun-ito : Remanent Magnetism, 812
Arc Cathode : The (A. M. Cassie), 476
Archaeological Remains : Intensity of Remanent Magnetization of (R. M. Cook), 1421
Archaeological Setting of the Pokom-Maya in the Sixteenth Century : Social Structure and (Miss S. W. Miles), 1180
Archaeology : Guide to, *review* by M. C. Burkitt, 374
  Silchester (Dr. M. Aylwin Cotton), 1707
Archaeology in Greece, *review* by R. M. Cook, 1560
Archaeology and Society (Prof. Grahame Clark), third edition, *review* by M. C. Burkitt, 374
Architect of British Medical Research, *review* by Sir William Gavin, 513
Architects (British), Royal Institute of : Symposium on the Design of Teaching Laboratories in Universities and Colleges of Advanced Technology, 459
Architectural Science : Development of (T. M. Charlton), 1315
Architecture : Structure and—Proceedings of the Symposium on (edited by Prof. Henry J. Cowan), (University of Sydney Extension Board), 1315
Archives des Sciences, Vol. 10, Proceedings of the Sixth Colloquium Ampère (1957), 1443
Arcs : Magnetic Deflexion of (P. E. Secker and Dr. A. E. Guile), 1615
Arcs in High Vacuum : Burning Voltage of (M. P. Reece), 475
Arctic and Antarctic, *review* by Dr. G. C. L. Bertram, 729
Arctic Frontiers—United States Explorations in the Far North (Dr. John Edwards Caswell), *review* by Dr. G. C. L. Bertram, 729
Arctic Institute of North America : Special Publication No. 2, Arctic Research, the Current Status of Research and some Immediate Problems in the North American Arctic and Sub-arctic (edited by Diana Rowley), *review* by Dr. G. C. L. Bertram, 729

Arctic Island : Spring on an (Katharine Scherman), *review* by Dr. G. C. L. Bertram, 729
Arctic Research, the Current Status of Research and some Immediate Problems in the North American Arctic and Sub-arctic (edited by Diana Rowley), *review* by Dr. G. C. L. Bertram, 729
Ardran, Dr. G. M. : Awarded the Barclay Medal for 1958 of the British Institute of Radiology, 531
Arend-Roland (Comet), 1956*h* : Polarization of the Integrated Light of (D. R. Barber), 760
Arends, Dr. Tulio, and others : Peculiar Distribution of the Diego Factor among the Warrau, 118
Arginine Metabolism of some Higher Plants : Occurrence of Ornithine in Sulphur-deficient Flax and the Possible Place of Ornithine and Citrulline in the (R. G. Coleman), 776
Argon : Effect of a Combined Treatment with 8-Ethoxycaffeine and, on the Roots of *Vicia faba* (Effect on Radiosensitivity of Inert Gases), (John Read), 616
  The Triple Point of, as a Thermometric Fixed Point (R. A. H. Pool, B. D. C. Shields and Dr. L. A. K. Staveley), 831
Argon-39 in the Sikhote-Alin Meteorite Fall (E. L. Fireman), 1613
Argon—Alcohol Counters : Role of Photons in (Dr. P. Mortier, J. Demuynck and O. Segaert), 1327
Arid Zone Research, No. 10, Climatology—Reviews of Research (Unesco), 1443
Arid Zones : Salinity Problems in (Unesco and the Iranian Government Symposium on), 1378
Arima, K., and others : Yeasts (edited by W. Roman), *review* by R. B. Gilliland, 798
Arison, R. N., and others : Antimitotic Activity of 5-Tertiary Butyl Benzimidazolone, *erratum*, 238
Arizona Meteorite Crater : Distribution of Meteoritic Debris about the (J. S. Rinehart), 1777
Arkell, Dr. W. J. : *Obituary* by A. G. Brighton, 1373
Armament Research and Development Establishment, Fort Halstead : Symposium on Real Gas Effects in High Speed Flow, 671
Armitage, Dr. A. : Title of reader in the history and philosophy of science in the University of London conferred on, 89
  The Exact Sciences in Antiquity, *review*, 1097
Armored Scale Insects of California (Howard L. McKenzie), *review* by Dr. W. J. Hall, 986
Armstrong, J. J., and others: Nucleotides and the Bacterial Cell Wall, 1692
Armstrong, W. D., and others : Awarded the Moulton Medal of the Institution of Chemical Engineers, 1312
Armytage, Prof. W. H. G. : Steam Intellect Societies, *review*, 585
Arnold, Herbert, and others: Chemotherapeutic Action of a Cyclic Nitrogen Mustard Phosphamide Ester (B 518-ASTA) in Experimental Tumours of the Rat, 931
Arnot, C. L., and McDowell, C. A. : Structure and Reactivity of Electronically Excited Species (Rate of Transfer of Vibrational Energy to Translational), 321
Aroids and the Duckweeds : *Spirodela polyrrhiza*, the Link between the (Satish C. Maheshwari), 1745
Aromatic Chemistry : Developments in (Chemical Society Symposium on), 161
Aromatic Compounds in Coal : Polynuclear (Dr. D. W. van Krevelen, M. P. Groenewege and B. J. Rietveld), 640
Aromatic Hydrocarbons : Correlations between Localization Energies and Polarographic Half-Wave Potentials of (P. H. Given), 1001
Aromatic Mixtures : Gas Chromatographic Separation of *Meta*- and *Para*-Xylenes in (Dr. Albert Zlatkis, Lawrence O'Brien and Philip R. Scholly), 1794
Aromaticity : A Novel Type of (Prof. D. P. Craig and N. L. Paddock), 1052
Arregger, Mrs. C. E. : Women Graduates, *review*, 443
Arrogance : Scientific (Bishop of Portsmouth), 1107
Arsenic in Detergents (Dr. J. M. A. Lenihan, Hamilton Smith and J. G. Chalmers), 1463
Arsenic-resistant and -sensitive Strains of the Blue Tick, *Boophilus decoloratus* : Total Sulphydryl Content of Embryos of (M. E. Thompson and A. M. Johnston), 647
Art of Health Education : The Science and (Central Council for Health Education Summer School on), 1703
Artemesia : Cytology of Indian Species of (Dr. T. N. Khoshoo and S. N. Sobti), 853
Arteriosclerosis (Pulmonary), due to Serotonin (Dr. Paolo Rossi and Dr. Luciano Zamboni), 1216
Arthropod Remains from a Roman Occupation Site at St. Albans : An Assemblage of (P. L. Bradley), 435
Arthur, Dr. H. R. : Phytochemistry (Avicennin, a New Coumarin from *Zanthoxylum avicennae*), 466
Artichoke Tubers (Jerusalem) : Formation of, in Sterile Culture (Dr. Margery P. F. Marsden Ray), 1480
Artificial Earth Satellite : Determination of Radio-Propagation Elements due to an (Dr. E. Woyk-Chvojková), 1195
  End of the Second, 1107
  Life-time of an (Dr. D. C. M. Leslie), 403
  Observations in Australia of Radio Transmissions from the First (G. H. Munro and R. B. White), 104
Artificial Earth Satellite (1958α), 367
Artificial Earth Satellite (1958β) : Fourth, 810
Artificial Earth Satellite (1958δ) : Orbit of, 1507
Artificial Earth Satellites : Scientific Observations of the, and their Analysis (Prof. H. S. W. Massey and Dr. R. L. F. Boyd), 78
Artificial Epileptogenic Foci : Audiogenic Epileptic Seizures evoked in Rats by (Dr. Zd. Servít and J. Sterc), 1475
Artificial Insemination : Human, *review* by Dr. G. I. M. Swyer, 797
Artificial Insemination in the Human (Dr. A. M. C. M. Schellen), *review* by Dr. G. I. M. Swyer, 797
Artificial Satellites (Dr. E. J. Öpik), 1311
  Effect of the Earth's Equatorial Bulge on the Life-time of, and its Use in Determining Atmospheric Scale-Heights (Dr. G. V. Groves), 1055
Artificial Satellites of the Earth : Some Variation Problems connected with the Launching of (D. E. Okhotsimskii and T. M. Eneev), 1311
Artificial Stimulation of Rainfall in East Africa by means of Rockets (J. H. Brazell and C. M. Taylor), 1421
Arts, Royal Academy of : Appointment of Dr. L. A. Jordan as professor of chemistry, 531
Arundel, J. H. : Perosis and Folic Acid Antagonism in Chickens, 342
Arylsulphatases : Arylsulphate Synthesis and the (H. Baum and Dr. K. S. Dodgson), 115
Arylsulphate Synthesis and the Arylsulphatases (H. Baum and Dr. K. S. Dodgson), 115
Ascaris lumbricoides : Physiology of the Hatching of Eggs of (Prof. W. P. Rogers), 1410
Ascidians : Niobium in (Dr. D. B. Carlisle), 933
Ascites Carcinoma (Ehrlich Mouse) : A Cytoplasmic Membrane-like Fraction from Cells of the (Prof. P. C. Rajam and Anne-Louise Jackson), 1670
Ascites Tumour Cells (Ehrlich), of Mice : Calcium Exchanges of (Doreen Thomason and Raymond Schofield), 1207
Ascophyllum nodosum (L.) Le Jol. : Chemical Composition of the Brown Alga—Presence of Reducing Compounds in *Ascophyllum nodosum* (Bjørn Larsen and Arne Haug), 1224 ; Influence of Habitat on the Chemical Composition of *Ascophyllum nodosum* (Arne Haug and Bjørn Larsen), 1224
Ashby, Sir Eric : A New Deal for Australian Universities, 300
  Elected to the mastership of Clare College, Cambridge, 1039 ; work of, 1039
Ashby, Dr. Maurice : The Study of Plant Communities, *review*, 661
  A Practical Guide to Plant Sociology for Foresters and Agriculturists, *review*, 987
Asher, R. C., and Wilson, S. A. : Lamellar Compound of Sodium with Graphite, 409
Ashley, David J. B. : Occurrence of Sex Chromatin in the Basal Cells of the Epidermis and in Basal Cell Carcinomata, 427
Ashley, Dr. G. T. : Variations in Axonal Diameters of Myelinated Nerve Fibres—Apparent or Real ?, 125
Ashoub, Dr. M. A. El-R. : Effect of Two Extreme Temperatures on Growth and Tail-length of Mice, 284
Ashton, E. D. : Milk and Butterfat Recording, *review* by Helen R. Chapman, 982
Ashton, G. C. : Polymorphism in the β-Globulins of Sheep, 849
Ashton, M. H. : Title of professor of pathology in the University of London conferred on, 89
Asia and the Far East : Regional Cartographic Conference for (1955, Mussoorie, India), Vol. 2, Proceedings of the Conference and Technical Papers (United Nations), 817
Aslib : Conference on Scientific and Technical Translation, 1044
Aslib (Scottish Branch) : Annual General Meeting, 238
  Symposium on Librarians Here and There, 238
  Conference, 746
Aspartate : Formation of Oxalacetate and, from Phospho-Enol-Pyruvate in Spinach Leaf Chloroplast Extract (Lawson L. Rosenberg, John B. Capindale and F. R. Whatley, 632
Aspect (Genetic), of Somatic Cell Variation (Eleventh Biology Research Conference of the Biology Division of the Oak Ridge National Laboratory), 1706
Aspects (Biological), of Cancer (Sir Julian Huxley), *review* by Prof. P. C. Koller, 1363
Aspects (Comparative), of Haemolytic Disease of the Newborn (Dr. G. Fulton Roberts), *review*, 588
Aspects (Fundamental), of the Dehydration of Foodstuffs (Society of Chemical Industry Conference on), 387
Aspects (Metallurgical), of Semi-Conductors (Metal Physics Committee of the Institute of Metals Symposium on), 238
Aspects (Photographic), of Electron Microscopy (Scientific and Technical Group of the Royal Photographic Society and the Electron Microscopy Group of the Institute of Physics Meeting on), 1312
Aspects (Some), of the Chemistry and Toxic Action of Organic Compounds containing Phosphorus and Fluorine (Dr. Bernard Charles Saunders), *review* by Sir Rudolph Peters, 1295
Asphyxia : Response of the Adrenal Medulla of the Sheep Foetus to (Dr. R. S. Comline and Marian Silver), 283
Aspinall, Donald (Paleg, Leslie, and) : Inhibition of the Development of the Barley Spike by Gibberellic Acid, 1743
Asprey, Prof. G. F. : Professional Problems of Biologists serving Overseas (Problems of Biologists in University Colleges Overseas), 678
Asprey, Prof. G. F., and others : Effect of Gibberellin and Indoleacetic Acid on Seta Elongation in *Pellia epiphylla*, 1351
Assay of Erythropoietin in Bone Marrow Suspensions (Leslie R. Schroeder, Clifford W. Gurney and Nancy Wackman), 1537
Assay of Isotopic Nitrogen by Mass-Spectrometer (A. P. Sims and Dr. E. C. Cocking), 474
Assay of Vitamin A Oils (Prof. E. Brunius), 395
Assay (A Highly Sensitive), for Œstrogens (L. Martin and Dr. P. J. Claringbold), 620
Assay (Precise), of Carbon-14 in Small Liquid Samples : A Direct-Plating Method for the (Dr. C. C. McCready), 1406
Assay Method (A Shorter Microbiological), for Oxytetracycline and Chlortetracycline (Nyiri László), 648
Assessment (Optical Image), using Frequency Response Techniques (Imperial College of Science and Technology Summer School on), 1510
Assessment (Rapid), of Surface Radioactive Contamination (Prof. F. Behounek), 695
Assistance : Technical and Economic, 1557
Assistant Masters in Secondary Schools, Incorporated Association of : The Teaching of Mathmatics, *review* by W. J. Langford, 979
Associated Electrical Industries, Ltd., Aldermaston : SCEPTRE III Apparatus in the Research Laboratory of the, 222
Astbury, Prof. W. T. : Giant Molecules, 94
Asterionella (The Diatom), in the Krishna Estuary Region (V. S. R. Murthy and A. Venkataramaiah), 360
Asterococcus mycoides : Agar Double Diffusion Precipitation Reaction applied to the Study of (G. White), 278
Åström, Ernst (Alfvén, Prof. H., and) : Energy Spectrum of Cosmic Radiation, 330
Astronomer, H.M.'s, at the Cape of Good Hope : Report to the Secretary of the Admiralty for the Year 1956, 243
Astronomical Observatory, United States National (United States National Science Foundation and the Association of Universities for Research in Astronomy, Inc., contract for a), 236
  Appointment of Dr. Aden R. Meinel as director, 740

Astronomical Society, Royal : Gold Medal awarded to Prof. André Danjon, 531
Eddington Medal awarded to Dr. H. W. Babcock, 531
Geophysical Discussion on Radiometric and Geochemical Survey Techniques, 594
Geophysical Discussion on the Transition from the Ionosphere to Interplanetary Space, 1237
Geophysical Journal, Vol. 1, No. 1, 1376
Astronomical Union, International : Symposium No. 3, Non-Stable Stars (edited by George H. Herbig), *review* by Prof. R. O. Redman, 731
Symposium No. 4, Radio Astronomy (held at the Jodrell Bank Experimental Station, 1955), edited by H. C. van de Hulst, *review* by Dr. J. S. Hey, 1432
Astronomy at Cambridge, 740
Astronomy at the Cape of Good Hope, 243
Astronomy : Radio (edited by H. C. van de Hulst), (International Astronomical Union, Symposium No. 4, held at the Jodrell Bank Experimental Station, 1955), *review* by Dr. J. S. Hey, 1432
Astronomy (Radio-) : A Popular Account of, *review* by Dr. F. G. Smith, 980
Athenaeum : Election of Dr. Vivian Fuchs as a member under Rule 2, 1110
Athens : Annual of the British School at, No. 50 (1955), No. 51 (1956), *review* by R. M. Cook, 1560
Atkins, Dr. D. : British Pea-crabs (*Pinnotheres*), 1087
Atkins, Ian : Awarded the Pye Premium of the Television Society, 1246
Atkinson, J. R. : Cloud Physics, *review*, 1298
Atkinson, Dr. R. d'E. : The Transition from the Ionosphere to Interplanetary Space, 1238
Atlantic : Pogonophora from the (Dr. A. J. Southward and E. C. Southward), 1607
Atlantic Coast of France : *Balanus tulipiformis* Ellis on the, and an Unusual Situation for *B. amphitrite* Darwin (B. S. Kisch), 206
Atlantic (North) Treaty Organization : Nominations of national representatives on the Science Committee, 739
Atlantic (North) Treaty Organization (Combustion and Propulsion Panel of the Advisory Group for Aeronautical Research and Development) : Third Colloquium (Current Propulsion Problems), 458
Atlantic (North) Treaty Organization (Wind Tunnel and Model Testing Panel) : Meeting in Freiburg im Breisgau, 458
Atmosphere : The Diffusion of Stack Gases in the (F. H. Schmidt), 1575
Dissemination of *Verticillium albo-atrum* through the (R. R. Davies and Dr. I. Isaac), 649
Atmospheric Aerosols (Royal Meterological Society Discussion on), 1703
Atmospheric Condensation Nuclei : Third Symposium on (Cavendish Laboratory, Cambridge), 1640
Atmospheric Pollution : The Investigation of—a Report on Observations in the Year 1955-56, 1702
Atmospheric Precipitation : The Influence and Importance of Daily Weather Conditions in the Supply of Chloride, Sulphate and other Ions to Fresh Waters from (E. Gorham), 1650
Atmospheric Pulses reflected successively from the Ionosphere : Abnormal Polarization of the (Prof. S. R. Khastgir), 404
Atmospheric Refraction at Sea : Anomalous (Dr. B. M. Cwilong), 181
Atmospheric Scale-Heights : Effect of the Earth's Equatorial Bulge on the Life-time of Artificial Satellites and its Use in determining (Dr. G. V. Groves), 1055
Atmospherics : Polarization of (F. Horner), 1678 ; (Prof. S. R. Khastgir), 1679
Atolla : A New Species of (Dr. F. S. Russell), 1811
Atomic Arms Race : Dangers of the—Second Pugwash Conference, 1239
Atomic Beams : Measurement of Nuclear Magnetic Moments in (Dr. G. K. Woodgate and P. G. H. Sandars), 1395
Atomic Energy (House of Commons Debate on), 948
Atomic Energy : Geneva Series on the Peaceful Uses of—Nuclear Reactors for Research (edited by Clifford K. Beck), *review* by F. W. Fenning, 984
Peaceful Uses of (Australian Atomic Energy Commission, and others, Symposium on), 238
Peaceful Uses of (Prof. J. Rotblat), (British Association for the Advancement of Science lecture for children), 528
Peaceful Uses of (United Nations Second International Conference on), 884
Atomic Energy Agency, International : Offers of fissionable materials, radio-elements and special materials for reactors, and fellowships and training facilities, 456
Atomic Energy Applications with reference to Underdeveloped Countries (B. C. Netschert and S. H. Schurr), *review* by Sir John Cockcroft, 1167
Atomic Energy Authority (United Kingdom) : Appointment of Leonard Rotherham as a full-time member of the Central Electricity Generating Board, 20
Appointment of W. R. J. Cook as a full-time member, 311
Appointment of Dr. B. F. J. Schonland as director, 311
Organization of the, 385
Man-power in the, 439
Report of the Committee appointed by the Prime Minister to examine the Organization of certain parts of the, 439
Conference on Recent Developments in Nuclear Reactor Technology, 458
Appointment of Dr. H. Kronberger as director of research and development at the Industrial Group Headquarters at Risley, 530
Appointment of J. C. C. Stewart as a deputy managing director of the Industrial Group, 530
Appointment of J. B. W. Cunningham as director of industrial power in the Industrial Group, 530
Appointment of Dr. R. Hurst as director of the Dounreay Experimental Reactor Establishment, 530
Appointment of D. S. Mitchell as director of personnel and administration in the Industrial Group, 530
Appointment of D. W. Fry as a deputy director of the Atomic Energy Research Establishment, 531
Report of the Committee appointed by the Prime Minister to examine the Organization for Control of Health and Safety in the, 1023, 1043
Committee to advise on Training in Radiological Protection, 1442
Appointment of P. T. Fletcher as a deputy managing director, 1510
Appointment of H. V. Disney as a director of engineeering, 1510
Appointment of R. V. Moore as director of reactor design, 1510
Atomic Energy Commission (Australian) : Appointment of A. D. McKnight as full-time executive commissioner, 1246
Appointment of Sir Leslie Martin as part-time commissioner, 1246
Fifth Annual Report (1956-57), 1248
Laboratories and first Australian Nuclear Energy Reactor opened by the Rt. Hon. R. G. Menzies, 1433
Atomic Energy Commission (Australian), and others : Symposium in Sydney on Peaceful Uses of Atomic Energy, 238
Atomic Energy Commission (United States), (McCollum-Pratt Institute of the Johns Hopkins University, with support from the) : Symposium on the Chemical Basis of Heredity (edited by William D. McElroy and Dr. Bentley Glass), *review* by Prof. M. Stacey, 75
Atomic Energy Development in Australia (Prof. E. W. Titterton), 1433
Atomic Energy Insurance Conference : Second International, 1039
Atomic Energy Office : Report of the Committee appointed by the Prime Minister to examine the Organization for Control of Health and Safety in the United Kingdom Atomic Energy Authority, 1023, 1043
Atomic Energy Research Establishment : ZETA Apparatus for Controlled Thermonuclear Reactions, 217
Appointment of D. W. Fry as a deputy director, 531
Courses on Radioisotopes, 884
HAZEL, a new Zero-energy Reactor, 947
Course at the Reactor School, Harwell, 1110
First Hulton Achievement Award presented to the members of the team who created ZETA, 1182
Atomic Energy and Agriculture—a Symposium at the Atlanta Meeting of the American Association for the Advancement of Science, and co-sponsored by the Oak Ridge Institute of Studies, 1955 (edited by C. L. Comar), *review* by Dr. R. F. Glascock, 1097
Atomic Physics (Theoretical), in Copenhagen, 1767
Atomic Power : Industry and, 1039
Progress in, 458
Atomic Power Achievements (General Electric Co., Ltd.,) 1039
Atomic Safety Committee, 1442
Atomic Theory, *review* by Prof. R. Eisenschitz, 1625
Atoms (Excited Rare Gas) : Measurement of Low Vapour Concentrations by Collision with (Dr. J. E. Lovelock), 1460
Atoms (Hydrogen), in β, γ and δ Positions : Hyperconjugation due to (S. G. Beech), 1617
Atrial Muscle Fibres : Effect of Acetylcholine on the Membrane Resistance and Threshold of (Dr. Edward A. Johnson and P. A. Robertson), 910
Atrio-ventricular Node : Transmembrane Potentials of Single Fibres of the (Dr. Brian F. Hoffman, A. Paes de Carvalho and W. Carlos de Mello), 66
Attachment Coefficients (Ionizing and), and Breakdown Characteristics for Carbon Tetrafluoride : Correlation between (P. R. Howard), 645
Attack (Microbial) : Resistance of Protein—Lignin Complexes, Lignins and Humic Acids to (Prof. D. L. Lynch and Prof. C. C. Lynch), 1478
Attempt to adapt Explanted Tissues to an Anticonvulsant ('Trimedal') and to Phenobarbital (E. Holečková and Dr. Z. Servít), 1541
Attitude (Right), to Science ? : What is the (Dr. K. Mendelssohn), 88
Attitudes (Soviet and Western), to Science, 88
Attridge, J. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Atwater, H. A., and Ellickson, R. T. : Remanent Magnetization of Ancient Bricks, 404
Atwood, K. C. : Genetic Aspect of Somatic Cell Variation (Phenotype Variability in Human Erythrocytes), 1706
Atypical Forms of Tubercle Bacilli (Strain *B.C.G.*), (Dr. Stephen E. Juhasz and Edith M. Mankiewicz), 929
Atypical Guard-Hair Follicles in the Skin of the Rabbit (William E. Straile), 1604
Atz, James W. (Pickford, Grace E., and) : The Physiology of the Pituitary Gland of Fishes, *review* by Prof. J. Z. Young, 971
Aubréville, André : The Development of the West African Environment, 1581
Audiogenic Epileptic Seizures evoked in Rats by Artificial Epileptogenic Foci (Dr. Zd. Servít and J. Sterc), 1475
Audiogram : A Ripple Effect in the (E. Elliott), 1076
Auerbach, Dr. C. : Use of 'Brood Patterns' in Research on Chemical Mutagens, 754, 757
August Rats : Protection of, against Lethal Doses of a Dimethyl Homologue of Myleran by Isologous Bone Marrow (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Augustinsson, Dr. Klas-Bertil : Electrophoretic Separation and Classification of Blood Plasma Esterases, 1786
Auricchio, S., and others : Conversion of 3-Hydroxyanthranilic Acid to Quinolinic Acid in presence of Rat Liver treated with 2-Acetylaminofluorene, 624
Auroral Absorption of 18-Mc./s. Cosmic Radio Waves on February 11, 1958 (Dr. R. Fleischer), 1156
Austin, Dr. C. R., and Bishop, Dr. M. W. H. : Capacitation of Mammalian Spermatozoa, 851
Austin, Prof. G. W. : Retirement from the Goldsmiths' chair of metallurgy in the University of Cambridge, 1177 ; work of, 1177
Australia : Atomic Energy Development in (Prof. E. W. Titterton), 1433
The Biogeography of (Prof. Ronald Good), 1763
The Grasshoppers and Locusts of (Dr. J. A. G. Rehn), Vol. 1, Families Tetrigidae and Eumastacidae ; Vol. 2, Family Acrididae, Subfamily Pyrgomorphinae ; Vol. 3, Family Acrididae, Subfamily Cyrtacanthacridinae, tribes Oxyini, Spathosternini and Praxibulini, *review* by Dr. B. P. Uvarov, 1628
Observations in, of Radio Transmissions from the First Artificial Earth Satellite (G. H. Munro and R. B. White), 104
Wheat in, *review* by Dr. D. J. Watson, 730
The Wheat Industry in (Dr. A. R. Callaghan and Dr. A. J. Millington), *review* by Dr. D. J. Watson, 730
Australia (South) : Evolution of Sex in the Flowering Plants of (P. A. Parsons), 1673
Australia (Western) : The Toxic Plants of (C. A. Gardner and H. W. Bennetts), *review* by Dr. F. N. Howes, 729
Australian Acridoidea, *review* by Dr. B. P. Uvarov, 1628
Australian Atomic Energy Commission : Appointment of A. D. McKnight as full-time executive commissioner, 1246
Appointment of Sir Leslie Martin as part-time commissioner, 1246
Fifth Annual Report (1956-57), 1248
Laboratories and first Australia Nuclear Reactor opened by the Rt. Hon. R. G. Menzies, 1433

Australian Atomic Energy Commission, and others : Symposium in Sydney on Peaceful Uses of Atomic Energy, 238
Australian Conference in Radiation Biology : Second, 238
Australian Malacology, 1574
Australian Merino Sheep : A Dominant Felting Lustre Mutant Fleece-type in (Dr. B. F. Short), 1414
Australian Sheep Blowfly : Resistance to Dieldrin in *Lucilia cuprina* Wied, the (G. J. Shanahan), 860
Australian Universities : A New Deal for (Sir Eric Ashby), 300
  Report of the Committee on, 300
Autographs : Fibrinolysis (Dr. A. S. Todd), 495
Automatic Control (A *Scientific American* Book), *review* by J. F. Coales, 661
Automatic Control, British Group for Computation and : Constitution of, 237
  Election of T. E. Goldup as chairman, 237
Automatic Control, International Federation of : Ratification of the constitution, 1377
  First International Congress for Automatic Control, 1378
Automatic Digital Computing Machines : Programme Design for (Mathematical Laboratory of the University of Cambridge Summer School in), 1246
Automatic Measurement of Quality in Process Plants (Society of Instrument Technology Conference on), 165
Automation : British Group for Engineering Applications of (Constitution of Group *A* of the British Conference on Automation and Computation), 672
Automation in the Post Office (E. Marples), 92
Automation in the Post Office—Technology and Humanism, 71
Automation and Computation, British Conference on : To be organized in three sections—(A) the British Group for the Engineering Applications of Automation, (B) the British Group for Computation and Automatic Control, and (C) the British Group for the Sociological and Economic Aspects of Automation Techniques, 236
  Constitution of Section *A* (British Group for the Engineering Applications of Automation), 672
  Constitution of Section *B* (British Group for Computation and Automatic Control), 237
  Election of T. E. Goldup as chairman of Section *B*, 237
Automation (Full), of the Telephone System (White Paper on), 71
Autoradiographic Visualization of Synthesis of Deoxyribonucleic Acid in Tissue Culture with Tritium-labelled Thymidine (H. Firket and W. G. Verly), 274
Autoxidation of Pyrogallol—General Characteristics and Inhibition by Catalase (S. M. Siegel and B. Z. Siegel), 1153
Auxin : Complementary Action of Gibberellic Acid and (P. W. Brian and H. G. Hemming), 1575
Auxin and Sex Balance in a Long-Day Plant : Photoperiod, (Prof. J. Heslop-Harrison and Y. Heslop-Harrison), 100
Auxins in Immature Maize Kernels (Dr. Kathleen R. Farrar, Joyce A. Bentley, G. Britton and S. Housley), 553
Aves : Tratado de Doenças das (J. Reis e P. Nóbrega), 4 vols., *review* by Dr. C. A. Wright, 1756
Avi-Dor, Y., and Miller, Sh. : Effect of Electrolytes on the Uptake by Bacteria of Labelled Glutamate, 190
Avian Haemoglobins : Electrophoretic Behaviour of (R. Datta, Jharna Ghosh and Prof. B. C. Guha), 1204
Avidin : Antigenicity of (Dr. D. V. Siva Sankar, Barbara J. Cossano, Henry W. Theis and Carol R. Marks), 619
Avigad, Gad : Influence of Introduction of a Fructosyl Group into Galactosylglucoses on their β-Galactosidase-inducing Activity, 554
Avoidance of 'Secondary Disease' in Radiation Chimaeras (D. W. H. Barnes, P. L. T. Ilbery and Prof. J. F. Loutit), 488
Award for original work or services in connexion with Blood Transfusion (Oliver Memorial Fund), 1771
Awards for 1958-59 for Research on Leumaemia and Allied Diseases (Lady Tata Memorial Fund), 1703
Awards : Leverhulme Research (First Report of the Leverhulme Trust on the), 951
Awards (Technological), National Council for : Report for December, 1955, to July, 1957, 814
Axonal Diameters of Myelinated Nerve Fibres : Variations in—Apparent or Real ? (Dr. G. T. Ashley), 125 ; (Dr. P. L. Williams and Dr. C. P. Wendell-Smith), 125
Aylward, Dr. Francis, and Nichols, B. W. : Isolation of β-Sitosterol-D-Glucoside from Groundnut Phospholipids, 1064
8-Azaguanine : Effects of, on the Synthesis of Protein and Nucleic Acids in *Bacillus cereus* (Prof. H. Chantrenne and S. Devreaux), 1737
Azide : Genetic Effects of Carbon Monoxide, Cyanide and, on *Drosophila* (Dr. A. M. Clark), 500
Azo Dye Carcinogenesis of Rat Liver : Effect of Splenectomy on (Dr. Muneaki Takashi and Shoji Iwase), 1211
Azotobacter vinelandii : Silicate in the Metabolism of (Dr. R. F. Keeler and J. E. Varner), 127
Azzi, Prof. Girolamo : Agricultural Ecology, *review* by A. D. Bradshaw, 443

BABCOCK, Dr. H. W. : Awarded the Eddington Medal of the Royal Astronomical Society, 331
Bacci, Prof. G., and Razzauti, A. : Protogynous Hermaphroditism in *Coris julis* L., 432
Bachrach, U., and others : Formation of β-Alanine from Spermine and Spermidine by *Pseudomonas aeruginosa*, 700
Bacilli (Tubercle), Strain *B.C.G.* : Atypical Forms of (Dr. Stephen E. Juhasz and Edith M. Mankiewicz), 929
Bacillus sp. : An Antibiotic produced by a, active against *Haemophilus pertussis* (Dr. A. Ian Tiffin), 907
Bacillus cereus : Effects of 8-Azaguanine on the Synthesis of Protein and Nucleic Acids in (Prof. H. Chantrenne and S. Devreux), 1737
Bacillus subtilis : Mycobacillin, a New Antifungal Antibiotic produced by (S. K. Majumdar and Dr. S. K. Bose), 134
Bacillus (An Acid-free), Isolated from the Lungs of the Cape Hyrax, *Procavia capensis* (Pallas), (J. C. Wagner, Dr. G. Buchanan, V. Bokkenheuser and Shirley Leviseur), 284
Back, Avigdor (Guttman, Ruth, and) : Effects of Kinetin on Cell Division in *Paramecium caudatum*, 852
Back Grant of the Royal Geographical Society awarded to Ingénieur-en-Chef Bertrand Imbert, 810
Backett, Dr. E. Maurice : Appointed professor of social medicine in the University of Aberdeen, 740 ; work of, 740
Bacteria : Effect of Electrolytes on the Uptake by, of Labelled Glutamate (Y. Avi-Dor and Sh. Miller), 190
  Fixation of, for Electron Microscopy (E. H. Mercer), 1550
  Interaction of Phenolic Compounds with (Dr. A. H. Beckett, Dr. S. J. Patki and Ann E. Robinson), 712
  Photosensitization of, by Furocoumarins and related Compounds (Dr. W. L. Fowlks, D. G. Griffith and Evelyn L. Oginsky), 571
  Plant Diseases due to (Dr. W. J. Dowson), second edition, *review* by W. C. Moore, 1094
Bacteria (Gram-Negative) : Some Changes in the Surface Structure of, induced by Penicillin Action (Dr. M. R. J. Salton and Dr. F. Shafa), 1321
Bacteria (Photosynthetic) : Inhibition of Carotenoid Synthesis by—Specific Inhibition of Carotenoid Synthesis in a Photosynthetic Bacterium and its Physiological Consequences (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250 ; Suppression of Carotenoid Synthesis and its Effect on the Activity of Photosynthetic Bacterial Chromatophores (Dr. R. C. Fuller and I. C. Anderson), 252
Bacteria (Soft Rot) : Occurrence of, in Scottish Soils (Dr. D. C. Graham), 61
Bacteria (Soil) : Occurrence of D-Acylase in (Prof. Yukio Kameda, Etsuko Toyoura and Yukio Kimura), 1225
Bacterial Antigen : Antibody Production by Lymphocytes after *in vitro* Contact with, and Transfer to New-born Rabbits (Dr. Miroslav Holub), 122
Bacterial Cell Separation : Chaining and Unchaining *Streptococcus faecalis*—a Hypothesis of the Mechanism of (Dr. Iwo Lominski, John Cameron and George Wyllie), 1477
Bacterial Cell Wall : Nucleotides and the (J. J. Armstrong, Prof. J. Baddiley, Dr. J. G. Buchanan and Dr. B. Carss), 1692
Bacterial Chromatophores (Photosynthetic) : Suppression of Carotenoid Synthesis and its Effect on the Activity of (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Dr. R. C. Fuller and I. C. Anderson), 252
Bacterial Cultures (Aged) : Occurrence and Filterability of Protoplast-like Elements in (Dr. J. Sinkovics), 566
Bacterial Deoxyribonucleic Acid : Antigenicity of a (Dr. John H. Phillips, Prof. Werner Braun and Dr. Otto J. Plescia), 573
Bacterial Dissimilation of Indoleacetic Acid—a New Route of Breakdown of the Indole Nucleus (Michael H. Proctor), 1345
Bacterial Enzymes : Lysis of Fungal Mycelia by (Koki Horikoshi and Sigeji Iida), 917
Bacterial Oxidation of Lactose and Melibiose (Dr. B. P. Eddy), 904
Bacterial Plant Pathogens : The Study of, *review* by W. C. Moore, 1094
Bacterial Polysaccharides : Contribution of Deoxymethylpentoses to the Serological Specificity of some, and the Recognition of a New Sugar, Paratose (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
Bacterial Protoplasts (Dr. S. Brenner, Dr. F. A. Dark, Dr. P. Gerhardt, Dr. M. H. Jeynes, Dr. O. Kandler, Dr. E. Kellenberger, Dr. E. Klieneberger-Nobel, Dr. K. McQuillen, Dr. M. Rubio-Huertos, Dr. M. R. J. Salton, Dr. R. E. Strange, Dr. J. Tomcsik and Dr. C. Weibull), 1713
Bacterial Respiration : Streptomycin and (F. L. Jackson), 281
Bacterial and *L* Forms of *Proteus vulgaris* : Cell Wall Composition in (Dr. O. Kandler, A. Hund and C. Zehender), 572
Bactericidal Action (Anomalous), of Bromamine (J. K. Johannesson), 1799
Bactericidal Activity of Macrophages *in vitro* against *Escherichia coli* (Dr. D. Rowley), 1738
Bactericidal Resorcinols : Enhancement of Mouse-virulence of Group *A* Streptococci by (John Cameron), 919
Bacteriology (Applied), Society for : Annual Meeting and Summer Conference, 1182
Bacteriophage *in vitro* : Increased Rate of Plaque-type and Host-range Mutation following Treatment of, with Ethyl Methane Sulphonate (Dr. Anthony Loveless), 1212
Bacterium (Photosynthetic) : Specific Inhibition of Carotenoid Synthesis in a, and its Physiological Consequences (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250
Badcoe, S. R., and others : Long-Distance Radio Propagation above 30 Mc./s. (The Mechanism of Propagation responsible for the Permanent Residual Fields), 1186
Baddiley, Prof. J., and others : Nucleotides and the Bacterial Cell Wall, 1692
Baden-Powell, D. F. W. : The Cromer Forest Bed—Preglacial or Interglacial ? 1813
Bagdasarian, Michael : A New Transaminase of *Corynebacterium diphtheriae*, 1399, *erratum*, 1640
Baghdad Pact Nuclear Centre : Appointment of H. A. C. McKay as director, 529
Bagnall, Dr. K. W. : Awarded the Corday-Morgan Medal and Prize for 1956 of the Chemical Society, 947
Bags (Plastic) : Propagation of Cacao in (R. Nichols), 580
Bagworm (Wattle) : Occurrence of Strains of the Nuclear Polyhedral Virus of the (L. L. J. Ossowski), 648
Bailey, C. H. : Biology for Non-Biologists, 392
Bailey, Sir Edward : *Obituary* of Prof. Léon W. Collet, 17
  Geological Interpretation of Marine Sediments, *review*, 658
Bailey, Dr. R. W. : Acidity of Sprays used in Detecting Ketohexoses on Paper Chromatograms, 836
Bailey, Prof. W. N. : Retirement from the chair of mathematics at Bedford College, 670 ; work of, 670
Bain, T. : Recent Advances in Polymer Technology (Radiation Processing), 1305
Bain, W. C. : Long-Distance Radio Propagation above 30 Mc./s. (Research on Ionospheric Scattering), 1185
Bainbridge, A. E., and Wilson, Dr. A. T. : Isotope Enrichment in a Continuous Feed Process, 1729
Baird, Donald : Reptile Faunules of the Upper Brunswick Formation (Newark Series, Upper Triassic), 1575
Baker, Dr. J. F. (Pippard, Dr. A. J. S., and) : The Analysis of Engineering Structures, third edition, *review* by Prof. W. F. Cassie, 1498
Baker, J. L. : *Obituary* by Dr. L. R. Bishop, 809

Baker, Dr. J. R. : Elected a Fellow of the Royal Society, 881
  Leucocytozoon spp. in some Hertfordshire Birds, 205
  Practical Modern Microscopy, *review*, 589
  Freedom in Research, 1107
Baker, W. P. : Influence of the Ambient Medium on the Breakdown Voltage of Sheet Insulating Materials, 1726
Bakewell, Robert—Pioneer Livestock Breeder (Prof. H. Cecil Pawson), *review* by G. E. Fussell, 868
Baking Industries Research Association, British : Appointment of Dr. G. A. H. Elton as director of research, 949
Bakshi, B. K., and others : Relationship between *Merulius lacrymans* and *M. himantioides*, 1011
Balachandran, N. K., and others : Periodicity in Sea Roughness and Origin of Microseisms, 646
Balance in Multipoint Linkage Programmes : Number of Mating Types required for (A. W. F. Edwards), 503
Balanus amphitrite : A Freshwater Mutant of (Dr. H. H. Shatoury), 790
B. amphitrite Darwin : *Balanus tulipiformis* Ellis on the Atlantic Coast of France and an Unusual Situation for (B. S. Kisch), 206
Balanus tulipiformis Ellis on the Atlantic Coast of France and an Unusual Situation for *B. amphitrite* Darwin (B. S. Kisch), 206
Balch, Dr. C. C. : The Birds of Reading (Presidential Address to the Zoological Section of the South-Eastern Union of Scientific Societies), 1708
Balchin, Prof. W. G. V. : Appointed a member of the Committee for Wales of the Nature Conservancy, 1312
Baldwin, Prof. Ernest : Ureogenesis in Elasmobranchs, 1591
Baldwin, Dr. R. W., and others : Carcinogenicity of Tricycloquinazoline, 838
Baldwin Instrument Co., Ltd., Dartford : Nucleonic Thickness Gauge, 457
Bale, W. D., and others : Interaction in Ionic Solutions (Study of various Ion Association Equilibria by Spectrophotometry), 241
Ballard, W. E. : Elected president of the Institution of Metallurgists, 1576
Balss, Prof. Heinrich (Dr. J. Théodorides), 531 ; (Dr. Isabella Gordon), 531
Baltzer, Prof. F. (Chen, Dr. P. S., and) : Species-Specific Differences in Free Amino-Acids and Peptides in Sea-Urchin Eggs and Embryos (Pure Species and Hybrids), 98
Balzola, F., and others : A Special Reaction of the Complement Fixation Test applied to the Study of Tumours, 622
Bananas : Blackhead Toppling Disease of (Dr. R. Leach), 204
Banbury, G. H. : Phototropism of *Phycomyces* Sporangiophores, 358
Bancroft, Prof. John B., and Kaesberg, Prof. Paul : Size and Shape of Alfalfa Mosaic Virus, 720
Band Theory of Metals and the Structure of the Fermi Surface (Physical Society Conference on), 525
Band-width of Short-lived Transients in Solar Noise : Duration and (T. de Groot), 1676
Bandyopadhyay, P. (Dutt, Dr. N. K., and) : Anomalous Behaviour of β-Diketone Complexes of the Lanthanons in Organic Solvents, 1682
Bangham, Dr. A. D., and Blumberg, Dr. B. S. : Distribution of Electrophoretically Different Haemoglobins among some Cattle Breeds of Europe and Africa, 1551
Bangham, Dr. A. D., and Lehmann, Dr. H. : 'Multiple' Haemoglobins in the Horse, 267
Banks, Olive, and Scott, Dr. W. M. : Men, Steel and Technical Change, 1180
Bano, Miss L. : Partial Inhibitory Effect of *Plistophora culicis* on the Sporogonic Cycle of *Plasmodium cynomolgi* in *Anopheles stephensi*, 430
Baptista, H. L., and others : A New Class of Antibiotic Salts of Reduced Toxicity, 182
Baranowska, Miss J. (Shugar, Dr. D., and) : Quantitative Gram-staining with Labelled Iodine, 357
Barber, D. R. : Polarization of the Integrated Light of Comet Arend-Roland, 1956*h*, 760
Barber, Dr. Mary : Appointed to the University of London readership in clinical bacteriology at the Postgraduate Medical School of London, 459
Barclay Medal for 1958 of the British Institute of Radiology awarded to Dr. G. M. Ardran, 531
Barclay Prize for 1958 of the British Institute of Radiology awarded (posthumously) to the late Dr. Trevor Griffiths, 531
Bardsley Bird and Field Observatory : Report for 1956, 949
Barendrecht, E. : A Rotating Hanging Mercury-Drop Electrode, 764
Barer, R. : Lecture Notes on the Use of the Microscope, second edition, *review* by S. Bradbury, 801
Barghorn, E. S. : Salt Marshes (Bolyston Street Peat at Boston and the Peat of the Barnstaple Marsh could be used both Archaeologically and by Radiocarbon Dating to Measure Rate of Marsh Development in relation to Land Subsidence), 1513
Barigozzi, C. : Genetic Aspect of Somatic Cell Variation (Formation of the Melanotic Pseudo-tumours in *Drosophila*), 1706
Barker, Edwin : Scientific and Technological Education, *review* by T. H. Hawkins, 517
Barker, Dr. G. C., and others : Use of Faradaic Rectification for the Study of Rapid Electrode Processes, 247
Barker, Jennifer M. : Variations in the Erythrocyte Potassium and Sodium in the Possum, *Trichosurus vulpecula*, 492
Barker, Dr. K. H. : *Obituary* by Prof. C. C. Butler, 1038
Barker, R. F. : Radioisotopes and Glass (Investigation of Glass Flow in Furnaces by Radioactivation Methods), 319
  Radioisotopes and Glass (The Assessment by Tracer Methods of Mixing during Sand Treatment), 319
Barker, Dr. S. A., and others : Structure of an Acidic Polysaccharide elaborated by *Aerobacter aerogenes*, 999
Barley : Effects of Heat and Loss of Moisture on the Dormancy of (P. D. Hewett), 424
Barley Grain : Influence of the Enclosing Protective Tissues on the Metabolism of (F. S. Mitchell, F. Caldwell and G. Hampson), 1270
Barley Roots : Carbon Dioxide Fixation in Particulate Preparations from (Dr. L. C. T. Young and Janet S. D. Graham), 1071
Barley Spike : Inhibition of the Development of the, by Gibberellic Acid (Leslie Paleg and Donald Aspinall), 1743
Barley—Climate Relationships (M. Y. Nuttonson), *review* by Dr. E. C. Humphries, 1689
Barling, Elizabeth : At the Annual Conference of the British Institute of Management (A Woman's Approach to Management), 308
Barlow, A. J. E. (Chattaway, Dr. F. W., and) : Fluorescent Substances produced by Dermatophytes, 281
Barlow, Prof. H. M., and others : A New Microwave Mixer, 1008
Barnard, Prof. G. A. : Awarded the Guy Medal in silver of the Royal Statistical Society, 1703
Barnard, Dr. T. : Awarded a Fellowship by the Leverhulme Trust, 1442
Barnes, D. W. H., and others : Avoidance of 'Secondary Disease' in Radiation Chimaeras, 488
Barnes, H., and Gonor, J. J. : Neurosecretory Cells in some Cirripedes, 194
Barnes, Dr. R. S. : Vacancies and other Point Defects in Metals and Alloys (Experiments on Copper Bombarded with α-Particles), 451
Barnes, Dr. Virgil E. : Origin of Tektites, 1457
Barnett, Dr. E. de Barry, and Wilson, Dr. C. L. : Inorganic Chemistry, second edition, *review* by Prof. J. R. Partington, 1097
Barnothy, J. M. (Barnothy, M. F., and) : Biological Effect of a Magnetic Field and the Radiation Syndrome, 1785
Barnothy, M. F., and Barnothy, J. M. : Biological Effect of a Magnetic Field and the Radiation Syndrome, 1785
Barometric Pressure and Altitude (E. S. Williams), 1527
Baron, Dr. M. O., and others : Comparison of Effect of Lysergic Acid Diethylamide with Potassium Cyanide and other Respiratory Inhibitors on the Siamese Fighting Fish, 1136
Baron, Samuel, and others : Adaptation to Serum-free Medium by a Phagocytic Cell Strain derived from a Murine Lymphoma, 1343
Barrer, Prof. R. M. : Dispersion Energies in Porous Sorbents, 176
Barron, Dr. T. H. K. : Appointed lecturer in physical and inorganic chemistry at the University of Bristol, 602
Barrow, N. J. : Effect of the Nitrogen and Sulphur Content of Organic Matter on the Production of Ammonium and Sulphate, 1806
Barry, Dr. J. M., and Ichihara, Elizabeth : Biosynthesis of Gramicidin-*S*, 1274
Bartholomew, Dr. G. A. : Photoperiodism in Plants and Animals (Photoperiodic Effects in certain Reptiles), 536
Bartlett, Sir Frederic : Thinking, an Experimental and Social Study, *review* by Prof. George Humphrey, 1629
Bartniski-García, S., and Casas-Campillo, Dr. C. : Some Nutritional Requirements of *Colletotrichum coffeanum* Noack, 565
Barton, Dr. A. W. : Science in Schools, 1371
Barua, P. K. (Wood, D. J., and) : Species Hybrids of Tea, 1674
Baruah, Prof. B. D. : Demonstration of Antibody in Passive Transplantation Immunity to Crocker Tumour in Mice, using the Schultz-Dale Technique, 624
Basal Cell Carcinomata : Occurrence of Sex Chromatin in the Basal Cells of the Epidermis and in (David J. B. Ashley), 427
Basal Cells of the Epidermis and in Basal Cell Carcinomata : Occurrence of Sex Chromatin in the (David J. B. Ashley), 427
Bascombe, Dr. K. N., and Bell, R. P. : Interaction in Ionic Solutions (Variation of Hammett Acidity Functions with concentration in Concentrated Strong Acids), 241
Bases (Physical), of the Electrohysterogram (Dr. S. D. Larks), 67
Basic Polypeptides and Proteins (Biologically Active) : Interaction between Synthetic Polyglucose Sulphate and (Dr. P. T. Mora and B. G. Young), 1402
Basic Research in the United States, 679
Basic Research—a National Resource (United States National Science Foundation), 679
Basic Zoology, *review* by Prof. John E. Harris, 1430
Basicities of N-Alkyl Anilines (H. T. Taylor), 265
Basidiomycetes (Wood-destroying) : A Simple Technique for producing Fruit Bodies of (N. Tamblyn and E. W. B. Da Costa), 578
Basinski, Z. S. : Melting, Diffusion and related Topics (Work Hardening of Face-centred Cubic Metals), 320
Basis of Anglo-American Co-operation, 1091
Basis (Cellular), for the Induction of Morphological Structures (Dr. R. Brown), 1546
Basis (A Possible), for the Anti-inflammatory Activity of Salicylates and other Non-Hormonal Anti-Rheumatic Drugs (S. S. Adams and R. Cobb), 773
Basis (A Possible), for Phyto-Immunity (D. H. Taysum), 174
Basophilic Cytoplasm : Affinity of Neutral Red for Cells with (Dr. Winfield S. Morgan), 1132
Basque (Spanish), and Nigerian African Populations : Haptoglobin Types in British, (Dr. A. C. Allison, Dr. B. S. Blumberg and Mrs. ap Rees), 824
Bass, Dr. R. : Physics of Water and Ice (Lattice Defects in relation to the Mechanical Relaxation of Ice), 381
Bassett, Dr. E. G. : Gestational Changes in Connective Tissue in the Ewe, 196
Bassham, Dr. J. A., and Calvin, Prof. M. : The Path of Carbon in Photosynthesis, *review* by Dr. C. P. Whittingham, 1231
Bastick, Dr. R. E. : Radioisotopes and Glass (Development of Glasses for Use with Radioisotopes and other Sources of Radiation), 318
Basu, Dr. N. K., and Sarkar, B. : Isolation of Reserpine from *Vinca rosea* Linn., 552
Bat Erosion as a Factor in Cave Formation (W. A. King-Webster and J. S. Kenny), 1813
Bates, Prof. D. R. (edited by, in association with Moore, Patrick) : Space Research and Exploration, *review*, 1299
Bates, Prof. Marston, and Humphrey, Dr. Philip S. (edited by) : The Darwin Reader, *review* by Dr. G. S. Carter, 970
Battelle Memorial Institute (compiled by) : Semiconductor Abstracts, Vol. 3, 1955 (edited by E. Paskell), *review* by Dr. J. R. Tillman, 1168
Batten, Prof. R. L. : Silicified Permain Fossils from Texas and New Mexico —Pleurotomariacea, 1639
Baudouin, H.M. King : Honorary membership of the Iron and Steel Institute accepted by, 1378
Bauer, Siegfried J. (Daniels, Fred B., and) : Measurement of the Ionospheric Faraday Effect by Radio Waves reflected from the Moon, 1392
Baum, H., and Dodgson, Dr. K. S. : Arylsulphate Synthesis and the Arylsulphatases, 115
Bawden, F. C. : Biological Productivity of Britain, 83
  Appointed director of the Rothamsted Experimental Station, 89, 158 ; work of, 158
Bayley, S. T. (Setterfield, G., and) : Mechanism of Deposition and Extension of Primary Cell Walls, 530

- Bazzard, G. H. (Minnis, C. M., and) : Solar-Flare Effect in the *F*2-Layer of the Ionosphere, 690
  - Similarities in the Characteristics of Solar Radiation at λ10.7 cm. and in the Far Ultra-violet, 1796
- B.B.C. : Handbook for 1958, 293 ; *review*, 445
  - Engineering Monograph No. 12, An Improved 'Roving Eye' (T. Worswick and G. W. H. Larkby), 1046
  - Engineering Monograph No. 13, The B.B.C. Riverside Television Studios—the Architectural Aspects (E. A. Fowler), 1046
  - Engineering Monograph No. 14, The B.B.C. Riverside Television Studios—some Aspects of Technical Planning and Equipment (H. C. Nickels and D. M. B. Grubb), 1046
  - Reith Lectures for 1958 (Prof. A. C. B. Lovell), 1378
  - VERA (Vision Electronic Recording Apparatus), 1174

- Benzimidazolone (5-Tertiary Butyl) : Antimitotic Activity of (Dr. H. C. Stoerk, R. N. Arison and J. E. Hawkins, jun.), *erratum*, 238
- Bergel, Prof. F., and others : A Model System for Cysteine Desulphydrase Action—Pyridoxal Phosphate—Vanadium, 1654
- Bergeron, Prof. Tor : Elected to honorary membership of the Royal Meteorological Society, 1375
- Bergquist, P. L. : Effect of Potassium Cyanide on Apparent Free Space in a Brown Alga, 1270
- Berkner, Dr. L. V. : Elected president of the International Scientific Radio Union, 465
- Bernal, Prof. J. D. : Physics of Water and Ice, 380
- Bernstein, A. (Pletscher, A., and) : Increase of 5-Hydroxytryptamine in Blood Platelets by Isopropyl-isonicotinic Acid Hydrazide, 1133
- Berry, Dr. B. S. : Vacancies and other Point Defects in Metals and Alloys (Energies for Diffusion in Quenched Aluminium 4 per cent Copper Alloy), 450
- Berry Enlargement in Seedless Grapes of *Vitis vinifera* : Effect of Gibberellic Acid on Fruit Set and (Dr. Robert J. Weaver), 851, *erratum*, 1110
- Bertelsen, Dr. E. : A New Type of Light Organ in the Deep-Sea Fish *Opisthoproctus*, 862
- Bertelson, P. : At the thirteenth International Congress of Applied Psychology (Response Times to Stimuli varying in the Probability of their Appearance), 1579
- Bertram, Dr. G. C. L. : Arctic and Antarctic, *review*, 729
- Bertrand, G. : Appointed honorary president of the French National Committee of Biochemistry, 1444
- Beryllium (Polycrystalline) : Occurrence of Beryllium Oxide in (V. D. Scott and Dr. H. Wilman), 902
- Beryllium Oxide : Occurrence of, in Polycrystalline Beryllium (V. D. Scott and Dr. H. Wilman), 902
- Besicovitch, Prof. A. S. : Retirement from the Rouse Ball chair of mathematics in the University of Cambridge, 528 ; work of, 528
- Bessemer Gold Medal for 1958 of the Iron and Steel Institute awarded to W. F. Cartwright, 885
- Bessis, Dr. M. : Awarded a grant (renewal) from the Lady Tata Memorial Fund, 1703
- Bessis, Dr. M., et autres : Traité de Microscopie—Instruments et Techniques, *review* by Dr. John R. Baker, 589
- β-Alanine : Formation of, from Spermine and Spermidine by *Pseudomonas aeruginosa* (Dr. S. Razin, U. Bachrach and I. Gery), 700
- β-Counter : Correction for the Gamma-Ray Sensitivity of the, in the Standardization of Cobalt-60 by the Beta-Gamma Coincidence Method (B. Owen and R. A. Lloyd), 396

β-Cytomembrane (Plasma Membrane) : Occurrence of Foldings of, in Cells of Pig's Carpal Organ as revealed by Electron Microscopy (K. Kurosumi and T. Kitamura), 489
β-Diketone Complexes of the Lanthanons in Organic Solvents : Anomalous Behaviour of (Dr. N. K. Dutt and P. Bandyopadhyay), 1682
β-Emitters (Pure) : Application of the Kurie Plot to the Standardization of (R. A. Lloyd), 1055
β-Galactosidase-inducing Activity : Influence of Introduction of a Fructosyl Group of Galactosylglucoses on their (Gad Avigad), 554
β-Globulin Locus (Serum), in Humans : Third Allele at the (Dr. O. Smithies), 1203
β-Globulins of Sheep : Polymorphism in the (G. C. Ashton), 849
β-Glucuronidase, Lipase and Esterase in the Testis of the Cryptorchid Rat (Dr. Masando Hayashi, Kazuhiro Ogata, Takuro Shiraogawa and Osamu Kawase), 186
β-Hydroxyleucine, and γ-Methylproline from the Hydrolysis of a Natural Product : α-Aminoisobutyric Acid, (Prof. G. W. Kenner and R. C. Sheppard), 48
β-Mercaptoethanol : Effects of, on Morphogensis in Amphibian Eggs (Prof. J. Brachet), 1736
β_1-Metal-combining Globulin : Method of Isolating the, from Human Blood Plasma (E. W. Boettcher, P. Kistler and Prof. Hs. Nitschmann), 490
β-Oxidation of ω-(3-Indolyl) alkanecarboxylic Acids in Plant Tissues (Dr. C. H. Fawcett, Prof. R. L. Wain and Dr. F. Wightman), 1387
β-Sitosterol-D-Glucoside : Isolation of, from Groundnut Phospholipids (Dr. Francis Aylward and B. W. Nichols), 1064
β-γ Coincidence Method : Correction for the Gamma-Ray Sensitivity of the Beta-Counter in the Standardization of Cobalt-60 by the (B. Owen and R. A. Lloyd), 396
Bett, Dr. W. R. : Vaccination and Inoculation, *review*, 1690
Beutler, Dr. Ernest : Iron Content of Haemoglobin in Iron Deficiency, 837
Beuzenberg, E. J. (Hair, Dr. J. B., and) : Chromosomal Evolution in the Podocarpaceae, 1584
Bevan, E. A., and Kemp, R. F. O. : Stipe Regeneration and Fruit-body Production in *Collybia velutipes* (Curt.) Fr., 1145
Bevington, Dr. J. C. : Appointed to a senior lectureship in chemistry at the University of Birmingham, 1181
Bézier, Denise (Charlot, Prof. G., and) : Quantitative Inorganic Analysis (translated by Dr. R. C. Murray), *review* by C. O. Harvey, 869
Beznák, Prof. A. B. L. : Effect of Acetylcholinesterase on the Surviving Frog Heart, 1190
Bhaduri, J. L., and others (edited by) : H. K. Mookerjee Memorial Volume of the Proceedings of the Zoological Society, Calcutta, *review* by Dr. A. Glucksmann, 589
Bharucha, Prof. F. R., and DeLeeuw, Dr. W. C. : A Practical Guide to Plant Sociology for Foresters and Agriculturists, *review* by Maurice Ashby, 987
Bhaskaran, S., and Venkataraman, G. S. : Occurrence of a Blue-Green Alga in the Nodules of *Trifolium alexandrinum*, 277
Bhatnagar, Colonel S. S. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Bhattacharya, Dr. P. C. : Physics in Indian Universities, 23
BHC Dust applied to Soil : Effect on Earthworm and Diptera Populations of (Jerzy J. Lipa), 863
Bhide, Prof. V. G. : Spiral Pits on Silicon Carbide, 1006
Bibliography of Natural History, Society for the : Election of Officers, 1246
Bibliography of the Order Mysidacea (Joan Gordan), 457
Bicarbonate (Carbon Dioxide-) Mixtures : Some Effects of, on the Oxidation and Reduction of Cytochrome *c* by *Ricinus* Mitochondria (D. S. Bendall, Dr. S. L. Ranson and D. A. Walker, 133
Bickerton, Dr. R. J. : Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions (Scaling Laws for Stabilized Discharges), 805
Bidwell, R. G. S. : Metabolism of Marine Flagellates, 1769
Bier, M., and others : Acetylation of Trypsin in Organic Solvents, 414
Bilbey, Dr. D. L. J., and others : Effect of various Stilbene Compounds on the Phagocytic Activity of the Reticulo-Endothelial System, 1538
  Effect of certain Polyphenylated Aliphatic Hydrocarbons on the Phagocytic Activity of the Reticulo-Endothelial System, 1804
Bile Pigments (Common) : The IX-α Structure of the (Prof. C. H. Gray, Dr. D. C. Nicholson and R. A. Nicolaus), 183
Biliverdin in the Eggs of *Nereis fucata* (J. Green and R. Phillips Dales), 1412
Bingley, F. J. : The Natural Resources of the Country and their Value for Teaching and Research (The Initial Training of Field Workers), 1314
Binuclear Complexes of Chromium and Iron : Magnetic Properties of some (A. Earnshaw and J. Lewis), 1262
Binuclear Thiocyanato-bridged Complexes : Isomerism among (Dr. J. Chatt, L. A. Duncanson, F. A. Hart and P. G. Owston), 43
Bioassay (Dwarf Pea) : Evidence from a, for Naturally Occurring Gibberellins in the Growing Plant (A. J. McComb and Prof. D. J. Carr), 1548
Biochemical Cytology (Prof. Jean Brachet), *review* by Prof. C. H. Waddington, 1231
Biochemical Differences between Inbred and Outbred Lines of *Drasophila melanogaster* studied by Paper Partition Chromatography (H. F. Hoenigsberg and M. C. Castiglioni), 1404
Biochemical Disorders in Human Disease (edited by Prof. R. H. S. Thompson and Prof. E. J. King), *review* by Dr. C. P. Stewart, 215
Biochemical Functioning of Vitamin B_{12} (Dr. E. Lester Smith), 305
Biochemical Lesion : The, *review* by Dr. C. P. Stewart, 215
Biochemical Society : Symposium on the Biochemistry of Glutathione, 887
  Meeting at the University of Edinburgh, 1182
Biochemical Study of Nucleohistones from Different Vertebrates : A Comparative (Dr. R. Vendrely, A. Knobloch and H. Matsudaira), 343
Biochemie der Reduktone und Reduktonate : Chemie und (Prof. Dr. Hans von Euler und Prof. Dr. Bernd Eistert), *review* by Prof. E. L. Hirst, 145
Biochemistry : French National Committee of (Appointed by the Paris Academy of Sciences to represent France in connexion with the International Union of Biochemistry), 1444
  Lipid, review by Dr. F. D. Gunstone, 1028
  Pasteur's Work on Fermentation and its Significance for Present-day Studies in (Prof. T. K. Walker), 940
Biochemistry, International Union of (Science Council of Japan, under the auspices of the) : International Symposium on Enzyme Chemistry, 389
Biochemistry of Antibiotics (Papers given at the first European Symposium on), 20
Biochemstry of Glutathione (Biochemical Society Symposium on), 887
Biochemistry of Lactation : The Physiology and (Dr. S. J. Folley), *review* by Dr. J. A. B. Smith, 986
Biochemistry of the Reductones : The Chemistry and, *review* by Prof. E. L. Hirst, 145
Biochemistry and the International Union of Biological Sciences, 161
Biochemistry (Clinical) : Lecture-Demonstration Course on (Association of Clinical Biochemists), 1312
Biochemists (Clinical), Association of : Lecture-Demonstration Course on Clinical Biochemistry, 1312
Biogenesis of Condensed Tannins from Leucoanthocyanins (Dr. David G. Roux), 1454
Biogeography, an Ecological Perspective (Prof. Pierre Dansereau), *review* by Prof. J. Heslop-Harrison, 586
Biogeography of Australia (Prof. Ronald Good), 1763
Biogeography of the New Hebrides (Dr. Alan Solem), 1253
Biological Acoustics, Committee for : Formation of a, 742
Biological Aspects of Cancer (Sir Julian Huxley), *review* by Prof. P. C. Koller, 1363
Biological Characteristics : A Correlation between Electrical Surface Charge and some, during the Stepwise Progression of a Mouse Sarcoma (Mrs. L. Purdom and E. J. Ambrose, and Prof. G. Klein), 1586
Biological Effect of a Magnetic Field and the Radiation Syndrome (M. F. Barnothy and J. M. Barnothy), 1785
Biological Effectiveness (Comparative), of the Gibberellins (Dr. M. J. Bukovac and Dr. S. H. Wittwer), 1484
Biological Experiments : Machines as Models in (Dr. W. Grey Walter), 1187, 1444
Biological Materials : Freezing and Drying (Dr. Audrey U. Smith), 1694
Biological Productivity of Britain (Institute of Biology Symposium on), 82
Biological Sciences, International Union of : Formation of a Committee of the Section of Biochemistry, 161
Biological Sciences, International Union of, and the University of Neuchâtel : First Symposium on Host Specificity among Parasites of Vertebrates, *review* by Dr. G. Lapage, 1362
Biological Staining Methods (George T. Gurr), sixth edition, *review* by S. Bradbury, 988
Biological Systems : Electron Mobility in, and its relation to Carcinogenesis (Dr. R. Mason), 820
Biological Uses of the Electron Microscope (Linnean Society Symposium on), 459
Biological, Agricultural and Medical Research : Statistical Tables for (Prof. Sir Ronald A. Fisher and Dr. Frank Yates), fifth edition, *review*, 299
Biologically Active Basic Polypeptides and Proteins : Interaction between Synthetic Polyglucose Sulphate and (Dr. P. T. Mora and B. G. Young), 1402
Biologists in the Tropics, 677
Biologists serving Overseas : Professional Problems of (Institute of Biology Discussion on), 677
Biologists (Applied), Association of : Meeting on the Restoration of Agricultural and other Soils, 390
  Election of Officers for 1958-59, 1246
Biology : Brookhaven Symposium in, 11, The Photochemical Apparatus—its Structure and Function, 1042
  Life, an Introduction to (George Gaylord Simpson, Colin S. Pittendrigh and Lewis H. Tiffany), *review*, 1561
  Medical Radiation (Friedrich Ellinger), *review*, 984
  A School Course of (L. J. F. Brimble), fourth edition, *review* by R. Weatherall, 1758
  The Significance of, *review* by Dr. Alex Comfort, 1627
Biology, Institute of : Symposia No. 6, The Biology of Ageing (edited by W. B. Yapp and G. H. Bourne), *review* by Prof. P. L. Krohn, 74
  Symposium on the Biological Productivity of Britain, 82
  International Symposium on Freezing and Drying, 314, 1694
  Discussion on Professional Problems of Biologists serving Overseas, 677
Biology, Institute of (Parasitology Group) : Discussion on the Nature of Immune Responses in Parasitism, 464
Biology, Institute of, and others : Symposium on Science and Society, 603, 1183
Biology of Ageing, *review* by Prof. P. L. Krohn, 74
Biology of Ageing (Institute of Biology Symposia No. 6, edited by W. B. Yapp and G. H. Bourne), *review* by Prof. P. L. Krohn, 74
Biology for Non-Biologists (C. H. Bailey), 392
Biology of Mammals, *review* by Prof. V. C. Wynne-Edwards, 4
Biology of the Ungulates : Systematics and (Comité de Direction et d'Administration of *Mammalia* and the Société pour l'Étude et la Protection des Mammifères Colloquium on), 237
Biology and Chemistry : Mathematics and Statistics for Use in Pharmacy, (L. Saunders and R. Fleming), *review* by Dr. D. J. Finney, 147
Biology (Human), Society for the Study of : Foundation of the, 1507
Biology (Radiation) : Second Australian Conference in, 238
Biology (Theoretical) : The Strategy of the Genes, a Discussion of Some Aspects of (Prof. C. H. Waddington), *review* by Dr. J. M. Thoday, 1025
Biology Research Conference : Eleventh (Biology Division of the Oak Ridge National Laboratory), (Genetic Aspect of Somatic Cell Variation), 1706
Biometric Conference : Fourth International, 1576
Biosynthesis : The Pyridine Ring and the Problem of its (James Grimshaw and Léo Marion), 112
Biosynthesis of Gramicidin-*S* (Dr. J. M. Barry and Elizabeth Ichihara), 1274
Biosynthesis of Porphyrins from Porphobilinogen by *Rhodopseudomonas spheroides* : Intermediates in the (Dr. D. S. Hoare and Dr. H. Heath), 1592
Biosynthesis of Ribonucleic Acid and Protein : A Hypothesis for the (Dr. A. M. Michelson), 375
Biosynthesis of Triose : Formaldehyde as an Acceptor Aldehyde for Transketolase, and the (Prof. F. Dickens and D. H. Williamson), 1790
Biosynthesis of Tryptophan : A Possible Intermediate in the—1-Deoxy-1-N-*o*-Carboxyphenyl-Ribulose (Dr. F. W. E. Gibson, C. H. Doy and Shelagh B. Segall), 549
Biotopes de Haute Altitude Ruwenzori, I (J. Heinzelin and H. Mollaret), 19
Birch, Prof. A. J. : The Terpenes, review, 445
Birch, H. F. : Pattern of Humus Decomposition in East African Soils, 788
Birch, Prof. J. A. : Elected a Fellow of the Royal Society, 881
Bird (Oliver) Trust Prize for 1957 awarded to Dr. Gregory Pincus, 1703

Bird, Dr. R., and Jackson, Dorothy : Demonstration of Thyroglobulin in the Presence of other Proteins by the Precipitin Reaction, 1405
Bird Orientation : Repetition of an Experiment on (Klaus Hoffmann), 1435
Birds : Check-List of North American (Committee of the American Ornithologists Union), *review* by Dr. W. Rydzewski, 590
    Diseases of, *review* by Dr. C. A. Wright, 1756
    Folklore of (English Folklore Survey, Questionnaire No. 8 on the), 672
Birds of Eastern and North-Eastern Africa (C. W. Mackworth-Praed and Capt. C. H. B. Grant), second edition, *review*, 801
Birds of Reading (Dr. C. C. Balch), 1708
Birds (Hertfordshire) : *Leucocytozoon* spp. in some (Dr. J. R. Baker), 205
Birefringence Determination in Objects of Irregular Cross-sectional Shape and Constant Weight per Unit Length (S. C. Simmens), 1260
Birkbeck, George—Pioneer of Adult Education (Dr. Thomas Kelly), *review* by Prof. W. H. G. Armytage, 585
Birkhoff, Garrett, and Zarantonello, E. H. : Jets, Wakes and Cavities, *review* by Dr. D. Küchemann, 984
Birmingham College of Technology : Course on Statistical Quality Control and Acceptance Sampling, 1703
Bischitz, P. G., and Snell, Dr. R. S.: Effect of Testosterone and Orchidectom on the Activity of the Melanocytes in the Skin, 187
    Effect of Ovariectomy, Œstrogen and Progesterone on the Activity o the Melanocytes in the Skin, 1413
Bishop, Miss M. J. : Procedure for the Selection of Undergraduate Students, 164
Bishop, Dr. L. R. : *Obituary* of J. L. Baker, 809
Bishop, Dr. M. W. H. (Austin, Dr. C. R., and) : Capacitation of Mammalian Spermatozoa, 851
Bishop (Bernice P.) Museum, Honolulu : Insects of Micronesia, 818
Bishop's Stortford School Natural History Society : *Coturnix*, the Journal of the, 530
Bismuth Telluride and its Alloys : Thermoelectric Properties of (D. A. Wright), 834
Bisset, Sheenah K., and Alexander, W. D. : Effect of Muscular Activity prior to Venepuncture on the Respiration of Leucocytes *in vitro*, 909
Biswas, B., and others (edited by) : H. K. Mookerjee Memorial Volume of the Proceedings of the Zoological Society, Calcutta, *review* by Dr. A. Glucksmann, 589
Biswas, B. B., and Sen, Dr. S. P. : Thioctic Acid and Photosynthetic Fixation of Carbon Dioxide, 1219
Biting Behaviour of Mated and Unmated Females of an African Strain of *Aedes aegypti* (M. M. J. Lavoipierre), 1781
Biting Small Invertebrates : A Trap for Insects (Dr. W. H. R. Lumsden), 819
Bitter, Prof. Francis : Currents, Fields and Particles, *review* by G. R. Noakes, 870
Biuret Complex of Gelatin and the Mechanism of Gelation (J. Bello and J. R. Vinograd), 273
Bixbyite from Nagpur (B. L. Sreenivas), 864
Black, Dr. C. A. : Soil—Plant Relationships, *review* by Sir John Russell, 1627
Black, Dr. D. H. : Appointed director of the Armament Research and Development Establishment of the Ministry of Supply, 1444
Black, M. (Wareing, Dr. P. F., and) : Similar Effects of Blue and Infra-Red Radiation on Light-sensitive Seeds, 1420
Blackcurrant Fruits : Anthocyanins in (B. V. Chandler and K. A. Harper), 131
Blackett, Prof. P. M. S. : Science and Society, 1183
Blackhead Toppling Disease of Bananas (Dr. R. Leach), 204
Blackman, Dr. M. : Physics of Water and Ice (Study by Electron Diffraction of Epitaxial Growth of Ice on Silver Iodide Crystals), 382
Blackwell, Dr. D. E. : The Transition from the Ionosphere to Interplanetary Space, 1237
Blackwood, R. R. : Appointment as chairman of the interim Council of the new University of Victoria, 315
Blair, Dr. G. W. Scott, and Reiner, Prof. Markus : Agricultural Rheology, *review* by Dr. E. C. Childs, 1166
Blair, J. A. : Metabolic Role of Xanthopterin, 996
Blake, Dr. John B. : Benjamin Waterhouse and the Introduction of Vaccination, *review* by Dr. W. R. Bett, 1690
Blaschko, Dr. H. : *Obituary* of Prof. Claude Fromageot, 454
Blastocyst—Uterine Relationships in the Rabbit : Use of Labelled Ions in the Study of (J. P. Bennett, Dr. J. C. Boursnell and Dr. C. Lutwak-Mann), 1715
Blatt, A. H., and others (edited by) : Organic Reactions, Vol. 9, *review* by Prof. John Read, 147
Blaxter, K. L. : Nutrition and Climatic Stress (At Low Temperatures the Cow derives almost all its Excess Heat Production from Metabolism of Fat), 1644
Bleaching of Rhodopsin by Light and by Heat (Dr. Ruth Hubbard), 1126
Bleaney, Prof. B. I., and Mrs. B. : Electricity and Magnetism, *review* by Prof. G. O. Jones, 1495
Bleeding Lesions (Gastro-intestinal) : Isotopic Tracer Method for Measurement of Iron Lost into and Re-absorbed from (M. Roche, M. E. Perez-Gimenez and A. Levy), *errata*, 603
Blenkinsop, A. : Siting of Nuclear Power Stations, 462
    Appointed a member of the Nature Convervancy, 1312
Blest, A. D. : Interaction between Consecutive Responses in a Hemileucid Moth, and the Evolution of Insect Communication, 1077
Blewitt, Dr. T. H. : Vacancies and other Point Defects in Metals and Alloys (Tensile Tests on Copper Single Crystals), 451
Bloch, Bernard : Bonding of Bone Fractures with Plastics, 1701
Blockades (Histochemical Aldehyde) : Effect of Periodic Acid on (Dr. P. H. Staple), 288
Blocking Activity (Neuromuscular), of Ethylene*bis*- (Trimethylammonium): Reaction of Ethylene Bromide with Trimethylamine and the (Dr. Allan P. Gray and Thomas B. O'Dell), 634
Blocking Effect of Morphine on the Secretion of Thyroid-stimulating Hormone in Rats (Milan Sámel), 845
Bloemendal, H., and Ten Cate, Prof. G. : N-Terminal Amino-acids of Bovine Eye Lens Proteins, 340
Blois, Marsden S. : Antioxidant Determinations by the Use of a Stable Free Radical, 1199
Blood : Adenosine-5'-phosphates as the Stimulating Agent in, for inducing Gorging of the Mosquito (Teruhiko Hosoi), 1664
Blood, with special reference to Leukaemia : Grants, Scholarships or Fellowships for research on Diseases of the (Lady Tata Memorial Fund), 458
Blood of Adrenalectomized Rats : Adrenocorticotrophic Hormone in the (G. S. Cox and Dr. J. R. Hodges), 420
Blood Circulation : Adherence and Viscosity of Blood Contacting Foreign Surfaces, and the Plasmatic Zone in (Dr. Alfred L. Copley), 551
Blood Coagulation : Effect of Human α_1-Acid Glycoprotein on (Inga Marie Nilsson and Ikuo Yamashina), 711
Blood Contacting Foreign Surfaces : Adherence and Viscosity of, and the Plasmatic Zone in Blood Circulation (Dr. Alfred L. Copley), 551
Blood Corpuscles (Red) : Sites of the Physiological Breakdown of the (G. v. Ehrenstein and D. Lockner), 911
Blood Digestion in Mosquitoes : Inhibition of, by Cations and Cation-Antibiotic Mixtures (Dr. Levon A. Terzian), 282
Blood Eosinophils and *Wuchereria bancrofti* Microfilariae : 24-Hr. Rhythms in, Before and After Δ^1-9α-Fluorocortisol (Rudolf Engel, Dr. Franz Halberg, W. L. P. Dassanayake and Justin de Silva), 1135
Blood Group (Diego) : Absence of the, and Abnormal Haemoglobins in 92 Maoris (Dr. H. Lehmann, Dr. A. North and Dr. J. M. Staveley), 791
Blood Group Antigen : Js, a 'New', found in Negroes (Dr. Eloise R. Giblett), 1221
Blood Group Antigen (Diego) in Sarawak and Burma : Haemoglobin E and the (M. J. Colbourne, Elizabeth W. Ikin, Dr. A. E. Mourant, Dr. H. Lehmann and H. Thein), 119
Blood Group System : The Diego (Dr. Bruce Chown, Marion Lewis and Hiroko Kaita), 268
    Diego as an Independent (Dr. Bruce Chown, Marion Lewis and Hiroko Kaita), 1598
Blood Plasma (Human) : Method of Isolating the β_1-Metal-combining Globulin from (E. W. Boettcher, P. Kistler and Prof. Hs. Nitschmann), 490
Blood Plasma Esterases : Electrophoretic Separation and Classification of (Dr. Klas-Bertil Augustinsson), 1786
Blood Platelets : Increase of 5-Hydroxytryptamine in, by Isopropyl-isonicotinic Acid Hydrazide (A. Pletscher and A. Bernstein), 1133
Blood Transfusion : Award for original work or services in connexion with (Oliver Memorial Fund), 1771
Blood—Air Barrier in the Mouse Lung after Inhalation of Colloidal Gold Particles : Alterations in the Ultrastructure of the (Dr. N. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1418
Bloom, Ben, and Topper, Yale J. : Absolute Configuration of Enantiomorphic Carbanions involved in the Aldolase and Triose Phosphate Isomerase Reactions, 1128
Blowfly (Australian Sheep) : Resistance to Dieldrin in *Lucilia cuprina* Wied., the (G. J. Shanahan), 860
Blue Sky : A Device for Visualizing the Pattern of Plane Polarized Light from (J. A. Chapman), 1393
Blue Tick, *Boophilus decoloratus* : Total Sulphydryl Content of Embryos of Arsenic-resistant and -sensitive Strains of the (M. E. Thompson and A. M. Johnston), 647
Blue-Green Alga : Occurrence of a, in the Nodules of *Trifolium alexandrinum* (S. Bhaskaran and G. S. Venkataraman), 277
Blue and Infra-Red Radiation : Similar Effects of, on Light-sensitive Seeds (Dr. P. F. Wareing and M. Black), 1420
Bluebells : Polyploidy in (J. Yanney Wilson), 431
Blumberg, Dr. B. S., and Tombs, M. P. : Possible Polymorphism of Bovine α-Lactalbumin, 683
Blumberg, Dr. B. S., and others : Haptoglobin Types in British, Spanish Basque and Nigerian African Populations, 824
Blumberg, Dr. B. S. (Bangham, Dr. A. D., and) : Distribution of Electrophoretically Different Haemoglobins among some Cattle Breeds of Europe and Africa, 1551
Boalch, G. T. (Fogg, Dr. G. E., and) : Extra-cellular Products in Pure Cultures of a Brown Alga, 789
Boards of Nationalized Industries (Lord Simon of Wythenshawe), 511
Bodo, Dr. G., and others : A Three-Dimensional Model of the Myoglobin Molecule obtained by X-Ray Analysis, 662
Body Temperature in Hypophysectomized Rats and the Action of Cortisone : Immediate Effect of *l*-3:5:3'-Tri-iodothyroacetic Acid on Metabolic Rate and (Prof. Sz. Donhoffer, I. Várnai and E. Sziebert-Horváth), 345
Body-centred Cubic Metals : Localized Electrons in (J. S. Griffith and L. E. Orgel), 170
Body-Fluids : Determination of Glucose and Laevulose in (Dr. Jan Ek and Eric Hultman), 780
Body-Water Distribution : Rate of, studied with Triple Labelled Water (Michael Anbar and Dr. Zigmund Lewitus), 344
Body-weight in the Growing Albino Mouse : Heat Output and (E. G. C. Clarke and A. E. Hawkins), 1599
Boekelman, Dr. W. A. : Sodium Content of Erythrocytes in Hyperthyroidism, 1136
Boettcher, E. W., and others : Method of Isolating the β_1-Metal-combining Globulin from Human Blood Plasma, 490
Bohart, Richard M. : Insects of Micronesia, Vol. 12, No. 1, Diptera, Culicidae, *review* by P. F. Mattingly, 1234
Bohm, Prof. David : Causality and Chance in Modern Physics, *review* by Prof. L. Rosenfeld, 658
Bohn, J. L. (Korneff, T., and) : Extremely High Temperatures (Experiments in Plasma Acceleration by the Exploding Wire Ejection Technique at Low Pressure), 1381
Bohonos, N., and others : Decumbin, a New Compound from a Species of *Penicillium*, 1072
Boiling Hydrochloric Acid : Corrosion of Ten Metals in, when in Contact with Rhodium, Palladium, Iridium and Platinum (W. Roger Buck, *III*, and Henry Leidheiser, jun.), 1681
Bokkenheuser, V., and others : An Acid-fast Bacillus Isolated from the Lungs of the Cape Hyrax, *Procavia capensis* (Pallas), 284
Boldrini, R., and others : Effect of Creatine Phosphate Administration on the Cardiac Adenosine Triphosphate of Thyroxinized Rats, 419
    Cardiac Damage caused by Experimental Stress, 1215
Boletín de Información Electronica (Instituto Nacional de Electronica, Madrid), Vol. 1, No. 1, 1573
Bollen, W. B., and others : Effects of Gibberellic Acid on Soil Micro-organisms, 189
Bombardment of Plastics in a Glow Discharge (L. Holland), 1727
Bombardment Cleaning of Glass : Ionic (L. Holland), 1451
Bombyx mori L. : The 'Brain' Hormone in the Silkworm (Masatoshi Kobayashi and Jiro Kirimura), 1217

Bomford, Capt, A. G. : Awarded the Mrs. Patrick Ness Award of the Royal Geographical Society, 810
Bonacina, L. C. W. : Cloud Study, *review*, 985
  Awarded the Hugh Robert Mill Medal and Prize of the Royal Meteorological Society, 1375
Bond, Dr. Geoffrey : Awarded the Murchison Fund for 1958 of the Geological Society of London, 159
Bonding of Bone Fractures with Plastics (Bernard Bloch), 1701
Bone, A. D. (Weil-Malherbe, Dr. H., and) : Effect of Reserpine on the Intracellular Distribution of Catecholamines in the Brain Stem of the Rabbit, 1474
Bone, Quentin: Nervous Control of Cilia in Amphioxus (*Branchiostoma*), 193
Bone : Organic Composition of—Localization of Isocitric Dehydrogenase in Femurs (Robert Van Reev and Fred L. Losee), 1543
Bone (Rat) : Retention of Sodium-22 in (Dr. G. M. Kellerman), 914
Bone Fractures : Bonding of, with Plastics (Bernard Bloch), 1701
Bone Marrow: Effects of Alkoxyglycerols and especially Selachyl Alcohol on the, in connexion with Irradiation Treatment and in Leukaemia Therapy (Astrid Brohult), 1484
Bone Marrow (Human) : Transformation of Megaloblasts to Normoblasts by cultivating, in Presence of Vitamin B_{12} and Vitamin B_{12}-binding Protein (Dr. I. Pendl and Dr. W. Franz), 488
Bone Marrow (Isologous) : Protection of August Rats against Lethal Doses of a Dimethyl Homologue of Myleran by (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Bone Marrow Suspensions: Assay of Erythropoietin in (Leslie R. Schroeder, Clifford W. Gurney and Nancy Wackman), 1537
Bonin, J. H., and Price, C. F. : Extremely High Temperatures (Behaviour of Materials subjected to Ultra-high Temperature Environments), 1381
Bonnardel, Prof. R. : At the thirteenth International Congress of Applied Psychology (Evaluation of Educational Achievement ('Docimology')), 1580
Bonner, Dr. James : Photoperiodism in Plants and Animals (Nature of the Photoinductive Processes in Photoperiodism), 535
Bonnor, Dr. W. B. : Gravitational Radiation, 1196
Boog, W., and others : Interaction in Ionic Solutions (X-Ray Diffraction Studies of Aqueous Electrolyte Solutions), 241
Böök, Prof. J. A., and others : Congenital Malformations in Children of Mothers Aged 42 and Over, 1545
Books : Recent Scientific and Technical, Supp. viii, January 25 ; Supp. viii, February 22 ; Supp. vi, March 29 ; Supp. vi, April 26 ; Supp. vi, May 31 ; Supp. vi, June 28
Boophilus decoloratus : Total Sulphydryl Content of Embryos of Arsenic-resistant and -sensitive Strains of the Blue Tick (M. E. Thompson and A. M. Johnston), 647
Booth, A. (Kimber, G., and) : Radioactivity of Plant Material collected after the Accident at Windscale No. 1 Pile, 1391
Booth, the late Angus : The Development of the West African Environment, 1581
Booth, C. O. (Kennedy, Dr. J. S., and) : Water Relations of Leaves from Woody and Herbaceous Plants, 1271
Bor, Dr. N. L. : *Obituary* of Frank Kingdon-Ward, 1505
Borate Buffer : Effect of, on the Electrophoresis of Serum (D. R. Cooper), 713
Borelli, Giovanni Alfonso (1608-79), 235
Boride (Silicon), SiB_6 : Preliminary Investigations of the (Dr. Carl F. Cline), 476
Borides with the Cementite Structure : Two (Stig Rundqvist), 259
Boring Sponge, *Cliona celata* Grant : Reproduction of Fused Larvae in the (Frederick E. Warburton), 493
Borneo : Carbon-14 Dated Palaeoliths from (Tom Harrisson), 792
Boroff, Dr. Daniel A., and Fitzgerald, Dr. John E. : Fluorescence of the Toxin of *Clostridium botulinum* and its relation to Toxicity, 751
Boron Deficiency in Tea (Dr. E. M. Chenery), 426
Borradaile, the late L. A., and Potts, F. A. : The Invertebrata, third edition revised by G. A. Kerkut, *review* by Prof. O. Lowenstein, 1564
Borsook, Henry, and others : Isolation of an Erythropoietic Fraction from the Plasma of Rabbits made severely Anaemic with Phenylhydrazine, 1802
Borthwick, Dr. H. A. : Photoperiodism in Plants and Animals (Interaction of Red and Far-Red Radiation in the Flowering of various species, including *Hyoscyamus*), 535
Bose, Prof. Satyendranath : Elected a Fellow of the Royal Society, 881
Bose, Dr. S. K. (Majumdar, S.K., and) : Mycobacillin, a New Antifungal Antibiotic produced by *Bacillus subtilis*, 134
Bostick, W. H. : Extremely High Temperatures (Types of Plasma Motors), 1381
Boswell, Prof. P. G. H. : The Cromer Forest Bed—Preglacial or Interglacial?, 1087
  The Cromerian Interglacial, 1554
Bosworth, Prof. R. C. L. : Irreversible Processes in Physical Theory, 402
Böszörményi, Dr. Joseph : A Simple Method for absorbing Heterologous Antibodies from Precipitating Sera, 1344
Botanic Gardens (Royal), Kew : Open Days (Dr. W. B. Turrill), 1569
Botanical Society of the British Isles : Annual Exhibition Meeting, 605
Botany at Queen Mary College, London, 1242
Bott, T. R. : Appointed lecturer in chemical engineering at the University of Birmingham, 813
Bottomley, Dr. G. A., and others : Second Virial Coefficient of Methyl Chloride Vapour, 1004
Bouillon, J., and others : Ultra-Structure of the Choanocyte Collar-Cells in Freshwater Sponges, 58
Boule, Prof. Marcellin, and Vallois, Prof. Henri V. : Fossil Men (translated from the fifth French edition by Michael Bullock), *review* by Sir Wilfred Le Gros Clark, 1165
Boulind, Dr. H. F. : Science in Schools, 1372
Boundaries (Grain), in Metals (Dr. D. McLean), *review* by Prof. F. C. Frank, 976
Boundaries (Grain), and Electroluminescence in Gallium Phosphide (D. A. Holt, Dr. G. F. Alfrey and C. S. Wiggins), 109
Bourne, Prof. G. H. (edited by Yapp, W. B., and) : The Biology of Ageing (Institute of Biology Symposia No. 6), *review* by Prof. P. L. Krohn, 74
Bourseaux, Friedrich, and others : Chemotherapeutic Action of a Cyclic Nitrogen Mustard Phosphamide Ester (B 518-ASTA) in Experimental Tumours of the Rat, 931
Boursnell, Dr. J. C., and others : Use of Labelled Ions in the Study of Blastocyst—Uterine Relationships in the Rabbit, 1715
Bovey, Dr. F. A. (Updegraff, Dr. D. M., and): Reduction of Organic Hydroperoxides by Micro-organisms and Animal Tissues, 890
Bovine Eye Lens Proteins : N-Terminal Amino-acids of (H. Bloemendal and Prof. G. Ten Cate), 340
Bovine Foetus (Aborted) : Isolation of *Salmonella infantis* from an (Dr. J. Mortelmans, C. Huygelen and F. Pinckers), 1539
Bovine α-Lactalbumin : Possible Polymorphism of (B. S. Blumberg and M. P. Tombs), 683
Bovine Ribonuclease : Acquired Immunological Tolerance to (Dr. B. Cinader, J. H. Pearce and B. G. Carter), 1208
Bowden, Dr. F. P., and Brunton, J. H.: Damage to Solids by Liquid Impact at Supersonic Speeds, 873
Bowden, Prof. K. F. : National Oceanographic Council—Annual Report 1956-57, 888
Bowden, Dr. S. T. : Subjective Probability, Gambling and Intelligence, 1620
Bowen, Prof, E. G. : Awarded the Murchison Grant of the Royal Geographical Society, 810
Bowen, Dr. E. J. : *Obituary* of D. L. Chapman, 453
  Photobiological Investigations, 1314
Bowie, S. H. U. : Radiometric and Geochemical Survey Techniques, 594
Bowie (William) Medal of the American Geophysical Union awarded to Prof. J. T. Thijsse, 1378
Bowman, F. : *Obituary* of Dr. Maxwell Garnett, 1175
Boyd, Dr. R. L. F. (Massey, Prof. H. S. W., and) : Scientific Observations of the Artificial Earth Satellites and their Analysis, 78
Boyd, Prof. William C. : Use of Logarithms in recording Serological Reactions, 1348
Boyd, Prof. William C. (Litt, Dr. Mortimer, and) : Preservation of Haemocyanin, 1075
Bozzoli, Prof. G. R. (Kritzinger, J. J., and) : The Impulse Break-down Characteristic of a Point-Plant Gap in Air, 1259
Brabazon of Tara, Lord : Elected president of the Royal Institution, 1312
Brachet, Prof. J. : A Synthesis of General Embryology, *review*, 144
  Awarded the Charles Léopold Mayer Prize for 1957 of the Société de Chimie biologique, 1182
  Biochemical Cytology, *review* by Prof. C. H. Waddington, 1231
  Effects of β-Mercaptoethanol on Morphogenesis in Amphibian Eggs, 1736
Brackish Water : Three Zoopagales from (F. R. Jones), 575
Bracon cephi (Gahan) : Role of Glycerol in producing Abnormally Low Supercooling and Freezing Points in an Insect (R. W. Salt), 1281
Bradbury, S. : Lectures Notes on the Use of the Microscope, *review*, 801
  Biological Staining Methods, *review*, 988
  Microscopy Today, *review*, 1096
Bradbury, S., and Clayton, B.-P. : Occurrence of 'Masked Lipid' in Mouse Pancreas, 1347
Braden, Dr. A. W. H. : Influence of Time of Mating on the Segregation Ratio of Alleles at the *T* Locus in the House Mouse, 786
Bradley, D. E. : Simultaneous Evaporation of Platinum and Carbon for Possible Use in High-Resolution Shadow-Casting for the Electron Microscope, 875
Bradley, P. L. : An Assemblage of Arthropod Remains from a Roman Occupation Site at St. Albans, 435
Bradley, Dr. W. F. (Serratosa, Dr. José M., and) : Infra-Red Absorption of OH Bonds in Micas, 111
Bradshaw, A. D. : A Broad View of Ecology, *review*, 443
Bradshaw, R. : Appointed lecturer in geology at the University of Bristol, 602
Brady, Miss, B. L. : Freezing and Drying, 1695
Braendle, H. A. : Recent Advances in Polymer Technology (Masterbatching Techniques), 1305
Braganca, Dr. Beatriz M. (Kenkare, U. W., and) : Occurrence of Independent Systems for the Cleavage of Folic Acid and Citrovorum Factor in Rat Liver, 548
Bragg, Sir Lawrence : Elected president of the Science Masters' Association, 392
  Interpretation of Science to the Public, 807
Brailsford, Prof. F., and others : Electrical Engineering (General), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Brain : Changes in the Topographical Distribution of Glycogen in the, during Animal Hypnosis (Dr. D. Svorad), 775
  Drugs and the, *review* by Dr. G. B. Ansell, 1430
Brain (Perfused Cat) : Metabolism of the, during Metrazol Convulsions and Electroshock (C. Allweis and Dr. J. Magnes), 626
Brain Extracts containing Factor I : Absence of γ-Aminobutyric Acid from (Dr. H. McLennan), 1807
Brain Ganglioside : Structure of (Dr. J. Folch-Pi), 314
'Brain' Hormone in the Silkworm, *Bombyx mori* L. (Masatoshi Kobayashi and Jiro Kirimura), 1217
Brain Stem of the Rabbit : Effect of Reserpine on the Intracellular Distribution of Catecholamines in the (Dr. H. Weil-Malherbe and A. D. Bone), 1474
Brain Wounds : Depositions of Glycogen and Changes in some Enzymes in (Prof. Nobuo Shimizu and Dr. Yoriaki Hamuro), 781
Brains (Mouse), infected with Semliki Forest Virus : Infectivity of Ribonucleic Acid from (Dr. Ping-yao Cheng), 1800
Branch Prize for 1958 of the Royal Aeronautical Society awarded to M. B. Morgan, 1646
Branchiostoma: Nervous Control of Cilia in Amphioxus (Quentin Bone), 193
Brändli, S., and others : Ribonuclease Activity and Ribonucleic Acid Content of Homologous Human Normal and Cancer Cells, 913
Brass, W. : Demography of an Under-developed Territory, *review*, 442
Brasted, Prof. Robert C. : Hydrogen and its Isotopes (Comprehensive Inorganic Chemistry, by Prof. M. Cannon Sneed and Prof. Robert C. Brasted, Vol. 6, Part 2), *review*, 1428
Brasted, Prof. Robert C. (Sneed, Prof. M. Cannon, and) : Comprehensive Inorganic Chemistry, Vol. 5, Nitrogen, Phosphorus, Arsenic, Antimony and Bismuth (Harry H. Sisler), Nonaqueous Chemistry (Alfred R. Pray) ; Vol. 6, The Alkali Metals (John F. Suttle), Hydrogen and its Isotopes (Robert C. Brasted), *review*, 1428
Braun, Armin C. (Pringle, Dr. Ross B., and) : Constitution of the Toxin of *Helminthosporium victoriae*, 1205

Braun, J. W.: Genetic Aspect of Somatic Cell Variation (Mutation-rate of the Resistant Cell Variants), 1707
Braun, Dr. T., and Mosinger, Dr. B.: Effect of Hypothermia on Death by Starvation, 968

    VERA (Vision Electronic Recording Apparatus), 1174
British Broadcasting Corporation Riverside Television Studios—the Architectural Aspects (E. A. Fowler), 1046; Some Aspects of Technical Planning and Equipment (H. C. Nickels and D. M. B. Grubb), 1046
British Broadcasting Corporation Television: New Installations for, 1046
British Central Government, 1914-1956: The Organization of (A Survey by a Study Group of the Royal Institute of Public Administration, edited by D. N. Chester, written by F. M. G. Willson), 141; *review*, 299
British Colonial Territories: Overseas Service in, 610
British Commonwealth, Association of Universities of the: Report for 1956-57, 1770
British Computer Society: *Computer Journal*, Vol. 1, No. 1, 1701
British Conference on Automation and Computation: To be organized in three sections—(A) the British Group for the Engineering Applications of Automation, (B) the British Group for Computation and Automatic Control, and (C) the British Group for the Sociological and Economic Aspects of Automation Techniques, 236
    Constitution of Section A (British Group for the Engineering Applications of Automation), 672
    Constitution of Section *B* (British Group for Computation and Automatic Control, 237
    Election of T. E. Goldup as chairman of Section B, 237
British Constructional Steelwork Association (British Steel Producers' Conference and the): Offer of £6,000 a year to the Imperial College of Science and Technology, for the establishment of a readership in structural steelwork and the provision of bursaries for postgraduate study in that subject, 314
British Cotton Industry Research Association: Thirty-eighth Annual General Meeting, 466
British Council: Annual Report for 1956-57, 322
British Dependent Territories in Africa: The Indigenous Cattle of the (D. E. Faulkner and Dr. H. Epstein), (Colonial Advisory Council of Agriculture, Animal Health and Forestry, Publication No. 5), 1581
British Egg Marketing Board: Postgraduate Studentship, 1510
British Embassy in Moscow: Appointment of a Scientific Attaché at the, 1507
British Empire Cancer Campaign: Gift of £7,773 to the University of Bristol, for cancer research to be carried out in the Departments of Pathology, Physiology and Surgery, 602
British Fish (*Gobius forsteri*): A New (P. G. Corbin), 1659
British Flora in 1957 (J. E. Lousley), 605
British Gelatine and Glue Research Association: Fourteenth Meeting of the Research Panel, 537
British Gold Medal for Aeronautics of the Royal Aeronautical Society awarded to S. D. Davies, 1646
British Group for Computation and Automatic Control: Constitution of Section *B* of the British Conference on Automation and Computation, 237
    Election of T. E. Goldup as chairman, 237
British Group for the Engineering Applications of Automation: Constitution of Section *A* of the British Conference on Automation and Computation, 672
British Group for the Sociological and Economic Aspects of Automation Techniques (Section *C* of the British Conference on Automation and Computation), 236
British Industries, Federation of: Conference on Nuclear Energy, 459
    Report of the Regional Conference on Industry and the Technical Colleges, organized by the Southern Regional Council of the F.B.I., in co-operation with the Southern Regional Council for Further Education, 370, 1573
    Forty-first Annual Report (1957), 1769
British Insecticide Manufacturers, Association of (Pesticides Group of the Society of Chemical Industry and the): Discussion on Residues of Pesticides in Foodstuffs, 22

British Institute of Management : Work Study Conference, 20
  Annual Conference, 307
  Conference on the Finding and Development of Managers for Industry, 816
British Institute of Radiology : Barclay Medal for 1958 awarded to Dr. G. M. Ardran, 531
  Röntgen Award for 1958 awarded to Dr. P. R. J. Burch, 531
  Barclay Prize for 1958 awarded (posthumously) to the late Dr. Trevor Griffiths, 531
British Isles : Flora of the (A. R. Clapham, T. G. Tutin and E. F. Warburg), Illustrations, Part I, Pteridophyta—Papilionaceae, *review*, 1366
British Lichen Society : Formation of the, 602
British Mathematical Colloquium : Tenth, 161
British Medical Research : Architect of, *review* by Sir William Gavin, 513
British Mink : *Cryptocotyle lingua* in (H. Scott McTaggart), 651
British Museum (Natural History) : Appointment of Dr. Ethelwynn Trewavas as a deputy keeper in the Department of Zoology, 1042
British National Conference on Social Work : Third Meeting (Children and Young People), 1381
British North Greenland Expedition, 1952-54—Scientific Results (R. A. Hamilton), 1030
British Nuclear Energy Conference : Symposium on Nuclear Energy, 735
British Occupational Hygiene Society : Conference on Noise in Industry, 813, 1696
British Ocean Weather Ships: Ten Years' Work of the (Comdr. C. E. N. Frankcom), 236
British Overseas Mining Association Educational Trust : Scholarships in Mining Engineering and related Subjects, 1771
British Pea-crabs (*Pinnotheres*), (Dr. D. Atkins), 1087
British Plastics Federation : Report of the Toxicity Sub-Committee of the Main Technical Committee, 1702
British School at Athens : Annual of the, No. 50 (1955), No. 51 (1956), *review* by R. M. Cook, 1560
British Shipbuilding Research Association : Election of Dr. S. L. Smith to a Fellowship of the Imperial College of Science and Technology, 1182
British Silver Medal for Aeronautics of the Royal Aeronautical Society awarded to W. H. Lindsay and W. F. Saxton, 1646
British Social Biology Council : Conference on the Making of a Scientist, 603
British Soils : Free Acid in (Eville Gorham), 106
British Steel Producers' Conference and the British Constructional Steelwork Association : Offer of £6,000 a year to the Imperial College of Science and Technology, for the establishment of a readership in structural steelwork and the provision of bursaries for post-graduate study in that subject, 314
British Trust for Ornithology : Five-year grant from the Nuffield Foundation, for the appointment of a migration research officer, 456
  Appointment of Kenneth Williamson as migration research officer, 456
British Universities : Vacant Places in, 1243
British Waters: *Bugula simplex* Hincks, a Newly Recognized Polyzoan from (J. S. Ryland), 1146
  Sacculina gonoplaxae Guérin-Ganivet, 1911, a Rhinocephalan Parasite New to (A. K. Nagabhushanam), 57
British Zoologists, Association of : Annual Meeting (The Natural Resources of the Country and their Value for Teaching and Research), 1313
British, Spanish Basque and Nigerian African Populations : Haptoglobin Types in (Dr. A. C. Allison, Dr. B. S. Blumberg and Mrs. ap Rees), 824
Brittle Fracture of Mild Steel : Stress Condition for (Prof. Takeo Yokobori and Prof. Hiroto Hamamoto and Akio Otsuka), 1719
Brittle Materials (Non-Metallic) : Mechanical Properties of (Mining Research Establishment of the National Coal Board and the Building Research Station of the Department of Scientific and Industrial Research Conference on), 1577
Britton, G., and others : Auxins in Immature Maize Kernels, 553
Broad Bean Seeds : Effect of a Single Light Exposure on Germinating (Dr. G. R. Lane and R. D. Butler), 1080
Broadbent, Prof. T. A. A. : Kandelman's Krim, *review*, 445
Broadcasting Services and Educational Achievements, 293
Brock, Norbert, and others : Chemotherapeutic Action of a Cyclic Nitrogen Mustard Phosphamide Ester (B 518-ASTA) in Experimental Tumours of the Rat, 931
Brock, Prof. Thomas D. : Reversal of Thymine Xyloside Inhibition in *Escherichia coli* by Glutathione, 269
Brockbank, A. J. : Microtexts and Micro-recording (Commercial Use of Microfilm), 1573
Brockhouse, B. N. : Melting, Diffusion and related Topics, 320
Brocklehurst, Prof. R. J. : *Obituary* of Dr. A. F. S. Kent, 1240
Brodie, Bernard B., and others : Dealkylation of N-Alkylamines by Model Systems, 898
Brodie, J. W., and Burling, R. W. : Age Determinations of Southern Ocean Waters, 107
Brohult, Astrid : Effects of Alkoxyglycerols and especially Selachyl Alcohol on the Bone Marrow in connexion with Irradiation Treatment and in Leukaemia Therapy, 1484
Broida, H. P., and Shuler, K. E. : Structure and Reactivity of Electronically Excited Species (Use of the Reversal of Iron Lines in studying Flame Temperatures), 321
Bromamine : Anomalous Bactericidal Action of (J. K. Johannesson), 1799
Bromide (Ethylene), with Trimethylamine : Reaction of, and the Neuromuscular Blocking Activity of Ethylene*bis*- (Trimethylammonium), (Dr. Allan P. Gray and Thomas B. O'Dell), 634
Bronk, Dr. Detlev W. : Awarded the Gold Medal of the International Benjamin Franklin Society, 387
Bronze Medal of the Royal Aeronautical Society awarded to Dr. D. Williams, 1646
'Brood Patterns' in Research on Chemical Mutagens : Use of (Dr. C. Auerbach), 754, 757 ; (Dr. O. G. Fahmy and Dr. Myrtle J. Fahmy), 755
Brookhaven National Laboratory, Upton, N.Y. : Eleventh Brookhaven Symposium in Biology (The Photochemical Apparatus—its Structure and Function), 1042
Brookhaven Symposium in Biology, 11, The Photochemical Apparatus—its Structure and Function, 1042
Brooks, Dr. C. E. P. : *Obituary* by G. A. Bull, 1698
Brooks, Prof. Charles F. : *Obituary* by Prof. Henry G. Houghton, 1440
Brooks, J., and others : Processing of Foods with Ionizing Radiations (Irradiation of Frozen Whole Egg), 878
Broom, Dr. T. : Vacancies and other Point Defects in Metals and Alloys, 449
Brora Coal of the Scottish Middle Jurassic : Palynology of the (N. F. Hughes and R. A. Couper), 1482
Brown, A. H., and others (edited by) : Research in Photosynthesis (Papers and Discussions presented at the Gatlinburg Conference, 1955), *review* by Prof. C. P. Whittingham, 974
Brown, Dr. F. : Immunoelectrophoretic Evidence for the Presence of Two Precipitating Antibodies in Serum following Infection with the Virus of Foot-and-Mouth Disease, 1130
Brown, Dr. G. E. : Appointed to a senior lectureship in mathematical physics at the University of Birmingham, 1181
Brown, I. F. (Meltzer, Dr. B., and) : Digital Field Computers, 1384
Brown, Dr. J., and others : A New Microwave Mixer, 1008
Brown, Dr. John : Elementos de Medicina (Spanish translation from a manuscript by Dr. Don Luis José Montaña, edited by Dr. J. J. Izquierdo), *review* by Dr. Douglas Guthrie, 296
Brown, J. H., and Pomeroy, C. D. : Mechanical Properties of Non-Metallic Brittle Materials (Friction between Coal and Metal Surfaces), 1579
Brown, Sir Lindor : Appointed a vice-president of the Royal Society, 87
Brown, Margaret E. (edited by) : The Physiology of Fishes, Vol. 1, Metabolism ; Vol. 2, Behavior, *review* by Prof. J. Z. Young, 971
Brown, Dr. P. C., and Consden, Dr. R. : Variation with Age of Shrinkage Temperature of Human Collagen, 349
Brown, Dr. P. C. (Consden, Dr. R., and) : Some Aspects of Connective Tissue in relation to Age, 538
Brown, Dr. R. : Cellular Basis for the Induction of Morphological Structures, 1546
Brown, Dr. R. (edited by Lindström, Dr. B., and) : Cytochemical Methods with Quantitative Aims—Biophysical and Biochemical Approaches (Proceedings of the Symposium held by the Institute for Medical Cell Research and Genetics, Karolinska Institutet, Stockholm, 1956), (Experimental Cell Research, Supplement 4), *review*, 1029
Brown, R. Hanbury, and Lovell, Prof. A. C. B. : The Exploration of Space by Radio, *review* by Dr. F. G. Smith, 1562
Brown, Prof. T. Arnold : Retirement from the chair of mathematics in the University of Exeter, 1178 ; work of, 1178
Brown, T. H., and others : Growth and Reproduction in Worm-free Sheep at Pasture, 168
Brown, Prof. W. : Reproduction in Fungi, *review*, 297
Brown, W. M. Court, and Doll, Dr. Richard : Awarded a David Anderson-Berry Prize for 1958 of the Royal Society of Edinburgh, 1571
Brown Alga : Effect of Potassium Cyanide on Apparent Free Space in a (P. L. Bergquist), 1270
  Extracellular Products in Pure Cultures of a (Dr. G. E. Fogg and G. T. Boalch), 789
Brown Alga *Ascophyllum nodosum* (L.) Le Jol. : Chemical Composition of the —Presence of Reducing Compounds in *Ascophyllum nodosum* (Bjørn Larsen and Arne Haug), 1224 ; Influence of Habitat on the Chemical Composition of *Ascophyllum nodosum* (Arne Haug and Bjørn Larsen), 1224
Brown Rot Mould *Poria vaillantii* : Glycerol Metabolism of the (Bienvenido C. Sison, jun., and Walter J. Schubert), 1015
Browning, Dr. T. O. (Andrewartha, Dr. H. G., and) : Williamson's Theory of Interspecific Competition, 1415
Browning Reaction : A Novel Non-Enzymic (Dr. H. Rinderknecht and Dr. L. Jurd), 1268
Brownismo en México : El (Dr. J. J. Izquierdo), *review* by Dr. Douglas Guthrie, 296
Brownlee, Dr. George : Title of professor of pharmacology in the University of London at King's College conferred on, 602
Brucella abortus : Distribution of Radio-iodinated, Acetone-killed, in the Tissues of Normal and Immune Mice (Dr. D. Sulitzeanu), 495
Brucine : A New Method for separating Strychnine and, by Paper Chromatography (G. Dušinsky and Dr. M. Tyllová), 1335
Brück, Prof. H. A. : Elected a Fellow of the Royal Society of Edinburgh, 739
Bruckner, Dr. W. : The Development of the West African Environment, 1580
Brumfitt, Dr. W., and others : Development of Lysozyme-Resistance in *Micrococcus lysodiekticus* and its Association with an Increased O-Acetyl Content of the Cell Wall, 1783
Brunel, Isambard Kingdom—a Biography (L. T. C. Rolt), *review* by H. P. Spratt, 1754
Brunius, Prof. E. : Assay of Vitamin A Oils, 395
Brunonian Doctrine in Mexico, *review* by Dr. Douglas Guthrie, 296
Bruns, Dr. Friedrich H., and Fiedler, Liselore : Enzymatic Cleavage and Synthesis of L-threo-β-Phenylserine and L-erythro-β-Phenylserine, 1533
Bruns, Dr. Friedrich H., and Noltman, Ernst : Phosphomannoisomerase, an SH-Dependent Metal-Enzyme Complex, 1467
Brunt, Sir David : Elected to honorary membership of the Royal Meteorological Society, 1375
Brunton, J. H. (Bowden, Dr. F. P., and) : Damage to Solids by Liquid Impact at Supersonic Speeds, 873
Brunton, S. S. : Appointed veterinary officer, Northern Rhodesia, 459
Brussels Universal and International Exhibition : Opening of the, 1179
Brussels Universal and International Exhibition (Postal and Telecommunications Group) : International Conference on Solid State Phenomena in Electronics and Telecommunications, 813
Bryan, jun., E. H., and others : Insects of Micronesia, Vol. 2 (Bernice P. Bishop Museum, Honolulu), 818
Bryan, Prof. P. W. : Presidential Address to the Annual Conference of the Geographical Association, 606
Bryophytes : Comparative Chlorophyll Content of the Two Generations of (Prof. Frederick T. Wolf), 579
Brzin, M., and Zajicek, Prof. J. : Quantitative Determination of Cholinesterase Activity in Individual End-plates of Normal and Denervated Gastrocnemius Muscle, 626
Buchan Prize of the Royal Meteorological Society awarded to Dr. R. M. Goody, 1375
Buchanan, Dr. G., and others : An Acid-fast Bacillus isolated from the Lungs of the Cape Hyrax, *Procavia capensis* (Pallas), 284
Buchanan, Dr. J. G., and others : Nucleotides and the Bacterial Cell Wall, 1692

Buchanan, R. H. : Appointed to a supernumerary lectureship in geography at Queen's University, Belfast, 1042
Buck, III, W. Roger, and Leidheiser, Jun., Henry : Corrosion of Ten Metals in Boiling Hydrochloric Acid when in Contact with Rhodium, Palladium, Iridium and Platinum, 1681
Buckingham, Dr. A. D. : Interaction in Ionic Solutions (Interaction between the Ion and Solvent Molecule), 241
Buckwheat in the Field : Use of Defoliants for drying, and a New Method for the Chemical Determination of Rutin (V. Brejcha and P. Horák), 505
Büdel, Prof. J. : Elected to honorary membership of the Royal Netherlands Geographical Society, 1771
Buffalo : Haemoglobin Types in Ox and (Dr. Francis Vella), 564
Buffer (Borate) : Effect of, on the Electrophoresis of Serum (D. R. Cooper), 713
Bug (Milkweed), *Oncopeltus fasciatus* (Dallas) : Hormonal Regulation of Reproduction in the (A. S. Johansson), 198
Bugula simplex Hincks, a Newly Recognized Polyzoan from British Waters (J. S. Ryland), 1146
Bui-Duy-Tam, M., and others : Phytochemistry (Experimental Research on the Toxicity of Rice infected by *Penicillium citrinum*), 466
Building Programme for Technical Education in Scotland, 1309
Building Research Station of the Department of Scientific and Industrial Research (Mining Research Establishment of the National Coal Board and the) : Conference on the Mechanical Properties of Non-Metallic Brittle Materials, 1577
Bukovac, Dr. M. J., and Wittwer, Dr. S. H. : Comparative Biological Effectiveness of the Gibberellins, 1484
Bulbous Weed *Oxalis pes-caprae* : Maleic Hydrazide in the Control of the (N. G. Marinos), 1143
Bülbring, Edith : Elected a Fellow of the Royal Society, 881
Bulewicz, E. M., and Kaufman, F. : Structure and Reactivity of Electronically Excited Species (Green Emission obtained when Nitric Oxide is added to Systems containing Oxygen Atoms), 321
Bulk : Possible Existence of Anti-Matter in (Philip J. Wyatt), 1194
Bull, G. A. : Annals of the International Physical Year, *review*, 1097
  Miscelanea Geofisica publicada pelo Servico Meteorologico de Angola em Commemoracao do X Aniversario do Servico Meteorologico Nacional, *review*, 1299
  Obituary of Dr. C. E. P. Brooks, 1698
Bull, Dr. J. P. : Nutritive Value of Proteins (Nitrogen Balance following Injuries), 153
Bull Semen : Labelling of, with Phosphorus-32 *in vivo* (Dr. R. M. C. Dawson), 1014
Bull Spermatozoa carrying *X*- and *Y*-Chromosomes : Separation of, by Counter-Streaming Centrifugation (Per Eric Lindahl), 784
Buller, Dr. A. J. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Bullerwell, Dr. W. : Radiometric and Geochemical Survey Techniques (Radiometric Methods in Bore-hole Logging), 595
Bulliform Cells in Grasses : Silicification of (D. Wynn Parry and Dr. Frank Smithson), 1549
Bullough, Dr. W. S. : Photoperiodism in Plants and Animals (Seasonal Control of Reproductive Cycles in Vertebrates), 536
Bunn, C. W. : Physical Properties of Polymers, 1633
Bünning, Prof. E. : Photoperiodism in Plants and Animals (Endogenous Rhythms), 536
  Cellular Clocks, 1169
Bunting, Prof. A. H. : Professional Problems of Biologists serving Overseas (Problems of Biologists in the Transition of Colonial Countries to Independence), 678
Bunton, Dr. C. A. : Title of reader in chemistry in the University of London at University College conferred on, 20
Bunyan, J., and others : Protective Effect of Trace Elements other than Selenium against Dietary Necrotic Liver Degeneration, 1801
Bunyan, John : Elected president of the Royal Microscopical Society, 238
Burawoy, Dr. A., and Roach, A. G. : Colour Filters for the 4358-A. line of the Mercury Discharge Spectrum, 762
Burch, Dr. P. R. J. : Awarded the Röntgen Award for 1958 of the British Institute of Radiology, 531
Burcham, Prof. W. E. : Recent Advances in Nuclear Physics (The Optical Model and Nuclear Reactions), 886
Burchfield, Dr. H. P. : Molecular Rearrangement in the Reaction of Cysteine with 1-Fluoro-2,4-Dinitrobenzene, 49
Burdon, Dr. J. : Appointed a lecturer in chemistry at the University of Birmingham, 813
Burdon-Jones, Dr. C., and Charles, G. H. : Light Reactions of Littoral Gastropods, 129
Bureau de Recherches Géologiques, Géophysiques et Minières : To publish a French translation of *Razvedka i Okhrana Nedr* (Prospecting and Protection of Subsoil), 1510
Burger, Mikuláš, and others : Effect of Calcium Ions on the Inhibition of Hydrolases by Chlortetracycline, 1201
Burges, Prof. N. A. : Appointed a member of the Committee for England of the Nature Conservancy, 1312
Burgess, Eric : Satellites and Space Flight, *review* by D. G. King-Hele, 980
Burgess, Prof. R. E., and others (edited by) : Progress in Semiconductors, Vol. 2, *review* by Dr. J. R. Tillman, 1168
Burgoyne, Dr. J. H. : Flames and Industry, 15
Burhans, R. W., and others : Determination of Orbital Characteristics of an Earth Satellite from Single-Station Radio-Transit Observations, 900
Buried Treasure (Paul Johnstone), *review* by M. C. Burkitt, 147
Burk, L. G., and Tso, Dr. T. C. : Effects of Gibberellic Acid on *Nicotiana* Plants, 1672
Burke, E. : Flames and Industry (Application to the Cement Industry), 16
Burkhanov, V. F. : The Great Northern Route in the U.S.S.R., 1245
Burkhardt, Dr. L. C., and Lovberg, Dr. R. H. : Controlled Release of Thermonuclear Energy—New Confinement Phenomena and Neutron Production in a Linear Stabilized Pinch, 228
Burkhardt, Dr. L. C., and others : Controlled Release of Thermonuclear Energy—Magnetic Measurement of Plasma Confinement in a Partially Stabilized Linear Pinch, 224
Burkill, Dr. J. C. : *Obituary* of J. H. Grace, 1105
Burkitt, M. C. : Buried Treasure, *review*, 147
  Prehistoric Denmark, *review*, 215
  Guide to Archaeology, *review*, 374
  Old Stone Age, *review*, 801
  Prehistoric Africa, *review*, 1095
  Ancient Man, *review*, 1234
  Archives de l'Institut de Paléontologie Humaine, Paris, *review*, 1564
  Man's Journey through Time, *review*, 1691
Burling, R. W. (Brodie, J. W., and) : Age Determinations of Southern Ocean Waters, 107
Burma : Haemoglobin E and the Diego Blood Group Antigen in Sarawak and (M. J. Colbourne, Elizabeth W. Ikin, Dr. A. E. Mourant, Dr. H. Lehmann and H. Thein), 119
Burnet, Sir Macfarlane : Awarded the Order of Merit, 1767 ; work of, 1767
Burning Velocity of Nitric Oxide Flames : Effect of Pressure on (G. A. McD. Cummings), 1327
Burning Voltage of Arcs in High Vacuum (M. P. Reece), 475
Burns, Mrs. Anne : Awarded the R. P. Alston Medal of the Royal Aeronautical Society, 1646
Burns : Lingering Effects of Local X-Irradiation on Healing in (R. H. Rixon, J. M. A. Tishler and H. B. Newcombe), 1138
Burrows, R. B., and others : A New Series of Anthelmintics, 183
Bursaries (Institution of British Agricultural Engineers), 885
Bursaries (Commonwealth) : Royal Society and Nuffield Foundation (Awards), 89
Burson, D. M. (Cornwell, P. B., and) : Grain Weevils, *Calandra granaria* L. and *C. oryzae* L., reared on Irradiated Wheat, 1747
Burton, Dr. John : Smoking and Lung Cancer, 1768
Burton, J. D., and Riley, Dr. J. P. : Germanium and Gallium in Sea-Water—Germanium, 179
Burton, K. : Energy of Adenosine Triphosphate, 1594
Burton, W. G., and Powell, D. B. : Processing of Foods with Ionizing Radiations (Prevention of Sprouting of Potatoes), 878
Burton, Dr. W. K. : Elected a Fellow of the Royal Society of Edinburgh, 739
Busch, Daryle H. (Krause, Prof. Ronald A., and) : Complexes of Nickell (II) with 2-Pyridinaldoxime, 1529
Bushnell, Dr. G. H. S. : *Obituary* of Dr. Paul Rivet, 1374
  Man and Mammoth in Mexico, *review*, 1432
Business : Developments in Electronic Data Processing for (Dundee Technical College Special Summer programme on), 1042
Business Problems : Electronic Computers and (Dundee Technical College Special Summer programme on), 1042
Busk (Edward) Memorial Prize of the Royal Aeronautical Society awarded to Dr. D. Küchemann, 1646
Butler, Prof. C. C. : *Obituary* of Dr. K. H. Barker, 1038
2,3-Butanediol : Mechanisms of Formation of Stereoisomers of, during Microbial Fermentation of Sugars (Mary B. Taylor and Dr. Elliot Juni), 1389
Butler, Prof. J. A. V. : Science and Human Life, *review* by F. I. G. Rawlins, 299
Butler, Dr. K., and others : Carcinogenicity of Tricycloquinazoline, 838
Butler, R. D. (Lane, Dr. G. R., and) : Effect of a Single Light Exposure on Germinating Broad Bean Seeds, 1080
Butt, Dr. Audrey J. : Amazon Forest, *review*, 1563
Butt, E. P., and others : Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315
Butterfat Intake (High) : Production of Convulsions in Hamsters by (Prof. R. L. Swank and R. Engel), 1214
Butterfat Recording : Milk and (E. D. Ashton), *review* by Helen R. Chapman, 982
Butterfield, Prof. H. : The Origins of Modern Science, *1300-1800*, new edition, *review* by Dr. H. D. Anthony, 731
Button Shedding in the Coconut : Fortifying Influences of Coconut Milk and Cow's Urine on 2,4-Dichlorophenoxyacetic Acid in the Control of (S. R. Gangolly and Dr. K. M. Pandalai), 855
Butyl Benzimidazolone (5-Tertiary) : Antimitotic Activity of (Dr. H. C. Stoerk), R. N. Arison and J. E. Hawkins, jun.), *erratum*, 238
Buxton, E. W. : A Change of Pathogenic Race in *Fusarium oxysporum* f. *pisi* induced by Root Exudate from a Resistant Host, 1222

CABBAGE Mildew (*Erysiphe polygoni* DC.) : Control of Turnip and, by Zinc (Dr. J. A. Tomlinson and M. J. W. Webb), 1352
Cabinet Government and War, 1890-1940 (John Ehrman), 1752
Caborn, Dr. J. M. : Shelter Belts and Micro-climate, 160
Cacao : Propagation of, in Plastic Bags (R. Nichols), 580
Caeruloplasmin : Effect of Chymotrypsin on (Dr. G. Curzon), 115
Caeruloplasmin Oxidase Activity (Human) : Colorimetric Detection of, after Electrophoresis in Agar Plates or after Immuno-electrophoresis (José Uriel), 999
Caesium : Absorption and Translocation of Strontium and, by Plants from Foliar Sprays (L. J. Middleton), 1300
  Paper Chromatography of Potassium, Rubidium and (Florin Modreanu, Simon Fisel and Adrian Carpov), 1618
Caesium Nitrate on Muscovite : Kinetics of the Trigonal-to-Cubic Transition in Crystals of (E. Ferroni and M. Cocchi), 903
Caffeine and other Purines : Effect of, upon the Ribonucleic Acid/Deoxyribonucleic Acid Ratio in Leaves, and the Suitability of these Leaves for Aphids (Dr. B. Kessler, Dr. E. Swirski and Dr. A. S. Tahori), 1595
Cahn, Dr. R. W. : Vacancies and other Point Defects in Metals and Alloys (Creep Phenomena in Ordered Alloys), 451
  Title of reader in physical metallurgy in the University of Birmingham conferred on, 1640
Cairns, Dr. Joan F. (Eichhorn, Dr. Gunther L., and) : Rotatory Dispersion of Cytochrome *c*, 994
Calandra granaria L. and *C. oryzae* L. (Grain Weevils), reared on Irradiated Wheat (P. B. Cornwell and D. M. Burson), 1747
Calcified Tissues (Newly) : A Histological Stain for (Prof. J. T. Irving), 704
Calcium in the Animal Economy, *review* by Dr. N. M. Hancox, 799
Calcium Exchanges of Ehrlich Ascites Tumour Cells of Mice (Doreen Thomason and Raymond Schofield), 1207
Calcium Ions : Effect of, on the Inhibition of Hydrolases by Chlortetracycline (Dr. Josef Rokos, Mikuláš Burger and Pavel Procházka), 1201

Calcium Loss resulting from Ammonium Sulphate Treatment of a Tea Soil : Rate of (N. G. Gokhalé), 426
Calcium Metabolism (Prof. J. T. Irving), *review* by Dr. E. J. Hewitt, 799
Calcium Oxide : Differential Thermal Method for determining Reactivity of (T. L. Webb and T. van der Walt), 411
Calcium Phosphate Columns : Chromatographic Separation of Lactalbumin from Human Milk Whey on (Dr. Bengt Johansson), 996
Calculation of the Life-time of a Satellite (D. G. Parkyn), 1156
Calculations of Lunar Temperatures (R. W. Muncey), 1458
Calder, Ritchie : The Presentation of Science to the Public, 392
  Men against the Frozen North, *review* by Dr. G. C. L. Bertram, 729
Caldwell, F., and others : Influence of the Enclosing Protective Tissues on the Metabolism of Barley Grain, 1270
Caldwell, R. : Fate of Spores of *Trichoderma viride* Pers. ex Fr. introduced into Soil, 1144
Caley, Earle R., and Richards, John F. C. (Introduction, Greek Text, English translation, and Commentary, by) : Theophrastus on Stones, *review* by Dr. V. A. Eyles, 1686
California : The Armored Scale Insects of (Howard L. McKenzie), *review* by Dr. W. J. Hall, 986
California Insect Survey : Bulletin of the, Vol. 5, The Armored Scale Insects of California (Howard L. MacKenzie), *review* by Dr. W. J. Hall, 986
California Institute of Technology : Appointment of Dr. George Wells Beadle as Eastman Visiting Professor at the University of Oxford, 1106
California Strain of *Plasmopara viticola* : Zoospore Morphology of the (Dr. Vincent Santilli), 924
Callaghan, Dr. A. R., and Millington, Dr. A. J. : The Wheat Industry in Australia, *review* by Dr. D. J. Watson, 730
Callan, Prof. H. G., and Macgregor, H. C. : Action of Deoxyribonuclease on Lampbrush Chromosomes, 1479
Callingham, B. A., and Mann, Dr. Monica : Adrenaline and Noradrenaline Content of the Adrenal Gland of the Rat following Depletion with Reserpine, 423
Calliphora : Static Sense of, and the Physical Stabilizing Effect of the Halteres (Dr. G. Schneider), 1355 ; (Dr. J. W. S. Pringle), 1356
Callow, Dr. R. K. : Elected a Fellow of the Royal Society, 881
Calvert, Dr. H. R. : *Obituary* of Colonel E. E. B. Mackintosh, 17
Calves (Young Dairy) : Effect of Age of, on Dry-Matter Digestibility of Alfalfa Pellets (M. E. McCullough and L. R. Sisk), 57
Calvin, Prof. M. (Bassham, Dr. J. A., and) : The Path of Carbon in Photosynthesis, *review* by Dr. C. P. Whittingham, 1231
Calvin, Prof. M., and others : Action and Emission Spectra of the Luminescence of Green Plant Materials, 1266
Camber, Dr. B. : An Improved Technique for Spot Testing using a 'Cellophane' Membrane, 124
Cambial Activity : Interaction between Indole-acetic Acid and Gibberellic Acid in (Dr. P. F. Wareing), 1744
Cameron, Dr. H. K. : Industrial Carbon and Graphite (Traditional Uses of Carbon, and Modern Developments from Them), 674
Cameron, John : Enhancement of Mouse-virulence of Group *A* Streptococci by Bactericidal Resorcinols, 919
Cameron, John, and others : Chaining and Unchaining *Streptococcus faecalis*—a Hypothesis of the Mechanism of Bacterial Cell Separation, 1477
Camm, Sir Sydney : Awarded the Gold Medal of the Royal Aeronautical Society, 1646
Campbell, F. W., and Robson, J. G. : Moving Visual Images produced by Regular Stationary Patterns, 362
Campion, Sir Harry : Re-elected president of the Royal Statistical Society, 1703
Canada : Handbook of Snakes of the United States and (Prof. Albert Hazen Wright and Anna Allen Wright), Vols. 1 and 2, *review*, 872
Canadian Department of Transport : Appointment of P. D. McTaggart-Cowan as associate director with Andrew Thomson of the Meteorological Branch, 1444
Cancer : Biological Aspects of (Sir Julian Huxley), *review* by Prof. P. C. Koller, 1363
Cancer (Liver) : Effects of certain Compounds related to Trypan Blue on the Experimental Production of (Dr. K. Fujita, T. Mine, T. Ito and M. Matsuyama), 1732
  Inhibiting Effect of Chlorpromazine on the Experimental Production of (Dr. K. Fujita, S. Iwase, T. Ito and M. Matsuyama), 54
Cancer (Lung) : Smoking and (Dr. John Burton), 1768
Cancer (Primary Rat Liver) : Phosphorylase Activity of (A. A. Hadjiolov and K. I. Dancheva), 547
Cancer Campaign, British Empire : Gift of £7,773 to the University of Bristol, for cancer research to be carried out in the Departments of Pathology, Physiology and Surgery, 602
Cancer Cells (Homologous Human Normal and) : Ribonuclease Activity and Ribonucleic Acid Content of (L. Ledoux, S. Brändli and J. C. De Paepe), 913
Cancer Institute, Melbourne : Second Australian Conference in Radiation Biology, 238
Cancer Tissues (Foetal and) : Protein Degradation of, in the Presence of Ethionine (Dr. Renzo Rendi), 351
Cancer-bearing and Lymphoma-bearing Mice : Erythrophagocytosis in (Ruth V. Ponder and Dr. Eric Ponder), 1537
Candida albicans from Grass Leaves (Dr. M. E. di Menna), 1287
Cane, Violet R. (Gregory, R. L., and) : A Theory of Visual Thresholds, 1488
Canestrelli, Prof. : Opening Discourse at the thirteenth International Congress of Applied Psychology, 1579
Cannon, Prof. H. Graham : The Evolution of Living Things, *review* by T. H. Hawkins, 1364
Canyon (Submarine) : A Possible Ecological Effect of Upwelling in a (Raymond J. Ghelardi and Wheeler J. North), 207
Capacitation of Mammalian Spermatozoa (Dr. C. R. Austin and Dr. M. W. H. Bishop), 851
Capacitation of Rabbit Spermatozoa (Dr. R. W. Noyes, Dr. A. Walton and Dr. C. E. Adams), 1209
Cape of Good Hope : Report of Her Majesty's Astronomer at the, to the Secretary of the Admiralty for the year 1955, 243
Cape Hyrax, *Procavia capensis* (Pallas) : An Acid-free Bacillus isolated from the Lungs of the (J. C. Wagner, Dr. G. Buchanan, V. Bokkenheuser and Shirley Leviseur), 284
Capindale, John B., and others; Formation of Oxalacetate and Aspartate from Phospho-Enol-Pyruvate in Spinach Leaf Chloroplast Extract, 632
Capital Investment in the Coal, Gas and Electricity Industries : White Paper on, 1638
Capstick, P. B. : Appointed veterinary research officer, Kenya, 459
Carbanions (Enantiomorphic), involved in the Aldolase and Triose Phosphate Isomerase Reactions : Absolute Configuration of (Ben Bloom and Yale J. Topper), 1128
Carbide (Iron), and Tungsten Carbide : Metallographic Studies of (F. J. Radd and L. H. Crowder), 258
Carbide (Silicon) : Spiral Pits on (Prof. V. G. Bhide), 1006
Carbide (Tungsten) : Metallographic Studies of Iron Carbide and (F. J. Radd and L. H. Crowder), 258
Carbo Meteorite : Distribution of Helium-3 in the (E. L. Fireman), 1725
Carbohydrases in the Sugar-Gland Juice of *Cryptochiton* (Polyplacophora, Mollusca), (Prof. B. J. D. Meeuse and Walter Fluegel), 699
Carbohydrate : Linkage of, to Protein in Ovalbumin (Dr. F. R. Jevons), 1346
Carbohydrate Peptide Complex from Egg Albumin (P. Johansen, Dr. R. D. Marshall and Prof. A. Neuberger), 1345
Carbodydrate (Glycine-) Residue from Muscle Collagen : Isolation of a (K. Konno and K. I. Altman), 994
Carbon : Isolation of a Soil Coccus capable of utilizing 'Tween 80' as a Sole Source of (Kazumori Minami), 430
  Simultaneous Evaporation of Platinum and, for Possible Use in High-Resolution Shadow-Casting for the Electron Microscope (D. E. Bradley), 875
Carbon in Photosynthesis : The Path of (Dr. J. A. Bassham and Prof. M. Calvin), *review* by Dr. C. P. Whittingham, 1231
Carbon-14 : Distribution of, in Labelled Amino-acids separated on Paper Chromatograms (K. H. Hallowes, Dr. F. P. W. Winteringham and Dr. W. J. Le Quesne), 336
  Small-Scale Preparation of Glyoxylic Acid labelled with (R. M. Krupka and Prof. G. H. N. Towers), 335
Carbon-14 in Components of Goat's Milk : Distribution of, with Sodium Formate-^{14}C as Presursor (Samual Misler, Leon Tumerman and Henry R. Roberts), 346
Carbon-14 in Small Liquid Samples : A Direct-Plating Method for the Precise Assay of (Dr. C. C. McCready), 1406
Carbon-14 Dated Palaeoliths from Borneo (Tom Harrisson), 792
C21 17 : 20-Dihydroxy-20-methyl Steroids : Separation, Detection and Estimation of (Dr. R. I. Cox), 638
Carbon (Graphitic), at 450° C. : Reaction of Carbon Monoxide with (Victor R. Deitz and Edward J. Prosen), 109
Carbon and Graphite : Industrial (Society of Chemical Industry Conference on), 674
Carbon Dioxide : Effect of, on Multiplication of *Fusarium* in Soil (Dr. R. H. Stover and Dr. S. R. Freiberg), 788
  Thioctic Acid and Photosynthetic Fixation of (B. B. Biswas and Dr. S. P. Sen), 1219
Carbon Dioxide Fixation in some Components of Growing Rat Red Cells (G. Giustina and E. Lazzarini), 1285
Carbon Dioxide Fixation in Particulate Preparations from Barley Roots (Dr. L. C. T. Young and Janet S. D. Graham), 1071
Carbon Dioxide—Bicarbonate Mixtures : Some Effects of, on the Oxidation and Reduction of Cytochrome *c* by *Ricinus* Mitochondria (D. S. Bendall, Dr. S. L. Ranson and D. A. Walker), 133
Carbon Monoxide : Reaction of, with Graphitic Carbon at 450° C. (Victor R. Deitz and Edward J. Prosen), 109
Carbon Monoxide, Cyanide and Azide : Genetic Effects of, on *Drosophila* (Dr. A. M. Clark), 500
<C=O Bonds : Formation of, in the Radiation-induced Oxidation of Protein in Aqueous Systems (Michael E. Jayko and Warren M. Garrison), 413
Carbon Tetrafluoride : Correlation between Ionizing and Attachment Coefficients and Breakdown Characteristics for (P. R. Howard), 645
Carboxylic Acids : Effect of the Metallic Ion on the Infra-Red Spectra of Salts of (Bryan Ellis and H. Pyszora), 181
Carcinogenesis : Electron Mobility in Biological Systems and its relation to (Dr. R. Mason), 820
  Multiple-Mutation Theory of (J. C. Fisher), 651
Carcinogenicity of Tricycloquinazoline (Dr. R. W. Baldwin, Dr. K. Butler, Dr. F. C. Cooper, Dr. M. W. Partridge and Dr. G. J. Cunningham), 838
Carcinogenesis (Azo Dye), of Rat Liver : Effect of Splenectomy on (Dr. Muneaki Takashi and Shoji Iwase), 1211
Carcinoma : Effect of Heparin on Pathologically Decreased Serum Esterase in (Dr. J. Skořepa, S. Novák and H. Todorovičová), 903
Carcinoma (Ehrlich Mouse Ascites) : A Cytoplasmic Membrane-like Fraction from Cells of the (Prof. P. C. Rajam and Anne-Louise Jackson), 1670
Carcinoma (Human) : Cytolipin *H*, a Pure Lipid Hapten isolated from (Dr. Maurice M. Rapport, Liselotte Graf, Vladimir P. Skipski and Nicholas F. Alonzo), 1803
Carcinoma (Intestinal), in Mice following Injection of Herring-Sperm Deoxyribonucleic Acid (T. F. Hewer and Dr. E. S. Meek), 990
Carcinoma (Walker) : Inability of Hydrogen Peroxide to Influence the Survival-Time of Rats bearing *RD*3 Sarcoma and the (Dr. F. N. Ghadially and Dr. G. Wiseman), 1067
Carcinomata (Basal Cell) : Occurrence of Sex Chromatin in the Basal Cells of the Epidermis and in (David J. B. Ashley), 427
Cardiac Adenosine Triphosphate of Thyroxinized Rats : Effect of Creatine Phosphate Administration on the (Dr. L. Angelucci, R. Boldrini and E. Mascitelli-Coriandoli), 419
Cardiac Damage caused by Experimental Stress (E. Mascitelli-Coriandoli, R. Boldrini and Dr. C. Citterio), 1215
Cardiac Output and Central Pressure Data (Robert L. Evans), 1471
Cardium edule L. and *Cardium lamarcki* Reeve : Distinction between (G. H. Petersen), 356
Carex: A Cytotaxonomic Study of (Åskell and Doris Löve and Marcel Raymond), 1041
Caribbean : Manganese Deposition and Deep Water Movements in the (Peter J. Wangersky and Prof. G. E. Hutchinson), 108
Carlile, M. J. : Phototropism of *Phycomyces* Sporangiophores, 359
Carlill, S. D. : Resistance to Flow in Vascular Beds, 1607

Carling, Sir Ernest Rock : Medical Uses of Ionizing Radiations, 93
Carlisle, Dr. D. B. : Niobium in Ascidians, 933
Carlisle, Dr. D. B., and Hummerstone, L. G.: Niobium in Sea-Water, 1002
Carlos de Mello, W., and others : Transmembrane Potentials of Single Fibres of the Atrio-ventricular Node, 66
Carlsberg Laboratory : The Journal to be published in future under its old title, *Comptes rendus des Travaux du Laboratoire Carlsberg*, 1509
Carlsberg—Wellcome Travelling Research Fellowships : Awards for 1958-59, 743
Carlson, Dr. W. B. : Flames and Industry (Application to Boilers), 16
Carlucci, A. F. (Litwack, Prof. Gerald, and) : The Pigment of *Micrococcus lysodeikticus*, 904
Carnegie Institution of Washington : To withdraw from the field of Middle American archaeology, 1110
  Year Book for 1956-57, 1513
Carnegie United Kingdom Trust : Forty-fourth Annual Report (1957), 1708
Carnivores (Fissipede) : A Quantitative Study of Stasigenesis in (Dr. M. Crusafont-Pairó and Dr. J. Truyols Santonja), 289
Carnivorous Gastropods : Escape Responses of Herbivorous Gastropods when Stimulated by (W. C. Clark), 137
Carotenoid Synthesis : Separation of, from Fat Synthesis in *Rhodotorula gracilis* by Diphenylamine (L. Slechta, O. Gabriel and Dr. O. Hoffmann-Ostenhof), 268
  Suppression of, and its Effect on the Activity of Photosynthetic Bacterial Chromatophores (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Dr. R. C. Fuller and I. C. Anderson), 252
Carotenoid Synthesis in Photosynthetic Bacteria : Inhibition of—Specific Inhibition of Carotenoid Synthesis in a Photosynthetic Bacterium and its Physiological Consequences (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250 ; Suppression of Carotenoid Synthesis and its Effect on the Activity of Photosynethic Bacterial Chromatophores (Dr. R. C. Fuller and I. C. Anderson), 252
Carotenoid Synthesis in a Photosynthetic Bacterium : Specific Inhibition of, and its Physiological Consequences (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250
Carotenized-sensitized Fluorescence of Chlorophyll *in vitro* (F. W. J. Teale), 415
Carpal Organ (Pig's) : Occurrence of Foldings of Plasma Membrane (β-Cytomembrane) in Cells of, as revealed by Electron Microscopy (K. Kurosumi and T. Kitamura), 489
Carpenter, Dr. Alan : Noise in Industry (Could Noise be Responsible for Interference with Mental Work), 1698
Carpenter, Dr. K. J. : Nutritive Value of Proteins (Chemical Methods of Evaluating Protein Quality), 152
Carpov, Adrian, and others : Paper Chromatography of Potassium, Rubidium and Caesium, 1618
Carr, Prof. D. J. (McComb, A. J., and) : Evidence from a Dwarf Pea Bioassay for Naturally Occurring Gibberellins in the Growing Plant, 1548
Carrier (Specimen), in Double-Beam Infra-Red Spectroscopy : Agar as (J. G. Feinberg, H. D. C. Rapson and Mary P. Taylor), 763
Carrington, P. : Structure and Reactivity of Electronically Excited Species (Emission by $^2\Sigma^+$OH Radicals in Oxyacetylene Flames), 321
Carruthers, R., and others : Controlled Release of Thermonuclear Energy —Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315
Carss, Dr. B., and others : Nucleotides and the Bacterial Cell Wall, 1692
Carter, B. G., and others : Acquired Immunological Tolerance to Bovine Ribonuclease, 1208
Carter, Dr. G. : Water Quality Problems in the United Kingdom, 24
Carter, Dr. G. R. : Failure of the Agglutination Test to Identify Types of *Pasteurella multocida*, 1138
Carter, Dr. G. S. : Darwin and the History of Science, *review*, 970
  A Hundred Years of Evolution, *review* by Prof. L. A. Harvey, 1296
Carter, Prof. G. W., and others : Electricity and Electrical Machines, *review*, 516
Carter, Harley, and others : Electrical Engineering (General), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Cartilage Induction in *T/T* Mice : *In vitro* Study of (Dorothea Bennett), 1286
Cartographic Conference for Asia and the Far East : Regional (1955, Mussoorie, India), Vol. 2, Proceedings of the Conference and Technical Papers (United Nations), 817
Cartography (Miss A. M. Ferrar), 817
Cartwright, D., and Stride, A. H. : Large Sand Waves near the Edge of the Continental Shelf, 41
Cartwright, T. E., and others : Polymerization—Depolymerization of Tobacco Mosaic Virus Protein, 1338
Cartwright, W. F. : Awarded the Bessemer Gold Medal for 1958 of the Iron and Steel Institute, 885
Casas-Campillo, Dr. C. (Bartniski-García, S., and) : Some Nutritional Requirements of *Colletotrichum coffeanum* Noack, 565
Case, Dr. R. A. M.,: Smoking Habits and Mortality among Workers in Cigarette Factories, 84
Casein in Milk : Rapid Determination of (J. Jakubowski, Z. Sienkiewicz and Eugenia Nowak), 1277
α-Casein from Goat Milk : Inhomogeneity of (Dr. T. Hofman), 633
Casein (First and Second Cycle), in Milk (Dr. T. A. J. Payens), 114
Casein and Lactose : Infra-red Absorption Spectra of (K. P. Norris and J.E.S. Greenstreet), 265
Cassels, Prof. J. : Parity Conservation (π-μ-e-Decay), 447
Cassie, A. M. : The Arc Cathode, 476
Cassie, Prof. W. Fisher : Plastic Design of Portal Frames, *review*, 987
  The Analysis of Engineering Structures, *review*, 1498
Cassirer, Ernst : Determinism and Indeterminism in Modern Physics (translated by O. Theodor Benfey), *review* by F. I. G. Rawlins, 590
Castelli, D., and others : A Special Reaction of the Complement Fixation Test applied to the Study of Tumours, 622
Castiaux, P., and others : Ultra-Structure of the Choanocyte Collar-Cells in Freshwater Sponges, 58
Castiglioni, M. C. (Hoenigsberg, H. F., and) : Biochemical Differences between Inbred and Outbred Lines of *Drosophila melanogaster* studied by Paper Partition Chromatography, 1404
Castings (Magnesium-treated Iron) : Promoting the Stable Eutectic Reaction in, by Vibration during Solidification (J. H. Gittus), 1004
Caswell, Dr. John Edwards : Artic Frontiers—United States Explorations in the Far North, *review* by Dr. G. C. L. Bertram, 729
Cat : Diseases of the Intervertebral Disk of the (A. S. King and R. N. Smith), 568
  Sexual Behaviour and the Vaginal Cycle in the (Richard P. Michael), 567
Cat Brain (Perfused) : Metabolism of the, during Metrazol Convulsions and Electroshock (C. Allweis and Dr. J. Magnes), 626
Cat's Optic Nervous System : Sensory Deprivation and the (Dr. Lawrence Weiskrantz), 1047
Catabolism of Serum Albumin : Site of (Dr. David Gitlin, James R. Klinenberg and Walter L. Hughes), 1064
Catalán, Prof. M. A. : *Obituary* by Dr. R. Velasco, 234
Catalase : Autoxidation of Pyrogallol—General Characteristics and Inhibition by (S. M. Siegel and B. Z. Siegel), 1153
Catalysis (γ-Radiation), of the Oxidation by Air of Tri-isopropyl Phosphite (Dr. D. G. Coe), 1519
Catecholamines in the Brain Stem of the Rabbit : Effect of Reserpine on the Intracellular Distribution of (Dr. H. Weil-Malherbe and A. D. Bone), 1474
Cater, Dr. D. B. (Hemingway, Dr. J. T., and) : Effects of Pituitary Hormones and Cortisone upon Liver Regeneration in the Hypophysectomized Rat, 1065
Cathode : The Arc (A. M. Cassie), 476
Cathode Ray Oscillograph (J. Czech), *review* by Denis L. Johnston, 73
Cation-Antibiotic Mixtures : Inhibition of Blood Digestion in Mosquitoes by Cations and (Dr. Levon A. Terzian), 282
Cation Exchangers : Ammonium Salts of the Heteropolyacids as (Dr. J. van R. Smit), 1530
Cations in some Distorted Spinels : Electronic Configuration of (Dr. K. P. Sinha), 835
Cations and Cation-Antibiotic Mixtures : Inhibition of Blood Digestion in Mosquitoes by (Dr. Levon A. Terzian), 282
Catterall, J. A. : Band Theory of Metals and the Structure of the Fermi Surface (X-Ray Emission from Alkali Metals), 527
Cattle (African), in British Dependent Territories, 1581
Cattle (Indigenous), of the British Dependent Territories in Africa (D. E. Faulkner and Dr. H. Epstein), (Colonial Advisory Council of Agriculture, Animal Health and Forestry, Publication No. 5), 1581
Cattle Breeds of Europe and Africa : Distribution of Electrophoretically Different Haemoglobins among some (A. D. Bangham and B. S. Blumberg), 1551
Cauchois, Miss Y. : Band Theory of Metals and the Structure of the Fermi Surface (X-Ray Spectroscopy of Metals), 526
Caudal Necrosis in Suckling Rats (P. K. Dikshit and S. Sriramachari), 63
Caullery, Prof. Maurice : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Causality and Chance in Modern Physics (Prof. David Bohm), *review* by Prof. L. Rosenfeld, 658
Cavanagh, Dr. P. E., and Ridley, Dr. E. C. : Parity Conservation (Experimental Techniques for Measuring Electron Polarization and Electron-neutrino Correlation), 447
Cave Formation : Bat Erosion as a Factor in (W. A. King-Webster and J. S. Kenny), 1813
Cavendish Laboratory, Cambridge : Third Symposium on Atmospheric Condensation Nuclei, 1640
Cavitation and the Solution of Gases in Liquids (Dr. K. S. Iyengar and Prof. E. G. Richardson), 1328
Cavities : Jets, Wakes and (Garrett Birkhoff and E. H. Zarantonello), *review* by Dr. D. Küchemann, 984
Caw, J. Morison : Awarded the Consolidated Gold Fields of South Africa, Ltd. Premium for 1956-57 of the Institution of Mining and Metallurgy, 1375
Cawthorne, T. : Noise in Industry (Clinical and Physiological Effects of Noise), 1696
Cedar Heartwood (Incense), *Libocedrus decurrens* Torrey : Nature of some Decay-retardant Extractive Components in (Arthur B. Anderson, Eugene Zavarin and Theodore C. Scheffer), 1275
Celebonovic, Stefan : Old Stone Age, *review* by M. C. Burkitt, 801
Cell (Non-Multiplying Animal) : Turnover of Protein in a (Dr. H. Harris and J.W. Watts), 1582
Cell (Photovoltaic) : Retinal Type of (Dr. Irvin Levin), 832
Cell (Plant) : Ion Permeability of the Plasmalemma of the (N. A. Walker), 1288 ; (Prof. G. E. Briggs), 1289
Cell (Red) Agglutinability affected by Disease (Dr. E. Stratton, P. H. Renton and Jeanne A. Hancock), 62
Cell (Single) : Two Inhibitory Fibres forming Synapses with a (Dr. G. Hoyle), 1134
Cell-free System : Effect of Hypophysectomy on the Ability of Rat Liver Microsomes in a, to Incorporate Radioactive Amino-Acids into their Proteins (Dr. A. Korner), 422
Cell-Bodies (Neuron), in Sodium-free Media : Electrical Responses of (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 1798
Cell Body Content of Ribonucleic Acid in Supra-optic Neurones : Relation between Nucleolar Volume and (J.-E. Edström and D. Eichner), 619
Cell Carcinomata (Basal) : Occurrence of Sex Chromatin in the Basal Cells of the Epidermis and in (David J. B. Ashley), 427
Cell Division in *Paramecium caudatum*: Effects of Kinetin on (Ruth Guttman and Avigdor Back), 852
Cell-Fractions of Rat Liver : Soluble Antigens in Microsomes and other (Dr. P. Perlmann and Dr. V. D'Amelio), 491
Cell Growth : Enzymic Synthesis of Coenzyme I in relation to Chemical Control of (Prof. R. K. Morton), 540
Cell Multiplication : Distribution of Tritium-labelled Thymidine in *Escherichia coli* during (Dr. R. B. Painter, F. Forro, jun., and W. L. Hughes), 328
Cell Rupture : Thaw Rigor and (R. M. Love and S. B. Haraldsson), 1334
Cell Separation (Bacterial) : Chaining and Unchaining *Streptococcus faecalis* —a Hypothesis for the Mechanism of (Dr. Iwo Lominski, John Cameron and George Wyllie), 1477
Cell Strain (Phagocytic), derived from a Murine Lymphoma : Adaptation to Serum-free Medium by a (Dr. Alan S. Rabson, Frances Y. Legallais and Samuel Baron), 1343
Cell Strains : Nomenclature of (Dr. John Paul), 650
Cell System (Dendritic), and Mast Cells in Non-Epidermal Stratified Squamous Epithelium (Dr. L. O. Zwillenberg), 1343
Cell Tumour (Mouse Plasma) : Virus-like Bodies in a Transplantable (Dr. A. F. Howatson and E. A. McCulloch), 1213

Cell Variation (Somatic) : Genetic Aspect of (Eleventh Biology Research Conference of the Biology Division of the Oak Ridge National Laboratory), 1706

Cell Wall : Development of Lysozyme-Resistance in *Micrococcus lysodiekticus* and its Association with an Increased O-Acetyl Content of the (Dr. W. Brumfitt and Dr. A. C. Wardlaw, and Dr. J. T. Park), 1783

Cell Wall (Bacterial) : Nucleotides and the (J. J. Armstrong, Prof. J. Baddiley, Dr. J. G. Buchanan and Dr. B. Carss), 1692

Cell Wall Composition in Bacterial and *L* Forms of *Proteus vulgaris* (Dr. O. Kandler, A. Hund and C. Zehender), 572

Cell-Wall Synthesis : Chloramphenicol-Resistant Incorporation of Amino-Acids into *Staphylococci* and (Dr. J. Mandelstam and Dr. H. J. Rogers), 956

Cell-Wall Synthesis by *Staphylococcus aureus* in the Presence of Chloramphenicol (R. Hancock and Dr. James T. Park), 1050

Cell Walls (Plant) : Spatial and Temporal Variation of Microfibrillar Organization in (D. S. Belford, Dr. A. Myers and Prof. R. D. Preston), 1251

Cell Walls (Primary) : Mechanism of Deposition and Extension of (G. Setterfield and S. T. Bayley), 530

'Cellophane' Membrane : An Improved Technique for Spot Testing, using a (Dr. B. Camber), 124

Cells, Normal and Abnormal : Chemical Organization of (Conference at the University of Wisconsin), 1576

Cells, Normal and Malignant, *review* by Prof. P. C. Koller, 1363

Cells : Chemistry of, *review* by Prof. C. H. Waddington, 1231
  The Life and Death of (Dr. Joseph G. Hoffman), *review* by Prof. P. C. Koller, 1363
  Mast (Dr. Tadeus Niebroj), 991

Cells with Basophilic Cytoplasm : Affinity of Neutral Red for (Dr. Winfield S. Morgan), 1132

Cells of the Ehrlich Mouse Ascites Carcinoma : A Cytoplasmic Membrane-like Fraction from (Prof. P. C. Rajam and Anne-Louise Jackson), 1670

Cells of the Facial Nerve Nucleus : A Histoautoradiographic Study of the Effect of Section of the Facial Nerve on the Uptake of Methionine-^{35}S by the (J. Fischer, Z. Lodin and Dr. J. Koloušek), 341

Cells of the Oral Epithelium : Sudanophil Inclusions in Ameloblasts, Odontoblasts and (Prof. J. T. Irving), 569

Cells of Pig's Carpal Organ : Occurrence of Foldings of Plasma Membrane (β-Cytomembrane) in, as revealed by Electron Microscopy (K. Kurosumi and T. Kitamura), 489

Cells (*Amoeba proteus* and *A. discoides*): Ageing of (Audrey Muggleton and Prof. J. F. Danielli), 1738

Cells (Basal), of the Epidermis and in Basal Cell Carcinomata : Occurrence of Sex Chromatin in the (David J. B. Ashley), 427

Cells (Bulliform), in Grasses : Silicification of (D. Wynn Parry and Dr. Frank Smithson), 1549

Cells (Choanocyte Collar-), in Freshwater Sponges : Ultra-Structure of the (R. Rasmont, J. Bouillon, P. Castiaux and G. Vendermeerssche), 58

Cells (Chlorophyllous) : Respiration in (W. O. James and V. S. R. Das), 1244

Cells (Ehrlich Ascites Tumour), of Mice : Calcium Exchanges of (Doreen Thomason and Raymond Schofield), 1207

Cells (Frog Spinal Ganglion) : Electrical Responses of, in Sodium-free Media (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 703

Cells (Growing Rat Red) : Carbon Dioxide Fixation in some Components of (G. Giustina and E. Lazzarini), 1285

Cells (Homologous Human Normal and Cancer) : Ribonuclease Activity and Ribonucleic Acid Content of (L. Ledoux, S. Brändli and J. C. De Paepe), 913

Cells (Isolated), of Hen Spleen : Antibody Formation by, after mixing with Antigen *in vitro* and Transfer to Chicks (Dr. Z. Trnka), 55

Cells (Mast), in Non-Epidermal Stratified Squamous Epithelium : The Dendritic Cell System and (Dr. L. O. Zwillenberg), 1343

Cells (Neurosecretory), in some Cirripedes (H. Barnes and J. J. Gonor), 194

Cells' ('Polarization) : Electrical Noise from, and from Human Tissues (E. Nightingale), 192

Cells (Renal) : Spontaneous Occurrence of Intranuclear Inclusion Bodies in Continuous Cultures of (Dr. N. M. Larin), 1477

Cells (Reticulo-endothelial) : A Theory of Antibody Formation involving Eosinophils and (Dr. Robert S. Speirs), 681

Cells (Selenium-type Photovoltaic) : Photo-electric Response of, to X-Rays (Dr. R. Feinberg), 1057

Cells (Single) : Antibody Production by (G. J. V. Nossal and Prof. Joshua Lederberg), 1419

Cells (Solitary HeLa) : Multiplication of (Dr. Peter Wildy and Michael Stoker), 1407

Cellular Basis for the Induction of Morphological Structures (Dr. R. Brown), 1546

Cellular Clocks (Prof. Erwin Bünning), 1169

Cellulase (*Myrothrecium*) : Zone Electrophoresis of (R. Thomas and Dr. D. R. Whitaker), 715

Cellulose : Mammalian (Dr. D. A. Hall, Dr. P. F. Lloyd and H. Saxl, and Dr. F. Happey), 470
  Systematic Absences and the X-Ray Diagram of (K. C. Ellis and Dr. J. O. Warwicker), 1614

Cellulose Fibre : Examination of, by the Low-Temperature Specimen Method of Electron Difiraction and Electron Microscopy (Goro Honjo and Masaru Watanabe), 326

Cellulose Microfibrils : Electron Diffraction Study of Adsorbed Metal Ions on the Surface of (D. S. Belford, A. Myers and Prof. R. D. Preston), 1516

Cementite Structure : Two Borides with the (Stig Rundqvist), 259

Centenaries of 1958 : Scientific (Joan M. Eyles), 9

Centipede, *Lithobius forficatus* (L.) : Connective-Tissue Pigment of the (Dr. A. E. Needham), 194

Central Electricity Generating Board : Appointment of Leonard Rotherham as a full-time member, 20

Central European Flora : North and, *review* by Prof. T. G. Tutin, 972

Central Government (British), 1914-1956 : The Organization of (A Survey by a Study Group of the Royal Institute of Public Administration, edited by D. N. Chester, written by F. M. G. Willson), 141 ; *review*, 299

Central Nervous System : Chemotherapy and the (Dr. Henry McIlwain), *review* by Dr. G. B. Ansell, 1430

Central Pressure Data : Cardiac Output and (Robert L. Evans), 1471

Centrifugation (Counter-Streaming) : Separation of Bull Spermatozoa carrying *X*- and *Y*-Chromosomes by (Per Eric Lindahl), 784

Ceppellini, Dr. R., and Pernis, Dr. B. : Presence of Plasma Globulins in the Hyaline Tissue in Cases of Silicosis, 55

Cereal Chemistry : Modern (Dr. D. W. Kent-Jones and Dr. A. J. Amos), fifth edition, *review* by Dr. J. B. Hutchinson, 1361

Cereal Crops : Diseases of, *review* by Prof. A. E. Muskett, 515

Cereal Diseases in Ireland (Prof. Robert McKay), *review* by Prof. A. E. Muskett, 515

Cereal Science : Progress in, *review* by Dr. J. B. Hutchinson, 1361

Cereals and Climate, *review* by Dr. E. C. Humphries, 1689

Cerf, J. A., and others : Electrical Responses of Frog Spinal Ganglion Cells in Sodium-Free Media, 703
  Electrical Responses of Neuron Cell-Bodies in Sodium-free Media, 1798

Cerf, Dr. Roger : Dynamics of Chain Molecules in Dilute Solutions with special reference to Non-Newtonian Viscosity, 558

Cesa-Bianchi, M., and Spaltro, E. : At the thirteenth International Congress of Applied Psychology (Workers' Mobility in North Italy), 1580

Cestode Fragments (Larval) : Cultivation and Development of, *in vitro* (Prof. J. D. Smyth), 1119

Ceylon : The Amphibia of (P. Kirtisinghe), *review* by Miss A. G. C. Grandison, 1758

Chabazite, a Molecular Sieve : Crystal Structure of (L. S. Dent and Prof. J. V. Smith), 1794

Chain : The Golden—a Study in the History of Libraries (Prof. R. Irwin), 313

Chain Molecules in Dilute Solutions : Dynamics of, with special reference to Non-Newtonian Viscosity (Dr. Roger Cerf), 558

Chaining and Unchaining *Streprococcus faecalis*—a Hypothesis of the Mechanism of Bacterial Cell Separation (Dr. Iwo Lominski, John Cameron and George Wyllie), 1477

Chakraborty, S. (Chanda, N. B., and) : Murexide Test in Paper Chromatography, 836

Chalk, Dr. L. : Tree Injuries, *review*, 732

Challen, S. B. : Glossary of Indian Medicinal Plants, *review*, 984
  Analytical Microscopy, *review*, 1758

Challenger, Prof. Frederick : *Obituary* of Prof. Robert Whytlaw-Gray, 527

Challenger Society : Joint meeting with representatives from Marine Laboratories, 1640

Chalmers, J. G., and others : Arsenic in Detergents, 1463

Chambers, Dr. R. G. : Band Theory of Metals and the Structure of the Fermi Surface (Cyclotron Resonance in Metals), 526
  Appointed senior lecturer in low-temperature physics at the University of Bristol, 602

Champion, P. A. : Awarded the N. E. Rowe Medal of the Royal Aeronautical Society, 1646

Chance, Prof. Britton : Enzyme Chemistry (Cytochromes in Living Cells), 389

Chance in Modern Physics : Causality and (Prof. David Bohm), *review* by Prof. L. Rosenfeld, 658

Chance in Scientific Discovery : Reason and (Dr. R. Taton), translated by A. J. Pomerans, *review* by Sir Edward Appleton, 983

Chanda, N. B., and Chakraborty, S. : Murexide Test in Paper Chromatography, 836

Chandler, B. V., and Harper, K. A. : Anthocyanins in Blackcurrant Fruits, 131

Chang, Prof. J. T., and Wang, Miss M. Y. : Nutritional Requirements of the Common Housefly, *Musca domestica vicina* Macq., 566

Change of Length during Transformation of Iron under Stress (M. de Jong and Prof. G. W. Rathenau), 1396

Change of Pathogenic Race in *Fusarium oxysporum* f. *pisi* induced by Root Exudate from a Resistant Host (E. W. Buxton), 1222

Changes : Recent Climatic (Dr. E. B. Kraus), 666, *erratum*, 813

Changes in Adenine Nucleotides of Squid Muscle (Tsuneyuki Saito, Ken-ichi Arai and Tsune Tanaka), 1127

Changes in the Dry Weight and the Deoxyribonucleic Acid Content of *Proteus vulgaris* caused by Penicillin (Dr. M. V. Nermut and Dr. V. Drášil), 1740

Changes in some Enzymes in Brain Wounds : Deposition of Glycogen and (Prof. Nobuo Shimizu and Dr. Yoriaki Hamuro), 781

Changes in the Surface Structure of Gram-Negative Bacteria induced by Penicillin Action : Some (Dr. M. R. J. Salton and Dr. F. Shafa), 1321

Changes in the Topographical Distribution of Glycogen in the Brain during Animal Hypnosis (Dr. D. Svorad), 775

Changes in Vat Dye Systems (Dr. G. S. Egerton and F. Galil), 1399

Changes (Behavioural), in Animals after Intracisternal Injection with Adrenocorticotrophic Hormone and Melanocyte-stimulating Hormone (Prof. W. Ferrari), 925

Changes (Gestational), in Connective Tissue in the Ewe (Dr. E. G. Bassett), 196

Changes (Histological and Chemical), in the Rat Pituitary Neural Lobe following Treatment with Neurohypophysial Substances (Dr. J. de Groot), 650

Changing Universe (John Pfeiffer), *review* by Dr. F. G. Smith, 980

Chantrenne, Prof. H., and Devreux, S. : Effects of 8-Azaguanine on the Synthesis of Protein and Nucleic Acids in *Bacillus cereus*, 1737

Chapman, C., and Phillips, Dr. M. A. : Fluoroacetamide as a Systemic Insecticide, 1810

Chapman, D. L. : *Obituary* by Dr. E. J. Bowen, 453

Chapman, F. : Recent Advances in Polymer Technology (Expanded P.V.C.), 1305

Chapman, Dr. F. T., and others : Electrical Engineering (General), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516

Chapman, Dr. Garth : Appointed to a newly created chair of zoology at Queen Elizabeth College, London, 1182, 1243 ; work of, 1243

Chapman, Helen R. : Dairy Records, *review*, 982

Chapman, J. A. : A Device for Visualizing the Pattern of Plane Polarized Light from Blue Sky, 1393

Chapman, Prof. Sydney : The Transition from the Ionosphere to Interplanetary Space, 1237

Chapman, S., and Tandberg-Hanssen, E. : Extremley High Temperatures (Mathematical Analysis of Thermal Diffusion at High Temperatures in Ionized Gases), 1381

Chapman, Prof. V. J., and Steers, Prof. J. A. : Salt Marshes, 1512

Character (Invariant)—'Vibrissa Number'—in the House Mouse : Selection for an (R. B. Dun and A. S. Fraser), 1018

Characteristic (A New Spectral), in Solar Radio Emission (A Maxwell and G. Swarup), 36
Characteristics of Solar Radiation at λ10.7 cm. and in the Far Ultra-violet : Similarities in the (C. M. Minnis and G. H. Bazzard), 1796
Characteristics (Biological) : A Correlation between Electrical Surface Charge and some, during the Stepwise Progression of a Mouse Sarcoma (Mrs. L. Purdom and E. J. Ambrose, and Prof. G. Klein), 1586
Characteristics (Breakdown), for Carbon Tetrafluoride : Correlation between Ionizing and Attachment Coefficients and (P. R. Howard), 645
Characteristics (Deformation), of Alpha-Titanium : Effect of Hydrogen on the (E. Smith), 902
Characteristics (Orbital), of an Earth Satellite : Determination of, from Single-Station Radio-Transit Observations (Gordon Grant, A. L. Jones, R. W. Burhans, P. S. Fay and David Frazier), 900
Charged Particles : Confinement of, by a Magnetic Field (Dr. B. Lehnert), 331
Charles, G. H. (Burdon-Jones, Dr. C., and) : Light Reactions of Littoral Gastropods, 129
Charles, R. T., and Rees, O. : Use of Sulphonamides in the Treatment of Pleuro-pneumonia-like Organisms in Rats, 1213
Charlesby, Prof. A. : Recent Advances in Polymer Technology (Radiation of Polymers), 1304
Charlesby, Prof. A. (Pinner, Dr. S. H., and) : Recent Advances in Polymer Technology, 1303
Charlot, Prof. G., and Bézier, Denise : Quantitative Inorganic Analysis (translated by Dr. R. C. Murray), *review* by C. O. Harvey, 869
Charlotte, H.R.H., Grand Duchess of Luxembourg : Honorary membership of the Iron and Steel Institute accepted by, 1378
Charlton, T. M. : Suspension Bridges, *review*, 982
  Development of Architectural Science, 1315
  Water-Hammer Analysis, *review*, 1495
Chart (Trilinear), of Nuclides (William H. Sullivan), second edition, *review* by Dr. E. Bretscher, 987
Chatfield, Dr. Paul O. : Fundamentals of Clinical Neurophysiology, *review* by Prof. D. Whitteridge, 1095
Chatt, Dr. J., and others : Isomerism among Binuclear Thiocyanato-bridged Complexes, 43
Chattaway, Dr. F. W., and Barlow, A. J. E. : Fluorescent Substances produced by Dermatophytes, 281
Chatterjea, Dr. A. B. (edited by Nijhawan, Dr. B. R., and) : Non-Ferrous Metal Industry in India—a Symposium held at the National Metallurgical Laboratory, 1954, *review* by Prof. F. C. Thompson, 1498
Chatterjee, Dr. A. : Phytochemistry (Alkaloids of Apocynaceous Plants), 466
Chatterji, A. K. : Plasticity of Clay-Water Systems, 1118
Chaudhri, Prof. Rafi' M., and others : Photo-ionization in Self-quenching Geiger Counters, 1526
Cheese Curd : Fibrous Structure in (N. King and J. Czulak), 113
Cheeseman, G. C. (Garvie, Ellen I., and) : *Alcaligenes haemolysans*, 1540
Chelates : Mode of Action of, in protecting against *Clostridium perfringens* Toxin (Prof. Merwin Moskowitz), 550
Chemical Affinity : Time Variation of (Dr. W. Yourgrau and Dr. C. J. G. Raw), 480
Chemical Analysis of Holothurian Sclerites (John S. Hampton), 1608
Chemical Analysis of Tea : Agrotype Concept in (Dr. W. Wight), 1355
Chemical Approach using Quinol Phosphates : Oxidative Phosphorylation —a (Dr. V. M. Clark, G. W. Kirby and Sir Alexander Todd), 1650
Chemical Basis of Heredity (McCollum-Pratt Institute of the Johns Hopkins University, with support from the Atomic Energy Commission, Symposium on, edited by William D. McElroy and Dr. Bentley Glass), *review* by Prof. M. Stacey, 75
Chemical Changes in the Rat Pituitary Neural Lobe following Treatment with Neurohypophysial Substances : Histological and (Dr. J. de Groot), 650
Chemical Composition of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol.—Presence of Reducing Compounds in *Ascophyllum nodosum* (Bjørn Larsen and Arne Haug), 1224 ; Influence of Habitat on the Chemical Composition of *Ascophyllum nodosum* (Arne Haug and Bjørn Larsen), 1224
Chemical Control of Cell Growth : Enzymic Synthesis of Coenzyme I in relation to (Prof. R. K. Morton), 540
Chemical Detection of Indolyl Acetic Acid in Plants : A Possible Source of Error in the (R. Nichols), 919
Chemical Determination of Deoxyribonucleic Acid in Root Tips before and after Cold Treatment (Dr. J. K. Heyes and Dr. G. W. Shaw), 1337
Chemical Determination of Rutin : Use of Defoliants for Drying Buckwheat in the Field, and a New Method for the (V. Brejcha and P. Horák), 505
Chemical Differences of the Human Haemoglobins *A*, *S* and *C* : Allelomorphism and the (J. A. Hunt and Dr. V. M. Ingram), 1062
Chemical Engineering : Pilot Plants, Models and Scale-up Methods in (Dr. Robert Edgeworth Johnstone and Prof. Meredith W. Thring), *review* by Prof. D. M. Newitt, 1094
Chemical Engineering in a University (Prof. P. V. Danckwerts), 811
Chemical Engineering, European Federation of : Seventeenth Meeting (Symposium on the Organization of Chemical Engineering Projects), 1042, 1312
Chemical Engineering Projects : The Organization of (European Federation of Chemical Engineering Symposium on), 1042, 1312
Chemical Engineers in Britain : Output of, 1382
Chemical Engineers, Institution of : Moulton Medal awarded to W. D. Armstrong, H. H. Rosenbrock and W. L. Wilkinson, 1312
  Junior Moulton Medal for 1957 awarded to Dr. D. Train, 1312
  Presidential Address (Sir Hugh Beaver), 1375
Chemical Engineers, Institution of, in co-operation with the Chemical Engineering Group of the Society for Chemical Industry : Proceedings of the Symposium on the Scaling-up of Chemical Plant and Processes, 1769
Chemical Groups : Conditions for Differential Reaction of 'Identical' (Dr. A. G. Ogston), 1462
Chemical Industry, Society of : Conference on Fundamental Aspects of the Dehydration of Foodstuffs, 387
  Conference on Industrial Carbon and Graphite, 674
  Reports on the Progress of Applied Chemistry, Vol. 41, 1956, *review* by Prof. J. R. Partington, 1432
Chemical Industry, Society of (American Section) : Perkin Medal Address (Dr. W. S. Kroll), 159
Chemical Industry, Society of (Chemical Engineering Group), (Institution of Chemical Engineers, in co-operation with the) : Proceedings of the Symposium on the Scaling-up of Chemical Plant and Processes, 1769
Chemical Industry, Society of (Fine Chemicals Group), (Chemical Society and the) : Symposium on Newer Preparative Methods in Organic Chemistry, 239
Chemical Industry, Society of (Pesticides Group), and the Association of British Insecticide Manufacturers : Discussion on Residues of Pesticides in Foodstuffs, 22
Chemical Industry, Society of (Plastics and Polymer Group) : Silver Jubilee Symposium on the Physical Properties of Polymers, 531, 1633
Chemical Industry, Society of (Italian Chemical Society and the) : Eighth National Congress of Chemistry, 1246
Chemical Institute of Canada (Physical Chemistry Division) : Symposium on the Structure and Reactivity of Electronically Excited Species, 320
Chemical Kinetics in Manganous Sulphate Solutions : An Ultrasonic Investigation of (Sushil Kumar Kor), 1462
Chemical Mutagens : Use of 'Brood Patterns' in Research on (Dr. C. Auerbach), 754, 757 ; (Dr. O. G. Fahmy and Dr. Myrtle J. Fahmy), 755
Chemical Nature : Relative Distribution and, of the Fuel Store of the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon (Dr. J. C. George and R. M. Naik), 709
Chemical Organization of Cells, Normal and Abnormal (Conference at the University of Wisconsin), 1576
Chemical Pathology at Cape Town, 1179
Chemical Phase Theory (Prof. J. Zernike), *review* by Dr. F. Din, 587
Chemical Plant and Processes : The Scaling-up of (Proceedings of the Institution of Chemical Engineers, in co-operation with the Chemical Engineering Group of the Society for Chemical Industry Symposium on), 1769
Chemical Reactions (Radiation-induced) : Dose-rate Effects in (J. P. Keene), 387
Chemical Society : Anniversary Meeting, 161
  Symposium on Developments in Aromatic Chemistry, 161
  Symposium on Applications of Electron and Nuclear Resonance in Chemistry, 161
  Symposium on Recent Work on the Inorganic Chemistry of Sulphur, 161
  Corday-Morgan Medal and Prize was 1956 awarded to Dr. K. W. Bagnall, 947
  Election of Prof. O. Hassel, Dr. G. B. Kistiakowski, Prof. Wolfgang Pauli and Dr. E. W. R. Steacie to honorary fellowship, 1312
Chemical Society, and the Fine Chemicals Group of the Society of Chemical Industry : Symposium on Newer Preparative Methods in Organic Chemistry, 239
Chemical Society of Egypt : Publication of the *Egyptian Journal of Chemistry*, 1638
Chemical Structure and Physical Behaviour of High Polymers (Sir Harry Melville), 1045
Chemical Substances : Purity and Purification of (Prof. Arne Tiselius), 387
Chemical and Petroleum Engineering Exhibition at Olympia, 1312
Chemical and Physical Structure of Mucopolysaccharides (National Science Foundation and the Retina Foundation Conference on), 1246
Chemicals Dissolved in Rain Water, 1650
Chemie und Biochemie der Reduktone und Reduktonate (Prof. Dr. Hans von Euler und Prof. Dr. Bernd Eistert), *review* by Prof. E. L. Hirst, 145
Chemistry : Applications of Electron and Nuclear Resonance in (Chemical Society Symposium on), 161
  Comprehensive Inorganic (Prof. M. Cannon Sneed and Prof. Robert C. Brasted), Vol. 5, Nitrogen, Phosphorus, Arsenic, Antimony and Bismuth (Harry H. Sisler), Nonaqueous Chemistry (Alfred R. Pray) ; Vol. 6, The Alkali Metals (John F. Suttle), Hydrogen and its Isotopes (Robert C. Brasted), *review*, 1428
  Eighth National Congress of (Italian Chemical Society and the Society of Chemical Industry), 1246
  High-Polymer (*Scientific American* issue devoted to), 94
  Index of Films on (Royal Institute of Chemistry), 1245
  Inorganic (Dr. E. de Barry Barnett and Dr. C. L. Wilson), second edition, *review* by Prof. J. R. Partington, 1097
  Mathematics and Statistics for Use in Pharmacy, Biology and (L. Saunders and R. Fleming), *review* by Dr. D. J. Finney, 147
  Modern Cereal (Dr. D. W. Kent-Jones and Dr. A. J. Amos), fifth edition, *review* by Dr. J. B. Hutchinson, 1361
  Nuclear, *review* by G. N. Walton, 975
  Organic (Dr. I. L. Finar), Vol. 2, Stereochemistry and the Chemistry of Natural Products, *review* by Dr. W. D. Ollis, 6
  Organic—Electronic Theory and Reaction Mechanism (Rowland I. Reed and Dr. S. Horwood Tucker), *review* by G. Fowles, 299
  Ramsay Memorial Fellowship in, 459
  Through Alchemy to (Prof. J. Read), *review* by Prof. J. R. Partington, 986
Chemistry, Royal Institute of : Meldola Medal of the Society of Maccabaeans, 161, 1374
  Beilby Memorial Awards, 161
  Humphry Davy Lectures, 387
  Index of Films on Chemistry, 1245
Chemistry, Royal Institute of (Thames Valley Section) : Symposium on Radiation Chemistry of Organic Systems, 1110
Chemistry, Royal Institute of, and others : Symposium on Science and Society, 603, 1183
Chemistry of the Actinide Elements (Joseph J. Katz and Glenn T. Seaborg), *review* by Dr. L. E. J. Roberts, 1496
Chemistry of Cells, *review* by Prof. C. H. Waddington, 1231
Chemistry of Co-ordination Compounds (National Academy of Sciences of India Symposium on), 1246
Chemistry of Life : The Physics and (A *Scientific American* Book), *review* by Prof. D. C. Harrison, 985
Chemistry of Natural Products : Stereochemistry and the (Dr. I. L. Finar), (Organic Chemistry, Vol. 2), *review* by Dr. W. D. Ollis, 6
Chemistry of Steroids (Dr. W. Klyne), *review* by Dr. E. Stedman, 659
Chemistry (Analytical), Society for : Election of Officers, 812
Chemistry (Applied) : Reports on the Progress of (Society of Chemical Industry), Vol. 41, 1956, *review* by Prof. J. R. Partington, 1432

Chemistry (Aromatic) : Developments in (Chemical Society Symposium on), 161
Chemistry (Enzyme) : International Symposium on (Science Council of Japan, under the auspices of the International Union of Biochemistry), 389
Chemistry (Inorganic) : Treatise on (Prof. H. Remy), Vol. 2, Sub-Groups of the Periodic Table and General Topics (translated by Prof. J. S. Anderson, edited by Prof. J. Kleinberg), *review* by Prof. J. R. Partington, 1366
Chemistry (Inorganic), of Sulphur : Recent Work on the (Chemical Society Symposium on), 161
Chemistry (Organic) : Advanced, *review* by Dr. W. D. Ollis, 6
  Guides to, *review* by Prof. John Read, 515
  Newer Preparative Methods in (Chemical Society and the Fine Chemicals Group of the Society of Chemical Industry Symposium on), 239
Chemistry (Physical), of Nucleic Acids and Nucleo-proteins : Structure and (Colloid and Biophysics Committee of the Faraday Society Discussion on), 885
Chemistry (Physiological), in the University of Reading, 670
Chemistry (Radiation), of Organic Systems (Thames Valley Section of the Royal Institute of Chemistry Symposium on), 1110
Chemistry (Steroid) : Outline of, *review* by Dr. E. Stedman, 659
Chemistry and Biochemistry of the Reductones, *review* by Prof. E. L. Hirst, 145
Chemistry and Life, *review* by Prof. M. Stacey, 75
Chemistry and Physics : Handbook of (edited by Prof. Charles D. Hodgman, in association with Prof. Robert C. Weast and Dr. Samuel M. Selby), thirty-nineth edition, *review*, 661
Chemistry and Toxic Action of Organic Compounds containing Phosphorus and Fluorine : Some Aspects of the (Dr. Bernard Charles Saunders), *review* by Sir Rudolph Peters, 1295
Chemotherapeutic Action of a Cyclic Nitrogen Mustard Phosphamide Ester (B 518-ASTA) in Experimental Tumours of the Rat (Herbert Arnold, Friedrich Bourseaux and Norbert Brock), 931
Chemotherapy and the Central Nervous System (Dr. Henry McIlwain), *review* by Dr. G. B. Ansell, 1430
Chen, Dr. P. S., and Baltzer, Prof. F. : Species-Specific Differences in Free Amino-Acids and Peptides in Sea-Urchin Eggs and Embryos (Pure Species and Hybrids), 98
Chenery, Dr. E. M. : Boron Deficiency in Tea, 426
Cheng, Chu Shan, and others : Effects of Clipping and Spraying on various Homoeothermic Responses of Rabbits at an Elevated Environmental Temperature, 842
Cheng, Dr. Ping-yao : Infectivity of Ribonucleic Acid from Mouse Brains infected with Semliki Forest Virus, 1800
Cheong, Wan Sai, and Kiang, Dr. A. K. : Phytochemistry (Preliminary Investigations on the Separation of Alkaloids of *Rauwolfia perakensis*), 466
Chester, D. N. (edited by) : The Organization of British Central Government, 1914-1956—a Survey by a Study Group of the Royal Institute of Public Administration (written by F. M. G. Willson), 141 ; *review*, 299
Chesterman, Dr. D. R. : Science in Schools, 1372
Chesters, Prof. C. G. C. (Parkinson, D., and) : Occurrence of *Fusarium culmorum* (W. G. Sm.) Sacc. in the Rhizosphere of Oats, 1746
Chesters, Dr. J. H. : Flames and Industry (Relevance of the work of the International Flame Research Foundation to Conditions in Steel Furnaces), 16
Cheyletus eruditus (Acarina) : Cleavage in (A. R. Edwards), 1409
Chhapgar, A. F., and others : Temperature Coefficient of Ultrasonic Absorption in Organic Liquids, 405
Chiasma Frequency in Allocyclic Segments of Chromosomes : High (Dr. N. E. Virkki), 1148
Chibnall, Dr. A. C. : *Obituary* of Prof. M. Damodaran, 454
Chicago Field Museum of Natural History : Botanical Series, Vol. 13, Part 3A, No. 2, Flora of Peru (J. Francis MacBride), *review* by N. Y. Sandwith, 1366
  Fieldiana, Anthropology, Vol. 36, No. 9, Edible Lizards (Allan R. Holmberg), 1187
  Fieldiana, Botany, Vol. 28, No. 4, Contributions to the Flora of Venezuela (Dr. Julian A. Steyermark and collaborators), *review*, 445
Chick, D. R., and others : Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
  Critical Mass Measurements for the Merlin Research Reactor, 1171
Chick Embryo : Serological Determination of Developing Muscle Protein in (Dr. Yoshito Ogawa, Takatada Kawahara and Jiroo Miura), 621
Chick Fibroblasts *in vitro* : Radioprotective Properties of Cystamine, Cysteamine and Cysteine when tested with (P. Oftedal, R. Oftebro and R. Eker), 344
Chickens : Perosis and Folic Acid Antagonism in (J. H. Arundel), 343
Chicks : Antibody Formation by Isolated Cells of Hen Spleen after mixing with Antigen *in vitro* and Transfer to (Dr. Z. Trnka), 55
Chicory : Virus Transmission by *Dactynotus cichoricola* H.R.L., a New Aphid on (Dr. J. Semal), 721
Children : Science for, *review* by T. H. Hawkins, 1628
Children of Mothers Aged 42 and Over : Congenital Malformations in (Prof. J. A. Böök, M. Fraccaro, C. G. Hagert and J. Lindsten), 1545
Children and Society, 1381
Children and Young People (British National Conference on Social Work), 1381
Childs, Dr. E. C. : Rheology on the Land, *review*, 1166
Chile (Southern) : Expedition to (Royal Society, in co-operation with the Royal Society of New Zealand), 949
Chimaera of *Alaria* and *Laminaria* found in Nature (Jun Tokida, Hikoei Ohmi and Minoru Imashima), 923
Chimaeras (Radiation) : Avoidance of 'Secondary Disease' in (D. W. H. Barnes, P. L. T. Ilbery and Prof. J. F. Loutit), 488
Chimie biologique, Société de : Charles Léopold Mayer Prize for 1957 awarded to Prof. J. Brachet, 1182
Chimie nucléaire et ses applications (M. Haïssinsky), *review* by G. N. Walton, 975
Chimie physique, Société de : Eighth Annual Meeting (Discussion on Transferts d'Energie Lumineuse et Photosensibilisation), 673
China, Dr. W. E. : Insects of Micronesia, 818
  Hétéroptères aquatiques, *review*, 1691
Chinese Rape (Yellow) : Seed-coat Structure of (Dr. John G. Vaughan), 650
Chloramphenicol : Cell-Wall Synthesis by *Staphylococcus aureus* in the Presence of (R. Hancock and Dr. James T. Park), 1050
  Effect of, on Ribonucleic Acid Metabolism in *E. coli* infected with *T*2 Phage (Prof. Itaru Watanabe, Dr. Yukio Kiho and Dr. Kin-ichiro Miura), 1127
Chloramphenicol-Resistant Incorporation of Amino-Acids into *Staphylococci* and Cell-Wall Synthesis (Dr. J. Mandelstam and Dr. H. J. Rogers), 956
Chlorate (Neutron-irradiated Sodium) : Nuclear Quadrupole Resonance of (Joseph Depireux and Prof, Jules Duchesne), 759
Chlorella pyrenoidosa : Chloride Effect on the Growth of (Dr. Clyde Eyster), 1141
Chloride Effect on the Growth of *Chlorella pyrenoidosa* (Dr. Clyde Eyster), 1141
Chloride, Sulphate and other Ions : The Influence and Importance of Daily Weather Conditions in the Supply of, to Fresh Water from Atmospheric Precipitation (E. Gorham), 1650
Chloride Crystals (Sodium) : Etch Figures on (B. Jeszenszky), 559
  Rectifying Effects of (Dr. S. Császár), 1158
Chloride Vapour (Methyl) : Second Virial Coefficient of (the late Prof. R. Whytlaw-Gray, C. G. Reeves and Dr. G. A. Bottomley), 1004
Chloroacetic Acids (Mono-, Di- and Tri-) : Structure of Cupric Acids with (Dr. Ryutaro Tsuchida, Dr. Shoichiro Yamada and Hiroji Nakamura), 479
Chlorophyll *in vitro* : Carotenoid-sensitized Fluorescence of (F. W. J. Teale), 415
Chlorophyll Content (Comparative), of the Two Generations of Bryophytes (Prof. Frederick T. Wolf), 579
Chlorophyll Metabolism and Nodule Formation in Soya Bean : Relation between (C. Sironval), 1272
Chlorophyllous Cells : Respiration in (W. O. James and V. S. R. Das), 1244
Chloroplast Extract (Spinach Leaf) : Formation of Oxalacetate and Aspartate from Phospho-Enol-Pyruvate in (Lawson L. Rosenberg, John B. Capindale and F. R. Whatley), 632
Chlorpromazine : Inhibiting Effect of, on the Experimental Production of Liver Cancer (Dr. K. Fujita, S. Iwase, T. Ito and M. Matsuyama), 54
Chlorpromazine in *N* Alkali : Relative Instability of (Dr. I. Gordon Fels, Marty Kaufman and A. G. Karczmar), 1266
Chlorpromazine and Anoxia : Relationship between (Dr. V. Lindaur), 1341, *errata*, 1510
Chlortetracycline : Effect of Calcium Ions on the Inhibition of Hydrolases by (Dr. Josef Rokos, Mikuláš Burger and Pavel Procházka), 1201
  A Shorter Microbiological Assay Method for Oxytetracycline and (Nyiri László), 648
Choanocyte Collar-Cells in Freshwater Sponges : Ultra-Structure of the (R. Rasmont, J. Bouillon, P. Castiaux and G. Vandermeerssche), 58
Choice and Application of Fungicides to Plantation Crops, with special reference to *Hevea brasiliensis* (E. J. Risdon), 1017
Cholic Acid : An Alternative Pathway for the Degradation of, by Micro-organisms (Shohei Hayakawa, Yasuo Saburi, Keizo Tamaki and Hideyuki Hoshijima), 906
Cholinesterase Activity in Individual End-plates of Normal and Denervated Gastrocnemius Muscle : Quantitative Determination of (M. Brzin and Prof. J. Zajicek), 626
Chondroitin Sulphates : Isomeric (Dr. Martin B. Mathews), 421
Chondrules in Meteoritic Stones : Origin of (Dr. L. J. Spencer), 680
Chopinet, Madeleine : Étude spectrophotométrique de quelques étoiles à grande vitesse, 1041
Chopra, I. C., and others : Glossary of Indian Medicinal Plants, *review* by S. B. Challen, 984
Chopra, R. N., and others : Glossary of Indian Medicinal Plants, *review* by S. B. Challen, 984
Chordotonal Organs in the Cockroach : Influence of DDT and Lindane on (G. Becht), 777
Choudhury, T. G., and others : Relationship between *Merulius lacrymans* and *M. himantioides*, 1011
Chowdhury, A. K. (Alexander, Dr. F., and) : Enzymes in the Ileal Juice of the Horse, 190
Chown, Dr. Bruce, and others : The Diego Blood Group System, 268
  Diego as an Independent Blood-Group System, 1598
Christensen, B., and O'Connor, F. B. : Pseudofertilization in the Genus *Lumbricillus* (Enchytraeidae), 1085
Christian, Dr. C. S. : Climate, Vegetation and Land Utilization in the Humid Tropics, 597
Christmas Factor : Heparin and (Dr. J. R. O'Brien), 1801
Christopher Columbus Prize for Communications (City of Genoa), 1311
Chromatin (Sex) : Occurrence of, in the Basal Cells of the Epidermis and in Basal Cell Carcinomata (David J. B. Ashley), 427
Chromatin (Sex), in Polyploid Nuclei of Human Amnion Epithelium (Harold P. Klinger and Hans G. Schwarzacher), 1150
Chromatograms (Paper) : Acidity of Sprays used in Detecting Ketohexoses on (Dr. R. W. Bailey), 836
  Detection of Inositol and Inositol Diphosphate on (Y. Nagai and Y. Kimura), 1730
  Detection of α-Ketoglutaric Acid and other Keto-Acids on, with Ninhydrin (Dr. R. Rabson and N. E. Tolbert), 50
  Detection of Triterpenoid Acids on (Dr. B. Pasich), 765
  Determination of Epinephrine and related Compounds on (Dr. George L. Ellman), 768
  Distribution of Carbon-14 in Labelled Amino-acids separated on (K. H. Hallowes, Dr. F. P. W. Winteringham and Dr. W. J. Le Quesne), 336
Chromatographic Analysis (Gas) : Molecular Sieves as Subtractors in (Nathaniel Brenner and Vincent J. Coates), 1401
Chromatographic Method for Studying Simple Compounds in Plants (R. N. Greenshields), 280
Chromatographic Separation of Lactalbumin from Human Milk Whey on Calcium Phosphate Columns (Dr. Bengt Johansson), 996
Chromatographic Separation of Œstriol, Œstrone and Œstradiol-17β (Tokuichiro Seki), 768
Chromatographic Separation (Gas) of *Meta*- and *Para*-Xylenes in Aromatic Mixtures (Dr. Albert Zlatkis, Lawrence O'Brien and Philip R. Scholly), 1794
Chromatographic Separation (Paper), of Glucose and Sorbitol : A Solvent for the (Dr. W. R. Rees and T. Reynolds), 767

- Chromatography : A Modified Technique in (Prof. K. Krishnamurti and B. V. Dhareshwar), 766
- Chromatography (Adsorption), on Silica-treated Paper (J. B. Roberts), 338
- Chromatography (Gas) : Column Packings for (Gas Chromatography Discussion Group associated with the Institute of Petroleum Symposium on), 604
  - Flame Ionization Detector for (J. Harley, W. Nel and Dr. V. Pretorius), 177 ; (I. G. McWilliam and R. A. Dewar), 760
- Chromatography (Gas-Liquid) : A Robust but Sensitive Detector for (Dr. D. W. Turner), 1265
- Chromatography (Paper) : Murexide Test in (N. B. Chanda and S. Chakraborty), 836
  - A New Method for separating Strychnine and Brucine by (G. Dušinsky and Dr. M. Tyllová), 1335
  - Quantitative Determination of Hydroxyproline by (Henry R. Roberts and Michael G. Kolor), 837
- Chromatography (Paper), of the Polycyclic Tar Hydrocarbons (Dr. Ernest Maly), 698
- Chromatography (Paper), of Potassium, Rubidium and Caesium (Florin Modreanu, Simon Fisel and Adrian Carpov), 1618
- Chromatography (Paper Partition) : Biochemical Differences between Inbred and Outbred Lines of *Drosophila melanogaster* studied by (H. F. Hoenigsberg and M. C. Castiglioni), 1404
- Chromatography (Qualitative, Quantitative and Preparative), of Steroids on Fully Acetylated Paper (F. J. Ritter and J. Hartel), 765
- Chromatography (Quantitative Paper Partition), of Sialic Acids (Elisabet Svennerholm and Dr. Lars Svennerholm), 1154
- Chromatography Apparatus : Mark 2 Gas (Griffin and George, Ltd., Pamphlet on), 88
- Chromatography Identification (Spot), of Citrus Rootstocks (Prof. Raymond M. Selle), 506
- Chromatophores (Photosynthetic Bacterial) : Suppression of Carotenoid Synthesis and its Effect on the Activity of (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Dr. R. C. Fuller and I. C. Anderson), 252
- Chromium : Effect of Plastic Deformation on the Electrical Resistivity of (M. E. de Morton), 477
- Chromium and Iron : Magnetic Properties of some Binuclear Complexes of (A. Earnshaw and J. Lewis), 1262
- Chromocentres in the Nuclei of *Halidrys siliquosa* (L.) Lyngb. : Chromosomes and (Dr. Margaret Naylor), 853
- Chromosomal Evolution in the Podocarpaceae (Dr. J. B. Hair and E. J. Beuzenberg), 1584
- *Rh*-Chromosome : A New 'Deleted' (Dr. K. Henningsen), 502
- Chromosome Breakage in *Vicia faba* by Ozone (Dr. Robert H. Fetner), 504
- Chromosome Count in *Schizaea* (J. D. Lovis), 1085
- Chromosome Exchange (Radiation-induced) : Inaccuracies of Anaphase Estimation of (Dr. J. M. Thoday), 932
- Chromosome Number in *Marsilea* (Prof. P. N. Mehra and D. S. Loyal), 577
- Chromosome Number in the Silver Fox (*Vulpes fulvus* Desm.), (O, Lande), 1353
- Chromosome Numbers in the Euglenineae (Flagellata) : Mitosis and (Gordon F. Leedale), 502
- Chromosome Science, *review* by Prof. K. Mather, 973
- Chromosome Size in *Lolium temulentum* and *L. perenne* (Beryl Naylor and Dr. H. Rees), 854
- Chromosome Variation in the *Heleocharis palustris-uniglumis* Complex (Lise H. Saunte), 1019
- Chromosomes : Deoxyribonucleic Acid Side-Chain Modêl of the (Dr. Drew Schwartz), 1149
  - High Chiasma Frequency in Allocyclic Segments of (Dr. N. E. Virkki), 1148
  - Human Somatic (Dr. C. E. Ford and P. A. Jacobs, and Dr. L. G. Lajtha), 1565
- Chromosomes (Lampbrush) : Action of Deoxyribonuclease on (Prof. H. G. Callan and H. C. Macgregor), 1479
- Chromosomes (Sex), in the Hop, *Humulus lupulus* (R. A. Neve), 1084
- Chromosomes (X- and Y-) : Separation of Bull Spermatozoa carrying, by Counter-Streaming Centrifugation (Per Eric Lindahl), 784
- Chromosomes and Chromocentres in the Nuclei of *Halidrys siliquosa* (L.) Lyngb. (Dr. Margaret Naylor), 853
- *Chrotogonus trachypterus* : Demonstration of some 'Masked' Lipids in the Oocytes of, with Sudan Black *B* and Phenol 'Unmasking' Techniques (Brij L. Gupta), 555
- Churchill College, Cambridge, 1359
- Churchill College, Cambridge : Offer of £50,000 from the Calouste Gulbenkian Foundation, Lisbon, to the University of Cambridge, to endow three Gulbenkian Studentships, 1378
- Churchman, Dr. A. T. : Vacancies and other Point Defects in Metals and Alloys (Dependence of Neutron-bombardment Hardening of Mild Steel upon Grain Size and Temperature), 451
- Chvojková, Dr. E. : Propagation of Radio Waves from Cosmical Sources, 105
- Chymotrypsin : Effect of, on Caeruloplasmin (Dr. G. Curzon), 115
- Ciba Foundation : Colloquia on Ageing, Vol. 2, Ageing in Transient Tissues (edited by G. E. W. Wolstenholme and Elaine C. P. Millar) ; Vol. 3, Methodology of the Study of Ageing (edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by Prof. P. L. Krohn, 74
- Ciferri, Orio, and Machado, Marisa P. : Isolation of a New Flavin produced by an Actinomycete, 484
- Cigarette Factories : Smoking Habits and Mortality among Workers in (Dr. R. A. M. Case), 84
- Cigarette Smoke : Free-Radicals produced in (M. J. Lyons, L. F. Gibson and Dr. D. J. E. Ingram), 1003
- Cilia in Amphioxus (*Branchiostoma*) : Nervous Control of (Quentin Rone), 193
- Cinader, Prof. B. : *Obituary* of Prof. Louis Pillemer, 234
- Cinader, Prof. B., and others : Acquired Immunological Tolerance to Bovine Ribonuclease, 1208
- Circulation in Rotating Helium II : Detection of Single Quanta of (Dr. W. F. Vinen), 1524
- Circulation (Blood) : Adherence and Viscosity of Blood Contacting Foreign Surfaces, and the Plasmatic Zone in (Dr. Alfred L. Copley), 551
- Cirripedes : Neurosecretory Cells in some (H. Barnes and J. J. Gonor), 194
  - Relation between Breeding and Ecdysis in (Dr. D. J. Crisp and B. S. Patel), 1078
- Citrovorum Factor in Rat Liver : Occurrence of Independent Systems for the Cleavage of Folic Acid and (U. W. Kenkare and Dr. Beatriz M. Braganca), 548
- Citrulline in the Arginine Metabolism of some Higher Plants : Occurrence of Ornithine in Sulphur-deficient Flax and the Possible Place of Ornithine and (R. G. Coleman), 776
- *Citrus* (Genus) : Cytogenetical Studies in the (S. P. Naithani and S. S. Raghuvanshi), 1406
- Citrus Rootstocks : Spot Chromatography Identification of (Prof. Raymond M. Selle), 506
- Citterio, Dr. C., and others : Cardiac Damage caused by Experimental Stress, 1215
- City and Guilds of London Institute : Conferment of Fellowships, 884
- Civil Engineering at Nottingham, 455
- Civil Engineering at Southampton, 87
- Civil Engineers, Institution of : Fourth Graham Clark Lecture (Sir Ewart Smith), 611
- Civil Research : Government Support for, 1702
- Civil Service Fellowships : Home (Commonwealth Fund Awards for 1958-59), 1181
  - Oversea (Commonwealth Fund Awards for 1958-59), 1181
- Civilization (Industrial) : Cultural Foundations of (Prof. John U. Nef), *review*, 1427
- Clapham, A. R., and others : Flora of the British Isles, Illustrations, Part I, Pteridophyta—Papilionaceae, review, 1366
- Clare College, Cambridge : Retirement of Sir Henry Thirkill from the mastership, 1038
  - Election of Sir Eric Ashby to the mastership, 1039
- Claringbold, Dr. P. J. (Martin, L., and) : A Highly Sensitive Assay for Œstrogens, 620
- Clark, Dr. A. M. : Genetic Effects of Carbon Monoxide, Cyanide and Azide on *Drosophila*, 500
- Clark, Colin : World Population, 1235
- Clark, F. Le Gros : Ageing on the Factory Floor, 744
- Clark (Graham) Lecture of the Institution of Civil Engineers (Sir Ewart Smith), 611
- Clark, Prof. Grahame : Archaeology and Society, third edition, *review* by M. C. Burkitt, 374
- Clark, Dr. V. M., and others : Oxidative Phosphorylation—a Chemical Approach using Quinol Phosphates, 1650
- Clark, W. C. : Escape Responses of Herbivorous Gastropods when Stimulated by Carnivorous Gastropods, 137
- Clark, Sir Wilfrid Le Gros : Evolution of the Primates, *review*, 1165
- Clarke, C. (Horner, F., and) : Radio Noise from Lightning Discharges, 688
- Clarke, Dr. C. A. : Appointed to a readership in the Department of Medicine in the University of Liverpool, 602
- Clarke, Dr. E. G. C. : Identification of Solanine, 1152
- Clarke, Dr. E. G. C., and Hawkins, A. E. : Heat Output and Body-weight in the Growing Albino Mouse, 1599
- Clarke, F. J. J. : Elected to a Beit Fellowship for Scientific Research at the Imperial College of Science and Technology, 1444
- Clarke, J. F. : Real Gas Effects in High Speed Flow (Energy Transfer through a Dissociated Gas in Couette Flow), 671
- Clarke, S. H. : Appointed director of the new research station of the Department of Scientific and Industrial Research at Stevenage for fuel and process research, 1106 ; work of, 1106
- Clason, Dr. W. E. : Scientific and Technical Translation, 1045
- Clason, Dr. W. E. (compiled and arranged on an English alphabetical base by) : Elsevier's Dictionary of Electronics and Waveguides in Six Languages, *review* by Dr. R. L. Smith-Rose, 801
- Class (A New), of Antibiotic Salts of Reduced Toxicity (F. A. Alves, M. F. C. A. N. Graça and H. L. Baptista), 182
- Class-work (Mycological) : Use of the Membrane Filter in (Dr. Sigurd Funder), 1606
- Classical Thermodynamics : Elements of, for Advanced Students of Physics (Dr. A. B. Pippard), *review* by S. Angus, 1755
- Classification of Blood Plasma Esterases : Electrophoretic Separation and (Dr. Klas-Bertil Augustinsson), 1786
- Classifications of Animals : Embryology of Pogonophora and (Dr. S. M. Manton), 748
- Claudet (Arthur) Student's Prize of the Institution of Mining and Metallurgy awarded to Dr. J. K. Almond, 1375
- Clauser, M. : Extremely High Temperatures (Problems of Fusion Propulsion), 1381
- Clawed Frog (South African), *Xenopus laevis* (Daudin) : Induction of Triploidy in the (Sheila Smith), 290
- Clay-Water Systems : Plasticity of (A. K. Chatterji), 1118
- Clays : The Differential Thermal Investigation of (edited by Robert C. Mackenzie), *review*, 1561
  - Thermal Analysis of, *review*, 1561
- Clayton, B. -P. (Bradbury, S., and) : Occurrence of 'Masked Lipid' in Mouse Pancreas, 1347
- Cleaning of Glass : Ionic Bombardment (L. Holland), 1451
- Cleaning of Inscriptions and Sculptures in Sandstone (Dr. David Smith), 812
- Clearing Action of Lysolecithin (Dr. L. Saunders, I. L. Thomas and N. Robinson), 782
- Cleavage in *Cheyletus eruditus* (Acarina), (A. R. Edwards), 1409
- Cleavage of Folic Acid and Citrovorum Factor in Rat Liver : Occurrence of Independent Systems for the (U. W. Kenkare and Dr. Beatriz M. Braganca), 548
- Cleavage of Sea Urchin Eggs : Effect of Adenosine Triphosphate on (Louis Wolpert), 716
- Cleavage (Enzymatic), and Synthesis of L-threo-β-Phenylserine and L-erythro-β-Phenylserine (Friedrich H. Bruns and Liselore Fiedler), 1533
- Cleckley, Hervey M. (Thigpen, Corbett H., and) : The Three Faces of Eve, *review* by Dr. Clifford Allen, 5
- Clegg, Dr. J. A., and others : Remanent Magnetism of the Rajmahal Traps of North-Eastern India, 830
- Clements, J. F. (Davies, W. R., and) : Mechanical Properties of Non-Metallic Brittle Materials (Strength of Ceramic Materials—Sonic Testing of Ceramic Refractory Materials), 1578
- *Clethra barbinervis* Sieb. et Zucc. : A Cobalt-Accumulator Plant (Noboru Yamagata and Yukio Murakami), 1808
- Cleveland Museum of Natural History, Ohio : A Reason for Pride, 160
- Climate : Cereals and, *review* by Dr. E. C. Humphries, 1689

Climate, Vegetation and Land Utilization in the Humid Tropics (Pacific Science Congress Symposium on), 596
Climatic Changes : Recent (Dr. E. B. Kraus), 666, *erratum*, 813
Climatic Stress : Nutrition and (Scottish Group of the Nutrition Society Symposium on), 949, 1644
Climatology—Reviews of Research (Arid Zone Research, No. 10), (Unesco), 1443
Cline, Dr. Carl F. : Preliminary Investigations of the Silicon Boride, SiB_4, 476
Clinical Biochemistry : Lecture-Demonstration Course on (Association of Clinical Biochemists), 1312
Clinical Biochemists, Association of : Lecture-Demonstration Course on Clinical Biochemistry, 1312
Clinical Neurophysiology : Fundamentals of (Dr. Paul O. Chatfield), *review* by Prof. D. Whitteridge, 1095
Clinical Use of Hormones (*The Practitioner*, Vol. 180, No. 5), 602
Cliona celata Grant : Reproduction of Fused Larvae in the Boring Sponge (Frederick E. Warburton), 493
Clipped Speech : Vowel Recognition in (Rais Ahmed), 210
Clipping and Spraying : Effects of, on various Homoeothermic Responses of Rabbits at an Elevated Environmental Temperature (Dr. Harold D. Johnson, Chu Shan Cheng and A. C. Ragsdale), 842
Clocks : Cellular (Prof. Erwin Bünning), 1169
Closs, R. L. (Mitchell, K. J., and) : Loss of Moisture from Vegetation, 1619
Clostridium (Genus) : Antigenic Formulae for the (Dr. Raouf S. Moussa), 123
Clostridium botulinum : Fluorescence of the Toxin of, and its relation to Toxicity (Dr. Daniel A. Boroff and Dr. John E. Fitzgerald), 751
Clostridium butyricum in Soils : Influence of Media on the Counts of (Dr. D. J. Ross), 1142
Clostridium perfringens Toxin : Mode of Action of Chelates in protecting against (Prof. Merwin Moskowitz), 550
Cloud Physics, *review* by J. R. Atkinson, 1298
Cloud Study (F. H. Ludlam and Dr. R. S. Scorer), *review* by L. C. W. Bonacina, 984
Clouds : The Physics of (Dr. B. J. Mason), *review* by J. R. Atkinson, 1298
Clouds on Filmstrips (accompanied by booklet of lecture notes by F. H. Ludlam and Dr. S. R. Scorer), 457
Clough Memorial Research Fund of the Edinburgh Geological Society : Funds available for geological research in Scotland and the north of England, 603
Clouston, J. G., and others : Temperature Measurements of Shock-Waves by the Spectrum-Line Reversal Method, 1325
Clovers (Egyptian and Indian) : Induced Polyploidy in (S. M. Sikka, M. S. Swaminathan and R. K. Mehta), 32
Clovers and *Ditylenchus destructor* Thorne, 1945 : Relationship between some (V. E. Henderson), 59
Coagulation (Blood) : Effect of Human α_1-Acid Glycoprotein on (Inga Marie Nilsson and Ikuo Yamashina), 711
Coal : Polynuclear Aromatic Compounds in (Prof. D. W. van Krevelen, M. P. Groenewege and B. J. Rietveld), 640
Coal and its Future : Britain's (Dr. I. G. C. Dryden), 460
Coal, Gas and Electricity Industries : White Paper on Capital Investment in the, 1638
Coal (Brora), of the Scottish Middle Jurassic : Palynology of the (N. F. Hughes and R. A. Couper), 1482
Coal Bill : Opencast, 889
Coal Board, National (Mining Research Establishment), and the Building Research Station of the Department of Scientific and Industrial Research : Conference on the Mechanical Properties of Non-Metallic Brittle Materials, 1577
Coal Science—Aspects of Coal Constitution (Prof. D. W. van Krevelen and J. Schuyer), *review* by Dr. I. G. C. Dryden, 4
Coal Science : Landmark in, *review* by Dr. I. G. C. Dryden, 4
Coales, J. F. : Automatic Control, *review*, 661
Coals : Ease of Reduction of a Series of, and its relation to their Structure (P. H. Given, V. Lupton and M. E. Peover), 1059
  Electron Spin Resonance of—Saturation Effect (J. Smidt), 176
Coast of Tropical West Africa : Thermocline off the (J. C. D. Watts), 863
Coates, G. : Oxygen-cutting of Vanadium, 479
Coates, Dr. R. C. : Appointed to the chair of civil engineering in the University of Nottingham, 455 ; work of, 455
Coates, Vincent J. (Brenner, Nathaniel, and) : Molecular Sieves as Subtractors in Gas Chromatographic Analysis, 1401
Coates, W. A. : Fellowship of the City and Guilds of London Institute conferred on, 884
Coaxial Electrodes : Electrical Discharges between (J. S. T. Looms), 696
Cobalt : Provision of, to Ruminants by means of Heavy Pellets (D. W. Dewey, H. J. Lee and Dr. Hedley R. Marston), 1367
Cobalt-60 : Correction for the Gamma-Ray Sensitivity of the Beta-Counter in the Standardization of, by the Beta-Gamma Coincidence Method (B. Owen and R. A. Lloyd), 396
Cobalt-Accumulator Plant, *Clethra barbinervis* Sieb. et Zucc. (Noboru Yamagata and Yukio Murakami), 1808
Cobb, R. (Adams, S. S., and) : A Possible Basis for the Anti-Inflammatory Activity of Salicylates and other Non-Hormonal Anti-Rheumatic Drugs, 773
Cocarboxylase : Influence of, on Tolerance to Morphine in the Rat (Dr. Luciano Angelucci), 967
Cocchi, M. (Ferroni, E., and) : Kinetics of the Trigonal-to-Cubic Transition in Crystals of Caesium Nitrate on Muscovite, 903
Coccus (Soil), capable of utilizing 'Tween 80' as a Sole Source of Carbon : Isolation of a (Kazumori Minami), 430
Cockcroft, Sir John : l'Énergie nucléaire dans le Monde, *review*, 445
  British Nuclear Energy Conference Symposium on Nuclear Energy opened by, 735
  Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions, 803
  Atomic Energy for Underdeveloped Countries, *review*, 1167
Cocking, Dr. E. C. (Sims, A. P., and) : Assay of Isotopic Nitrogen by Mass-Spectrometer, 474
Cockroach : Influence of DDT and Lindane on Chordotonal Organs in the (G. Becht), 777
Cockroach (American), *Periplaneta americana* L. : Muscle Fibres of the Fast and the Slow Contracting Muscles of the Mesothoracic Leg of the (W. A. Smit), 1073
Coconut : Fortifying Influences of Coconut Milk and Cow's Urine on 2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the (S. R. Gangolly and Dr. K. M. Pandalai), 855
Coconut Milk and Cow's Urine : Fortifying Influences of, on 2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the Coconut (S. R. Gangolly and Dr. K. M. Pandalai), 855
Coding Problem in Proteins (Dr. Drew Schwartz), 769
Coe, Dr. D. G. : Gamma-Radiation Catalysis of the Oxidation by Air of Tri-isopropyl Phosphite, 1519
Coe, K. : Appointed a lecturer in geology at the University of Exeter, 1182
Coed Tremadoc Nature Reserve : Extension of the (Nature Conservancy), 1379
Coefficient (Second Virial), of Methyl Chloride Vapour (the late Prof. R. Whytlaw-Gray, C. G. Reeves and Dr. G. A. Bottomley), 1004
Coefficient (Temperature), of Ultrasonic Absorption in Organic Liquids (Dr. S. Parthasarathy, M. Pancholy and A. F. Chhapgar), 405
Coefficients (Ionizing and Attachment), and Breakdown Characteristics for Carbon Tetrafluoride : Correlation between (P. R. Howard), 645
Coefficients (Stress Optical), of Different Specimens of Vitreous Silica (Dr. R. S. Krishnan, E. S. Jog and R. Srinivasan), 692
Coenzyme *A* and Aldolase in Rubber-bearing Plants (J. A. Gascoigne, Dr. W. G. Overend, G. F. J. Moir and Dr. G. Hübscher), 628
Coenzyme A and Pantothenic Acid of Liver in Vitamin B_{12} Deficiency : Effects of Orotic Acid on (Prof. G. Moruzzi, R. Viviani, M. Marchetti and F. Sanguinetti), 416
Coenzyme I : Enzymic Synthesis of, in relation to Chemical Control of Cell Growth (Prof. R. K. Morton), 540
  Formation of Histamine-containing Dinucleotides by Enzymatic Interaction of Histamine and (Dr. Spyridon G. A. Alivisatos), 271
Coexistence of Three Species of the Wood-boring Isopod *Limnoria* in Southampton Water (Dr. S. K. Eltringham and A. R. Hockley), 1659
Coffinite in Cornwall (K. Taylor and R. K. Harrison), 363
Cohen, Dan, and others : Metal-Chelating Properties of Plant-Growth Substances, 686
Cohen, Dr. Edward H. (Frieden, Dr. Edward H., and) : Effect of Testosterone Propionate upon the Incorporation of Labelled Glycine into Homogenates of Mouse Kidney, 912
Cohen, Prof. I. Bernard : Franklin and Newton, an Enquiry into Speculative Newtonian Experimental Science and Franklin's Work in Electricity as an Example Thereof, *review* by Dr. M. A. Hoskin, 295
Cohen, Prof. John : Pavlov, Psychology and Psychiatry, *review*, 1233
  Humanistic Psychology, *review* by Prof. L. S. Hearnshaw, 1493
  International Congress of Applied Psychology, 1579
Cohen, Prof. John, and Hansel, C. E. M. : Subjective Probability, Gambling and Intelligence, 1160, 1620
Cohen-Bazire, Germaine, and Stanier, Prof. R. Y. : Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria—Specific Inhibition of Carotenoid Synthesis in a Photosynthetic Bacterium and its Physiological Consequences, 250
Cohen-Séat, G. : At the thirteenth International Congress of Applied Psychology (Social Influences on Delinquency), 1580
Cohn, jun., Victor H., and others : Distribution of Norepinephrine in the Heart; 848
Coincidence Method (Beta-Gamma) : Correction for the Gamma-Ray Sensitivity of the Beta-Counter in the Standardization of Cobalt-60 by the (B. Owen and R. A. Lloyd), 396
Colbourne, M. J., and others : Haemoglobin E and the Diego Blood Group Antigen in Sarawak and Burma, 119
Cold Treatment : Chemical Determination of Deoxyribonucleic Acid in Root Tips before and after (Dr. J. K. Heyes and Dr. G. W. Shaw), 1337
Coldwell-Horsfall, Miss R. : Band Theory of Metals and the Structure of the Fermi Surface (Electrical Conductivity Tensor and the Fermi Surface), 527
Cole, Dr. B. N. : Title of reader in mechanical engineering in the University of Birmingham conferred on, 813
Cole, Prof. F. J. : Leeuwenhoek's Correspondence, *review*, 1753
Cole, M. : Oxidation Products of Leucoanthocyanins as Inhibitors of Fungal Polygalacturonase in Rotting Apple Fruit, 1596
Cole, W. F. (Demediuk, Thaisa, and) : Exothermic Reaction of Metakaolin between 950° and 1,000° C., 1400
Coleby, Dr. B. : Processing of Foods with Ionizing Radiations, 877
Coleman, R. G. : Occurrence of Ornithine in Sulphur-deficient Flax and the Possible Place of Ornithine and Citrulline in the Arginine Metabolism of some Higher Plants, 776
Coles, B. R. : Band Theory of Metals and the Structure of the Fermi Surface (Electrical Resistivity and Electronic Structure), 526
Colhoun, E. H. : Physical Release of Acetylcholine from the Thoracic Nerve Cord of *Periplaneta americana* L., 490
Colhoun, E. H. (Miller, D. M., and) : Apparatus for Stimulation of Insect Sense-Organs by Air Puffs, 126
Collagen : Molecular Weight of Condensed Tannins as a Factor determining their Affinity for (Dr. David G. Roux), 1793
Collagen in the Phylum Mollusca : Occurrence of (S. C. Melnick), 1483
Collagen (Human) : Variation with Age of Shrinkage Temperature of (Patricia C. Brown and Dr. R. Consden), 349
Collagen (Muscle) : Isolation of a Glycine-Carbohydrate Residue from (K. Konno and K. I. Altman), 994
Collagen System : Influence of Time on the Reversible Association between Large Molecules—the (Dr. Jerome Gross), 556
Collagen and Gelatin : Effect of Neutral Salts on the Structure of (William F. Harrington), 997
Collar, Prof. A. R. : Awarded the Orville Wright Prize of the Royal Aeronautical Society, 1646
Collar-Cells (Choanocyte), in Freshwater Sponges : Ultra-Structure of the (R. Rasmont, J. Bouillon, P. Castiaux and G. Vandermeerssche), 58
College : Wives who went to (Mrs. Judith Hubback), *review* by Mrs. C. E. Arregger, 443
College of Aeronautics, Cranfield : Appointment of John Loxham to the chair of aircraft economics and production, 385
  Appointment of A. G. Smith to the chair of aircraft propulsion, 528
Colleges of Advanced Technology : The Design of Teaching Laboratories in Universities and (Royal Institute of British Architects Symposium on), 459

Colleges (Technical) : Industry and the (Report of the Southern Regional Council of the Federation of British Industries, in co-operation with the Southern Regional Council for Further Education Regional Conference on), 1573
  Liberal Education in, 386
  Report of the Second National Conference between Industry and the (Federation of British Industries), 370
  Supply of Teachers in Schools and, 948
Colleges and Universities in the United States : Scientific Research Activities at (United States National Science Foundation, Reviews of Data on Research and Development, No. 6), 167
Collet, Prof. Léon W. : *Obituary* by Sir Edward Bailey, 17
Collet, R. A., and others : Processing of Foods with Ionizing Radiations (Autolytic Changes occurring during Storage of Sterile Muscle Samples), 878
Colletotrichum coffeanum Noack : Some Nutritional Requirements of (S. Bartnlski-Garciá and Dr. C. Casas-Campillo), 565
Collier, Dr. H. O. J. : Appointed director of pharmacological research at Parke, Davis and Co., Ltd., Hounslow, 161
Collingridge, Mrs. J. M., and Ritchie, Mrs. J. M. : Personnel Management in a Small Firm, 1310
Collins, Dr. D. C. : Appointed senior lecturer in education at the University of Exeter, 1182
Collinson, A. A. : Industry and the Technical Colleges (The Needs of Industry in Technical Education), 1573
Collip, Dr. J. B. : Retirement from the directorship of the Division of Medical Research of the National Research Council of Canada, 311 ; work of, 311
Collision with Excited Rare Gas Atoms : Measurement of Low Vapour Concentrations by (Dr. J. E. Lovelock), 1460
Colloidal Gold Particles : Alterations in the Ultrastructure of the Blood—Air Barrier in the Mouse Lung after Inhalation of (Dr. N. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1418
Colloquium Ampère (1957), (Proceedings of the Sixth), 1443
Collybia velutipes (Curt.) Fr. : Stipe Regeneration and Fruit-body Production in (E. A. Bevan and R. F. O. Kemp), 1145
Colonial Advisory Council of Agriculture, Animal Health and Forestry : Publication No. 5, The Indigenous Cattle of British Dependent Territories in Africa (D. E. Faulkner and Dr. H. Epstein), 1581
Colonial Agricultural, Animal Health and Forestry Research, Committee for : Twelfth Annual Report, 1033
Colonial Economic Research Committee : Tenth Annual Report, 1034
Colonial Fisheries Advisory Commitee : Annual Report for 1956-57, 1034
Colonial Medical Research Committee : Twelfth Annual Report, 1034
Colonial Office : Appointments in the Oversea Service Division, 458
  Colonial Research, 1956-1957—Reports of the Colonial Research Council ; Committee for Colonial Agricultural, Animal Health and Forestry Research ; Colonial Economic Research Committee ; Colonial Fisheries Advisory Committee ; Colonial Medical Research Committee ; Colonial Pesticides Research Committee ; Colonial Products Council ; Colonial Road Research Committee ; Colonial Social Science Research Council ; Tsetse Fly and Trypanosomiasis Committee ; Director, Anti-Locust Research Centre, and Research Matters not covered by the above Reports of the Specialist Advisory Bodies, 1032
Colonial Pesticides Research Committee : Tenth Annual Report, 1035
Colonial Products Council : Fourth Annual Report, 1035
Colonial Research, 1956-57 (Colonial Office), 1032
Colonial Research Council : Annual Report of the, 1032
Colonial Road Research Committee : Second Annual Report, 1036
Colonial Social Science Research Council : Thirteenth Annual Report, 1036
Colonial Territories (British) : Overseas Service in, 610
Colonization of *Anopheles funestus* (M. W. Service and D. Oguamah), 1225
Colorimetric Detection of Human Caeruloplasmic Oxidase Activity after Electrophoresis in Agar Plates or after Immuno-electrophoresis (José Uriel), 999
Colorimetry, *review* by Dr. W. S. Stiles, 1297
Colour : The Measurement of (Prof. W. D. Wright), second edition, *review* by Dr. W. S. Stiles, 1297
Colour Filters for the 4358-A. line of the Mercury Discharge Spectrum (Dr. A. Burawoy and A. G. Roach), 762
Colour Measurement : Scope and Limits of (Colour Group of the Physical Society Symposium on), 1704
Colour Problem of Ruby (Lakhbir Singh), 1264
Colour Reaction for Non-ionic and Amphoteric Soaps (Dr. J. E. Lovelock and T. Nash), 1263
Colour Reaction of Vitamin E with Vitamin K and Cysteine (Eduardo Cruz-Coke), 49
Colour Television : Medical, 1768
Colour Television in University Teaching (C. E. Engel and Prof. Roger Warwick), 91
Colour Vision of Three Albinos (Prof. R. W. Pickford), 361
Colour and Vision : Light, (Prof. Yves Le Grand), approved translation by Dr. R. W. G. Hunt, Dr. J. W. T. Walsh and F. R. W. Hunt, *review* by Prof. W. D. Wright, 146
Colowick, Sidney P., and Kaplan, Nathan O. (edited by) : Methods in Enzymology, Vols. 3 and 4, *review* by Dr. Edwin C. Webb, 1431
Colquhoun, Dr. W. P. : Automatic Measurement of Quality in Process Plants, 166
Columbus (Christopher) Prize for Communications (City of Genoa), 1311
Columbus II Apparatus at the Los Alamos Scientific Laboratory, University of California, Los Alamos, 226
Columbus S-4 Apparatus at the Los Alamos Scientific Laboratory, University of California, Los Alamos, 228
Column Packings for Gas Chromatography (Gas Chromatography Discussion Group associated with the Institute of Petroleum Symposium on), 604
Comar, C. L. (edited by) : Atomic Energy and Agriculture—a Symposium at the Atlanta Meeting of the American Association for the Advancement of Science and co-sponsored by the Oak Ridge Institute of Studies, 1955, *review* by Dr. R. F. Glascock, 1097
Combined Treatment with 8-Ethoxycaffeine and Argon on the Roots of *Vicia faba*: Effect of a (Effect on Radiosensitivity of Inert Gases), (John Read), 616
Combustion : Seventh International Symposium on (Combustion Institute in collaboration with the Institute of Fuel), 1576, 1703
Combustion Institute, in collaboration with the Institute of Fuel : Seventh International Symposium on Combustion, 1576, 1703
Comet Arend-Roland, 1956*h* : Polarization of the Integrated Light of (D. R. Barber), 760
Comets : Origin of, 394
Comets (Long-Period) : Distribution of the Directions of Perihelia of (J. G. Tyror), 394
Comfort, Dr. Alex : The Significance of Biology, *review*, 1627
Comline, Dr. R. S., and Silver, Marian : Response of the Adrenal Medulla of the Sheep Foetus to Asphyxia, 283
Common, Prof. R. H., and others : Presence of Œstrone, Œstradiol and Œstriol in Extracts of Ovaries of Laying Hens, 351
Common Bile Pigments : The IX-α Structure of the (Prof. C. H. Gray, Dr. D. C. Nicholson and R. A. Nicolaus), 183
Common Lands of Hampshire (Dr. L. Ellis Tavener), *review* by Prof. L. Dudley Stamp, 730
Common Man : Evolution and the, 1649
Commons, House of : Debate on the Siting of Nuclear Power Stations, 462
  Debate on the Peaceful Uses of Nuclear Energy, 948
  Debate on Science Teachers and National Service, 948
  Debate on the Recruitment and Training of Teachers, 950
  Debate on the Milford Haven Conservancy Bill, 1040
  Debate on the Defence Contracts Bill, 1111
  Debate on the motion for the annulment of the Alkali, etc., Works Order (1958), 1572
Commonwealth Bureau of Dairy Science and Technology : Technical Communication No. 3, Milk and Butterfat Recording (E. D. Ashton), *review* by Helen R. Chapman, 982
Commonwealth Bursaries : Royal Society and Nuffield Foundation (Awards), 89
Commonwealth Development : United Kingdom's Role in (White Paper on the), 1582
Commonwealth Fund, New York : Thirty-ninth Annual Report, 1113
  Fellowship Awards for 1958-59, 1181
Commonwealth Institute Act : Second reading of the, 1713
Commonwealth Scientific and Industrial Research Organization : Appointment of E. R. Hoare as officer-in-charge of the Irrigation Research Station, Griffith, N.S.W., 235
  Appointment of Dr. H. R. C. Pratt as leader of the chemical engineering section in the Division of Industrial Chemistry, 459
Commonwealth Studies, Institute of : Annual Seminar (Science in the Tropics), 1448
Commonwealth Telecommunications Board : Ninth General Report (1956), 1638
Commonwealth Trans-Antarctic Expedition, 88, 236
  Arrival at Scott Base, 669
Commonwealth (British), Association of Universities of the : Report for 1956-57, 1770
Communication of Information in an Industrial Setting : Decision-making and the (R. Sergean), 1020
Communication (Electrical), and other Fields : The Theory of Networks in (F. E. Rogers), *review* by K. R. Sturley, 6
Communication (Insect) : Interaction between Consecutive Responses in a Hemileucid Moth, and the Evolution of (A. D. Blest), 1077
Communication (Radio) : Solar Activity and (R. Naismith), 954
Communications : Christopher Columbus Prize for (City of Genoa), 1311
Communities (Plant) : The Study of (Prof. Henry J. Oosting), second edition, *review* by Dr. Maurice Ashby, 661
Comparative Aspects of Haemolytic Disease of the Newborn (Dr. G. Fulton Roberts), *review*, 588
Comparative Biochemical Study of Nucleohistones from Different Vertebrates (Dr. R. Vendrely, A. Knobloch and H. Matsudaira), 343
Comparative Biological Effectiveness of the Gibberellins (Dr. M. J. Bukovac and Dr. S. H. Wittwer), 1484
Comparative Chlorophyll Content of the Two Generations of Bryophtes (Prof. Frederick T. Wolf), 579
Comparison of Effect of Lysergic Acid Diethylamide with Potassium Cyanide and other Respiratory Inhibitors on the Siamese Fighting Fish (Dr. H. A. Abramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
'Compensatory Hyper-regeneration' in the Antennae of Hemiptera (Dennis Leston), 931
Competing Reactions : Intermediates and, in the Photodestruction of Indoleacetic Acid (Peter M. Ray and George M. Curry), 895
Competition (Interspecific) : Williamson's Theory of (Dr. H. G. Andrewartha and Dr. T. O. Browning), 1415 ; (M. H. Williamson), 1415
Complement : Immunological Estimation of a Component of (Dr. H. A. Ellis and P. G. H. Gell), 1667
Complement (Guinea Pig) : Effect of Histamine and an Anti-Histamine Drug on the Haemolytic Action of (Dr. J. D. Hawkins), 1666
Complement Fixation Test applied to the Study of Tumours : A Special Reaction of the (Prof. A. Serra, G. Guarini, P. Lovisetto, D. Castelli and F. Balzola), 622
Complement-fixing Antigen (A Purified), from *Mycobacterium johnei* (E. Annau), 1206
Complementary Action of Gibberellic Acid and Auxin (P. W. Brian and H. G. Hemming), 1575
Complete Transverse Lesions of the Spinal Cord : Excretion of 17-Ketogenic Steroids in Subjects with (R. Robinson), 484
Complex (The Biuret), of Gelatin and the Mechanism of Gelation (J. Bello and J. R. Vinograd), 273
Complex (Carbohydrate Peptide), from Egg Albumin (P. Johansen, Dr. R. D. Marshall and Prof. A. Neuberger), 1345
Complex (SH-Dependent Metal-Enzyme) : Phosphomannoisomerase, an (Dr. Friedrich H. Bruns and Ernst Noltmann), 1467
Complex Formation between Groundnut Skin Pigments and Conarachin II (Miss H. M. R. McDavid and W. E. F. Naismith), 480
Complex Ion : Ferric Perchlorate (R. A. Horne), 410
Complexes of Nickel (II) with 2-Pyridinaldoxime (Prof. Ronald A. Krause and Daryle H. Busch), 1529
Complexes (Binuclear), of Chromium and Iron : Magnetic Properties of some (A. Earnshaw and J. Lewis), 1262
Complexes (Binuclear Thiocyanato-bridged) : Isomerism among (Dr. J. Chatt, L. A. Duncanson, F. A. Hart and P. G. Owston), 43
Complexes (β-Diketone), of the Lanthanons in Organic Solvents : Anomalous Behaviour of (Dr. N. K. Dutt and P. Bandyopadhyay), 1682
Complexes (Molecular) : Absorption Spectra of (R. Foster), 337

Complexes (Protein-Lignin), Lignins and Humic Acids : Resistance of, to Microbial Attack (Prof. D. L. Lynch and Prof. C. C. Lynch), 1478
Complexometric Titrations (Prof. Gerold Schwarzenbach), translated and revised in collaboration with the author by Dr. Harry Irving, *review* by Dr. A. D. Mitchell, 987
Component of Complement : Immunological Estimation of a (Dr. H. A. Ellis and P. G. H. Gell), 1667
Component (Protein), in the Middle Lamella of Plant Tissue : Evidence for a—a Possible Site for Indolylacetic Acid Action (B. Z. Ginzburg), 398
Components of Goat's Milk : Distribution of Carbon-14 in, with Sodium Formate-^{14}C as Precursor (Samuel Misler, Leon Tumerman and Henry R. Roberts), 346
Components of Growing Rat Red Cells : Carbon Dioxide Fixation in some (G. Giustina and E. Lazzarini), 1285
Composition of Protein : Effect of Transmitted Ribonucleic Acid from Healthy Pear Trees upon the Synthesis and (Dr. B. Kessler), 201
Composition of the Rous Virus Nucleoid (Dr. M. A. Epstein), 1808
Composition (Chemical), of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol.—Presence of Reducing Compounds in *Ascophyllum nodosum* (Bjørn Larsen and Arne Haug), 1224 ; Influence of Habitat on the Chemical Composition of *Ascophyllum nododum* (Arne Haug and Bjørn Larsen), 1224
Composition (Organic), of Bone—Localization of Isocitric Dehydrogenase in Femurs (Robert Van Reen and Fred L. Losee), 1543
Compound (Lamellar), of Sodium with Graphite (R. C. Asher and S. A. Wilson), 409
Compound (A New), from a Species of *Penicillium*: Decumbin, a (Dr. V. L. Singleton, N. Bohonos and A. J. Ullstrup), 1072
Compound Hair Follicles (Giant), in the Skin of the Rabbit (Dr. H. J. Whiteley), 850
Compounds : Determination of Epinephrine and related, on Paper Chromatograms (Dr. George L. Ellman), 768
    Photosensitization of Bacteria by Furocoumarins and related (Dr. W. L. Fowlks, D. G. Griffith and Evelyn L. Oginsky), 571
    Polynuclear Aromatic, in Coal (Dr. D. W. van Krevelen, M. P. Groenewege and B. J. Rietveld), 640
Compounds in the Steroid Reference Collection : Requests for (Medical Research Council), 315
Compounds related to Trypan Blue : Effects of certain, on the Experimental Production of Liver Cancer (K. Fujita, T. Mine, T. Ito and M. Matsuyama), 1732
Compounds (Co-ordination) : Chemistry of (National Academy of Sciences of India Symposium on), 1246
Compounds (Organic), containing Phosphorus and Fluorine : Some Aspects of the Chemistry and Toxic Action of (Dr. Bernard Charles Saunders), *review* by Sir Rudolph Peters, 1295
Compounds (Phenolic) : Interaction of, with Bacteria (Dr. A. H. Beckett, Dr. S. J. Patki and Ann E. Robinson), 712
Compounds (Reducing) : Presence of, in *Ascophyllum nodosum* (Chemical Composition of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol. (Bjørn Larsen and Arne Haug), 1224
Compounds (Simple), in Plants : A Chromatographic Method for Studying (R. N. Greenshields), 280
Compounds (Stilbene) : Effect of various, on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, D. L. J. Bilbey and C. C. Ware), 1538
Compounds (Uridine Diphosphate Amino-sugar), from *Staphylococcus aureus* inhibited by Penicillin (Eiji Ito, Nobutoshi Ishimoto and Masahiro Saito), 906
Comprehensive Inorganic Chemistry (Prof. M. Cannon Sneed and Prof. Robert C. Brasted), Vol. 5, Nitrogen, Phosphorus, Arsenic, Antimony and Bismuth (Harry H. Sisler), Nonaqueous Chemistry (Alfred R. Pray) ; Vol. 6, The Alkali Metals (John F. Suttle), Hydrogen and its Isotopes (Robert C. Brasted), *review*, 1428
Comptrollership of the Patent Office, 725, 947, 1246
Computation, British Conference on Automation and : To be organized in three sections—(A) the British Group for the Engineering Applications of Automation, (B) the British Group for Computation and Automatic Control, and (C) the British Group for the Sociological and Economic Aspects of Automation Techniques, 236
    Constitution of Section *A* (British Group for the Engineering Applications of Automation), 672
    Constitution of Section *B* (British Group for Computation and Automatic Control, 237
    Election of T. E. Goldup as chairman of Section *B*, 237
Computer Journal (British Computer Society), Vol. 1, No. 1, 1701
Computer Society, British : *Computer Journal*, Vol. 1, No. 1, 1701
Computer (Digital) Components and Circuits (Dr. R. K. Richards), *review* by Dr. M. V. Wilkes, 1755
Computer (Digital) Programming (D. D. McCracken), *review* by Dr. M. V. Wilkes, 1755
Computers, *review* by Dr. M. V. Wilkes, 1755
Computers : Digital Field (Dr. B. Meltzer and I. F. Brown), 1384
    Mathematics and (Dr. George R. Stibitz and Prof. Jules A. Larrivee), *review* by Dr. M. V. Wilkes, 1755
Computers (Electronic), and Business Problems (Dundee Technical College Special Summer programme on), 1042
Computing Machines (Automatic Digital) : Programme Design for (Mathematical Laboratory of the University of Cambridge Summer School in), 1246
Computing Methods : Modern (National Physical Laboratory, Notes on Applied Science No. 16), *review* by S. Weintroub, 985
Conarachin II : Complex Formation between Groundnut Skin Pigments and (Miss H. M. R. McDavid and W. E. F. Naismith), 480
Concentration (Surface) : Control of, in the Diffusion of Phosphorus in Silicon (M. J. Coupland), 1331
Concentrations of Sodium, Potassium, Lactose and Water in Milk : Interrelationships of the (J. A. F. Rook and Marian Wood), 1284
Concentrations (Low Vapour) : Measurement of, by Collision with Excited Rare Gas Atoms (Dr. J. E. Lovelock), 1460
Concept (Agrotype), in Chemical Analysis of Tea (Dr. W. Wight), 1355
Concept (Agrotype), in Tea Taxonomy (Dr. W. Wight), 893
Concept (A New), of the Transformation Sequence of Kaolinite to Mullite (Prof. G. W. Brindley and Dr. M. Nakahira), 1333
Concrete Roads (Dr. R. H. H. Kirkham), 462
Condensation Nuclei (Atmospheric) : Third Symposium on (Cavendish Laboratory, Cambridge), 1640
Condensed Tannins : Molecular Weight of, as a Factor determining their Affinity for Collagen (Dr. David G. Roux), 1793
Condensed Tannins from Leucoanthocyanins : Biogenesis of (Dr. David G. Roux), 1454
Condition (Stress), for Brittle Fracture of Mild Steel (Prof. Takeo Yokobori and Prof. Hiroto Hamamoto and Akio Otsuka), 1719
Conditioning of Flax : Environmental (Dr. A. Durrant), 928
Conditions for Differential Reaction of 'Identical' Chemical Groups (Dr. A. G. Ogston), 1462
Conditions of Life in the Sea, *review* by Dr. G. E. R. Deacon, 1559
Conditions (Environmental) : Reduction of Low-Temperature Injury to Stored Apples by Modulation of (W. Hugh Smith), 275
Conditions (Living), International Medical Association for the Study of Health and : Formation of an, 464
Conditions (Living and Working) : Influence of, upon Health (Medical Conference on), 464
Conditions (Special), in Normal and Tumorous Nuclei (Prof. A. Stolk), 1739
Conduction (Metallic) : Plasma Approach to (Dr. Louis Gold), 1316
Conferences : Organization of, 1574
Configuration of the Molecule : Microwave Spectrum of Nickel Cyclopentadienyl Nitrosyl and the (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1157
Configuration (Absolute), of Enantiomorphic Carbanions involved in the Aldolase and Triose Phosphate Isomerase Reactions (Ben Bloom and Yale J. Topper), 1128
Configuration (Absolute), of α-Quartz : Determination of the (A. de Vries), 1193
Configuration (Electronic), of Cations in some Distorted Spinels (Dr. K. P. Sinha), 835
Configurations and Interactions of Macromolecules and Liquid Crystals (Faraday Society General Discussion on), 673
Confinement of Charged Particles by a Magnetic Field (Dr. B. Lehnert), 331
Confinement Phenomena (New), and Neutron Production in a Linear Stabilized Pinch (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt and Dr. R. H. Lovberg), 228
Congenital Malformations in Children of Mothers Aged 42 and Over (Prof. J. A. Böök, M. Fraccaro, C. G. Hagert and J. Lindsten), 1545
Conjugates (Antigen—Polystyrene) : Isolation of Antibodies on (L. Gyenes, B. Rose and Dr. A. H. Sehon), 1465
Conn, William M. : Extremely High Temperatures (Effects of Electrically Exploded Wires and the Ensuing Discharge), 1380
Connective Tissue : Some Aspects of, in relation to Age (Dr. R. Consden and Dr. P. C. Brown), 538
Connective Tissue in the Ewe : Gestational Changes in (Dr. E. G. Bassett), 196
Connective-Tissue Pigment of the Centipede, *Lithobius forficatus* (L.), (Dr. A. E. Needham), 194
Consden, Dr. R., and Brown, Dr. P. C. : Some Aspects of Connective Tissue in relation to Age, 538
Consden, Dr. R. (Brown, Dr. P. C., and) : Variation with Age of Shrinkage Temperature of Human Collagen, 349
Consecutive Responses in a Hemileucid Moth : Interaction between, and the Evolution of Insect Communication (A. D. Blest), 1077
Conservation : Parity (Royal Society Discussion on), 447, *errata*, 885
Conservation of Nature in South-East England (South-Eastern Union of Scientific Societies Conference on), 743, 1446
Conserving Wild Life and Amenities in the South-East of England (South-Eastern Union of Scientific Societies Conference on), 315
Consolidated Gold Fields of South Africa, Ltd. Gold Medal for 1956-57 of the Institution of Mining and Metallurgy awarded jointly to K. E. Mackay and J. D. Johnson, 1375
Consolidated Gold Fields of South Africa, Ltd. Premium for 1956-57 of the Institution of Mining and Metallurgy awarded to J. Morison Caw, 1375
Consolidation : Land (European Productivity Agency of the Organization for European Economic Co-operation, Project No. 199), 1114
Consolidation of Fragmented Agricultural Holdings (Food and Agriculture Organization of the United Nations, Report of the Working Party of Specialists on the), 1114
Consolidation of Fragmented Holdings, Working Party on (Sub-Commission on Land and Water Use of the European Commission on Agriculture) : Report of the First Session (Lisbon, 1956) ; Report of the Second Session (Vienna, 1957), 1114
Constant Temperature Water-Bath (Prof. A. Darbre and R. L. Speirs), 364
Constant Weight per Unit Length : Birefringence Determination in Objects of Irregular Cross-sectional Shape and (S. C. Simmens), 1260
Constants (Elemental), and Electricity Standards : Importance of the Faraday to (A. G. McNish and Dr. R. D. Huntoon), 1194
Constituents (Insoluble) : Culture of *Nitrosomonas europaea* in Media Free of (M. S. Engel and Prof. M. Alexander), 136
Constituents (Minor), and Trace Elements in Negev Phosphate Rocks (Dr. E. Foa), 1676
Constitution of the Fibrillar and Non-Fibrillar Components of the Walls of *Valonia ventricosa* (Prof. R. D. Preston and J. Cronshaw), 248
Constitution of the Toxin of *Helminthosporium victoriae* (Dr. Ross B. Pringle and Armin C. Braun), 1205
Constitution of Verdohaem (Dr. R. Lessing), 1131
Constriction (Magnetic), in Simple Diodes (Dr. B. Meltzer), 1332
Constructional Steelwork Association, British (British Steel Producers' Conference and the) : Offer of £6,000 a year to the Imperial College of Science and Technology, for the establishment of a readership in structural steelwork and the provision of bursaries for postgraduate study in that subject, 314
Consultants Bureau, Inc., New York : Catalogue No. 2, 1508
    Express Contents, No. 1, 1509
Consumption and Resources : Fuel, 745
Contact with Glass : Activation of a Permeability Factor in Plasma by (Dr. J. Margolis), 635
Contact with Rhodium, Palladium, Iridium and Platinum : Corrosion of Ten Metals in Boiling Hydrochloric Acid when in (W. Roger Buck, III, and Henry Leidheiser, jun.), 1681
Contact (*in vitro*) with Bacterial Antigen and Transfer to New-born Rabbits: Antibody Production by Lymphocytes after (Dr. Miroslav Holub), 122
Contact Stresses (Stress Analysis Group of the Institute of Physics Symposium on), 1773

Contaminants : Embrittlement of Tungsten Wires by (Dr. G. L. Davis), 1198
Contamination (Surface Radioactive) : Rapid Assessment of (Prof. F. Behounek), 695
Continental Shelf : Large Sand Waves near the Edge of the (D. Cartwright and A. H. Stride), 41
Continuous Cultivation of Micro-organisms (Institute of Biology of the Czechoslavak Academy of Sciences Symposium on), 1042
Continuous Cultures of Renal Cells : Spontaneous Occurrence of Intranuclear Inclusion Bodies in (Dr. N. M. Larin), 1477
Continuous Feed Process : Isotope Enrichment in a (A. E. Bainbridge and Dr. A. T. Wilson), 1729 ; (Prof. S. Tolansky), 1730
Contracting Muscles (the Fast and the Slow), of the Mesothoracic Leg of the American Cockroach (*Periplaneta americana* L.) : Muscle Fibres of (W. A. Smit), 1073
Contraction in Dehydrated Muscle Fibres : Adenosine Triphosphatase and (Sheila M. V. Hunt and N. A. Matheson), 472
Contraction of Time and Protoplasm (Prof. Anderson Nettleship), 562
Contrast in the Electron Microscope Image (Dr. Robin C. Valentine), 832
Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a New Sugar, Paratose (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
Control : Automatic (A *Scientific American* Book), *review* by J. F. Coales, 661
  Pest, *review* by Dr. K. A. Lord, 1689
Control of the Bulbous Weed *Oxalis pes-caprae* : Maleic Hydrazide in the (N. G. Marinos), 1143
Control of Button Shedding in the Coconut : Fortifying Influences of Coconut Milk and Cow's Urine on 2,4-Dichlorophenoxyacetic Acid in the (S. R. Gangolly and Dr. K. M. Pandalai), 855
Control of Health and Safety in the United Kingdom Atomic Energy Authority : Report of the Committee appointed by the Prime Minister to examine the Organization for (Atomic Energy Office), 1023, 1043
Control of Pests in Stored Agricultural Products with special reference to Grain (Dr. J. A. Freeman), (European Productivity Agency of the Organization for European Economic Co-operation, Project No. 212), 1639
Control of Surface Concentration in the Diffusion of Phosphorus in Silicon (M. J. Coupland), 1331
Control of Turnip and Cabbage Mildew (*Erysiphe polygoni* DC.) by Zinc (Dr. J. A. Tomlinson and M. J. W. Webb), 1352
Control (Automatic), British Group for Computation and : Constitution of, 237
  Election of T. E. Goldup as chairman, 237
Control (Automatic), International Federation of : Ratification of the constitution, 1377
  First International Congress for Automatic Control, 1378
Control (Chemical), of Cell Growth : Enzymic Synthesis of Coenzyme I in relation to (Prof. R. K. Morton), 540
Control (Management), of Small Engineering Firms (L. Fontaine, J. W. Walker and W. R. Spencer), 1113
Control (Nervous), of Cilia in Amphioxus (*Branchiostoma*), (Quentin Bone), 193
Control (Photoperiodic), of Flowering in *Lemna perpusilla* (William S. Hillman), 1275
Control (*Simulium*) : Effects of, on Insectivorous Fishes (Philip S. Corbet), 570
Control (Statistical Quality), and Acceptance Sampling (Birmingham College of Technology Course on), 1703
Control (Train), on Railways in Britain, 883
Control Circuits (Industrial Electronic) : Handbook of (John Markus and Vin Zeluff), *review* by Denis L. Johnston, 73
Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, F. W. P. McWhirter, R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217, 315
Controlled Release of Thermonuclear Energy—Co-operative Phenomena in Hot Plasmas (Prof. Lyman Spitzer), 221
Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, J. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222
Controlled Release of Thermonuclear Energy—Magnetic Measurement of Plasma Confinement in a Partially Stabilized Linear Pinch (Dr. L. C. Burkhardt, Dr. R. H. Lovberg and Dr. J. A. Phillips), 224
Controlled Release of Thermonuclear Energy—Neutron Production in a High-Power Pinch Apparatus (Dr. D. C. Hagerman and Dr. J. W. Mather), 226
Controlled Release of Thermonuclear Energy—New Confinement Phenomena and Neutron Production in a Linear Stabilized Pinch (Dr. L. C. Burkhardt and Dr. R. H. Lovberg), 228
Controlled Release of Thermonuclear Energy—Neutrons from a Stabilized Toroidal Pinch (Dr. J. Honsaker, Dr. H. Karr, Dr. J. Osher, Dr. J. A. Phillips and Dr. J. L. Tuck), 231
Controlled Thermonuclear Reactions (Joint United States—United Kingdom Conference to exchange information on), 386
Controlled Thermonuclear Reactions : Experimental Results with the ZETA Apparatus on (Royal Society Discussion on), 238, 803
Controversy : Reason and, *review* by Dr. C. K. Grant, 869
Conversion of 3-Hydroxyanthranilic Acid to Quinolinic Acid in presence of Rat Liver treated with 2-Acetylaminofluorene (E. Quagliariello, S. Auricchio and E. Rinaldi), 624
Convocation in the University of London—Centenary Lecture 1958 (Dr. P. Dunsheath), 1442
Convocation in the University of London—the First Hundred Years (Dr. P. Dunsheath and Mrs. Margaret Miller), 1442
Convulsions in Hamsters : Production of, by High Butterfat Intake (Prof. R. L. Swank and R. Engel), 1214
Convulsions (Metrazol), and Electroshock : Metabolism of the Perfused Cat Brain during (C. Allweis and Dr. J. Magnes), 626
Conway, Prof. Edward J. : Microdiffusion Analysis and Volumetric Error, fourth edition, *review* by E. I. Johnson, 1029
Conway, H. G. (edited by) : Aircraft Hydraulics, Vol. I, Hydraulic Systems ; Vol. 2, Component Design, *review*, 977
Cook, Dr. A. H. : Brewing, *review*, 441
  Appointed director of the Brewing Industry Research Foundation, 810 ; work of, 810
Cook, G. A. : *Obituary*, 1766
Cook, J. M. : Awarded a Grant by the Leverhulme Trust, 1442
Cook, R. M. : Intensity of Remanent Magnetization of Archaeological Remains, 1421
  Archaeology in Greece, *review*, 1560
Cook, Sir William : Appointed a member of the Ministry of Supply's Advisory Council on Scientific Research and Technical Development, 1442
Cook, W. R. J. : Appointed a full-time member of the United Kingdom Atomic Energy Authority, 311
Cooke, B. E. D. : Title of reader in dental medicine in the University of London at Guy's Hospital Medical School conferred on, 602
Cooke, Dr. G. W. : Influence of War on the Production and Use of Fertilizers, *review*, 371
Cooke, Dr. R. G. : Solution of Eigenvalue Problems, *review*, 978
Coons, A. H. : Genetic Aspect of Somatic Cell Variation (Capacity of Cells to produce Specific Proteins which behave as Antibodies), 1706
Cooper, A. : Recent Advances in Polymer Technology (Properties of Cellular Polymers), 1305
Cooper, A. W. M., and others : Simultaneous Occurrence of Moving and Standing Waves in a Positive Column, 1326
Cooper, D. R. : Effect of Borate Buffer on the Electrophoresis of Serum, 713
Cooper, Dr. F. C., and others : Carcinogenicity of Tricycloquinazoline, 838
Cooper, Dr. J. P., and others : Non-Flowering Strains of Herbage Grasses, 591
Cooper, Prof. M. McG. : Biological Productivity of Britain (Expansion of Animal Production), 83
Co-operation in Research and Development, 655
Co-operation (Anglo-American) : The Basis of, 1091
Co-operative Phenomena in Hot Plasmas (Controlled Release of Thermonuclear Energy), (Prof. Lyman Spitzer), 221
Co-ordination Compounds : Chemistry of (National Academy of Sciences of India Symposium on), 1246
Cope, Arthur C., and others (edited by) : Organic Reactions, Vol. 9, *review* by Prof. John Read, 147
Cope, F. W. : Incompatibility in *Theobroma cacao*, 279
Copeland, W. C. (Fleming, N., and) : Noise in Industry (The Principles of Noise Suppression), 1697
Copley, Dr. Alfred L. : Adherence and Viscosity of Blood Contacting Foreign Surfaces, and the Plasmatic Zone in Blood Circulation, 551
Copp, F. C., and others : A New Series of Anthelmintics, 183
Copper Phthalocyanine : Lattice Image of Twin Structure observed directly by Electron Microscope in a Crystal of (Prof. E. Suito, N. Uyeda, H. Watanabe and T. Komoda), 332
Corbet, Philip S. : Effects of *Simulium* Control on Insectivorous Fishes, 570
Corbin, P. G. : A New British Fish (*Gobius forsteri*), 1659
Corcyra cephalonica St. : Influence of some Iodoamino-Acids and Iodoproteins on the Growth of (N. R. Moudgal, E. Raghupathy and Prof. P. S. Sarma), 1655
Corday—Morgan Medal and Prize for 1956 of the Chemical Society awarded to Dr. K. W. Bagnall, 947
Corky Ringspot Disease of Potato : A Soil-borne Virus associated with the (C. H. Walkinshaw and Dr. R. H. Larson), 1146
Corn Borer (European), *Pyrausta nubilalis* (Hbn.) : Importance of Photoperiod and Temperature in Inducing Diapause in the (J. A. Mutchmor and Dr. W. E. Beckel), 204
Corne, S. J., and others : 1:2:2:6:6-Pentamethylpiperidine a, New Hypotensive Drug, 1717
Cornell University : Summer Laboratory Course in Techniques and Applications of the Electron Microscope, 743
Cornwall : Coffinite in (K. Taylor and R. K. Harrison), 363
Cornwell, J. C. : Design of Physics Research Laboratories (Buildings and Services from the point of view of the Laboratory Maintenance Engineer), 91
Cornwell, P. B. : Processing of Foods with Ionizing Radiations (Elimination of Grain Weevils and Flour Mill Moths), 878
Cornwell, P. B., and Burson, D. M. : Grain Weevils, *Calandra granaria* L. and *C. oryzae* L., reared on Irradiated Wheat, 1747
Corona (The Solar), without an Eclipse, *review* by Prof. R. O. Redman, 871
Corpuscle (Pacinian) : Generation and Propagation of Impulses during Refractoriness in a (Prof. Werner R. Loewenstein and R. Altamirano-Orrego), 124
Corpuscles (Red Blood) : Sites of the Physiological Breakdown of the (G. v. Ehrenstein and D. Lockner), 911
Correction for the Gamma-Ray Sensitivity of the Beta-Counter in the Standardization of Cobalt-60 by the Beta-Gamma Coincidence Method (B. Owen and R. A. Lloyd), 396
Correlation between Electrical Surface Charge and some Biological Characteristics during the Stepwise Progression of a Mouse Sarcoma (Mrs. L. Purdom and E. J. Ambrose, and Prof. G. Klein), 1586
Correlation between Ionizing and Attachment Coefficients and Breakdown Characteristics for Carbon Tetrafluoride (P. R. Howard), 645
Correlations between Localization Energies and Polarographic Half-Wave Potentials of Aromatic Hydrocarbons (P. H. Given), 1001
Correlations (Possible), between Earthquakes and Microseisms (C. A. Nanney), 802
Corrosion of Ten Metals in Boiling Hydrochloric Acid when in Contact with Rhodium, Palladium, Iridium and Platinum (W. Roger Buck, III, and Henry Leidheiser, jun.), 1681
Corrosion Inhibitors : Electrocapillary Action of (Harry C. Gatos), 1060
Cortical Hormones (Adrenal), and the Formation of Histamine and 5-Hydroxytryptamine (R. Hicks and Dr. G. B. West), 1342
Cortisone : Anti-allergic Effect of (Dr. E. R. Trethewie), 625
  Effect of Stress and, on the Cytomorphology of Pituitary Grafts in Rats (Dr. K. Kovács, M. A. David and I. W. Horváth), 1417
  Immediate Effect of *l*-3:5:3'-Tri-iodothyroacetic Acid on Metabolic Rate and Body Temperature in Hypophysectomized Rats and the Action of (Prof. Sz. Donhoffer, I. Várnai and E. Szlebert-Horváth), 345
Cortisone (Pituitary Hormones and) : Effects of, upon Liver Regeneration in the Hypophysectomized Rat (Dr. J. T. Hemingway and Dr. D. B. Cater), 1065

Cortisone-Glucose Tolerance Test in Normal and Thyroxine-treated Rabbits (Dr. L. Macho), 620
Corynebacterium diphtheriae : A New Transaminase of (Michael Bagdasarian), 1399, *erratum*, 1640
  Role of Phage Antibodies in the Development of Non-toxigenic Cultures of (Paul S. Anderson, Jun., and Prof. Philip B. Cowles), 350
Cosmetics—Science and Technology (edited by Edward Sagarin), *review* by Cyril W. Ridout, 444
Cosmetics : The Science of, *review* by Cyril W. Ridout, 444
Cosmic Dust on the Earth : Rate of Accretion of (Prof. Hans Pettersson), 330
Cosmic Radiation : Energy Spectrum of (Prof. H. Alfvén and Ernst Åström), 330
Cosmic Radio Waves (18-Mc./s.) : Auroral Absorption of, on February 11, 1958 (Dr. R. Fleischer), 1156
Cosmic-Ray Decrease (A Large), accompanying the Solar Maximum of 1957 (Cosmic Rays and the Sunspot Cycle), (J. R. Winckler and L. Peterson), 1317
Cosmic-Ray Nucleonic Component along 145° East Longitude : A Survey of the, using an Airborne Monitor (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 1155
Cosmic Rays : Effective Magnetic Meridian for (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 34
Cosmic Rays and the Sunspot Cycle—A Large Cosmic-Ray Decrease accompanying the Solar Maximum of 1957 (J. R. Winckler and L. Peterson), 1317 : Primary α-Particle Intensity at Sunspot Maximum (P. S. Freier, Prof. E. P. Ney and P. H. Fowler), 1319
Cosmical Sources : Propagation of Radio Waves from (Dr. E. Chvojková), 105
Cossano, Barbara J., and others : Antigenicity of Avidin, 619
Cotes, Dr. Phoebe M. : Awarded a Beit Junior Fellowship for Medical Research, 1507
Cotterman, C. W. : Genetic Aspect of Somatic Cell Variation (Irregularity in the Human ABO Blood Group), 1706
Cotton, Dr. M. Aylwin : Silchester Archaeology (Presidential Address to the Archaeological Section of the South-Eastern Union of Scientific Societies), 1707
Cotton Industry Research Association, British : Thirty-eighth Annual General Meeting, 466
Cotton Varieties (Egyptian) : Growth Responses of *Fusarium oxysporum* to Metabolites of some Rhizospheric Microflora of (Dr. M. S. Naim and A. M. Hussein), 578
Cottrell, Dr. A. H. : Vacancies and other Point Defects in Metals and Alloys, 449
  Lattice Defects in Irradiated Solids, *review*, 977
  Appointed to the Goldsmiths' chair of metallurgy in the University of Cambridge, 1178
Coturnix, the Journal of the Bishop's Stortford School Natural History Society, 530
Coulson, Prof. C. A. : Humanity and Science, *review*, 7
  Science and the Idea of God (1958 Eddington Memorial Lecture), 813
Coulter, J. R. M., and others : Simultaneous Occurrence of Moving and Standing Waves in a Positive Column, 1326
p-Coumaric Acids (Ferulic and), in Pineapple Tissue as Modifiers of Pineapple Indoleacetic Acid Oxidase (Dr. Willis A. Gortner, Martha J. Kent and Dr. G. K. Sutherland), 630
Council for Nature, 867
Countenance : The Bright—a Personal Biography of Walter Morley Fletcher (Maisie Fletcher), *review* by Sir William Gavin, 513
β-Counter : Correction for the Gamma-Ray Sensitivity of the, in the Standardization of Cobalt-60 by the Beta-Gamma Coincidence Method (B. Owen and R. A. Lloyd), 396
Counter-Streaming Centrifugation : Separation of Bull Spermatozoa carrying *X*- and *Y*-Chromosomes by (Per Eric Lindahl), 784
Counteraction by Aluminium : Novel Action of Potassium on a Yeast and a (Dr. E. J. Miller), 191
Counters (Argon—Alcohol) : Role of Photons in (Dr. P. Mortier, J. Demuynck and O. Segaert), 1327
Countries (Underdeveloped) : Atomic Energy Applications with reference to (B. C. Netschert and S. H. Schurr), *review* by Sir John Cockcroft, 1167
  Power Development in Hitherto (F. D. Robinson), 1502
Countries (Undeveloped) : Power as a Factor of Development in (Eleventh Sectional Meeting of the World Power Conference), 1502
Country : The Natural Resources of the, and their Value for Teaching and Research (Papers at the Annual Meeting of the Association of British Zoologists), 1313
Countryside : Preservation of the, 937
Counts of *Clostridium butyricum* in Soils : Influence of Media on the (Dr. D. J. Ross), 1142
Couper, R. A. (Hughes, N. F., and) : Palynology of the Brora Coal of the Scottish Middle Jurassic, 1482
Coupland, M. J. : Control of Surface Concentration in the Diffusion of Phosphorus in Silicon, 1331
Coupland, Dr. R. E. : Strain Sensitivity of Albino Rats to Reserpine, 930
Course at the Reactor School, Harwell, 1110
Course on Statistical Quality Control and Acceptance Sampling (Birmingham College of Technology), 1703
Course in the Use of Statistics in Personnel Management (Institute of Personnel Management in conjunction with the National Institute of Industrial Psychology), 20
Course (Lecture-Demonstration), on Clinical Biochemistry (Association of Clinical Biochemists), 1312
Course (Refresher), on Elementary Fourier Analysis (Imperial College of Science and Technology), 1510
Course (Residential Study), in the Employment Function of Management (Institute of Personnel Management), 20
Course (Residential Summer), on the Lunar Society—Science and Thought in the Eighteenth Century (Departments of Extra-Mural Studies of the University of Birmingham and the University of Nottingham), 1510
Course (A School), of Biology (L. J. F. Brimble), fourth edition, *review* by R. Weatherall, 1758
Course (Summer Laboratory), in Techniques and Applications of the Electron Microscope (Cornell University), 743
Courses : Sandwich (Association of Teachers in Technical Institutions Memorandum on), 1712
Courses on Radioisotopes (Atomic Energy Research Establishment, Harwell), 884
Covenanted Subscriptions to Learned Societies, 1243
Coventry Technical College : Appointment of Dr. M. E. Foss as head of the Department of Chemistry and Metallurgy, 238
Cow Kidney : Crystallization of Cytochrome *c* from (Bunji Hagihara, Kunio Tagawa, Ichiro Sekuzu, Ichiro Morikawa and Prof. Kazuo Okunuki), (Crystalline Cytochrome *c*), 1589
Cow's Urine : Fortifying Influences of Coconut Milk and, on 2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the Coconut (S. R. Gangolly and Dr. K. M. Pandalai), 855
Cowan, Prof. Henry J. (edited by) : Proceedings of the Symposium on Structure and Architecture (University of Sydney Extension Board), 1315
Cowles, Prof. Philip B. (Anderson, jun., Paul S., and) : Role of Phage Antibodies in the Development of Non-Toxigenic Cultures of *Corynebacterium diphtheriae*, 350
Cowling, Prof. T. G. : What Magnetohydrodynamics is About, *review*, 1361
Cox, A. P., and others : Microwave Spectra of Diazomethane and its Deutero Derivatives, 1000
  Microwave Spectrum of Nickel Cyclopentadienyl Nitrosyl and the Configuration of the Molecule, 1157
Cox, G. S., and Hodges, Dr. J. R. : Adrenocorticotrophic Hormone in the Blood of Adrenalectomized Rats, 420
Cox, Dr. R. I. : Separation, Detection and Estimation of C21 17 : 20-Dihydroxy-20-methyl Steroids, 638
Coyne, Dr. F. P. : Residues of Pesticides in Foodstuffs, 22
Crabs (Intertidal) : Effect of Photoperiod on the Oxygen Consumption of Two Species of (Prof. Paul A. Dehnel), 1415
Crabs (Pea-), *Pinnotheres*: British (Dr. D. Atkins), 1087
Crabtree, Dr. John I. : Honorary fellowship of the Royal Photographic Society conferred on, 313
Crabtree and Sons, Ltd., R. W. : Gift of £50,000 to the University of Leeds, towards the fund for new buildings, 1576
Craftsmen : Supply and Quality of, *review* by T. H. Hawkins, 373, 531
Cragg, Prof. J. B. : Biological Productivity of Britain (Multi-purpose Use of the Uplands), 84
Craig, A. W., and others : Sensitivity of the Spermatogenic Process in the Rat to Radiomimetic Drugs and X-Rays, 353
Craig, Prof. D. P., and Paddock, N. L. : A Novel Type of Aromaticity, 1052
Cranbrook, Earl of : Conservation of Nature in South-East England, 1446
Crangle, Prof. J. : Magnetic Susceptibility of the Alloy Pt_3Fe between 20 and 900 Degrees Absolute, 644
Craters (Terrestrial) : A Survey of (Dr. C. S. Beals), 559
Crawford, Dr. O. G. S. : *Obituary* by Dr. J. K. S. St. Joseph, 156
  The Eye Goddess, *review* by Prof. E. O. James, 969
Crawshay-Williams, Rupert : Methods and Criteria of Reasoning, *review* by Dr. C. K. Grant, 869
Creatine Phosphate Administration : Effect of, on the Cardiac Adenosine Triphosphate of Thyroxinized Rats (L. Angelucci, R. Boldrini and E. Mascitelli-Coriandoli), 419
Credibility and Error : Statistical Theory, the Relationship of Probability, (Prof. Lancelot Hogben), *review* by I. J. Good, 1687
Creese, Dr. R., and others : Effect of Insulin on Sodium in Muscle, 1278
Cremer, H. W. : Water Quality Problems in the United Kingdom, 24
Creutzberg, F. : Use of Tidal Streams by Migrating Elvers (*Anguilla vulgaris* Turt.), 857
Crisp, Dr. D. J., and Patel, B. S. : Relation between Breeding and Ecdysis in Cirripedes, 1078
Criteria of Reasoning : Methods and (Rupert Crawshay-Williams), *review* by Dr. C. K. Grant, 869
Critical Mass Measurements for the Merlin Research Reactor (D. R. Chick, K. Firth, M. Kerridge and A. J. Salmon), 1171
Crocker Tumour in Mice : Demonstration of Antibody in Passive Transplantation Immunity to, using the Schultz-Dale Technique (Prof. B. D. Baruah), 624
Cromer Forest Bed—Preglacial or Interglacial ? (Prof. P. G. H. Boswell), 1087 ; (D. F. W. Baden-Powell,) 1813
Cromerian Interglacial (Dr. R. G. West and Dr. H. Godwin), 155 ; (Prof. P. G. H. Boswell), 1554
Cronshaw, J. (Preston, Prof. R. D., and) : Constitution of the Fibrillar and Non-Fibrillar Components of the Walls of *Valonia ventricosa*, 248
Crook, Dr. A. W. : Contact Stresses (Rolling Contact), 1774
Crop Pests : History of, and the Measures taken to Overcome Them (George Ordish), 536
Crops (Cereal) : Diseases of, *review* by Prof. A. E. Muskett, 515
Crops (Plantation) : Choice and Application of Fungicides to, with special reference to *Hevea brasiliensis* (E. J. Risdon), 1017
Cross, L. E. : Electric Double Hysteresis in $(K_xNa_{1-x}NbO_3$ Single Crystals, 178
Cross, Rt. Hon. Sir Ronald : Elected president of the Royal Society of Tasmania, 1110
Cross-Pollination in Lettuce, *Lactuca sativa* L. : Natural (L. E. Watts), 1084
Cross-sectional Shape (Irregular), and Constant Weight per Unit Length : Birefringence Determination in Objects of (S. C. Simmens), 1260
Crosse, J. E., and Hingorani, M. K. : A Method for Isolating *Pseudomonas mors-prunorum* Phages from the Soil, 60
Crosses (Reciprocal) : Embryological Investigation in *Hibiscus sabdariffa* x *H. cannabinus* and their (P. Sanyal), 1353
Crosskey, M. E. (Crosskey, R. W., and) : Filarial Infection in *Simulium griseicolle* Becker, 713
Crosskey, R. W., and Crosskey, M. E. : Filarial Infection in *Simulium griseicolle* Becker, 713
Crowcroft, Dr. Peter : The Life of the Shrew, *review* by H. R. Hewer, 517
Crowder, L. H. (Radd, F. J., and) : Metallographic Studies of Iron Carbide and Tungsten Carbide, 258
Crowley-Milling, M. C. : Processing of Foods with Ionizing Radiations (Electrical Machines as Sources of Radiation), 878
Cruickshank, J. G., and others : Pigmentation of Intestinal Muscle in Steatorrhoea, 538
Crumpton, M. J., and others : Action of Periodate on some Polysaccharides containing Aldoheptose Sugars, 412
Crusafont-Pairó, Dr. M., and Truyols-Santonja, Dr. J. : A Quantitative Study of Stasigenesis in Fissipede Carnivores, 289

Crustacean from the West Indies : A New Subterranean (Dr. Isabella Gordon), 1552
Cruz-Coke, Eduardo : A Colour Reaction of Vitamin E with Vitamin K and Cysteine, 49
Cruzado, H. J. (Muzik, Prof. T. J., and) : Transmission of Juvenile Rooting Ability from Seedlings to Adults of *Hevea brasiliensis*, 1288
Cryptochiton (Polyplacophora, Mollusca) : Carbohydrases in the Sugar-Gland Juice of (Prof. B. J. D. Meeuse and Walter Fluegel), 699
Cryptocotyle lingua in British Mink (H. Scott McTaggart), 651
Cryptorchid Rat : β-Glucuronidase, Lipase and Esterase in the Testis of the (Dr. Masando Hayashi, Kazuhiro Ogata, Takuro Shiraogawa and Osamu Kawase), 186
Crystal of Copper Phthalocyanine : Lattice Image of Twin Structure observed directly by Electron Microscope in a (Prof. E. Suito, N. Uyeda, H. Watanabe and T. Komoda), 332
Crystal (Lead) : Mean Free Path of Phonons in a (G. J. McCallum and P. A. Egelstaff), 643
Crystal Habit of Ice : Influence of Organic Vapours on the (J. Hallett and Dr. B. J. Mason), 467
Crystal Structure of Chabazite, a Molecular Sieve (L. S. Dent and Prof. J. V. Smith), 1794
Crystal Structure of Greenalite : Mineralogy and (R. Steadman and Dr. R. F. Youell), 45
Crystalline Antifungal Antibiotic : Flavofungin, a New—Origin and Biological Properties (Dr. J. Uri and I. Békési), 908
Crystalline Cytochrome *c*—Crystallization of Cytochrome *c* from Pigeon Breast Muscle (Bunji Hagihara, Ichiro Sekuzu, Kunio Tagawa, Masahiko Yoneda and Prof. Kazuo Okunuki), 1588 ; Crystallization of Cytochrome *c* from Cow Kidney (Bungji Hagihara, Kunio Tagawa, Ichiro Sekuzu, Ichiro Morikawa and Prof. Kazuo Okunuki), 1589; Crystallization of Cytochrome *c* from Wheat Germ (Bunji Hagihara, Kunio Tagawa, Ichiro Morikawa, Masateru Shin and Prof. Kazuo Okunuki), 1590
Crystalline Haemoproteins of Wheat : Two (Bunji Hagihara, Kunio Tagawa, Ichiro Morikawa, Masateru Shin and Prof. Kazuo Okunuki), 1656
Crystalline Lattice Structure in Yolk Platelets of the Amphibian Embryo : Electron Micrographs of a (Shuichi Karasaki and Tsutomu Komoda), 407
Crystalline Lens : Fluorescence of the, and Electroretinographic Sensitivity Determinations (Dr. E. Dodt and J. B. Walther), 286
Crystalline Saccharogenic Amylase of Moulds : Specificity of (Yoshio Tsujisaka, Juichiro Fukumoto and Takehiro Yamamoto), 770
Crystallinity : Effects of, on the Infra-red Absorption Spectra of Lactose and Dried Milk (J. D. S. Goulden and Jonathan W. White, jun.), 266
Crystallization (Spontaneous), of Amylase from Pancreatic Juice of the Rat (Dr. N. G. Heatley), 1069
Crystallography (Microscopic Optical) : An Improved Orientation Stage for (H. C. G. Vincent), 693
Crystals : Dislocations and Mechanical Properties of—an International Conference held at Lake Placid, 1956 (edited by J. C. Fisher, W. G. Johnston, R. Thompson and T. Vreeland, Jr.), *review* by Dr. R. A. Hyman, 1562
Crystals of Caesium Nitrate on Muscovite : Kinetics of the Trigonal-to-Cubic Transition in (E. Ferroni and M. Cocchi), 903
Crystals (Aluminium—Zinc Single) : Unloading Effects in (A. T. Thomas), 1728
Crystals (Liquid) : Configurations and Interactions of Macromolecules and (Faraday Society General Discussion on), 673
Crystals (Non-polymer) : Polymer-type Elasticity in (J. E. Gordon, A. T. K. Seville and D. M. Marsh), 1678
Crystals (K_xNa_{1-x}) NbO_3 Single) : Electric Double Hysteresis in (L. E. Cross), 178
Crystals (Protein), at Low Temperature : Improved Resolution of X-Ray Diffraction Patterns of (Dr. Murray Vernon King), 263
Crystals (Snow) : Symmetry of (Prof. S. Tolansky), 256
Crystals (Sodium Chloride) : Etch Figures on (B. Jeszenszky), 559
Rectifying Effects of (Dr. S. Császár), 1158
Crystals (Sodium Phosphate), on Salt Fish (Dr. W. J. Dyer, Doris I. Fraser and J. R. Dingle), 858
Crystals (Synthetic Piezoelectric) : Properties of, *review* by Dr. Warren P. Mason, 588
Császár, Dr. S. : Rectifying Effects of Sodium Chloride Crystals, 1158
Csernyánszky, H., and others : Effects of a Lethal Electric Shock during Hypothermia, 909
Csillik, Dr. B. (Sávay, Dr. Gy., and) : Lead-Reactive Substances in Myoneural Synapses, 1137
Cubic Metals (Body-centred) : Localized Electrons in (J. S. Griffith and L. E. Orgel), 170
Cucurbita: Size Differences in (K. E. von Maltzahn), 1115
Culex fatigans Wied. (Mosquito), exposed to DDT : Laboratory Variations in Mortality of the (T. Koshi and S. K. Ranganathan), 199
Culis julis L. : Protogynous Hermaphroditism in (Prof. G. Bacci and A. Razzauti), 432
Culkin, F., and Riley, Dr. J. P. : Germanium and Gallium in Sea-Water—Gallium, 180
Cullen, Prof. A. L. : A Travelling-Wave Parametric Amplifier, 332
Cult : The Face-, *review* by Prof. E. O. James, 969
Cultivating Human Bone Marrow in Presence of Vitamin B_{12} and Vitamin$_{12}$-binding Protein : Transformation of Megaloblasts to Normoblasts by (Dr. I. Pendl and Dr. W. Franz), 488
Cultivation (Continuous), of Micro-organisms (Institute of Biology of the Czechoslovak Academy of Sciences Symposium on), 1042
Cultivation (Rice) : Planting Distance and Number of Seedlings in (N. K. Jain), 202
Cultivation and Development of Larval Cestode Fragments *in vitro* (Prof. J. D. Smyth), 1119
Cultural Anthropochronology (Physical and) : Man's Journey through Time, a First Step in (Prof. L. S. Palmer), *review* by M. C. Burkitt, 1691
Cultural Foundations of Industrial Civilization (Prof. John U. Nef), *review*, 1427
Cultural Relations with the U.S.S.R., Society for : Technical Education in the U.S.S.R. (C. E. Simmonds), 316
Culture of *Nitrosomonas europaea* in Media Free of Insoluble Constituents (M. S. Engel and Prof. M. Alexander), 136
Culture (*In vitro*), of Ovaries of *Iberis amara* L. (Nirmala Maheshwari and Manohar Lal), 631
Culture (Monolayer Tissue), of Pig Kidney : Growth and Titration of Louping-ill Virus in (Dr. Holman E. Williams), 497
Culture (Sterile) : Formation of Jerusalem Artichoke Tubers in (Dr. Margery P. F. Marsden Ray), 1480
Culture (Tissue) : Limited Multiplication of *M. lepraemurium* in (R. J. W. Rees and P. C. Wong), 359
Culture (Tissue) with Tritium-labelled Thymidine : Autoradiographic Visualization of Synthesis of Deoxyribonucleic Acid in (H. Firket and W. G. Verly), 274
Culture Filtrate (Diphtherial) : Accumulation of α-Alanine and of Pyruvate in, and its relation to Iron Deficiency of Medium (Prof. Masahiko Yoneda and Hiroshi Ishihara), 272
Culture Media : Estimation of Hydrogen Peroxide in (E. J. K. Penikett and Dr. A. J. Lister), 1682
Cultures of *Thiobacilli:* Detection of Polythionate in, by means of the Folin—Ciocalteu Reagent (Prof. D. P. Pratt), 1075
Cultures (Aged Bacterial) : Occurrence and Filterability of Protoplast-like Elements in (Dr. J. Sinkovics), 566
Cultures (Continuous), of Renal Cells : Spontaneous Occurrence of Intranuclear Inclusion Bodies in (Dr. N. M. Larin), 1477
Cultures (Non-toxigenic), of *Corynebacterium diphtheriae:* Role of Phage Antibodies in the Development of (Paul S. Anderson, jun., and Prof. Philip B. Cowles), 350
Cultures (Plant Tissue) : Gibberellin and the Growth of (Dr. L. G. Nickell), 499
Cultures (Pure), of a Brown Alga : Extracellular Products in (Dr. G. E. Fogg and G. T. Boalch), 789
Cummings, G. A. McD. : Effect of Pressure on Burning Velocity of Nitric Oxide Flames, 1327
Cunningham, Dr. G. J., and others : Carcinogenicity of Tricycloquinazoline, 838
Cunningham, J. B. W. : Appointed director of industrial power in the Industrial Group of the United Kingdom Atomic Energy Authority, 530
Cupric Salts with Mono-, Di- and Tri-Chloroacetic Acids : Structure of (Dr. Ryutaro Tsuchida, Dr. Shoichiro Yamada and Hiroji Nakamura), 479
Curd (Cheese) : Fibrous Structure in (N. King and J. Czulak), 113
Currant (Black-) Fruits : Anthocyanins in (B. V. Chandler and K. A. Harper), 131
Current Research on Orthoptera (Anti-Locust Research Centre), 742
Current (High-) Toroidal Discharge producing High Temperatures : A Stabilized (Controlled Release of Thermonuclear Energy), (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, J. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222
Currents, Fields and Particles (Prof. Francis Bitter), *review* by G. R. Noakes, 870
Currents (Water) : Effect of Photoperiodism on Response of Juvenile Trout to (T. G. Northcote), 1283
Curry, Dr. C. : Wave Optics, *review* by G. R. Noakes, 5
Curry, George M. (Ray, Peter M., and) : Intermediates and Competing Reactions in the Photodestruction of Indoleacetic Acid, 895
Curtin, David Y., and others (edited by) : Organic Reactions, Vol. 9, *review* by Prof. John Read, 147
Curtis, A. S. G. : A Ribonucleoprotein from Amphibian Gastrulae, 185
Curzon, Dr. G. : Effect of Chymotrypsin on Caeruloplasmin, 115
Cushing, Emory C. : History of Entomology in World War II, *review* by P. F. Mattingly, 1234
Cuthbertson, Dr. D. P. : Nutritive Value of Proteins, 151
Cuticle of Albino Locusts with Internally Absorbed Phenol Substrates : Induction of Melanin Patterns and of Hardening as Separate Processes in the (Dr. B. M. Jones and W. Sinclair), 926
Cuticle (Insect) : Abrasion of the, by Aqueous Suspensions of Small Particles (Prof. V. B. Wigglesworth), 779
Cutler, P. H., and Williams, Dr. D. : Long-Distance Radio Propagation above 30 Mc./s. (A Scatter Signal Analyser), 1185
Cutter, E. G. : Developmental Potentialities of Fern Leaf Primordia, 314
Cutting (Oxygen-) of Vanadium (G. Coates), 479
Cwilong, Dr. B. M. : Anomalous Atmospheric Refraction at Sea, 181
Obituary by Dr. G. M. B. Dobson, 1105
Cyanamid of Great Britain, Ltd. (Lederle Laboratories Division) : 'Ledercort,' a New Steroid, 1311
Cyanide and Azide (Carbon Monoxide,) : Genetic Effects of, on *Drosophila* (Dr. A. M. Clark), 500
Cyanide (Potassium) : Effect of, on Apparent Free Space in a Brown Alga (P. L. Bergquist), 1270
Cyanide (Potassium), and other Respiratory Inhibitors : Comparison of Effect of Lysergic Acid Diethylamide with, on the Siamese Fighting Fish (Dr. H. A. Bramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
Cybernetics : Second International Congress on (International Association for Cybernetics), 1576
Cybernetics, International Association for : Second International Congress on Cybernetics, 1576
Cyclic Nitrogen Mustard Phosphamide Ester (B 518-ASTA) : Chemotherapeutic Action of a, in Experimental Tumours of the Rat (Herbert Arnold, Friedrich Bourseaux and Norbert Brock), 931
Cyprinodont, *Lebistes reticulatus* R. : Masculinizing Action of Pregneninolone on Female Gonads in the (Dr. T. Mohsen), 1074
Cystamine, Cysteamine and Cysteine : Radioprotective Properties of, when tested with Chick Fibroblasts *in vitro* (P. Oftedal, R. Oftebro and R. Eker), 344
Cysteamine and Cysteine (Cystamine,) : Radioprotective Properties of, when tested with Chick Fibroblasts *in vitro* (P. Oftedal, R. Oftebro and R. Eker), 344
Cysteine : A Colour Reaction of Vitamin E with Vitamin K and (Eduardo Cruz-Coke), 49
Cysteine Desulphydrase Action : A Model System for—Pyridoxal Phosphate—Vanadium (Prof. F. Bergel, R. C. Bray and K. R. Harrap), 1654
Cysteine with 1-Fluoro-2,4-Dinitrobenzene : Molecular Rearrangement in the Reaction of (Dr. H. P. Burchfield), 49
Cysteine (Cystamine, Cysteamine and) : Radioprotective Properties of, when tested with Chick Fibroblasts *in vitro* (P. Oftedal, R. Oftebro and R. Eker), 344

Cytochemical Localization of Pyridine Nucleotide-linked Dehydrogenases (Dr. R. Hess, Dr. D. G. Scarpelli and Dr. A. G. E. Pearse), 1531
Cytochemical Localization of Succinic Dehydrogenase in Mitochondria from *Periplaneta americana* (Dr. A. G. E. Pearse and Dr. D. G. Scarpelli), 702
Cytochemical Methods with Quantative Aims—Biophysical and Biochemical Approaches (Proceedings of the Symposium held by the Institute for Medical Cell Research and Genetics, Karolinska Institutet, Stockholm, 1956), edited by Dr. B. Lindström and Dr. R. Brown (Experimental Cell Research, Supplement 4), *review*, 1029
Cytochrome c : Crystalline—Crystallization of Cytochrome *c* from Pigeon Breast Muscle (Bunji Hagihara, Ichiro Sekuzu, Kunio Tagawa, Masahiko Yoneda and Prof. Kazuo Okunuki), 1588; Crystallization of Cytochrome *c* from Cow Kidney (Bunji Hagihara, Kunio Tagawa, Ichiro Sekuzu, Ichiro Morikawa and Prof. Kazuo Okunuki), 1589 ; Crystallization of Cytochrome *c* from Wheat Germ (Bunji Hagihara, Kunio Tagawa, Ichiro Morikawa, Masateru Shin and Prof. Kazuo Okunuki), 1590
  Rotatory Dispersion of (Dr. Gunther L. Eichhorn and Dr. Joan F. Cairns), 994
  Some Effects of Carbon Dioxide—Bicarbonate Mixtures on the Oxidation and Reduction of, by *Ricinus* Mitochondria (D. S. Bendall, Dr. S. L. Ranson and D. A. Walker), 133
'Cytochrome *dh*' in Wheat Roots : Relation between Peroxidase and (Prof. H. Lundegardh), 28
Cytochrome Oxidase : Activation of, by Synthetic Detergents (Takashi Yonetani, Shigeki Takemori, Ichiro Sekuzu and Prof. Kazuo Okunuki) 1339
Cytochrome Oxidase in the Fat Body of the Desert Locust : Enzymes of the Tricarboxylic Acid Cycle and (Dr. D. A. H. Hearfield and Dr. B. A. Kilby), 546
Cytochrome System in Oyster Tissues (Kiyozo Kawai), 1468
Cytochrome System Preparation (Particulate) : Reconstitution of the Succinic Oxidase System from Soluble Succinic Dehydrogenase and a (Prof. D. Keilin and Dr. Tsoo E. King), 1520
Cytochromes of *Micrococcus lysodeikticus* (F. L. Jackson and Valerie D. Lawton), 1539
Cytogenetical Studies in the Genus *Citrus* (S. P. Naithani and S. S. Raghuvanshi), 1406
Cytolipin *H*, a Pure Lipid Hapten isolated from Human Carcinoma (Dr. Maurice M. Rapport, Liselotte Graf, Vladimir P. Skipski and Nicholas F. Alonzo), 1803
Cytological Techniques and the Apical Meristem (Prof. C. W. Wardlaw), 237
Cytology : Biochemical (Prof. Jean Brachet), *review* by Prof. C. H. Waddington, 1231
Cytology of Indian Species of *Artemesia* (Dr. T. N. Khoshoo and S. N. Sobti), 853
Cytology and Genetics (Prof. Carl P. Swanson), *review* by Prof. K. Mather, 973
β-Cytomembrane (Plasma Membrane) : Occurrence of Foldings of, in Cells of Pig's Carpal Organ as revealed by Electron Microscopy (K. Kurosumi and T. Kitamura), 489
Cytomorphology of Pituitary Grafts in Rats : Effect of Stress and Cortisone on the (Dr. K. Kovács, M. A. David and I. W. Horváth), 1417
Cytoplasm (Basophilic) : Affinity of Neutral Red for Cells with (Dr. Winfield S. Morgan), 1132
Cytoplasm (Feulgen-Positive), of *Molgula* Eggs (Dr. Daniel S. Grosch), 1078
Cytoplasmic Membrane-like Fraction from Cells of the Ehrlich Mouse Ascites Carcinoma (Prof. P. C. Rajam and Anne-Louise Jackson), 1670
Cytoplasmic Particles isolated from Apples : Activity of (Dr. G. E. Neal and Dr. A. C. Hulme), 1469
Cytoplasmic Variation in *Nectria stenospora* (Mrs. Ann Gibson and Dr. D. M. Griffin), 1222
Cytostatic and Fungistatic Steroid : 3β-Methoxy-5-androsten-16β-ol, a (Prof. R. W. Jones, G. Rebell and Prof. M. N. Huffman), 48
Cytotaxonomic Study of *Carex* (Åskell and Doris Löve and Marcel Raymond), 1041
Czech, J. : The Cathode Ray Oscillograph, *review* by Denis L. Johnston, 73
Czechoslavak Academy of Sciences (Institute of Biology) : Symposium on Continuous Cultivation of Micro-organisms, 1042
Czulak, J. (King, N., and) : Fibrous Structure in Cheese Curd, 113

DA COSTA, E. W. B. (Tamblyn, N., and) : A Simple Technique for producing Fruit Bodies of Wood-destroying Basidiomycetes, 578
Da Costa, E. W. B., and others : Relationship of Tectoquinone to Durability in *Tectona grandis*, 721
da Costa, G. J., and others : Absence of Abnormal Haemoglobins in some Groups of the Papua Population of Dutch New Guinea, 1279
Dactynotus cichoricola H.R.L., a New Aphid on Chicory : Virus Transmission by (Dr. J. Semal), 721
Dahl, Dr. Lewis K.: Salt Intake, Adrenocortical Function and Hypertension, 989
Daily Weather Conditions : The Influence and Importance of, in the Supply of Chloride, Sulphate and other Ions to Fresh Waters from Atmospheric Precipitation (E. Gorham), 1650
Dainty, J. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Dairy Calves (Young) : Effect of Age of, on Dry-Matter Digestibility of Alfalfa Pellets (M. E. McCullough and L. R. Sisk), 57
Dairy Congress : Fifteenth International (International Dairy Federation), 1444
Dairy Federation, International : Fifteenth International Dairy Congress, 1444
Dairy Records, *review* by Helen R. Chapman, 982
Dairy Science and Technology, Commonwealth Bureau of : Technical Communication No. 3, M'lk and Butterfat Recording, *review* by Helen R. Chapman, 982
Dairying, National Institute for Research in : Retirement of Prof. H. D. Kay from the directorship, 1506
Dalcq, Prof. A. M. : Introduction to General Embryology (translated by Jean Medawar), *review* by Prof. J. Brachet, 144
Dale, Sir Henry : *Obituary* of Viscount Waverley, 383
Dale, H. C. A. : Subjective Probability, Gambling and Intelligence, 363
Dale, R. N. (Morris, C. E. H., and) : Awarded Ablett Prizes for 1957 of the Iron and Steel Institute, 885
Dales, R. Phillips (Green, J., and) : Biliverdin in the Eggs of *Nereis fucata*, 1412
D'Alessandro, Prof. Giuseppe, and del Carpio, Carla : A Lipopolysaccharide Antigen of the *Treponema*, 991
Daly, Dr. Ivan de Burgh : Retirement from the directorship of the Agricultural Research Council's Institute of Animal Physiology, 882 ; work of, 882
Damage to Solids by Liquid Impact at Supersonic Speeds (Dr. F. P. Bowden and J. H. Brunton), 873
Damage (Cardiac), caused by Experimental Stress (E. Mascitelli-Coriandoli, R. Boldrini and Dr. C. Citterio), 1215
D'Amelio, Dr. V. (Perlmann, Dr. P., and) : Soluble Antigens in Microsomes and other Cell-Fractions of Rat Liver, 491
Damodaran, Prof. M. : *Obituary* by Dr. A. C. Chibnall, 454
Dancheva, K. I. (Hadjiolov, A. A., and) : Phosphorylase Activity of Primary Rat Liver Cancer, 547
Danckwerts, Prof. P. V. : Chemical Engineering in a University (Inaugural Lecture at the Imperial College of Science and Technology), 811
Dangers of the Atomic Arms Race—Second Pugwash Conference, 1239
Danielli, Prof. J. F. (Muggleton, Audrey, and) : Ageing of *Amoeba proteus* and *A. discoides* Cells, 1738
Daniels, Fred B., and Bauer, Siegfried J. : Measurement of the Ionospheric Faraday Effect by Radio Waves reflected from the Moon, 1392
Danjon, Prof. André : Awarded the Gold Medal of the Royal Astronomical Society, 531
Dansereau, Prof. Pierre : Biogeography, an Ecological Perspective, *review* by Prof. J. Heslop-Harrison, 586
  Climate, Vegetation and Land Utilization in the Humid Tropics, 597
Dar, Rehana, and others : Photo-ionization in Self-quenching Geiger Counters, 1526
Darbre, Prof. A., and Speirs, R. L. : Constant Temperature Water-Bath, 364
Darby, Prof. H. C. : Elected to honorary membership of the Royal Netherlands Geographical Society, 1771
Dark, Dr. F. A., and others : Bacterial Protoplasts, 1713
Darling, H. S. : Systemic Insecticides and the Ratio of Green to Dried Hops, 1811
Darling, H. S. (Laws, E. Q., and) : Treatment of Hops with Dimefox, 498
Darman, Prof. A. J. : Phytochemistry (Preliminary Investigations on the C. N. S. Action of Indonesian *Rauwolfia* spp.), 466
Dart, Dr. Raymond A. : Awarded a Viking Fund Medal and Prize for 1957 by the Wenner-Gren Foundation, 882
Darwin, Sir Charles : *Obituary* of J. R. Womersley, 1240
Darwin and the History of Science, *review* by Dr. G. S. Carter, 970
Darwin Reader : The (edited by Prof. Marston Bates and Dr. Philip S. Humphrey), *review* by Dr. G. S. Carter, 970
Darwin—Wallace Centenary : Special Evolution number of *Antiquity* to commemorate the, 812
Darwin—Wallace Commemorative Medals of the Linnean Society of London awarded to Dr. Edgar Anderson, Prof. Maurice Caullery, Sir Ronald Fisher, Prof. C. R. Florin, Prof. J. B. S. Haldane, Prof. Roger Heim, Dr. John Hutchinson, Sir Julian Huxley, Dr. Ernst Mayr, Prof. H. J. Muller, Prof. E. Pavlovsky, Dr. Bernard Rensch, Dr. G. Gaylord Simpson, Prof. Carl Skottsberg, Prof. E. A. Stensiö, Dr. H. Hamshaw Thomas, Prof. G. V. Turesson, Dr. V. van Straelen, Prof. D. M. S. Watson and (the late) Dr. J. C. Willis, 1177
Das, R. P. (Kar, Dr. Amiya B., and) : Effect of Aldosterone Monoacetate and Deoxycorticosterone Acetate on Alkaline Phosphatase Activity in the Liver of Rats, 623
Das, V. S. R. (James, W. O., and) : Respiration in Chlorophyllous Cells, 1244
Dassanayake, W. L. P., and others : 24-Hr. Rythms in Blood Eosinophils and *Wuchereria bancrofti* Microfilariae Before and After Δ^1-9α-Fluorocortisol, 1135
Data on Research and Development : Reviews of, No. 8, Funds for Research in Agricultural Experiment Stations, 1953-54 (United States National Science Foundation), 160
  Reviews of, No. 6, Scientific Research Activities at Colleges and Universities in the United States (United States National Science Foundation), 167
Data (Electroencephalographic and Psychological) : The Relationships between, in Normal Adults (Dr. P. F. Werre), *review* by Dr. Clifford Allen, 983
Data Processing (Electronic), for Business : Developments in (Dundee Technical College Special Summer programme on), 1042
Dating (Radiocarbon), of the Eustatic Rise in Ocean-Level (Dr. H. Godwin, R. P. Suggate and Dr. E. H. Willis), 1518
Datta, R., and others : Electrophoretic Behaviour of Avian Haemoglobins, 1204
Davenport, Prof. H. : Appointed to the Rouse Ball chair of mathematics in the University of Cambridge, 528 ; work of, 528
Davey, H. G. : Nuclear Energy (Commissioning and Operation of 'A' Station, Calder Works), 735
David, M. A., and others : Effect of Stress and Cortisone on the Cytomorphology of Pituitary Grafts in Rats, 1417
David, Dr. W. A. L., and Gardiner, B. O. C. : Fluoracetamide as a Systemic Insecticide, 1810
Davidson, H. W., and Losty, H. H. W. : Plasticity of Graphite, 1057
  Mechanical Properties of Non-Metallic Brittle Materials (Elastic and Plastic Properties of Carbon and Graphite), 1578
Davies, C. N. : Noise in Industry, 1696
Davies, Prof. C. W. : Interaction in Ionic Solutions (The Incomplete-Dissociation Model as a way of handling Short-range Ion—Ion Interactions), 240
Davies, Dr. D. A. L., and others : Action of Periodate on some Polysaccharides containing Aldoheptose Sugars, 412
  Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a New Sugar, Paratose, 822
Davies, Dr. D. D. : Synthesis of Succinate from Acetate by an Enzyme System of Pig Heart Muscle, 339
Davies, Dr. D. D. (Wilkinson, A. P., and) : Serine—Glycine Interconversion in Plant Tissues, 1070

Davies, D. W. : An Electronic Mechanism of Addition Reactions, 903
Davies, E. W., and others : Interaction in Ionic Solutions (Study of various Ion Association Equilibria by Spectrophotometry), 241
Davies, M. G. : Flow Noise (The 'Back Reaction' or Resonance Mechanism), 389
Davies, I. : The Development of the West African Environment, 1580
Davies, Prof. R. M. : *Obituary* by I. C. Jones, 879 ; *obituary* by Prof. Enrico Volterra, 880
Davies, R. R., and Isaac, Dr. I. : Dissemination of *Verticillium albo-atrum* through the Atmosphere, 649
Davies, Prof. Seaborne : The Place of Residence in the University Today, 164
Davies, S. D. : Awarded the British Gold Medal for Aeronautics of the Royal Aeronautical Society, 1646
Davies, W. G., and others : Interaction in Ionic Solutions (Precise Spectrophotometric Results for Copper Sulphate Solutions), 241
Davies, W. R., and Clements, J. F. : Mechanical Properties of Non-Metallic Brittle Materials (Strength of Ceramic Materials—Sonic Testing of Ceramic Refractory Materials), 1578
Davis, Dr. G. L. : Embrittlement of Tungsten Wires by Contaminants, 1198
Davis, Dr. Peter H.: Awarded the Cuthbert Peek Grant of the Royal Geographical Society, 810
Davison, Dr. A. N., and Sandler, Dr. M. : Inhibition of 5-Hydroxytryptophan Decarboxylase by Phenylalanine Metabolites, 186
Davisson, Dr. C. J. : *Obituary* by Sir George Thomson, 808
Davy (Humphry) Lectures of the Royal Institute of Chemistry, 387
Dawson, Dr. R. M. C. : Labelling of Bull Semen with Phosphorus-32 *in vivo*, 1014
DDT : Laboratory Variations in Mortality of the Mosquito, *Culex fatigans* Wied., exposed to (T. Koshi and S. K. Ranganathan), 199
DDT and Lindane : Influence of, on Chordotonal Organs in the Cockroach (G. Becht), 777
De Baun, Robert M. : An Experimental Design for Three Factors at Three Levels, 209
de Beer, Sir Gavin : Awarded a Linnean Gold Medal for 1958 by the Linnean Society of London, 1177
de Broglie, Prof. Louis : Physics and Metaphysics, 1814
de Clerck, Prof. Jean : A Textbook of Brewing (translated by Kathleen Barton-Wright), Vol. I, *review* by Dr. A. H. Cook, 441
de Giovanni, Miss Rosalie, and others : Induced Gene Unstabilization, 827
De Groodt, Dr. M., and others : Fine Structure of the Alveolar Wall of the Lung, 1066
  Alterations in the Ultrastructure of the Blood—Air Barrier in the Mouse Lung after Inhalation of Colloidal Gold Particles, 1418
de Groot, Dr. J. : Histological and Chemical Changes in the Rat Pituitary Neural Lobe following Treatmentwith Neurohypophysial Substances, 650
de Groot, T. : Duration and Band-width of Short-lived Transients in Solar Noise, 1676
de Hevesy, George Carl, and others (edited by) : Advances in Radiobiology—Proceedings of the Fifth International Conference on Radiobiology held in Stockholm, 1956, *review* by Dr. O. A. Trowell, 660
de Jong, M., and Rathenau, Prof. G. W. : Change of Length during Transformation of Iron under Stress, 1396
DeKock, Dr. P. C. : Soil Science, *review*, 297
DeLeeuw, Dr. W. C. (Bharucha, Prof. F. R., and) : A Practical Guide to Plant Sociology for Foresters and Agriculturists, *review* by Maurice Ashby, 987
De Marco, C., and Antonini, E. : Amino-Acid Composition of Haemoglobin from *Thunnus thynnus*, 1128
De Mayer, Dr. L. : Physics of Water and Ice (Electrical Conductivities of Pure Water and Pure Ice), 381
de Morton, M. E. : Effect of Plastic Deformation on the Electrical Resistivity of Chromium, 477
De Paepe, J. C., and others : Ribonuclease Activity and Ribonucleic Acid Content of Homologous Human Normal and Cancer Cells, 913
de Rose, François : Elected president of the European Organization for Nuclear Research, 87
De Silva, Miss : At the Conference of the Scottish Branch of Aslib (Differences between the Libraries in Ceylon, Kenya and the United Kingdom), 747
de Silva, Justin, and others : 24-Hr. Rhythms in Blood Eosinophils and *Wuchereria bancrofti* Microfilariae Before and After Δ^1-9α-Fluorocortisol, 1135
de Terra, Dr. Helmut : Man and Mammoth in Mexico (translated from the German by Alan Houghton Brodrick), *review* by Dr. G. H. S. Bushnell, 1432
de Vaucouleurs, Gérard, et autres : Manuel de Photographie scientifique, *review* by J. Walton Siddorn, 798
de Vries, A. : Determination of the Absolute Configuration of α-Quartz, 1193
de la Rüe, Dr. E. Aubert : Climate, Vegetation and Land Utilization in the Humid Tropics (Rapid Disappearance of the Natural Plant Cover), 597
Deacon, Dr. G. E. R. : Hydrography, *review*, 214
  Elected a Foreign Member of the Swedish Royal Academy of Sciences, 387
  Conditions of Life in the Sea, *review*, 1559
Dealkylation of N-Alkylamines by Model Systems (James R. Gillette, James V. Dingell and Bernard B. Brodie), 898
Death due to Ozone Poisoning : Protection against (Dr. Sidney Mittler), 1063
Death by Starvation : Effect of Hypothermia on (Dr. T. Braun and Dr. B. Mosinger), 968
Death of Cells : The Life and (Dr. Joseph G. Hoffman), *review* by Prof. P. C. Koller, 1363
Debris (Meteoritic) : Distribution of, about the Arizona Meteorite Crater (J. S. Rinehart), 1777
Decarboxylase (5-Hydroxytryptophan) : Inhibition of, by Phenylalanine Metabolites (Dr. A. N. Davison and Dr. M. Sandler), 186
Decay-retardant Extractive Components : Nature of some, in Incense Cedar Heartwood (*Libocedrus decurrens* Torrey), (Arthur B. Anderson, Eugene Zavarin and Theodore C. Scheffer), 1275
Decision Making Aids to (Operational Research Society Open Conference on), 949
Decision-making and the Communication of Information in an Industrial Setting (R. Sergean), 1020
Deckers, J., and Van Tiggelen, Prof. A. : Ion Identification in Flames by Mass Spectrometry, 1460
Decomposition of Lead Styphnate Monohydrate : Effects of Nuclear Irradiation upon the (Dr. Ted B. Flanagan), 42
Decomposition (Humus), in East African Soils : Pattern of (H. F. Birch), 788
Decomposition (Thermal), of some Antibiotics (Prof. Wesley W. Wendlandt and Morris Zief), 1207
Decreased (Pathologically) Serum Esterase in Carcinoma : Effect of Heparin on (Dr. J. Skořepa, S. Novák and H. Todorovičová), 908
Decumbin, a New Compound from a Species of *Penicillium* (Dr. V. L. Singleton, N. Bohonos and A. J. Ullstrup), 1072
Deep-Freezing : Use of, in the Preservation and Preparation of Fresh Soil Samples (J. K. R. Gasser), 1334
Deep-Sea Fish *Opisthoproctus* : A New Type of Light Organ in the (Dr. E. Bertelsen), 862
Deep Water Movements in the Caribbean : Manganese Deposition and (Peter J. Wangersky and Prof. G. E. Hutchinson), 108
Defects (Lattice), in Irradiated Solids, *review* by Dr. A. H. Cottrell, 977
Defects (Point), in Metals and Alloys : Vacancies and other (Metal Physics Committee of the Institute of Metals Symposium on), 449
Defence : Report on—Britain's Contribution to Peace and Security, 1229
  Administration and, in a Technical Age, 1751
  Science and Technology in, 1229
Defence Contracts Bill : Second reading of the, 1111
Deficiency (Boron), in Tea (Dr. E. M. Chenery), 426
Deficiency (Iron) : Iron Content of Haemoglobin in (Dr. Ernest Beutler), 837
Deficiency (Iron), of Medium : Accumulation of α-Alanine and of Pyruvate in Diphtherial Culture Filtrate and its relation to (Prof. Masahiko Yoneda and Hiroshi Ishihara), 272
Deficiency (Salt) : Influence of, on Taste Sensitivity in Human Subjects (Roy Yensen), 1472
Deflexion (Magnetic), of Arcs (P. E. Secker and Dr. A. E. Guile), 1615
Defoliants : Use of, for Drying Buckwheat in the Field, and a New Method for the Chemical Determination of Rutin (V. Brejcha and P. Horák), 505
Deformation (Plastic) : Effect of, on the Electrical Resistivity of Chromium (M. E. de Morton), 477
Deformation Characteristics of Alpha-Titanium : Effect of Hydrogen on the (E. Smith), 902
Degeneration (Dietary Necrotic Liver) : Protective Effect of Trace Elements other than Selenium against (J. Bunyan, E. E. Edwin and J. Green), 1801
Degradation of Cholic Acid by Micro-organisms : An Alternative Pathway for the (Shohei Hayakawa, Yasuo Saburi, Keizo Tamaki and Hideyuki Hoshijima), 906
Degradation of Steroidal Sapogenins to 16-Dehydropregnan-20-ones (Dr. G. P. Mueller), 771
Degradation (Enzymatic), of Urocanic Acid : Intermediate Products in the (Studies of Urocanic Acid), (Robert H. Feinberg and Prof. David M. Greenberg), 897
Degradation (Protein), of Foetal and Cancer Tissues in the Presence of Ethionine (Dr. Renzo Rendi), 351
Degrees Absolute (20 and 900) : Magnetic Susceptibility of the Alloy Pt_3Fe between (Prof. J. Crangle), 644
Dehnel, Prof. Paul A. : Effect of Photoperiod on the Oxygen Consumption of Two Species of Intertidal Crabs, 1415
Dehydrated Muscle Fibres : Adenosine Triphosphatase and Contraction in (Sheila M. V. Hunt and N. A. Matheson), 472
Dehydration of Foodstuffs : Fundamental Aspects of the (Society of Chemical Industry Conference on), 387
Dehydrogenase (Isocitric), in Femurs : Organic Composition of Bone—Localization of (Robert Van Reen and Fred L. Losee), 1543
Dehydrogenase (Soluble Succinic), and a Particulate Cytochrome System Preparation : Reconstitution of the Succinic Oxidase System from (Prof. D. Keilin and Dr. Tsoo E. King), 1520
Dehydrogenase (Succinic), in Mitochondria from *Periplaneta americana* : Cytochemical Localization of (Dr. A. G. E. Pearse and Dr. D. G. Scarpelli), 702
Dehydrogenases (Pyridine Nucleotide-linked) : Cytochemical Localization of (Dr. R. Hess, Dr. D. G. Scarpelli and Dr. A. G. E. Pearse), 1531
Dehydrogenation (Enzymatic), of Hydroxypurines and Hydroxypteridines (Dr. Josef Fellig and Christine E. Wiley), 51
16-Dehydropregnan-20-ones : Degradation of Steroidal Sapogenins to (Dr. G. P. Mueller), 771
Deitz, Victor R., and Prosen, Edward J. : Reaction of Carbon Monoxide with Graphite Carbon at 450° C., 109
Dekeyser, P. L. : The Development of the West African Environment, 1581
Dekker, J., and others : Internal Seed Disinfection with Pyridine-2-thiol-N-oxide and a Derivative, 1017
del Carpio, Carla (D'Alessandra, Prof. Giuseppe, and) : A Lipopolysaccharide Antigen of the *Treponema*, 991
Delafresnaye, J. F. (edited by Himsworth, Sir Harold, and) : The Support of Medical Research— a Symposium organized by the Council for International Organizations of Medical Sciences, *review*, 147
Delay (Mitotic), in Irradiated Roots of *Vicia faba*—the Effect of Oxygen (Dr. H. J. Evans, Dr. G. J. Neary and Miss S. M. Tonkinson), 1083
'Deleted' *Rh*-Chromosome : A New (Dr. K. Henningsen), 502
Dellis, Dr. A. N., and others : Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315
Demand : Supply and (Prof. J. Greig), 321
Demediuk, Thaisa, and Cole, W. F. : Exothermic Reaction of Metakaolin between 950° and 1,000° C., 1400
Demography of an Under-developed Territory, *review* by W. Brass, 442
Demonstration of Antibody in Passive Transplantation Immunity to Crocker Tumour in Mice, using the Schultz-Dale Technique (Prof. B. D. Baruah), 624
Demonstration of some 'Masked' Lipids in the Oocytes of *Chrotogonus trachypterus* with Sudan Black *B* and Phenol 'Unmasking' Techniques (Brij L. Gupta), 555
Demonstration of Thyroglobulin in the Presence of other Proteins by the Precipitin Reaction (Dr. R. Bird and Dorothy Jackson), 1405

Demonstration (Histochemical), of Lipase Activity in the Pectoralis Major Muscle of the Pigeon (Dr. J. C. George and K. S. Scaria), 783
Demuynck, J., and others : Role of Photons in Argon—Alcohol Counters, 1327
Dendritic Cell System and Mast Cells in Non-Epidermal Stratified Squamous Epithelium (Dr. L. O. Zwillenberg), 1343
Denervated Gastrocnemius Muscle (Normal and) : Quantitative Determination of Cholinesterase Activity in Individual End-plates of (M. Brzin and Prof. J. Zajicek), 626
Denmark : Prehistoric, *review* by M. C. Burkitt, 215
Denmark before the Vikings (Dr. Ole Klindt-Jensen), *review* by M. C. Burkitt, 215
Density of Glass : Structure and (I. Náray-Szabó), 40
Density of Water sorbed on Montmorillonite (Dr. Robert C. Mackenzie), 334
Density-Dependence and related Terms : Meaning of, in Population Dynamics (Dr. M. E. Solomon), 1778 ; (Prof. G. C. Varley), 1780
Density Profiles (Electron), in the Ionosphere, 1770
Dent, L. S., and Smith, Prof. J. V. : Crystal Structure of Chabazite, a Molecular Sieve, 1794
Dentine : Study of (Dr. W. Warwick James), 19
I-Deoxy-I-N-*o*-Carboxyphenyl-Ribulose : A Possible Intermediate in the Biosynthesis of Tryptophan— (Dr. F. W. E. Gibson, C. H. Doy and Shelagh B. Segall), 549
Deoxycorticosterone Acetate : Effect of Aldosterone Monoacetate and, on Alkaline Phosphatase Activity in the Liver of Rats (Dr. Amiya B. Kar and R. P. Das), 623
Deoxymethylpentoses : Contribution of, to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a New Sugar, Paratose (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
Deoxyribonuclease : Action of, on Lampbrush Chromosomes (Prof. H. G. Callan and H. C. Macgregor), 1479
Deoxyribonucleic Acid : Pitfalls of Specific Radioactivity in Measuring Synthesis of (Dr. L. G. Lajtha), 1609
Deoxyribonucleic Acid in Tissue Culture with Tritium-labelled Thymidine : Autoradiographic Visualization of Synthesis of (H. Firket and W. G. Verly), 274
Deoxyribonucleic Acid (Bacterial) : Antigenicity of a (Dr. John H. Phillips, Prof. Werner Braun and Dr. Otto J. Plescia), 573
Deoxyribonucleic Acid (Herring-Sperm) : Intestinal Carcinoma in Mice following injection of (T. F. Hewer and Dr. E. S. Meek), 990
Deoxyribonucleic Acid and Genetic Modification in Ducks (Dr. Alan W. Greenwood), 533
Deoxyribonucleic Acid Content of *Proteus vulgaris* : Changes in the Dry Weight and, caused by Penicillin (Dr. M. V. Nermut and Dr. V. Dràšil), 1740
Deoxyribonucleic Acid Side-Chain Model of the Chromosomes (Dr. Drew Schwartz), 1149
Dependence of Heat Capacity on Thermal History (J. M. Lock, D. H. Parkinson and L. M. Roberts), 642
Dependence on Light of the Reversible Uptake of Inorganic Phosphate by Hydrodictyon (A. Pirson and Dr. A. Kuhl), 921
Dependence of the Observed Oxygen Effect on the Post-Irradiation Treatment of Micro-organisms (Tikvah Alper and Dr. N. E. Gillies), 961
Depireux, Joseph, and Duchesne, Prof. Jules : Nuclear Quadrupole Resonance of Neutron-irradiated Sodium Chlorate, 759
Depletion with Reserpine : Adrenaline and Noradrenaline Content of the Adrenal Gland of the Rat following (B. A. Callingham and Dr. Monica Mann), 423
Deposition of Glycogen and Changes in some Enzymes in Brain Wounds (Prof. Nobuo Shimizu and Dr. Yoriaki Hamuro), 781
Deposition and Extension of Primary Cell Walls : Mechanism of (G. Setterfield and S. T. Bayley), 530
Deposition (Manganese) and Deep Water Movements in the Caribbean (Peter J. Wangersky and Prof. G. E. Hutchinson), 108
Deprivation (Sensory), and the Cat's Optic Nervous System (Dr. Lawrence Weiskrantz), 1047
Dermatophytes : Fluorescent Substances produced by (Dr. F. W. Chattaway and A. J. E. Barlow), 281
Dermis : Junction of the Epidermis and (Betty M. Haines), 485
Desert Locust : Enzymes of the Tricarboxylic Acid Cycle and Cytochrome Oxidase in the Fat Body of the (Dr. D. A. H. Hearfield and Dr. B. A. Kilby), 546
  An Olfactory Response of Immature Adults of the (W. Loher), 1280
Design : Irrigation and Hydraulic (Dr. Serge Leliavsky), Vol. 2, Irrigation Works, *review* by G. H. Lean, 514
Design of Physics Research Laboratories (London and Home Counties Branch of the Institute of Physics Conference on), 90
Design of Teaching Laboratories in Universities and Colleges of Advanced Technology (Royal Institute of British Architects Symposium on), 459
Design (An Experimental), for Three Factors at Three Levels (Robert M. De Baun), 209
Design (Plastic), of Portal Frames (Dr. Jacques Heyman), *review* by Prof. W Fisher Cassie, 987
Design (Shield) : The Theory and Practice of, *review* by J. Edwards, 976
Designs for Europe (Political and Economic Planning, Broadsheet No. 414), 1163
Desty, Dr. D. H. : Column Packings for Gas Chromatography, 604
Desulphydrase Action (Cysteine) : A Model System for—Pyridoxal Phosphate—Vanadian (Prof. F. Bergel, R. C. Bray and K. R. Harrap), 1654
Detecting Ketohexoses on Paper Chromagrams : Acidity of Sprays used in (Dr. R. W. Bailey), 836
Detecting Ratoon Stunting Disease in Sugar Cane : A Staining Technique for (Robert Antoine), 276
Detection of Inositol and Inositol Diphosphate on Paper Chromatograms (Y. Nagai and Y. Kimura), 1730
Detection of α-Ketoglutaric Acid and other Keto-Acids on Paper Chromatograms with Ninhydrin (Dr. R. Rabson and N. E. Tolbert), 50
Detection of Phosphatase Production by *Micrococcus pyogenes* var. *aureus* : Incorporation of Disodium *p*-Nitrophenylphosphate in Solid Medium for the (H. R. Lovell), 995
Detection of Polythionate in Cultures of *Thiobacilli* by means of the Folin—Ciocalteu Reagent (Prof. D. P. Pratt), 1075
Detection of Single Quanta of Circulation in Rotating Helium II (Dr. W. F. Vinen), 1524
Detection of Triterpenoid Acids on Paper Chromatograms (Dr. B. Pasich), 765
Detection of Tsetse Fly at Night (G. R. Jewell), 1354
Detection of Uric Acid in the Tissue Homogenates of Earthworms (Dr. Gaber M. Haggag and Dr. A. Khalaf El-Duweini), 191
Detection of Viable Air-borne Spores in Air (Dr. J. Rishbeth), 1549
Detection (Chemical), of Indolyl Acetic Acid in Plants : A Possible Source of Error in the (R. Nichols), 919
Detection (Colorimetric), of Human Caeruloplasmin Oxidase Activity after Electrophoresis in Agar Plates or after Immuno-electrophoresis (José Uriel), 999
Detection and Estimation of C21 17:20-Dihydroxy-20-methyl Steroids : Separation, (Dr. R. I. Cox), 638
Detector for Gas-Liquid Chromatography : A Robust but Sensitive (Dr. D. W. Turner), 1265
Detector (Flame Ionization), for Gas Chromatography (J. Harley, W. Nel and Dr. V. Pretorius), 177 ; (I. G. McWilliam and R. A. Dewar), 760
Detergents : Arsenic in (Dr. J. M. A. Lenihan, Hamilton Smith and J. G. Chalmers), 1463
  Reversibility of the Inactivation of Rous Sarcoma Extracts by (Dr. Dino Guerritore), 419
Detergents (Synthetic) : Activation of Cytochrome Oxidase by (Takashi Yonetani, Shigeki Takemori, Ichiro Sekuzu and Prof. Kazuo Okunuki), 1339
Determination of the Absolute Configuration of α-Quartz (A. de Vries), 1193
Determination of Epinephrine and related Compounds on Paper Chromatograms (Dr. George L. Ellman), 768
Determination of Glucose and Laevulose in Body-Fluids (Dr. Jan Ek and Eric Hultman), 780
Determination of Orbital Characteristics of an Earth Satellite from Single-Station Radio-Transit Observations (Gordon Grant, A. L. Jones, R. W. Burhans, P. S. Fay and David Frazier), 900
Determination of Radio-Propagation Elements due to an Artificial Earth Satellite (Dr. E. Woyk-Chvojková), 1195
Determination of Sakaguchi-positive Antibiotics : Microchemical Method for the (Dr. I. Szilágyi and I. Szabó), 52
Determination of Transaminase Activity of Serum Protein Fractions separated by Paper Electrophoresis (Dr. Miroslav Sevela), 915
Determination (Birefringence), in Objects of Irregular Cross-sectional Shape and Constant Weight per Unit Length (S. C. Simmens), 1260
Determination (Chemical), of Deoxyribonucleic Acid in Root Tips before and after Cold Treatment (Dr. J. K. Heyes and Dr. G. W. Shaw), 1337
Determination (Chemical), of Rutin : Use of Defoliants for Drying Buckwheat in the Field, and a New Method for the (V. Brejcha and P. Horák), 505
Determination (Direct), of the Active Phase of End-Plate Potential (Prof. Noriko Takeuchi and Akira Takeuchi), 779
Determination (Precision), of the Velocity of Electromagnetic Waves (K. D. Froome), 258
Determination (Quantitative), of Cholinesterase Activity in Individual End-plates of Normal and Denervated Gastrocnemius Muscle (M. Brzin and Prof. J. Zajicek), 626
Determination (Quantitative), of Hydroxyproline by Paper Chromatography (Henry R. Roberts and Michael G. Kolor), 837
Determination (Rapid), of Casein in Milk (J. Jakubowski, Z. Sienkiewicz and Eugenia Nowak), 1277
Determination (Serological), of Developing Muscle Protein in Chick Embryo (Dr. Yoshito Ogawa, Takatada Kawahara and Jiroo Miura), 621
Determinations of Uranium : Distribution of Radioactivity in Rocks and Minerals, and the Effect of Weathering on (Dr. E. Hamilton), 697
Determinations (Age), of Southern Ocean Waters (J. W. Brodie and R. W. Burling), 107
Determinations (Antioxidant), by the Use of a Stable Free Radical (Marsden S. Blois), 1199
Determinations (Electroretinographic Sensitivity) : Fluorescence of the Crystalline Lens and (Dr. E. Dodt and J. B. Walther), 286
Determining Atmospheric Scale-Heights : Effect of the Earth's Equatorial Bulge on the Life-time of Artificial Satellites and its Use in (Dr. G. V. Groves), 1055
Determining Reactivity of Calcium Oxide : Differential Thermal Method for (T. L. Webb and T. van der Walt), 411
Determinism and Indeterminism in Modern Physics (Ernst Cassirer), translated by O. Theodor Benfey, *review* by F. I. G. Rawlins, 590
Deuel, Jr., Prof. Harry J. : The Lipids, their Chemistry and Biochemistry, Vol. 3, Biochemistry—Biosynthesis, Oxidation, Metabolism and Nutritional Value, *review* by Dr. F. D. Gunstone, 1028
Deutero Derivatives : Microwave Spectra of Diazomethane and its (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1000
Developing Muscle Protein in Chick Embryo : Serological Determination of (Dr. Yoshito Ogawa, Takatada Kawahara and Jiroo Miura), 621
Development : Co-operation in Research and, 655
  Management (T. H. Hawkins), 816
Development of Architectural Science (T. M. Charlton), 1315
Development of the Barley Spike : Inhibition of the, by Gibberellic Acid (Leslie Paleg and Donald Aspinall), 1743
Development of Eggs before the Final Moult in *Pratylenchus* (M. R. Sauer), 129
Development of Larval Cestode Fragments *in vitro*: Cultivation and (Prof. J. D. Smyth), 1119
Development of Lysozyme-Resistance in *Micrococcus lysodiekticus* and its Association with an Increased O-Acetyl Content of the Cell Wall (Dr. W. Brumfitt and Dr. A. C. Wardlaw, and Dr. J. T. Park), 1783
Development of Managers for Industry : The Finding and (British Institute of Management Conference on), 816
Development of Market Gardening : History of the (Dr. L. G. Bennett), 536
Development of *Micrococcus lysodeikticus* Resistant to Lysozyme (Prof. Gerald Litwack), 1348
Development of Non-toxigenic Cultures of *Corynebacterium diphtheriae*: Role of Phase Antibodies in the (Paul S. Anderson, Jun., and Prof. Philip B. Cowles), 350
Development in Undeveloped Countries : Power as a Factor of (Eleventh Sectional Meeting of the World Power Conference), 1502
Development of the West African Environment (Second Interterritorial Conference of the West African Science Association), 1580

Development (Atomic Energy), in Australia (Prof. E. W. Titterton), 1433
Development (Commonwealth) : United Kingdom's Role in (White Paper on the), 1582
Development (Mammalian) : Parthenogenesis and Polyploidy in (Dr. R. A. Beatty), *review* by Prof. Robert Matthey, 1497
Development (Post-natal), of Thermoregulation in the Rat : Significance of the Adrenal Glands during (Dr. P. Hahn and O. Koldovsky), 847
Development (Power), in Hitherto Underdeveloped Countries (F. D. Robinson), 1502
Development (Research and) : Reviews of Data on, No. 8, Funds for Research in Agricultural Experiment Stations, 1953-54 (United States National Science Foundation), 160
  Reviews of Data on, No. 6, Scientific Research Activities at Colleges and Universities in the United States (United States National Science Foundation), 167
Development (Scientific Research and) : Government—University Relationships in Federally Sponsored (National Science Foundation, Washington), 1712
Development and Meaning of Eddington's 'Fundamental Theory' (Dr. Noel B. Slater), *review* by Prof. W. H. McCrea, 214
Development Budget : Federal Research and, Fiscal Years 1956, 1957 and 1958 (National Science Foundation, Federal Funds for Science, 6), 534
Development Commissioners, in association with the Ministry of Agriculture, Fisheries and Food, and the Scottish Home Department : Award of Postgraduate Training Grants in Fishery Research, 1312
Development Costs in American Industry : Industrial Research and, 1638
Development Potentialities of Fern Leaf Primordia (E. G. Cutter), 314
Developments in Aromatic Chemistry (Chemical Society Symposium on), 161
Developments in Electronic Data Processing for Business (Dundee Technical College Special Summer programme on), 1042
Developments in Nuclear Reactor Technology : Recent (United Kingdom Atomic Energy Authority Conference on), 458
Developments (New), in Analytical Psychology (Michael Fordham), *review* by Dr. Clifford Allen, 298
Developments (Nuclear Energy), and Oceanography, 1685
Device for Visualizing the Pattern of Plane Polarized Light from Blue Sky (J. A. Chapman), 1393
Devreux, S. (Chantrenne, Prof. H., and) : Effects of 8-Azaguanine on the Synthesis of Protein and Nucleic Acids in *Bacillus cereus*, 1737
Dewar, R. A. (McWilliam, I. G., and) : Flame Ionization Detector for Gas Chromatography, 760
Dewar, W. McL. : Elected a Fellow of the Royal Society of Edinburgh, 739
Dewey, D. W., and others : Provision of Cobalt to Ruminants by means of Heavy Pellets, 1367
Dewitt, David, and Rossoff, Arthur L. : Transistor Electronics, *review* by Dr. J. R. Tillman, 1168
Dextrorotatory Urobilin-IXα and Racemic *d*-Urobilin (Prof. C. H. Gray and D. C. Nicholson), 483
Dhareshwar, B. V. (Krishnamurti, Prof. K., and) : A Modified Technique in Chromatography, 766
D'Hoore, Dr. J. : The Development of the West African Environment, 1580
DiGiorgio, V. E. (Robinson, G. W., and) : Structure and Reactivity of Electronically Excited Species, 320
di Menna, Dr. M. E. : *Candida albicans* from Grass Leaves, 1287
Di- and Tri-Chloroacetic Acids (Mono-,) : Structure of Cupric Acids with (Dr. Ryutaro Tsuchida, Dr. Shoichiro Yamada and Hiroji Nakamura), 479
Dialysis: Elimination of, in the Preparation of Hydrophobic Sols (P. Nagels), 638
Diameters (Axonal), of Myelinated Nerve Fibres : Variations in—Apparent or Real ? (Dr. G. T. Ashley), 125 (Dr. P. L. Williams and Dr. C. P. Wendell-Smith), 125
Diamine (Ethylene), with Epinephrine and Norepinephrine : Influence of Metallic Ions on the Reaction of (Prof. Guy Ladeau, L. P. Joly and G. Sobolewski), 1061
Diamonds in Siberia (Prof. S. I. Tomkeieff), 323
Diamonds (Laboratory-made) : X-Ray Study of (Dr. H. Judith Grenville-Wells and Dame Kathleen Lonsdale), 758
Diapause in the European Corn Borer, *Pyrausta nubilalis* (Hbn.) : Importance of Photoperiod and Temperature in Inducing (J. A. Mutchmor and Dr. W. E. Beckel), 204
Diapause (Imaginal), in Acridids : Influence of Photoperiod on (M. J. Norris (Mrs. O. W. Richards)), 58
Diatom *Asterionella* in the Krishna Estuary Region (V. S. R. Murthy and A. Venkataramaiah), 360
Diatoms from Equatorial Indian Ocean Cores (N. Ingram Hendey), 953
Diazomethane : Microwave Spectra of, and its Deutero Derivatives (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1000
Dibromide (Ethylene) : Action of, on Hen Gonadotrophic Hormones (Dr. Eugenia Olomucki), *erratum*, 459
2,4-Dichlorophenoxyacetic Acid : Effect of, on Pectin Methylesterase in Tobacco Pith Sections (K. T. Glasziou), 428
2,4-Dichlorophenoxyacetic Acid as an Aid to Seed Production when widely separated *Solanum* Species are Crossed (Leo A. Dionne), 361
2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the Coconut : Fortifying Influences of Coconut Milk and Cow's Urine on (S. R. Gangolly and Dr. K. M. Pandalai), 855
Dick, Esther A. (Snell, Walter H., and) : A Glossary of Mycology, *review* by Dr. J. Grainger, 517
Dickens, Prof. F. : Enzyme Chemistry, 389
Dickens, Prof. F., and Williamson, D. H. : Formaldehyde as an Acceptor Aldehyde for Transketolase, and the Biosynthesis of Triose, 1790
Dickinson, Dr. R. E. : Appointed professor of geography at the University of Leeds, 1576
Dickson, J. : Appointed veterinary research officer, Federation of Nigeria, 459
Dictionary of Electronics and Waveguides in Six Languages (Elsevier's), compiled and arranged on an English alphabetical base by W. E. Clason, *review* by Dr. R. L. Smith-Rose, 801
Diego as an Independent Blood-Group System (Dr. Bruce Chown, Marion Lewis and Hiroko Kaita), 1598
Diego Blood Group : Absence of the, and Abnormal Haemoglobins in 92 Maoris (Dr. H. Lehmann, Dr. A. North and Dr. J. M. Staveley), 791
Diego Blood Group Antigen in Sarawak and Burma : Haemoglobin E and the (M. J. Colbourne, Elizabeth W. Ikin, Dr. A. E. Mourant, Dr. H. Lehmann and H. Thein), 119
Diego Blood Group System (Dr. Bruce Chown, Marion Lewis and Hiroko Kaita), 268
Diego Factor among the Warrau : Peculiar Distribution of the (Dr. Miguel Layrisse, Dr. Tulio Arends and Johannes Wilbert), 118
Dieldrin : Resistance to, in *Lucilia cuprina* Wied., the Australian Sheep Blowfly (G. J. Shanahan), 860
Dieldrin Residues (Aldrin and) : Persistence of, in Sheep Fleece (I. R. Harrison and C. A. Johnson), 1267
Dielectric Properties of Solid Powders dispersed in Liquid Paraffin : Influence of Moisture upon the (Rempei Gotohi, Tetsuya Hanai and Naokazu Koizumi), 406
Dielectric-loaded Wave-guides : Vacuum Breakdown in (Dr. G. B. Walker and E. L. Lewis), 38
Dienes, G. J., and Vineyard, G. H. : Radiation Effects in Solids, *review* by Dr. A. H. Cottrell, 977
Diesel, Rudolf, 1858-1913 (E. J. Holmgren), 737
Dietary Necrotic Liver Degeneration : Protective Effect of Trace Elements other than Selenium against (J. Bunyan, E. E. Edwin and J. Green), 1801
Diethylamide (Lysergic Acid) : Comparison of Effect of, with Potassium Cyanide and other Respiratory Inhibitors on the Siamese Fighting Fish (Dr. H. A. Abramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
Difference (Species), in Pyridine Nucleotide Synthesis by Erythrocytes (P. G. Tulpule), 1804
Differences (Biochemical), between Inbred and Outbred Lines of *Drosophila melanogaster* studied by Paper Partition Chromatography (H. F. Hoenigsberg and M. C. Castiglioni), 1404
Differences (Chemical), of the Human Haemoglobins *A*, *S* and *C* : Allelomorphism and the (J. A. Hunt and Dr. V. M. Ingram), 1062
Differences (Size), in *Cucurbita* (K. E. von Maltzahn), 1115
Differences (Species-Specific), in Free Amino-Acids and Peptides in Sea-Urchin Eggs and Embryos (Pure Species and Hybrids), (Dr. P. S. Chen and Prof. F. Baltzer), 98
Different Haemoglobins (Electrophoretically) : Distribution of, among some Cattle Breeds of Europe and Africa (A. D. Bangham and B. S. Blumberg), 1551
Different Specimens of Vitreous Silica : Stress Optical Coefficients of (Dr. R. S. Krishnan, E. S. Jog and R. Srinivasan), 692
Differential Reaction of 'Identical' Chemical Groups : Conditions for (Dr. A. G. Ogston), 1462
Differential Thermal Investigation of Clays (edited by Robert C. Mackenzie), *review*, 1561
Differential Thermal Method for determining Reactivity of Calcium Oxide (T. L. Webb and T. van der Walt), 411
Differentiation of *cis*- and *trans*-Isomers of Nitrophenylhydrazones of some α-Keto Acids : A New Reaction for the (Hirohiko Katsuki, Köichirö Sumizu, Tarumi Moriwaki, Shözö Tanaka and Ichirö Hayashi), 639
Differentiation (Structural), in the Nucleoid of Mature Vaccinia Virus (Dr. M. A. Epstein), 784
Diffraction (Electron), and Electron Microscopy : Examination of Cellulose Fibre by the Low-Temperature Specimen Method of (Goro Honjo and Masaru Watanabe), 326
Diffraction Patterns (X-Ray), of Protein Crystals at Low Temperature : Improved Resolution of (Dr. Murray Vernon King), 263
Diffraction Study (Electron), of Adsorbed Metal Ions on the Surface of Cellulose Microfibrils (D. S. Belford, A. Myers and Prof. R. D. Preston), 1516
Diffusates (Root), of *Solanum tuberosum* and *Digitalis purpurea* (Dr. C. Ellenby), 920
Diffusible Antigen of Rinderpest Virus (A Specific), demonstrated by the Agar Double-Diffusion Precipitation Reaction (G. White), 1409
Diffusion in Liquid Systems : Some Recent Experimental Studies of (Prof. H. S. Harned), 240
Diffusion of Phosphorus in Silicon : Control of Surface Concentration in the (M. J. Coupland), 1331
Diffusion of Stack Gases in the Atmosphere (F. H. Schmidt), 1575
Diffusion and related Topics : Melting, (Low Temperature and Solid State Physics Group of the Division of Pure Physics of the National Research Council of Canada Symposium on), 319
Diffusion (Facilitated), and Exchange in the Absorption of Glucose by the Locust, *Schistocerca gregaria* (Forsk.), (J. E. Treherne), 1280
Diffusion Precipitin Test : Slide Gel (W. Mansi), 1289
Digestibility (Dry-Matter), of Alfalfa Pellets : Effect of Age of Young Dairy Calves on (M. E. McCullough and L. R. Sisk), 57
Digestion (Blood), in Mosquitoes : Inhibition of, by Cations and Cation-Antibiotic Mixtures (Dr. Levon A. Terzian), 282
Dighton, D. T. R. : Design of Physics Research Laboratories (Recent Trends in the Design of American Industrial Research Facilities), 90
Digital Computer Components and Circuits (Dr. R. K. Richards), *review* by Dr. M. V. Wilkes, 1755
Digital Computer Programming (D. D. McCracken), *review* by Dr. M. V. Wilkes, 1755
Digital Computing Machines (Automatic) : Programme Design for (Mathematical Laboratory of the University of Cambridge Summer School in), 1246
Digital Field Computers (Dr. B. Meltzer and I. F. Brown), 1384
Digitalis purpurea: Root Diffusates of *Solanum tuberosum* and (Dr. C. Ellenby), 920
Dihydrofolic Acid Reductase (James M. Peters and Prof. David M. Greenberg), 1669
β-Diketone Complexes of the Lanthanons in Organic Solvents : Anomalous Behaviour of (Dr. N. K. Dutt and P. Bandyopadhyay), 1682
Dikshit, P. K., and Sriramachari, S. : Caudal Necrosis in Suckling Rats, 63
Dilute Solutions : Dynamics of Chain Molecules in, with special reference to Non-Newtonian Viscosity (Dr. Roger Cerf), 558
Dimefox : Treatment of Hops with (E. Q. Laws and H. S. Darling), 498
Dimethyl Homologue of Myleran : Protection of August Rats against Lethal Doses of a, by Isologous Bone Marrow (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Din, Dr. F. : The Phase Rule, *review*, 587
Dingell, James V., and others : Dealkylation of N-Alkylamines by Model Systems, 898
Dingle, J. R., and others : Sodium Phosphate Crystals on Salt Fish, 858
Dinsdale, A., and Wilkinson, W. T. : Mechanical Properties of Non-Metallic Brittle Materials (Strength of Ceramic Materials—Methods of Measuring Impact Strength), 1578

Dintzis, Dr. H. M., and others : A Three Dimensional Model of the Myoglobin Molecule obtained by X-Ray Analysis, 662
Dinucleotides (Histamine-containing) : Formation of, by Enzymatic Interaction of Histamine and Coenzyme I (Dr. Spyridon G. A. Alivisatos), 271
Diodes (Simple) : Magnetic Constriction in (Dr. B. Meltzer), 1332
Dionne, Leo A.: 2,4-Dichlorophenoxyacetic Acid as an Aid to Seed Production when widely separated *Solanum* Species are Crossed, 361
Dioxide (Carbon) : Effect of, on Multiplication of *Fusarium* in Soil (Dr. R. H. Stover and Dr. S. R. Freiberg), 788
  Thioctic Acid and Photosynthetic Fixation of (B. B. Biswas and Dr. S. P. Sen), 1219
Dioxide (Carbon) Fixation in some Components of Growing Rat Red Cells (G. Giustina and E. Lazzarini), 1285
Dioxide (Carbon) Fixation in Particulate Preparations from Barley Roots (Dr. L. C. T. Young and Janet S. D. Graham), 1071
Diphenylamine : Separation of Carotenoid Synthesis from Fat Synthesis in *Rhodotorula gracilis* by (L. Slechta, O. Gabriel and Dr. O. Hoffmann-Ostenhof), 268
Diphosphate (Inositol) : Detection of Inositol and, on Paper Chromatograms (Y. Nagari and Y. Kimura), 1730
Diphosphate (Uridine) Amino-sugar Compounds from *Staphylococcus aureus* inhibited by Penicillin (Eiji Ito, Nobutoshi Ishimoto and Masahiro Saito), 906
Diphtheria Toxin : Isolation of the Lethal Factor of, by Electrophoresis in Starch Gel (Dr. M. D. Poulik and E. Poulik), 354
Diphtherial Culture Filtrate : Accumulation of α-Alanine and of Pyruvate in, and its relation to Iron Deficiency of Medium (Prof. Masahiko Yoneda and Hiroshi Ishihara), 272
Diptera Populations (Earthworm and) : Effect on, of BHC Dust applied to Soil (Jerzy J. Lipa), 863
Direct Determination of the Active Phase of End-Plate Potential (Prof. Noriko Takeuchi and Akira Takeuchi), 779
Direct-Plating Method for the Precise Assay of Carbon-14 in Small Liquid Samples (Dr. C. C. McCready), 1406
Direct Registration of an Instantaneous X-Ray Effect in Rats and Man (Prof. R. Brinkman and H. B. Lamberts), 774
Directions of Perihelia of Long-Period Comets : Distribution of the (J. G. Tyror), 394
Directory of Natural History Societies (New edition to be published by the British Association for the Advancement of Science), 741
Disaccharides (Nitrogen-containing) : Enzymic Synthesis of, by α-Galactosyl Transfer (Dr. Winifred M. Watkins), 117
Discharge (Gas) : Production of High Temperatures and Nuclear Reactions in a (Controlled Release of Thermonuclear Energy), (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, R. W. P. Mc Whirter, R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217, 315
Discharge (Glow) : Bombardment of Plastics in a (L. Holland), 1727
Discharge (High-Current Toroidal) producing High Temperatures : A Stabilized (Controlled Release of Thermonuclear Energy), (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, J. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222
Discharge (Spark) : Surface Hardening of Metals by (Prof. Hugh O'Neill), 1421
  Surface Hardening of Non-ferrous Metals by (Dr. N. C. Welsh), 1005
Discharges (Electrical), between Coaxial Electrodes (J. S. T. Looms), 696
Discharges (Electrical), in Gases (Dr. F. M. Penning), *review* by Dr. P. C. Thonemann, 1498
Discharges (Lightning) : Radio Noise from (F. Horner and C. Clarke), 688
Discomfort caused by High Brightness : Magnitude of (Dr. R. G. Hopkinson), 1076
Discoveries at Olduvai Gorge, Tanganyika : Recent (Dr. L. S. B. Leakey), 1099
Discovery: New format of, 18
Discovery, No. 2 (University of Melbourne), 1181
Discovery in Science : Team-work and, 159
Discovery (Scientific) : Reason and Chance in (Dr. R. Taton), translated by A. J. Pomerans, *review* by Sir Edward Appleton, 983
Disease : Red Cell Agglutinability affected by (Dr. F. Stratton, P. H. Renton and Jeanne A. Hancock), 62
Disease (Blackhead Toppling), of Bananas (Dr. R. Leach), 204
Disease (Corky Ringspot), of Potato : A Soil-borne Virus associated with the (C. H. Walkinshaw and Dr. R. H. Larson), 1146
Disease (Foot-and-Mouth) : Immunoelectrophoretic Evidence for the Presence of Two Precipitating Antibodies in Serum following Infection with the Virus of (Dr. F. Brown), 1130
Disease (Haemolytic), of the Newborn : Comparative Aspects of (Dr. G. Fulton Roberts), *review*, 588
Disease (Human) : Biochemical Disorders in (edited by Prof. R. H. S. Thompson and Prof. E. J. King), *review* by Dr. C. P. Stewart, 215
Disease (Ratoon Stunting), in Sugar Cane : A Staining Technique—for detecting (Robert Antoine), 276
Disease' ('Secondary), in Radiation Chimaeras : Avoidance of (D. W. H. Barnes, P. L. T. Ilbery and Prof. J. F. Loutit), 488
Diseases : Occupational, *review* by Prof. W. Hobson, 728
Diseases of Birds, *review* by Dr. C. A. Wright, 1756
Diseases of the Blood, with special reference to Leukaemia : Grants, Scholarships or Fellowships for research on (Lady Tata Memorial Fund), 458
Diseases of Cereal Crops, *review* by Prof. A. E. Muskett, 515
Diseases of the Intervertebral Disk of the Cat (A. S. King and R. N. Smith). 568
Diseases of Occupations (Dr. Donald Hunter), second edition, *review* by Prof. W. Hobson, 728
Diseases (Cereal), in Ireland (Prof. Robert McKay), *review* by Prof. A. E. Muskett, 515
Diseases (Plant), due to Bacteria (Dr. W. J. Dowson), second edition, *review* by W. C. Moore, 1094
Disinfection (Internal Seed), with Pyridine-2-thiol-N-oxide and a Derivative (J. Dekker, O. M. van Andel and A. Kaars Sijpesteijn), 1017
Dislocations : Les (J. Friedel), *review* by Dr. R. A. Hyman, 1562
  Properties of, *review* by Dr. R. A. Hyman, 1562
Dislocations and Mechanical Properties of Crystals—an International Conference held at Lake Placid, 1956 (edited by J. C. Fisher, W. G. Johnston, R. Thompson and T. Vreeland, Jr.), *review* by Dr. R. A. Hyman, 1562
Disney, H. V. : Appointed a director of engineering in the Industrial Group of the United Kingdom Atomic Energy Authority, 1510
Disodium *p*-Nitrophenylphosphate in Solid Medium : Incorporation of, for the Detection of Phosphatase Production by *Micrococcus pyogenes* var. *aureus* (H. R. Lovell), 995
Disorder (Peculiar), of Plasma Thromboplastin Production (Dr. F. Nour-Eldin and Dr. John F. Wilkinson), 989
Disorders (Biochemical), in Human Disease (edited by Prof. R. H. S. Thompson and Prof. E. J. King), *review* by Dr. C. P. Stewart, 215
Dispensatories, Formularies and Allied Publications (1493-1957) : A Catalogue of the Pharmacopoeias, in Lloyd Library, 1769
Dispersion (Rotatory), of Cytochrome *c* (Dr. Gunther L. Eichhorn and Dr. Joan F. Cairns), 994
Dispersion Energies in Porous Sorbents (Prof. R. M. Barrer), 176
Disruptive Selection : Effects of—the Experimental Production of a Polymorphic Population (Dr. J. M. Thoday), 1124
Dissemination of *Verticillium albo-atrum* through the Atmosphere (R. R. Davies and Dr. I. Isaac), 649
Dissimilation (Bacterial), of Indoleacetic Acid—a New Route of Breakdown of the Indole Nucleus (Michael H. Proctor), 1345
Dissolution : Mechano-Chemical Anodic (Dr. T. P. Hoar and J. M. West), 835
Distant Hybrids from Parents with Reduced Immunological Reactivity (Marta Vojtíšková), 927
Distension of the Rumen and Salivary Secretion (A. T. Phillipson and C. S. W. Reid), 1722
Distinction between *Cardium edule* L. and *Cardium lamarcki* Reeve (G. H. Petersen), 356
Distorted Spinels : Electronic Configuration of Cations in some (Dr. K. P. Sinha), 835
Distribution of Carbon-14 in Components of Goat's Milk, with Sodium Formate-^{14}C as Precursor (Samuel Misler, Leon Tumerman and Henry R. Roberts), 346
Distribution of Carbon-14 in Labelled Amino-acids separated on Paper Chromatograms (K. H. Hallowes, Dr. F. P. W. Winteringham and Dr. W. J. Le Quesne), 336
Distribution of the Directions of Perihelia of Long-Period Comets (J. G. Tyror), 394
Distribution of Electrophoretically Different Haemoglobins among some Cattle Breeds of Europe and Africa (A. D. Bangham and B. S. Blumberg), 1551
Distribution of Flavonoids in Genotypes of *Primula sinensis* (J. B. Harborne and H. S. A. Sherratt), 25
Distribution of Globulin Permeability Factor and its Inhibitor in the Tissue Fluid and Lymph of the Guinea Pig (Prof. A. A. Miles and D. L. Wilhelm), 96
Distribution of Helium-3 in the Carbo Meteorite (E. L. Fireman), 1725
Distribution of Meteoritic Debris about the Arizona Meteorite Crater (J. S. Rinehart), 1777
Distribution of Norepinephrine in the Heart (Parkhurst A. Shore, Victor H. Cohn, jun., Benjamin Highman and Harriet M. Maling), 848
Distribution of Radioactivity in Rocks and Minerals, and the Effect of Weathering on Determinations of Uranium (Dr. E. Hamilton), 697
Distribution of Radioiodinated, Acetone-killed *Brucella abortus* in the Tissues of Normal and Immune Mice (Dr. D. Sulitzeanu), 495
Distribution in Rats of Radioactive Phosphorus biologically incorporated in Food : Absorption and (B. Kawin and R. F. Palmer), 127
Distribution of Tritium-labelled Thymidine in *Escherichia coli* during Cell Multiplication (Dr. R. B. Painter, F. Forro, jun., and W. L. Hughes), 328
Distribution (Annual Rainfall), in East Africa (J. F. Griffiths), 1331
Distribution (Body-Water) : Rate of, studied with Triple Labelled Water (Michael Anbar and Dr. Zigmund Lewitus), 344
Distribution (Intracellular), of Catecholamines in the Brain Stem of the Rabbit : Effect of Reserpine on the (Dr. H. Weil-Malherbe and A. D. Bone), 1474
t-Distribution (Non-Central) : Tables of the (George J. Resnikoff and Gerald J. Leiberman), *review*, 985
Distribution (Peculiar), of the Diego Factor among the Warrau (Dr. Miguel Layrisse, Dr. Julio Arends and Johannes Wilbert), 118
Distribution (Relative), of the Mitochondria in the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon (Dr. J. C. George and R. M. Naik), 782
Distribution (Relative), and Chemical Nature of the Fuel Store of the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon (Dr. J. C. George and R. M. Naik), 709
Distribution (Size), of Pores : Permeability and the (Dr. M. R. J. Wyllie and Dr. G. H. F. Gardner), 477 ; (Dr. T. J. Marshall), 477
Distribution (Topographical), of Glycogen in the Brain during Animal Hypnosis : Changes in the (Dr. D. Svorad), 775
Dithiol : Effect of a, on Survival Time after Irradiation (Dr. Thomas J. Haley, Anna M. Flesher and Nathan Komesu), 1405
Ditylenchus destructor Thorne, 1945 : Relationship between some Clovers and (V. E. Henderson), 59
Division of a Nucleus lacking a Nucleolus (R. C. von Borstel and M. L. Rekemeyer), 1597
Dixey, Dr. F. : Elected a Fellow of the Royal Society, 881
  Honorary membership of the Institution of Mining and Metallurgy conferred on, 1375
'Do-It-Yourself' Manual : Enzymologists', *review* by Dr. Edwin C. Webb, 1431
Dobson, Dr. G. M. B. : *Obituary* of Dr. B. M. Cwilong, 1105
Dochez, Dr. Alphonse R. : Awarded the Medal of the New York Academy of Medicine, 238 ; work of, 238
Dodds, Sir Charles : Appointed a vice-president of the Royal Society, 87
Dodgson, J. M. : A Survey of English Folklore, 1769
Dodgson, Dr. K. S. (Baum, H., and) : Arylsulphate Synthesis and the Arylsulphatases, 115
Dodt, Dr. E., and Walther, J. B. : Fluorescence of the Crystalline Lens and Electroretinographic Sensitivity Determinations, 286
Doenças das Aves : Tratado de (J. Reis e P. Nóbrega), 4 vols., *review* by Dr. C. A. Wright, 1756

Doery, Hazel M. (North, Dr. Edgar A., and) : Antagonism between the Actions of Staphylococal Toxin and Tiger Snake Venom, 1542
Dogs : Muscular Exercise and Adrenal 17-Hydroxycorticosteroid Secretion in (Prof. T. Suzuki, K. Yamashita and T. Mitamura), 715
Dogs (Nephrectomized) : Erythropoiesis in (Dr. J. P. Naets), 1134
Doherty, S. N. F., and Mothersole, P. L. : Awarded the Mullard Premium of the Television Society, 1246
Dolder, Dr. K., and Hide, Dr. R. : An Experiment on the Interaction between a Plane Shock and a Magnetic Field, 1116
Doll, Dr. Richard (Brown, W. M. Court, and) : Awarded a David Anderson-Berry Prize for 1958 of the Royal Society of Edinburgh, 1571
Dolops (Genus) (Crustacea : Brachiura) : Occurrence of Spermatophores in the (G. Fryer), 1011
Domestic Fowl : Light and Sexual Maturity in the (T. R. Morris and S. Fox), 1453
Domestic Hen : Relationship between Aggressiveness and Egg Production in the (G. McBride), 858
Domestic Pets : Economics of (Political and Economic Planning, Broadsheet No. 415), 1180
Dominant (Monofactorial), in Tetraploid Wheats : 'Purple Pericarp', a (Dr. B. C. Sharman), 929
Dominant Felting Lustre Mutant Fleece-type in the Australian Merino Sheep (Dr. B. F. Short), 1414
Doney, Dr. J. T. : Conservation of Nature in South-East England (Conservation in Hertfordshire), 1447
Dongerkery, S. R. : A History of the University of Bombay, 1857-1957, *review* by Dr. L. A Jordan, 1757
Donhoffer, Prof. Sz. and others : Immediate Effect of *l*-3:5:3'-Tri-iodothyroacetic Acid on Metabolic Rate and Body Temperature in Hypophysectomized Rats and the Action of Cortisone, 345
Donsiella limnoriae Stephensen (Copepoda, Harpacticoida) in the Southampton Area : Occurrence of (S. Krishnaswamy and L. T. Jones), 1017
Doppler Radio Signals from Earth Satellites : Theoretical Analysis of (Dr. William C. Guier and George C. Weiffenbach), 1525
Dorgelo, Prof. H. B. : The Technological University of Eindhoven, 12
Dormancy of Barley : Effects of Heat and Loss of Moisture on the (P. D. Hewett), 424
Dorset : Germanium Enrichment in Lignites from the Lower Lias of (A. Hallam and K. W. Payne), 1008
Dose-Rate Effects in Radiation-induced Chemical Reactions (J. P. Keene), 387
Doses (Lethal), of a Dimethyl Homologue of Myleran : Protection of August Rats against, by Isologous Bone Marrow (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Double-Beam Infra-Red Spectroscopy : Agar as Specimen Carrier in (J. G. Feinberg, H. D. C. Rapson and Mary P. Taylor), 763
Double-Diffusion Precipitation Reaction (Agar) : A Specific Diffusible Antigen of Rinderpest Virus demonstrated by the (G. White), 1409
Double-Diffusion Precipitation Reaction (Agar), applied to the Study of *Asterococcus mycoides* (G. White), 278
Double Hysteresis (Electric), in (K_xNa_{1-x}) NbO_3 Single Crystals (L. E. Cross), 178
Douce, Dr. J. L. : Appointed lecturer in electrical engineering at Queen's University, Belfast, 1042
Dougals, A. E. : Structure and Reactivity of Electronically Excited Species (Zeeman Effect in the Near Ultra-violet Bands of Carbon Disulphide), 320
Douglas, J. R., and others : Inhibitory Effect of Gibberellins on Nodulization in Dwarf Beans (*Phaseolus vulgaris*), 1082
Dounreay Experimental Reactor Establishment : Appointment of Dr. R. Hurst as director, 530
Dover, A. T., and others : Electrical Engineering (General), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Dowland, W. H. : Sixth-Form Physics, *review*, 586
Downs, Dr. R. J. : Photoperiodism in Plants and Animals (Interaction between Red and Infra-red Radiation in relation to various aspects of Vegetative Growth), 535
Dowson, Dr. W. J. : Plant Diseases due to Bacteria, second edition, *review* by W. C. Moore, 1094
Doy, C. H., and others : A Possible Intermediate in the Biosynthesis of Tryptophan—1-Deoxy-1-N-*o*-Carboxyphenyl-Ribulose, 549
Dragesco, Jean, et autres : Manuel de Photographie scientifique, *review* by J. Walton Siddorn, 798
Dragonflies in Temporary Waters : Breeding of (Dr. E. P. Hodgkin and J. A. L. Watson), 1015
Drain, L. E. : Band Theory of Metals and the Structure of the Fermi Surface (Nuclear Magnetic Resonance in Ag—Cd Alloys), 527
Drake, G. M. : Awarded the Usborne Memorial Prize of the Royal Aeronautical Society, 1646
Draper, A. : Electrical Machines, *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Drášil, Dr. V. (Nermut, Dr. M. V., and) : Changes in the Dry Weight and the Deoxyribonucleic Acid Content of *Proteus vulgaris* caused by Penicillin, 1740
Dressler, K., and Ramsay, D. A. : Structure and Reactivity of Electronically Excited Species (The Renner Effect in Linear Molecules), 320
Drew, Prof. G. C. : Appointed to the chair of psychology at University College, London, 18 ; work of, 18
    Resignation from the chair of psychology in the University of Bristol, 602
Dried Hops : Systemic Insecticides and the Ratio of Green to (H. S. Darling), 1811
Dried Milk : Effects of Crystallinity on the Infra-red Absorption Spectra of Lactose and (J. D. S. Goulden and Jonathan W. White, jun.), 266
Dried Organic Substances as Food for Larval Annelids (Dr. D. I. D. Howie), 1486
Drosophila : Genetic Effects of Carbon Monoxide, Cyanide and Azide on (Dr. A. M. Clark), 500
Drosophila melanogaster : Biochemical Differences between Inbred and Outbred Lines of, studied by Paper Partition Chromatography (H. F. Hoenigsberg and M. C. Castiglioni), 1404
Drosophila subobscura : Prolongation of the Life of, by a Brief Exposure of Adults to a High Temperature (J. Maynard Smith), 496
Drug : 1:2:2:6:6-Pentamethylpiperidine, a New Hypotensive (G. E. Lee, W. R. Wragg, S. J. Corne, N. D. Edge and H. W. Reading), 1717
Drug (Anti-Histamine) : Effect of Histamine and an, on the Haemolytic Action of Guinea Pig Complement (Dr. J. D. Hawkins), 1666
Drugs : Enzymatic Abnormality in Erythrocytes of a Population sensitive to *Vicia faba* or Haemolytic Anaemia induced by (Dr. A. Szeinberg, Dr. Ch. Sheba and A. Adam), 1256
Drugs and the Brain, *review* by Dr. G. B. Ansell, 1430
Drugs (Non-Hormonal Anti-Rheumatic) : A Possible Basis for the Anti-inflammatory Activity of Salicylates and other (S. S. Adams and R. Cobb), 773
Drugs (Radiomimetic), and X-Rays : Sensitivity of the Spermatogenic Process in the Rat to (A. W. Craig, B. W. Fox and Dr. H. Jackson), 353
Drum Types of Eastern New Guinea (Aldo Massola), 1639
Drummond, J. E. : Extremely High Temperatures (Investigations of Temperatures of a Thermal Plasma in the range up to 20,000° K.), 1381
Dry-Matter Digestibility of Alfalfa Pellets : Effect of Age of Young Dairy Cavles on (M. E. McCullough and L. R. Sisk), 57
Dry Weight and Deoxyribonucleic Acid Content of *Proteus vulgaris* : Changes in the, caused by Penicillin (Dr. M. V. Nermut and Dr. V. Drášil), 1740
Dryden, Dr. I. G. C. : Landmark in Coal Science, *review*, 4
    Britain's Coal and its Future, 460
Drying : Freezing and (Institute of Biology International Symposium on), 314, 1694
Drying Biological Materials : Freezing and (Dr. Audrey U. Smith), 1694
Drying Buckwheat in the Field : Use of Defoliants for, and a New Method for the Chemical Determination of Rutin (V. Brekcha and P. Horák), 505
D'Silva, J. L., and others : Effect of Insulin on Sodium in Muscle, 1278
Duchesne, Prof. Jules (Depireux, Joseph, and) : Nuclear Quadrupole Resonance of Neutron-irradiated Sodium Chlorate, 759
Ducks : Deoxyribonucleic Acid and Genetic Modification in (Dr. Alan W. Greenwood), 533
Duckweeds : *Spirodela polyrrhiza*, the Link between the Aroids and the (Satish C. Maheshwari), 1745
Ducrocq, Albert : The Origins of Life (translated by Alec Brown), *review* by T. H. Hawkins, 1364
Dudal, Dr. R. : Climate, Vegetation and Land Utilization in the Humid Tropics (Tropical Soils), 597
Duddell Lecture of the Physical Society (Prof. L. C. Jackson), 527
Duffus, H. J., and others : Sub-audible Geomagnetic Fluctuations, 1258
Dugdale, J. S. : Melting, Diffusion and related Topics (Lindemann Melting Formula in relation to Inert Gas Solids), 320
Dugdale, J. S. (Gugan, D., and) : Melting, Diffusion and related Topics (Electrical Resistivity Measurements appear to provide information on the Martensitic Transformation in Lithium), 320
Duggan, A. W., and Reed, G. W. : Hypothalamus and Oxytocin, 1278
Dumbleton, M. J., and others : Mechanical Properties of Non-Metallic Brittle Materials (Laboratory Experiments in 'Ploughing' the Face off a Block of Coal), 1579
Dumont, Prof. René : Types of Rural Economy—Studies in World Agriculture, *review* by Sir John Russell, 144
Dun, R. B., and Fraser, A. S. : Selection for an Invariant Character—'Vibrissa Number'—in the House Mouse, 1018
Duncanson, L. A., and others : Isomerism among Binuclear Thiocyanato-bridged Complexes, 43
Dundee Technical College : Special Summer programmes on Electronic Computers and Business Problems, and Developments in Electronic Data Processing for Business, 1042
Dunn, Dr. D. B. (Littlefield, Dr. J. W., and) : Natural Occurrence of Thymine and Three Methylated Adenine Bases in several Ribonucleic Acids, 254
Dunsheath, Dr. P. : Convocation in the University of London—Centenary Lecture 1958, 1442
Dunsheath, Dr. P., and Miller, Mrs. Margaret : Convocation in the University of London—the First Hundred Years, 1442
DuPorte, Prof. E. M. : Retirement from the chair of entomology at Macdonald College, McGill, 455 ; work of, 455
Durability in *Tectona grandis* : Relationship of Tectoquinone to (Dr. P. Rudman, E. W. B. Da Costa, F. J. Gay and A. H. Wetherly), 721
Duration and Band-Width of Short-lived Transients in Solar Noise (T. de Groot), 1676
Durban Museum and Art Gallery : Annual Report for 1956-57, 1574
Durrands, K. J. : Appointed to a lectureship in mechanical engineering at the University of Birmingham, 1182
Durrant, Dr. A. : Environmental Conditioning of Flax, 928
Dušinsky, G., and Tyllová, Dr. M. : A New Method for separating Strychnine and Brucine by Paper Chromatography, 1335
Dust (Cosmic), on the Earth : Rate of Accretion of (Prof. Hans Pettersson), 330
Dutch New Guinea : Absence of Abnormal Haemoglobins in some Groups of the Papua Population of (Prof. J. H. P. Jonxis, Dr. T. H. J. Huisman, G. J. da Costa and D. Metselaar), 1279
Dutt, Dr. N. K., and Bandyopadhyay, P. : Anomalous Behaviour of β-Diketone Complexes of the Lanthanons in Organic Solvents, 1682
Dutta, Dr. A. K., and Samal, K. : Propagation of Ultrasonic Waves in Liquids, 563
Dwarf Bean (*Phaseolus vulgaris*) : Effect of Gibberellic Acid and Kinetin on Growth of Primary Leaf of (E. C. Humphries), 1081
Dwarf Beans (*Phaseolus vulgaris*) : Inhibitory Effect of Gibberellins on Nodulization in (G. A. Thurber, J. R. Douglas and S. W. Galston), 1082
Dwarf Pea Bioassay : Evidence from a, for Naturally Occurring Gibberellins in the Growing Plant (A. J. McComb and Prof. D. J. Carr), 1548
Dwarfs : White (Prof. E. Schatzman), *review* by Dr. R. J. Tayler, 1366
Dye Reduction by a Metabolite of Urocanic Acid (Studies of Urocanic Acid), (Robert H. Feinberg and Prof. David M. Greenberg), 898
Dye Systems (Vat) : Changes in (Dr. G. S. Egerton and F. Galil), 1399
Dyer, A. J. (Taylor, R. J., and) : An Instrument for Measuring Evaporation from Natural Surfaces, 408
Dyer, Dr. W. J., and others : Sodium Phosphate Crystals on Salt Fish, 858
Dyke (Pilansberg), of Palaeomagnetic Significance : Age of a (G. D. L. Schreiner), 1330
Dykehouse, R. H. : Recent Advances in Polymer Technology (Practical and Economic Importance of Preplasticizing Equipment to the Moulder), 1305
Dynamic and Static Elasticities of Solids (Dr. J. F. W. Bell), 1330

Dynamics of Chain Molecules in Dilute Solutions with special reference to Non-Newtonian Viscosity (Dr. Roger Cerf), 558
Dynamics (Gas) : Elements of (H. W. Liepmann and A. Roshko), *review* by Dr. J. H. Horlock, 1232
Dynamics (Population) : Meaning of Density-Dependence and related Terms in (Dr. M. E. Solomon), 1778 ; Prof. G. C. Varley), 1780
Dyson, Dr. G. Malcolm : Elected president of the Institute of Information Scientists, 1576

EAR (Insect) : Ultra-structure of the (Dr. E. G. Gray and Prof. R. J. Pumphrey), 618
Earland, Arthur : *Obituary* by Dr. R. H. Hedley, 1440
Earle (Sir George) Trophy for Industrial Safety awarded to Imperial Chemical Industries Ltd., 1243
Early, H. C., and Walker, R. C. : Extremely High Temperatures (Inductive Energy Storage as a Tool for High-Temperature Research), 1380
Early Inflammatory Phenomena of Turpentine Pleurisy in Rats : Experimental Suppression of the (W. G. Spector and D. A. Willoughby), 708
Early Stages of Infection with the *Tipula* Iridescent Virus (Dr. Kenneth M. Smith), 966
Early Stone Age (Later African Chelles-Acheul) Site at Wonderboom South, Pretoria (Revel Mason), 1377
Early Variety of Rice : Interaction of Hormone and Photoperiod in an (G. Misra and G. Sahu), 637
Earnshaw, A., and Lewis, J. : Magnetic Properties of some Binuclear Complexes of Chromium and Iron, 1262
Earth : Rate of Accretion of Cosmic Dust on the (Prof. Hans Pettersson), 330
  Variation in the Speed of Rotation of the, since June 1955 (Dr. L. Essen, J. V. L. Parry, Dr. Wm. Markowitz and Dr. R. G. Hall), 1054
  Some Variation Problems connected with the Launching of Artificial Satellites of the (D. E. Okhotsimskii and T. M. Eneev), 1311
Earth Satellite: Determination of Orbital Characteristics of an, from Single-Station Radio-Transit Observations (Gordon Grant, A. L. Jones, R. W. Burhans, P. S. Fay and David Frazier), 900
  Determination of Radio-Propagation Elements due to an Artificial (Dr. E. Woyk-Chvojková), 1195
  End of the Second Artificial, 1107
  Lift-time of an Artificial (Dr. D. C. M. Leslie), 403
  Observations in Australia of Radio Transmissions from the First Artificial (G. H. Munro and R. B. White), 104
  Tracking the Russian, 1441
Earth Satellite, 1957β : Effect of Air Drag on the Orbit of the Russian—Comparison of Theory and Observation (D. G. King-Hele and Dr. D. C. M. Leslie), 1761
Earth Satellite, 1958α : Artificial, 367
Earth Satellite, 1958β : Fourth Artificial, 810
Earth Satellite, 1958δ : The Third Russian, 1441
  Orbit of Artificial, 1507
  Some Effects of the Fine Structure of the Ionosphere on Transmissions received from the Russian (F. A. Kitchen and W. R. R. Joy), 1759
Earth Satellites : Theoretical Analysis of Doppler Radio Signals from (Dr. William C. Guier and George C. Weiffenbach), 1525
  Scientific Observations of the Artificial, and their Analysis (Prof. H. S. W. Massey and Dr. R. L. F. Boyd), 78
Earth's Equatorial Bulge : Effect of the, on the Life-time of Artificial Satellites and its Use in Determining Atmospheric Scale-Heights (Dr. G. V. Groves), 1055
Earth's Shadow : A Photographic Observation of the Satellite 1957 Beta leaving the (Dr. Heinz Neckel), 257
Earthquakes : Recent, 88
Earthquakes and Microseisms : Possible Correlations between (C. A. Nanney), 802
Earths (Rare), in Glasses : Absorption Spectra of (Dr. R. C. Vickery and R. Sedlacek), 39
Earthwork and Diptera Populations : Effect on, of BHC Dust applied to Soil (Jerzy J. Lipa), 863
Earthworm ('Rare'), in Montgomeryshire : Occurrence of a (K. Sylvia Richards), 575
Earthworms : Detection of Uric Acid in the Tissue Homogenates of (Dr. Gaber M. Haggag and Dr. A. Khalaf El-Duweini), 191
Ease of Reduction of a Series of Coals and its relation to their Structure (P. H. Given, V. Lupton and M. E. Peover), 1059
East and West : Agriculture in, *review* by Sir John Russell, 144
East Africa : Annual Rainfall Distribution in (J. F. Griffiths), 1331
  Artificial Stimulation of Rainfall in, by means of Rockets (J. H. Brazell and C. M. Taylor), 1421
  The Giant Rat of (J. G. Halcrow), 649
  Working Party on Higher Education to visit, 1308
East Africa High Commission : Annual Report of the East African Virus Research Institute (1956-57), 1777
East African Mountain Flora, *review* by Dr. G. Taylor, 1027
East African Soils : Pattern of Humus Decomposition in (H. F. Birch), 788
East African Virus Research Institute : Annual Report for 1956-57, 1777
Eastbourne College : Soddy Commemoration Plaque to be installed in one of the new laboratories, to be called the Frederick Soddy Memorial Laboratory, 1571
Easter School in Agricultural Science : Fifth (The Nutrition of the Legumes), (University of Nottingham School of Agriculture), 315
Eastern New Guinea : Drum Types of (Aldo Massola), 1639
Eastern and North-Eastern Africa : Birds of (C. W. Mackworth-Praed and Capt. C. H. B. Grant), second edition, *review*, 801
Eastham, Prof. L. E. : Retirement from the chair of zoology in the University of Sheffield, 1307 ; work of, 1307
Eastman Visiting Professor at Oxford, 1106
Eayrs, Dr. J. T. : Mechanism in Behaviour, *review*, 216
Ebert, Dr. Michael, and others : Effect on Radiosensitivity of Inert Gases—Effect of Inert Gases on Oxygen-dependent Radio-sensitivity, 613
Ecdysis : Relation between Breeding and, in Cirripedes (Dr. D. J. Crisp and B. S. Patel), 1078
Eckford, R. J. A., and Manson, W. : Awarded (jointly) the Wollaston Fund for 1958 of the Geological Society of London, 159
Eckman, Prof. D. P. : Automatic Measurement of Quality in Process Plants, 166
Eclipse : The Solar Corona without an, *review* by Prof. R. O. Redman, 871
Ecological Effect (A Possible), of Upwelling in a Submarine Canyon (Raymond J. Ghelardi and Wheeler J. North), 207
Ecological Perspective : An, *review* by Prof. J. Heslop-Harrison, 586
Ecology : Agricultural (Prof. Girolamo Azzi), *review* by A. D. Bradshaw, 443
  A Broad View of, *review* by A. D. Bradshaw, 443
  Role of Plant Hormones in Algal Metabolism and (Dr. Joyce A. Bentley), 1499, *erratum*, 1703
Ecology (Marine), and Paleoecology : Treatise on (edited by Joel W. Hedgpeth), Vol. 1, Ecology, *review* by Dr. G. E. R. Deacon, 1559
Economic Assistance : Technical and, 1557
Economic Theory, *review* by Prof. R. G. D. Allen, 1027
Economic Trends in the Production, Transportation and Utilization of Fuel and Energy (Canadian Section Meeting of the World Power Conference), 1245
Economics of Domestic Pets (Political and Economic Planning, Broadsheet No. 415), 1180
Economy : The World Fertilizer (Mirko Lamer), *review* by Dr. G. W. Cooke, 371
Economy (Animal) : Calcium in the, *review* by Dr. E. J. Hewitt, 799
Economy (Rural) : Types of—Studies in World Agriculture (Prof. René Dumont), *review* by Sir John Russell, 144
Eddington : Enigmatic, *review* by Prof. W. H. McCrea, 214
Eddington's 'Fundamental Theory' : The Development and Meaning of (Dr. Noel B. Slater), *review* by Prof. W. H. McCrea, 214
Eddington Medal of the Royal Astronomical Society awarded to Dr. H. W. Babcock, 531
Eddington Memorial Lecture for 1958 (Prof. C. A. Coulson), 813
Eddy, Dr. B. P. : Bacterial Oxidation of Lactose and Melibiose, 904
Edge, N. D., and others : 1:2:2:6:6-Pentamethylpiperidine, a New Hypotensive Drug, 1717
Edge of the Continental Shelf: Large Sand Waves near the (D. Cartwright and A. H. Stride), 41
Edible Lizards (Allan R. Holmberg), 1187
Edinburgh Geological Society : Funds available from the Clough Memorial Research Fund for geological research in Scotland and the north of England, 603
Edlin, H. L., and Nimmo, M. : Tree Injuries, *review* by Dr. L. Chalk, 732
Edson, Dr. E. F. : Residues of Pesticides in Foodstuffs (Pesticide Residues and Public Health), 22
Edström, J.-E., and Eichner, D. : Relation between Nucleolar Volume and Cell Body Content of Ribonucleic Acid in Supraoptic Neurones, 619
Education : Science and (Science Masters' Association Statement on Policy), 457
  Scientific and Technological (Edwin Barker), *review* by T. H. Hawkins, 517
  Technical (H. A. Warren), *review* by T. H. Hawkins, 517
Education for Our Times (Dr. R. P. Linstead), 95
Education for a Technological Age, 95
Education (Adult) : George Birkbeck, Pioneer of (Dr. Thomas Kelly), *review* by Prof. W. H. G. Armytage, 585
Education (Further), Southern Regional Council for (Southern Regional Council of the Federation of British Industries, in co-operation with the) : Report of the Regional Conference on Industry and the Technical Colleges, 1573
Education (Health) : The Science and Art of (Central Council for Health Education Summer School on), 1703
Education (Health), Central Council for : Summer School on the Science and Art of Health Education, 1703
Education (Health), International Journal of, Vol. 1, No. 1 (International Union for Health Education), 1109
Education (Health), International Union for : Publication of the *International Journal of Health Education*, Vol. 1, No. 1, 1109
Education (Higher) : Working Party on, to visit East Africa, 1308
Education (Higher Technological), London and Home Counties Regional Advisory Council for : Ninth Annual Report, 1309
Education (Science), in Malta, 815
Education (Scientific), in the United States, 1250
Education (Soviet), for Science and Technology (Alexander G. Korol), 1491
Education (Technical) : Apprenticeship and, 1293
  The Industrial Film in (Midland Industrial Film Association Conference on), 1508
  Liberal Studies in (A. A. Part), 386
  Quality in, 1491
Education (Technical), in the Post Office, 1309
Education (Technical), in Scotland : Building Programme for, 1309
Education (Technical), in the U.S.S.R. (C. E. Simmonds), 316
Education (Technical and Technological), in Scotland, 313
Education (Technological), in Britain, 814
Educational Achievements : Broadcasting Services and, 293
Edwards, A. R. : Cleavage in *Cheyletus eruditus* (Acarina), 1409
Edwards, A. W. F. : Number of Mating Types required for Balance of Multipoint Linkage Programmes, 503
Edwards, J. : The Theory and Practice of Shield Design, *review*, 976
Edwards, M. V., and others : Exotic Trees in Great Britain (Forestry Commission, Bulletin No. 30), 747
Edwin, E. E., and others : Protective Effect of Trace Elements other than Selenium against Dietary Necrotic Liver Degeneration, 1801
Eernisse, J. G., and others : Leucocyte Antibodies in Sera from Pregnant Women, 1735
Effect of Acetylcholine on the Membrane Resistance and Threshold of Atrial Muscle Fibres (Dr. Edward A. Johnson and P. A. Robertson), 910
Effect of Acetylcholinesterase on the Surviving Frog Heart (Prof. A. B. L. Beznák), 1190
Effect on the Activity of Photosynthetic Bacterial Chromatophores : Suppression of Carotenoid Synthesis and its (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Dr. R. C. Fuller and I. C. Anderson), 252
Effect of Adenosine Triphosphate on Cleavage of Sea Urchin Eggs (Louis Wolpert), 716
Effect of Age of Young Dairy Calves on Dry-Matter Digestibility of Alfalfa Pellets (M. E. McCullough and L. R. Sisk), 57
Effect of Air Drag on the Orbit of the Russian Earth Satellite 1957β—Comparison of Theory and Observation (D. G. King-Hele and Dr. D. C. M. Leslie), 1761

Effect of Aldosterone Monoacetate and Deoxycorticosterone Acetate on Alkaline Phosphatase Activity in the Liver of Rats (Dr. Amiya B. Kar and R. P. Das), 623
Effect of Anaerobic Conditions on Imbibed Lettuce Seeds (Walter Heydecker), 1140
Effect of Antibiotics on the Phagocytic Activity of the Reticulo-Endothelial System (I. A. Sewell and Prof. T. Nicol), 1662
Effect of Borate Buffer on the Electrophoresis of Serum (D. R. Cooper), 713
Effect of Caffeine and other Purines upon the Ribonucleic Acid/Deoxyribonucleic Acid Ratio in Leaves, and the Suitability of these Leaves for Aphids (Dr. B. Kessler, Dr. E. Swirski and Dr. A. S. Tahori), 1595
Effect of Calcium Ions on the Inhibition of Hydrolases by Chlortetracycline (Dr. Josef Rokos, Mikuláš Burger and Pavel Procházka), 1201
Effect of Carbon Dioxide on Multiplication of *Fusarium* in Soil (Dr. R. H. Stover and Dr. S. R. Freiberg), 788
Effect of Chloramphenicol on Ribonucleic Acid Metabolism in *E. coli* infected with *T*2 Phage (Prof. Itaru Watanabe, Dr. Yukio Kiho and Dr. Kin-ichiro Miura), 1127
Effect of Chymotrypsin on Caeruloplasmin (Dr. G. Curzon), 115
Effect of a Combined Treatment with 8-Ethoxycaffeine and Argon on the Roots of *Vivia faba* (Effect on Radiosensitivity of Inert Gases), (Jon Read), 616
Effect of Creatine Phosphate Administration on the Cardiac Adenosine Triphosphate of Thyroxinized Rats (L. Angelucci, R. Boldrini and E. Mascitelli-Coriandoli), 419
Effect of 2,4-Dichlorophenoxyacetic Acid on Pectin Methylesterase in Tobacco Pith Sections (K. T. Glasziou), 428
Effect of a Dithiol on Survival Time after Irradiation (Dr. Thomas J. Haley, Anna M. Flesher and Nathan Komesu), 1405
Effect of the Earth's Equatorial Bulge on the Life-time of Artificial Satellites and its Use in Determining Atmospheric Scale-Heights (Dr. G. V. Groves), 1055
Effect on Earthworm and Diptera Populations of BHC Dust applied to Soil (Jerzy J. Lipa), 863
Effect of Electrolytes on the Uptake by Bacteria of Labelled Glutamate (Y. Avi-Dor and Sh. Miller), 190
Effect of Gibberellic Acid on Fruit Set and Berry Enlargement in Seedless Grapes of *Vitis vinifera* (Dr. Robert J. Weaver), 851, *erratum*, 1110
Effect of Gibberellic Acid on the Growth of Pea Seedlings when imbibed through the Seed Coat (Dr. Thomas C. Moore), 500
Effect of Gibberellic Acid on the Growth of Protonemata in *Splachnum ampullaceum* (L.) Hedw. (Dr. K. E. von Maltzahn and I. G. MacQuarrie), 1139
Effect of Gibberellic Acid on Species of *Eucalyptus* (G. Scurfield and C. W. E. Moore), 1276
Effect of Gibberellic Acid and Kinetin on Growth of the Primary Leaf of Dwarf Bean (*Phaseolus vulgaris*), (E. C. Humphries), 1081
Effect of Gibberellin and Indoleacetic Acid on Seta Elongation in *Pellia epiphylla* (Prof. G. F. Asprey, K. Benson-Evans and A. G. Lyon), 1351
Effect of Glycerol and Low Temperature on Survival of Unfertilized Mouse Eggs (Dr. J. K. Sherman and Dr. Teh Ping Lin), 785
Effect of Heparin on Pathologically Decreased Serum Esterase in Carcinoma (Dr. J. Skořepa, S. Novák and H. Todorovičová), 908
Effect of Histamine and an Anti-Histamine Drug on the Haemolytic Action of Guinea Pig Complement (Dr. J. D. Hawkins), 1666
Effect of Human α_1-Acid Glycoprotein on Blood Coagulation (Inga Marie Nilsson and Ikuo Yamashina), 711
Effect of Hydrogen on the Deformation Characteristics of Alpha-Titanium (E. Smith), 902
Effect of Hypophysectomy on the Ability of Rat Liver Microsomes in a Cell-free System to incorporate Radioactive Amino-Acids into their Proteins (Dr. A. Korner), 422
Effect of Hypothermia on Death by Starvation (Dr. T. Braun and Dr. B. Mosinger), 968
Effect of Inert Gases on Oxygen-dependent Radiosensitivity (Effect on Radiosensitivity of Inert Gases), (Dr. Michael Ebert, Mrs. Shirley Hornsey and Dr. Alma Howard), 613
Effect of Insulin on Sodium in Muscle (Dr. R. Creese, J. L. D'Silva and Jean Northover), 1278
Effect of Ionizing Radiation on Aqueous Solutions of Guanylic Acid and Guanosine (G. Hems), 1721
Effect of a Lethal Electric Shock during Hypothermia (T. Szilágyi, K. Benkö and H. Csernyánszky), 909
Effect of Lime on the Production of a Toadstool (*Omphalia maura* (Fr.) Gill.), (Dr. F. B. Hora), 1668
Effect of the Metallic Ion on the Infra-Red Spectra of Salts of Carboxylic Acids (Bryan Ellis and H. Pyszora), 181
Effect of Muscular Activity prior to Venepuncture on the Respiration of Leucocytes *in vitro* (Sheenah K. Bisset and W. D. Alexander), 909
Effect of Neutral Salts on the Structure of Collagen and Gelatin (William F. Harrington), 997
Effect of the Nitrogen and Sulphur Content of Organic Matter on the Production of Ammonium and Sulphate (N. J. Barrow), 1806
Effect of some Nitrogen Mustard Derivatives on Growth of Rabbit's Hair (William J. P. Neish), 188
Effect of Ovariectomy, Œstrogen and Progesterone on the Activity of the Melanocytes in the Skin (P. G. Bischitz and Dr. R. S. Snell), 1413
Effect of Oxygen : Mitotic Delay in Irradiated Roots of *Vicia faba*—the (Dr. H. J. Evans, Dr. G. J. Neary and Miss S. M. Tonkinson), 1083
Effect of Periodic Acid on Histochemical Aldehyde Blockades (Dr. P. H. Staple), 288
Effect of Phenobarbitone on the Requirement of *Lactobacillus leichmannii* for Vitamin B_{12} (Dr. G. H. Spray), 859
Effect of Photoperiod on the Oxygen Consumption of Two Species of Intertidal Crabs (Prof. Paul A. Dehnel), 1415
Effect of Photoperiodism on Response of Juvenile Trout to Water Currents (T. G. Northcote), 1283
Effect of Plasmolysis on the Rate of Respiration of a Green Alga (Dr. F. J. Taylor), 136
Effect of Plastic Deformation on the Electrical Resistivity of Chromium (M. E. de Morton), 477
Effect of certain Polyphenylated Aliphatic Hydrocarbons on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, C. C. Ware and Dr. D. L. J. Bilbey), 1804
Effect of Potassium Cyanide on Apparent Free Space in a Brown Alga (P. L. Bergquist), 1270
Effect of Pressure on Burning Velocity of Nitric Oxide Flames (G. A. McD. Cummings), 1327
Effect on Radiosensitivity of Inert Gases—Effect of Inert Gases on Oxygen-dependent Radiosensitivity (Dr. Michael Ebert, Mrs. Shirley Hornsey and Dr. Alma Howard), 613 ; Effect of a Combined Treatment with 8-Ethoxycaffeine and Argon on the Roots of *Vicia faba* (John Read), 616
Effect of a Raised Peripheral Temperature upon the Rate of Regeneration in a Mammalian Peripheral Nerve (H. J. Gamble), 287
Effect of Reserpine on the Intracellular Distribution of Catecholamines in the Brain Stem of the Rabbit (Dr. H. Weil-Malherbe and A. D. Bone), 1474
Effect of Section of the Facial Nerve : A Histoautoradiographic Study of the, on the Uptake of Methionine-^{35}S by the Cells of the Facial Nerve Nucleus (J. Fischer, Z. Lodin and Dr. J. Koloušek), 341
Effect of a Single Light Exposure on Germinating Broad Bean Seeds (Dr. G. R. Lane and R. D. Butler), 1080
Effect of Splenectomy on Azo Dye Carcinogenesis of Rat Liver (Dr. Muneaki Takashi and Shoji Iwase), 1211
Effect of Stereoisomeric Tartrates on Root Elongation in *Lepidium* (Torbjörn Aasheim), 922
Effect of various Stilbene Compounds on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 1538
Effect of Stress and Cortisone on the Cytomorphology of Pituitary Grafts in Rats (Dr. K. Kovács, M. A. David and I. W. Horváth), 1417
Effect of the Synthetic Œstrogen Stilboestrol on Pregnancy in the Rabbit (Dr. A. Sharaf and Dr. E. S. E. Hafez), 1211
Effect of Testosterone and Orchidectomy on the Activity of the Melanocytes in the Skin (P. G. Bischitz and Dr. R. S. Snell), 187
Effect of Testosterone Propionate upon the Incorporation of Labelled Glycine into Homogenates of Mouse Kidney (Dr. Edward H. Frieden and Dr. Edward H. Cohen), 912
Effect of Thiosemicarbazones on the Multiplication of Tobacco Mosaic Virus (Tokuzo Hirai, Toru Shimomura and Yonosuke Nishikawa), 352
Effect of Transmitted Ribonucleic Acid from Healthy Pear Trees upon the Synthesis and Composition of Protein (Dr. B. Kessler), 201
Effect of Trauma on Growth of Hair (Dr. F. N. Ghadially), 993
Effect of Two Extreme Temperatures on Growth and Tail-length of Mice (Dr. M. A. El-R. Ashoub), 284
Effect of Ultra-Violet Irradiation on Electrophoretic Properties of Serum Protein (Dr. N. M. Larin), 65
Effect of the Uterine Environment upon Skeletal Morphology in the Mouse (Dr. Anne McLaren and Dr. Donald Michie), 1147
Effect of Water upon the Polymorphic Transitions in Anhydrous Sodium Sulphate (E. L. Kreidl and Ivan Simon), 1529
Effect of Weathering on Determinations of Uranium : Distribution of Radioactivity in Rocks and Minerals, and the (Dr. E. Hamilton), 697
Effect (Adverse), of Nitrate Metabolic Products on Sheep Growth (N. D. Jamieson), 1601
Effect (Anti-allergic), of Cortisone (Dr. E. R. Trethewie), 625
Effect (An Apparent Beneficial), of Gamma-Radiation on the Flour Mite (Dr. Collin Melville), 1403
Effect (Biological), of a Magnetic Field and the Radiation Syndrome (M. F. Barnothy and J. M. Barnothy), 1785
Effect (Blocking), of Morphine on the Secretion of Thyroid-stimulating Hormone in Rats (Milan Sámel), 845
Effect (Chloride), on the Growth of *Chlorella pyrenoidosa* (Dr. Clyde Eyster), 1141
Effect (Extraordinary Hall) : Spin-Orbit Coupling and the (Dr. C. Strachan and A. M. Murray), 1260
Effect (Immediate), of *l*-3 : 5 : 3′-Tri-iodothyroacetic Acid on Metabolic Rate and Body Temperature of Hypophysectomized Rats and the Action of Cortisone (Prof. Sz. Donhoffer, I. Várnai and E. Sziebert-Horváth), 345
Effect (Inhibiting), of Chlorpromazine on the Experimental Production of Liver Cancer (Dr. K. Fujita, S. Iwase, T. Ito and M. Matsuyama), 54
Effect (Inhibitory), of Gibberellins on Nodulization in Dwarf Beans (*Phaseolus vulgaris*), (G. A. Thurber, J. R. Douglas and A. W. Galston), 1082
Effect (Instantaneous X-Ray), in Rats and Man : Direct Registration of an (Prof. R. Brinkman and H. B. Lamberts), 774
Effect (Observed Oxygen) : Dependence of the, on the Post-Irradiation Treatment of Micro-organisms (Tikvah Alper and Dr. N. E. Gillies), 961
Effect (Partial Inhibitory), of *Plistophora culicis* on the Sporogonic Cycle of *Plasmodium cynomolgi* in *Anopheles stephensi* (Miss L. Bano), 430
Effect (Physical Stabilizing), of the Halteres : Static Sense of *Calliphora* and the (Dr. G. Schneider), 1355 ; (Dr. J. W. S. Pringle), 1356
Effect (A Possible Ecological), of Upwelling in a Submarine Canyon (Raymond J. Ghelardi and Wheeler J. North), 207
Effect (Protective), of Trace Elements other than Selenium against Dietary Necrotic Liver Degeneration (J. Bunyan. E. E. Edwin and J. Green), 1801
Effect (A Ripple), in the Audiogram (E. Elliott), 1076
Effect (Solar-Flare) in the *F*2-Layer of the Ionosphere (C. M. Minnis and G. H. Bazzard), 690
Effective Magnetic Meridian for Cosmic Rays (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 34
Effectiveness (Comparative Biological), of the Gibberellins (Dr. M. J. Bukovac and Dr. S. H. Wittwer), 1484
Effects of Alkoxyglycerols and especially Selachyl Alcohol on the Bone Marrow in connexion with Irradiation Treatment and in Leukaemia Therapy (Astrid Brohult), 1484
Effects of 8-Azaguanine on the Synthesis of Protein and Nucleic Acids in *Bacillus cereus* (Prof. H. Chantrenne and S. Devreux), 1737
Effects of Clipping and Spraying on various Homoeothermic Responses of Rabbits at an Elevated Environmental Temperature (Dr. Harold D. Johnson, Chu Shan Cheng and A. C. Ragsdale), 842
Effects of certain Compounds related to Trypan Blue on the Experimental Production of Liver Cancer (K. Fujita, T. Mine, T. Ito and M. Matsuyama), 1732
Effects of Crystallinity on the Infra-red Absorption Spectra of Lactose and Dried Milk (J. D. S. Goulden and Jonathan W. White, Jun.), 266
Effects of Disruptive Selection—the Experimental Production of a Polymorphic Population (Dr. J. M. Thoday), 1124
Effects of Gibberellic Acid on *Nicotiana* Plants (L. G. Burk and Dr. T. C. Tso), 1672

Effects of Gibberellic Acid on Soil Micro-organisms (Dr. K. C. Lu, C. M. Gilmour, A. C. Zagallo and W. B. Bollen), 189
Effects of Heat and Loss of Moisture on the Dormancy of Barley (P. D. Hewett), 424
Effects of Kinetin on Cell Division in *Paramecium caudatum* (Ruth Guttman and Avigdor Back), 852
Effects of β-Mercaptoethanol on Morphogenesis in Amphibian Eggs (Prof. J. Brachet), 1736
Effects of Nuclear Irradiation upon the Decomposition of Lead Styphnate Monohydrate (Dr. Ted B. Flanagan), 42
Effects of Orotic Acid on Coenzyme A and Pantothenic Acid of Liver in Vitamin B_{12} Deficiency (Prof. G. Moruzzi, R. Viviani, M. Marchetti and F. Sanguinetti), 416
Effects of Pituitary Hormones and Cortizone upon Liver Regeneration in the Hypophysectomized Rat (Dr. J. T. Hemingway and Dr. D. B. Cater), 1065
Effects of *Simulium* Control on Insectivorous Fishes (Philip S. Corbet), 570
Effects of Ultra-Violet Radiation on Oysters (Dr. L. A. Aboul-Ela), 1013
Effects (Dose-Rate), in Radiation-induced Chemical Reactions (J. P. Keene), 387
Effects (Genetic), of Carbon Monoxide, Cyanide and Azide on *Drosophila* (Dr. A. M. Clark), 500
Effects (Instability), in Vortex Rings produced with Liquids (W. C. Levengood), 1680
Effects (Lingering), of Local X-Irradiation on Healing of Burns (R. H. Rixon, J. M. A. Tishler and H. B. Newcombe), 1138
Effects (Radiation), in Solids (G. J. Dienes and G. H. Vineyard), *review* by Dr. A. H. Cottrell, 977
Effects (Real Gas), in High Speed Flow (Symposium at the Armament Research and Development Establishment, Fort Halstead), 671
Effects (Rectifying), of Sodium Chloride Crystals (Dr. S. Császár), 1158
Effects (Similar), of Blue and Infra-Red Radiation on Light-sensitive Seeds (Dr. P. F. Wareing and M. Black), 1420
Effects (Some), of Carbon Dioxide—Bicarbonate Mixtures on the Oxidation and Reduction of Cytochrome *c* by *Ricinus* Mitochondria (D. S. Bendall, Dr. S. L. Ranson and D. A. Walker), 133
Effects (Some), of the Fine Structure of the Ionosphere on Transmissions received from the Russian Earth Satellite 1958*δ* (F. A. Kitchen and W. R. R. Joy), 1759
Effects (Unloading), in Aluminium—Zinc Single Crystals (A. T. Thomas), 1728
Egami, Prof. F., and others : Nucleic Acids (Specificity of Two Ribonucleases (T_1 and T_2) Isolated from Takadiastase), 1511
Egelstaff, P. A. (McCallum, G. J., and) : Mean Free Path of Phonons in a Lead Crystal, 643
Egerton, Dr. G. S., and Galil, F. : Changes in Vat Dye Systems, 1399
Egg (Hen's) : A Nail found within a (Prof. Hadley Kirkman and Gladys Tracy Kirkman), 1159
Egg Albumin : Carbohydrate Peptide Complex from (P. Johansen, Dr. R. D. Marshall and Prof. A. Neuberger), 1345
Egg Marketing Board, British : Postgraduate Studentships, 1510
Egg Production : Relationship between Aggressiveness and, in the Domestic Hen (G. McBride), 858
Eggleston, Dr. H. G. : Appointed to the University of London chair of mathematics at Bedford College, 459, 670 ; work of, 670.
Eggs : Development of, before the Final Moult in *Pratylenchus* (M. R. Sauer). 129
Eggs of *Ascaris lumbricoides:* Physiology of the Hatching of (Prof. W. P. Rogers), 1410
Eggs of *Nereis fucata:* Biliverdin in the (J. Green and R. Phillips Dales), 1412
Eggs (Amphibian) : Effects of β-Mercaptoethanol on Morphogenesis in (Prof. J. Brachet), 1736
Eggs (*Molgula*): Feulgen-Positive Cytoplasm of (Dr. Daniel S. Grosch), 1078
Eggs (Sea Urchin) : Effect of Adenosine Triphosphate on Cleavage of (Louis Wolpert), 716
Eggs (Unfertilized Mouse) : Effect of Glycerol and Low Temperature on Survival of (Dr. J. K. Sherman and Dr. Teh Ping Lin), 785
Eggs and Embryos (Sea-Urchin), (Pure Species and Hybrids) : Species-Specific Differences in Free Amino-Acids and Peptides in (Dr. P. S. Chen and Prof. F. Baltzer), 98
Egler, Dr. F. : Climate, Vegetation and Land Utilization in the Humid Tropics, 597
Egyptian Cotton Varieties : Growth Responses of *Fusarium oxysporum* to Metabolites of some Rhizospheric Microflora of (Dr. M. S. Naim and A. M. Hussein), 578
Egyptian Journal of Chemistry (Chemical Society of Egypt), 1638
Egyptian Journal of Geology, No. 1 (Geological Society of Egypt), 742
Egyptian and Indian Clovers : Induced Polyploidy in (S. M. Sikka, M. S. Swaminathan and R. K. Mehta), 32
Ehrenstein, G. v., and Lockner, D. : Sites of the Physiological Breakdown of the Red Blood Corpuscles, 911
Ehrlich Ascites Tumour Cells of Mice : Calcium Exchanges of (Doreen Thomason and Raymond Schofield), 1207
Ehrlich Mouse Ascites Carcinoma : A Cytoplasmic Membrane-like Fraction from Cells of the (Prof. P. C. Rajam and Anne-Louise Jackson), 1670
Ehrman, John : Cabinet Government and War, 1890-1940, 1752
Eichhorn, Dr. Gunther L., and Cairns, Dr. Joan F. : Rotatory Dispersion of Cytochrome *c*, 994
Eichner, D. (Edström, J.-E., and) : Relation between Nucleolar Volume and Cell Body Content of Ribonucleic Acid in Supraoptic Neurones, 619
Eigen, Dr. M. : Interaction in Ionic Solutions (Short-range Interaction in Bi-bivalent Electrolytes), 240
Eigenvalue Problems : Solution of, *review* by Dr. R. G. Cooke, 978
  Variational Methods for (Prof. S. H. Gould), *review* by Dr. R. G. Cooke, 978
Eighteenth Century : The Lunar Society—Science and Thought in the (Departments of Extra-Mural Studies of the University of Birmingham and the University of Nottingham Residential Course on), 1510
Eisenschitz, Prof. R. : Band Theory of Metals and the Structure of the Fermi Surface (Electronic Levels of Disordered Structures), 526
  Atomic Theory, *review*, 1625
Eistert, Prof. Dr. Bernd (von Euler, Prof. Dr. Hans, und) : Chemie und Biochemie der Reduktone und Reduktonate, *review* by Prof. E. L. Hirst, 145
Ek, Dr. Jan, and Hultman, Eric : Determination of Glucose and Laevulose in Body-Fluids, 780
Eker, R., and others : Radioprotective Properties of Cystamine, Cysteamine and Cysteine when tested with Chick Fibroblasts *in vitro*, 344
El-Duweini, Dr. A. Khalaf (Haggag, Dr. Gaber M., and) : Detection of Uric Acid in the Tissue Homogenates of Earthworms, 191
Elaeagnus Root Nodules : Nitrogen Fixation in (I. C. Gardner), 717
Elasmobranchs : Ureogenesis in (Prof. Ernest Baldwin), 1591
Elasticities of Solids : Dynamic and Static (Dr. J. F. W. Bell), 1330
Elasticity (Polymer-type), in Non-polymer Crystals (J. E. Gordon, A. T. K. Seville and D. M. Marsh), 1678
Electric Double Hysteresis in $(K_xNa_{1-x})NbO_3$ Single Crystals (L. E. Cross), 178
Electric Shock (Lethal) : Effect of a, during Hypothermia (T. Szilágyi, K. Benkö and H. Csernyánszky), 909
Electrical Communication and other Fields : The Theory of Networks in (F. E. Rogers), *review* by K. R. Sturley, 6
Electrical Discharges between Coaxial Electrodes (J. S. T. Looms), 696
Electrical Discharges in Gases (Dr. F. M. Penning), *review* by Dr. P. C. Thonemann, 1498
Electrical Engineering (General), (A. T. Dover, Dr. F. T. Chapman, Prof. F. Brailsford and Harley Carter), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Electrical Engineers, Institution of : Chairman's Address to the Supply Sections, Too Much and Too Little (Prof. M. G. Say), 321
  Faraday Lecture for 1957-58 (the late G. H. Fletcher, delivered by R. Ledger), 387
  International Convention on Microwave Valves, 673, 1378
  Kelvin Lecture (Sir Harry Melville), 1045
  Symposium on Long-Distance Radio Propagation above 30 Mc./s., 1184
Electrical Machines (A. Draper), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
  Electricity and, *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
  The General Theory of (Bernard Adkins), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Electrical Networks : The Theory of, *review* by K. R. Sturley, 6
Electrical Noise from 'Polarization Cells' and from Human Tissues (A. Nightingale), 192
Electrical Receptor in Fishes (P. G. Wright), 64
Electrical Resistivity of Chromium : Effect of Plastic Deformation on the (M. E. de Morton), 477
Electrical Responses of Frog Spinal Ganglion Cells in Sodium-free Media (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 703
Electrical Responses of Neuron Cell-Bodies in Sodium-free Media (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 1798
Electrical Surface Charge : A Correlation between, and some Biological Characteristics during the Stepwise Progression of a Mouse Sarcoma (Mrs. L. Purdom and E. J. Ambrose, and Prof. G. Klein), 1586
Electricity : A New Approach to, *review* by G. R. Noakes, 870
Electricity Generating Board, Central : Appointment of Leonard Rotherham as a full-time member, 20
Electricity Industries (Coal, Gas and) : White Paper on Capital Investment in the, 1638
Electricity Standards : Importance of the Faraday to Elemental Constants and (A. G. McNish and Dr. R. D. Huntoon), 1194
Electricity and Electrical Machines, *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Electricity and Magnetism (Prof. B. I. Bleaney and Mrs. B. Bleaney), *review* by Prof. G. O. Jones, 1495
Electrification of Railways (the late G. H. Fletcher, delivered by R. Ledger), 387
Electrocapillary Action of Corrosion Inhibitors (Harry C. Hatos), 1060
Electrode : A Rotating Hanging Mercury-Drop (E. Barendrecht), 764
Electrode Processes : Use of Faradaic Rectification for the Study of Rapid (Dr. G. C. Barker, R. L. Faircloth and A. W. Gardner), 247
Electrodes (Coaxial) : Electrical Discharges between (J. S. T. Looms), 696
Electroencephalographic and Psychological Data : The Relationships between, in Normal Adults (Dr. P. F. Werre), *review* by Dr. Clifford Allen, 983
Electrohysterogram : Physical Bases of the (Dr. S. D. Larks), 67
Electroluminescence in Gallium Phosphide : Grain Boundaries and (D. A. Holt, Dr. G. F. Alfred and C. S. Wiggins), 109
Electrolyte (Ion-exchange Polymer): Thermocell with (W. T. Grubb), 338
Electrolytes : Effect of, on the Uptake by Bacteria of Labelled Glutamate (Y. Avi-Dor and Sh, Miller), 190
Electromagnetic Waves : Precision Determination of the Velocity of (K. D. Froome), 258
Electron Affinities of Oxygen : Estimation of, by Extrapolations of Ionization Potentials (Dr. D. F. C. Morris and H. N. Schmeising), 469
Electron Density Profiles in the Ionosphere, 1770
Electron Diffraction and Electron Microscopy : Examination of Cellulose Fibre by the Low-Temperature Specimen Method of (Goro Honjo and Masaru Watanabe), 326
Electron Diffraction Study of Adsorbed Metal Ions on the Surface of Cellulose Microfibrils (D. S. Belford, A. Myers and Prof. R. D. Preston), 1516
Electron Emission from Silicon *p-n* Junctions (Dr. Jan Tauc), 38
Electron Micrographs of a Crystalline Lattice Structure in Yolk Platelets of the Amphibian Embryo (Shuichi Karasaki and Tsutomu Komoda), 407
Electron Micrographs of Monolayers of Stearic Acid (Herman E. Ries, jun., and Wayne A. Kimball), 901
Electron Microscope : Biological Uses of the (Linnean Society Symposium on), 459
  Lattice Image of Twin Structure observed directly by, in a Crystal of Copper Phthalocyanine (Prof. E. Suito, N. Uyeda, H. Watanabe and T. Komoda), 332
  Simultaneous Evaporation of Platinum and Carbon for Possible Use in High-Resolution Shadow-Casting for the (D. E. Bradley), 875
  Techniques and Applications of the (Cornell University Summer Laboratory Course in), 743
Electron Miscroscope (300-kV.) : Observation of Metal Sections by means of the (Hidetsugu Tsuchikura and Keiji Ichige), 694
Electron Microscope Image : Contrast in the (Dr. Robin C. Valentine), 832
Electron Microscope Society of America : Fifteenth Annual Meeting, 816
Electron Microscopists (S. Weintroub), 816

Electron Microscopy—Proceedings of the Stockholm Conference, 1956 (edited by F. S. Sjöstrand and J. Rhodin), *review* by H. I. Matthews, 1626
Examination of Cellulose Fibre by the Low-Temperature Specimen Method of Electron Diffraction and (Goro Honjo and Masaru Watanabe), 326
Fixation of Bacteria for (E. H. Mercer), 1550
Occurrence of Foldings of Plasma Membrane (β-Cytomembrane) in Cells of Pig's Carpal Organ as revealed by (K. Kurosumi and T. Kitamura), 489
Photographic Aspects of (Scientific and Technical Group of the Royal Photographic Society and the Electron Microscopy Group of the Institute of Physics Meeting on), 1312
Electron Microscopy of a Stable *Proteus* L. Form (Dr. K. G. Thorsson and Prof. C. Weibull), 1348
Electron Mobility in Biological Systems and its relation to Carcinogenesis (Dr. R. Mason), 820
Electron Physics: Advances in Electronics and (edited by L. Marton), Vol. 9, *review* by Dr. J. A. Saxton, 1688
Electron Spin Resonance of Coals—Saturation Effect (J. Smidt), 176
Electron Traps in Insulating Materials: Triboelectricity and—some Correlations (Dr. E. Fukada and Dr. J. F. Fowler), 693
Electron and Nuclear Resonance in Chemistry: Applications of (Chemical Society Symposium on), 161
Electronic Computers and Business Problems (Dundee Technical College Special Summer programme on), 1042
Electronic Configuration of Cations in some Distorted Spinels (Dr. K. P. Sinha), 835
Electronic Control Circuits (Industrial): Handbook of (John Markus and Vin Zeluff), *review* by Denis L. Johnston, 73
Electronic Data Processing for Business: Developments in (Dundee Technical College Special Summer programme on), 1042
Electronic Engineering Premium of the Television Society awarded to Dr. R. Pearce, 1246
Electronic Flash in Photomicrography: Use of (Dr. David A. Erasmus), 1290
Electronic Mechanism of Addition Reactions (Lakhbir Singh), 110; (D. W. Davies), 903
Electronica, Instituto Nacional de (Madrid): *Boletín de Información Electronica*, Vol. 1, No. 1, 1573
Electronically Excited Species: Structure and Reactivity of (Physical Chemistry Division of the Chemical Institute of Canada Symposium on), 320
Electronics: Transistor (David Dewitt and Arthur L. Rossoff), *review* by Dr. J. R. Tillman, 1168
Electronics, Institution of (Northern Division): Thirteenth Annual Electronics Exhibition and Convention, 1245, 1771
Electronics in Geophysical Research, *review* by Dr. J. A. Saxton, 1688
Electronics Bulletin: Spanish, 1573
Electronics Digest, *review* by Denis L. Johnston, 73
Electronics Exhibition and Convention: Thirteenth Annual (Northern Division of the Institution of Electronics), 1245, 1771
Electronics (Nuclear): International Symposium on (Société des Radio-électriciens), 1640
Electronics and Electron Physics: Advances in (edited by L. Marton), Vol. 9, *review* by Dr. J. A. Saxton, 1688
Electronics and Telecommunications: Solid State Phenomena in (Postal and Telecommunications Group of the Brussels Universal and International Exhibition International Conference on), 813
Electronics and Waveguides: Elsevier's Dictionary of, in Six Languages (compiled and arranged on an English alphabetical base by W. E. Clason), *review* by Dr. R. L. Smith-Rose, 801
Electrons (Localized), in Body-centred Cubic Metals (J. S. Griffith and L. E. Orgel), 170
Electrophoresis: Preparation of Transparent Starch Gels after (Dr. J. M. Fine and E. Waszczenko-Z), 269
Electrophoresis in Agar Plates or after Immuno-electrophoresis: Colorimetric Detection of Human Caeruloplasmin Oxidase Activity after (José Uriel), 999
Electrophoresis of Serum: Effect of Borate Buffer on the (D. R. Cooper), 713
Electrophoresis in Starch Gel: Isolation of the Lethal Factor of Diphtheria Toxin by (Dr. M. D. Poulik and E. Poulik), 354
Electrophoresis (High-Voltage Paper): Separation of the Lower Fatty Acids (C_1 to C_{10}) by (Dr. D. Gross), 264
Electrophoresis (Immuno-): Colorimetric Detection of Human Caeruloplasmin Oxidase Activity after Electrophoresis in Agar Plates or after (José Uriel), 999
Electrophoresis (Paper): Determination of Transaminase Activity of Serum Protein Fractions separated by (Dr. Miroslav Sevela), 915
Electrophoresis (Starch Gel): Separation of Metastable Polymers by (Geoffrey Franglen and Cécile Gosselin), 1152
Electrophoresis (Zone), of *Myrothrecium* Cellulase (R. Thoms and Dr. D. R. Whitaker), 715
Electrophoretic Behaviour of Avian Haemoglobins (R. Datta, Jharna Ghosh and Prof. B. C. Guha), 1204
Electrophoretic Behaviour of *i*-Urobilin and Stercobilin (I. L. Kahán), 773
Electrophoretic Method: A Micro- (Dr. J. Kohn), 839
Electrophoretic Properties of Serum Protein: Effect of Ultra-Violet Irradiation on (Dr. N. M. Larin), 65
Electrophoretic Removal of Protein from Hyaluronic Acid (Dr. A. G. Ogston and T. F. Sherman), 482
Electrophoretic Separation and Classification of Blood Plasma Esterases (Dr. Klas-Bertil Augustinsson), 1786
Electrophoretically Different Haemoglobins: Distribution of, among some Cattle Breeds of Europe and Africa (A. D. Bangham and B. S. Blumberg), 1551
Electroplax (Isolated Single), of the Skate: A Method for Studying separately the Properties of the Innervated and Non-innervated Membrane of an (Dr. Ernest Schoffeniels), 287
Electroretinographic Sensitivity Determinations: Fluorescence of the Crystalline Lens and (Dr. E. Dodt and J. B. Walther), 286
Electroshock: Metabolism of the Perfused Cat Brain during Metrazol Convulsions and (C. Allweis and Dr. J. Magnes), 626
Elemental Constants and Electricity Standards: Importance of the Faraday to (A. G. McNish and Dr. R. D. Huntoon), 1194
Elementary Fourier Analysis (Imperial College of Science and Technology Refresher Course on), 1510
Elementos de Medicina (Dr. John Brown), Spanish translation from a manuscript by Dr. Don Luis José Montaña (edited by Dr. J. J. Izquierdo), *review* by Dr. Douglas Guthrie, 296
Elements: The Heaviest, *review* by Dr. L. E. J. Roberts, 1496
Elements of Classical Thermodynamics for Advanced Students of Physics (Dr. A. B. Pippard), *review* by S. Angus, 1755
Elements of Gasdynamics (H. W. Liepmann and A. Roshko), *review* by Dr. J. H. Horlock, 1232
Elements (Actinide): The Chemistry of the (Joseph J. Katz and Glenn T. Seaborg), *review* by Dr. L. E. J. Roberts, 1496
Elements (Trace), other than Selenium: Protective Effect of, against Dietary Necrotic Liver Degeneration (J. Bunyan, E. E. Edwin and J. Green), 1801
Elevated Environmental Temperature: Effects of Clipping and Spraying on various Homoeothermic Responses of Rabbits at an (Dr. Harold D. Johnson, Chu Shan Cheng and A. C. Ragsdale), 842
Elevated Temperatures: Behaviour of Metals at (Lectures delivered at the Institution of Metallurgists Refresher Course, 1956), *review* by Prof. F. C. Thompson, 1299
Elimination of Dialysis in the Preparation of Hydrophobic Sols (P. Nagels), 638
Ellenby, Dr. C.: Root Diffusates of *Solanum tuberosum* and *Digitalis purpurea*, 920
Ellickson, R. T. (Atwater, H. A., and): Remanent Magnetization of Ancient Bricks, 404
Ellinger, Friedrich: Medical Radiation Biology, *review*, 984
Ellinger, Dr. Gabrielle: Nutritive Value of Proteins (The Importance of Protein Quality in Animal Feeding), 152
Elliott, E.: A Ripple Effect in the Audiogram, 1076
Ellis, Bryan, and Pyszora, H.: Effect of the Metallic Ion on the Infra-Red Spectra of Salts of Carboxylic Acids, 181
Ellis, Dr. H. A., and Gell, P. G. H.: Immunological Estimation of a Component of Complement, 1667
Ellis, K. C., and Warwicker, Dr. J. O.: Systematic Absences and the X-Ray Diagram of Cellulose, 1614
Ellis, Prof. R.: Children and Young People, 1381
Ellman, Dr. George L.: Determination of Epinephrine and related Compounds on Paper Chromatograms, 768
Ellwood, E. C. (Smart, R. F., and): Sintering of Tin Powder, 833
Elmore, Dr. D. T.: Appointed to a lectureship in biochemistry at the University of Belfast, 20
Elongation (Radicle), of *Pseudotsuga menziesii* in relation to Light and Gibberellic Acid (Dr. S. D. Richardson), 429
Elongation (Root), in *Lepidium*: Effect of Stereoisomeric Tartrates on (Torbjörn Aasheim), 922
Elongation (Seta), in *Pellia epiphylla*: Effect of Gibberellin and Indoleacetic Acid on (Prof. G. F. Asprey, K. Benson-Evans and A. G. Lyon), 1351
Elsdale, T. R., and others: Nuclear Transplantation in *Xenopus laevis*, 424
Elsdon-Dew, Dr. R. (Freedman, L., and): Size Variation in *Entamoeba histolytica*, 433
Elsevier's Dictionary of Electronics and Waveguides in Six Languages (compiled and arranged on an English alphabetical base by W. E. Clason), *review* by Dr. R. L. Smith-Rose, 801
Elson, Dr. L. A. (Talbot, Prof. Timothy R., and): Protection of August Rats against Lethal Doses of a Dimethyl Homologue of Myleran by Isologous Bone Marrow, 684
Elton, Dr. G. A. H.: Appointed director of research of the British Baking Industries Research Association, 949; work of, 949
Eltringham, Dr. S. K., and Hockley, A. R.: Coexistence of Three Species of the Wood-boring Isopod *Limnoria* in Southampton Water, 1659
Elvers (Migrating), *Anguilla vulgaris* Turt.: Use of Tidal Streams by (F. Creutzberg), 857
Elvin, Prof. H. Lionel: Appointed director of the University of London Institute of Education, 20
Embrittlement of Tungsten Wires by Contaminants (Dr. G. L. Davis), 1198
Embryo (Amphibian): Electron Micrographs of a Crystalline Lattice Structure in Yolk Platelets of the (Shuichi Karasaki and Tsutomu Komoda), 407
Embryo (Chick): Serological Determination of Developing Muscle Protein in (Dr. Yoshito Ogawa, Takatada Kawahara and Jiroo Miura), 621
Embryological Investigation in *Hibiscus sabdariffa* x *H. cannabinus* and their Reciprocal Crosses (P. Sanyal), 1352
Embryology (General): Introduction to (Prof. A. M. Dalcq), translated by Jean Medawar, *review* by Prof. J. Brachet, 144
A Synthesis of, *review* by Prof. J. Brachet, 144
Embryology of Pogonophora and Classifications of Animals (Dr. S. M. Manton), 748
Embryos of Arsenic-resistant and -sensitive Strains of the Blue Tick, *Boophilus decoloratus*: Total Sulphydryl Content of (M. E. Thompson and A. M. Johnston), 647
Embryos (Sea-Urchin Eggs and), (Pure Species and Hybrids): Species-Specific Differences in Free Amino-Acids and Peptides in (Dr. P.-S. Chen and Prof. F. Baltzer), 98
Emeléus, Prof. K. G., and others: Simultaneous Occurrence of Moving and Standing Waves in a Positive Column, 1326
Emergency Supplies of Water, 741
Emerson, Dr. T.: Design of Physics Research Laboratories (Planning of Industrial Research Laboratories), 90
Emerton, H. W.: Fundamentals of the Beating Process—the Theory of the Development in Pulps of Paper-making Characteristics by Mechanical Treatment, *review* by Dr. Julius Grant, 975
E.M.I. Premium of the Television Society awarded to Dr. J. A. Saxton, 1246
Emigration of Scientists and Technologists, 1243
Emission (Electron), from Silicon *p-n* Junctions (Dr. Jan Tauc), 38
Emission (Solar Radio): A New Spectral Characteristic in (A. Maxwell and G. Swarup), 36
Emission Spectra of the Luminescence of Green Plant Materials: Action and (Gordon Tollin, Eiji Fujimori and Prof. Melvin Calvin), 1266
β-Emitters (Pure): Application of the Kurie Plot to the Standardization of (R. A. Lloyd), 1055
Employment: Ageing and, 744
Employment and Welfare in 1956, 532
Employment Function of Management (Institute of Personnel Management Residential Study Course in), 20
Employment Policies: Positive—Examples of Management Practice contributing to Good Relations in Industry (Ministry of Labour and National Service), 1425

Enamel (Human Tooth) : Investigations into Temperature Changes on the Surface of (Peter S. Rothwell), 1805
Enantiomorphic Carbanions involved in the Aldolase and Triose Phosphate Isomerase Reactions : Absolute Configuration of (Ben Bloom and Yale J. Topper), 1128
Encephalomyelitis (Experimental Allergic) : Acquired Resistance to (I. A. Svet-Moldavskaya and G. J. Svet-Moldavsky), 1536
Enclosing Protective Tissues : Influence of the, on the Metabolism of Barley Grain (F. S. Mitchell, F. Caldwell and G. Hampson), 1270
End-Plate Potential : Direct Determination of the Active Phase of (Prof. Noriko Takeuchi and Akira Takeuchi), 779
End-plates (Individual), of Normal and Denervated Gastrocnemius Muscle : Quantitative Determination of Cholinesterase Activity in (M. Brzin and Prof. J. Zajicek), 626
Endeavour Prizes of the British Association for the Advancement of Science : Essay subjects for, 885
Eneev, T. M. (Okhotsimskii, D. E., and) : Some Variation Problems connected with the Launching of Artificial Satellites of the Earth, 1311
l'Énergie nucléaire dans le Monde (T. Reis), *review* by Sir John Cockcroft, 445
Energies (Dispersion), in Porous Sorbents (Prof. R. M. Barrer), 176
Energies (Localization), and Polarographic Half-Wave Potentials of Aromatic Hydrocarbons : Correlations between (P. H. Given), 1001
Energy : Economic Trends in the Production, Transportation and Utilization of Fuel and (Canadian Sectional Meeting of the World Power Conference), 1245
Energy of Adenosine Triphosphate (K. Burton), 1594
Energy Spectrum of Cosmic Radiation (Prof. H. Alfvén and Ernst Åström), 330
Energy (High) Physics (European Organization for Nuclear Research 1958 Annual International Conference on), 884
Energy (High-) Radiation on Solids : Action of (Radiation Research Visiting Club Meeting in Cambridge on), 315
Engel, C. E., and Warwick, Prof. Roger : Colour Television in University Teaching, 91
Engel, M. S., and Alexander, Prof. M. : Culture of *Nitrosomonas europaea* in Media Free of Insoluble Constituents, 136
Engel, Rudolf, and others : 24-Hr. Rhythms in Blood Eosinophils and *Wuchereria bancrofti* Microfilariae Before and After Δ^1-9α-Fluorocortisol, 1135
Engel, Rudolf (Swank, Prof. R. L., and) : Production of Convulsions in Hamsters by High Butterfat Intake, 1214
Engelhardt, W. A. : Enzyme Chemistry (Enzymology and Mechanochemistry), 389
Engels, W. L. : Photoperiodism in Plants and Animals (Photoperiodic Responses in Birds), 536
Engineer : Modern Mathematics for the (edited by Prof. Edwin F. Beckenbach), *review* by Dr. R. K. Livesley, 979
  Solid-State Science for the, *review* by K. J. Pascoe, 1496
Engineer and Management (Sir Ewart Smith), 611
Engineering at Saskatchewan, 1178
Engineering : Electrical (General), (A. T. Dover, Dr. F. T. Chapman, Prof. F. Brailsford and Harley Carter), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
  Nuclear, 1106
Engineering (Chemical) : Pilot Plants, Models and Scale-up Methods in (Dr. Robert Edgeworth Johnstone and Prof. Meredith W. Thring), *review* by Prof. D. M. Newitt, 1094
Engineering (Chemical), in a University (Prof. P. V. Danckwerts), 811
Engineering (Chemical), European Federation of : Seventeenth Meeting (Symposium on the Organization of Chemical Engineering Projects), 1042, 1312
Engineering (Chemical) Projects : The Organization of (European Federation of Chemical Engineering Symposium on), 1042, 1312
Engineering (Chemical and Petroleum) Exhibition at Olympia, 1312
Engineering (Civil), at Nottingham, 455
Engineering (Civil), at Southampton, 87
Engineering (Mechanical), in the University of Western Australia, 86
Engineering (Mechanical) Research Board : Appointment of Vice-Admiral Sir Frank Mason as chairman, 1576
Engineering (Mechanical) Research Laboratory of the Department of Scientific and Industrial Research, East Kilbride : Open Days, 743
Engineering (Mining), and related Subjects : Scholarships in (British Overseas Mining Association Educational Trust), 1771
Engineering Applications of Automation : British Group for (Constitution of Section *A* of the British Conference on Automation and Computation), 672
Engineering Firms (Small) : Management Control of (L. Fontaine, J. W. Walker and W. R. Spencer), 1113
Engineering Materials : The Science of (edited by J. E. Goldman), *review* by K. J. Pascoe, 1496
Engineering Metals and Alloys : Industrial Failure of—a Symposium organized by the National Metallurgical Laboratory, 1953 (edited by Dr. B. R. Nijhawan), *review* by Prof. F. C. Thompson, 1498
Engineering Projects (Chemical) : The Organization of (European Federation of Chemical Engineering Symposium on), 1042, 1312
Engineering Structures at the Imperial College, 946
Engineering Structures : The Analysis of (Dr. A. J. S. Pippard and Dr. J. F. Baker), third edition, *review* by Prof. W. F. Cassie, 1498
Engineering Thermodynamics—Work and Heat Transfer (G. F. C. Rogers and Y. R. Mayhew), *review* by Dr. J. H. Horlock, 1028
Engineers (British Agricultural), Institution of : Bursaries, 885
Engineers (Chemical) : Output of, in Britain, 1382
Engineers (Chemical), Institution of : Moulton Medal awarded to W. D. Armstrong, H. H. Rosenbrock and W. L. Wilkinson, 1312
  Junior Moulton Medal for 1957 awarded to Dr. D. Train, 1312
  Presidential Address (Sir Hugh Beaver), 1375
Engineers (Chemical), Institution of, in co-operation with the Chemical Engineering Group of the Society for Chemical Industry : Proceedings of the Symposium on the Scaling-up of Chemical Plant and Processes, 1769
Engineers (Civil), Institution of : Fourth Graham Clark Lecture (Sir Ewart Smith), 611
Engineers (Electrical), Institution of : Chairman's Address to the Supply Section, Too Much and Too Little (Prof. M. G. Say), 321
  Faraday Lecture for 1957-58 (the late G. H. Fletcher, delivered by R. Ledger), 387
  International Convention of Microwave Valves, 673, 1378
  Kelvin Lecture (Sir Harry Melville), 1045
  Symposium on Long-Distance Radio Propagation above 30 Mc./s., 1184
Engineers (Mechanical), Institution of : International Discussion on Lubrication and Wear, *correction*, 161
  Management Control of Small Engineering Firms (L. Fontaine, J. W. Walker and W. R. Spencer), 1113
Engineers (Mining), Institution of : Election of T. A. Rogers as president for 1959-60, 1378
Engineers (Professional) Appointments Bureau : Report for 1957, 1309
England and France : The Adoption of Inoculation for Smallpox in (Dr. Genevieve Miller), *review* by Dr. W. R. Bett, 1690
England (South-East of) : Conserving Wild Life and Amenities in the (South-Eastern Union of Scientific Societies Conference on), 315
England (South-Eastern) : Conservation of Nature in (South-Eastern Union of Scientific Societies Conference on), 743, 1446
England and Wales : Population Statistics for, 1573
  Statistical Review of, for the Year 1956, Part 2, Tables, Civil (Registrar General), 1573
Engler, R. (Schramm, Prof. G., and) : The Latent Period after Infection with Tobacco Mosaic Virus and Virus Nucleic Acid, 916
English Folk-lore : A Survey of (J. M. Dodgson), 1769
English Folklore Survey : Questionnaire No. 8, The Folklore of Birds, 672
English Lake District : Accumulation of Radioactive Fall-out by Plants in the (Eville Gorham), 1523
Enhanced Tonicity : Substrate-Selective Inhibition of Mitochondrial Oxidations by (Diane Johnson and Prof. Henry Lardy), 701
Enhancement of Mouse-virulence of Group *A* Streptococci by Bactericidal Resorcinols (John Cameron), 919
Enigmatic Eddington, *review* by Prof. W. H. McCrea, 214
Enrichment (Germanium), in Lignites from the Lower Lias of Dorset (A. Hallam and K. W. Payne), 1008
Enrichment (Isotope), in a Continuous Feed Process (A. E. Bainbridge and Dr. A. T. Wilson), 1729 ; (Prof. S. Tolansky), 1730
Entamoeba histolytica : Size Variation in (L. Freedman and Dr. R. Elsdon-Dew), 433
Entomologia Experimentalis et Applicata, Vol. 1, No. 1, 1040
Entomology at McGill, 455
Entomology : Annual Review of (edited by Edward A. Steinhaus in association with Ray F. Smith), Vol. 3, *review* by Dr. P. T. Haskell, 1756
Entomology in Review, *review* by Dr. P. T. Haskell, 1756
Entomology in World War II : History of (Emory C. Cushing), *review* by P. F. Mattingly, 1234
Envelope (Polyethylene) : Fumigation under a (W. M. Graham and S. Kockum), 1675
Environment : Alpha-Ray Activities of Humans and their (R. C. Turner, J. M. Radley and Prof. W. V. Mayneord), 518
Environment (Planktonic), of the Herring (R. S. Glover), 1575
Environment (Uterine) : An Effect of the, upon Skeletal Morphology in the Mouse (Dr. Anne McLaren and Dr. Donald Michie), 1147
Environment (West African) : The Development of the (Second Inter-territorial Conference of the West African Science Association), 1580
Environmental Conditioning of Flax (Dr. A. Durrant), 928
Environmental Conditions : Reduction of Low-Temperature Injury to Stored Apples by Modulation of (W. Hugh Smith), 275
Environmental Temperature (Elevated) : Effects of Clipping and Spraying on various Homoeothermic Responses of Rabbits at an (Dr. Harold D. Johnson, Chu Shan Cheng and A. C. Ragsdale), 842
Enzymatic Abnormality in Erythrocytes of a Population Sensitive to *Vicia faba* or Haemolytic Anaemia induced by Drugs (Dr. A. Szeinberg, Dr. Ch. Sheba and A. Adam), 1256
Enzymatic Cleavage and Synthesis of L-threo-β-Phenylserine and L-erythro-β-Phenylserine (Friedrich N. Bruns and Liselore Fiedler), 1533
Enzymatic Degradation of Urocanic Acid : Intermediate Products in the (Studies of Urocanic Acid), (Robert H. Feinberg and Prof. David M. Greenberg), 897
Enzymatic Dehydrogenation of Hydroxypurines and Hydroxypteridines (Dr. Josef Fellig and Christine E. Wiley), 51
Enzymatic Formation of Aminomalonic Acid from Ketomalonic Acid (Hideo Nagayama, Michiko Muramatsu and Dr. Kensuke Shimura), 417
Enzymatic Hydrolysis of Indoleacetonitrile (Prof. Kenneth V. Thimann and S. Mahadevan), 1466
Enzymatic Interaction of Histamine and Coenzyme I : Formation of Histamine-containing Dinucleotides by (Dr. Spyridon G. A. Alivisatos), 271
Enzymatic Transamination : Role of Ferrous Iron in (M. V. Patwardhan), 187
Enzyme (*R*-) : Heterogeneity of (I. C. MacWilliam), 1143
Enzyme Changes in the Ageing Periosteum (Dr. E. A. Tonna), 486
Enzyme Chemistry : International Symposium on (Science Council of Japan, under the auspices of the International Union of Biochemistry), 389
Enzyme System of Pig Heart Muscle : Synthesis of Succinate from Acetate by an (Dr. D. D. Davies), 339
Enzyme Systems (Oxidative), in the Uterus and Vagina of the Rat : Localization of (Dr. Charles G. Rosa and Dr. Joseph T. Velardo), 348
Enzymes : International Commission on (Prof. O. Hoffman-Ostenhof and Prof. R. H. S. Thompson), 452
Enzymes in Brain Wounds : Deposition of Glycogen and Changes in some (Prof. Nobuo Shimizu and Dr. Yoriaki Hamuro), 781
Enzymes in the Ileal Juice of the Horse (Dr. F. Alexander and A. K. Chowdhury), 190
Enzymes of the Tricarboxylic Acid Cycle and Cytochrome Oxidase in the Fat Body of the Desert Locust (Dr. D. A. H. Hearfield and Dr. B. A. Kilby), 546
Enzymes (Bacterial) : Lysis of Fungal Mycelia by (Koki Horikoshi and Sigeji Iida), 917
Enzymic Synthesis of Coenzyme I in relation to Chemical Control of Cell Growth (Prof. R. K. Morton), 540
Enzymic Synthesis of Nitrogen-containing Disaccharides by α-Galactosyl Transfer (Dr. Winifred M. Watkins), 117
Enzymologists' 'Do-It-Yourself' Manual, *review* by Dr. Edwin C. Webb, 1431
Enzymology : Introduction to (Alan H. Mehler), *review* by Dr. Vincent, Massey, 1029
  Methods in (edited by Sidney P. Colowick and Nathan O. Kaplan). Vols. 3 and 4, *review* by Dr. Edwin C. Webb, 1431

Eosinophils and Reticulo-endothelial Cells : A Theory of Antibody Formation involving (Dr. Robert S. Speirs), 681
Eosinophils (Blood), and *Wuchereria bancrofti* Microfilariae : 24-Hr. Rhythms in, Before and After Δ^1-9α-Fluorocortisol (Rudolf Engel, Dr. Franz Halberg, W. L. P. Dassanayake and Justin de Silva), 1135
Ephemeris and Nautical Almanack (1958) : Indian, 314
Ephrussi, B. (Stern, C., and) : Genetic Aspect of Somatic Cell Variation (Wide Spectrum of Somatic Cell Variations), 1706
Epidemiology, *review* by Dr. Kenneth Newell, 800
  Principles of (Ian Taylor and John Knowelden), *review* by Dr. Kenneth Newell, 800
  Uses of (Dr. J. N. Morris), *review* by Dr. Kenneth Newell, 800
Epidermis : Occurrence of Sex Chromatin in the Basal Cells of the, and in Basal Cell Carcinomata (David J. B. Ashley), 427
Epidermis and Dermis : Junction of the (Betty M. Haines), 485
Epilepsy : Phenobarbitone Therapy in, 1377
Epileptic Seizures (Audiogenic), evoked in Rats by Artificial Epileptogenic Foci (Dr. Zd. Servít and J. Sterc), 1475
Epileptogenic Foci (Artificial) : Audiogenic Epileptic Seizures evoked in Rats by (Dr. Zd. Servít and J. Sterc), 1475
Epimorphic Regeneration during Hibernation (Timothy J. Hunt), 290
Epinephrine and related Compounds on Paper Chromatograms : Determination of (Dr. George L. Ellman), 768
Epinephrine and Norepinephrine : Influence of Metallic Ions on the Reaction of Ethylene Diamine with (Prof. Guy Ladeau, L. P. Joly and G. Sobolewski), 1061
Epitaxially Grown Films : Thickness Measurement of (Dr. O. S. Heavens and D. C. Pandeya), 1394
Epithelium (Human Amnion) : Sex Chromatin in Polyploid Nuclei of (Harold P. Klinger and Hans G. Schwarzacher), 1150
Epithelium (Non-Epidermal Stratified Squamous) : The Dendritic Cell System and Mast Cells in (Dr. L. O. Zwillenberg), 1343
Epithelium (Oral) : Sudanophil Inclusions in Ameloblasts, Odontoblasts and Cells of the (Prof. J. T. Irving), 569
Epps, F. J. : Conservation of Nature in South-East England, 1446
  South-Eastern Union of Scientific Societies, 1707
Epstein, Dr. H. (Faulkner, D. E., and) : The Indigenous Cattle of the British Dependent Territories in Africa (Colonial Advisory Council of Agriculture, Animal Health and Forestry, Publication No. 5), 1581
Epstein, Dr. M. A. : Structural Differentiation in the Nucleoid of Mature Vaccinia Virus, 784
  Composition of the Rous Virus Nucleoid, 1808
Equator (Magnetic): Ionospheric Drift in the F2 Region near the (Dr. B. W. Purslow), 35
Equatorial Bulge (Earth's) : Effect of the, on the Life-time of Artificial Satellites and its Use in Determining Atmospheric Scale-Heights (Dr. G. V. Groves), 1055
Equatorial Indian Ocean Cores : Diatoms from (N. Ingram Hendey), 953
Equatorial Latitudes: Horizontal Ionospheric Drifts in the *F*2-Region at (Dr. B. Ramachandra Rao and E. Bhagiratha Rao), 1612
Equatorial Spread-*F* and Magnetic Activity (A. J. Lyon, N. J. Skinner and Dr. R. W. Wright), 1724
Equilibrium (General Static) : The Theory of (Prof. Eraldo Fossati), edited by Prof. G. L. S. Shackle, *review* by Prof. R. G. D. Allen, 1027
Equipment : Hot Laboratories and (Seventh Conference on), 1771
Erasmus, Dr. David A. : Use of Electronic Flash in Photomicrography, 1290
Ergonomics Research Society : Conference on Problems of Training, 949
Erosion (Bat), as a Factor in Cave Formation (W. A. King-Webster and J. S. Kenny), 1813
Error : Statistical Theory, the Relationship of Probability, Credibility and (Prof. Lancelot Hogben), *review* by I. J. Good, 1687
Error (A Possible Source of), in the Chemical Detection of Indolyl Acetic Acid in Plants (R. Nichols), 919
Error (Volumetric) : Microdiffusion Analysis and (Prof. Edward J. Conway), fourth edition, *review* by E. I. Johnson, 1029
Erskine, D. G. : Appointed veterinary research officer, Federation of Nigeria, 459
Erysiphe polygoni DC. : Control of Turnip and Cabbage Mildew, by Zinc (Dr. J. A. Tomlinson and M. J. W. Webb), 1352
Erythrocyte (Rabbit) *in vivo:* Adenosine Triphosphate Metabolism in the (Dr. Bertram A. Lowy, Dr. Bracha Ramot and Dr. Irving M. London), 324
Erythrocyte Membranes : Physicochemical Investigations of (A. Teitel and N. Marcus), 714
Erythrocyte Potassium and Sodium in the Possum, *Trichosurus vulpecula:* Variations in the (Jennifer M. Barker), 492
Erythrocytes : Species Differences in Pyridine Nucleotide Synthesis by (P. G. Tulpule), 1804
Erythrocytes in Hyperthyroidism : Sodium Content of (Dr. W. A. Boekelman), 1136
Erythrocytes of a Population sensitive to *Vicia faba* or Haemolytic Anaemia induced by Drugs : Enzymatic Abnormality in (Dr. A. Szeinberg, Dr. Ch. Sheba and A. Adam), 1256
Erythrophagocytosis in Cancer-bearing and Lymphoma-bearing Mice (Ruth V. Ponder and Dr. Eric Ponder), 1537
Erythropoiesis in Nephrectomized Dogs (Dr. J. P. Naets), 1134
Erythropoietic Fraction from the Plasma of Rabbits made severely Anaemic with Phenylhydrazine : Isolation of an (Peter H. Lowy, Geoffrey Keighley, Henry Borsook and Ashton Graybiel), 1802
Erythropoietin in Bone Marrow Suspensions: Assay of (Leslie R. Schroeder, Clifford W. Gurney and Nancy Wackman), 1537
Esaki, Prof. Teiso, and others : Insects of Micronesia, Vol. 2 (Bernice P. Bishop Museum, Honolulu), 818
Escape Responses of Herbivorous Gastropods when Stimulated by Carnivorous Gastropods (W. C. Clark), 137
Escherichia coli: Bactericidal Activity of Macrophages *in vitro* against (Dr. D. Rowley), 1738
  Distribution of Tritium-labelled Thymidine in, during Cell Multiplication (Dr. R. B. Painter, F. Forro, jun., and W. L. Hughes), 328
  Reversal of Thymine Xyloside Inhibition in, by Glutathione (Prof. Thomas D. Brock), 269
E. coli infected with *T*2 Phage : Effect of Chloramphenicol on Ribonucleic Acid Metabolism in (Prof. Itaru Watanabe, Dr. Yukio Kiho and Dr. Kin-ichiro Miura), 1127
Eskola, Prof. Pentti : Awarded the Wollaston Medal for 1958 of the Geological Society of London, 159
Essay Subjects for *Endeavour* Prizes of the British Association for the Advancement of Science, 885
Essen, Dr. L., and others : Variation in the Speed of Rotation of the Earth since June 1955, 1054
Ester, B 518-ASTA (Cyclic Nitrogen Mustard Phosphamide) : Chemotherapeutic Action of a, in Experimental Tumours of the Rat (Herbert Arnold, Friedrich Bourseaux and Norbert Brock), 931
Esterase (β-Glucuronidase, Lipase and), in the Testis of the Cryptorchid Rat (Dr. Masando Hayashi, Kazuhiro Ogata, Takuro Shiraogawa and Osamu Kawase), 186
Esterase (Serum), in Carcinoma : Effect of Heparin on Pathologically Decreased (Dr. J. Skořepa, S. Novák and H. Todorovičová), 908
Esterases (Blood Plasma) : Electrophoretic Separation and Classification of (Dr. Klas-Bertil Augustinsson), 1786
Estimates, Select Committee on : Fifth Special Report from the, Session 1956-57, 655
Estimation of C21 17 : 20-Dihydroxy-20-methyl Steroids : Separation, Detection and (Dr. R. I. Cox), 638
Estimation of Electron Affinities of Oxygen by Extrapolations of Ionization Potentials (Dr. D. F. C. Morris and H. N. Schmeising), 469
Estimation of Hydrogen Peroxide in Culture Media (E. J. K. Penikett and Dr. A. J. Lister), 1682
Estimation (Immunological), of a Component of Complement (Dr. H. A. Ellis and P. G. H. Gell), 1667
Estimation (Micro), of Urea (D. Watson and D. A. H. Pratt), 1475
Etch Figures in Lead : 'Sub-Grains' and (E. J. Hooker), 180
Etch Figures on Sodium Chloride Crystals (B. Jeszenszky), 559
Etherington, Dr. I. M. H. : Awarded the Keith Prize for 1955-57 of the Royal Society of Edinburgh, 673
Ethionine : Protein Degradation of Foetal and Cancer Tissues in the Presence of (Dr. Renzo Rendi), 351
8-Ethoxycaffeine and Argon : Effect of a Combined Treatment with, on the Roots of *Vicia faba* (Effect on Radiosensitivity of Inert Gases), (John Read), 616
Ethyl Methane Sulphonate : Increased Rate of Plaque-type and Host-range Mutation following Treatment of Bacteriophage *in vitro* with (Dr. Anthony Loveless), 1212
Ethylene Bromide with Trimethylamine : Reaction of, and the Neuromuscular Blocking Activity of Ethylene*bis*-(Trimethylammonium), (Dr. Allan P. Gray and Thomas B. O'Dell), 634
Ethylene Diamine with Epinephrine and Norepinephrine : Influence of Metallic Ions on the Reaction of (Prof. Guy Ladeau, L. P. Joly and G. Sobolewski), 1061
Ethylene-diamine-tetra-acetic Acid : Maceration of Plant Tissues with (Dr. D. S. Letham), 135
Ethylene Dibromide : Action of, on Hen Gonadotrophic Hormones (Dr. Eugenia Olomucki), *erratum*, 459
Ethylene*bis*-(Trimethylammonium) : Reaction of Ethylene Bromide with Trimethylamine and the Neuromuscular Blocking Activity of (Dr. Allan P. Gray and Thomas B. O'Dell), 634
Eton College Natural History Society : Report for 1955-57, 1639
Eucalyptus: Effect of Gibberellic Acid on Species of (G. Scurfield and C. W. E. Moore), 1276
Euglenineae (Flagellata) : Mitosis and Chromosome Numbers in the (Gordon F. Leedale), 502
Europa (Nord- und Mittel-) : Flora von (Friedrich Hermann), *review* by Prof. T. G. Tutin, 972
Europe : Designs for (Political and Economic Planning, Broadsheet No. 414), 1163
Europe and Africa : Distribution of Electrophoretically Different Haemoglobins among some Cattle Breeds of (A. D. Bangham and B. S. Blumberg), 1551
European Brewery Convention : Seventh Report of the Barley Committee, 1515
European Commission on Agriculture (Sub-Commission on Land and Water Use) : Report of the First Session of the Working Party on Consolidation of Fragmented Holdings (Lisbon, 1956) ; Report of the Second Session (Vienna, 1957), 1114
European Committee on Radiobiology, and others : International Congress of Radiation Research, 1444
European Corn Borer, *Pyrausta nubilalis* (Hbn.) : Importance of Photoperiod and Temperature in Inducing Diapause in the (J. A. Mutchmor and Dr. W. E. Beckel), 204
European Economic Co-operation, Organization for : Setting up of a special Office of Scientific and Technical Man-power, 1572
  Appointment of Dr. Alexander King as director of the Office of Scientific and Technical Man-power, 1572
European Economic Co-operation, Organization for (European Productivity Agency) : Project No. 199, Land Consolidation, 1114
  Project No. 212, Control of Pests in Stored Agricultural Products with special reference to Grain (Dr. J. A. Freeman), 1639
European Federation of Chemical Engineering : Seventeenth Meeting (Symposium on the Organization of Chemical Engineering Projects), 1042, 1312
European Free Trade : Technological Advance and, 1163
European Interchange Scheme for Research Students (Department of Scientific and Industrial Research), 1770
European Nuclear Energy Agency : White Paper on the, 952
European Organization for Nuclear Research : Appointments, 87
  Election of François de Rose as president, 87
  Laboratories of the, 670
  Second Annual Report (1956), 747
  International Conference on High Energy Physics (1958), 884
European Productivity Agency of the Organization for European Economic Co-operation : Project No. 199, Land Consolidation, 1114
  Project No. 212, Control of Pests in Stored Agricultural Products with special reference to Grain (Dr. J. A. Freeman), 1639
European (North and Central) Flora, *review* by Prof. T. G. Tutin, 972
Eustatic Rise in Ocean-Level : Radiocarbon Dating of the (Dr. H. Godwin, R. P. Suggate and Dr. E. H. Willis), 1518
Eutectic Reaction (Stable), in Magnesium-treated Iron Castings : Promoting the, by Vibration during Solidification (J. H. Gittus), 1004
Evans, Dr. D. G. : Appointed director of the Division of Biological Standards at the National Institute for Medical Research, 673
Evans, Dr. David S. : Explorer (Satellite 1958α) over Africa, 1173

Evans, Dr. H. J., and others : Mitotic Delay in Irradiated Roots of *Vicia faba*—the Effect of Oxygen, 1083
Evans, I. : Mechanical Properties of Non-Metallic Brittle Materials (The Action of Wedge-type Tools), 1579
Evans, I., and Murrell, S. A. F. : Mechanical Properties of Non-Metallic Brittle Materials (The Entry of a Wedge into Coal specimens with One Free Face), 1579
Evans, I., and Pomeroy, C. D. : Mechanical Properties of Non-Metallic Brittle Materials (Random Variability of the Strength of Coal in Uniaxial Compression), 1577
Evans, Dr. J. : Fundamental Principles of Transistors, *review* by Dr. J. R. Tillman, 1168
Evans, Dr. J. V. : The Transition from the Ionosphere to Interplanetary Space, 1237
Evans, Prof. R. H. : Mechanical Properties of Non-Metallic Brittle Materials (Properties of Concrete and other Building Materials when subjected to Rapid Rates of Loading), 1578
Evans, Robert L. : Cardiac Output and Central Pressure Data, 1471
Evans, Dr. R. M. : Newer Preparative Methods in Organic Chemistry (Dehydrogenation with Manganese Dioxide), 239
Evans, W. J. : Appointed assistant conservator of forests, Northern Nigeria, 459
Evaporation from Natural Surfaces : An Instrument for measuring (R. J. Taylor and A. J. Dyer), 408
Evaporation (Simultaneous), of Platinum and Carbon for Possible Use in High-Resolution Shadow-Casting for the Electron Microscope (D. E. Bradley), 875
Eve : The Three Faces of (Corbett H. Thigpen and Hervey M. Cleckley), *review by* Dr. Clifford Allen, 5
Everett, Prof. D. H. : Industrial Carbon and Graphite, 674
Evidence from a Dwarf Pea Bioassay for Naturally Occurring Gibberellins in the Growing Plant (A. J. McComb and Prof. D. J. Carr), 1548
Evidence for a Protein Component in the Middle Lamella of Plant Tissue—a Possible Site for Indolylacetic Acid Action (V. Z. Ginzburg), 398
Evidence (Immunoelectrophoretic), for the Presence of Two Precipitating Antibodies in Serum following Infection with the Virus of Foot-and-Mouth Disease (Dr. F. Brown), 1130
Evolution : A Hundred Years of (Dr. G. S. Carter), *review* by Prof. L. A. Harvey, 1296
  Retrospect on, *review* by Prof. L. A. Harvey, 1296
  Theories of, *review* by T. H. Hawkins, 1364
Evolution number of *Antiquity*, to commemorate the Darwin—Wallace Centenary, 812
Evolution of Insect Communication : Interaction between Consecutive Responses in a Hemileucid Moth, and the (A. D. Blest), 1077
Evolution of Living Things (Prof. H. Graham Cannon), *review* by T. H. Hawkins, 1364
Evolution of Man : Vision and the, *review* by Prof. R. W. Pickford, 1429
Evolution of the Primates, *review* by Sir Wilfrid Le Gros Clark, 1165
Evolution of Sex in the Flowering Plants of South Australia (P. A. Parsons), 1673
Evolution (Chromosomal), in the Podocarpaceae (Dr. J. B. Hair and E. J. Beuzenberg), 1584
Evolution and the Common Man, 1649
Evolution and Organization, *review* by Dr. J. M. Thoday, 1025
Evolution Process : A Logarithmic Time Scale for the (G. F. Phillips), 1652 ; (Sir Julian Huxley), 1653
Ewald, Prof. P. P. : Elected a Fellow of the Royal Society, 881
Ewe : Gestational Changes in Connective Tissue in the (Dr. E. G. Bassett), 196
Ewes : Transfer of Sheep Keds, *Melophagus ovinus* (L.), from, to their Lambs (W. A. Nelson), 56
Ewins, Dr. A. J. : *Obituary* by Dr. F. Hawking, 310
Exact Sciences in Antiquity (Dr. O. Neugebauer), second edition, *review* by Dr. A. Armitage, 1097
Examination of Cellulose Fibre by the Low-Temperature Specimen Method of Electron Diffraction and Electron Microscopy (Goro Honjo and Masaru Watanabe), 326
Exchange : Facilitated Diffusion and, in the Absorption of Glucose by the Locust, *Schistocerca gregaria* (Forsk.), (J. E. Treherne), 1280
Exchange of Information on Controlled Thermonuclear Reactions (United States—United Kingdom Conference on), 386
Exchange of Technical Information, 1111
Exchange (Radiation-induced Chromosome) : Inaccuracies of Anaphase Estimation of (Dr. J. M. Thoday), 932
Exchange Visits with the Soviet Union, 947
Excited Rare Gas Atoms : Measurement of Low Vapour Concentrations by Collision with (Dr. J. E. Lovelock), 1460
Excited Species (Electronically) : Structure and Reactivity of (Physical Chemistry Division of the Chemical Institute of Canada Symposium on), 320
Excretion of 17-Ketogenic Steroids in Subjects with Complete Transverse Lesions of the Spinal Cord (R. Robinson), 484
Excretion (Vanillic Acid), during Stress (P. Smith and A. M. H. Bennett), 709
Exercise (Muscular), and Adrenal 17-Hydroxycorticosteroid Secretion in Dogs (Prof. T. Suzuki, K. Yamashita and T. Mitamura), 715
Exhibition : Chemical and Petroleum Engineering, at Olympia, 1312
Exhibition presenting the Life and Work of Sir William Siemens (Science Museum, London), 741
Exhibition of Scientific Instruments and Apparatus (Physical Society), 673 ; Handbook of, 743
Exhibition, Brussels Universal and International : Opening of the, 1179
Exhibition, Brussels Universal and International (Postal and Telecommunications Group) : International Conference on Solid State Phenomena in Electronics and Telecommunications, 813
Existence : Science and (Alan Richardson), *review* by T. H. Hawkins, 517
Existence (Possible), of Anti-Matter in Bulk (Philip J. Wyatt), 1194
Exothermic Reaction of Metakaolin between 950° and 1,000° C. (Thaisa Demediuk and W. F. Cole), 1400
Exotic Trees in Great Britain (James Macdonald, R. F. Wood, M. V. Edwards and J. R. Aldhous), (Forestry Commission, Bulletin No. 30), 747
Expansion of Universities in Britain, 600
Expedition : British North Greenland, 1952-54—Scientific Results (R. A. Hamilton), 1030
Expedition to Southern Chile (Royal Society, in co-operation with the Royal Society of New Zealand), 949
Experiment on Bird Orientation : Repetition of an (Klaus Hoffmann), 1435
Experiment into the Freezing of Fish at Sea : Report on an (White Fish Authority), 817
Experiment on the Interaction between a Plane Shock and a Magnetic Field (Dr. K. Dolder and Dr. R. Hide), 1116
Experimental Allergic Encephalomyelitis : Acquired Resistance to (I. A. Svet-Moldavskaya and G. J. Svet-Moldavsky), 1536
Experimental Design for Three Factors at Three Levels (Robert M. De Baun), 209
Experimental Production of Liver Cancer : Effects of certain Compounds related to Trypan Blue on the (Dr. K. Fujita, T. Mine, T. Ito and M. Matsuyama), 1732
  Inhibiting Effect of Chlorpromazine on the (Dr. K. Fujita, S. Iwase. T. Ito and M. Matsuyama), 54
Experimental Production of a Polymorphic Population : Effects of Disruptive Selection—the (Dr. J. M. Thoday), 1124
Experimental Purposes : Rearing Newts in the Laboratory for (Dr. David D. Williams), 933
Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions (Royal Society Discussion on), 238, 803
Experimental Stress : Cardiac Damage caused by (E. Mascitelli-Coriandoli, R. Boldrini and Dr. C. Citterio), 1215
Experimental Studies of Diffusion in Liquid Systems : Some Recent (Prof. H. S. Harned), 240
Experimental Suppression of the Early Inflammatory Phenomena of Turpentine Pleurisy in Rats (W. G. Spector and D. A. Willoughby), 708
Experimental Teratogenesis : Insulin—Cortisone Relationship in (Dr. J. W. Millen and Dr. D. H. M. Woollam), 418
Experimental Tumours of the Rat : Chemotherapeutic Action of a Cyclic Nitrogen Mustard Phosphamide Ester (B 518-ASTA) in (Herbert Arnold, Friedrich Bourseaux and Norbert Brock), 931
Experiments on Photoperiodism : Use of Fluorescent Lighting for (Dr. J. W. L. Beament and Dr. A. D. Lees), 1443
Experiments (Biological) : Machines as Models in (Dr. W. Grey Walter), 1187, 1444
Explanted Tissues : An Attempt to adapt, to an Anticonvulsant ('Trimedal') and to Phenobarbital (E. Holečková and Dr. Z. Servít), 1541
Exploration : Space Research and (edited by Prof. D. R. Bates, in association with Patrick Moore), *review*, 1299
Exploration du Parc National Albert : Fasc. 3, Biotopes de Haute Altitude Ruwenzori, I (J. Heinzelin et H. Mollaret), 19
Exploration of Space by Radio (R. Hanbury Brown and Prof. A. C. B. Lovell), *review* by Dr. F. G. Smith, 1562
Explorer (Satellite 1958*a*) over Africa (Dr. David S. Evans), 1173
Explosions : Stellar, *review* by Prof. Zdenek Kopal, 1688
Explosive Materials : Surface Hardness of, by Micro-indentation (Dr. G. Todd and E. Parry), 260
Exposure (Brief), of Adults to a High Temperature : Prolongation of the Life of *Drosophila subobscura* by (J. Maynard Smith), 496
Express Contents, No. I (Consultants Bureau, Inc., New York), 1509
Extension of Primary Cell Walls : Mechanism of Deposition and (G. Setterfield and S. T. Bayley), 530
Extracellular Products in Pure Cultures of a Brown Alga (Dr. G. R. Fogg and G. T. Boalch), 789
Extraction of Helium from Gas Mixtures (K. B. McAfee), 1639
Extractive Components (Decay-retardant) : Nature of some, in Incense Cedar Heartwood (*Libocedrus decurrens* Torrey), (Arthur B. Anderson, Eugene Zavarin and Theodore C. Scheffer), 1275
Extracts of Ovaries of Laying Hens : Presence of Œstrone, Œstradiol and Œstriol in (D. S. Layne, Prof. R. H. Common, W. A. Maw and R. M. Fraps), 351
Extracts of Rat Liver : Thyroxine Metabolism by (Lawrence G. Plaskett), 273
Extraordinary Hall Effect : Spin-Orbit Coupling and the (Dr. C. Strachan and A. M. Murray), 1260
Extrapolations of Ionization Potentials : Estimation of Electron Affinities of Oxygen by (Dr. D. F. C. Morris and H. N. Schmeising), 469
Extreme Temperatures (Two) : Effect of, on Growth and Tail-length of Mice (Dr. M. A. El-R. Ashoub), 284
Extremely High Temperatures (Electronics Research Directorate, Air Force Cambridge Research Center, Bedford, Mass., Conference on), 1380
Exudate (Root) from a Resistant Host : A Change of Pathogenic Race in *Fusarium oxysporum* f. *pisi* induced by (E. W. Buxton), 1222
Eye' ('Roving) : An Improved (T. Worswick and G. W. H. Larkby), 1046
Eye Goddess : The (Dr. O. G. S. Crawford), *review* by Prof. E. O. James, 969
Eye Lens Proteins (Bovine) : N-Terminal Amino-acids of (H. Bloemendal and Prof. G. Ten Cate), 340
Eyles, Joan M. : Scientific Centenaries of 1958, 9
Eyles, Dr. V. A. : Theophrastus on Stones, *review*, 1686
Eyring, H. : Structure and Reactivity of Electronically Excited Species, 321
Eyster, Dr. Clyde : Chloride Effect on the Growth of *Chlorella pyrenoidosa*, 1141

F2-LAYER of the Ionosphere : Solar-Flare Effect in the (C. M. Minnis and G. H. Bazzard), 690
F2-Region at Equatorial Latitudes : Horizontal Ionospheric Drifts in the (Dr. R. Ramachandra Rao and E. Bhagiratha Rao), 1612
F2 Region near the Magnetic Equator : Ionospheric Drift in the (Dr. B. W. Purslow), 35
Fabre, R. : Appointed president of the French National Committee of Biochemistry, 1444
Face-Cult : The, *review* by Prof. E. O. James, 969
Faces of Eve : The Three (Corbett H. Thigpen and Harvey M. Cleckley), *review* by Dr. Clifford Allen, 5
Facial Nerve : A Histoautoradiographic Study of the Effect of Section of the, on the Uptake of Methionine-$_{35}$S by the Cells of the Facial Nerve Nucleus (J. Fischer, Z. Lodin and Dr. J. Koloušek), 341
Facial Nerve Nucleus : A Histoautoradiographic Study of the Effect of Section of the Facial Nerve on the Uptake of Methionine-$_{35}$S by the Cells of the (J. Fischer, Z. Lodin and Dr. J. Koloušek), 341
Facilitated Diffusion and Exchange in the Absorption of Glucose by the Locust, *Schistocerca gregaria* (Forsk.), (J. E. Trehetne), 1280
Factor determining their Affinity for Collagen : Molecular Weight of Condensed Tannins as a (Dr. David G. Roux), 1793

Factor in Cave Formation : Bat Erosion as a (W. A. King-Webster and J. S. Kenny), 1813
Factor of Development in Undeveloped Countries : Power as a (Eleventh Sectional Meeting of the World Power Conference), 1502
Factor I : Absence of γ-Aminobutyric Acid from Brain Extracts containing (Dr. H. McLennan), 1807
Factor (Globulin Permeability) : Distribution of, and its Inhibitor in the Tissue Fluid and Lymph of the Guinea Pig (Prof. A. A. Miles and D. L. Wilhelm), 96
Factor (Lethal), of Diphtheria Toxin: Isolation of the, by Electrophoresis in Starch Gel (Dr. M. D. Poulik and E. Poulik), 354
Factor (Permeability), in Plasma : Activation of a, by Contact with Glass (Dr. J. Margolis), 635
Factories, Chief Inspector of : Annual Report for 1956 (Ministry of Labour and National Service), 1023, 1043
Factories (Cigarette) : Smoking Habits and Mortality among Workers in (Dr. R. A. M. Case), 84
Factors : Muscle-Relaxing (J. R. Bendall), 1188
Factors (Antitumour) : Passive Transfer of, through Milk in Rats (Prof. B. Sekla), 1600
Factors (Person) : The General Relationship between Test Factors and—Application to Preference Matrices (Patrick Slater), 1225
Factors (Test), and Person Factors : The General Relationship between—Application to Preference Matrices (Patrick Slater), 1225
Factors (Three), at Three Levels : An Experimental Design for (Robert M. De Baun), 209
Factory Floor : Ageing on the (F. Le Gros Clark), 744
Fahmy, Dr. Myrtle J. (Fahmy, Dr. O. G., and) : Use of 'Brood Patterns' in Research on Chemical Mutagens, 755
Fahmy, Dr. O. G., and Fahmy, Dr. Myrtle J. : Use of 'Brood Patterns' in Research on Chemical Mutagens, 755
Failure of the Agglutination Test to Identify Types of *Pasteurella multocida* (Dr. G. R. Carter), 1138
Failure (Industrial), of Engineering Metals and Alloys—a Symposium organized by the National Metallurgical Laboratory, 1953 (edited by Dr. B. R. Nijhawan), *review* by Prof. F. C. Thompson, 1498
Fairbairn, Dr. D. : Glucose, Trehalose and Glycogen in *Porrocaecum decipiens* Larvae, 1593
Fairbairn, Dr. W. M. : Resignation as lecturer in mathematics at the University of Glasgow, 459
Faircloth, R. L., and others : Use of Faradaic Rectification for the Study of Rapid Electrode Processes, 247
Falkenhagen, Prof. H., and Kelbg, Dr. G. : Interaction in Ionic Solutions (Extension of the Limiting-law Equations), 240
Fall-out (Radioactive) : Accumulation of, by Plants in the English Lake District (Eville Gorham), 1523
Fame : American Hall of, 87
Far East (Asia and the) : Regional Cartographic Conference for (1955, Mussoorie, India), Vol. 2, Proceedings of the Conference and Technical Papers (United Nations), 817
Far Ultra-violet : Similarities in the Characteristics of Solar Radiation at λ10.7 cm. and in the (C. M. Minnis and G. H. Bazzard), 1796
Faradaic Rectification : Use of, for the Study of Rapid Electrode Processes (Dr. G. C. Barker, R. L. Faircloth and A. W. Gardner), 247
Faraday : Importance of the, to Elemental Constants and Electricity Standards (A. G. McNish and Dr. R. D. Huntoon), 1194
Faraday Effect (Ionospheric) : Measurement of the, by Radio Waves reflected from the Moon (Fred B. Daniels and Siegfried J. Bauer), 1392
Faraday Lecture for 1957-58 of the Institution of Electrical Engineers (the late G. H. Fletcher, delivered by R. Ledger), 387
Faraday Society : General Discussion on Interaction in Ionic Solutions, 240
    Spiers Memorial Lecture (Prof. H. S. Harned), 240
    General Discussion on Configurations and Interactions of Macromolecules and Liquid Crystals, 673
    Marlow Medal and Prize for 1958 awarded to Dr. J. A. Pople, 1246
Faraday Society (Colloid and Biophysics Committee) : Discussion on the Structure and Physical Chemistry of Nucleic Acids and Nucleoproteins, 885
Faraggi, Henriette, et Tellez-Plasencia, H. (Gérard de Vaucouleurs, Jean Dragesco et Pierre Selme, avec la collaboration de) : Manuel de Photographie scientifique, *review* by J. Walton Siddorn, 798
Farm Livestock Research Centre of the Animal Health Trust (Dr. W. R. Wooldridge), 76
Farming History (G. E. Fussell), 536
Farner, Dr. D. S. : Photoperiodism in Plants and Animals (Day-length Controls a variety of Physiological Responses in certain Birds), 536
Faroe—Shetland Channel, 1927-1952 : Hydrography of the (Dr. John B. Tait), *review* by Dr. G. E. R. Deacon, 214
Farquharson, Dr. J. S. : *Obituary* by R. G. Veryard, 1766
Farquharson, Prof. R. F. : Appointed vice-president (medical), of the National Research Council of Canada, 312 : work of, 312
Farrar, Dr. Kathleen R., and others : Auxins in Immature Maize Kernels, 553
Farvis, W. E. J. : Elected a Fellow of the Royal Society of Edinburgh, 739
Fast and the Slow Contracting Muscles of the Mesothoracic Leg of the American Cockroach (*Periplaneta americana* L.) : Muscle Fibres of the (W. A. Smit), 1073
Fat Body of the Desert Locust : Enzymes of the Tricarboxylic Acid Cycle and Cytochrome Oxidase in the (Dr. D. A. H. Hearfield and Dr. B. A. Kilby), 546
Fat Synthesis : Separation of Carotenoid Synthesis from, in *Rhodotorula gracilis* by Diphenylamine (L. Slechta, O. Gabriel and Dr. O. Hoffmann-Ostenhof), 268
Fate of Spores of *Trichoderma viride* Pers. ex Fr. introduced into Soil (R. Caldwell), 1144
Fatehchand, R. : Visibility of Noise on Television Pictures, 1797
Fatty Acids (Lower) (C_1 to C_{10}) : Separation of the, by High-Voltage Paper Electrophoresis (Dr. D. Gross), 264
Faulkner, D. E., and Epstein, Dr. H. : The Indigenous Cattle of the British Dependent Territories in Africa (Colonial Advisory Council of Agriculture, Animal Health and Forestry, Publication No. 5), 1581
Faulkner, O. T. : *Obituary* by Dr. C. Y. Shephard, 1176
Faunules : Reptile (Donald Baird), 1575
Fawcett, Dr. C. H., and others: β-Oxidation of ω- (3-Indolyl) alkanecarboxylic Acids in Plant Tissues, 1387
Fay, P. S., and others : Determination of Orbital Characteristics of an Earth Satellite from Single-Station Radio-Transit Observations, 900
Feast, M. W., and others : Radial Velocities of Southern *B* Stars, 1116
Federal Research and Development Budget, Fiscal Years 1956, 1957 and 1958 (National Science Foundation, Federal Funds for Science, 6), 534
Federally Sponsored Scientific Research and Development : Government—University Relationships in (National Science Foundation, Washington), 1712
Federation of British Industries : Report of the Second National Conference between Industry and the Technical Colleges (1957), 370
    Conference on Nuclear Energy, 459
    Report of the Regional Conference on Industry and the Technical Colleges, organized by the Southern Regional Council of the F.B.I., in co-operation with the Southern Regional Council for Further Education, 1573
    Forty-first Annual Report (1957), 1769
Federation of Malaya (Government of the), and Unesco : Symposium on Phytochemistry, 466
Federation of Prestressing, International : Third Congress, 673
Feed Process (Continuous) : Isotope Enrichment in a (A. E. Bainbridge and Dr. A. T. Wilson), 1729 ; (Prof. S. Tolansky), 1730
Feilberg, C. S. : Appointed assistant conservator of forests, Northern Nigeria, 459
Feinberg, J. G., and others : Agar as Specimen Carrier in Double-Beam Infra-Red Spectroscopy, 763
Feinberg, Dr. R. : Photoelectric Response of Selenium-type Photovoltaic Cells to X-Rays, 1057
Feinberg, Robert H., and Greenberg, Prof. David M. : Studies of Urocanic Acid—Intermediate Products in the Enzymatic Degradation of Urocanic Acid, 897 ; Dye Reduction by a Metabolite of Urocanic Acid, 898
Fellig, Dr. Josef, and Wiley, Christine E. : Enzymatic Dehydrogenation of Hydroxypurines and Hydroxypteridines, 51
Fellowship in Chemistry : Ramsay Memorial, 459
Fellowships (City and Guilds of London Institute), 884
Fellowships for 1958-59 (National Science Foundation, Washington), 1377
Fellowships : Carlsberg-Wellcome Travelling Research (Awards for 1958-59), 743
    Commonwealth Fund (Awards for 1958-59), 1181
    Home Civil Service (Commonwealth Fund Awards for 1958-59), 1181
    André Mayer (Food and Agriculture Organization of the United Nations), 1110
    Mond Nickel, 458
    Oversea Civil Service (Commonwealth Fund Awards for 1958-59), 1181
    Research (Extension of the Imperial Chemical Industries Scheme), 159
    Research (Life Insurance Medical Research Fund of Australia and New Zealand), 1110
    Travelling (Life Insurance Medical Research Fund of Australia and New Zealand), 1110
    Wilmot Breeden, 812
Fellowships for Medical Research : Beit, 1507
Fellowships for Scientific Research : Beit, awarded to F. J. J. Clarke and D. G. Watts, 1444
Fellowships (Grants, Scholarships or), for research on Diseases of the Blood, with special reference to Leukaemia (Lady Tata Memorial Fund), 458
Fellowships (Research), and Grants (Leverhulme Trust Awards), 1442
Fels, Dr. I. Gordon, and others : Relative Instability of Chlorpromazine in *N* Alkali, 1266
Feltham, Dr. P. : Vacancies and other Point Defects in Metals and Alloys (Analysis of New Results for the Creep of Copper between 400 and 750° C.), 451
Felting Lustre Mutant Fleece-type in the Australian Merino Sheep : A Dominant (Dr. B. F. Short), 1414
Female Gonads in the Cyprinodont, *Lebistes reticulatus* R. : Masculinizing Action of Pregneninolone on (Dr. T. Mohsen), 1074
Female House-Flies (*Musca domestica* L.) : Survival Curves for Male and (Morris Rockstein and Harry M. Lieberman), 787
Females (Mated and Unmated), of an African Strain of *Aedes aegypti* : Biting Behaviour of (M. M. J. Lavoipierre), 1781
Femurs : Organic Composition of Bone—Localization of Isocitric Dehydrogenase in (Robert Van Reen and Fred L. Losee), 1543
Fenner, Prof. F. J. : Elected a Fellow of the Royal Society, 881
Fenning, F. W. : Nuclear Reactors for Research, *review*, 984
Fenning Island Nature Reserve (Nature Conservancy,) 1379
Fenton, Dr. A. G., and others : Effective Magnetic Meridian for Cosmic Rays, 34
    A Survey of the Cosmic-Ray Nucleonic Component along 145° East Longitude using an Airborne Monitor, 1155
Fermentation : Pasteur's Work on, and its Significance for Present-day Studies in Biochemistry (Prof. T. K. Walker), 940
Fermentation (Microbial), of Sugars : Mechanisms of Formation of Stereoisomers of 2,3-Butanediol during (Mary B. Taylor and Dr. Elliot Juni), 1389
Fermi Surface : The Band Theory of Metals and the Structure of the (Physical Society Conference on), 525
Fern Apex : Responses of a, to Gibberellic Acid, Kinetin and α-Napththaleneacetic Acid (Prof. C. W. Wardlaw and G. C. Mitra), 400
Fern Leaf Primordia : Developmental Potentialities of (E. G. Cutter), 314
Ferrar, Miss A. M. : Cartography, 817
Ferrar, W. L. : Algebra, second edition, *review* by S. A. Stigant, 1691
Ferrari, Prof. W. : Behavioural Changes in Animals after Intracisternal Injection with Adrenocorticotrophic Hormone and Melanocyte-stimulating Hormone, 925
Ferraro, Prof. V. C. A. : The Transition from the Ionosphere to Interplanetary Space, 1238
γ-Ferric Oxide : A New Superstructure in (G. W. van Oosterhout and Dr. C. J. M. Rooijmans), 44
Ferric Perchlorate Complex Ion (R. A. Horne), 410
Ferrimyoglobin : Reaction of, with Phenols (Prof. Philip George, R. L. J. Lyster and J. Beetlestone), 1534
Ferroni, E., and Cocchi, M. : Kinetics of the Trigonal-to-Cubic Transition in Crystals of Caesium Nitrate on Muscovite, 903
Ferrous Iron : Role of, in Enzymatic Transamination (M. V. Patwardhan), 187
Fertility Factor : An Infectious, for *Pseudomonas aeruginosa* (Dr. B. W. Holloway and Pamela A. Jennings), 855
Fertilization (Pseudo-) in the Genus *Lumbricillus* (Enchytraeidae), (B. Christensen and F. B. O'Connor), 1085

Fertilizer Economy : The World (Mirko Lamer), *review* by Dr. G. W. Cooke, 371
Fertilizers : Influence of War on the Production and Use of, *review* by Dr. G. W. Cooke, 371
Ferulic and *p*-Coumaric Acids in Pineapple Tissue as Modifiers of Pineapple Indoleacetic Acid Oxidase (Dr. Willis A. Gortner, Martha J. Kent and Dr. G. K. Sutherland), 630
Fetner, Dr. Robert H. : Chromosome Breakage in *Vicia faba* by Ozone, 504
Feulgen-Positive Cytoplasm of *Molgula* Eggs (Dr. Daniel S. Grosch), 1078
Few, Dr. A. V. : *Obituary* by Dr. R. H. Ottewill, 668
Fibre (Cellulose) : Examination of, by the Low-Temperature Specimen Method of Electron Diffraction and Electron Microscopy (Goro Honjo and Masaru Watanabe), 326
Fibre Blends and Mixtures (1958 Annual Conference of the Textile Institute), 673
Fibres in the Pectoralis Major Muscle of the Pigeon : Relative Distribution and Chemical Nature of the Fuel Store of the Two Types of (Dr. J. C. George and R. M. Naik), 709
  Relative Distribution of the Mitochondria in the Two Types of (Dr. J. C. George and R. M. Naik), 782
Fibres (Atrial Muscle) : Effect of Acetylcholine on the Membrane Resistance and Threshold of (Dr. Edward A. Johnson and P. A. Robertson), 910
Fibres (Dehydrated Muscle) : Adenosine Triphosphatase and Contraction in (Sheila M. V. Hunt and N. A. Matheson), 472
Fibres (Glass) : Strength of (Dr. W. F. Thomas), 1006 ; (N. J. Parratt), 1726
Fibres (Muscle), of the Fast and the Slow Contracting Muscles of the Mesothoracic Leg of the American Cockroach (*Periplaneta americana* L.), (W. A. Smit), 1073
Fibres (Myelinated Nerve) : Variations in Axonal Diameters of—Apparent or Real ? (Dr. G. T. Ashley), 125 ; (Dr. P. L. Williams and Dr. C. P. Wendell-Smith), 125
Fibres (Nerve) : 'Intercalated' Internodes in (Dr. L. Lubińska), 957
Fibres (Single), of the Atrio-ventricular Node : Transmembrane Potentials of (Dr. Brian F. Hoffman, A. Paes de Carvalho and W. Carlos de Mello), 66
Fibres (Two Inhibitory), forming Synapses with a Single Cell (Dr. G. Hoyle), 1134
Fibrillar and Non-Fibrillar Components of the Walls of *Valonia ventricosa* : Constitution of the (Prof. R. D. Preston and J. Cronshaw), 248
Fibrinolysis Autographs (Dr. A. S. Todd), 495
Fibroblasts *in vitro* (Chick) : Radioprotective Properties of Cystamine, Cysteamine and Cysteine when tested with (P. Oftedal, R. Oftebro and R. Eker), 344
Fibrous Structure in Cheese Curd (N. King and J. Czulak), 113
Fiedler, Liselore (Bruns, Dr. Friedrich H., and) : Enzymatic Cleavage and Synthesis of L-threo-*β*-Phenylserine and L-erythro-*β*-Phenylserine, 1533
Field, Dr. E. J. : Resignation as lecturer in anatomy at the University of Bristol, 602
Field, G. : Flames and Industry (Application to the Cement Industry), 16
Field : Use of Defoliants for Drying Buckwheat in the, and a New Method for the Chemical Determination of Rutin (V. Brejcha and P. Horák), 505
Field Computers : Digital (Dr. B. Meltzer and I. F. Brown), 1384
Field Museum of Natural History, Chicago : Botanical Series, Part 3A, No. 2, Flora of Peru (J. Francis MacBride), *review* by N. Y. Sandwith, 1366
  Fieldiana, Anthropology, Vol. 36, No. 9, Edible Lizards (Allan R. Holmberg), 1187
  Fieldiana, Botany, Vol. 28, No. 4, Contributions to the Flora of Venezuela (Dr. Julian A. Steyermark and collaborators), *review*, 445
Field Studies Council : Annual Report for 1956-57, 1250
Fields and Particles : Currents, (Prof. Francis Bitter), *review* by G. R. Noakes, 870
Fifth Major Plant Nutrient : Magnesium, the (Dr. A. Jacob), translated from the German by Dr. Norman Walker, *review* by Dr. E. J. Hewitt, 799
Fifty Straight Answers to Fifty Fair Questions : You Yourself— (Seekers and Finders, Book 3), (Amabel Williams-Ellis), *review* by T. H. Hawkins, 1628
Fighting Fish (Siamese) : Comparison of Effect of Lysergic Acid Diethylamide with Potassium Cyanide and other Respiratory Inhibitors on the (Dr. H. A. Abramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
Filarial Infection in *Simulium griseicolle* Becker (R. W. Crosskey and M. E. Crosskey), 713
Film (The Industrial), in Technical Education (Midland Industrial Film Association Conference on), 1508
Films : Thickness Measurement of Epitaxially Grown (Dr. O. S. Heavens and D. C. Pandeya), 1394
Films on Chemistry : Index of (Royal Institute of Chemistry), 1245
Filmstrips entitled 'Clouds' (accompanied by booklet of lecture notes by F. H. Ludlam and Dr. R. S. Scorer), 457
Filter (Membrane) : Use of the, in Mycological Class-work (Dr. Sigurd Funder), 1606
Filterability of Protoplast-like Elements in Aged Bacterial Cultures : Occurrence and (Dr. J. Sinkovics), 566
Filters (Colour), for the 4358-A. Line of the Mercury Discharge Spectrum (Dr. A. Burawoy and A. G. Roach), 762
Filtrate (Diphtherial Culture) : Accumulation of *α*-Alanine and of Pyruvate in, and its relation to Iron Deficiency of Medium (Prof. Masahiko Yoneda and Hiroshi Ishihara), 272
Final Moult in *Pratylenchus* : Development of Eggs before the (M. R. Sauer), 129
Finar, Dr. I. L. : Organic Chemistry, Vol. 2, Stereochemistry and the Chemistry of Natural Products, *review* by Dr. W. D. Ollis, 6
Finders : Seekers and (Amabel Williams-Ellis), Book 1, They dared to Ask Questions ; Book 2, Magic, Science and Invention ; Book 3, You Yourself, Fifty Straight Answers to Fifty Fair Questions, *review* by T. H. Hawkins, 1628
Finding Fossil Man (Robin Place), *review* by M. C. Burkitt, 1234
Finding and Development of Managers for Industry (British Institute of Management Conference on), 816
Findlay, J. D. : Nutrition and Climatic Stress (Climatic Stress between a Sweating and a nearly Non-Sweating Mammal), 1645
Fine, Dr. J. M., and Waszczenko-Z, E. : Preparation of Transparent Starch Gels after Electrophoresis, 269
Fine Aluminium Nitride Precipitates in Steel (Prof. C. C. Hsiao), 1527
Fine Structure of the Alveolar Wall of the Lung (Dr. M. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1066
Fine Structure of the Ionosphere : Some Effects of the, on Transmissions received from the Russian Earth Satellite 1958δ (F. A. Kitchen and W. R. R. Joy), 1759
Finkelstein, D. : Extremely High Temperatures (Design of a Megatron), 1381
Finlayson, Dr. D. : Elected a Fellow of the Royal Society of Edinburgh, 739
Finlayson, Dr. H. H. : 'Recurrence' of *Macroderma gigas* Dobson, 923
Finney, Dr. D. J. : Mathematics and Statistics for Use in Pharmacy, Biology and Chemistry, *review*, 147
Fire : References to Scientific Literature on (Miss E. M. Shakeshaft and Mrs. B. F. W. Rogowski), 1443
Fire Offices' Committee Joint Fire Research Organization (Department of Scientific and Industrial Research and) ; Bibliography of References to Scientific Literature on Fire, Part 8 (Miss E. M. Shakeshaft and Mrs. B. F. W. Rogowski), 1443
Fireman, E. L. : Argon-39 in the Sikhote-Alin Meteorite Fall, 1613
  Distribution of Helium-3 in the Carbo Meteorite, 1725
Firket, H., and Verly, W. G. : Autoradiographic Visualization of Synthesis of Deoxyribonucleic Acid in Tissue Culture with Tritium-labelled Thymidine, 274
Firm (Small) : Personnel Management in a (Mrs. J. M. Collingridge and Mrs. J. M. Ritchie), 1310
Firms (Small Engineering) : Management Control of (L. Fontaine, J. W. Walker and W. R. Spencer), 1113
First Artificial Earth Satellite : Observations in Australia of Radio Transmissions from the (G. H. Munro and R. B. White), 104
First and Second Cycle Casein in Milk (Dr. T. A. J. Payens), 114
Firth, K., and others : Critical Mass Measurements for the Merlin Research Reactor, 1171
Fischberg, M., and others : Nuclear Transplantation in *Xenopus laevis*, 424
Fischer, Dr. Heinz : Extremely High Temperatures, 1380
Fischer, J., and others : A Histoautoradiographic Study of the Effect of Section of the Facial Nerve on the Uptake of Methionine-$_{35}$S by the Cells of the Facial Nerve Nucleus, 341
Fisel, Simon, and others: Paper Chromatography of Potassium, Rubidium and Caesium, 1618
Fish (Nutrition Society Symposium on), 531
Fish (*Gobius forsteri*) : A New British (P. G. Corbin), 1659
Fish at Sea : Report on an Experiment into the Freezing of (White Fish Authority), 817
Fish (Deep-Sea), *Opisthoproctus* : A New Type of Light Organ in the (Dr. E. Bertelsen), 862
Fish (Labrid) : Retinal Pigments of a (Dr. W. Frederick W. Munz), 1012
Fish (Salt) : Sodium Phosphate Crystals on (Dr. W. J. Dyer, Doris I. Fraser and J. R. Dingle), 858
Fish (Siamese Fighting) : Comparison of Effect of Lysergic Acid Diethylamide with Potassium Cyanide and other Respiratory Inhibitors on the (Dr. H. A. Abramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
Fish Physiology, *review* by Prof. J. Z. Young, 971
Fish-marking Tag : An Inexpensive Easily Constructed (Prof. Fergus J. O'Rourke and P. Makings), 577
Fisher, J. C. : Multiple-Mutation Theory of Carcinogenesis, 651
Fisher, J. C., and others (edited by) : Dislocations and Mechnical Properties of Crystals—an International Conference held at Lake Placid, 1956, *review* by Dr. R. A. Hyman, 1562
Fisher, Margery and James : Shackleton, *review* by David James, 372
Fisher, Sir Ronald : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Fisher, Sir Ronald, and Yates, Dr. Frank : Statistical Tables for Biological, Agricultural and Medical Research, fifth edition, *review*, 299
Fisheries (Herring) : Plankton and the, 1575
Fisheries and Agriculture : Utilizing the Natural Resources of Lake Victoria for the Benefit of (R. S. A. Beauchamp), 1634
Fishery Research : Postgraduate Training Grants in (Development Commissioners, in association with the Ministry of Agriculture, Fisheries and Food, and the Scottish Home Department), 1312
Fishes : An Electrical Receptor in (P. G. Wright), 64
  The Physiology of (edited by Margaret E. Brown), Vol. 1, Metabolism ; Vol. 2, Behaviour, *review* by Prof. J. Z. Young, 971
  The Physiology of the Pituitary Gland of (Grace E. Pickford and James W. Atz), *review* by Prof. J. Z. Young, 971
  Red Sea, *review* by Dr. E. Trewavas, 298
Fishes (Insectivorous) : Effects of *Simulium* Control on (Philip S. Corbet), 570
Fishes (Salmonid) : Size and Osmoregulation in (Gwyneth Parry (Mrs. Howells)), 1218
Fishes of the Red Sea and Southern Arabia (Henry W. Fowler), Vol. I, Branchiostomida to Polynemida, *review* by Dr. E. Trewavas, 298
Fishwick, Prof. W. : Automatic Measurement of Quality in Process Plants (Uses of Radioactive Isotopes in Quality Measurement), 166
Fissipede Carnivores : A Quantitative Study of Stasigenesis in (Dr. M. Crusafont-Pairó and Dr. J. Truyols-Santonja), 289
Fitch, E., and Ruddleston, R. : Long-Distance Radio Propagation above 30 Mc./s. (Terminal Equipment), 1185
Fitch, F. J., and others : Sub-aerial Volcanicity in Snowdonia, 508
Fitzgerald, Dr. John E. (Boroff, Dr. Daniel A., and) : Fluorescence of the Toxin of *Clostridium botulinum* and its relation to Toxicity, 751
Fitzgerald, P. H. : A Case of Limitation of Phenotypic Variation, 436
Fixation : Relaxation of Snails before (Dr. Bruce M. McCraw), 575
Fixation of Bacteria for Electron Microscopy (E. H. Mercer), 1550
Fixation (Carbon Dioxide), in some Components of Growing Rat Red Cells (G. Giustina and E. Lazzarini), 1285
Fixation (Carbon Dioxide), in Particulate Preparations from Barley Roots (Dr. L. C. T. Young and Janet S. D. Graham), 1071
Fixation (Nitrogen), in *Elaeagnus* Root Nodules (I. C. Gardner), 717
Fixation (Photosynthetic), of Carbon Dioxide : Thioctic Acid and (B. B. Biswas and Dr. S. P. Sen), 1219
Fixation Test (Complement), applied to the Study of Tumours : A Special Reaction of the (Prof. A. Serra, G. Guarini, P. Lovisetto, D. Castelli and F. Balzola), 622
Fixed Point (Thermometric) : The Triple Point of Argon as a (R. A. H. Pool, B. D. C. Shields and Dr. L. A. K. Staveley), 831
Flagellates (Marine) : Metabolism of (R. G. S. Bidwell), 1769

Flame Ionization Detector for Gas Chromatography (J. Harley, W. Nel and Dr. V. Pretorius), 177 ; (I. G. McWilliam and R. A. Dewar), 760
Flame Spectroscopy, *review* by Dr. T. M. Sugden, 74
Flames : Ion Identification in, by Mass Spectrometry (J. Deckers and Prof. A. Van Tiggelen), 1460
  Mass-Spectrometric Observations of Ions in (P. F. Knewstubb and Dr. T. M. Sugden), 474
  The Spectroscopy of (Dr. A. G. Gaydon), *review* by Dr. T. M. Sugden, 74
Flames (Hydrocarbon) : Mass-Spectrometric Observations of Ions in (P. F. Knewstubb and Dr. T. M. Sugden), 1261
Flames (Nitric Oxide) : Effect of Pressure on Burning Velocity of (G. A. McD. Cummings), 1327
Flames and Industry (Institute of Fuel Symposium on), 15
Flanagan, Dr. Ted B. : Effects of Nuclear Irradiation upon the Decomposition of Lead Styphnate Monohydrate, 42
Flare (Solar-) Effect in the *F*2-Layer of the Ionosphere (C. M. Minnis and G. H. Bazzard), 690
Flash (Electronic) : Use of, in Photomicrography (Dr. David A. Erasmus), 1290
Flavin (New), produced by an Actinomycete : Isolation of a (Orio Ciferri and Marisa P. Machado), 484
Flavofungin, a New Crystalline Antifungal Antibiotic—Origin and Biological Properties (Dr. J. Uri and I. Békési), 908
Flavonoids in Genotypes of *Primula sinensis:* Distribution of (J. B. Harborne and H. S. A. Sherratt), 25
Flavonoids of the Primulaceae—Distribution of Flavonoids in Genotypes of *Primula sinensis* (J. B. Harborne and H. S. A. Sherratt), 25 ; Anthocyanins in the Flowers of *Primula sinensis* (H. S. A. Sherratt), 26 ; Anthocyanidins of the Primulaceae (J. B. Harborne), 26
Flax : Environmental Conditioning of (Dr. A. Durrant), 928
Flax (Sulphur-deficient) : Occurrence of Ornithine in, and the Possible. Place of Ornithine and Citrulline in the Arginine Metabolism of some Higher Plants (R. G. Coleman), 776
Fleece (Sheep) : Persistence of Aldrin and Dieldrin Residues in (I. R. Harrison and C. A. Johnson), 1267
Fleece-type : A Dominant Felting Lustre Mutant, in Australian Merino Sheep (Dr. B. F. Short), 1414
Fleischer, Dr. R. : Auroral Absorption of 18-Mc./s. Cosmic Radio Waves on February 11, 1958, 1156
Fleming (John A.) Medal for 1958 of the American Institute of Geonomy and Natural Resources awarded to Dr. and Mrs. J. B. Hersey, 1640
Fleming, Dr. M. G. : Title of reader in mineral dressing in the University of London (at the Imperial College of Science and Technology) conferred on, 1182
Fleming, N., and Copeland, W. C. : Noise in Industry (The Principles of Noise Suppression), 1697
Fleming, R. (Saunders, Dr. L., and) : Mathematics and Statistics for Use in Pharmacy, Biology and Chemistry, *review* by Dr. D. J. Finney, 147
Fleming-Williams, B. C. : Design of Physics Research Laboratories (Services and Facilities from the User's Point of View), 90
Flemming, Sir Gilbert : Science in Schools, 1373
Flesh (Herring) : Volatile Amines of (Dr. R. B. Hughes), 1281
Flesher, Anna M., and others : Effect of a Dithiol on Survival Time after Irradiation, 1405
Fletcher, the late G. H. : The Electrification of Railways (Faraday Lecture for 1957-58 of the Institution of Electrical Engineers, delivered by R. Ledger), 387
Fletcher, Maisie : The Bright Countenance, a Personal Biography of Walter Morley Fletcher, *review* by Sir William Gavin, 513
Fletcher, P. T. : Appointed a deputy managing director in the Industrial Group of the United Kingdom Atomic Energy Authority, 1510
Fletcher, Walter Morley : The Bright Countenance, a Personal Biography of (Maisie Fletcher), *review* by Sir William Gavin, 513
Flew, Prof. A. G. N. : Academic Mobility, 165
Flies (Dragon-) in Temporary Waters : Breeding of (Dr. E. P. Hodgkin and J. A. L. Watson), 1015
Flies (House-), *Musca domestica* L : Survival Curves for Male and Female (Morris Rockstein and Harry M. Lieberman), 787
Flight : Insect (Dr. J. W. S. Pringle), *review* by Dr. Graham Hoyle, 971
  Shaking of Honeybee Queens prior to (M. Delia Allen), 68
Flight (Space) : Satellites and (Eric Burgess), *review* by D. G. King-Hele, 980
Flint, Dr. A. R. : Appointed to the University of London readership in structural steelwork at the Imperial College of Science and Technology, 949
Flint, Prof. H. T. : Max Planck (1858-1947), 1098
Flora : East African Mountain, *review* by Dr. G. Taylor, 1027
  North and Central European, *review* by Prof. T. G. Tutin, 972
Flora of the British Isles (A. R. Clapham, T. G. Tutin and E. F. Warburg), Illustrations, Part I, Pteridophyta—Papilionaceae, *review*, 1366
Flora von Nord- und Mitteleuropa (Friedrich Hermann), *review* by Prof. T. G. Tutin, 972
Flora of Peru (J. Francis MacBride), *review* by N. Y. Sandwith, 1366
Flora of Venezuela : Contributions to the (Dr. Julian A. Steyermark and collaborators), *review*, 445
Flora of Wiltshire (Donald Grose), *review*, 590
Flora (The British), in 1957 (J. E. Lousley), 605
Florin, Prof. C. R. : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Florkin, Prof. M. : Enzyme Chemistry, 389
Flour Mite : An Apparent Beneficial Effect of Gamma-Radiation on the (Dr. Colin Melville), 1403
Flow : Resistance to, in Vascular Beds (S. D. Carlill), 1607
Flow (High Speed) : Real Gas Effects in (Symposium at the Armament Research and Development Establishment, Fort Halstead), 671
Flow Noise (Acoustics Group of the Physical Society and the North-Eastern Branch of the Institute of Physics Discussion on), 388
Flowering : Role of Gibberellin-like Hormones in Regulation of Plant Growth and (Dr. P. W. Brian), 1122
Flowering in *Lemna perpusilla:* Photoperiodic Control of (William S. Hillman), 1275
Flowering Plants of South Australia : Evolution of Sex in the (P. A. Parsons), 1673
Flowers, Dr. Brian H. : Appointed to the chair of theoretical physics in the University of Manchester, 1767 ; work of, 1767
Flowers of *Primula sinensis:* Anthocyanins in the (H. S. A. Sherratt), 26
Floyd, Lieut.-Colonel C. M. : Appointed a member of the Nature Conservancy, 1312
Fluegel, Walter (Meeuse, Prof. B. J. D., and) : Carbohydrases in the Sugar-Gland Juice of *Cryptochiton* (Polyplacophora, Mollusca), 699
Flügge, S. (herausgegeben von) : Handbuch der Physik, Band 30, Röntgenstrahlen ; Band 32, Strukturforschung, *review* by Prof. A. J. C. Wilson, 727
  Handbuch der Physik, Band 14, Kältephysik I ; Band 15, Kältephysik II, *review* by Dr. A. B. Pippard, 871
  Handbuch der Physik, Band 35, Atome I ; Band 36, Atome II, *review* by Prof. R. Eisenschitz, 1625
Fluid (Tissue), and Lymph of the Guinea Pig : Distribution of Globulin Permeability Factor and its Inhibitor in the (Prof. A. A. Miles and D. L. Wilhelm), 96
Fluids: Physics of (American Institute of Physics), Vol. 1, No. 1, 601
Fluids (Body-) : Determination of Glucose and Laevulose in (Dr. Jan Ek and Eric Hultman), 780
Fluorescence of the Crystalline Lens and Electroretinographic Sensitivity Determinations (Dr. E. Dodt and J. B. Walther), 286
Flourescence of the Toxin of *Clostridium botulinum* and its relation to Toxicity (Dr. Daniel A. Boroff and Da. John E. Fitzgerald), 751
Fluorescence (Carotenoid-sensitized), of Chlorophyll *in vitro* (F. W. J. Teale), 415
Fluorescent Lighting : Use of, for Experiments on Photoperiodism (Dr. J. W. L. Beament and Dr. A. D. Lees), 1443
Fluorescent Substances produced by Dermatophytes (Dr. F. W. Chattaway and A. J. E. Barlow), 281
Fluorescent Whitening Agents (R. S. Higginbotham and F. W. Thomas), 1437
Fluorine : Some Aspects of the Chemistry and Toxic Action of Organic Compounds containing Phosphorus and (Dr. Bernard Charles Saunders), *review* by Sir Rudolph Peters, 1295
Fluoroacetamide as a Systemic Insecticide (Dr. W. A. L. David and B. O. C. Gardiner), 1810 ; (C. Chapman and Dr. M. A. Phillips), 1810
Fluoroacetates : Phosphorofluoridates and, *review* by Sir Rudolph Peters, 1295
Δ^1-9*α*-Fluorocortisol: 24-Hr. Rhythms in Blood Eosinophils and *Wuchereria bancrofti* Microfilariae Before and After (Rudolf Engel, Dr. Franz Halberg, W. L. P. Dassanayake and Justin de Silva), 1135
1-Fluoro-2,4-Dinitrobenzene : Molecular Rearrangement in the Reaction of Cysteine with (Dr. H. P. Burchfield), 49
Fly *Muscina stabulans* (Fall.) (Muscidae) : Sex-linked and Sex-limited Mutation in the (H. E. Paterson), 932
Fly (Blow-) : Resistance to Dieldrin in *Lucilia cuprina* Wied., the Australian Sheep (G. J. Shanahan), 860
Fly (House-), *Musca domestica vicina* Macq. : Nutritional Requirements of the Common (Prof. J. T. Chang and Miss M. Y. Wang), 566
Fly (Tsetse) : Detection of, at Night (G. R. Jewell), 1354
  Use of Reflecting Paints for locating, at Night (B. D. Rennison, W. H. R. Lumsden and C. J. Webb), 1354
'Fly Ash' : Plant Growth on (R. Holliday, D. R. Hodgson, W. N. Townsend and J. W. Wood), 1079
Foa, Dr. E. : Minor Constituents and Trace Elements in Negev Phosphate Rocks, 1676
Foetal and Cancer Tissues : Protein Degradation of, in the Presence of Ethionine (Dr. Renzo Rendi), 351
Foetal and Prepubertal Giraffes, *Giraffa camelopardalis* (Linnaeus) : Ovaries of some (Dr. L. M. Kellas, Dr. E. W. van Lennep and Prof. E. C. Amoroso), 487
Foetus : Passage of Serum Albumins from the Mother to the (Prof. A. M. Schechtman and K. C. Abraham), 120
Foetus (Aborted Bovine) : Isolation of *Salmonella infantis* from an (Dr. J. Mortelmans, C. Huygelen and F. Pinckers), 1539
Foetus (Sheep) : Response of the Adrenal Medulla of the, to Asphyxia (Dr. R. S. Comline and Marian Silver), 283
Foetuses: Protection of, against Radiation Injury (Dr. E. M. Pantelouris), 563
Fogg, Dr. G. E., and Boalch, G. T. : Extracellular Products in Pure Cultures of a Brown Alga, 789
Folch-Pi, Dr. J. : Structure of Brain Ganglioside, 314
Foldings of Plasma Membrane (β-Cytomembrane) : Occurrence of, in Cells of Pig's Carpal Organ as revealed by Electron Microscopy (K. Kurosumi and T. Kitamura), 489
Foliar Sprays : Absorption and Translocation of Strontium and Caesium by Plants from (L. J. Middleton), 1300
Folic Acid Antagonism in Chickens : Perosis and (J. H. Arundel), 343
Folic Acid and Citrovorum Factor in Rat Liver : Occurrence of Independent Systems for the Cleavage of (U. W. Kenkare and Dr. Beatriz M. Braganca), 548
Folin—Ciocalteu Reagent : Detection of Polythionate in Cultures of *Thiobacilli* by means of the (Prof. D. P. Pratt), 1075
Folk, Jun., Dr. G. Edgar, and others : A Mammalian Activity Rhythm independent of Temperature, 1598
Folk-lore (English) : A Survey of (J. M. Dodgson), 1769
Folklore of Birds (English Folklore Survey, Questionnaire No. 8 on the), 672
Folklore Survey, English : Questionnaire No. 8 on the Folklore of Birds, 672
Folley, D. S. J. : The Physiology and Biochemistry of Lactation, *review* by Dr. J. A. B. Smith, 986
Follicles (Atypical Guard-Hair), in the Skin of the Rabbit (William E. Stralle), 1604
Follicles (Giant Compound Hair), in the Skin of the Rabbit (Dr. H. J, Whiteley), 850
Formaldehyde as an Acceptor Aldehyde for Transketolase, and the Biosynthesis of Triose (Prof. F. Dickens and D. H. Williamson), 1790
Fontaine, L., and others : Management Control of Small Engineering Firms, 1113
Fontéchevade: La Grotte de, Première Partie, Historique, Fouilles, Stratigraphie, Archéologie (Mlle. G. Henri-Martin), (Archives de l'Institut de Paléontologie Humaine, Mémoire 28), *review* by M. C. Burkitt, 1564
Food : Absorption and Distribution in Rats of Radioactive Phosphorus biologically incorporated in (B. Kawin and R. F. Palmer), 127
Food for Larval Annelids : Dried Organic Substances as (Dr. D. I. D. Howie), 1486
Food and Agricultural Organization of the United Nations : André Mayer Fellowship, 1110
  Report of the Working Party of Specialists on the Consolidation of Fragmented Agricultural Holdings (Rome, 1953), 1114

Food and Agriculture Organization of the United Nations (Sub-Commission on Land and Water Use of the European Commission on Agriculture) : Report of the First Session of the Working Party on Consolidation of Fragmented Holdings (Lisbon, 1956) ; Report of the Second Session (Vienna, 1957), 1114
Foods : Processing of, with Ionizing Radiations (Dr. B. Coleby), 877
Foodstuffs : Fundamental Aspects of the Dehydration of (Society of Chemical Industry Conference on), 387
  Residues of Pesticides in (Pesticides Group of the Society of Chemical Industry and the Association of British Insecticide Manufacturers Discussion on), 22
Foot, J. B. L., and others : Long-Distance Radio Propagation above 30 Mc./s. (Tropospheric Propagation), 1186
Foot-and-Mouth Disease : Immunoelectrophoretic Evidence for the Presence of Two Precipitating Antibodies in Serum following Infection with the Virus of (Dr. F. Brown), 1130
Ford, Dr. C. E. : Awarded a David Anderson-Berry Prize for 1958 of the Royal Society of Edinburgh, 1571
  Genetic Aspect of Somatic Cell Variation (Cytological Analysis of Spontaneous Primary Tumours in Mice and those induced by Radiation), 1706
Ford, Dr. C. E., and others : Human Somatic Chromosomes, 1565
Fordham, Michael : New Developments in Analytical Psychology, *review* by Dr. Clifford Allen, 298
Foreign Surfaces : Adherence and Viscosity of Blood Contacting, and the Plasmatic Zone in Blood Circulation (Dr. Alfred L. Copley), 551
Foreshadowing Science : Practice, *review* by G. E. Fussell, 868
Forest : Amazon, *review* by Dr. Audrey J. Butt, 1563
Forest Bed : The Cromer—Preglacial or Interglacial ? (Prof. P. G. H. Boswell), 1087 ; (D. F. W. Baden-Powell), 1813
Forest Research : Swedish, 742
Forest Trees (Exotic), in Great Britain, 747
Foresters and Agriculturists : A Practical Guide to Plant Sociology for (Prof. F. R. Bharucha and Dr. W. C. DeLeeuw), *review* by Maurice Ashby, 987
Forestry in Japan (Yoshio Matsushima), 1311
Forestry Commission : Bulletin No. 29, Shelter Belts and Microclimate (Dr. J. M. Caborn), 160
  Bulletin No. 30, Exotic Trees in Great Britain (James Macdonald, R. F. Wood, M. V. Edwards and J. R. Aldhous), 747
Forests North of the Amazon : Wai-Wai, Through the (Nicholas Guppy), *review* by Dr. Audrey J. Butt, 1563
Form Determination in Aphids : Influence of Parasitization on (Dr. Bruce Johnson), 205
Formate-^{14}C (Sodium), as Precursor : Distribution of Carbon-14 in Components of Goat's Milk, with (Samuel Misler, Leon Tumerman and Henry R. Roberts), 346
Formation of β-Alanine from Spermine and Spermidine by *Pseudomonas aeruginosa* (Dr. S. Razin, U. Bachrach and I. Gery), 700
Formation of Alkyl Phosphates in Wheat Leaves (V. C. Runeckles), 1470
Formation of α-Amino-butyric Acid by a Staphylococcus : Role of Oxygen in the (P. B. Riley and H. K. Robinson), 905
Formation of $>C=O$ Bonds in the Radiation-induced Oxidation of Protein in Aqueous Systems (Michael E. Jayko and Warren M. Garrison), 413
Formation of a Glycoside of Maleic Hydrazide in Plants (Prof. G. H. N. Towers, A. Hutchinson and W. A. Andreae), 1535
Formation of Histamine and 5-Hydroxytryptamine : Adrenal Cortical Hormones and the (R. Hicks and Dr. G. B. West), 1342
Formation of Histamine-containing Dinucleotides by Enzymatic Interaction of Histamine and Coenzyme I (Dr. Spyridon G. A. Alivisatos), 271
Formation of Jerusalem Artichoke Tubers in Sterile Culture (Dr. Margery P. F. Marsden Ray), 1480
Formation of Lactate from Acetoacetate in the Perfused Heart (Dr. J. H. Ottaway and A. K. Sarkar), 1791
Formation of Lactulose and Tagatose from Lactose in Strongly Heated Milk (Susumu Adachi), 840
Formation of Oxalacetate and Aspartate from Phospho-Enol-Pyruvate in Spinach Leaf Chloroplast Extract (Lawson L. Rosenberg, John B. Capindale and F. R. Whatley), 632
Formation of Stereoisomers of 2,3-Butanediol during Microbial Fermentation of Sugars (Mary B. Taylor and Dr. Elliot Juni), 1389
Formation of Two- and Three-Stranded Helical Molecules by Polyinosinic Acid and Polyadenylic Acid (Dr. Alexander Rich), 521
Formation (Antibody), by Isolated Cells of Hen Spleen after mixing with Antigen *in vitro* and Transfer to Chicks (Dr. Z. Trnka), 55
Formation (Cave) : Bat Erosion as a Factor in (W. A. King-Webster and J. S. Kenny), 1813
Formation (Complex), between Groundnut Skin Pigments and Conarachin II (Miss H. M. R. McDavid and W. E. F. Naismith), 480
Formation (Enzymatic), of Aminomalonic Acid from Ketomalonic Acid (Hideo Nagayama, Michiko Muramatsu and Dr. Kensuke Shimura), 417
Formularies and Allied Publications (1493-1957) : A Catalogue of the Pharmacopoeias, Dispensatories, in Lloyd Library, 1769
Forrest, Dr. J. S. : Design of Physics Research Laboratories, 90
Forro, jun., F., and others : Distribution of Tritium-labelled Thymidine in *Escherichia coli* during Cell Multiplication, 328
Forssberg, Anne Gunnar, and others (edited by) : Advances in Radiobiology—Proceedings of the Fifth International Conference on Radiobiology held in Stockholm, 1956, *review* by Dr. O. A. Trowell, 660
Fort Jesus, Mombasa : Offer by the Gulbenkian Foundation, Lisbon, to convert the Fort into a museum of East African history and archaeology under the care of the Royal National Parks of Kenya, 1378
Fortifying Influences of Coconut Milk and Cow's Urine on 2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the Coconut (S. R. Gangolly and Dr. K. M. Pandalai), 855
Fosberg, Dr. F. R. : Climate, Vegetation and Land Utilization in the Humid Tropics (Man from an Ecologist's Point of View), 598
Foss, Dr. M. E. : Appointed head of the Department of Chemistry and Metallurgy, Coventry Technical College, 238 ; work of, 238
Fossati, Prof. Eraldo : The Theory of General Static Equilibrium (edited by Prof. G. L. S. Shackle), *review* by Prof. R. G. D. Allen, 1027
Fossil Algae in India (Prof. L. Rama Rao), 544
Fossil Mammal-like Reptile, *review* by Prof. D. M. S. Watson, 1233
Fossil Man : Finding (Robin Place), *review* by M. C. Burkitt, 1234
Fossil Men (Prof. Marcellin Boule and Prof. Henri V. Vallois), translated from the fifth French edition by Michael Bullock, *review* by Sir Wilfred Le Gros Clark, 1165
Fossils (Silicified Permian), from Texas and New Mexico—Pleurotomariacea (Prof. R. L. Batten), 1639
Foster, Dr. A. B., and others : Action of Periodate on some Polysaccharides containing Aldoheptose Sugars, 412
  Structure of an Acidic Polysaccharide elaborated by *Aerobacter aerogenes*, 999
Foster, Dr. F. G. : Appointed to the University of London readership in statistical computing at the London School of Economics and Political Science, 238
Foster, R. : Absorption Spectra of Molecular Complexes, 337
Foundation for Mutual Assistance in Africa South of the Sahara, 601, 811
Foundations of Thermodynamics, *review* by S. Angus, 1755
Foundations (Cultural), of Industrial Civilization (Prof. John U. Nef), *review*, 1427
Founder's Medal of the Royal Geographical Society awarded to Sir Edmund Hillary, 810
Four-Dimensional Gas, *review* by Dr. N. B. Slater, 374
Fourier Analysis : Elementary (Imperial College of Science and Technology Refresher Course on), 1510
Fowl : Presence of Triiodothyronine in (Dr. Claire J. Shellabarger and Dr. Rosalind Pitt-Rivers), 546
Fowl (Domestic) : Light and Sexual Maturity in the (T. R. Morris and S. Fox), 1453
Fowler, E. A. : The B.B.C. Riverside Television Studios—the Architectural Aspects (B.B.C. Engineering Monograph No. 13), 1046
Fowler, Henry W. : Fishes of the Red Sea and Southern Arabia, Vol. I, Branchiostomida to Polynemida, *review* by Dr. E. Trewavas, 298
Fowler, Dr. J. F. (Fukada, Dr. E., and) : Triboelectricity and Electron Traps in Insulating Materials—some Correlations, 693
Fowler, P. H., and others : Cosmic Rays and the Sunspot Cycle (Primary α-Particle Intensity at Sunspot Maximum), 1319
Fowles, G. : Organic Chemistry—Electronic Theory and Reaction Mechanism, *review*, 299
Fowlks, Dr. W. L., and others : Photosensitization of Bacteria by Furocoumarins and related Compounds, 571
Fox, B. W., and others : Sensitivity of the Spermatogenic Process in the Rat to Radiomimetic Drugs and X-Rays, 353
Fox, E. N. : Mechanical Properties of Non-Metallic Brittle Materials (Strength of Concrete Beams subjected to Short-duration Flat-topped Stresses), 1578
Fox, R. H. : Nutrition and Climatic Stress, 1645
Fox, S. (Morris, T. R., and) : Light and Sexual Maturity in the Domestic Fowl, 1453
Fox (Silver), *Vulpes fulvus* Desm. : Chromosome Number in the (O. Lande), 1353
Fox Squirrel : Natural History of the (J. C. Moore), 322
Fraccaro, M., and others : Congenital Malformations in Children of Mothers Aged 42 and Over, 1545
Fracture (Brittle), of Mild Steel : Stress Condition for (Prof. Takeo Yokobori and Prof. Hiroto Hamamoto and Akio Otsuka), 1719
Fractures (Bone) : Bonding of, with Plastics (Bernard Bloch), 1701
Fragmented Agricultural Holdings : Consolidation of (Food and Agriculture Organization of the United Nations, Report of the Working Party of Specialists on the), 1114
Fragmented Holdings, Working Party on Consolidation of (Sub-Commission on Land and Water Use of the European Commission on Agriculture) : Report of the First Session (Lisbon, 1956) ; Report of the Second Session (Vienna, 1957), 1114
Frames (Portal) : Plastic Design of (Dr. Jacques Heyman), *review* by Prof. W. Fisher Cassie, 987
Frampton, A. de K.: Appointed deputy director of agriculture, Barbados, 458
France : The Adoption of Inoculation for Smallpox in England and (Dr. Genevieve Miller), *review* by Dr. W. R. Bett, 1690
France (Atlantic Coast of) : *Balanus tulipiformis* Ellis on the, and an Unusual Situation for *B. amphitrite* Darwin (B. S. Kisch), 206
Franglen, Geoffrey, and Gosselin, Cécile : Separation of Metastable Polymers by Starch Gel Electrophoresis, 1152
Frank, Prof. F. C. : Grain Boundaries in Metals, *review*, 976
Frank, Prof. H. S. : Interaction in Ionic Solutions (The Debye—Hückel Theory), 240
  Physics of Water and Ice (Nature of the Hydrogen-bonds in Water and Ice), 381
Frank, Prof. H. S., and Wen, Dr. Wen-Yang : Interaction in Ionic Solutions (Ion-Solvent Interaction), 241
Frankcom, Comdr. C. E. N. : Ten Years Work of the British Ocean Weather Ships, 236
Frankel, Doris R., and others : Importance of the Synthesis of Acidic Polysaccharide for Wound Healing, 1543
Franklin, the Newtonian, *review* by Dr. M. A. Hoskin, 295
Franklin (Benjamin) Society, International : Gold Medal awarded to Dr. Detlev W. Bronk, 387
Franklin and Newton, an Enquiry into Speculative Newtonian Experimental Science and Franklin's Work in Electricity as an Example Thereof (Prof. I. Bernard Cohen), *review* by Dr. M. A. Hoskin, 295
Franz, Dr. W. (Pendl, Dr. I., and) : Transformation of Megaloblasts to Normoblasts by Cultivating Human Bone Marrow in Presence of Vitamin B_{12} and Vitamin B_{12}—binding Protein, 488
Fraps, Dr. R. M. : Photoperiodism in Plants and Animals (Endogenous Rhythms in the Ovulation Cycle of Hens), 536
Fraps, Dr. R. M., and others : Presence of Œstrone, Œstradiol and Œstriol in Extracts of Ovaries of Laying Hens, 351
Fraser, A. S. : Monte Carlo Analyses of Genetic Models, 208
Fraser, A. S. (Dun, R. B., and) : Selection for an Invariant Character—'Vibrissa Number'—in the House Mouse, 1018
Fraser, Doris I., and others : Sodium Phosphate Crystals on Salt Fish, 858
Fraser, Dean I. M. : Retirement as dean of the College of Engineering, University of Saskatchewan, 1178 ; work of, 1178
Fraser, K. B. : A Two-stage Transfer of Pathogenicity between the *MEL* and *NWS* Strains of Influenza *A* Virus, 195
Frazier, David, and others : Determination of Orbital Characteristics of an Earth Satellite from Single-Station Radio-Transit Observations, 900
Frechville (William) Student's Prize of the Institution of Mining and Metallurgy awarded to Dr. Barry Scott, 1375

Free Acid in British Soils (Eville Gorham), 106
Free Amino-Acids and Peptides in Sea-Urchin Eggs and Embryos (Pure Species and Hybrids) : Species-Specific Differences in (Dr. P. S. Chen and Prof. F. Baltzer), 98
Free Path (Mean), of Phonons in a Lead Crystal (G. J. McCallum and P. A. Egelstaff), 643
Free Radical produced in the Reaction of Metmyoglobin with Hydrogen Peroxide (Dr. J. F. Gibson, Dr. D. J. E. Ingram and P. Nicholls), 1398
Free Radical (Stable) : Antioxidant Determinations by the Use of a (Marsden S. Blois), 1199
Free Radicals : Infra-Red Spectra of (Dr. K. Nolen Tanner and Raymond L. King), 963
Free-Radicals produced in Cigarette Smoke (M. J. Lyons, L. F. Gibson and Dr. D. J. E. Ingram), 1003
Free Space (Apparent), in a Brown Alga : Effect of Potassium Cyanide on (P. L. Bergquist), 1270
Free Trade and Social Security (Political and Economic Planning, Broadsheet No. 412), 1164
Free Trade (European) : Technological Advance and, 1163
Free-living and Parasitic Protozoa : Catalog of Laboratory Strains of (Society of Protozoologists), 161
Freed, Simon, and others : Proteins in Solutions at Low Temperatures, 1731
Freedman, L., and Elsdon-Dew, Dr. R. : Size Variation in *Entamoeba histolytica*, 433
Freedom in Research (Dr. J. R. Baker), 1107
Freedom in Science, Society for : Occasional Pamphlet No. 17, Freedom in Research (Dr. J. R. Baker), 1107
Freedom (Science and), International Committee on, in co-operation with the World University Service : Appeal for funds to help non-white South African students, 671
Freeman, Dr. J. A. : Control of Pests in Stored Agricultural Products with special reference to Grain (European Productivity Agency of the Organization for European Economic Co-operation, Project No. 212), 1639
Freezing of Fish at Sea : Report on an Experiment into the (White Fish Authority), 817
Freezing Points (Abnormally Low Super-cooling and), in an Insect, *Bracon cephi* (Gahan) : Role of Glycerol in producing (R. W. Salt), 2181
Freezing and Drying (Institute of Biology International Symposium on), 314, 1694
Freezing and Drying Biological Materials (Dr. Audrey U. Smith), 1694
Freezing (Deep-) : Use of, in the Preservation and Preparation of Fresh Soil Samples (J. K. R. Gasser), 1334
Freiberg, Dr. S. R. (Stover, Dr. R. H., and) : Effect of Carbon Dioxide on Multiplication of *Fusarium* in Soil, 788
Freier, P. S., and others : Cosmic Rays and the Sunspot Cycle (Primary α-Particle Intensity at Sunspot Maximum), 1319
French, C. S., and others (edited by) : Research in Photosynthesis (Papers and Discussions presented at the Gatlinburg Conference, 1955), *review* by Prof. C. P. Whittingham, 974
French, Dr. Stacey : Photoperiodism in Plants and Animals (Determining Action and Absorption Spectra in Living Systems), 535
French National Committee of Biochemistry (Appointed by the Paris Academy of Sciences to represent France in connexion with the International Union of Biochemistry), 1444
Frequency of Movement of Migrants : Internal Migration, a Study of the (John A. Rowntree), (General Register Office, Studies on Medical and Population Subjects, No. 11), 1574
Frequency Response of a Lens : An Optical Method of Obtaining the (K. Hacking), 1158
Frequency Response Techniques : Optical Image Assessment using (Imperial College of Science and Technology Summer School on), 1510
Frequency Transmissions (Standard), from the United Kingdom (National Physical Laboratory Pamphlet on), 952
Fresh Soil Samples : Use of Deep-Freezing in the Preservation and Preparation of (J. K. R. Gasser), 1334
Fresh Waters : The Influence and Importance of Daily Weather Conditions in the Supply of Chloride, Sulphate and other Ions to, from Atmospheric Precipitation (E. Gorham), 1650
Freshwater Mutant of *Balanus amphitrite* (Dr. H. H. Shatoury), 790
Freshwater Sponges: Ultra-Structure of the Choanocyte Collar-Cells in (R. Rasmont, J. Bouillon, P. Castiaux and G. Vandermeerssche), 58
Friedel, J. : Les Dislocations, *review* by Dr. R. A. Hyman, 1562
Frieden, Dr. Edward H., and Cohen, Dr. Edward H. : Effect of Testosterone Propionate upon the Incorporation of Labelled Glycine into Homogenates of Mouse Kidney, 912
Friedler, Gladys, and others : Importance of the Synthesis of Acidic Polysaccharide for Wound Healing, 1543
Friend, R. G. : Appointed director of electronics research and development (telecommunications) in the Ministry of Supply, 1576
Frisch, Prof. O. R. (edited by) : Progress in Nuclear Physics, Vol. 6, *review* by Dr. T. G. Pickavance, 1362
Frog : Action of Acetone on the Tonic Muscle of the (Dr. Adolf Zeleny and Jaroslav Kozák), 1340, *errata*, 1510
  Ovulation induced in, with Mammalian Hormones (Dr. L. S. Ramaswami and A. B. Lakshman), 1210
Frog (South African Clawed), *Xenopus laevis* (Daudin) : Induction of Triploidy in the (Sheila Smith), 290
Frog Heart (Surviving) : Effect of Acetylcholinesterase on the (Prof. A. B. L. Beznák), 1190
Frog Spinal Ganglion Cells : Electrical Responses of, in Sodium-free Media (Prof. K. Koketsu, J. A. Gerf and S. Nishi), 703
Frohnsdorff, Dr. G. J. C., and Kington, Dr. G. L. : Physics of Water and Ice (Thermodynamic and Spectroscopic Properties of Water contained in the Pores of Synthetic Zeolites), 381
Fromageot, Prof. Claude : *Obituary* by Dr. H. Blaschko, 454
Fromme, Dr. I., and others : Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a New Sugar, Paratose, 822
Frontiers : Arctic—United States Explorations in the Far North (Dr. John Edwards Caswell), *review* by Dr. G. C. L. Bertram, 729
Frood, D. H. G. : Real Gas Effects in High Speed Flow (The Effect of Relaxation on Gas Properties), 671
Froome, K. D. : Precision Determination of the Velocity of Electromagnetic Waves, 258
Frost, D. C., and McDowell, C. A. : Structure and Reactivity of Electronically Excited Species (Mass Spectrometer used to determine the Energies of the Excited States of the Ions produced in the Instrument), 320
Frozen North : Men against the (Ritchie Calder), *review* by Dr. G. C. L. Bertram, 729
Fructosyl Group into Galactosylglucoses : Influence of Introduction of a, on their β-Galactosidase-inducing Activity (Gad Avigad), 554
Fruit (Rotting Apple) : Oxidation Products of Leucoanthocyanins as Inhibitors of Fungal Polygalacturonase in (M. Cole), 1596
Fruit Bodies of Wood-destroying Basidiomycetes : A Simple Technique for producing (N. Tamblyn and E. W. B. Da Costa), 578
Fruit-body Production in *Collybia velutipes* (Curt.) Fr. : Stipe Regeneration and (E. A. Bevan and R. F. O. Kemp), 1145
Fruit Growing (Soft) : History of (Eric Hobbis), 536
Fruit Set and Berry Enlargement in Seedless Grapes of *Vitis vinifera* : Effect of Gibberellic Acid on (Dr. Robert J. Weaver), 851 ; *erratum*, 1110
Fruits (Blackcurrant): Anthocyanins in (B. V. Chandler and K. A. Harper), 131
Fry, D. W. : Appointed a deputy director of the Atomic Energy Research Establishment, 531
Fry, D. W., and others : Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315
Fryer, G.: Occurrence of Spermatophores in the Genus *Dolops* (Crustacea: Branchiura), 1011
Fuchs, Dr. Vivian : Awarded a Special Gold Medal of the Royal Geographical Society, 810
  Elected a member of the Athenaeum under Rule 2, 1110
Fuel, Institute of : Symposium on Flames and Industry, 15
Fuel, Institute of (Combustion Institute, in collaboration with the): Seventh International Symposium on Combustion, 1576, 1703
Fuel Consumption and Resources, 745
Fuel Policy : National, 1108
Fuel Research Board : Measurement of Air Pollution—Recommended Methods for Deposited Matter, Smoke and Sulphur Dioxide, 1244
Fuel Store of the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon : Relative Distribution and Chemical Nature of the (Dr. J. C. George and R. M. Naik), 709
Fuel and Energy : Economic Trends in the Production, Transportation and Utilization of (Canadian Section Meeting of the World Power Conference), 1245
Fujimori, Eiji, and others : Action and Emission Spectra of the Luminescence of Green Plant Materials, 1266
Fujino, Masahiko, and others : Structure of Sperm- and Sei-Whale Insulins and their Breakdown by Whale Pepsin, 1468
Fujita, Dr. K., and others: Inhibiting Effect of Chlorpromazine on the Experimental Production of Liver Cancer, 54
  Effects of certain Compounds related to Trypan Blue on the Experimental Production of Liver Cancer, 1732
Fukada, Dr. E., and Fowler, Dr. J. F. : Triboelectricity and Electron Traps in Insulating Materials—some Correlations, 693
Fukumoto, Juichiro, and others : Specificity of Crystalline Saccharogenic Amylase of Moulds, 770
Full Automation of the Telephone System (White Paper on), 71
Fuller, Dr. R. C., and Anderson, I. C. : Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria—Suppression of Carotenoid Synthesis and its Effect on the Activity of Photosynthetic Bacterial Chromatophores, 252
Fully Acetylated Paper : Qualitative, Quantitative and Preparative Chromatography of Steroids on (F. J. Ritter and J. Hartel), 765
Fumigation under a Polyethylene Envelope (W. M. Graham and S. Kockum), 1675
Function (Employment), of Management (Institute of Personnel Management Residential Study Course in), 20
Function (Retinal) : Validity of Motokawa's Technique for Investigating (Dr. C. I. Howarth and M. Treisman), 843
Functionals : Spin (Dr. J. Aharoni), 1385
Functioning (Biochemical), of Vitamin B_{12} (Dr. E. Lester Smith), 305
Functions (Gaussian) : Use of, for Intermolecular Potentials (Dr. K. Singer), 262
Fundamental Aspects of the Dehydration of Foodstuffs (Society of Chemical Industry Conference on), 387
Fundamental Principles of Transistors (Dr. J. Evans), *review* by Dr. J. R. Tillman, 1168
'Fundamental Theory' (Eddington's) : The Development and Meaning of (Dr. Noel B. Slater), *review* by Prof. W. H. McCrea, 214
Fundamentals of the Beating Process—the Theory of the Development in Pulps of Paper-making Characteristics by Mechanical Treatment (H. W. Emerton), *review* by Dr. Julius Grant, 975
Fundamentals of Clinical Neurophysiology (Dr. Paul O. Chatfield), *review* by Prof. D. Whitteridge, 1095
Funder, Dr. Sigurd : Use of the Membrane Filter in Mycological Class-work, 1606
Funds for Research in Agricultural Experiment Stations, 1953-54 (United States National Science Foundation, Reviews of Data on Research and Development, No. 8), 160
Fungal Mycelia : Lysis of, by Bacterial Enzymes (Koki Horikoshi and Sigeji Iida), 917
Fungal Polygalacturonase in Rotting Apple Fruit : Oxidation Products of Leucoanthocyanins as Inhibitors of (M. Cole), 1596
Fungi : The Physiology of Reproduction in (Dr. Lilian E. Hawker), *review* by Prof. W. Brown, 297
  Reproduction in, *review* by Prof. W. Brown, 297
Fungi (Micro-), in Pine Litter (W. B. Kendrick), 432
Fungicides : Choice and Application of, to Plantation Crops, with special reference to *Hevea brasiliensis* (E. J. Risdon), 1017
Fungistatic Steroid : 3β-Methoxy-5-androsten-16β-ol, a Cytostatic and (Prof. R. W. Jones, G. Rebell and Prof. M. N. Huffman), 48
Furka, Árpád (Széll, Dr. Tamas, and) : Isolation of 2-Nitro-phenol from the Mixture of Mono-nitro-phenols, 481
Furocoumarins and related Compounds : Photosensitization of Bacteria by (Dr. W. L. Fowlks, D. G. Griffith and Evelyn L. Oginsky), 571
Further Education, Southern Regional Council for (Southern Regional Council of the Federation of British Industries, in co-operation with the) : Report of the Regional Conference on Industry and the Technical Colleges, organized by the, 1573

Fusarium in Soil : Effect of Carbon Dioxide on Multiplication of (Dr. R. H. Stover and Dr. S. R. Freiberg), 788
sarium culmorum (W. G. Sm.) Sacc. : Occurrence of, in the Rhizosphere of Oats (D. Parkinson and Prof. C. G. C. Chesters), 1746
sarium oxysporum : Growth Responses of, to Metabolites of some Rhizospheric Microflora of Egyptian Cotton Varities (Dr. M. S. Naim and A. M. Hussein), 578
Fusarium oxysporum as a Soil Saprophyte (D. Park), 1509
Fusarium oxysporum f. *pisi* : A Change of Pathogenic Race in, induced by Root Exudate from a Resistant Host (E. W. Buxton), 1222
Fused Larvae : Reproduction of, in the Boring Sponge, *Cliona celata* Grant (Frederick E. Warburton), 493
Fusiformis nigrescens : Apparent Requirement for Vitamin K of Rumen Strains of (Dr. M. Lev), 203
Fusion (Nuclear) : Harnessing, 213
Fussell, G. E. : Farming History, 536
  Practice Foreshadowing Science, *review*, 868
Future of the Aircraft Industry in Britain, 1646
Future Activities of the British Association : Interpretation of Science to the Public—, 8
Fye, Dr. P. M. : Appointed director of the Woods Hole·Oceanographic Institution, 669 ; work of, 669
Fyzee, A. A. S. : Presidential Address at the Millennial Celebrations of Al-Mas'udi, 883

GABOR, Dr. D. : Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions, 806
  Awarded the *Wireless World* Premium of the Television Society, 1246
Gabriel, O., and others : Separation of Carotenoid Synthesis from Fat Synthesis in *Rhodotorula gracilis* by Diphenylamine, 268
Gaddini, R., and Pickford, Prof. R. W. : At the thirteenth International Congress of Applied Psychology (Impact of Hospitalization on Young Children who are Chronic Invalids or who suffer from Organic Disability), 1580
Gaddum, Prof. J. H. : Appointed third visiting professor of pharmacology in the University of Sydney, 603
  Appointed director of the Agricultural Research Council's Institute of Animal Physiology, 882 ; work of, 882
Gaffron, H., and others (edited by) : Research in Photosynthesis (Papers and Discussions presented at the Gatlinburg Conference, 1955), *review* by Prof. C. P. Whittingham, 974
Galactic Novae : The (Prof. Cecilia Payne-Gaposchkin), *review* by Prof. Zdenek Kopal, 1688
β-Galactosidase-inducing Activity : Influence of Introduction of a Fructosyl Group into Galactosylglucoses on their (Gad Avigad), 554
α-Galactosyl Transfer : Enzymic Synthesis of Nitrogen-containing Disaccharides by (Dr. Winifred M. Watkins), 117
Galactosylglucoses : Influence of Introduction of a Fructosyl Group into, on their β-Galactosidase-inducing Activity (Gad Avigad), 554
Galago crassicaudatus agisymbanus : The Vitreous Body of (Prof. C. P. Luck), 719
Galanthus and *Leucojum* : Snowdrops and Snowflakes, a Study of the Genera (F. C. Stern), *review* by R. D. Meikle, 1691
Gale, V. E. : Appointed assistant director of agriculture, Western Nigeria, 458
Galil, F. (Egerton, Dr. G. S., and) : Changes in Vat Dye Systems, 1399
Galley, R. : Nuclear Energy (Marcoule Plutonium Plant), 736
Gallium in Sea-Water : Germanium and—Germanium (J. D. Burton and Dr. J. P. Riley), 179 ; Gallium (F. Culkin and Dr. J. P. Riley), 180
Gallium Phosphide : Grain Boundaries and Electroluminescence in (D. A. Holt, Dr. G. F. Alfrey and C. S. Wiggins), 109
Galston, Dr. A. W. : Photoperiodism in Plants and Animals (Effects of Red Irradiation on the Activity of Indole-acetic Acid Oxidase), 535
Galston, Dr. A. W., and others : Inhibitory Effect of Gibberellins on Nodulization in Dwarf Beans (*Phaseolus vulgaris*), 1082
Gamble, H. J. : Effect of a Raised Peripheral Temperature upon the Rate of Regeneration in a Mammalian Peripheral Nerve, 287
Gambling and Intelligence : Subjective Probability, (H. C. A. Dale), 363 ; (Prof. John Cohen and C. E. M. Hansel), 1160, 1620 ; (Prof. O. V. S. Heath), 1620 ; (Dr. S. T. Bowden), 1620
Game and Tsetse Control Department, Northern Rhodesia : Appointment of W. S. Steel as chief entomologist, 458
γ-Aminobutyric Acid : Absence of, from Brain Extracts containing Factor I (Dr. H. McLennan), 1807
γ-Amino-Butyric Acid in Ocular Tissue (Prof. K. Kojima, M. Mizuno and M. Miyazaki), 1200
γ-Aminobutyrylcholine (K. Kuriaki, T. Yakushiji, T. Noro, the late Prof. T. Shimizu and Sh. Saji), 1336
γ-Ferric Oxide : A New Superstructure in (G. W. van Oosterhout and Dr. C. J. M. Rooijmans), 44
γ-Methylproline from the Hydrolysis of a Natural Product : α-Amino*iso*butyric Acid, β-Hydroxyleucine and (Prof. G. W. Kenner and R. C. Sheppard), 48
γ-Radiation : An Apparent Beneficial Effect of, on the Flour Mite (Dr. Colin Melville), 1403
γ-Radiation Catalysis of the Oxidation by Air of Tri-isopropyl Phosphite (Dr. D. G. Coe), 1519
γ-Ray Sensitivity of the Beta-Counter : Correction for the, in the Standardization of Cobalt-60 by the Beta-Gamma Coincidence Method (B. Owen and R. A. Lloyd), 396
Gane, N., and Parkins, Dr. R. N. : Anomaly in the Age-Hardening Behaviour of Aluminium—Zinc Alloys, 1198
Ganglion Cells (Frog Spinal) : Electrical Responses of, in Sodium-free Media (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 703
Ganglion-blocking Agents : Polyalkylpiperidines, a New Series of (Dr. A. Spinks and Prof. E. H. P. Young), 1397
Ganglioside (Brain) : Structure of (Dr. J. Folch-Pi), 314
Gangolly, S. R., and Pandalai, Dr. K. M. : Fortifying Influences of Coconut Milk and Cow's Urine on 2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the Coconut, 855
Gangolly, S. R., and others : The Mango, *review* by T. A. Russell, 1364
Gardening (Market) : History of the Development of (Dr. L. G. Bennett), 536
Gardiner, B. O. C. (David, Dr. W. A. L., and) : Fluoroacetamide as a Systemic Insecticide, 1810
Gardiner Vacuum Oven (Griffin and George, Ltd.), 314
Gardner, A. W., and others : Use of Faradaic Rectification for the Study of Rapid Electrode Processes, 247
Gardner, C. A., and Bennetts, H. W. : The Toxic Plants of Western Australia, *review* by Dr. F. N. Howes, 729
Gardner, Dr. D. L. : Lesions in the Hypertensive Rat Kidney produced by Hydralazine, 915
Gardner, Dr. G. H. F. (Wyllie, Dr. M. R. J., and) : Permeability and the Size Distribution of Pores, 477
Gardner, I. C. : Nitrogen Fixation in *Elaeagnus* Root Nodules, 717
Garner, Prof. F. H. : Tenure as professor of chemical engineering and head of the Department of Chemical Engineering in the University of Birmingham to be extended to 1960, 813
Garner, R. J. : Veterinary Toxicology (formerly Lander's 'Veterinary Toxicology'), *review* by Dr. P. Jewell, 983
Garnett, Dr. A. : At the Annual Conference of the Geographical Association (Atmospheric Pollution as a Factor of Urban Geography), 607
Garnett, Dr. Maxwell : *Obituary* by F. Bowman, 1175
Garnham, Prof. P. C. C. : Tropical Medicine, *review*, 1428
Garrison, Warren M. (Jayko, Michael E., and) : Formation of <C=O Bonds in the Radiation-induced Oxidation of Protein in Aqueous Systems, 413
Garrod, D. J., and Newell, B.S. : Ring Formation in *Tilapia esculenta*, 1411
Garstang, Dr. R. H. : Introduction to the Mechanics of Stellar Systems, *review*, 1029
Garven, Dr. H. S. D.: A Student's Histology, *review* by Prof. J. M. Yoffey, 972
Garvie, Ellen I., and Cheeseman, G. C. : *Alcaligenes haemolysans*, 1540
Gas : Four-Dimensional, *review* by Dr. N. B. Slater, 374
  The Relativistic (Prof. J. L. Synge), *review* by Dr. N. B. Slater, 374
Gas (Liquid Natural) : Importation into Britain of, 671
Gas (Natural), in Scotland (T. S. Ricketts), 1042
Gas (Radiomimetic) : Ozone as a Possible (Prof. R. Brinkman and H. B. Lamberts), 1202
Gas Atoms (Excited Rare) : Measurement of Low Vapour Concentrations by Collision with (Dr. J. E. Lovelock), 1460
Gas Chromatographic Analysis : Molecular Sieves as Subtractors in (Nathaniel Brenner and Vincent J. Coates), 1401
Gas Chromatographic Separation of *Meta*- and *Para*-Xylenes in Aromatic Mixtures (Dr. Albert Zlatkis, Lawrence O'Brien and Philip R. Scholly), 1794
Gas Chromatography : Column Packings for (Gas Chromatography Discussion Group associated with the Institute of Petroleum Symposium on), 604
  Flame Ionization Detector for (J. Harley, W. Nel and Dr. V. Pretorius). 177 ; (I. G. McWilliam and R. A. Dewar), 760
Gas Chromatography Apparatus : Mark 2 (Griffin and George, Ltd., Pamphlet on), 88
Gas Chromatography Discussion Group : Formed in association with the Hydrocarbon Research Group of the Institute of Petroleum, 1041
Gas Chromatography Discussion Group, associated with the Institute of Petroleum : Symposium on Column Packings for Gas Chromatography, 604
Gas Council: Appointment of R. F. Hayman as chairman of the Industrial Gas Development Committee, 161
Gas Discharge : Production of High Temperatures and Nuclear Reactions in a (Controlled Release of Thermonuclear Energy), (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, R. W. P. McWhirter, R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217, 315
Gasdynamics : Elements of (H. W. Liepmann and A. Roshko), *review* by Dr. J. H. Horlock, 1232
Gas Effects (Real), in High Speed Flow (Symposium at the Armament Research and Development Establishment, Fort Halstead), 671
Gas and Electricity Industries (Coal,) : White Paper on Capital Investment in the, 1638
Gas-Liquid Chromatography : A Robust but Sensitive Detector for (Dr. D. W. Turner), 1265
Gas Mixtures : Extraction of Helium from (K. B. McAfee), 1639
Gascoigne, J. A., and others : Coenzyme A and Aldolase in Rubber-bearing Plants, 628
Gases : Electrical Discharges in (Dr. F. M. Penning), *review* by Dr. P. C. Thonemann, 1498
Gases in Liquids : Cavitation and the Solution of (Dr. K. S. Iyengar and Prof. E. G. Richardson), 1328
Gases (Inert) : Effect of, on Oxygen-dependent Radiosensitivity (Effect on Radiosensitivity of Inert Gases), (Dr. Michael Ebert, Mrs. Shirley Hornsey and Dr. Alma Howard), 613
  Effect on Radiosensitivity of—Effect of Inert Gases on Oxygen-dependent Radiosensitivity (Dr. Michael Ebert, Mrs. Shirley Hornsey and Dr. Alma Howard), 613 ; Effect of a Combined Treatment with 8-Ethoxycaffeine and Argon on the Roots of *Vicia faba* (John Read), 616
Gases (Stack), in the Atmosphere : The Diffusion of (F. H. Schmidt), 1575
Gasser, J. K. R. : Use of Deep-Freezing in the Preservation and Preparation of Fresh Soil Samples, 1334
'Gastric Para-Mucus' (Dr. Franklin Hollander), 847
Gastrocnemius Muscle (Normal and Denervated) : Quantitative Determination of Cholinesterase Activity in Individual End-plates of (M. Brzin and Prof. J. Zajicek), 626
Gastroenterology : World Congress of, 1110
Gastro-intestinal Bleeding Lesions : Isotopic Tracer Method for Measurement of Iron Lost into and Re-absorbed from (M. Roche, M. E. Perez-Gimenez and A. Lavy), *errata*, 603
Gastropods (Carnivorous) : Escape Responses of Herbivorous Gastropods when Stimulated by (W. C. Clark), 137
Gastropods (Herbivorous) : Escape Responses of, when Stimulated by Carnivorous Gastropods (W. C. Clark), 137
Gastropods (Littoral) : Light Reactions of (Dr. C. Burdon-Jones and G. H. Charles), 129
Gastrulae (Amphibian) : A Ribonucleoprotein from (A. S. G. Curtis), 185
Gatlinburg Conference : Papers and Discussions presented at the (1955)—Research in Photosynthesis (edited by H. Gaffron, A. H. Brown, C. S. French, R. Livingston, E. I. Rabinowitch, B. L. Strehler and N. E. Tolbert), *review* by Prof. C. P. Whittingham, 974

Gatos, Harry C. : Electrocapillary Action of Corrosion Inhibitors, 1060
Gauge : Nucleonic Thickness (Baldwin Instrument Co., Ltd., Dartford), 457
Gauging : Metrology and (S. A. J. Parsons), *review* by P. W. Harrison, 988
Gauntlett, Miss M. D. : Microtexts and Microrecording (Handling, Filing and Indexing Microtexts), 1573
Gaussen, Prof. Henri : Climate, Vegetation and Land Utilization in the Humid Tropics (The Cartographic Approach), 597
Gaussian Functions : Use of, for Intermolecular Potentials (Dr. K. Singer), 262
Gavin, Sir William : Architect of British Medical Research, *review*, 513
Gay, F. J., and others : Relationship of Tectoquinone to Durability in *Tectona grandis*, 721
Gaydon, Dr. A. G. : The Spectroscopy of Flames, *review* by Dr. T. M. Sugden, 74
Gaydon, Dr. A. G., and others : Temperature Measurements of Shock Waves by the Spectrum-Line Reversal Method, 1325
Geballe, T. H., and others : Resistance Thermometry near the Absolute Zero, 1245
Geddes, Patrick : Pioneer of Sociology—Life and Letters of (Philip Mairet), *review* by R. Brightman, 731
Gee, Prof. G. : Recent Advances in Polymer Technology, 1303
Geiger Counters : Photo-ionization in Self-quenching (Prof. Rafi M. Chaudhri, Mustafa Yar Khan, Abida Khawaja and Rehana Dar), 1526
Gel (Slide) Diffusion Precipitin Test (W. Mansi), 1289
Gel (Starch): Isolation of the Lethal Factor of Diphtheria Toxin by Electrophoresis in (Dr. M. D. Poulik and E. Poulik), 354
Gel Electrophoresis (Starch) : Separation of Metastable Polymers by (Geoffrey Franglen and Cécile Gosselin), 1152
Gelatin : Effect of Neutral Salts on the Structure of Collagen and (William F. Harrington), 997
Gelatin as a Protein : 'Purity' of (G. Russell), 102
Gelatin and the Mechanism of Gelation : The Biuret Complex of (J. Bello and J. R. Vinograd), 273
Gelatine and Glue (A. G. Ward), 537
Gelatine and Glue Research Association, British : Fourteenth Meeting of the Research Panel, 537
Gelation : The Biuret Complex of Gelatin and the Mechanism of (J. Bello and J. R. Vinograd), 273
Gell, P. G. H. (Ellis, Dr. H. A., and) : Immunological Estimation of a Component of Complement, 1667
Gelles, Dr. E. : Granted leave of absence from the University of Glasgow to enable him to hold a research fellowship at Brandreis University, Waltham, Mass., 459
Gels (Transparent Starch) : Preparation of, after Electrophoresis (Dr. J. M. Fine and E. Waszczenko-Z), 269
Gemelli, Prof. A. : Opening Discourse at the thirteenth International Congress of Applied Psychology, 1579
Gene Unstabilization : Induced (Prof. Stephen Zamenhof, Miss Rosalie de Giovanni and Dr. Sheldon Greer), 827
Genecological Trials : A Spurious Significance in (Dr. D. J. Harberd), 138
General Electric Co., Ltd. : Atomic Power Achievements (Chairman's address at the fifty-seventh Annual General Meeting), 1039
General Electric Company of America : The Silicon 'Unijunction' Transistor, 1509
General Embryology : Introduction to (Prof. A. M. Dalcq), translated by Jean Medawar, *review* by Prof. J. Brachet, 144
  A Synthesis of, *review* by Prof. J. Brachet, 144
General Post Office : Selected Engineering Reports—Piezoelectricity, *review* by Dr. Warren P. Mason, 588
General Practitioners : Public Health Training of (World Health Organization, Technical Report No. 140, Report of the Conference on, Geneva, 1956), 1047
General Register Office : Studies on Medical and Population Subjects, No. 11, Internal Migration—a Study of the Frequency of Movement of Migrants (John A. Rowntree), 1574
General Relationship between Test Factors and Person Factors—Application to Preference Matrices (Patrick Slater), 1225
General Static Equilibrium : The Theory of (Prof. Eraldo Fossati), edited by Prof. G. L. S. Shackle, *review* by Prof. R. G. D. Allen, 1027
Generation and Propagation of Impulses during Refractoriness in a Pacinian Corpuscle (Prof. Werner R. Loewenstein and R. Altamirano-Orrego), 124
Genes : The Strategy of the—a Discussion of Some Aspects of Theoretical Biology (Prof. C. H. Waddington), *review* by Dr. J. M. Thoday, 1025
Genetic Aspect of Somatic Cell Variation (Eleventh Biology Research Conference of the Biology Division of the Oak Ridge National Laboratory), 1706
Genetic Effects of Carbon Monoxide, Cyanide and Azide on *Drosophila* (Dr. A. M. Clark), 500
Genetic Models : Monte Carlo Analyses of (A. S. Fraser), 208
Genetic Modification in Ducks : Deoxyribonucleic Acid and (Dr. Alan W. Greenwood), 533
Genetics : Tenth International Congress of, 1246
  Cytology and (Prof. Carl P. Swanson), *review* by Prof. K. Mather, 973
Geneva Series on the Peaceful Uses of Atomic Energy—Nuclear Reactors for Research (edited by Clifford K. Beck), *review* by F. W. Fenning, 984
Genoa, City of : Christopher Columbus Prize for Communications, 1311
Genotypes of *Primula sinensis:* Distribution of Flavonoids in (J. B. Harborne and H. S. A. Sherratt), 25
Geochemical Survey Techniques : Radiometric and (Royal Astronomical Society Geophysical Discussion on), 594
Geographical Association : Annual Conference, 606
Geographical Society, Royal : Patron's Medal awarded to Dr. Paul A. Siple, 810
  Founder's Medal awarded to Sir Edmund Hillary, 810
  Special Gold Medal awarded to Dr. Vivian Fuchs, 810
  Victoria Medal awarded to Prof. Roberto Almagià, 810
  Murchison Grant awarded to Prof. E. G. Bowen, 810
  Back Grant awarded to Ingénieur-en-Chef Bertrand Imbert, 810
  Cuthbert Peek Grant awarded to Dr. Peter H. Davis, 810
  Gill Memorial awarded to Dr. M. J. Wise, 810
  Mrs. Patrick Ness Award awarded to Capt. A. G. Bomford, 810
Geography at the London School of Economics, 1636
Geological Interpretation of Marine Sediments, *review* by Sir Edward Bailey, 658
Geological Research in Scotland and the north of England : Funds available from the Clough Memorial Research Fund of the Edinburgh Geological Society, 603
Geological Society of America : Memoir No. 67, Treatise on Mar Ecology and Paleoecology (edited by Joel H. Hedgpeth), Vol. Ecology, *review* by Dr. G. E. R. Deacon, 1559
Geological Society of Australia : Election of Officers for 1957-58, 1041
Geological Society of Egypt : *Egyptian Journal of Geology*, No. 1, 742
Geological Society of London (Dr. W. Campbell Smith), 149
  Wollaston Medal for 1958 awarded to Prof. Pentti Eskola, 159
  Murchison Medal for 1958 awarded to Dr. R. G. S. Hudson, 159
  Lyell Medal for 1958 awarded to Dr. Helen Muir-Wood, 159
  Wollaston Fund for 1958 awarded jointly to R. J. A. Eckford and W. Manson, 159
  Murchison Fund for 1958 awarded to Dr. Geoffrey Bond, 159
  Moiety of the Lyell Fund for 1958 awarded to H. R. Warman and one to Dr. Eileen Lind Hendriks, 159
  Election of Officers for 1958, 1312
Geological Survey, Tanganyika : Appointment of B. J. Rushton as chemist, 459
Géologie Sédimentaire—Les Séries Marines (Prof. Augustin Lombard), *review* by Sir Edward Bailey, 658
Geology at Exeter, 87
Geology, Egyptian Journal of (Geological Society of Egypt), No. 1, 742
Geology and Geophysics, New Zealand Journal of (New Zealand Department of Scientific and Industrial Research), No. 1, 1179
Geology of Reading with reference to the Kingsclere Excursion (Prof. H. L. Hawkins), 1708
Geomagnetic Fluctuations : Sub-audible (H. J. Duffus, P. W. Nasmyth, J. A. Shand and Sir Charles Wright), 1258
Geophysical Journal (Royal Astronomical Society), Vol. 1, No. 1, 1376
Geophysical Research : Electronics in, *review* by Dr. J. A. Saxton, 1688
Geophysical Year (International)—Bibliographical Index of Literature in the Russian Language for 1954-1957 (Academy of Sciences of the U.S.S.R.), 1702
  Annals of the, Vol. 3, *review* by Dr. R. L. Smith-Rose, 726
  Annals of the, Vol. 4, Parts 1-7 : Vol. 5, Parts 1-3, *review* by G. A. Bull, 1097
  The Soviet Contribution to the, 1702
George, Dr. J. C., and Naik, R. M. : Relative Distribution and Chemical Nature of the Fuel Store of the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon, 709
  Relative Distribution of the Mitochondria in the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon, 782
George, Dr. J. C., and Scaria, K. S. : Histochemical Demonstration of Lipase Activity in the Pectoralis Major Muscle of the Pigeon, 783
George, Prof. Philip, and others : Reaction of Ferrimyoglobin with Phenols, 1534
Gerard, B. M. : Student Scientific Expedition to Ghana, 25
Gerhardt, Dr. P., and others : Bacterial Protoplasts, 1713
Germ (Wheat) : Crystallization of Cytocrome *c* from (Bunji Hagihara, Kunio Tagawa, Ichiro Morikawa, Masateru Shin and Prof. Kazuo Okunuki), (Crystalline Cytochrome *c*), 1590
German Cereals Research Association ; 1958 International Starch Convention, 531
Germanium Enrichment in Lignites from the Lower Lias of Dorset (A. Hallam and K. W. Payne), 1008
Germanium and Gallium in Sea-Water—Germanium (J. D. Burton and Dr. J. P. Riley), 179 ; Gallium (F. Culkin and Dr. J. P. Riley), 180
Germinating Broad Bean Seeds : Effect of a Single Light Exposure on (Dr. G. R. Lane and R. D. Butler), 1080
Germinating Marrow Seeds : *Iso*citritase in (M. T. Heydeman), 627
Gerrard, Dr. J. H. : Flow Noise (Experiments on the Singing of Wires), 388
Gerstenberg (Arnold) Studentship for 1959, 1576
Gery, I., and others : Formation of β-Alanine from Spermine and Spermidine by *Pseudomonas aeruginosa*, 700
Gestational Changes in Connective Tissue in the Ewe (Dr. E. G. Bassett), 196
Ghadially, Dr. F. N. : Effect of Trauma on Growth of Hair, 993
Ghadially, Dr. F. N., and Wiseman, Dr. G. : Inability of Hydrogen Peroxide to influence the Survival-Time of Rats bearing *RD3* Sarcoma and the Walker Carcinoma, 1067
Ghai, M. L. : Extremely High Temperatures (A High-Temperature Plasma Generator), 1381
Ghana : Student Scientific Expedition to (B. M. Gerard), 25
Ghelardi, Raymond J., and North, Wheeler, J. : A Possible Ecological Effect of Upwelling in a Submarine Canyon, 207
Ghosh, Jharna, and others : Electrophoretic Behaviour of Avian Haemoglobins, 1204
Gialdroni-Grassi, Giuliana : Activity of Glucose-1-phosphate on Liver Steatosis, 53
Giant Compound Hair Follicles in the Skin of the Rabbit (Dr. H. J. Whiteley), 850
Giant Molecules (Prof. W. T. Astbury), 94
Giant Rat of East Africa (J. G. Halcrow), 649
Gibberellic Acid : Effect of, on Fruit Set and Berry Enlargement in Seedless Grapes of *Vitis vinifera* (Dr. Robert J. Weaver), 851, *erratum*, 1110
  Effect of, on the Growth of Pea Seedlings when imbibed through the Seed Coat (Dr. Thomas C. Moore), 500
  Effect of, on the Growth of Protonemata in *Splachnum ampullaceum* (L.) Hedw. (Dr. K. E. von Maltzahn and I. G. MacQuarrie), 1139
  Effects of, on *Nicotiana* Plants (L. G. Burk and Dr. T. C. Tso), 1672
  Effects of, on Soil Micro-organisms (Dr. K. C. Lu, C. M. Gilmour, A. C. Zagallo and W. B. Bollen), 189
  Effect of, on Species of *Eucalyptus* (G. Scurfield and C. W. E. Moore), 1276
  Inhibition of the Development of the Barley Spike by (Leslie Paleg and Donald Aspinall), 1743
  Interaction between Indole-acetic Acid and, in Cambial Activity (Dr. P. F. Wareing), 1744
  Radicle Elongation of *Pseudotsuga menziesii* in relation to Light and (Dr. S. D. Richardson), 429
Gibberellic Acid and Auxin : Complementary Action of (P. W. Brian and H. G. Hemming), 1575
Gibberellic Acid and Kinetin : Effect of, on Growth of the Primary Leaf of Dwarf Bean (*Phaseolus vulgaris*), (E. C. Humphries), 1081

Gibberellic Acid, Kinetin and α-Naphthaleneacetic Acid : Responses of a Fern Apex to (Prof. C. W. Wardlaw and G. C. Mitra), 400

Gibberellin and the Growth of Plant Tissue Cultures (Dr. L. G. Nickell), 499

Gibberellin-like Hormones : Role of, in Regulation of Plant Growth and Flowering (Dr. P. W. Brian), 1122

Gibberellin and Indoleacetic Acid : Effect of, on Seta Elongation in *Pellia epiphylla* (Prof. G. F. Asprey, K. Benson-Evans and A. G. Lyon), 1351

Gibberellins : Comparative Biological Effectiveness of the (Dr. M. J. Bukovac and Dr. S. H. Wittwer), 1484
    Inhibitory Effect of, on Nodulization in Dwarf Beans (*Phaseolus vulgaris*), (G. A. Thurber, J. R. Douglas and A. W. Galston), 1082

Gibberellins in the Growing Plant : Evidence from a Dwarf Pea Bioassay for Naturally Occurring (A. J. McComb and Prof. D. J. Carr), 1548

Gibbs, Joseph Willard : Bronze bust of, to be placed in the Hall of Fame for Great Americans at the University of New York, 87

Giblett, Dr. Eloise R. : Js, a 'New' Blood Group Antigen found in Negroes, 1221

Gibson, Dr. A. : Controlled Thermonuclear Reactions, 803

Gibson, Dr. A., and others : Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315

Gibson, Mrs. Ann, and Griffin, Dr. D. M. : Cytoplasmic Variation in *Nectria stenospora*, 1222

Gibson, Dr. Alan F., and others (edited by) : Progress in Semiconductors, Vol. 2, *review* by Dr. J. R. Tillman, 1168

Gibson, Dr. F. W. E., and others : A Possible Intermediate in the Biosynthesis of Trytophan—l-Deoxy-l-N-o-Carboxyphenyl-Ribulose, 549

Gibson, Dr. J. F., and others : Free-Radicals produced in Cigarette Smoke, 1003
    Free Radical produced in the Reaction of Metmyoglobin with Hydrogen Peroxide, 1398

Giese, Dr. A. C. : Photoperiodism in Plants and Animals (Photoperiodism in Marine Invertebrates), 536

Gifford, Dr. E. M. : Photoperiodism in Plants and Animals (Structural Changes occurring in Shoot-Apices of *Xanthium* and other species in the Transition from the Vegetative to the Flowering Condition), 535

Gilbert, Prof. E. W. : At the Annual Conference of the Geographical Association (English Seaside Towns), 606

Gill, E. K., and Laidler, K. J. : Structure and Reactivity of Electronically Excited Species, 321

Gill Memorial of the Royal Geographical Society awarded to Dr. M. J. Wise, 810

Gillette, James R., and others : Dealkylation of N-Alkylamines by Model Systems, 898

Gillies, Dr. N. E. (Alper, Tikvah, and) : Dependence of the Observed Oxygen Effect on the Post-Irradiation Treatment of Micro-organisms, 961

Gillieson, Dr. A. H., and Nicholls, C. M. : Nuclear Energy (Nuclear Criticality in Chemical Plants), 736

Gilliland, R. B. : Yeasts in Industry, *review*, 798

Gilmour, C. M., and others : Effects of Gibberellic Acid on Soil Micro-organisms, 189

Gilmour, E. F. : Awarded a Grant by the Leverhulme Trust, 1442

Gilmour, J. S. L. : The Species—Yesterday and Tomorrow, 379

Gimingham, C. T. : *Obituary* by F. H. Jacob, 157

Ginsberg, Dr. A. : At the thirteenth International Congress of Applied Psychology (Projective Tests administered to a Mixed Group of Criminals), 1580

Ginzburg, B. Z. : Evidence for a Protein Component in the Middle Lamella of Plant Tissue—a Possible Site for Indolylacetic Acid Action, 398

Ginzburg, B. Z., and others : Metal-Chelating Properties of Plant-Growth Substances, 686

Giordani, Prof. F. : Nominated as national representative for Italy on the North Atlantic Treaty Organization Science Committee, 739

Giraffa camelopardalis (Linnaeus) : Ovaries of some Foetal and Prepubertal Giraffes (Dr. L. M. Kellas, Dr. E. W. van Lennep and Prof. E. C. Amoroso), 487

Giraffes, *Giraffa camelopardalis* (Linnaeus) : Ovaries of some Foetal and Prepubertal (Dr. L. M. Kellas, Dr. E. W. van Lennep and Prof. E. C. Amoroso), 487

Gitlin, Dr. David, and others : Site of Catabolism of Serum Albumin, 1064

Gittus, J. H. : Promoting the Stable Eutectic Reaction in Magnesium-treated Iron Castings by Vibration during Solidification, 1004

Giustina, G., and Lazzarini, E. : Carbon Dioxide Fixation in some Components of Growing Rat Red Cells, 1285

Given, P. H. : Correlations between Localization Energies and Polarographic Half-Wave Potentials of Aromatic Hydrocarbons, 1001

Given, P. H., and others : Ease of Reduction of a Series of Coals and its relation to their Structure, 1059

Glaciers : Surges in (Dr. J. F. Nye), 1450

Gland (Adrenal), of the Rat : Adrenaline and Noradrenaline Content of the, following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 423

Gland (Pituary), of Fishes : The Physiology of the (Grace E. Pickford and James W. Atz), *review* by Prof. J. Z. Young, 971

Glands (Adrenal), during the Post-natal Development of Thermoregulation in the Rat : Significance of the (Dr. P. Hahn and O. Koldovsky), 847

Glands (Prothoracic), in *Tenebrio molitor* L. (Coleoptera : Tenebrionidae), (U. S. Srivastava), 1668

Glanville, Dr. W. H. : Elected a Fellow of the Royal Society, 881

Glascock, Dr. R. F. : Atomic Energy and Agriculture, *review*, 1097

Glass, Dr. Bentley (edited by McElroy, William D., and) : Symposium on the Chemical Basis of Heredity (sponsored by the McCollum-Pratt Institute of the Johns Hopkins University, with support from the Atomic Energy Commission), *review* by Prof. M. Stacey, 75

Glass, Prof. I. I., and others : Temperature Measurements of Shock Waves by the Spectrum-Line Reversal Method, 1325

Glass : Activation of a Permeability Factor in Plasma by Contact with (Dr. J. Margolis), 635
    Ionic Bombardment Cleaning of (L. Holland), 1451
    Radioisotopes and (Society for Glass Technology Symposium on), 318
    Structure and Density of (I. Náray-Szabó), 40

Glass Fibres : Strength of (Dr. W. F. Thomas), 1006 ; (N. J. Parratt), 1726

Glass Technology, Society for : Symposium on Radioisotopes and Glass, 318

Glasses : Absorption Spectra of Rare Earths in (Dr. R. C. Vickery and R. Sedlacek), 39

Glasshouse Crops Research Institute : Open Day, 673

Glasspoole, Dr. J. : Retirement from the Meteorological Office, 1767 ; work of, 1767

Glasziou, K. T. : Effect of 2,4-Dichlorophenoxyacetic Acid on Pectin Methylesterase in Tobacco Pith Sections, 428

Glees, Prof. Paul : Morphologie und Physiologie des Nervensystems, *review* by Prof. Ragnar Granit, 1493

Globulin (β_1-Metal-combining) : Method of Isolating the, from Human Blood Plasma (E. W. Boettcher, P. Kistler and Prof. Hs. Nitschmann), 490

Globulin Permeability Factor : Distribution of, and its Inhibitor in the Tissue Fluid and Lymph of the Guinea Pig (Prof. A. A. Miles and D. L. Wilhelm), 96

β-Globulin Locus (Serum), in Humans : Third Allele at the (Dr. O. Smithies), 1203

β-Globulins of Sheep : Polymorphism in the (G. C. Ashton), 849

Globulins (Plasma) : Presence of, in the Hyaline Tissue in Cases of Silicosis (Dr. R. Cèppellini and Dr. B. Pernis), 55

Gloeosporium spp. in Stored Apples : A Method of Reducing the Losses caused by (Dr. D. M. Spencer and Dr. E. H. Wilkinson), 1603

Glossary of Indian Medicinal Plants (R. N. Chopra, S. L. Nayar and I. C. Chopra), *review* by S. B. Challen, 984

Glossary of Mycology (Walter H. Snell and Esther A. Dick), *review* by Dr. J. Grainger, 517

Glover, R. S. : The Planktonic Environment of the Herring, 1575

Glow Discharge : Bombardment of Plastics in a (L. Holland), 1727

Glucksmann, Dr. A. : H. K. Mookerjee Memorial Volume, *review*, 589

Glucose : Facilitated Diffusion and Exchange in the Absorption of, by the Locust, *Schistocerca gregaria* (Forsk.), (J. E. Treherne), 1280

Glucose-1-phosphate : Activity of, on Liver Steatosis (Giuliana Gialdroni-Grassi), 53

Glucose and Laevulose in Body-Fluids : Determination of (Dr. Jan Ek and Eric Hultman), 780

Glucose and Sorbitol : A Solvent for the Paper Chromatographic Separation of (Dr. W. R. Rees and T. Reynolds), 767

Glucose, Trehalose and Glycogen in *Porrocaecum decipiens* Larvae (Dr. D. Fairbairn), 1593

Glucosides (Phenolic) : Synthesis of Phlorin and other, by Plant Tissues (A. Hutchinson, Chitra Roy and Prof. G. H. N. Towers), 841

Glückauf, Dr. E. : Nuclear Energy (Fission Product Disposal), 736

β-Glucuronidase, Lipase and Esterase in the Testis of the Cryptorchid Rat (Dr. Masando Hayashi, Kazuhiro Ogata, Takuro Shiraogawa and Osamu Kawase), 186

Glue : Gelatine and (A. G. Ward), 537

Glume of Wheat : Grain in the (G. M. Wright), 1812

Glutamate (Labelled) : Effect of Electrolytes on the Uptake by Bacteria of (Y. Avi-Dor and Sh. Miller), 190

Glutathione : Biochemistry of (Biochemical Society Symposium on), 887
    Reversal of Thymine Xyloside Inhibition in *Escherichia coli* by (Prof. Thomas D. Brock), 269

Glycerol : Role of, in producing Abnormally Low Supercooling and Freezing Points in an Insect, *Bracon cephi* (Gahan), (R. W. Salt), 1281

Glycerol and Low Temperature : Effect of, on Survival of Unfertilized Mouse Eggs (Dr. J. K. Sherman and Dr. Teh Ping Lin), 785

Glycerol Metabolism of the Brown Rot Mould *Poris vaillantii* (Bienvenido C. Sison, jun., and Walter J. Schubert), 1015

Glycine (Labelled) : Effect of Testosterone Propionate upon the Incorporation of, into Homogenates of Mouse Kidney (Dr. Edward H. Frieden and Dr. Edward H. Cohen), 912

Glycine-Carbohydrate Residue from Muscle Collagen : Isolation of a (K. Konno and K. I. Altman), 994

Glycogen : Deposition of, and Changes in some Enzymes in Brain Wounds (Prof. Nobuo Shimizu and Dr. Yoriaki Hamuro), 781

Glycogen in the Brain during Animal Hypnosis : Changes in the Topographical Distribution of (Dr. D. Svorad), 775

Glycogen in *Porrocaecum decipiens* Larvae : Glucose, Trehalose and (Dr. D. Fairbairn), 1593

Glycolysis : Aerobic Inhibition of (J. F. Turner and Dr. L. W. Mapson), 270

Glycoprotein (Human α_1-Acid) : Effect of, on Blood Coagulation (Inga Marie Nilsson and Ikuo Yamashina), 711

Glycoside of Maleic Hydrazide in Plants : Formation of a (Prof. G. H. N. Towers, A. Hutchinson and W. A. Andreae), 1535

Glyoxylic Acid labelled with Carbon-14 : Small-scale Preparation of (R. M. Krupka and Prof. G. H. N. Towers), 335

Goat Milk : Inhomogeneity of α-Casein from (Dr. T. Hofman), 633

Goat's Milk : Distribution of Carbon-14 in Components of, with Sodium Formate-^{14}C as Precursor (Samuel Misler, Leon Tumerman and Henry R. Roberts), 346

Gobius forsteri: A New British Fish (P. G. Corbin), 1659

God : Science and the Idea of (Prof. C. A. Coulson), 813

Goddard, Dr. L. S. : The Rolling of Strip, Sheet and Plate, *review*, 988

Goddess : The Eye (Dr. O. G. S. Crawford), *review* by Prof. E. O. James, 969

Godwin, Dr. H. : *Obituary* of S. Hazzledine Warren, 1241

Godwin, Dr. H., and others : Radiocarbon Dating of the Eustatic Rise in Ocean-Level, 1518

Godwin, Dr. H. (West, Dr. R. G., and) : The Cromerian Interglacial, 1554

Goitrogen of Milk produced on Kale (Evan Wright), 1602

Gokhalé, N. G. : Rate of Calcium Loss resulting from Ammonium Sulphate Treatment of a Tea Soil, 426

Gold, A. : Band Theory of Metals and the Structure of the Fermi Surface (The de Haas—van Alphen Effect in Lead), 526

Gold, E. : Elected to honorary membership of the Royal Meteorological Society, 1375

Gold, Dr. Louis : Plasma Approach to Metallic Conduction, 1316

Gold, Prof. T. : Origin of Tektites, 173

Gold Medal of the Association for the Advancement of Natural, Medical and Surgical Sciences, Amsterdam, awarded to Sir Hans Krebs, 743

Gold Medal for 1957 of the Institution of Mining and Metallurgy awarded to Dr. J. F. Thompson, 1375

Gold Medal of the International Benjamin Franklin Society awarded to Dr. Detlev W. Bronk, 387

Gold Medal of the Royal Aeronautical Society awarded to Sir Sydney Camm, 1646

Gold Medal of the Royal Astronomical Society awarded to Prof. André Danjon, 531

Gold Medal (Special) of the Royal Geographical Society awarded to Dr. Vivian Fuchs, 810
Gold Particles (Colloidal) : Alterations in the Ultrastructure of the Blood—Air Barrier in the Mouse Lung after Inhalation of (Dr. N. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1418
Golden Chain : The—a Study in the History of Libraries (Prof. R. Irwin), 313
Goldman, J. E. (edited by) : The Science of Engineering Materials, *review* by K. J. Pascoe, 1496
Goldup, T. E. : Elected chairman of the British Group for Computation and Automatic Control (Section *B* of the British Conference on Automation and Computation), 237
Gonadotrophic Hormones (Hen) : Action of Ethylene Dibromide on (Dr. Eugenia Olomucki), *erratum*, 459
Gonads (Female), in the Cyprinodont, *Lebistes reticulatus* R. : Masculinizing Action of Pregneninolone on (Dr. T. Mohsen), 1074
Gonor, J. J. (Barnes, H., and) : Neurosecretory Cells in some Cirripedes, 194
Good, I. J. : Sociology of Statistics, *review*, 1687
Good, Prof. Ronald : The Biogeography of Australia, 1763
Goodeve, Sir Charles : Elected Master of the Salters' Company, 1703
Goodwin, Dr. L. G. : Appointed head of the Wellcome Laboratories of Tropical Medicine, 1637 ; work of, 1637
Goody, Dr. R. M. : Awarded the Buchan Prize of the Royal Meteorological Society, 1375
Gopala Krishna, Dr. K. V. : and others : A New Microwave Mixer, 1008
Gordan, Joan : Bibliography of the Order Mysidacea, 457
Gordon, E. I. : Extremely High Temperatures (Plasma Diamagnetism as a Diagnostic Technique), 1381
Gordon, H. McL. (Stewart, Dr. D. F., and) : Immune Reactions to *Trichostrongylus colubriformis* Infestation in Sheep, 921
Gordon, Dr. Isabella : Prof. Heinrich Balss, 531
  A New Subterranean Cructacean from the West Indies, 1552
Gordon, J. E., and others : Polymer-type Elasticity in Non-polymer Crystals, 1678
Gordon, Dr. R. L. : X-Ray Research, 1645
Gordon, W. A. M. : Appointed to a supernumerary lectureship in veterinary science at Queen's University, Belfast, 1042
Gordon Research Conferences for 1958, 458
Gore, Willis C. (Morris, Alan D., and) : Extremely High Temperatures (The Thermionic Direct Current Electric Arc), 1380
Gorging of the Mosquito : Adenosine-5'- phosphates as the Stimulating Agent in Blood for inducing (Teruhiko Hosoi), 1664
Gorham, Eville : Free Acid in British Soils, 106
  Accumulation of Radioactive Fall-out by Plants in the English Lake District, 1523
  The Influence and Importance of Daily Weather Conditions in the Supply of Chloride, Sulphate and other Ions to Fresh Waters from Atmospheric Precipitation, 1650
Gortner, Dr. Willis A., and others : Ferulic and *p*-Coumaric Acids in Pineapple Tissue as Modifiers of Pineapple Indoleacetic Acid Oxidase, 630
Gosselin, Cécile (Franglen, Geoffrey, and) : Separation of Metastable Polymers by Starch Gel Electrophoresis, 1152
Goto, Mikiyasu, and Katsunuma, Nobuhiko : Relationship between Porphyrin and Isoniazid Resistance of *Mycobacterium avium*, 916
Gotohi, Rempei, and others : Influence of Moisture upon the Dielectric Properties of Solid Powders dispersed in Liquid Paraffin, 406
Gottschalk, Dr. Alfred : The Influenza Virus Neuraminidase, 377
Gough, V. E. : Contact Stresses (Rolling Contact), 1774
Gould, Prof. S. H. : Variational Methods for Eigenvalue Problems, *review* by Dr. R. G. Cooke, 978
Goulden, J. D. S., and White, jun., Jonathan W. : Effects of Crystallinity on the Infra-red Absorption Spectra of Lactose and Dried Milk, 266
Government : The Growth of (Political and Economic Planning, Broadsheet No. 417), 1108
Government in the Modern World : Problems of, 141
Government (British Central), 1914-1956 : The Organization of (A Survey by a Study Group of the Royal Institute of Public Administration, edited by D. N. Chester, written by F. M. G. Willson), 141 ; *review*, 299
Government (Cabinet), and War, 1890-1940 (John Ehrman), 1752
Government Grants for University Building Projects, 1702
Government Research : Appointment of a Committee on, 1507
Government-Sponsored Research in the United States, 1712
Government Support for Civil Research, 1702
Government—University Relationships in Federally Sponsored Scientific Research and Development (National Science Foundation, Washington), 1712
Gower Peninsula, Glamorgan, Nature Reserve (Nature Conservancy), 1379
Graça, M. F. C. A. N., and others : A New Class of Antibiotic Salts of Reduced Toxicity, 182
Grace, J. H. : *Obituary* by Dr. J. C. Burkhill, 1105
Grace, Dr. M. A. : Parity Conservation (β-Decay), 447
Gracey, J. F. : Appointed to a supernumerary lectureship in veterinary science at Queen's University, Belfast, 1042
Graduate Students and Research Workers : Notes on D.S.I.R. Grants for, 1110
Graduates : Women, *review* by Mrs. C. E. Arregger, 443
Graf, Liselotte, and others : Cytolipin *H*, a Pure Lipid Hapten isolated from Human Carcinoma, 1803
Graft Unions between Meristematic Tissues, 530
Grafts (Pituitary), in Rats : Effect of Stress and Cortisone on the Cytomorphology of (Dr. K. Kovács, M. A. Dávid and I. W. Horváth), 1417
Graham, Dr. D. C. : Occurrence of Soft Rot Bacteria in Scottish Soils, 61
Graham, D. R., and Statham, K. W. : Tryptophan Content of Wool, 861
Graham, G. M. : Retirement as director of fishery research in the Ministry of Agriculture, Fisheries and Food, 158 ; work of, 158
Graham, Janet, S.D. (Young, Dr. L. C. T., and) : Carbon Dioxide Fixation in Particulate Preparations from Barley Roots, 1071
Graham, W. M., and Kockum, S. : Fumigation under a Polyethylene Envelope, 1675
Grain : Control of Pests in Stored Agricultural Products with special reference to (Dr. J. A. Freeman), (European Productivity Agency of the Organization for European Economic Co-operation, Project No. 212), 1639
Grain in the Glume of Wheat (G. M. Wright), 1812
Grain (Barley) : Influence of the Enclosing Protective Tissues on the Metabolism of (F. S. Mitchell, F. Caldwell and G. Hampson), 1270
Grain Boundaries in Metals (Dr. D. McLean), *review* by Prof. F. C. Frank, 976
Grain Boundaries and Electroluminescence in Gallium Phosphide (D. A. Holt, Dr. G. F. Alfred and C. S. Wiggins), 109
Grain Weevils, *Calandra granaria* L. and *C. oryzae* L., reared on Irradiated Wheat (P. B. Cornwell and D. M. Burson), 1747
Grainger, Dr. J. : A Glossary of Mycology, *review*, 517
Gram-Negative Bacteria : Some Changes in the Surface Structure of, induced by Penicillin Action (Dr. M. R. J. Salton and Dr. F. Shafa), 1321
Gram-staining (Quantitative), with Labelled Iodine (Dr. D. Shugar and Miss J. Baranowska), 357
Gramberg, J. (Seldenrath, Prof. Th. R., and) : Mechanical Properties of Non-Metallic Brittle Materials (Complexity of the Breakage Phenomena occurring in apparently Simple Compression Tests), 1577
Gramicidin-*S*: Biosynthesis of (Dr. J. M. Barry and Elizabeth Ichihara), 1274
Gramineae : Vesicular-Arbuscular Mycorhiza in (Dr. T. H. Nicolson), 718
Grammar and Technical Schools : Science accommodation for, 1182
Grandison, Miss A. G. C. : The Amphibia of Ceylon, *review*, 1758
Gränicher, Dr. H. : Physics of Water and Ice (Studies on the Relaxation Process, particularly Dielectric Relaxation in Ice), 381
Granit, Prof. Ragnar : Neurobiology, *review*, 1493
Grant, Capt. C. H. B. (Mackworth-Praed, C. W., and) : Birds of Eastern and North-Eastern Africa, second edition, *review*, 801
Grant, Dr. C. K. : Reason and Controversy, *review*, 869
Grant, Gordon, and others : Determination of Orbital Characteristics of an Earth Satellite from Single-Station Radio-Transit Observations, 900
Grant, Dr. Julius : Paper-Making, *review*, 975
Grants (National Science Foundation, Washington), 1181
Grants : Research Fellowships and (Leverhulme Trust Awards), 1442
Grants for Research Reactors (National Science Foundation, Washington), 313
Grants for University Building Projects : Government, 1702
Grants (D.S.I.R.), for Graduate Students and Research Workers : Notes on, 1110
Grants (Postgraduate Training), in Fishery Research (Development Commissioners, in association with the Ministry of Agriculture, Fisheries and Food, and the Scottish Home Department), 1312
Grants-in-aid (Life Insurance Medical Research Fund of Australia and New Zealand), 1109
Grants Year Book (National Union of Students), 1770
Grants, Scholarships or Fellowships for research on Diseases of the Blood, with special reference to Leukaemia (Lady Tata Memorial Fund), 458
Grapes (Seedless), of *Vitis vinifera:* Effect of Gibberellic Acid on Fruit Set and Berry Enlargement in (Dr. Robert J. Weaver), 851, *erratum*, 1110
Graphite : Industrial Carbon and (Society of Chemical Industry Conference on), 674
  Lamellar Compound of Sodium with (R. C. Asher and S. A. Wilson), 409
  Plasticity of (H. W. Davidson and H. H. W. Losty), 1057
Graphitic Carbon at 450° C. : Reaction of Carbon Monoxide with (Victor R. Deitz and Edward J. Prosen), 109
Grass : Rothamsted Park (1856-1949), 1311
Grass Cover of Africa (R. O. Whyte and J. M. Rattray), 80
Grass Leaves : *Candida albicans* from (Dr. M. E. di Menna), 1287
Grasses : Silicification of Bulliform Cells in (D. Wynn Parry and Dr. Frank Smithson), 1549
Grasses (Herbage) : Non-Flowering Strains of (Prof. M. L. Peterson, Dr. J. P. Cooper and P. B. Vose), 591
Grasshoppers and Locusts of Australia (Dr. J. A. G. Rehn), Vol. 1, Families Tetrigidae and Eumastacidae ; Vol. 2, Family Acrididae, Subfamily Pyrgomorphinae ; Vol. 3, Family Acrididae, Subfamily Cyrtacanthacridinae, tribes Oxyini, Spathosternini and Praxibulini, *review* by Dr. B. P. Uvarov, 1628
Grassland Research Institute : Experiments in Progress No. 9 (Annual Report for 1956), 1449
Gravitational Radiation (Dr. W. B. Bonnor), 1196
Gray, Dr. Allan P., and O'Dell, Thomas B. : Reaction of Ethylene Bromide with Trimethylamine and the Neuromuscular Blocking Activity of Ethylene*bis*-(Trimethylammonium), 634
Gray, Prof. C. H., and Nicholson, Dr. D. C. : Dextrorotatory Urobilin-IXα and Racemic *d*-Urobilin, 483
Gray, Prof. C. H., and others : The IX-α Structure of the Common Bile Pigments, 183
Gray, Dr. E. G., and Pumphrey, Prof. R. J. : Ultra-structure of the Insect Ear, 618
Gray, Dr. G. M. A.: Awarded a Beit Junior Fellowship for Medical Research, 1507
Graybiel, Ashton, and others : Isolation of an Erythropoietic Fraction from the Plasma of Rabbits made severely Anaemic with Phenylhydrazine, 1802
Great Britain : Animal Health in (Dr. G. Lapage), 839

Gupta, Dr. S. R., and others : Interaction in Ionic Solutions (Precise Measurements of Activity Coefficients of Aqueous Hydrochloric Acid Solutions), 241
Gupta, V. D. : A Quantitative X-Ray Study of Alpha-Beta Transformation in Keratin, 113
Gurdon, J. B. : Awarded a Beit Junior Fellowship for Medical Research, 1507
Gurdon, J. B., and others : Nuclear Transplantation in *Xenopus laevis*, 424
Gurijanov, Dr. E. V. : At the thirteenth International Congress of Applied Psychology (Researches at the Laboratory of Labour Psychology), 1579
Gurney, Clifford W., and others : Assay of Erythropoietin in Bone Marrow Suspensions, 1537
Gurr, George T. : Biological Staining Methods, sixth edition, *review* by S. Bradbury, 988

Guthrie, Dr. Douglas : Brunonian Doctrine in Mexico, *review*, 296
Guttman, Ruth, and Back, Avigdor : Effects of Kinetin on Cell Dvision in *Paramecium caudatum*, 852
Guy Medal of the Royal Statistical Society awarded to Prof. G. A. Barnard, 1703
Guy's Hospital Medical School : Title of reader in dental medicine in the University of London conferred on B. E. D. Cooke, 602
Gyenes, L., and others : Isolation of Antibodies on Antigen—Polystyrene Conjugates, 1465

HAAG, H. B., and Hanmer, H. R. : Smoking Habits and Mortality among Workers in Cigarette Factories, 84
Habitat : Influence of, on the Chemical Composition of *Ascophyllum nodosum* (Chemical Composition of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol. (Arne Haug and Bjørn Larsen), 1224
Habits (Smoking), and Mortality among Workers in Cigarette Factories (Dr. R. A. M. Case), 84
Hacking, K. : An Optical Method of Obtaining the Frequency Response of a Lens, 1158
Haddow, Prof. A. : *Obituary* of Sir Ernest Kennaway, 309
  Elected a Fellow of the Royal Society, 881
  Science and Society (Social Dangers of Science), 1183
Hadfield Medal for 1958 of the Iron and Steel Institute awarded to W. C. F. Hessenberg, 885
Hadjiolov, A. A., and Dancheva, K. I. : Phosphorylase Activity of Primary Rat Liver Cancer, 547
Hadrian's Wall : Preservation of, 670
Haemocyanin : Preservation of (Dr. Mortimer Litt and Dr. William C. Boyd), 1075
Haemoglobin : Participation of Reticulocyte Microsomes in the Incorporation of Iron into (Dr. M. Rabinovitz and M. E. Olson), 1665
Haemoglobin in Iron Deficiency : Iron Content of (Dr. Ernest Beutler), 837
Haemoglobin from *Thunnus thynnus* : Amino-Acid Composition of (C. De Marco and E. Antonini), 1128
Haemoglobin E and the Diego Blood Group Antigen in Sarawak and Burma (M. J. Colbourne, Elizabeth W. Ikin, Dr. A. E. Mourant, Dr. H. Lehmann and H. Thein), 119
Haemoglobin Types in Ox and Buffalo (Dr. Francis Vella), 564
Haemoglobins in the Horse : 'Multiple' (Dr. A. D. Bangham and Dr. H. Lehmann), 267
Haemoglobins in Monkeys (G. F. Jacob and Dr. N. C. Tappen), 197
Haemoglobins (Abnormal) : Absence of, in some Groups of the Papua Population of Dutch New Guinea (Prof. J. H. P. Jonxis, Dr. T. H. J. Huisman, G. J. da Costa and D. Metselaar), 1279
  Absence of the Diego Blood Group and, in 92 Maoris (Dr. H. Lehmann, Dr. A. North and Dr. J. M. Staveley), 791
Haemoglobins (Avian) : Electrophoretic Behaviour of (R. Datta, Jharna Ghosh and Prof. B. C. Guha), 1204
Haemoglobins (Electrophoretically Different) : Distribution of, among some Cattle Breeds of Europe and Africa (Dr. A. D. Bangham and B. S. Blumberg), 1551
Haemoglobins *A*, *S* and *C* (Human) : Allelomorphism and the Chemical Differences of the (J. A. Hunt and Dr. V. M. Ingram), 1062
Haemolytic Action of Guinea Pig Complement : Effect of Histamine and an Anti-Histamine Drug on the (Dr. J. D. Hawkins), 1666
Haemolytic Anaemia induced by Drugs : Enzymatic Abnormality in Erythrocytes of a Population sensitive to *Vicia faba* or (Dr. A. Szeinberg, Dr. Ch. Sheba and A. Adam), 1256
Haemolytic Disease of the Newborn : Comparative Aspects of (Dr. G. Fulton Roberts), *review*, 588
Haemophilus pertussis : An Antibiotic produced by a *Bacillus* sp., active against (Dr. A. Ian Tiffin), 907
  Surface Antigens of (Armand Guérault and Prof. H. B. Maitland), 122
Haemoproteins of Wheat : Two Crystalline (Bunji Hagihara, Kunio Tagawa, Ichiro Morikawa, Masateru Shin and Prof. Kazuo Okunuki), 1656
Haesler, W. : At the thirteenth International Congress of Applied Psychology (Correctional Psychology), 1580
Haferd, Miss Margaret : At the Conference of the Scottish Branch of Aslib (The United States Information Service Library in London), 746
Hafez, Dr. E. S. E. (Sharaf, Dr. A., and) : Effect of the Synthetic Œstrogen Stilboestrol on Pregnancy in the Rabbit, 1211
Hagerman, Dr. D. C., and Mather, Dr. J. W. : Controlled Release of Thermonuclear Energy—Neutron Production in a High-Power Pinch Apparatus, 226
Hagert, C. G., and others : Congenital Malformations in Children of Mothers Aged 42 and Over, 1545
Hagg, E. L. (Warren, E., and) : Single-Hop Propagation of Radio Waves to a Distance of 5,300 km., 34
Haggag, Dr. Gaber M., and El-Duweini, Dr. A. Khalaf : Detection of Uric Acid in the Tissue Homogenates of Earthworms, 191
Hagihara, Bunji, and others : Crystalline Cytochrome *c*—Crystallization of Cytochrome *c* from Pigeon Breast Muscle, 1588 ; Crystallization of Cytochrome *c* from Cow Kidney, 1589 ; Crystallization of Cytochrome *c* from Wheat Germ, 1590
  Two Crystalline Haemoproteins of Wheat, 1656
Hahn, Dr. P., and Koldovsky, O. : Significance of the Adrenal Glands during the Post-natal Development of Thermoregulation in the Rat, 847

Harrap, K. R., and others : A Model System for Cysteine Desulphydrase Action—Pyridoxal Phosphate—Vanadium, 1654
Harries, J. R. : Awarded an Oversea Civil Service Fellowship of the Commonwealth Fund, 1181
Harrington, Dr. R. W. : Photoperiodism in Plants and Animals (Courtship and Breeding in Carp and related Fishes), 536
Harrington, William F. : Effect of Neutral Salts on the Structure of Collagen and Gelatin, 997
Harris, Prof. A. S. : Phytochemistry (Testing for Anti-Arrhythmic Action of New Compounds in Dogs with Ventricular Tachycardia), 466
Harris, Dr. Harry : Title of reader in biochemical genetics in the University of London at London Hospital Medical College conferred on, 602
Harris, Dr. H., and Watts, J. W. : Turnover of Protein in a Non-Multiplying Animal Cell, 1582
Harris, Prof. John E. : Basic Zoology, *review*, 1430
Harris, P. F. : Appointed a lecturer in anatomy at the University of Sheffield, 1576
Harris, Dr. R. J. C., and Simons, P. J. : Nature of the Antigens responsible for the Acquired Tolerance of Turkeys to Rous Sarcoma Agent, 1495
Harris, S. G. : Vacancies and other Point Defects in Metals and Alloys (Portevin—Le Chatelier Effect in concentrated commercial and high-purity Binary Aluminium Alloys), 451
Harrison, Prof. D. C. : The Physics and Chemistry of Life, *review*, 985
Harrison, Dr. G. B. : The Ramsden Laboratory of Ilford Limited, 21
Harrison, Prof. George Russell : What Man May Be, the Human Side of Science, *review* by Prof. C. A. Coulson, 7
Harrison, I. R., and Johnson, C. A. : Persistence of Aldrin and Dieldrin Residues in Sheep Fleece, 1267
Harrison, K. : A Theory of Oxidative Phosphorylation, 1131
Harrison, P. W. : Metrology and Gauging, *review*, 988
Harrison, R. K. (Taylor, K., and) : Coffinite in Cornwall, 363
Harrisson, Tom : Carbon-14 Dated Palaeoliths from Borneo, 792
Hart, F. A., and others : Isomerism among Binuclear Thiocyanato-bridged Complexes, 43
Hartel, J. (Ritter, F. J., and) : Qualitative, Quantitative and Preparative Chromatography of Steroids on Fully Acetylated Paper, 765
Hartree, Prof. D. R. : *Obituary* by Dr. M. V. Wilkes, 808
Harvard College : Bulletin of the Museum of Comparative Zoology, Vol. 117, No. 5, Reptile Faunules of the Upper Brunswick Formation (Newark Series, Upper Triassic), (Donald Baird), 1575
Harvey, A. W. : Processing of Foods with Ionizing Radiations, 877
Harvey, C. O. : Principles of Analysis, *review*, 869
Harvey, H. G., and Hannan, R. S.: Processing of Foods with Ionizing Radiations (Effects of Low Doses of Radiation upon Packaged Foods to Eliminate Insects), 878
Harvey, Prof. L. A. : Retrospect on Evolution, *review*, 1296
Harwell : New Reactor at, 947
Harwell Reactor School : Course at the, 1110
Haskell, Dr. P. T. : Entomology in Review, *review*, 1756
Haslewood, Dr. G. A. D. : *Obituary* of Prof. T. Shimizu, 880
Hassall, Dr. K. A. : Xylose as a Specific Inhibitor of Photosynthesis, 1273
Hassel, Prof. O.: Elected to honorary fellowship of the Chemical Society, 1312
Hastings, Anna B., and Thomas, Dr. H. Dighton : *Obituary* of Prof. H. A. Kluge, 599
Hastings, Dr. J. W. : Photoperiodism in Plants and Animals (Bioluminescence in *Gonyaulax polyedra*), 536
Haswell, Miss M. R. : Awarded a Grant by the Leverhulme Trust, 1442
Hatching of Eggs of *Ascaris lumbricoides* : Physiology of the (Prof. W. P. Rogers), 1410
Hatfield Technical College : Proceedings of a Symposium on Microtexts and Microrecording, 1573
Hatt, Dr. H. H. : Phytochemistry (The Occurrence of some Optically Active Compounds in Anacardiaceous Exudates), 466
Haug, Arne, and Larsen, Bjorn : Chemical Composition of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol.—Influence of Habitat on the Chemical Composition of *Ascophyllum nodosum*, 1224
Haug, Arne (Larsen, Bjørn, and) : Chemical Composition of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol.—Presence of Reducing Compounds in *Ascophyllum nodosum*, 1224
Hauschka, T. S. : Genetic Aspect of Somatic Cell Variation (Wide Spectrum of Heterogeneity in Tumour Cell Populations), 1706
Hawkes, Dr. J. G. : Appointed to a senior lectureship in botany at the University of Birmingham, 1181
Hawking, Dr. F. : *Obituary* of Dr. A. J. Ewins, 310
Hawkins, A. E. (Clarke, Dr. E. G. C., and) : Heat Output and Body-weight in the Growing Albino Mouse, 1599
Hawkins, Gerald S. : Radio Noise from Meteors, 1610
Hawkins, Prof. H. L. : All the World's a Stage (Presidential Address to the South-Eastern Union of Scientific Societies), 1707
  The Geology of Reading with reference to the Kingsclere Excursion, 1708
Hawkins, Dr. J. D. : Effect of Histamine and an Anti-Histamine Drug on the Haemolytic Action of Guinea Pig Complement, 1666
Hawkins, jun., J. E., and others : Antimitotic Activity of 5-Tertiary Butyl Benzimidazolone, *erratum*, 238
Hawkins, T. H. : A Wages Policy, 162
  Management and Research, 307
  Scientific and Technological Education, *review*, 517
  Technical Education, *review*, 517
  Purpose in Teacher Training, *review*, 517
  Science and Existence, *review*, 517
  Supply and Quality of Craftsmen, *review*, 373, 531
  Management Development, 816
  Theories of Evolution, *review*, 1364
  Children and Young People, 1382
  Science for Children, *review*, 1628
Hayakawa, Shohei, and others : An Alternative Pathway for the Degradation of Cholic Acid by Micro-organisms, 906
Hayashi, Ichirö, and others : A New Reaction for the Differentiation of *cis*- and *trans*-Isomers of Nitrophenylhydrazones of some α-Keto Acids, 639
Hayashi, Dr. Masando, and others : β-Glucuronidase, Lipase and Esterase in the Testis of the Cryptorchid Rat, 186
Haybittle, J. L. : Radiation Hazard from Luminous Watches, 1422
Hayfield, P. C. S. (Williams, E. C., and) : Vacancies and other Point Defects in Metals and Alloys (Character of the Metallic Surface), 450
Hayman, R. F. : Appointed chairman of the Industrial Gas Development Committee of the Gas Council, 161
Hazard (Radiation), from Luminous Watches (J. L. Haybittle), 1422
HAZEL, a new Zero-energy Reactor at the Atomic Energy Research Establishment, 947
Healing in Burns : Lingering Effects of Local X-Irradiation on (R. H. Rixon, J. M. A. Tishler and H. B. Newcombe), 1138
Healing (Wound) : Importance of the Synthesis of Acidic Polysaccharide for (Dr. Laurence L. Layton, Doris R. Frankel, Irving H. Sher, Sylvia Scapa and Gladys Friedler), 1543
Health : Influence of Living and Working Conditions upon (Medical Conference on), 464
  Measurement of Levels of (World Health Organization, Technical Report Series No. 137), 1244
Health (Animal), in Great Britain (Dr. G. Lapage), 889
Health (Industrial), in Great Britain, 1043
Health (World) : The Progress of (Dr. G. Lapage), 1776
Health Education : The Science and Art of (Central Council for Health Education Summer School on), 1703
Health Education, Central Council for : Summer School on the Science and Art of Health Education, 1703
Health Education, International Journal of (International Union for Health Education), Vol. 1, No. 1, 1109
Health Problems (Industrial), in the Use of Nuclear Energy, 1023
Health Training (Public) of General Practitioners : Report of the Conference on (Geneva, 1956), (World Health Organization, Technical Report No. 140), 1047
Health and Living Conditions, International Medical Association for the Study of : Formation of an, 464
Health and Safety in the United Kingdom Atomic Energy Authority : Report of the Committee appointed by the Prime Minister to examine the Organization for Control of (Atomic Energy Office), 1023, 1043
Healthy Pear Trees : Effect of Transmitted Ribonucleic Acid from, upon the Synthesis and Composition of Protein (Dr. B. Kessler), 201
Hearfield, Dr. D. A. H., and Kilby, Dr. B. A. : Enzymes of the Tricarboxylic Acid Cycle and Cytochrome Oxidase in the Fat Body of the Desert Locust, 546
Hearnshaw, Prof. L. S. : Humanistic Psychology, *review*, 1493
  At the thirteenth International Congress of Applied Psychology (Present Position of Psychology in British Medical Schools), 1580
Heart : Distribution of Norepinephrine in the (Parkhurst A. Shore, Victor H. Cohn, jun., Benjamin Highman and Harriet M. Maling), 848
Heart (Perfused) : Formation of Lactate from Acetoacetate in the (Dr. J. H. Ottaway and A. K. Sarkar), 1791
Heart (Surviving Frog) : Effect of Acetylcholinesterase on the (Prof. A. B. L. Beznák), 1190
Heart Muscle (Pig) : Synthesis of Succinate from Acetate by an Enzyme System of (Dr. D. D. Davies), 339
Heartwood (Incense Cedar), *Libocedrus decurrens* Torrey : Nature of some Decay-retardant Extractive Components in (Arthur B. Anderson, Eugene Zavarin and Theodore C. Scheffer), 1275
Heat : Bleaching of Rhodopsin by Light and by (Dr. Ruth Hubbard), 1126
Heat Capacity : Dependence of, on Thermal History (J. M. Lock, D. H. Parkinson and L. M. Roberts), 642
Heat Inactivation of Ribonucleic Acid of Tobacco Mosaic Virus : Kinetics of (Dr. William Ginoza), 958
Heat Output and Body-weight in the Growing Albino Mouse (E. G. C. Clarke and A. E. Hawkins), 1599
Heat and Loss of Moisture : Effects of, on the Dormancy of Barley (P. D. Hewett), 424
Heat and Thermodynamics (Prof. Mark W. Zemansky), fourth edition, *review* by J. A. Shercliff, 732
Heated Milk (Strongly) : Formation of Lactulose and Tagatose from Lactose in (Susumu Adachi), 840
Heath, Dr. D. A. : Appointed lecturer in pathology at the University of Birmingham, 813
Heath, Dr. H. (Hoare, Dr. D. S., and) : Intermediates in the Biosynthesis of Porphyrins from Porphobilinogen by *Rhodopseudomonas spheroides*, 1592
Heath, Dr. O. V. S. : Appointed to the chair of horticulture in the University of Reading, 385 ; work of, 385
  Subjective Probability, Gambling and Intelligence, 1620
Heatley, Dr. N. G. : Spontaneous Crystallization of Amylase from Pancreatic Juice of the Rat, 1069
Heavens, Dr. O. S., and Pandeya, D. C. : Thickness Measurement of Epitaxially Grown Films, 1394
Heaviest Elements, *review* by Dr. L. E. J. Roberts, 1496
Heavy Pellets : Provision of Cobalt to Ruminants by means of (D. W. Dewey, H. J. Lee and Dr. Hedley R. Marston), 1367
Hebrides (New) : Biogeography of the (Dr. Alan Solem), 1253
Hedberg, Olov : Afroalpine Vascular Plants, *review* by Dr. G. Taylor, 1027
Hedgpeth, Joel W. (edited by) : Treatise on Marine Ecology and Paleoecology, Vol. 1, Ecology, *review* by Dr. G. E. R. Deacon, 1559

Hedley, Dr. R. H.: *Obituary* of Arthur Earland, 1440
Heichlen, J., and Noyes, W. A.: Structure and Reactivity of Electronically Excited Species (Photochemical Experiments with Ketones and Bi-acetyl), 321
Heijkenskjöld, Dr. R., and Möllerberg, Dr. H.: Amino-acids in Anthracite, 334
Heilbron, Sir Ian: Retirement as director of the Brewing Industry Research Foundation, 810; work of, 810
  Appointed a member of the Ministry of Supply's Advisory Council on Scientific Research and Technical Development, 1442
Heim, Prof. Roger: Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Heine, V.: Band Theory of Metals, 525

Heitner-Wirguin, Dr. Carla, and others: Metal-Chelating Properties of Plant-Growth Substances, 686
HeLa Cells (Solitary): Multiplication of (Dr. Peter Wildy and Michael Stoker), 1407
Heleocharis palustris-uniglumis Complex: Chromosome Variation in the (Lise H. Saunte), 1019
Helgebostad, Dr. A., and Martinsons, Dr. E.: Nutritional Anaemia in Mink, 1660
Helical Molecules (Two- and Three-Stranded): Formation of, by Polyinosinic Acid and Polyadenylic Acid (Dr. Alexander Rich), 521
Helium: Extraction of, from Gas Mixtures (K. B. McAfee), 1639
Helium II (Rotating): Detection of Single Quanta of Circulation in (Dr. W. F. Vinen), 1524
Helium-3 in the Carbo Meteorite: Distribution of (E. L. Fireman), 1725
Helium Film: Measurements of the Thickness of the (Prof. L. C. Jackson), 527
Helland-Hansen, Prof. Bjørn: *Obituary* by Dr. J. B. Tait, 453
Hellings, G. M.: (Makinson, W., and): Awarded the Navigation Prize of the Royal Aeronautical Society, 1646
Helminthosporium victoriae: Constitution of the Toxin of (Dr. Ross B. Pringle and Armin C. Braun), 1205
Hemileucid Moth: Interaction between Consecutive Responses in a, and the Evolution of Insect Communication (A. D. Blest), 1077
Hemingway, Dr. J. T., and Cater, Dr. D. B.: Effects of Pituitary Hormones and Cortisone upon Liver Regeneration in the Hypophysectomized Rat, 1065
Hemiptera: 'Compensatory Hyper-regeneration' in the Antennae of (Dennis Leston), 931
Hemming, Francis: Retirement as honorary secretary to the International Commission on Zoological Nomenclature, 1308
Hemming, H. G. (Brian, Dr. P. W., and): Complementary Action of Gibberellic Acid and Auxin, 1575
Hemmings, R. F., and others: Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
Hems, Dr. B. A.: Newer Preparative Methods in Organic Chemistry, 239
Hems, G.: Effect of Ionizing Radiation on Aqueous Solutions of Guanylic Acid and Guanosine, 1721
Hen (Domestic): Relationship between Aggressiveness and Egg Production in the (G. McBride), 858
Hen Gonadotrophic Hormones: Action of Ethylene Dibromide on (Dr. Eugenia Olomucki), *erratum*, 459
Hen Spleen: Antibody Formation by Isolated Cells of, after mixing with Antigen *in vitro* and Transfer to Chicks (Dr. Z. Trnka), 55
Hen's Egg: A Nail found within a (Prof. Hadley Kirkman and Gladys Tracy Kirkman), 1159
Hénaff, Colonel F.: Freezing and Drying, 1696
Henbest, Prof. H. B.: Newer Preparative Methods in Organic Chemistry (Amine Oxidations), 239
Henderson, Jack R. (Markowitz, Dr. A. S., and): A Rapid and Specific Method for the Isolation of Pneumococcal Polysaccharide, 771
Henderson, M. R., and Addison, G. H.: Malayan Orchid Hybrids, *review*, 517
Henderson V. E.: Relationship between some Clovers and *Ditylenchus destructor* Thorne, 1945, 59
Hendey, N. Ingram: Diatoms from Equatorial Indian Ocean Cores, 953
Hendricks, Dr. S. B.: Photoperiodism in Plants and Animals (Kinetic Aspects of the Photo-reactions of Photoperiodism), 535
Hendrie, J. I.: Residues of Pesticides in Foodstuffs (Existing Regulations in the U.K. and Overseas), 22
Hendriks, Dr. Eileen Lind: Awarded a moiety of the Lyell Fund for 1958 of the Geological Society of London, 159
Hennessey, Dr. R. S. F.: Appointed head of the Therapeutic Research Division of the Wellcome Foundation, Ltd., 1637; work of, 1637
Henningsen, Dr. K.: A New 'Deleted' *Rh*-Chromosome, 502
Henri-Martin, Mlle. G.: La Grotte de Fontéchevade, Premiére Partie, Historique, Fouilles, Stratigraphie, Archéologie (Archives de l'Institut de Paléontologie Humaine, Mémoire 28), *review* by M. C. Burkitt, 1564
Henry, Dr. Kathleen, and Kon, Dr. S. K.: Nutritive Value of Proteins (General Considerations), 151
Henry, Dr. T. A.: *Obituary* by T. M. Sharp, 1699
Hens (Laying): Presence of Œstrone, Œstradiol and Œstriol in Extracts of Ovaries of (D. S. Layne, Prof. R. H. Common, W. A. Maw and R. M. Fraps), 351
Henshaw, D. G., and Pope, N. K.: Melting, Diffusion and related Topics (Determination of the Radial Distribution Function in Solid and Liquid Helium and Neon and in Liquid Argon), 320
Heparin: Effect of, on Pathologically Decreased Serum Esterase in Carcinoma (Dr. J. Skořepa, S. Novák and H. Todorovičová), 908
Heparin and Christmas Factor (Dr. J. R. O'Brien), 1801
Herbaceous Plants (Woody and): Water Relations of Leaves from (Dr. J. S. Kennedy and C. O. Booth), 1271
Herbage Grasses: Non-Flowering Strains of (Prof. M. L. Peterson, Dr. J. P. Cooper and P. B. Vose), 591
Herbicide: A New—1 : 1'-Ethylene-2 : 2'-Dipyridylium Dibromide (R. C. Brian, R. F. Homer and J. Stubbs, and R. L. Jones), 446
Herbig, George H. (edited by): Non-Stable Stars, *review* by Prof. R. O. Redman, 731
Herbivores: Serotonin Metabolism in (Kengo Nakai), 1734
Herbivorous Gastropods: Escape Responses, of, when Stimulated by Carnivorous Gastropods (W. C. Clark), 137
Heredity: The Chemical Basis of (McCollum—Pratt Institute of the Johns Hopkins University, with support from the Atomic Energy Commission, Symposium on), (edited by William D. McElroy and Dr. Bentley Glass), *review* by Prof. M. Stacey, 75
Hermann, Friedrich: Flora von Nord- und Mitteleuropa, *review* by Prof. T. G. Tutin, 972
Hermaphroditism (Protogynous), in *Culis julis* L. (Prof. G. Bacci and A. Razzauti), 432
Herold, M., and others: Lymphotrophic Antibiotics, 706
Herring: The Planktonic Environment of the (R. S. Glover), 1575
Herring Fisheries: Plankton and the, 1575
Herring Flesh: Volatile Amines of (Dr. R. B. Hughes), 1281
Herring-Sperm Deoxyribonucleic Acid: Intestinal Carcinoma in Mice following Injection of (T. F. Hewer and Dr. E. S. Meek), 990
Hersey, Dr. and Mrs. J. B.: Awarded the John A. Fleming Medal for 1958 of the American Institute of Geonomy and Natural Resources, 1640
Hertfordshire Birds: *Leucocytozoon* spp. in some (Dr. J. R. Baker), 205
Herzberg, G.: Structure and Reactivity of Electronically Excited Species, 320
Heslop-Harrison, Prof. J.: An Ecological Perspective, *review*, 586
Heslop-Harrison, Prof. J., and Heslop-Harrison, Y.: Photoperiod, Auxin and Sex Balance in a Long-Day Plant, 100
Heslop-Harrison, Y. (Heslop-Harrison, Prof. J., and): Photoperiod, Auxin and Sex Balance in a Long-Day Plant, 100
Hess, Dr. R., and others: Cytochemical Localization of Pyridine Nucleotide-linked Dehydrogenases, 1531
Hessenberg, W. C. F.: Awarded the Hadfield Medal for 1958 of the Iron and Steel Institute, 885
Heterogeneity of *R*-Enzyme (I. C. MacWilliam), 1143
Heterologous Antibodies from Precipitating Sera: A Simple Method for absorbing (Dr. Joseph Böszörményi), 1344
Heteropolyacids: Ammonium Salts of the, as Cation Exchangers (Dr. J. van R. Smit), 1530
Hétéroptères aquatiques (Prof. Raymond Poisson), *review* by Dr. W. E. China, 1691
Hevea brasiliensis: Choice and Application of Fungicides to Plantation Crops, with special reference to (E. J. Risdon), 1017
  Transmission of Juvenile Rooting Ability from Seedlings to Adults of (Prof. T. J. Muzik and H. J. Cruzado), 1288
Hewer, H. R.: The Life of the Shrew, *review*, 517
Hewer, T. F., and Meek, Dr. E. S.: Intestinal Carcinoma in Mice following Injection of Herring-Sperm Deoxyribonucleic Acid, 990
Hewett, P. D.: Effects of Heat and Loss of Moisture on the Dormancy of Barley, 424
Hewish, Dr. A.: The Transition from the Ionosphere to Interplanetary Space, 1238
Hewitt, C. H. (Jenkins, Dr. S. H., and): Trade Wastes (Acid Wastes), 679
Hewitt, David: Awarded the Frances Wood Memorial Prize of the Royal Statistical Society, 1703
Hewitt, Dr. E. J.: Magnesium in Plants and Soils, *review*, 799
Hey, Dr. J. S.: Radio Astronomy, *review*, 1432
Heydecker, Walter: Effect of Anaerobic Conditions on Imbibed Lettuce Seeds, 1140
Heydeman, M. T.: *Iso*citritase in Germinating Marrow Seeds, 627
Heyes, Dr. J. K., and Shaw, Dr. G. W.: Chemical Determination of Deoxyribonucleic Acid in Root Tips before and after Cold Treatment, 1337
Heyman, Dr. Jacques: Plastic Design of Portal Frames, *review* by Prof. W. Fisher Cassie, 987
Hibernation: Epimorphic Regeneration during (Timothy J. Hunt), 290
Hibiscus sabdariffa x *H. cannabinus* and their Reciprocal Crosses: Embryological Investigation in (P. Sanyal), 1352
Hickling, Ronald: Naturalists Trust—their Contribution to Nature Conservation, 1447
Hicks, R., and West, Dr. G. B.: Adrenal Cortical Hormones and the Formation of Histamine and 5-Hydroxytryptamine, 1342
Hide, Dr. R. (Dolder, Dr. K., and): An Experiment on the Interaction between a Plane Shock and a Magnetic Field, 1116
HIFAR (High Flux Australian Reactor), 1433
Higginbotham, R. S., and Thomas, F. W.: Fluorescent Whitening Agents, 1437
High Brightness: Magnitude of Discomfort caused by (Dr. R. G. Hopkinson), 1076
High Butterfat Intake: Production of Convulsions in Hamsters by (Prof. R. L. Swank and R. Engel), 1214
High Chiasma Frequency in Allocyclic Segments of Chromosomes (Dr. N. E. Virkki), 1148
High-Current Toroidal Discharge producing High Temperatures: A Stabilized (Controlled Release of Thermonuclear Energy), (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, J. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222
High Energy Physics (European Organization for Nuclear Research 1958 Annual International Conference on), 884
High-Energy Radiation on Solids: Action of (Radiation Research Visiting Club Meeting in Cambridge on), 315
High-Molecular Materials: Physics of (Dr. L. R. G. Treloar), 1633
High-Polymer Chemistry (Issue of the *Scientific American* devoted to), 94
High Polymers: Chemical Structure and Physical Behaviour of (Sir Harry Melville), 1045
High-Power Pinch Apparatus: Neutron Production in a (Controlled Release of Thermonuclear Energy), (Dr. D. C. Hagerman and Dr. J. W. Mather), 226
High Resolution Nuclear Magnetic Resonance (Radio-frequency Spectroscopy Group Discussion on), 673
High-Resolution Shadow-Casting for the Electron Microscope: Simultaneous Evaporation of Platinum and Carbon for Possible Use in (D. E. Bradley), 875
High Speed Flow: Real Gas Effects in (Symposium at the Armament Research and Development Establishment, Fort Halstead), 671
High Temperature: Prolongation of the Life of *Drosophila subobscura* by a Brief Exposure of Adults to a (J. Maynard Smith), 496
High Temperatures: Extremely (Electronics Research Directorate, Air Force Cambridge Research Center, Bedford, Mass., Conference on), 1380

High Temperatures : A Stabilized High-Current Toroidal Discharge producing (Controlled Release of Thermonuclear Energy), (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, J. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222
High Temperatures and Nuclear Reactions in a Gas Discharge : Production of (Controlled Release of Thermonuclear Energy), (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, R. W. P. McWhirter, R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217, 315
High Vacuum : Burning Voltage of Arcs in (M. P. Reece), 475
High Velocities : Spectrophotometric Study of Stars with (Madeleine Chopinet), 1041
High-Voltage Paper Electrophoresis : Separation of the Lower Fatty Acids (C_1 to C_{10}) by (Dr. D. Gross), 264
Higher Education : Working Party on, to visit East Africa, 1308
Higher Plants : Occurrence of Ornithine in Sulphur-deficient Flax and the Possible Place of Ornithine and Citrulline in the Arginine Metabolism of some (R. G. Coleman), 776
Higher Technological Education, London and Home Counties Regional Advisory Council for : Ninth Annual Report, 1309
Highly Sensitive Assay for Œstrogens (L. Martin and Dr. P. J. Claringbold), 620
Highman, Benjamin, and others : Distribution of Norepinephrine in the Heart, 848
Higman, Dr. Graham : Elected a Fellow of the Royal Society, 881
  Mathematician Extraordinary, *review*, 1365
Hill, Dr. A. R. : Elected a Fellow of the Royal Society of Edinburgh, 739
Hill, Dr. D. W. : Report on the research work of the British Cotton Industry Research Association, 466
Hill, Dr. J. W. F. : Science in Schools, 1372
Hillary, Sir Edmund : Awarded a Founder's Medal of the Royal Geographical Society, 810
Hillman, William S. : Photoperiodic Control of Flowering in *Lemna perpusilla*, 1275
Hills, Dr. G. J., and others : Interaction in Ionic Solutions (Precise Measurements of Activity Coefficients of Aqueous Hydrochloric Acid Solutions), 241
Hilsum, C., and others : A New Thermal Image-Converter, 691
Himsworth, Sir Harold, and Delafresnaye, J. F. (edited by) : The Support of Medical Research—a Symposium organized by the Council for International Organizations of Medical Sciences, *review*, 147
Hinde, B. J., and others : Refraction of Microseims, 646
Hine, R. : X-Ray Research (Determination of the Crystal Structure of (+) S-methyl-L-cysteine-S-Oxide), 1645
Hingorani, M. K. (Crosse, J. E., and) : A Method for Isolating *Pseudomonas mors-prunorum* Phages from the Soil, 60
Hinshelwood, Sir Cyril : Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions, 803
Hiorns, F. J. : Mechanical Properties of Non-Metallic Brittle Materials (Vibrating Strips of Coal to study the Dynamic Young's Modulus and Internal Friction), 1578
Hippospongia equina: Amino-acid Composition of Sclero-protein of the Sponge (Dr. J. Saper and W. E. White), 285
Hirai, Tokuzo, and others : Effect of Thiosemicarbazones on the Multiplication of Tobacco Mosaic Virus, 352
Hirst, Prof. E. L. : The Chemistry and Biochemistry of the Reductones, *review*, 145
  Newer Preparative Methods in Organic Chemistry, 239
Histamine and an Anti-Histamine Drug : Effect of, on the Haemolytic Action of Guinea Pig Complement (Dr. J. D. Hawkins), 1666
Histamine and Coenzyme I : Formation of Histamine-containing Dinucleotides by Enzymatic Interaction of (Dr. Spyridon G. A. Alivisatos), 271
Histamine and 5-Hydroxytryptamine : Adrenal Cortical Hormones and the Formation of (R. Hicks and Dr. G. B. West), 1342
Histamine-containing Dinucleotides : Formation of, by Enzymatic Interaction of Histamine and Coenzyme I (Dr. Spyridon G. A. Alivisatos), 271
Histidine (N-Terminal), at the Active Centre of a Permeability Mechanism (W. D. Stein), 1662
Histidyl Peptides : A New Synthesis of (Prof. Shiro Akabori, Kenji Okawa and Fumio Sakiyama), 772
Histoautoradiographic Study of the Effect of Section of the Facial Nerve on the Uptake of Methionine-^{35}S by the Cells of the Facial Nerve Nucleus (J. Fischer, Z. Lodin and Dr. J. Koloušek), 341
Histochemical Aldehyde Blockades : Effect of Periodic Acid on (Dr. P. H. Staple), 288
Histochemical Demonstration of Lipase Activity in the Pectoralis Major Muscle of the Pigeon (Dr. J. C. George and K. S. Scaria), 783
Histogenesis of Osteoclastomata (Dr. W. J. Pepler), 633
Histological Stain for Newly Calcified Tissues (Prof. J. T. Irving), 704
Histological and Chemical Changes in the Rat Pituitary Neural Lobe following Treatment with Neurohypophysial Substances (Dr. J. de Groot), 650
Histology, *review* by Prof. J. M. Yoffey, 972
  A Student's (Dr. H. S. D. Garven), *review* by Prof. J. M. Yoffey, 972
History : Farming (G. E. Fussell), 536
History of Crop Pests and the Measures taken to Overcome Them (George Ordish), 536
History of the Development of Market Gardening (Dr. L. G. Bennett), 536
History of Entomology in World War II (Emory C. Cushing), *review* by P. F. Mattingly, 1234
History of Libraries : The Golden Chain, a Study in the (Prof. R. Irwin), 313
History of Science : Darwin and the, *review* by Dr. G. S. Carter, 970
History of Soft Fruit Growing (Eric Hobbis), 536
History of the University of Bombay, 1857-1957 (S. R. Dongerkery), *review* by Dr. L. A. Jordan, 1757
Hoar, Dr. T. P. : Vacancies and other Point Defects in Metals and Alloys, 451
Hoar, Dr. T. P., and West, J. M. : Mechano-Chemical Anodic Dissolution, 835
Hoare, Dr. D. S., and Heath, Dr. H. : Intermediates in the Biosynthesis of Porphyrins from Porphobilinogen by *Rhodopseudomonas spheroides*, 1592
Hoare, E. R. : Appointed officer-in-charge of the Irrigation Research Station (Commonwealth Scientific and Industrial Research Organization), Griffith, N. S. W., 235 ; work of, 235
Hobbis, Eric : History of Soft Fruit Growing, 536
Hobbs, Betty C., and others : Processing of Foods with Ionizing Radiations (Irradiation of Frozen Whole Egg), 878
Hobbs, F. D. : Appointed Paviors lecturer in highway engineering in the Department of Civil Engineering of the University of Birmingham, 89
Hobson, Dr. B. M. : Polymely in *Xenopus laevis*, 862
Hobson, Dr. D. : Appointed honorary lecturer in bacteriology at the University of Sheffield, 1576
Hobson, Prof. W. : Resignation from the University of Sheffield, on appointment as medical officer in training and education in the World Health Organization Regional Office, Copenhagen, 673
  Occupational Diseases, *review*, 728
Hockley, A. R. (Eltringham, Dr. S. K., and) : Coexistence of Three Species of the Wood-boring Isopod *Limnoria* in Southampton Water, 1659
Hodge, Prof. W. V. D. : Pre-election as Master of Pembroke College, Cambridge, 946 ; work of, 946
Hodges, Dr. J. R. (Cox, G. S., and) : Adrenocorticotrophic Hormone in the Blood of Adrenalectomized Rats, 420
Hodgkin, Dr. E. P., and Watson, J. A. L. : Breeding of Dragonflies in Temporary Waters, 1015
Hodgman, Prof. Charles D. (edited by, in association with Weast, Prof. Robert C., and Selby, Dr. Samuel M.) : Handbook of Chemistry and Physics, thirty-ninth edition, *review*, 661
Hodgson, D. R. (Holliday, R., and) : Restoration of Agricultural and other Soils (Restoration of Land covered by Pulverized Fuel Ash), 390
Hodgson, D. R., and others : Plant Growth on 'Fly Ash,' 1079
Hodgson, E. : Automatic Measurement of Quality in Process Plants (Instrument for the Determination of the Crystallizing Point of Batch Samples), 166
Hodgson (J. E.) Prize of the Royal Aeronautical Society awarded to Prof. H. J. van der Maas, 1646
Hoenigsberg, H. F., and Castiglioni, M. C. : Biochemical Differences between Inbred and Outbred Lines of *Drosophila melanogaster* studied by Paper Partition Chromatography, 1404
Hoff, E. A. W. : Physical Properties of Polymers, 1634
Hoffman, Dr. Brian F., and others : Transmembrane Potentials of Single Fibres of the Atrio-ventricular Node, 66
Hoffman, J., and others : Lymphotrophic Antibiotics, 706
Hoffman, Dr. Joseph G. : The Life and Death of Cells, *review* by Prof. P. C. Koller, 1363
Hoffmann, Klaus : Repetition of an Experiment on Bird Orientation, 1435
Hoffmann-Ostenhof, Prof. O., and others : Separation of Carotenoid Synthesis from Fat Synthesis in *Rhodotorula gracilis* by Diphenylamine, 268
Hoffmann-Ostenhof, Prof. O., and Thompson, Prof. R. H. S. : International Commission on Enzymes, 452
Hofman, Dr. T. : Inhomogeneity of α-Casein from Goat Milk, 633
Hogben, Prof. Lancelot : Science and Society (Science and its Social Functions), 1183
  Statistical Theory, the Relationship of Probability, Credibility and Error, *review* by I. J. Good, 1687
Holdings (Fragmented), Working Party on Consolidation of (Sub-Commission on Land and Water Use of the European Commission on Agriculture) : Report of the First Session (Lisbon, 1956) ; Report of the Second Session (Vienna, 1957), 1114
Holdings (Fragmented Agricultural) : Consolidation of (Food and Agriculture Organization of the United Nations, Report of the Working Party of Specialists on the), 1114
Holečková, E., and Servít, Dr. Z. : An Attempt to adapt Explanted Tissues to an Anticonvulsant ('Trimedal') and to Phenobarbital, 1541
Holland, James F. (Regelson, Dr. William, and) : The Anionic Polyelectrolyte, Polyethylene Sulphonate, as a New Antineoplastic Agent, 46
Holland, L. : Ionic Bombardment Cleaning of Glass, 1451
  Bombardment of Plastics in a Glow Discharge, 1727
Hollander, Dr. Franklin : 'Gastric Para-Mucus', 847
Holliday, R., and Hodgson, D. R. : Restoration of Agricultural and other Soils (Restoration of Land covered by Pulverized Fuel Ash), 390
Holliday, R., and others : Plant Growth on 'Fly Ash', 1079
Hollomon, Dr. J. H. : Awarded the Rosenhain Medal of the Institute of Metals, 1182
Holloway, Dr. B. W., and Jennings, Pamela A. : An Infectious Fertility Factor for *Pseudomonas aeruginosa*, 855
Holmberg, Allan R. : Edible Lizards, 1187
Holmes, Ian H., and Rubbo, Prof. Sydney D. : Rejection of the Peroxide Accumulation Hypothesis of Isoniazid Action, 1203
Holmes, Dr. R. L. : Appointed senior lecturer in anatomy at the University of Birmingham, 89
Holmgren, E. J. : Rudolf Diesel, 1858-1913, 737
Holmstrom, Dr. J. E. : Scientific and Technical Translation, 1044
Holothurian Sclerites : Chemical Analysis of (John S. Hampson), 1608
Holt, D. A., and others : Grain Boundaries and Electroluminescence in Gallium Phosphide, 109
Holub, Dr. Miroslav : Antibody Production by Lymphocytes after *in vitro* Contact with Bacterial Antigen and Transfer to New-born Rabbits, 122
Holzbauer, Dr. Margarethe M. A. : Awarded a Beit Junior Fellowship for Medical Research, 1507
Home Civil Service Fellowships (Commonwealth Fund Awards for 1958-59), 1181
Home Counties (London and) Regional Advisory Council for Higher Technological Education : Ninth Annual Report, 1309
Home Universities Conference, 164
Homer, R. F., and others : A New Herbicide—1-1'-Ethylene-2:2'-Dipyridylium Dibromide, 446
Homoeothermic Responses of Rabbits at an Elevated Environmental Temperature : Effects of Clipping and Spraying on various (Dr. Harold D. Johnson, Chu Shan Cheng and A. C. Ragsdale), 842
Homogenates of Mouse Kidney : Effect of Testosterone Propionate upon the Incorporation of Labelled Glycine into (Dr. Edward H. Frieden and Dr. Edward H. Cohen), 912
Homogenates (Tissue), of Earthworms : Detection of Uric Acid in the (Dr. Gaber M. Haggag and Dr. A. Khalaf El-Duweini), 191

Homologous Human Normal and Cancer Cells : Ribonuclease Activity and Ribonucleic Acid Content of (L. Ledoux, S. Brändli and J. C. De Paepe), 913
Homologue (Dimethyl), of Myleran : Protection of August Rats against Lethal Doses of a, by Isologous Bone Marrow (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Honeybee Queens : Shaking of, prior to Flight (M. Delia Allan), 68
Honeybone, R. E. : The Geographical Association, 606
Honeycombe, Prof. R. W. K. : Vacancies and other Point Defects in Metals and Alloys, 449
Honjo, Goro, and Watanabe, Masaru : Examination of Cellulose Fibre by the Low-Temperature Specimen Method of Electron Diffraction and Electron Microscopy, 326
Honours List : New Year, 86
  H.M. the Queen's Birthday, 1700
Honsaker, Dr. J., and others : Controlled Release of Thermonuclear Energy—Neutrons from a Stabilized Toroidal Pinch, 231
Hood, Dr. G. C. (Redlich, Dr. O., and) : Interaction in Ionic Solutions (Raman and Nuclear Magnetic-Resonance Investigations of the Dissociation of Strong Acids), 240
Hooker, E. J. : 'Sub-Grains' and Etch Figures in Lead, 180
Hop, *Humulus lupulus* : Sex Chromosomes in the (R. A. Neve), 1084
  Twining of the (P. R. Bell), 1009
Hope, Dr. D. B. : Biochemistry of Glutathione (Relationships between Thiols and Radiation Damage), 888
Hopewell, G. H. : Fellowship of the City and Guilds of London Institute conferred on, 884
Hopkins, B. E. : Awarded one hundred and fifty guineas from the Sir George Beilby Memorial Fund, 1375
Hopkins, Dr. H. H. : Title of reader in optics in the University of London (at the Imperial College of Science and Technology) conferred on, 1182
Hopkins (Johns) University (McCullum-Pratt Institute of the), with support from the Atomic Energy Commission : Symposium on the Chemical Basis of Heredity (edited by William D. McElroy and Dr. Bentley Glass), *review* by Prof. M. Stacey, 75
Hopkinson, G. G. : Awarded a Fellowship by the Leverhulme Trust, 1442
Hopkinson, Dr. R. G. : Design of Physics Research Laboratories (Programme of Research on the Design of Laboratories by the Nuffield Foundation Division for Architectural Studies in collaboration with the Building Research Station), 91
  Magnitude of Discomfort caused by High Brightness, 1076
Hops : Treatment of, with Dimefox (E. Q. Laws and H. S. Darling), 498
Hops (Green to Dried) : Systemic Insecticides and the Ratio of (H. S. Darling), 1811
Hora, Dr. F. B. : Effect of Lime on the Production of a Toadstool (*Omphalia maura* (Fr.) Gill), 1668
  Toadstools (Presidential Address to the Botanical Section of the South-Eastern Union of Scientific Societies), 1708
Horák, P. (Brejcha, V., and) : Use of Defoliants for Drying Buckwheat in the Field, and a New Method for the Chemical Determination of Rutin, 505
Horikoshi, Koki, and Iida, Sigeji : Lysis of Fungal Mycelia by Bacterial Enzymes, 917
Horizontal Ionospheric Drifts in the *F*2-Region at Equatorial Latitudes (Dr. B. Ramachandra Rao and E. Bhagiratha Rao), 1612
Horlock, Dr. J. H. : Engineering Thermodynamics, *review*, 1028
  Aerodynamics, *review*, 1232
  Appointed to the Harrison chair of mechanical engineering in the University of Liverpool, 1576
Hormonal Regulation of Reproduction in the Milkweed Bug, *Oncopeltus fasciatus* (Dallas), (A. S. Johansson), 198
Hormone (Adrenocorticotrophic), in the Blood of Adrenalectomized Rats (G. S. Cox and Dr. J. R. Hodges), 420
Hormone (Adrenocorticotrophic), and Melanocyte-stimulating Hormone : Behavioural Changes in Animals after Intracisternal Injection with (Prof. W. Ferrari), 925
Hormone (The 'Brain'), in the Silkworm, *Bombyx mori* L. ((Masatoshi Kobayashi and Jiro Kirimura), 1217
Hormone (Melanocyte-stimulating) : Behavioural Changes in Animals after Intracisternal Injection with Adrenocorticotrophic Hormone and (Prof. W. Ferrari), 925
Hormone (Thyroid-stimulating), in Rats : Blocking Effect of Morphine on the Secretion of (Milan Šámel), 845
Hormone and Photoperiod : Interaction of, in an Early Variety of Rice (G. Misra and G. Sahu), 637
Hormone Production (Parathyroid) : Leucine Aminopeptidase in Rat Parathyroid and its relation to (Dr. A. G. E. Pearse and Dr. G. Tremblay), 1532
Hormones : Clinical Use of (*The Practitioner*, Vol. 180, No. 5), 602
Hormones (Adrenal Cortical), and the Formation of Histamine and 5-Hydroxytryptamine (R. Hicks and Dr. G. B. West), 1342
Hormones (Gibberellin-like) : Role of, in Regulation of Plant Growth and Flowering (Dr. P. W. Brian), 1122
Hormones (Hen Gonadotrophic) : Action of Ethylene Dibromide on (Dr. Eugenia Olomucki), *erratum*, 459
Hormones (Mammalian) : Ovulation induced in Frog with (Dr. L. S. Ramaswami and A. B. Lakshman), 1210
Hormones (Pituitary), and Cortisone: Effects of, upon Liver Regeneration in the Hypophysectomized Rat (Dr. J. T. Hemingway and Dr. D. B. Cater), 1065
Hormones (Plant) : Role of, in Algal Metabolism and Ecology (Dr. Joyce A. Bentley), 1499, *erratum*, 1703
Hornbrook, Miss F. : Children and Young People, 1382
Horne, J. E. T. : Radiometric and Geochemical Survey Techniques (Determination of the Age of Radioactive Mineralization), 595
Horne, R. A. : Ferric Perchlorate Complex Ion, 410
Horne, T. : Processing of Foods with Ionizing Radiations (Sterilization of Milk), 878 ; (Animal Feeding Studies at the Wantage Radiation Laboratory), 879
Horner, F. : Polarization of Atmospherics, 1678
Horner, F., and Clarke, C. : Radio Noise from Lightning Discharges, 688
Hornsey, Mrs. Shirley, and others : Effect on Radiosensitivity of Inert Gases—Effect of Inert Gases on Oxygen-dependent Radiosensitivity, 613
Horse : Enzymes in the Ileal Juice of the (Dr. F. Alexander and A. K. Chowdhury), 190
  'Multiple' Haemoglobins in the (Dr. A. D. Bangham and Dr. H. Lehmann), 267
Horticultural Congress : Fifteenth International (Science in the Service of Horticultural Techniques), 315
Horticultural Techniques : Science in the Service of (Fifteenth International Horticultural Congress), 315
Horticulture at Nottingham, 528
Horticulture at Reading, 385
Horton, C. C., and others : Radiation Shielding, *review* by J. Edwards, 976
Horváth, I. W., and others : Effect of Stress and Cortisone on the Cytomorphology of Pituitary Grafts in Rats, 1417
Hoshijima, Hideyuki, and others : An Alternative Pathway for the Degradation of Cholic Acid by Micro-organisms, 906
Hoskin, Dr. M. A. : Franklin, the Newtonian, *review*, 295
Hosoi, Teruhiko : Adenosine-5'-phosphates as the Stimulating Agent in Blood for inducing Gorging of the Mosquito, 1664
Hosoya, S. : X-Ray Research (Structures of Two Isomers of Thianthrene Dioxide), 1645
Host : Parasite and, *review* by Dr. G. Lapage, 1362
Host (Resistant) : A Change of Pathogenic Race in *Fusarium oxysporum* f. *pisi* induced by Root Exudate from a (E. W. Buxton), 1222
Host-range Mutation (Plaque-type and) : Increased Rate of, following Treatment of Bacteriophage *in vitro* with Ethyl Methane Sulphonate (Dr. Anthony Loveless), 1212
Host Specificity among Parasites of Vertebrates : First Symposium on (International Union of Biological Sciences and the University of Neuchâtel), *review* by Dr. G. Lapage, 1362
Hosts (Intermediate), of Schistosoma (Dr. G. Mandahl-Barth), 1244
Hot Laboratories and Equipment : Seventh Conference on, 1711
Hot Plasmas : Co-operative Phenomena in (Controlled Release of Thermonuclear Energy), (Prof. Lyman Spitzer), 221
Hotta, Y. : Nucleic Acids (Early Development of Fern Gametophytes), 1512
Houghton, Prof. Henry G. : *Obituary* of Prof. Charles F. Brooks, 1440
House, M. R. : Awarded a General Fellowship of the Commonwealth Fund, 1181
House of Commons : Debate on the Siting of Nuclear Power Stations, 462
  Debate on the Peaceful Uses of Nuclear Energy, 948
  Debate on Science Teachers and National Service, 948
  Debate on the Recruitment and Training of Teachers, 950
  Debate on the Milford Haven Conservancy Bill, 1040
  Debate on the Defence Contracts Bill, 1111
  Debate on the motion for the annulment of the Alkali, etc., Works Order (1958), 1572
House-Flies (*Musca domestica* L.) : Survival Curves for Male and Female (Morris Rockstein and Harry M. Lieberman), 787
Housefly, *Musca domestica vicina* Macq. : Nutritional Requirements of the Common (Prof. J. T. Chang and Miss M. Y. Wang), 566
House Mouse : Influence of Time of Mating on the Segregation Ratio of Alleles at the T Locus in the (Dr. A. W. H. Braden), 786
  Selection for an Invariant Character—'Vibrissa Number'—in the (R. B. Dun and A. S. Fraser), 1018
Houses : Thermal Insulation of, 529
Housley, S., and others : Auxins in Immature Maize Kernels, 553
Houstoun, Dr. R. A. : Physical Optics, *review* by G. R. Noakes, 5
Howard, Dr. Alma, and others : Effect on Radiosensitivity of Inert Gases—Effect of Inert Gases on Oxygen-dependent Radiosensitivity, 613
Howard, P. R. : Correlation between Ionizing and Attachment Coefficients and Breakdown Characteristics for Carbon Tetrafluoride, 645
Howarth, Dr. C. I., and Treisman, M. : Validity of Motokawa's Technique for Investigating Retinal Function, 843
Howatson, Dr. A. F., and McCulloch, E. A. : Virus-like Bodies in a Transplantable Mouse Plasma Cell Tumour, 1213
Howells, Mrs. (Gwyneth Parry) : Size and Osmoregulation in Salmonid Fishes, 1218
Howes, Dr. F. N. : Poisonous Plants, *review*, 729
Howie, Dr. D. I. D. : Dried Organic Substances as Food for Larval Annelids, 1486
Hoyle, Fred : Appointed Plumian professor of astronomy and experimental philosophy in the University of Cambridge, 740 ; work of, 740
Hoyle, Dr. Graham : The Mechanism of Insect Flight, *review*, 971
  Two Inhibitory Fibres forming Synapses with a Single Cell, 1134
Hsiao, Prof. C. C. : Fine Aluminium Nitride Precipitates in Steel, 1527
Hubback, Mrs. Judith : Wives who went to College, *review* by Mrs. C. E. Arregger, 443
Hubbard, E. H. : Flames and Industry (Experimental Methods used at the Royal Dutch Steelworks at IJmuiden), 15
Hubbard, J. : Band Theory of Metals and the Structure of the Fermi Surface (Description of the Electron Gas in Terms of the Independent Particle Model), 526
Hubbard, Dr. Ruth : Bleaching of Rhodopsin by Light and by Heat, 1126
Hubble, Dr. D. V. : Appointed to the chair of paediatrics and child health in the University of Birmingham, 1640
Hübscher, Dr. G., and others : Coenzyme *A* and Aldolase in Rubber-bearing Plants, 628
Huddersfield Training College : Technical Teacher Training, 948
Hudson, Dr. J. P. : Appointed to the chair of horticulture in the University of Nottingham, 528 ; work of, 528
Hudson, Dr. R. G. S. : Awarded the Murchison Medal for 1958 of the Geological Society of London, 159
Huffman, Prof. M. N., and others : 3β-Methoxy-5-androsten-16β-ol, a Cytostatic and Fungistatic Steroid, 48
Huggett, Prof. A. St. G. G. J. McC. : Elected a Fellow of the Royal Society, 881
Hughes, N. F., and Couper, R. A. : Palynology of the Brora Coal of the Scottish Middle Jurassic, 1482
Hughes, Dr. R. B. : Volatile Amines of Herring Flesh, 1281
Hughes, T. P., and others : Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
Hughes, W. L., and others : Distribution of Tritium-labelled Thymidine in *Escherichia coli* during Cell Multiplication, 328
  Site of Catabolism of Serum Albumin, 1064
Huisman, Dr. T. H. J., and others : Absence of Abnormal Haemoglobins in some Groups of the Papua Population of Dutch New Guinea, 1279

Hull, Dr. Albert W. : Dr. Irving Langmuir's Contributions to Physics, 148
Obituary of Dr. Willis R. Whitney, 1037
Hull, G. W., and others : Resistance Thermometry near the Absolute Zero, 1245
Hulme, Dr. A. C. (Neal, Dr. G. E., and) : Activity of Cytoplasmic Particles isolated from Apples, 1469
Hulse, G. : Physical Properties of Polymers, 1634
Hultman, Eric (Ek, Dr. Jan, and) : Determination of Glucose and Laevulose in Body-Fluids, 780
Hulton Achievement Award presented to the members of the team at the Atomic Energy Research Establishment, Harwell, who created ZETA, 1182
Human : Artificial Insemination in the (Dr. A. M. C. M. Schellen), *review* by Dr. G. I. M. Swyer, 797
Human α_1-Acid Glycoprotein : Effect of, on Blood Coagulation (Inga Marie Nilsson and Ikuo Yamashina), 711
Human Amnion Epithelium : Sex Chromatin in Polypoid Nuclei of (Harold P. Klinger and Hans G. Schwarzacher), 1150
Human Artificial Insemination, *review* by Dr. G. I. M. Swyer, 797
Human Biology, Society for the Study of : Foundation of the, 1507
Human Blood Plasma : Method of Isolating the β_1-Metal-combining Globulin from (E. W. Boettcher, P. Kistler and Prof. Hs. Nitschmann), 490
Human Bone Marrow : Transformation of Megaloblasts to Normoblasts by cultivating, in Presence of Vitamin B_{12} and Vitamin B_{12}-binding Protein (Dr. I. Pendl and Dr. W. Franz), 488
Human Caeruloplasmin Oxidase Activity : Colorimetric Detection of, after Electrophoresis in Agar Plates or after Immuno-electrophoresis (José Uriel), 999
Human Carcinoma : Cytolipin *H*, a Pure Lipid Hapten isolated from (Dr. Maurice M. Rapport, Liselotte Graf, Vladimir P. Skipski and Nicholas F. Alonzo), 1803
Human Collagen : Variation with Age of Shrinkage Temperature of (Patricia C. Brown and Dr. R. Consden), 349
Human Disease : Biochemical Disorders in (edited by Prof. R. H. S. Thompson and Prof. E. J. King), *review* by Dr. C. P. Stewart, 215
Human Haemoglobins *A*, *S* and *C* : Allelomorphism and the Chemical Differences of the (J. A. Hunt and Dr. V. M. Ingram), 1062
Human Life : Science and (Prof. J. A. V. Butler), *review* by F. I. G. Rawlins, 299
Human Milk Whey : Chromatographic Separation of Lactalbumin from, on Calcium Phosphate Columns (Dr. Bengt Johansson), 996
Human Normal and Cancer Cells (Homologous) : Ribonuclease Activity and Ribonucleic Acid Content of (L. Ledoux, S. Brändli and J. C. De Paepe), 913
Human Sciences in Industry (Council for Scientific and Industrial Research Committee on), 948
Human Side of Science : What Man May Be, the (Prof. George Russell Harrison), *review* by Prof. C. A. Coulson, 7
Human Somatic Chromosomes (Dr. C. E. Ford and P. A. Jacobs, and Dr. L. G. Lajtha), 1565
Human Subjects : Influence of Salt Deficiency on Taste Sensitivity in (Roy Yensen), 1472
Human Tissues : Electrical Noise from 'Polarization Cells' and from (E. Nightingale), 192
Human Tooth : Passage of Phosphate through the (Dr. P. Pincus), 844, *erratum*, 1771
Human Tooth Enamel : Investigations into Temperature Changes on the Surface of (Peter S. Rothwell), 1805
Human Visual Thresholds : Retinal Summation and (Dr. R. A. Weale), 154
Huma[illegible] Technique in the Laboratory (Report of a Symposium held by the [illegible]versities Federation for Animal Welfare), (Laboratory Animals [illegible]reau, Collected Papers Vol. 6), 1187, 1444
Humanism : Technological, 369
Humanistic Psychology (Prof. John Cohen), *review* by Prof. L. S. Hearnshaw, 1493
Humanity and Science, *review* by Prof. C. A. Coulson, 7
Humans : Alpha-Ray Activities of, and their Environment (R. C. Turner, J. M. Radley and Prof. W. V. Mayneord), 518
Third Allele at the Serum β-Globulin Locus in (Dr. O. Smithies), 1203
Humboldt Penguin : Nasal Salt Secretion in the (Prof. Knut Schmidt-Nielsen and Dr. W. J. L. Sladen), 1217
Humic Acids (Protein—Lignin Complexes, Lignins and) : Resistance of, to Microbial Attack (Prof. D. L. Lynch and Prof. C. C. Lynch), 1478
Humid Tropical Regions : Problems of (Unesco), 1380
Humid Tropics : Climate, Vegetation and Land Utilization in the (Pacific Science Congress Symposium on), 596
Hummerstone, L. G. (Carlisle, Dr. D. B., and) : Niobium in Sea-Water, 1002
Humphrey, Prof. George : Thinking as a Skill, *review*, 1629
Humphries, Dr. E. C. : Effect of Gibberellic Acid and Kinetin on Growth of the Primary Leaf of Dwarf Bean (*Phaseolus vulgaris*), 1081
Cereals and Climate, *review*, 1689
Humphrey, Dr. Philip S. (edited by Bates, Prof. Marston, and) : The Darwin Reader, *review* by Dr. G. S. Carter, 970
Humulus lupulus : Seed Chromosomes in the Hop (R. A. Neve), 1084
Twining of the Hop (P. R. Bell), 1009
Humus Decomposition in East African Soils : Pattern of (H. F. Birch), 788
Hund, A., and others : Cell Wall Composition in Bacterial and *L* Forms of *Proteus vulgaris*, 572
Hundred Years of Evolution (Dr. G. S. Carter), *review* by Prof. L. A. Harvey, 1296
Hunt, J. A., and Ingram, Dr. V. M. : Allelomorphism and the Chemical Differences of the Human Haemoglobins *A*, *S*, and *C*, 1062
Hunt, Prof. N. C. : At the Annual Conference of the British Institute of Management (The Part the Universities could play in Management Research), 309
Hunt, Dr. R. W. G. : Scope and Limits of Colour Measurement, 1706
Hunt, Sheila M. V., and Matheson, M. A. : Adenosine Triphosphatase and Contraction in Dehydrated Muscle Fibres, 472
Hunt, Timothy J. : Epimorphic Regeneration during Hibernation, 290
Hunter, Dr. Donald : The Diseases of Occupations, second edition, *review* by Prof. W. Hobson, 728
Huntoon, Dr. R. D. (McNish, A. G., and) : Importance of the Faraday to Elemental Constants and Electricity Standards, 1194
Hurst, Dr. R. : Appointed director of the Dounreay Experimental Reactor Establishment, 530
Husbandry : Postgraduate Scholarships in (Ministry of Agriculture, Fisheries and Food and the Department of Agriculture for Scotland), 603
Hussein, A. M. (Naim, Dr. M. S., and) : Growth Responses of *Fusarium oxysporium* to Metabolites of some Rhizospheric Microflora of Egyptian Cotton Varieties, 578
Hutchinson, A., and others : Formation of a Glycoside of Maleic Hydrazide in Plants, 1535
Synthesis of Phlorin and other Phenolic Glucosides by Plant Tissues, 841
Hutchinson, Prof. G. Evelyn : A Treatise of Limnology, Vol. 1, Geography, Physics and Chemistry, *review* by Prof. Kaare Strøm, 1360
Hutchinson, Prof. G. Evelyn (Wangersky, Peter J., and) : Manganese Deposition and Deep Water Movements in the Caribbean, 108
Hutchinson, Dr. John : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Hutchinson, Dr. J. B. : Progress in Cereal Science, *review*, 1361
Hutchinson, Dr. J. B., and others : Bread and the Growth of Weanling Rats—the Lysine—Threonine Balance, 1733
Hutton, Prof. R. S. : Awarded the Platinum Medal of the Institute of Metals, 1182
Huxley, Sir Julian : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Biological Aspects of Cancer, *review* by Prof. P. C. Koller, 1363
A Logarithmic Time Scale for the Evolution Process, 1653
Huxstep, Miss E. M. : Science in Schools, 1371
Huygelen, C., and others : Isolation of *Salmonella infantis* from an Aborted Bovine Foetus, 1539
Hvidberg, Eigill, and others : Reduction of the Viscosity of a Potassium Hyaluronate Solution by Ultra-violet Irradiation, 1338
Hyaline Tissue in Cases of Silicosis : Presence of Plasma Globulins in the (Dr. R. Ceppellini and Dr. B. Pernis), 55
Hyaluronate Solution (Potassium) : Reduction of the Viscosity of a, by Ultra-violet Irradiation (Eigill Hvidberg, Sven Ancher Kvorning, Arne Schmidt and Jens Schou), 1338
Hyaluronic Acid : Electrophoretic Removal of Protein from (Dr. A. G. Ogston and T. F. Sherman), 482
Hyatt, Comdr. G. W. : Freezing and Drying, 1695
Hybrids of Tea : Species (Dr. J. Wood and P. K. Barua), 1674
Hybrids (Distant), from Parents with Reduced Immunological Reactivity (Marta Vojtíšková), 927
Hydralazine : Lesions in the Hypertensive Rat Kidney Produced by (Dr. D. L. Gardner), 915
Hydraulic Design : Irrigation and (Dr. Serge Leliavsky), Vol. 2, Irrigation Works, *review* by G. H. Lean, 514
Hydraulic Systems in Aircraft, *review*, 977
Hydraulics : Aircraft (edited by H. G. Conway), Vol. 1, Hydraulic Systems ; Vol. 2, Component Design, *review*, 977
Hydraulics Research, 235
Hydraulics Research Station, Wallingford : Retirement of Sir Claude Inglis as director, 235
Appointment of Fergus H. Allen as director, 235
Hydrazide (Isopropyl-isonicotinic Acid) : Increase of 5-Hydroxytrypamine in Blood Platelets by (A. Pletscher and A. Bernstein), 1133
Hydrazide (Maleic), in the Control of the Bulbous Weed *Oxalis pes-caprae* (N. G. Marinos), 1143
Hydrazide (Maleic), in Plants : Formation of a Glycoside of (Prof. G. H. N. Towers, A. Hutchinson and W. A. Andreae), 1535
Hydrocarbon Flames : Mass-Spectrometric Observations of Ions in (P. F. Knewstubb and Dr. T. M. Sugden), 1261
Hydrocarbons (Aromatic) : Correlations between Localization Energies and Polarographic Half-Wave Potentials of (P. H. Given), 1001
Hydrocarbons (Polycyclic Tar) : Paper Chromatography of the (Dr. Ernest Maly), 698
Hydrocarbons (Polyphenylated Aliphatic) : Effect of certain, on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, C. C. Ware and Dr. D. L. J. Bilbey), 1804
Hydrochloric Acid (Boiling) : Corrosion of Ten Metals in, when in Contact with Rhodium, Palladium, Iridium and Platinum (W. Roger Buck, III, and Henry Leidheiser, jun.), 1681
Hydrodictyon: Dependence on Light of the Reversible Uptake of Inorganic Phosphate by (A. Pirson and Dr. A. Kuhl), 921
Hydrogen : Effect of, on the Deformation Characteristics of Alpha-Titanium (E. Smith), 902
Hydrogen Atoms in β, γ and δ positions : Hyperconjugation due to (S. G. Beech), 1617
Hydrogen Peroxide : Free Radical produced in the Reaction of Metmyoglobin with (Dr. J. F. Gibson, Dr. D. J. E. Ingram and P. Nicholls), 1398
Inability of, to influence the Survival-Time of Rats bearing *RD*3 Sarcoma and the Walker Carcinoma (Dr. F. N. Ghadially and Dr. G. Wiseman), 1067
Hydrogen Peroxide in Culture Media : Estimation of (E. J. K. Penikett and Dr. A. J. Lister), 1682
Hydrogen Peroxide and Tumour Therapy (Prof. H. N. Green and J. W. Westrop), 128
Hydrogen Sulphide : Release of Phosphate from Soil Minerals by (Joan I. Sperber), 934
Hydrography, *review* by Dr. G. E. R. Deacon, 214
Hydrography of the Faroe—Shetland Channel, 1927-1952 (Dr. John B. Tait), *review* by Dr. G. E. R. Deacon, 214
Hydrolases by Chlortetracycline : Effect of Calcium Ions on the Inhibition of (Dr. Josef Rokos, Mikuláš Burger and Pavel Procházka), 1201
Hydrolysis of a Natural Product : α-Aminoisobutyric Acid, β-Hydroxyleucine and γ-Methylproline from the (Prof. G. W. Kenner and R. C. Sheppard), 48
Hydrolysis (Enzymatic), of Indoleacetonitrile (Prof. Kenneth V. Thimann and S. Mahadevan), 1466
Hydroperoxides (Organic) : Reduction of, by Micro-organisms and Animal Tissues (Dr. D. M. Updegraff and Dr. F. A. Bovey), 890
Hydrophobic Sols : Elimination of Dialysis in the Preparation of (P. Nagels), 638
3-Hydroxyanthranilic Acid to Quinolinic Acid : Conversion of, in presence of Rat Liver treated with 2-Acetylaminofluorene (E. Quagliariello, S. Auricchio and E. Rinaldi), 624
17-Hydroxycorticosteroid (Adrenal) Secretion in Dogs : Muscular Exercise and (Prof. T. Suzuki, K. Yamashita and T. Mitamura), 715

β-Hydroxyleucine and γ-Methylproline from the Hydrolsis of a Natural Product : α-Amino*iso*butyric Acid, (Prof. G. W. Kenner and R. C. Sheppard), 48
Hydroxyproline : Quantitative Determination of, by Paper Chromatography (Henry R. Roberts and Michael G. Kolor), 837
Hydroxypteridines : Enzymatic Dehydrogenation of Hydroxypurines and (Dr. Josef Fellig and Christine E. Wiley), 51
Hydroxypurines and Hydroxypteridines : Enzymatic Dehydrogenation of (Dr. Josef Fellig and Christine E. Wiley), 51
5-Hydroxytryptamine : Adrenal Cortical Hormones and the Formation of Histamine and (R. Hicks and Dr. G. B. West), 1342
5-Hydroxytryptamine in Blood Platelets : Increase of, by Isopropylisonicotinic Acid Hydrazide (A. Pletscher and A. Bernstein), 1133
5-Hydroxytryptophan Decarboxylase : Inhibition of, by Phenylalanine Metabolites (Dr. A. N. Davison and Dr. M. Sandler), 186
Hyman, Dr. R. A. : Properties of Dislocations, *review*, 1562
Hyperconjugation due to Hydrogen Atoms in β, γ and δ Positions (S. G. Beech), 1617
Hyper-regeneration' ('Compensatory), in the Antennae of Hemiptera (Dennis Leston), 931
Hypertension : Salt Intake, Adrenocortical Function and (Dr. Lewis K. Dahl), 989
Hypertensive Rat Kidney : Lesions in the, produced by Hydralazine (Dr. D. L. Gardner), 915
Hyperthyroidism : Sodium Content of Erythrocytes in (Dr. W. A. Boekelman), 1136
Hypervitaminosis-A : Influence of 4-Methyl-2-thiouracil on the Teratogenic Activity of (Dr. D. H. M. Woollam and Dr. J. W. Millen), 992
Hypnosis (Animal) : Changes in the Topographical Distribution of Glycogen in the Brain during (Dr. D. Svorad), 775
Hypophysectomized Rat : Effects of Pituitary Hormones and Cortisome upon Liver Regeneration in the (Dr. J. T. Hemingway and Dr. D. B. Cater), 1065
Hypophysectomized Rats : Immediate Effect of *l*-3 : 5 : 3'-Tri-iodothyroacetic Acid on Metabolic Rate and Body Temperature in, and the Action of Cortisone (Prof. Sz. Donhoffer, I. Várnai and E. Sziebert-Horváth), 345
Hypophysectomy : Effect of, on the Ability of Rat Liver Microsomes in a Cell-free System to Incorporate Radioactive Amino-Acids into their Proteins (Dr. A. Korner), 422
Hypotensive Drug : 1 : 2 : 2 : 6 : 6-Pentamethylpiperidine, a New (G. E. Lee, W. R. Wragg, S. J. Corne, N. D. Edge and H. W. Reading), 1717
Hypothalamus and Oxytocin (A. W. Duggan and G. W. Reed), 1278
Hypothermia : Effect of, on Death by Starvation (Dr. T. Braun and Dr. B. Mosinger), 968
  Effect of a Lethal Electric Shock during (T. Szilágyi, K. Benkö and H. Csernyánszky), 909
  Stress in (H. S. Samuli Sarajas, Paula Nyholm and Paavo Suomalainen), 612
Hypothesis for the Biosynthesis of Ribonucleic Acid and Protein (Dr. A. M. Michelson), 375
Hypothesis of the Mechanism of Bacterial Cell Separation : Chaining and Unchaining *Streptococcus faecalis*—a (Dr. Iwo Lominski, John Cameron and George Wyllie), 1477
Hypothesis (Peroxide Accumulation), of Isoniazid Action : Rejection of the (Ian H. Holmes and Prof. Sydney D. Rubbo), 1203
Hyrax (Cape), *Procavia capensis* (Pallas) : An Acid-free Bacillus isolated from the Lungs of the (J. C. Wagner, Dr. G. Buchanan, V. Bokkenheuser and Shirley Leviseur), 284
Hysteresis (Electric Double), in (K_xNa_{1-x}) NbO_3 Single Crystals (L. E. Cross), 178

I*BERIS amara* L. : *In vitro* Culture of Ovaries of (Nirmala Maheshwari and Manohar Lal), 631
Ice : Influence of Organic Vapours on the Crystal Habit of (J. Hallett and Dr. B. J. Mason), 467
  Physics of Water and (Royal Society Discussion on), 380
Ichige, Keiji (Tsuchikura, Hidetsugu, and) : Observation of Metal Sections by means of the 300-kV. Electron Microscope, 694
Ichihara, Elizabeth (Barry, Dr. J. M., and) : Biosynthesis of Gramicidin-*S*, 1274
Idea of God : Science and the (Prof. C. A. Coulson), 813
'Identical' Chemical Groups : Conditions for Differential Reaction of (Dr. A. G. Ogston), 1462
Identification of *M*-Regions on the Sun (Dr. Kurt Toman), 641
Identification of Solanine (Dr. E. G. C. Clarke), 1152
Identification (Ion), in Flames by Mass Spectrometry (J. Deckers and Prof. A. Van Tiggelen), 1460
Identification (Spot Chromatography), of Citrus Rootstocks (Prof. Raymond M. Selle), 506
Identify Types of *Pasteurella multocida* : Failure of the Agglutination Test to (Dr. G. R. Carter), 1138
Igarashi, Hisanao, and others : Presence of a Threonine-containing Phospholipid in Tunny Muscle, 1282
Iida, Sigeji (Horikoshi, Koki, and) : Lysis of Fungal Mycelia by Bacterial Enzymes, 917
Ikin, Elizabeth W., and others : Haemoglobin E and the Diego Blood Group Antigen in Sarawak and Burma, 119
Ilbery, P. L. T., and others : Avoidance of 'Secondary Disease' in Radiation Chimaeras, 488
Ileal Juice of the Horse : Enzymes in the (Dr. F. Alexander and A. K. Chowdhury), 190
Ilford, Ltd. : The Ramsden Laboratory of (Dr. G. B. Harrison), 21
Iljina, T. S. (Alikhanian, S. I., and) : Mutagenic Action of Actinophages, 1476
Illing, Prof. V. C. : Elected to a Fellowship of the Imperial College of Science and Technology, 1182
Image (Electron Microscope) : Contrast in the (Dr. Robin C. Valentine), 832
Image (Lattice), of Twin Structure observed directly by Electron Microscope in a Crystal of Copper Phthalocyanine (Prof. E. Suito, N. Uyeda, H. Watanabe and T. Komoda), 332
Image Assessment (Optical), using Frequency Response Techniques (Imperial College of Science and Technology Summer School on), 1510
Image-Converter : A New Thermal (W. R. Harding, C. Hilsum and D. C. Northrop), 691
Images (Moving Visual), produced by Regular Stationary Patterns (Dr. M. H. Pirenne), 362 ; (F. W. Campbell and J. C. Robson), 362 ; (Dr. D. M. MacKay), 362
Imaginal Diapause in Acridids : Influence of Photoperiod on (M. J. Norris Mrs. O. W. Richards)), 58
Imashima, Minoru, and others : A Chimaera of *Alaria* and *Laminaria* found in Nature, 923
Imbert, Ingénieur-en-Chef Bertrand : Awarded the Back Grant of the Royal Geographical Society, 810
Imbibed Lettuce Seeds : Effect of Anaerobic Conditions on (Walter Heydecker), 1140
Immature Adults of the Desert Locust : An Olfactory Response of (W. Loher), 1280
Immature Maize Kernels : Auxins in (Dr. Kathleen R. Farrar, Joyce A. Bentley, G. Britton and S. Housley), 553
Immediate Effect of *l*-3 : 5 : 3'-Tri-iodothyroacetic Acid on Metabolic Rate and Body Temperature in Hypophysectomized Rats and the Action of Cortisone (Prof. Sz. Donhoffer, I. Várnai and E. Sziebert-Horváth), 345
Immigration of Technical Personnel to the United States, 1243
Immune Guinea Pig Monocytes (Normal and) : Growth of Meningopneumonitis Virus in (Prof. Albert A. Benedict and Clarence McFarland), 1742
Immune Mice (Normal and) : Distribution of Radioiodinated, Acetone-killed *Brucella abortus* in the Tissues of (Dr. D. Sulitzeanu), 495
Immune Reactions to *Trichostrongylus colubriformis* Infestation in Sheep (Dr. D. F. Stewart and H. McL. Gordon), 921
Immune Responses in Parasitism : Nature of (Parasitology Group of the Institute of Biology Discussion on), 464
Immunity in Parasitism (Dr. June Mahon), 464
Immunity (Passive Transplantation), to Crocker Tumour in Mice : Demonstration of Antibody in, using the Schultz-Dale Technique (Prof. B. D. Baruah), 624
Immunity (Phyto-) : A Possible Basis for (D. H. Taysum), 174
Immuno-electrophoresis : Colorimetric Detection of Human Caeruloplasmin Oxidase Activity after Electrophoresis in Agar Plates or after (José Uriel), 999
Immunoelectrophoretic Evidence for the Presence of Two Precipitating Antibodies in Serum following Infection with the Virus of Foot-and-Mouth Disease (Dr. F. Brown), 1130
Immunological Estimation of a Component of Complement (Dr. H. A. Ellis and P. G. H. Gell), 1667
Immunological Reactivity (Reduced) : Distant Hybrids from Parents with (Marta Vojtíšková), 927
Immunological Tolerance (Acquired), to Bovine Ribonuclease (Dr. B. Cinader, J. H. Pearce and B. G. Carter), 1208
Impact (Liquid), at Supersonic Speeds : Damage to Solids by (Dr. F. P. Bowden and J. H. Brunton), 873
Imperial Chemical Industries, Ltd. : Extension of the Research Fellowship Scheme, 159
  Retirement of R. M. Winter as research controller, 1039
  Appointment of Dr. M. A. T. Rogers as research controller, 1039
  Awarded the Sir George Early Trophy for Industrial Safety, 1243
Imperial College of Science and Technology : Title of reader in applied mathematics in the University of London conferred on Dr. E. P. Wohlfarth, 20
  Offer of £6,000 a year from the British Steel Producers' Conference and the British Constructional Steelwork Association, for the establishment of a readership in structural steelwork and the provision of bursaries for postgraduate study in that subject, 314
  Development of the, 386
  Title of reader in mathematics in the University of London conferred on Dr. M. A. Jaswon, 459
  Appointment of Dr. S. R. Sparkes to the chair of engineering structures, 813, 946
  Appointment of G. R. Hall to the readership in nuclear technology, 813
  Appointment of Dr. A. R. Flint to the University of London readership in structural engineering, 949
  Title of reader in mineral dressing in the University of London conferred on Dr. M. G. Fleming, 1182
  Title of reader in optics in the University of London conferred on Dr. H. H. Hopkins, 1182
  Election of Prof. H. V. A. Briscoe, C. A. Bristow, Prof. V. C. Illing, the Hon. H. Fletcher Moulton, Prof. A. J. S. Pippard and Dr. S. L. Smith to Fellowships, 1182
  Summer School on Optical Image Assessment using Frequency Response Techniques, 1510
  Refresher Course on Elementary Fourier Analysis, 1510
  Fiftieth Annual Report (1956-1957), 1573
Imperial College Exploration Board : Student Scientific Expedition to Ghana (B. M. Gerard), 25
Imperial Institute : Change of title to the Commonwealth Institute, 1713
Importance of Daily Weather Conditions in the Supply of Chloride, Sulphate and other Ions to Fresh Waters from Atmospheric Precipitation : The Influence and (E. Gorham), 1650
Importance of the Faraday to Elemental Constants and Electricity Standards (A. G. McNish and Dr. R. D. Huntoon), 1194
Importance of Photoperiod and Temperature in Inducing Diapause in the European Corn Borer, *Pyrausta nubilalis* (Hbn.), (J. A. Mutchmor and Dr. W. E. Beckel), 204
Importance of the Synthesis of Acidic Polysaccharide for Wound Healing (Dr. Laurence L. Layton, Doris R. Frankel, Irving H. Sher, Sylvia Scapa and Gladys Friedler), 1543
Importation into Britain of Liquid Natural Gas, 671
Improved Orientation Stage for Microscopic Optical Crystallography (H. C. G. Vincent), 693
Improved Resolution of X-Ray Diffraction Patterns of Protein Crystals at Low Temperature (Dr. Murray Vernon King), 263
Improved 'Roving Eye' (T. Worswick and G. W. H. Larkby), 1046
Improved Technique for Spot Testing, using a 'Cellophane' Membrane (Dr. B. Camber), 124
Impulse Break-down Characteristic of Point-Plant Gap in Air (J. J. Kritzinger and Prof. G. R. Bozzoli), 1259

Impulses : Generation and Propagation of, during Refractoriness in a Pacinian Corpuscle (Prof. Wenner R. Loewenstein and R. Altamirano-Orrego), 124
Impurities (Radiochemical) : Selective Uptake of, by Mitochondria (G. A. Lumb), 132
Inability of Hydrogen Peroxide to influence the Survival-Time of Rats bearing *RD*3 Sarcoma and the Walker Carcinoma (Dr. F. N. Ghadially and Dr. G. Wiseman), 1067
Inaccuracies of Anaphase Estimation of Radiation-induced Chromosome Exchange (Dr. J. M. Thoday), 932
Inactivation of Rous Sarcoma Extracts : Reversibility of the, by Detergents (Dr. Dino Guerritore), 419
Inactivation (Heat), of Ribonucleic Acid of Tobacco Mosaic Virus : Kinetics of (Dr. William Ginoza), 958
Inbred and Outbred Lines of *Drosophila melanogaster* : Biochemical Differences between, studied by Paper Partition Chromatography (H. F. Hoenigsberg and M. C. Castiglioni), 1404
Incense Cedar Heartwood (*Libocedrus decurrens* Torrey) : Nature of some Decay-retardant Extractive Components in (Arthur B. Anderson, Eugene Zavarin and Theodore C. Scheffer), 1275
nclusion Bodies (Intranuclear) : Spontaneous Occurrence of, in Continuous Cultures of Renal Cells (Dr. N. M. Larin), 1477
nclusions (Nucleolar) : Interpretation of (Prof. J. A. Serra), 1544
Inclusions (Sudanophil), in Ameloblasts, Odontoblasts and Cells of the Oral Epithelium (Prof. J. T. Irving), 569
ncompatibility in *Theobroma cacao* (F. W. Cope), 279
corporation of Disodium *p*-Nitrophenylphosphate in Solid Medium for the Detection of Phosphatase Production by *Micrococcus pyogenes* var. *aureus* (H. R. Lovell), 995
ncorporation of Iron into Haemoglobin ; Participation of Reticulocyte Microsomes in the (Dr. M. Rabinovitz and M. E. Olson), 1665
Incorporation of Labelled Glycine into Homogenates of Mouse Kidney : Effect of Testosterone Propionate upon the (Dr. Edward H. Frieden and Dr. Edward H. Cohen), 912
Incorporation (Chloramphenicol-Resistant), of Amino-Acids into *Staphylococci* and Cell-Wall Synthesis (Dr. J. Mandelstam and Dr. H. J. Rogers), 956
Increase of 5-Hydroxytryptamine in Blood Platelets by Isopropyl-isonicotinic Acid Hydrazide (A. Pletscher and A. Bernstein), 1133
Increased O-Acetyl Content of the Cell Wall : Development of Lysozyme-Resistance in *Micrococcus lysodiekticus* and its Association with an (Dr. W. Brumfitt and Dr. A. C. Wardlaw, and Dr. J. T. Park), 1783
Increased Rate of Plaque-type and Host-range Mutation following Treatment of Bacteriophage *in vitro* with Ethyl Methane Sulphonate (Dr. Anthony Loveless), 1212
Indentation (Micro-) : Surface Hardness of Explosive Materials by (Dr. G. Todd and E. Parry), 260
Independent Blood-Group System : Diego as an (Dr. Bruce Chown, Marion Lewis and Hiroko Kaita), 1598
Independent Systems for the Cleavage of Folic Acid and Citrovorum Factor in Rat Liver : Occurrence of (U. W. Kenkare and Dr. Beatriz M. Braganca), 548
Indeterminism in Modern Physics : Determinism and (Ernst Cassirer), translated by O. Theodor Benfey, *review* by F. I. G. Rawlins, 590
Index of Films on Chemistry (Royal Institute of Chemistry), 1245
India : Fossil Algae in (Prof. L. Rama Rao), 544
  Non-Ferrous Metal Industry in—a Symposium held at the National Metallurgical Laboratory, 1954 (edited by Dr. B. R. Nijhawan and Dr. A. B. Chatterjea), *review* by Prof. F. C. Thompson, 1498
  The Wealth of—Raw Materials, Vol. 4, F-G (with Index), *review* by Dr. H. E. Watson, 1026
India (North-Eastern) : Remanent Magnetism of the Rajmahal Traps of (Dr. J. A. Clegg, C. Radakrishnamurty and P. W. Sahasrabudhe), 830
Indian Clovers (Egyptian and) : Induced Polyploidy in (S. M. Sikka, M. S. Swaminathan and R. K. Mehta), 32
Indian Ephemeris and Nautical Almanack (1958), 314
Indian Mango Displayed, *review* by T. A. Russell, 1364
Indian Medicinal Plants : Glossary of (R. N. Chopra, S. L. Nayar and I. C. Chopra), *review* by S. B. Challen, 984
Indian National Scientific Documentation Centre : Annual Report for 1956-57, 1109
Indian Ocean Cores (Equatorial) : Diatoms from (N. Ingram Hendey), 953
Indian Society for the History of Science (Institute of Islamic Studies, Aligarh, and the) : Millenary Celebrations of Al-Mas'udi, 883
Indian Society for Plant Physiology : Inaugural Meeting, 1639
  Election of Officers for 1958, 1640
Indian Species of *Artemesia* : Cytology of (Dr. T. N. Khoshoo and S. N. Sobti), 853
Indian Universities : Physics in (Dr. P. C. Bhattacharya), 23
Indies (West) : A New Subterranean Crustacean from the (Dr. Isabella Gordon), 1552
Indigenous Cattle of the British Dependent Territories in Africa (D. E. Faulkner and Dr. H. Epstein), (Colonial Advisory Council of Agriculture, Animal Health and Forestry, Publication No. 5), 1581
Individual : The—Unique but Imperfect, *review* by Dr. D. A. Parry, 969
  The Uniqueness of the (Prof. P. B. Medawar), *review* by Dr. D. A. Parry, 969
Individual and the Universe (Prof. A. C. B. Lovell), 1378
Individual End-plates of Normal and Denervated Gastrocnemius Muscle : Quantitative Determination of Cholinesterase Activity in (M. Brzin and Prof. J. Zajicek), 626
Indole Nucleus : Bacterial Dissimilation of Indoleacetic Acid—a New Route of Breakdown of the (Michael H. Proctor), 1345
Indoleacetic Acid : Bacterial Dissimilation of—a New Route of Breakdown of the Indole Nucleus (Michael H. Proctor), 1345
  Effect of Gibberellin and, on Seta Elongation in *Pellia epiphylla* (Prof G. F. Asprey, K. Benson-Evans and A. G. Lyon), 1351
  Intermediates and Competing Reactions in the Photodestruction o (Peter M. Ray and George M. Curry), 895
Indole-acetic Acid and Gibberellic Acid : Interaction between, in Cambial Activity (Dr. P. F. Wareing), 1744
Indoleacetic Acid Oxidase (Pineapple) : Ferulic and *p*-Coumaric Acids in Pineapple Tissue as Modifiers of (Dr. Willis A. Gortner, Martha J. Kent and Dr. G. K. Sutherland), 630
Indoleacetonitrile : Enzymatic Hydrolysis of (Prof. Kenneth V. Thimann and S. Mahadevan), 1466
Indolyl Acetic Acid in Plants : A Possible Source of Error in the Chemical Detection of (R. Nichols), 919
Indolylacetic Acid Action : Evidence for a Protein Component in the Middle Lamella of Plant Tissue—a Possible Site for (B. Z. Ginzburg), 398
ω-(3-Indolyl)alkanecarboxylic Acids in Plant Tissues: β-Oxidation of (Dr. C. H. Fawcett, Prof. R. L. Wain and Dr. F. Wightman), 1387
Induced Gene Unstabilization (Prof. Stephen Zamenhof, Miss Rosalie de Giovanni and Dr. Sheldon Greer), 827
Induced Polyploidy in Egyptian and Indian Clovers (S. M. Sikka, M. S. Swaminathan and R. K. Mehta), 32
Inducing Diapause in the European Corn Borer, *Pyrausta nubilalis* (Hbn.) : Importance of Photoperiod and Temperature in (J. A. Mutchmor and Dr. W. E. Beckel), 204
Induction : The Logical Problem of (Prof. Georg Henrik von Wright), second edition, *review* by F. I. G. Rawlins, 981
  Logical Studies and, *review* by F. I. G. Rawlins, 981
Induction of Melanin Patterns and of Hardening as Separate Processes in the Cuticle of Albino Locusts with Internally Absorbed Phenol Substrates (Dr. B. M. Jones and W. Sinclair), 926
Induction of Morphological Structures : Cellular Basis for the (Dr. R. Brown), 1546
Induction of Triploidy in the South African Clawed Frog, *Xenopus laevis* (Daudin), (Sheila Smith), 290
Induction (Cartilage), in *T/T* Mice : *In vitro* Study of (Dorothea Bennett), 1286
Industrial Carbon and Graphite (Society of Chemical Industry Conference on), 674
Industrial Civilization : Cultural Foundations of (Prof. John U. Nef), *review*, 1427
Industrial Electronic Control Circuits : Handbook of (John Markus and Vin Zeluff), *review* by Denis L. Johnston, 73
Industrial Failure of Engineering Metals and Alloys—a Symposium organized by the National Metallurgical Laboratory, 1953 (edited by Dr. B. R. Nijhawan), *review* by Prof. F. C. Thompson, 1498
Industrial Film in Technical Education (Midland Industrial Film Association Conference on), 1508
Industrial Health in Great Britain, 1043
Industrial Health Problems in the Use of Nuclear Energy, 1023
Industrial Psychology, 1772
Industrial Psychology, National Institute of : Appointment of J. D. Handyside as controller of research, 885, 1042
  H. M. Vernon Prize for 1958 awarded to A. T. Welford, 1510
Industrial Psychology, National Institute of (Institute of Personnel Management in conjunction with the) : Course on the Use of Statistics in Personnel Management, 20
Industrial Relations, 1425
Industrial Relations : Technical Change and, 1180
Industrial Research and Development Costs in American Industry, 1638
Industrial Safety : Sir George Earle Trophy for, awarded to Imperial Chemical Industries, Ltd., 1243
Industrial Setting : Decision-making and the Communication of Information in an (R. Sergean), 1020
Industrial Smoke, 1572
Industries (Coal, Gas and Electricity) : White Paper on Capital Investment in the, 1638
Industries (Nationalized): The Boards of (Lord Simon of Wythenshawe), 511
  Scientific Management in, 511
Industries (Power) : Investment in the, 1638
Industry : Application of Science to (R. E. Prentice), 1108
  The Finding and Development of Managers for (British Institute of Management Conference on), 816
  Flames and (Institute of Fuel Symposium on), 15
  Human Sciences in (Council for Scientific and Industrial Research Committee on), 948
  Noise in (British Occupational Hygiene Society Conference on), 813, 1696
  Problems of Progress in, No. 1, Men, Steel and Technical Change (Olive Banks and Dr. W. Scott), 1180
  Statistical Sampling in (Birmingham Group of the Industrial Applications Section of the Royal Statistical Society Conference on), 885
  Training for Skill—Recruitment and Training of Young Workers in (Report by a Sub-Committee of the National Joint Advisory Council), 1293
  Yeasts in, *review* by R. B. Gilliland, 798
Industry (Aircraft) : Future of the, in Britain, 1646
Industry (American) : Industrial Research and Development Costs in, 1638
Industry and Atomic Power, 1039
Industry and the Technical Colleges (Report of the Southern Regional Council of the Federation of British Industries, in co-operation with the Southern Regional Council for Further Education Regional Conference on), 370, 1573
Inert Gases : Effect of, on Oxygen-dependent Radiosensitivity (Effect on Radiosensitivity of Inert Gases), (Dr. Michael Ebert, Mrs. Shirley Hornsey and Dr. Alma Howard), 613
  Effect on Radiosensitivity of—Effect of Inert Gases on Oxygen-dependent Radiosensitivity (Dr. Michael Ebert, Mrs. Shirley Hornsey and Dr. Alma Howard), 613 ; Effect of a Combined Treatment with 8-Ethoxycaffeine and Argon on the Roots of *Vicia faba* (John Read), 616
Inexpensive Easily Constructed Fishmarking Tag (Prof. Fregus J. O'Rourke and P. Makings), 577
Infection with the *Tipula* Iridescent Virus : Early Stages of (Dr. Kenneth M. Smith), 966
Infection with Tobacco Mosaic Virus and Virus Nucleic Acid : The Latent Period after (Prof. G. Schramm and R. Engler), 916
nfection with the Virus of Foot-and-Mouth Disease : Immunoelectrophoretic Evidence for the Presence of Two Precipitating Antibodies in Serum following (Dr. F. Brown), 1130
Infection (Filarial), in *Simulium griseicolle* Becker (R. W. Crosskey and M. E. Crosskey), 713
Infectious Fertility Factor for *Pseudomonas aeruginosa* (Dr. B. W. Holloway and Pamela A. Jennings), 855
Infectivity of Ribonucleic Acid from Mouse Brains Infected with Semliki Forest Virus (Dr. Ping-yao Cheng), 1800
Infertility in Mice : Temporary Nutritional Stress and (T. J. McClure), 1132
Infestation (*Trichostrongylus colubriformis*), in Sheep : Immune Reactions to (Dr. D. F. Stewart and H. McL. Gordon), 921

Inflammatory Phenomena (Early), of Turpentine Pleurisy in Rats : Experimental Suppression of the (W. G. Spector and D. A. Willoughby), 708
Influence of the Ambient Medium on the Breakdown Voltage of Sheet Insulating Materials (W. P. Baker), 1726
Influence of Cocarboxylase on Tolerance to Morphine in the Rat (Dr. Luciano Angelucci), 967
Influence of DDT and Lindane on Chordotonal Organs in the Cockroach (G. Becht), 777
Influence of the Enclosing Protective Tissues on the Metabolism of Barley Grain (F. S. Mitchell, F. Caldwell and G. Hampson), 1270
Influence of Habitat on the Chemical Composition of *Ascophyllum nodosum* (Chemical Composition of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol.), (Arne Haug and Bjørn Larsen), 1224
Influence of Introduction of a Fructosyl Group into Galactosylglucoses on their β-Galactosidase-inducing Activity (Gad Avigad), 554
Influence of some Iodoamino-Acids and Iodoproteins on the Growth of *Corcyra cephalonica* St. (N. R. Moudgal, E. Raghupathy and Prof. P. S. Sarma), 1655
Influence of Living and Working Conditions upon Health (Medical Conference on), 464
Influence of Media on the Counts of *Clostridium butyricum* in Soils (Dr. D. J. Ross), 1142
Influence of Metallic Ions on the Reaction of Ethylene Diamine with Epinephrine and Norepinephrine (Prof. Guy Nadeau, L. P. Joly and G. Sobolewski), 1061
Influence of 4-Methyl-2-thiouracil on the Teratogenic Activity of Hypervitaminosis-A (Dr. D. H. M. Woollam and Dr. J. W. Millen), 992
Influence of Moisture upon the Dielectric Properties of Solid Powders dispersed in Liquid Paraffin (Rempei Gotohi, Tetsuya Hanai and Naokazu Koizumi), 406
Influence of Organic Vapours on the Crystal Habit of Ice (J. Hallett and Dr. B. J. Mason), 467
Influence of Parasitization on Form Determination in Aphids (Dr. Bruce Johnson), 205
Influence of Photoperiod on Imaginal Diapause in Acridids (M. J. Norris (Mrs. O. W. Richards)), 58
Influence of Salt Deficiency on Taste Sensitivity in Human Subjects (Roy Yensen), 1472
Influence of Time of Mating on the Segregation Ratio of Alleles at the *T* Locus in the House Mouse (Dr. A. W. H. Braden), 786
Influence of Time on the Reversible Association between Large Molecules—the Collagen System (Dr. Jerome Gross), 556
Influence of War on the Production and Use of Fertilizers, *review* by Dr. G. W. Cooke, 371
Influence of Water-Content of Sand on Rate of Uptake of Rubidium-86 (Dr. L. K. Wiersum), 106
Influence and Importance of Daily Weather Conditions in the Supply of Chloride, Sulphate and other Ions to Fresh Waters from Atmospheric Precipitation (E. Gorham), 1650
Influences (Fortifying), of Coconut Milk and Cow's Urine on 2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the Coconut (S. R. Gangolly and Dr. K. M. Pandalai), 855
Influenza Virus Neuraminidase (Dr. Alfred Gottschalk), 377
Influenza *A* Virus : A Two-stage Transfer of Pathogenicity between the *MEL* and NWS Strains of (K. B. Fraser), 195
Información Electronica, Boletín de (Instituto Nacional de Electronica, Madrid). Vol. I, No. I, 1573
Information on Controlled Thermonuclear Reactions : Exchange of (United States—United Kingdom Conference on), 386
Information in an Industrial Setting : Decision-making and the Communication of (R. Sergean), 1020
Information (Technical) : Exchange of, 1111
Information Scientists, Institute of : Inauguration of an, 20
  Formation of, 387
  Election of Officers, 1576
Infra-red Absorption of OH Bonds in Micas (Dr. José M. Serratosa and Dr. W. F. Bradley), 111
Infra-red Absorption Spectra of Casein and Lactose (K. P. Norris and J. E. S. Greenstreet), 265
Infra-red Absorption Spectra of Lactose and Dried Milk : Effects of Crystallinity on the (J. D. S. Goulden and Jonathan W. White, jun.), 266
Infra-Red Radiation (Blue and) : Similar Effects of, on Light-sensitive Seeds (Dr. P. F. Wareing and M. Black), 1420
Infra-Red Spectra of Free Radicals (Dr. K. Nolen Tanner and Raymond L. King), 963
Infra-Red Spectra of Salts of Carboxylic Acids : Effects of the Metallic Ion on the (Bryan Ellis and H. Pyszora), 181
Infra-Red Spectroscopy (Double-Beam) : Agar as Specimen Carrier in (J. G. Feinberg, H. D. C. Rapson and Mary P. Taylor), 763
Inglis, Sir Claude : Retirement as director of the Hydraulics Research Station of the Department of Scientific and Industrial Research, Wallingford, 235 ; work of, 235
Ingram, Dr. D. J. E., and others : Free-Radicals produced in Cigarette Smoke, 1003
  Free Radical produced in the Reaction of Metmyoglobin with Hydrogen Peroxide, 1398
Ingram, M. : Processing of Foods with Ionizing Radiations (Selective Elimination of some Micro-organisms by Irradiation), 878
Ingram, Dr. V. M. (Hunt, J. A., and) : Allelomorphism and the Chemical Differences of the Human Haemoglobins *A*, *S* and *C*, 1062
Inhalation of Colloidal Gold Particles : Alterations in the Ultrastructure of the Blood—Air Barrier in the Mouse Lung after (Dr. N. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1418
Inhibiting Effect of Chlorpromazine on the Experimental Production of Liver Cancer (Dr. K. Fujita, S. Iwase, T. Ito and M. Matsuyama), 54
Inhibition of Blood Digestion in Mosquitoes by Cations, and Cation-Antibiotic Mixtures (Dr. Levon A. Terzian), 282
Inhibition of Carotenid Synthesis in Photosynthetic Bacteria—Specific Inhibition of Carotenoid Synthesis in a Photosynthetic Bacterium and its Physiological Consequences (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250 ; Suppression of Carotenoid Synthesis and its Effect on the Activity of Photosynthetic Bacterial Chromatophores (Dr. R. C. Fuller and I. C. Anderson), 252
Inhibition by Catalase : Autoxidation of Pyrogallol—General Characteristics and (S. M. Siegel and B. Z. Siegel), 1153
Inhibition of the Development of the Barley Spike by Gibberellic Acid (Leslie Paleg and Donald Aspinall), 1743
Inhibition of Hydrolases by Chlortetracycline : Effect of Calcium Ions on the (Dr. Josef Rokos, Mikuláš Burger and Pavel Procházka), 1201
Inhibition of 5-Hydroxytryptophan Decarboxylase by Phenylalanine Metabolites (Dr. A. N. Davison and Dr. M. Sandler), 186
Inhibition (Aerobic), of Glycolysis (J. F. Turner and Dr. L. W. Mapson), 270
Inhibition (Specific), of Carotenoid Synthesis in a Photosynthetic Bacterium and its Physiological Consequences (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250
Inhibition (Substrate-Selective), of Mitochondrial Oxidations by Enhanced Tonicity (Diane Johnson and Prof. Henry Lardy), 701
Inhibition (Thymine Xyloside), in *Escherichia coli* : Reversal of, by Glutathione (Prof. Thomas D. Brock), 269
Inhibitor in the Tissue Fluid and Lymph of the Guinea Pig : Distribution of Globulin Permeability Factor and its (Prof. A. A. Miles and D. L. Wilhelm), 96
Inhibitor (Specific), of Photosynthesis : Xylose as a (Dr. K. A. Hassall), 1273
Inhibitors of Fungal Polygalacturonase in Rotting Apple Fruit : Oxidation Products of Leucoanthocyanins as (M. Cole), 1596
Inhibitors (Corrosion) : Electrocapillary Action of (Harry C. Gatos), 1060
Inhibitors (Respiratory) : Comparison of Effect of Lysergic Acid Diethylamide with Potassium Cyanide and other, on the Siamese Fighting Fish (Dr. H. A. Abramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
Inhibitory Effect of Gibberellins on Nodulization in Dwarf Beans (*Phaseolus vulgaris*), (G. A. Thurber, J. R. Douglas and A. W. Galston), 1082
Inhibitory Effect (Partial), of *Plistophora culicis* on the Sporogonic Cycle of *Plasmodium cynomolgi* in *Anopheles stephensi* (Miss L. Bano), 430
Inhibitory Fibres (Two), forming Synapses with a Single Cell (Dr. G. Hoyle), 1134
Inhomogeneity of α-Casein from Goat Milk (Dr. T. Hofman), 633
Initiative : Technological, *review* by Prof. D. M. Newitt, 1094
Injection of Herring-Sperm Deoxyribonucleic Acid : Intestinal Carcinoma in Mice following (T. F. Hewer and Dr. E. S. Meek), 990
Injection (Intracerebral) : Action of the *Shigella shigae* Toxin after (Dr. H. Rašková and J. Vaneček), 1129
Injection (Intracisternal), with Adrenocorticotrophic Hormone and Melanocyte-stimulating Hormone : Behavioural Changes in Animals after (Prof. W. Ferrari), 925
Injuries : Tree (H. L. Edlin and M. Nimmo), *review* by Dr. L. Chalk, 732
Injury (Low-Temperature), to Stored Apples : Reduction of, by Modulation of Environmental Conditions (W. Hugh Smith), 275
Injury (Radiation) : Protection of Foetuses against (Dr. E. M. Pantelouris), 563
Inman, Dr. M. C. : Vacancies and other Point Defects in Metals and Alloys (Effects of Straining on the Diffusion of Antimony in Copper), 450
Innervated and Non-innervated Membrane of an Isolated Single Electroplax of the Skate : A Method for Studying separately the Properties of the (Dr. Ernest Schoffeniels), 287
Inoculation : Vaccination and, *review* by Dr. W. R. Bett, 1690
Inoculation for Smallpox in England and France : The Adoption of (Dr. Genevieve Miller), *review* by Dr. W. R. Bett, 1690
Inorganic Analysis : Quantitative (Prof. G. Charlot and Denise Bézier), translated by Dr. R. C. Murray, *review* by C. O. Harvey, 869
Inorganic Chemistry (Dr. E. de Barry Barnett and Dr. C. L. Wilson), second edition, *review* by Prof. J. R. Partington, 1097
  Comprehensive (Prof. M. Cannon Sneed and Prof. Robert C. Brasted), Vol. 5, Nitrogen, Phosphorus, Arsenic, Antimony and Bismuth (Harry H. Sisler), Nonaqueous Chemistry (Alfred R. Pray) ; Vol. 6, The Alkali Metals (John F. Suttle), Hydrogen and its Isotopes (Robert C. Brasted), *review*, 1428
  Treatise on (Prof. H. Remy), Vol. 2, Sub-Groups of the Periodic Table and General Topics (translated by Prof. J. S. Anderson ; edited by Prof. J. Kleinberg), *review* by Prof. J. R. Partington, 1366
Inorganic Chemistry of Sulphur : Recent Work on the (Chemical Society Symposium on), 161
Inorganic Phosphate : Dependence on Light of the Reversible Uptake of, by *Hydrodictyon* (A. Pirson and Dr. A. Kuhl), 921
Inositol and Inositol Diphosphate : Detection of, on Paper Chromatograms (Y. Nagai and Y. Kimura), 1730
Inositol Diphosphate : Detection of Inositol and, on Paper Chromatograms (Y. Nagai and Y. Kimura), 1730
Inscriptions and Sculptures in Sandstone : Cleaning of (Dr. David Smith), 812
Insect, *Bracon cephi* (Gahan) : Role of Glycerol in producing Abnormally Low Supercooling and Freezing Points in an (R. W. Salt), 1281
Insect Communication : Interaction between Consecutive Responses in a Hemileucid Moth, and the Evolution of (A. D. Blest), 1077
Insect Cuticle : Abrasion of the, by Aqueous Suspensions of Small Particles (Prof. V. B. Wigglesworth), 779
Insect Ear : Ultra-structure of the (Dr. E. G. Gray and Prof. R. J. Pumphrey), 618
Insect Flight (Dr. J. W. S. Pringle), *review* by Dr. Graham Hoyle, 971
Insect Life in the Tropics (T. W. Kirkpatrick), *review*, 732
Insect Metabolism : Water Content and (Dr. Kenneth Mellanby), 1403
Insect Sense-Organs : Apparatus for Stimulation of, by Air Puffs (D. M. Miller and E. H. Colhoun), 126
Insecticide (Systemic) : Fluoroacetamide as a (Dr. W. A. L. David and B. O. C. Gardiner), 1810 ; (C. Chapman and Dr. M. A. Phillips), 1810
Insecticide Manufacturers (British), Association of (Pesticides Group of the Society of Chemical Industry and the) : Discussion on Residues of Pesticides in Foodstuffs, 22
Insecticides (Organophorphorus) : Mode of Action of (Dr. K. van Asperen), 355
Insecticides (Systemic), and the Ratio of Green to Dried Hops (H. S. Darling), 1811
Insectivorous Fishes : Effects of *Simulium* Control on (Philip S. Corbet), 570
Insects Biting Small Invertebrates : A Trap for (Dr. W. H. R. Lumsden), 819
Insects of California : The Armored Scale (Howard L. McKenzie), *review* by Dr. W. J. Hall, 986
Insects of Micronesia (Dr. W. E. China), 818
Insects of Micronesia (Richard M. Bohart), Vol. 12, No. 1, Diptera, Culicidae, *review* by P. F. Mattingly, 1234
Insects of the Pacific : Noxious and Obnoxious, *review* by P. F. Mattingly, 1234

ects (Soil-burrowing) : Lapse-time Motion Picture Studies of (B. C. Green and J. W. T. Spinks), 434
nsemination : Human Artificial, *review* by Dr. G. I. M. Swyer, 797
nsemination (Artificial), in the Human (Dr. A. M. C. M. Schellen), *review* by Dr. G. I. M. Swyer, 797
Insoluble Constituents : Culture of *Nitrosomonas europaea* in Media Free of (M. S. Engel and Prof. M. Alexander) 136
Instability Effects in Vortex Rings produced with Liquids (W. C. Levengood), 1680
Instability (Relative), of Chlorpromazine in *N* Alkali (Dr. I. Gordon Fels, Marty Kaufman and A. G. Karczmar), 1266
nstallations (New), for B.B.C. Television, 1046
nstantaneous X-Ray Effect in Rats and Man : Direct Registration of an (Prof. R. Brinkman and H. B. Lamberts), 774
l'Institut de Paléontologie Humaine : Archives de, Mémoire 28, La Grotte de Fontéchevade, Premiére Partie, Historique, Fouilles, Stratigraphie, Archéologie (Mlle, G. Henri-Martin), *review* by M. C. Burkitt, 1564
Institute of Nuclear Sciences 'Boris Kidrich' : Bulletin of the, Vol. 7, *review* by Prof. H. W. B. Skinner, 590
Instituto Nacional de Electronica, Madrid : *Boletín de Información Electronica*, Vol. 1, No. 1, 1573
Instrument for Measuring Evaporation from Natural Surfaces (R. J. Taylor and A. J. Dyer), 408
Instrument Show : International, 387
Instrument Technology (E. B. Jones), Vol. 2, Analysis Instruments ; Vol. 3, Telemetering and Automatic Control, *review* by Dr. T. K. Ross, 73
Instrument Technology, Society of : Conference on Automatic Measurement of Quality in Process Plants, 165
Instrumentation : Theory of, *review* by Dr. T. K. Ross, 73
Instruments and Apparatus : Scientific (Physical Society Annual Exhibition of), 673 ; Handbook of (Physical Society), 743
Insulating Materials : Triboelectricity and Electron Traps in—some Correlations (Dr. E. Fukada and Dr. J. F. Fowler), 693
Insulating Materials (Sheet) : Influence of the Ambient Medium on the Breakdown Voltage of (W. P. Baker), 1726
Insulation (Thermal), of Houses, 529
Insulation (Thermal), (Dwellings) Bill, 529
Insulin : Effect of, on Sodium in Muscle (Dr. R. Creese, J. L. D'Silva and Jean Northover), 1278
Insulin—Cortisone Relationship in Experimental Teratogenesis (Dr. J. W. Millen and Dr. D. H. M. Woollam), 418
Insulins (Sperm- and Sei-Whale) : Structure of, and their Breakdown by Whale Pepsin (Yoshio Ishihara, Tsuneyuki Saito, Yasuzo Ito and Masahiko Fujino), 1468
Integrated Light of Comet Arend-Roland, 1956*h* : Polarization of the (D. R. Barber), 760
Integration of Absorption Bands (Dr. A. E. Martin), 1195
Integument of the Silkworm : Protocatechuic Acid in the (Shigemi Kawase), 1350
Intelligence : Subjective Probability, Gambling and (H. C. A. Dale), 363 ; (Prof. John Cohen and C. E. M. Hansel), 1160, 1620 ; (Prof. O. V. S. Heath), 1620 ; (Dr. S. T. Bowden), 1620
Intensity of Remanent Magnetization of Archaeological Remains (R. M. Cook), 1421
Interaction between Consecutive Responses in a Hemileucid Moth, and the Evolution of Insect Communication (A. D. Blest), 1077
Interaction of Hormone and Photoperiod in an Early Variety of Rice (G. Misra and G. Sahu), 637
Interaction between Indole-acetic Acid and Gibberellic Acid in Cambial Activity (Dr. P. F. Wareing), 1744
Interaction in Ionic Solutions (Fafaday Society General Discussion on), 240
Interaction of Phenolic Compounds with Bacteria (Dr. A. H. Beckett, Dr. S. J. Patki and Ann E. Robinson), 712
Interaction between a Plane Shock and a Magnetic Field : An Experiment on the (Dr. K. Dolder and Dr. R. Hide), 1116
Interaction of Polyadenylic and Polyuridylic Acids : Spectrophotometric, Light Scattering and Titration Studies upon the (Dr. Roland F. Beers, jun., and Dr. Robert F. Steiner), 30
Interaction between Synthetic Polyglucose Sulphate and Biologically Active Basic Polypeptides and Proteins (Dr. P. T. Mora and B. G. Young), 1402
Interaction (Enzymatic), of Histamine and Coenzyme I : Formation of Histamine-containing Dinucleotides by (Dr. Spyridon G. A. Alivisatos), 271
Interactions of Macromolecules and Liquid Crystals : Configurations and (Faraday Society General Discussion on), 673
'Intercalated' Internodes in Nerve Fibres (Dr. L. Lubińska), 957
Interchange Scheme (European), for Research Students (Department of Scientific and Industrial Research), 1770
Interconversion (Serine—Glycine), in Plant Tissues (A. P. Wilkinson and Dr. D. D. Davies), 1070
Interference between Plant Viruses (A. D. Thomson), 1547
Interglacial : The Cromerian (Dr. R. G. West and Dr. H. Godwin), 1554 ; (Prof. P. G. H. Boswell), 1554
Intermediate (A Possible), in the Biosynthesis of Tryptophan—1-Deoxy-1-N-*o*-Carboxyphenyl-Ribulose (Dr. F. W. E. Gibson, C. H. Doy and Shelagh B. Segall), 549
Intermediate Hosts of Schistosoma (Dr. G. Mandahl-Barth), 1244
Intermediate Physics : New (G. R. Noakes), *review* by W. H. Dowland, 586
Intermediate Products in the Enzymatic Degradation of Urocanic Acid (Studies of Urocanic Acid), (Robert H. Feinberg and Prof. David M. Greenberg), 897
Intermediates in the Biosynthesis of Porphyrins from Porphobilinogen by *Rhodopseudomonas spheroides* (Dr. D. S. Hoare and Dr. H. Heath), 1592
Intermediates and Competing Reactions in the Photodestruction of Indole-acetic Acid (Peter M. Ray and George M. Curry), 895
Intermolecular Potentials : Use of Gaussian Functions for (Dr. K. Singer), 262
Internal Migration, a Study of the Frequency of Movement of Migrants (John A. Rowntree), (General Register Office, Studies on Medical and Population Subjects, No. 11), 1574
Internal Seed Disinfection with Pyridine-2-thiol-N-oxide and a Derivative (J. Dekker, O. M. van Andel and A. Kaars Sijpesteijn), 1017
Internally Absorbed Phenol Substrates : Induction of Melanin Patterns and of Hardening as Separate Processes in the Cuticle of Albino Locusts with (Dr. B. M. Jones and W. Sinclair), 926
Internally Deposited Plutonium : Removal of (V. H. Smith), 1792
International Association for Cybernetics : Second International Congress on Cybernetics, 1576
International Astronomical Union : Symposium No. 3, Non-Stable Stars (edited by George H. Herbig), *review* by Prof. R. O. Redman, 731
    Symposium No. 4, Radio Astronomy (held at the Jodrell Bank Experimental Station, 1955), edited by H. C. van de Hulst, *review* by Dr. J. S. Hey, 1432
International Atomic Energy Agency : Offers of fissionable materials, radioelements and special materials for reactors, and fellowships and training facilities, 456
International Atomic Energy Insurance Conference : Second, 1039
International Benjamin Franklin Society : Gold Medal awarded to Dr. Detlev W. Bronk, 387
International Biometric Conference : Fourth, 1576
International Collegium for Neuro-Psychopharmacology (First International Symposium), 315
International Commission on Enzymes (Prof. O. Hoffmann-Ostenhof and Prof. R. H. S. Thompson), 452
International Commission for Uniform Methods of Sugar Analysis : Twelfth Session, 1182
International Commission on Zoological Nomenclature : Retirement of Francis Hemming as honorary secretary, 1308
    New address, 1703
International Committee on Laboratory Animals : *Bulletin*, March 1958, 1449
International Committee on Science and Freedom, in co-operation with the World University Service : Appeal for funds to help non-white South African students, 671
International Conference on High Energy Physics : 1958 Annual (European Organization for Nuclear Research), 884
International Conference on Low-Temperature Physics : Sixth, 161
International Conference on the Peaceful Uses of Atomic Energy : Second (United Nations), 884
International Conference on Radiobiology : Proceedings of the Fifth, held in Stockholm, 1956 (Advances in Radiobiology, edited by George Carl de Hevesy, Arne Gunnar Forssberg and John D. Abbatt), *review* by Dr. O. A. Trowell, 660
International Conference on Semi-conductors (International Union of Pure and Applied Physics), 885
International Conference on Solid State Phenomena in Electronics and Telecommunications (Postal and Telecommunications Group of the Brussels Universal and International Exhibition), 813
International Congress of Applied Psychology (Prof. John Cohen), 1579
International Congress for Automatic Control : First (International Federation of Automatic Control), 1378
International Congress on Concrete Roads and Runways, 462
International Congress on Cybernetics : Second (International Association for Cybernetics), 1576
International Congress of Genetics : Tenth, 1246
International Congress on Nuclear Physics (Low Energy Nuclear Interactions and Nuclear Structure), (International Union of Pure and Applied Physics, and Unesco), 459
International Congress of Radiation Research (National Academy of Sciences-National Research Council and the Radiation Research Society in co-operation with the European Committee on Radiobiology), 1444
International Convention of Microwave Valves (Institution of Electrical Engineers), 673, 1378
International Council of Scientific Unions : New Address of the Secretariat, 238
International Dairy Congress : Fifteenth (International Dairy Federation), 1444
International Dairy Federation : Fifteenth International Dairy Congress, 1444
International Discussion on Lubrication and Wear (Institution of Mechanical Engineers), *correction*, 161
International Exhibition, Brussels Universal and : Opening of the, 1179
International Exhibition, Brussels Universal and (Postal and Telecommunications Group) : International Conference on Solid State Phenomena in Electronics and Telecommunications, 813
International Federation of Automatic Control : Ratification of the constitution, 1377
    First International Congress for Automatic Control, 1378
International Federation of Prestressing : Third Congress, 673
International Geophysical Year—Bibliographical Index of Literature in the Russian Language for 1954-1957 (Academy of Sciences of the U.S.S.R.), 1702
    Annals of the, Vol. 4, *review* by Dr. R. L. Smith-Rose, 726
    Annals of the, Vol. 4, Parts 1-7 ; Vol. 5, Parts 1-3, *review* by G. A. Bull, 1097
    The Soviet Contribution to the, 1702
International Horticultural Congress : Fifteenth (Science in the Service of Horticultural Techniques), 315
International Institute of Refrigeration : Conference of the First Commission, 161
International Instrument Show, 387
International Journal of Health Education (International Union for Health Education), Vol. 1, No. 1, 1109
International Map of the World on the Millionth Scale : Report for 1955 (United Nations), 817
International Medical Association for the Study of Health and Living Conditions : Formation of an, 464
International Meetings : The Planning of (International Organizations of Medical Sciences), 1574
International Organizations of Medical Sciences : Handbook on the Planning of International Meetings, 1574
    Symposium on the Support of Medical Research (edited by Sir Harold Himsworth and J. F. Delafresnaye), *review*, 147
International Scientific Radio Union : Twelfth General Assembly, 465
    Election of Dr. L. V. Berkner as president, 465
International Seaweed Symposium : Third, 531
International Starch Convention (German Cereals Research Association), 531
International Symposium on Combustion : Seventh (Combustion Institute in collaboration with the Institute of Fuel), 1576, 1703

nternational Symposium on Enzyme Chemistry (Science Council of Japan, under the auspices of the International Union of Biochemistry), 389
nternational Symposium on Freezing and Drying : Second (Institute of Biology), 314, 1694
nternational Symposium on Nuclear Electronics (Société des Radio-électriciens), 1640
nternational Symposium on Photoperiodism in Plants and Animals (Photobiology Committee of the United States National Research Council), 535
nternational Union of Biochemistry (Science Council of Japan, under the auspices of the) : International Symposium on Enzyme Chemistry, 389
nternational Union of Biological Sciences : Formation of a Committee of the Section of Biochemistry, 161
nternational Union of Biological Sciences and the University of Neuchâtel : First Symposium on Host Specificity among Parasites of Vertebrates, *review* by Dr. G. Lapage, 1362
nternational Union of Pure and Applied Physics : 1958 International Conference on Semi-conductors, 885
nternational Union of Pure and Applied Physics and Unesco : International Congress on Nuclear Physics (Low Energy Nuclear Interactions and Nuclear Structure), 459
nternodes in Nerve Fibres : 'Intercalated' (Dr. L. Lublińska), 957
nterplanetary Space : The Transition from the Ionosphere to (Royal Astronomical Society Geophysical Discussion on), 1237
nterpretation of Nucleolar Inclusions (Prof. J. A. Serra), 1544
nterpretation of Science to the Public (Sir Lawrence Bragg), 807
nterpretation of Science to the Public—Future Activities of the British Association, 8
nterpretation (Geological), of Marine Sediments, *review* by Sir Edward Bailey, 658
nterrelationships of the Concentrations of Sodium, Potassium, Lactose and Water in Milk (J. A. F. Rook and Marian Wood), 1284
nterspecific Competition : Williamson's Theory of (Dr. H. G. Andrewartha and Dr. T. O. Browning), 1415 ; (M. H. Williamson), 1415
nterterritorial Conference of the West African Science Association : Second (The Development of the West African Environment), 1580
nteritdal Crabs : Effect of Photoperiod on the Oxygen Consumption of Two Species of (Prof. Paul A. Dehnel), 1415
ntervertebral Disk of the Cat : Diseases of the (A. S. King and R. N. Smith), 568
ntestinal Carcinoma in Mice following Injection of Herring-Sperm Deoxyribonucleic Acid (T. F. Hewer and Dr. E. S. Meek), 990
ntestinal Muscle : Pigmentation of, in Steatorrhoea (Dr. G. Austin Gresham and J. G. Cruickshank, and J. C. Valentine), 538
nto Space, *review* by Dr. G. King-Hele, 980
ntracellular Distribution of Catecholamines in the Brain Stem of the Rabbit : Effect of Reserpine on the (Dr. H. Weil-Malherbe and A. D. Bone), 1474
ntracerebral Injection : Action of the *Shigella shigae* Toxin after (Dr. H. Rašková and J. Vaněček), 1129
Intracisternal Injection with Adrenocorticotrophic Hormone and Melanocyte-stimulating Hormone: Behavioural Changes in Animals after (Prof. W. Ferrari), 925
Intranuclear Inclusion Bodies : Spontaneous Occurrence of, in Continuous Cultures of Renal Cells (Dr. N. M. Larin), 1477
Introduction of a Fructosyl Group into Galactosylglucoses : Influence of, on their β-Galactosidase-Inducing Activity (Gad Avigad), 554
Introduction of Vaccination : Benjamin Waterhouse and the (Dr. John B. Blake), *review* by Dr. W. R. Bett, 1690
Invariant Character—'Vibrissa Number'—in the House Mouse : Selection for an (R. B. Dun and A. S. Fraser), 1018
Invention : Magic, Science and (Seekers and Finders, Book 2), (Amabel Williams-Ellis), *review* by T. H. Hawkins, 1628
Invertebrata : The (the late L. A. Borradaile and F. A. Potts), third edition revised by G. A. Kerkut, *review* by Prof. O. Lowenstein, 1564
Invertebrates (Small) : A Trap for Insects Biting (Dr. W. H. R. Lumsden), 819
Investigating Retinal Function : Validity of Motokawa's Technique for (Dr. C. I. Howarth and M. Treisman), 843
Investigation (Embryological), in *Hibiscus sabdariffa* x *H. cannabinus* and their Reciprocal Crosses (P. Sanyal), 1352
Investigation (Thermal), of Clays : The Differential (edited by Robert C. Mackenzie), *review*, 1561
Investigation (Ultrasonic), of Chemical Kinetics in Manganous Sulphate Solutions (Sushil Kumar Kor), 1462
Investigations : Photobiological (Dr. E. J. Bowen), 1314
Investigations into Temperature Changes on the Surface of Human Tooth Enamel (Peter S. Rothwell), 1805
Investigations (Physicochemical), of Erythrocyte Membranes (A. Teitel and N. Marcus), 714
Investigations (Preliminary), of the Silicon Boride, SiB_6 (Dr. Carl F. Cline), 476
Investment in the Power Industries, 1638
Iodine (Labelled) : Quantitative Gram-staining with (Dr. D. Shugar and Miss J. Baranowska), 357
Iodine-131 in Sheep before and after a Nuclear Reactor Accident (Prof. L. Van Middlesworth), 256
Iodoamino-Acids and Iodoproteins : Influence of some, on the Growth of *Corcyra cephalonica* St. (N. R. Moudgal, E. Raghupathy and Prof. P. S. Sarma), 1655
Iodoproteins : Influence of some Iodoamino-Acids and, on the Growth of *Corcyra cephalonica* St. (N. R. Moudgal, E. Raghupathy and Prof. P. S. Sarma), 1655
Ion : Ferric Perchlorate Complex (R. A. Horne), 410
Ion (Metallic) : Effect of the, on the Infra-Red Spectra of Salts of Carboxylic Acids (Bryan Ellis and H. Pyszora), 181
Ion-exchange Polymer Electrolyte : Thermocell with (W. T. Grubb), 338
Ion Identification in Flames by Mass Spectrometry (J. Deckers and Prof. A. Van Tiggelen), 1460
Ion Permeability of the Plasmalemma of the Plant Cell (N. A. Walker), 1288 ; (Prof. G. E. Briggs), 1289
Ionic Bombardment Cleaning of Glass (L. Holland), 1451
Ionic Solutions: Interaction in (Faraday Society General Discussion on), 240
Ionization Detector (Flame), for Gas Chromatography (J. Harley, W. Nel and Dr. V. Pretorius), 177 ; (I. G. McWilliam and R. A. Dewar), 760
Ionization Potentials : Estimation of Electron Affinities of Oxygen Extrapolations of (Dr. D. F. C. Morris and H. N. Schmeising), 4
Ionizing Radiation : Effect of, on Aqueous Solutions of Guanylic Acid an Guanosine (G. Hems), 1721
Ionizing Radiations : Medical Uses of (Sir Ernest Rock Carling), 93
  Processing of Food with (Dr. B. Coleby), 877
Ionizing and Attachment Coefficients and Breakdown Characteristics for Carbon Tetrafluouride : Correlation between (P. R. Howard), 645
Ionosphere : Abnormal Polarization of the Atmospheric Pulses reflected successively from the (Prof. S. R. Khastgir), 404
  Electron Density Profiles in the, 1770
  The Mesopause Region of the (Dr. J. B. Gregory), 753
  Solar Activity and the (C. M. Minnis), 543
  Solar-Flare Effect in the *F*2-Layer of the (C. M. Minnis and G. H. Bazzard), 690
  Some Effects of the Fine Structure of the, on Transmissions received from the Russian Earth Satellite 1958δ (F. A. Kitchen and W. R. R. Joy), 1759
  The Transition from the, to Interplanetary Space (Royal Astronomical Society Geophysical Discussion on), 1237
Ionospheric Drift in the *F*2 Region near the Magnetic Equator (Dr. B. W. Purslow), 35
Ionospheric Drifts (Horizontal), in the F2-Region at Equatorial Latitudes (Dr. B. Ramachandra Rao and E. Bhagiratha Rao), 1612
Ionospheric Faraday Effect : Measurement of the, by Radio Waves reflected from the Moon (Fred B. Daniels and Siegfried J. Bauer), 1392
Ionospheric Research, *review* by Dr. R. L. Smith-Rose, 726
Ions in Flames : Mass-Spectrometric Observations of (P. F. Knewstubb and Dr. T. M. Sugden), 474
Ions in Hydrocarbon Flames : Mass-Spectrometric Observations of (P. F. Knewstubb and Dr. T. M. Sugden), 1261
Ions (Adsorbed Metal), on the Surface of Cellulose Microfibrils : Electron DiffractionStudy of (D. S. Belford, A. Myers and Prof. R. D. Preston), 1516
Ions (Calcium) : Effect of, on the Inhibition of Hydrolases by Chlortetracycline (Dr. Josef Rokos, Mikuláš Burger and Pavel Procházka), 1201
Ions (Chloride, Sulphate and other) : The Influence and Importance of Daily Weather Conditions in the Supply of, to Fresh Waters from Atmospheric Precipitation (E. Gorham), 1650
Ions (Labelled) : Use of, in the Study of Blastocyst—Uterine Relationships in the Rabbit (J. P. Bennett, Dr. J. C. Boursnell and Dr. C. Lutwak-Mann), 1715
Ions (Metallic) : Influence of, on the Reaction of Ethylene Diamine with Epinephrine and Norepinephrine (Prof. Guy Nadeau, L. P. Joly and G. Sobolewski), 1061
Iranian Government (Unesco and the) : Symposium on Salinity Problems in Arid Zones, 1378
Ireland : Cereal Diseases in (Prof. Robert McKay), *review* by Prof. A. E. Muskett, 515
Ireland (Northern) : Relict *Rotlehm* in (V. B. Proudfoot), 1287
Iridescent Virus (*Tipula*) : Early Stages of Infection with the (Dr. Kenneth M. Smith), 966
Iridium and Platinum (Rhodium, Palladium,) : Corrosion of Ten Metals in Boiling Hydrochloric Acid when in Contact with (W. Roger Buck, III, and Henry Leidheiser, jun.), 1681
Iron : Magnetic Properties of some Binuclear Complexes of Chromium and (A. Earnshaw and J. Lewis), 1262
Iron into Haemoglobin : Participation of Reticulocyte Microsomes in the Incorporation of (Dr. M. Rabinovitz and M. E. Olson), 1665
Iron under Stress : Change of Length during Transformation of (M. de Jong and Prof. G. W. Rathenau), 1396
Iron Carbide and Tungsten Carbide : Metallographic Studies of (F. J. Radd and L. H. Crowder), 258
Iron Castings (Magnesium-treated) : Promoting the Stable Eutectic Reaction in, by Vibration during Solidification (J. H. Gittus), 1004
Iron Content of Haemoglobin in Iron Deficiency (Dr. Ernest Beutler), 837
Iron Deficiency : Iron Content of Haemoglobin in (Dr. Ernest Beutler), 837
Iron Deficiency of Medium : Accumulation of α-Alanine and of Pyruvate in Diphtherial Culture Filtrate and its relation to (Prof. Masahiko Yoneda and Hiroshi Ishihara), 272
Iron Lost into and Re-absorbed from Gastro-intestinal Bleeding Lesions : Isotopic Tracer Method for Measurement of (M. Roche, M. E. Perez-Gimenez and A. Levy), *errata*, 603
Iron (Ferrous): Role of, in Enzymatic Transamination (M. V. Patwardhan), 187
Iron and Steel of the U.S.S.R., Ministry of : *Metallurgist*, No. 1, 1180
Iron and Steel Institute : Bessemer Gold Medal for 1958 awarded to W. F. Cartwright, 885
  Hadfield Medal for 1958 awarded to W. C. F. Hessenberg, 885
  Ablett Prizes for 1957 awarded to C. E. H. Morris and R. N. Dale, 885
  Honorary membership accepted by H.M. King Baudouin and H.R.H. Charlotte, Grand Duchess of Luxembourg, 1378
Irradiated Roots of *Vicia faba* : Mitotic Delay in—the Effect of Oxygen (Dr. H. J. Evans, Dr. G. J. Neary and Miss S. M. Tonkinson), 1083
Irradiated Solids : Lattice Defects in, *review* by Dr. A. H. Cottrell, 977
Irradiated Wheat : Grain Weevils, *Calandra granaria* L. and *C. oryzae* L., reared on (P. B. Cornwell and D. M. Burson), 1747
Irradiation : Effect of a Dithiol on Survival Time after (Dr. Thomas J. Haley, Anna M. Flesher and Nathan Komesu), 1405
Irradiation at Different Sites : Reversibility of the Red—Far-red Reaction by (Shimon Klein and Dr. John W. Preiss), 200
Irradiation (Nuclear) : Effects of, upon the Decomposition of Lead Styphnate Monohydrate (Dr. Ted B. Flanagan), 42
Irradiation (Ultra-Violet) : Effect of, on Electrophoretic Properties of Serum Protein (Dr. N. M. Larin), 65
  Reduction of the Viscosity of a Potassium Hyaluronate Solution by (Eigill Hvidberg, Sven Ancher Kvorning, Arne Schmidt and Jens Schou), 1338
Irradiation Treatment : Effects of Alkoxyglycerols and especially Selachyl Alcohol on the Bone Marrow in connexion with, and in Leukaemia Therapy (Astrid Brohult), 1484
Irregular Cross-sectional Shape and Constant Weight per Unit Length : Birefringence Determination in Objects of (S. C. Simmens), 1260
Irreversible Processes in Physical Theory (Prof. R. C. L. Bosworth), 402 ; (Prof. Karl R. Popper), 402
Irrigation Research Station, Griffith, N. S.W. : Appointment of E. R. Hoare as officer-in-charge, 235

ion Works, *review* by G. H. Lean, 514
ion and Hydraulic Design (Dr. Serge Leliavsky), Vol. 2, Irrigation Works, *review* by G. H. Lean, 514
ng, Prof. J. T.: Sudanophil Inclusions in Ameloblasts, Odontoblasts and Cells of the Oral Epithelium, 569
  A Histological Stain for Newly Calcified Tissues, 704
  Calcium Metabolism, *review* by Dr. E. J. Hewitt, 799
Irwin, Prof. R.: The Golden Chain, a Study in the History of Libraries (Inaugural Lecture at University College, London), 313
saac, Dr. I. (Davies, R. R., and): Dissemination of *Verticillium albo-atrum* through the Atmosphere, 649
selin, Dr. C. O'D.: Retirement from the directorship of the Woods Hole Oceanographic Institution, 669; work of, 669
sherwood, Dr. F. A.: Biochemistry of Glutathione (Glutathione in Animal Tissues), 887
shihara, Hiroshi (Yoneda, Prof. Masahiko, and): Accumulation of α-Alanine and of Pyruvate in Diphtherial Culture Filtrate and its relation to Iron Deficiency of Medium, 272
shihara, Yoshio, and others: Structure of Sperm- and Sei-Whale Insulins and their Breakdown by Whale Pepsin, 1468
himoto, Nobutoshi, and others: Uridine Diphosphate Amino-sugar Compounds from *Staphylococcus aureus* inhibited by Penicillin, 906
amic Studies, Institute of (Aligarh), and the Indian Society for the History of Science: Millenary Celebrations of Al-Mas'udi, 883
and (Arctic): Spring on an (Katharine Scherman), *review* by Dr. G. C. L. Bertram, 729
ocitric Dehydrogenase in Femurs: Organic Composition of Bone—Localization of (Robert Van Reen and Fred L. Losee), 1543
*Iso*citritase in Germinating Marrow Seeds (M. T. Heydeman), 627
Isolated Cells of Hen Spleen: Antibody Formation by, after mixing with Antigen *in vitro* and Transfer to Chicks (Dr. Z. Trnka), 55
Isolated Single Electroplax of the Skate: A Method for Studying separately the Properties of the Innervated and Non-innervated Membrane of an (Dr. Ernest Schoffeniels), 287
Isolating the β_1-Metal-combining Globulin from Human Blood Plasma: Method of (E. W. Boettcher, P. Kistler and Prof. Hs. Nitschmann), 490
Isolating *Pseudomonas mors-prunorum* Phages from the Soil: A Method for (J. E. Crosse and M. K. Hingorani), 60
Isolation of Antibodies on Antigen—Polystryrene Conjugates (L. Gyenes, B. Rose and Dr. A. H. Sehon), 1465
Isolation of an Erythropoietic Fraction from the Plasma of Rabbits made severely Anaemic with Phenylhydrazine (Peter H. Lowy, Geoffrey Keighley, Henry Borsook and Ashton Graybiel), 1802
Isolation of a Glycine-Carbohydrate Residue from Muscle Collagen (K. Konno and K. I. Altman), 994
Isolation of the Lethal Factor of Diphtheria Toxin by Electrophoresis in Starch Gel (Dr. M. D. Poulik and E. Poulik), 354
Isolation of a New Flavin produced by an Actinomycete (Orlo Ciferri and Marisa P. Machado), 484
Isolation of 2-Nitro-phenol from the Mixture of Mono-nitro-phenols (Dr. Tamás Széll and Árpád Furka), 481
Isolation of Pneumococcal Polysaccharide: A Rapid and Specific Method for the (Dr. A. S. Markowitz and Jack R. Henderson), 771
Isolation of Reserpine from *Vinca rosea* Linn. (Dr. N. K. Basu and B. Sarkar), 552
Isolation of *Salmonella infantis* from an Aborted Bovine Foetus (Dr. J. Mortelmans, C. Huygelen and F. Pinckers), 1539
Isolation of β-Sitosterol-D-Glucoside from Groundnut Phospholipids (Dr. Francis Aylward and B. W. Nichols), 1064
Isolation of a Soil Coccus capable of utilizing 'Tween 80' as a Sole Source of Carbon (Kazumori Minami), 430
*Iso*leucine and Allo-*iso*leucine (Mrs. Anna W. I. van Dam-Bakker), 116, *erratum*, 673
Isologous Bone Marrow: Protection of August Rats against Lethal Doses of a Dimethyl Homologue of Myleran by (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Isomer, Allokainic Acid: Structure of Kainic Acid and its (I. Nitta, H. Watase and Dr. Y. Tomiie), 761
Isomerase Reactions (Aldolase and Triose Phosphate): Absolute Configuration of Enantiomorphic Carbanions involved in the (Ben Bloom and Yale J. Topper), 1128
Isomeric Chondroitin Sulphates (Dr. Martin B. Mathews), 421
Isomerism among Binuclear Thiocyanato-bridged Complexes (Dr. J. Chatt, L. A. Duncanson, F. A. Hart and P. G. Owston), 43
Isomers (*cis-* and *trans-*), of Nitrophenylhydrazones of some α-Keto Acids: A New Reaction for the Differentiation of (Hirohiko Katsuki, Köichirö Sumizu, Tarumi Moriwaki, Shözö Tanaka and Ichirö Hayashi), 639
Isomorphous Replacement in the Kaolin Group of Minerals (Dr. R. F. Youell), 557
Isoniazid Action: Rejection of the Peroxide Accumulation Hypothesis of (Ian H. Holmes and Prof. Sydney D. Rubbo), 1203
Isoniazid Resistance of *Mycobacterium avium*: Relationship between Porphyrin and (Mikiyasu Goto and Nobuhiko Katsunuma), 916
Isopod *Limnoria* (Wood-boring), in Southampton Water: Coexistence of Three Species of the (Dr. S. K. Eltringham and A. R. Hockley), 1659
Isopropyl-isonicotinic Acid Hydrazide: Increase of 5-Hydroxytryptamine in Blood Platelets by (A. Pletscher and A. Bernstein), 1133
Isotope Courses at Harwell, 884
Isotope Enrichment in a Continuous Feed Process (A. E. Bainbridge and Dr. A. T. Wilson), 1729; (Prof. S. Tolansky), 1730
198-Isotope Lamp: Width of the Green Mercury Line from a (Dr. H. von Klüber), 1007
Isotopic Nitrogen: Assay of, by Mass-Spectrometer (A. P. Sims and Dr. E. C. Cocking), 474
Isotopic Tracer Method for Measurement of Iron Lost into and Re-absorbed from Gastro-intestinal Bleeding Lesions (M. Roche, M. E. Perez-Gimenez and A. Levy). *errata*, 603
Isted, G. A.: Long-Distance Radio Propagation above 30 Mc./s. (Research on Ionospheric Scattering), 1184
Italian Chemical Society and the Society of Chemical Industry: Eighth National Congress of Chemistry, 1246
Ito, Eiji, and others: Uridine Diphosphate Amino-sugar Compounds from *Staphylococcus aureus* inhibited by Penicillin, 906
Ito, T., and others: Inhibiting Effect of Chlorpromazine on the Experimental Production of Liver Cancer, 54
  Effects of certain Compounds related to Trypan Blue on the Experimental Production of Liver Cancer, 1732
Ito, Tasuzo, and others: Structure of Sperm- and Sei-Whale Insulins and their Breakdown by Whale Pepsin, 1468
Ives, Dr. D. J. G., and others: Interaction in Ionic Solutions (Precise Measurements of Activity Coefficients of Aqueous Hydrochloric Acid Solutions), 241
Ives, G. C.: Physical Properties of Polymers, 1634
Ivins, Dr. J. D.: Appointed professor of agriculture in the University of Nottingham, 1640
Iwase, S., and others: Inhibiting Effect of Chlorpromazine on the Experimental Production of Liver Cancer, 54
Iwase, Shoji (Takashi, Dr. Muneaki, and): Effect of Splenectomy on Azo Dye Carcinogenesis of Rat Liver, 1211

Kurie Plot : Application of the, to the Standardization of Pure Beta-Emitters (R. A. Lloyd), 1055
Kurosumi, K., and Kitamura, T. : Occurrence of Foldings of Plasma Membrane (β-Cytomembrane) in Cells of Pig's Carpal Organ as revealed by Electron Microscopy, 489
Kurth, Rudolf : Introduction to the Mechanics of Stellar Systems, *review* by Dr. R. H. Garstang, 1029
Kvorning, Sven Ancher, and others : Reduction of the Viscosity of a Potassium Hyaluronate Solution by Ultra-violet Irradiation, 1338

LABELLED Amino-acids separated on Paper Chromatograms : Distribution of Carbon-14 in (K. H. Hallowes, Dr. F. P. W. Winteringham and Dr. W. J. Le Quesne), 336
Labelled Glutamate : Effect of Electrolytes on the Uptake by Bacteria of (Y. Avi-Dor and Sh. Miller), 190
Labelled Glycine: Effect of Testosterone Propionate upon the Incorporation of, into Homogenates of Mouse Kidney (Dr. Edward H. Frieden and Dr. Edward H. Cohen), 912
Labelled Iodine : Quantitative Gram-staining with (Dr. D. Shugar and Miss J. Baranowska), 357
Labelled Ions : Use of, in the Study of Blastocyst—Uterine Relationships in the Rabbit (J. P. Bennett, Dr. J. C. Boursnell and Dr. C. Lutwak-Mann), 1715
Labelled Water (Triple) : Rate of Body-Water Distribution studied with (Michael Anbar and Dr. Zigmund Lewitus), 344
Labelling of Bull Semen with Phosphorus-32 *in vivo* (Dr. R. M. C. Dawson), 1014
Laboratories (Hot), and Equipment : Seventh Conference on, 1771
Laboratories (Physics Research) : Design of (London and Home Counties Branch of the Institute of Physics Conference on), 90

Laboratories (Teaching), in Universities and Colleges of Advanced Technology : The Design of (Royal Institute of British Architects Symposium on), 459
Laboratory : Humane Technique in the (Report of a Symposium held by the Universities Federation for Animal Welfare), (Laboratory Animals Bureau, Collected Papers Vol. 6), 1187, 1444
  Rearing Newts in the, for Experimental Purposes (Dr. David D. Williams), 933
Laboratory Animals(Dr. G. Lapage), 1449
Laboratory Animals Bureau : Collected Papers, Vol. 6, Report of a Symposium on Humane Technique in the Laboratory, held by the Universities Federation for Animal Welfare (London, 1957), 1187, 1444
Laboratory Course (Summer), in Techniques and Applications of the Electron Microscope (Cornell University), 743
Laboratory Strains of Free-living and Parasitic Protoza : Catalog of (Society of Protozoologists), 161
Laboratory Variations in Mortality of the Mosquito, *Culex fatigans* Wied., exposed to DDT (T. Koshi and S. K. Ranganathan), 199
Laboratory-made Diamonds : X-Ray Study of (Dr. H. Judith Grenville-Wells and Dame Kathleen Lonsdale), 758
Labour and National Service, Ministry of : Annual Report, 532
  Annual Report of the Chief Inspector of Factories for the Year 1956, 1023, 1043
  Positive Employment Policies—Examples of Management Practice contributing to Good Relations in Industry, 1425
Labrid Fish : Retinal Pigments of a (Dr. Frederick W. Munz), 1012
Lactalbumin from Human Milk Whey : Chromatographic Separation of, on Calcium Phosphate Columns (Dr. Bengt Johansson), 996
α-Lactalbumin (Bovine) : Possible Polymorphism of (B. S. Blumberg and M. P. Tombs), 683
Lactate from Acetoacetate in the Perfused Heart : Formation of (Dr. J. H. Ottaway and A. K. Sarkar), 1791
Lactation : The Physiology and Biochemistry of (Dr. S. J. Folley), *review* by Dr. J. A. B. Smith, 986
Lactobacillus leichmannii : Effect of Phenobarbitone on the Requirement of, for Vitamin B_{12} (Dr. G. H. Spray), 859
Lactose : Infra-red Absorption Spectra of Casein and (K. P. Norris and J. E. S. Greenstreet), 265
Lactose in Strongly Heated Milk : Formation of Lactulose and Tagatose from (Susumu Adachi), 840
Lactose and Dried Milk : Effects of Crystallinity on the Infra-red Absorption Spectra of (J. D. S. Goulden and Jonathan W. White, jun.), 266
Lactose and Melibiose : Bacterial Oxidation of (Dr. B. P. Eddy), 904
Lactose and Water in Milk : Interrelationships of the Concentrations of Sodium, Potassium, (J. A. F. Rook and Marian Wood), 1284
Lactuca sativa L. : Natural Cross-Pollination in Lettuce (L. E. Watts), 1084
Lactulose and Tagatose : Formation of, from Lactose in Strongly Heated Milk (Susumu Adachi), 840
Laevulose in Body-Fluids : Determination of Glucose and (Dr. Jan Ek and Eric Hultman), 780
Lagasse, Dr. A., and others : Fine Structure of the Alveolar Wall of the Lung, 1066
  Alterations in the Ultrastructure of the Blood—Air Barrier in the Mouse Lung after Inhalation of Colloidal Gold Particles, 1418
Laidler, K. J. (Gill, E. K., and) : Structure and Reactivity of Electronically Excited Species, 321
Lajtha, Dr. L. G. : Pitfalls of Specific Radioactivity in Measuring Synthesis of Deoxyribonucleic Acid, 1609
Lajtha, Dr. L. G., and others : Human Somatic Chromosomes, 1565
Lake District (English) : Accumulation of Radioactive Fall-out by Plants in the (Eville Gorham), 1523
Lake Physiography, *review* by Prof. Kaare Strøm, 1360
Lake Victoria : Utilizing the Natural Resources of, for the Benefit of Fisheries and Agriculture (R. S. A. Beauchamp), 1634
Lakshman, A. B. (Ramaswami, Dr. L. S., and) : Ovulation induced in Frog with Mammalian Hormones, 1210
Lal, Manohar (Maheshwari, Nirmala, and) : *In vitro* Culture of Ovaries of *Iberis amara* L., 631
Lamb, C. St. J. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 89
Lamberts, H. B. (Brinkman, Prof. R., and) : Direct Registration of an Instantaneous X-Ray Effect in Rats and Man, 774
  Ozone as a Possible Radiomimetic Gas, 1202
Lambeth, D., and others : Refraction of Microseisms, 646
Lambs : Transfer of Sheep Keds, *Melophagus ovinus* (L.), from Ewes to their (W. A. Nelson), 56
Lamella (Middle), of Plant Tissue : Evidence for a Protein Component in the—a Possible Site for Indolylacetic Acid Action (B. Z. Ginzburg), 398
Lamellar Compound of Sodium with Graphite (R. C. Asher and S. A. Wilson), 409
Lamer, Mirko : The World Fertilizer Economy, *review* by Dr. G. W. Cooke, 371
Laminaria : A Chimaera of *Alaria* and, found in Nature (Jun Tokida, Hikoei Ohmi and Minoru Imashima), 923
Lamp (198-Isotope) : Width of the Green Mercury Line from a (Dr. H. von Klüber), 1007
Lampbrush Chromosomes : Action of Deoxyribonuclease on (Prof. H. G. Callan and H. C. Macgregor), 1479
Lancashire and Yorkshire : The Mechanics' Institutes of, before 1951 (Dr. Mabel Tylecote), *review* by Prof. W. H. G. Armytage, 585
Land, Dr. Edwin H. : Awarded the Silver Progress Medal for 1957 of the Royal Photographic Society, 312
  Honorary fellowship of the Royal Photographic Society conferred on, 313
  Elected to honorary fellowship of the Royal Microscopical Society, 885
Land : Rheology on the, *review* by Dr. E. C. Childs, 1166
Land for Service Requirements, 601
Land Consolidation (European Productivity Agency of the Organization for European Economic Co-operation, Project No. 199), 1114
Land Powers (Defence) Bill, 601
Land Utilization in the Humid Tropics : Climate, Vegetation and (Pacific Science Congress Symposium on), 596
Lande, O. : Chromosome Number in the Silver Fox (*Vulpes fulvus* Desm.), 1353
Landmark in Coal Science, *review* by Dr. I. G. C. Dryden, 4
Lands (The Common), of Hampshire (Dr. L. Ellis Tavener), *review* by Prof. L. Dudley Stamp, 730
Landshoff, Rolf K. M. (edited by) : Magneto-hydrodynamics, a Symposium, *review* by Prof. T. G. Cowling, 1361
Lane, Dr. A. M. : Recent Advances in Nuclear Physics, 886
Lane, Dr. G. R., and Butler, R. D. : Effect of a Single Light Exposure on Germinating Broad Bean Seeds, 1080
Lang, Dr. A. : Photoperiodism in Plants and Animals (Role of Auxin and Gibberellins in Flowering), 535
Langfeld, Prof. H. S. : *Obituary* by A. T. Welford, 1241
Langford, W. J. : Mathematics in Secondary Schools, *review*, 979
  Secondary School Mathematics—an International Survey (Presidential Address at the Annual General Meeting of the Mathematical Association), 1107, 1310
Langmuir's (Dr. Irving) Contributions to Physics (Dr. Albert W. Hull), 148
Language Problem : Scientific and Technical Translating and other Aspects of the (Unesco), second edition, 1044
Language and Speech, Vol. 1, No. 1, 1768
Lanthanons in Organic Solvents : Anomalous Behaviour of β-Diketone Complexes of the (Dr. N. K. Dutt and P. Bandyopadhyay), 1682
Lanthanum from Thorium : Separation of, by Anion Exchange (Tatsuya Sekine and Prof. Nobufusa Saito), 1464
Lapage, Dr. G. : Animal Health in Great Britain, 889
  Parasite and Host, *review*, 1362
  Laboratory Animals, 1449
  The Progress of World Health, 1776
Lapse-time Motion Picture Studies of Soil-burrowing Insects (B. C. Green and J. W. T. Spinks), 434
Lardy, Prof. Henry (Johnson, Diane, and) : Substrate-Selective Inhibition of Mitochondrial Oxidations by Enhanced Tonicity, 701
Large Molecules : Influence of Time on the Reversible Associations between—the Collagen System (Dr. Jerome Gross), 556
Large Sand Waves near the Edge of the Continental Shelf (D. Cartwright and A. H. Stride), 41
Larin, Dr. N. M. : Effect of Ultra-Violet Irradiation in Electrophoretic Properties of Serum Protein, 65
  Spontaneous Occurrence of Intranuclear Inclusion Bodies in Continuous Cultures of Renal Cells, 1477
Larkby, G. W. H. (Worswick, T., and) : An Improved 'Roving Eye' (B.B.C. Engineering Monograph No. 12), 1046
Larke, Eustace C. : The Rolling of Strip, Sheet and Plate, *review* by Dr. L. S. Goddard, 988
Larks, Dr. S. D. : Physical Bases of the Electrohysterogram, 67
Larrivee, Prof. Jules A. (Stibitz, Dr. George R., and) : Mathematics and Computers, *review* by Dr. M. V. Wilkes, 1755
Larsen, Bjørn, and Haug, Arne : Chemical Composition of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol.—Presence of Reducing Compounds in *Ascophyllum nodosum*, 1224
Larsen, Bjørn (Haug, Arne, and) : Chemical Composition of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol.—Influence of Habitat on the Chemical Composition of *Ascophyllum nodosum*, 1224
Larson, Dr. R. H. (Walkinshaw, C. H., and) : A Soil-borne Virus associated with the Corky Ringspot Disease of Potato, 1146
Larvae (Fused) : Reproduction of, in the Boring Sponge, *Cliona celata* Grant (Frederick E. Warburton), 493
Larvae (Oyster) : Ultra-Violet Sterilization of Water used for Rearing (G. Duncan Waugh), 1747
Larvae (*Porrocaecum deciplens*) : Glucose, Trehalose and Glycogen in (Dr. D. Fairbairn), 1593
Larval Annelids : Dried Organic Substances as Food for (Dr. D. I. D. Howie), 1486
Larval Cestode Fragments : Cultivation and Development of, *In vitro* (Prof. J. D. Smyth), 1119
László, Nyiri : A Shorter Microbiological Assay Method for Oxytetracycline and Chlortetracycline, 648
Lataste-Dorolle, C., and others : Processing of Foods with Ionizing Radiations (Autolytic Changes occurring during Storage of Sterile Muscle Samples), 878
Latent Period after Infection with Tobacco Mosaic Virus and Virus Nucleic Acid (Prof. G. Schramm and R. Engler), 916
Latin America : Universities of (J. C. J. Metford), 609
Latitudes (Equatorial) : Horizontal Ionospheric Drifts in the *F*2-Region at (Dr. B. Ramachandra Rao and E. Bhagiratha Rao), 1612
Lattice Defects in Irradiated Solids, *review* by Dr. A. H. Cottrell, 977
Lattice Image of Twin Structure observed directly by Electron Microscope in a Crystal of Copper Phthalocyanine (Prof. E. Suito, N. Uyeda, H. Watanabe and T. Komoda), 332
Lattice Structure (Crystalline), in Yolk Platelets of the Amphibian Embryo : Electron Micrographs of a (Shuichi Karasaki and Tsutomu Komoda), 407
Lauffer, Max A., and others : Polymerization—Depolymerization of Tobacco Mosaic Virus Protein, 1338
Launching of Artificial Satellites of the Earth : Some Variation Problems connected with the (D. E. Okhotsimskii and T. M. Eneev), 1311
Laurie, M. V. : Biological Productivity of Britain (Present Production from Forestry in Britain), 83
Lavoipierre, M. M. J. : Biting Behaviour of Mated and Unmated Females of an African Strain of *Aedes aegypti*, 1781
Law, H. D. : Awarded a General Fellowship of the Commonwealth Fund, 1181
Lawrence, Dr. B. E. : Science in Schools, 1372
Laws, E. Q., and Darling, H. S. : Treatment of Hops with Dimefox, 498
Lawson, Dr. G. J. : Appointed to a lectureship in mining at the University of Birmingham, 1182
Lawton, Valerie D. (Jackson, F. L., and) : Cytochromes of *Micrococcus lysodeikticus*, 1539
Laying Hens : Presence of Œstrone, Œstradiol and Œstriol in Extracts of Ovaries of (D. S. Layne, Prof. R. H. Common, W. A. Maw and R. M. Fraps), 351
Layne, D. S., and others : Presence of Œstrone , Œstradiol and Œstriol in Extracts of Ovaries of Laying Hens, 351
Layrisse, Dr. Miguel, and others : Peculiar Distribution of the Diego Factor among the Warrau, 118
Layton, Dr. Laurence L., and others : Importance of the Synthesis of Acidic Polysaccharide for Wound Healing, 1543

Lazzarini, E. (Giustina, G., and) : Carbon Dioxide Fixation in some Components of Growing Rat Red Cells, 1285
Le Grand, Prof. Yves : Light, Colour and Vision (approved translation by Dr. R. W. G. Hunt, Dr. J. W. T. Walsh and F. R. W. Hunt), *review* by Prof. W. D. Wright, 146
Le Gren, E. D. : Biological Productivity of Britain (Production of Fish), 83
Le Quesne, Dr. W. J., and others : Distribution of Carbon-14 in Labelled Amino-acids separated on Paper Chromatograms, 336
Lea, Dr. F. M. : Mechanical Properties of Non-Metallic Brittle Materials, 1578
Leach, A. A. : An Approach to the Non-Gelatin Constituents of Gelatines and Glues, 538
Leach, Dr. R. : Blackhead Toppling Disease of Bananas, 204
Lead : 'Sub-Grains' and Etch Figures in (E. J. Hooker), 180
Lead Crystal : Mean Free Path of Phonons in a (G. J. McCallum and P. A. Egelstaff), 643
Lead-Reactive Substances in Myoneural Synapses (Dr. Gy. Sávay and Dr. B. Csillik), 1137
Lead Styphnate Monohydrate : Effects of Nuclear Irradiation upon the Decomposition of (Dr. Ted B. Flanagan), 42
Leaf (Primary), of Dwarf Bean (*Phaseolus vulgaris*) : Effect of Gibberellic Acid and Kinetin on Growth of (E. C. Humphries), 1081
Leaf Primordia (Fern) : Developmental Potentialities of (E. G. Cutter), 314
Leaf (Spinach) Chloroplast Extract : Formation of Oxalacetate and Aspartate from Phospho-Enol-Pyruvate in (Lawson L. Rosenberg, John B. Capindale and F. R. Whatley), 632
Leakey, Dr. L. S. B. : Recent Discoveries at Olduvai Gorge, Tanganyika, 1099
    The Development of the West African Environment, 1580
Lean, G. H. : Irrigation Works, *review*, 514
Learned Societies : Covenanted Subscriptions to, 1243
Leaves : Effect of Caffeine and other Purines upon the Ribonucleic Acid/Deoxyribonucleic Acid Ration in, and the Suitability of these Leaves for Aphids (Dr. B. Kessler, Dr. E. Swirski and Dr. A. S. Tahori), 1595
Leaves for Aphides: Effect of Caffeine and other Purines upon the Ribonucleic Acid/Deoxyribonucleic Acid Ratio in Leaves, and the Suitability of these (Dr. B. Kessler, Dr. E. Swirski and Dr. A. S. Tahori), 1595
Leaves from Woody and Herbaceous Plants : Water Relations of (Dr. J. S. Kennedy and C. O. Booth), 1271
Leaves (Grass) : *Candida albicans* from (Dr. M. E. di Menna), 1287
Leaves (Wheat) : Formation of Alkyl Phosphates in (V. C. Runeckles), 1470
Lebistes reticulatus R. : Masculinizing Action of Pregneninolone on Female Gonads in the Cyprinodont (Dr. T. Mohsen), 1074
Lecture Notes on the Use of the Microscope (R. Barer), second edition, *review* by S. Bradbury, 801
Lecture-Demonstration Course on Clinical Biochemistry (Association of Clinical Biochemists), 1312
Lederberg, Prof. J., and Lennox, E. S. : Genetic Aspect of Somatic Cell Variation (Antibody Production by Single Cells from Hyperimmune Animals *in vitro*), 1706
Lederberg, Prof. J. (Nossal, G. J. V., and) : Antibody Production by Single Cells, 1419
'Ledercort', a New Steroid (Lederle Laboratories Division of Cyanamid of Great Britain, Ltd.), 1311
Lederer, Prof. E. : To be visiting professor in the Department of Chemistry, King's College (University of Durham), Newcastle-upon-Tyne, 89
Lederle Laboratories Division of Cyanamid of Great Britain, Ltd. : 'Ledercort', a New Steroid, 1311
Ledger, R. : The Electrification of Railways (Faraday Lecture for 1957-58 of the Institution of Electrical Engineers, prepared by the late G. H. Fletcher), 387
Ledoux, L., and others : Ribonuclease Activity and Ribonucleic Acid Content of Homologous Human Normal and Cancer Cells, 913
Lee, Dr. Edward : Appointed deputy director of the National Physical Laboratory, 600 ; work of, 600
Lee, G. E., and others : 1 : 2 : 2 ; 6 : 6-Pentamethylpiperidine, a New Hypotensive Drug, 1717
Lee, H. J., and others : Provision of Cobalt to Ruminants by means of Heavy Pellets, 1367
Leech, J. W. : Melting and Diffusion, 319
Leedale, Gordon F. : Mitosis and Chromosome Numbers in the Euglenineae (Flagellata), 502
Lees, Dr. A. D. : Photoperiodism in Plants and Animals (Phenomena of Photoperiodism in Insects and Mites), 536
Lees, Dr. A. D. (Beament, Dr. J. W. L., and) : Use of Fluorescent Lighting for Experiments on Photoperiodism, 1443
Lees, D. J., and others : Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315
Leeuwenhoek, Antoni van : The Collected Letters of, Vol. 5 (edited, illustrated and annotated by a Committee of Dutch scientists), *review* by Prof. F. J. Cole, 1753
Leg (Mesothoracic), of the American Cockroach (*Periplaneta americana* L.) : Muscle Fibres of the Fast and the Slow Contracting Muscles of the (W. A. Smit), 1073
Legallais, Frances Y., and others : Adaptation to Serum-free Medium by a Phagocytic Cell Strain derived from a Murine Lymphoma, 1343
Legumes : The Nutrition of the (Fifth Easter School in Agricultural Science at the University of Nottingham School of Agriculture), 315
Lehmann, Dr. H., and others : Haemoglobin E and the Diego Blood Group Antigen in Sarawak and Burma, 119
    Absence of the Diego Blood Group and Abnormal Haemoglobins in 92 Maoris, 791
Lehmann, Dr. H. (Bangham, Dr. A. D., and) : 'Multiple' Haemoglobins in the Horse, 267
Lehnert, Dr. B. : Confinement of Charged Particles by a Magnetic Field, 331
Leiberman, Gerald J. (Resnikoff, George J., and) : Tables of the Non-Central t-Distribution, *review*, 985
Leicester Museum and Art Gallery: Fifty-first Annual Report (1956-57), 1376
Leidheiser, jun., Henry (Buck, III, W. Roger, and) : Corrosion of Ten Metals in Boiling Hydrochloric Acid when in Contact with Rhodium, Palladium, Iridium and Platinum, 1681
Leigh, R. S. : Band Theory of Metals and the Structure of the Fermi Surface (Correlation in the Free Electron Gas), 526
Leliavsky, Dr. Serge : Irrigation and Hydraulic Design, Vol. 2, Irrigation Works, *review* by G. H. Lean, 514
Lemberg, Dr. R. : Constitution of Verdohaem, 1131
Lemna perpusilla : Photoperiodic Control of Flowering in (William S. Hillman), 1275
Lenel, Dr. P. O. : Newer Preparative Methods in Organic Chemistry (Some Applications of Metal Carbonyls in Organic Chemistry), 240
Length : Change of, during Transformation of Iron under Stress (M. de Jong and Prof, G. W. Rathenau), 1396
Length (Unit) : Birefringence Determination in Objects of Irregular Cross-sectional Shape and Constant Weight per (S. C. Simmens), 1260
Lenihan, Dr. J. M. A., and others : Arsenic in Detergents, 1463
Lennox, E. S. (Lederberg, Prof. J., and) : Genetic Aspect of Somatic Cell Variation (Antibody Production by Single Cells from Hyperimmune Animals *in vitro*), 1706
Lens : An Optical Method of Obtaining the Frequency Responses of a (K. Hacking), 1158
Lens (Crystalline) : Fluorescence of the, and Electroretinographic Sensitivity Determinations (Dr. E. Dodt and J. B. Walther), 286
Lepidium : Effect of Stereoisomeric Tartrates on Root Elongation in (Torbjörn Arsheim), 922
Lesion : The Biochemical, *review* by Dr. C. P. Stewart, 215
Lesions in the Hypertensive Rat Kidney produced by Hydralazine (Dr. D. L. Gardner), 915
Lesions (Complete Transverse), of the Spinal Cord : Excretion of 17-Ketogenic Steroids in Subjects with (R. Robinson), 484
Lesions (Gastro-intestinal Bleeding) : Isotopic Tracer Method for Measurement of Iron Lost into and Re-absorbed from (M. Roche, M. E. Perez-Gimenez and A. Levy), *errata*, 603
Leslie, Dr. D. C. M. : Life-time of an Artificial Earth Satellite, 403
Leslie, Dr. D. C. M. (King-Hele, D. G., and) : Effect of Air Drag on the Orbit of the Russian Earth Satellite 1957β—Comparison of Theory and Observation, 1761
Leston, Dennis : 'Compensatory Hyper-regeneration' in the Antennae of Hemiptera, 931
Lethal Doses of a Dimethyl Homologue of Myleran : Protection of August Rats against, by Isologous Bone Marrow (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Lethal Electric Shock : Effect of a, during Hypothermia (T. Szilágyi, K. Benkö and H. Csernyánszky), 909
Lethal Factor of Diphtheria Toxin : Isolation of the, by Electrophoresis in Starch Gel (Dr. M. D. Poulik and E. Poulik), 354
Letham, Dr. D. S. : Maceration of Plant Tissues with Ethylene-diamine-tetra-acetic Acid, 135
Letters of Patrick Geddes : Pioneer of Sociology—the Life and (Philip Mairet), *review* by R. Brightman, 731
Letters (The Collected), of Antoni van Leeuwenhoek, Vol. 5 (edited, illustrated and annotated by a Committee of Dutch scientists), *review* by Prof. F. J. Cole, 1753
Lettuce, *Lactuca sativa* L. : Natural Cross-Pollination in (L. E. Watts), 1084
Lettuce Seeds : Effect of Anaerobic Conditions on Imbibed (Walter Heydecker), 1140
Leucine Aminopeptidase in Rat Parathyroid and its relation to Parathyroid Hormone Production (Dr. A. G. E. Pearse and Dr. G. Tremblay), 1532
Leucoanthocyanins : Biogenesis of Condensed Tannins from (Dr. David G. Roux), 1454
    Oxidation Products of, as Inhibitors of Fungal Polygalacturonase in Rotting Apple Fruit (M. Cole), 1596
Leucocyte Antibodies in Sera from Pregnant Women (J. J. van Rood, J. G. Eernisse and Miss A. van Leeuwen), 1735
Leucocytes *in vitro* : Effect of Muscular Activity prior to Venepuncture on the Respiration of (Sheenah K. Bisset and W. D. Alexander), 909
Leucocytozoon spp. in some Hertfordshire Birds (Dr. J. R. Baker), 205
Leucojum : Snowdrops and Snowflakes, a Study of the Genera *Galanthus* and (F. C. Stern), *review* by R. D. Meikle, 1691
Leukaemia : Grants, Scholarships or Fellowships for research on Diseases of the Blood, with special reference to (Lady Tata Memorial Fund), 458
Leukaemia Therapy : Effects of Alkoxyglycerols and especially Selachyl Alcohol on the Bone Marrow in connexion with Irradiation Treatment and in (Astrid Brohult), 1484
Leukaemia and Allied Diseases : Research on (Lady Tata Memorial Fund Awards for 1958-59), 1703
Lev, Dr. M. : Apparent Requirements for Vitamin K of Rumen Strains of *Fusiformis nigrescens*, 203
Levels (Three) : An Experimental Design for Three Factors at (Robert M. De Baun), 209
Levels of Health : Measurement of (World Health Organization, Technical Report Series No. 137), 1244
Levengood, W. C. : Instability Effects in Vortex Rings produced with Liquids, 1680
Lever Brothers (Rhodesia), Ltd. : Gift of £10,000 to the University College of Rhodesia and Nyasaland, to endow a Lever Research Fellowship, 673
Leverhulme Research Awards (First Report of the Leverhulme Trust on the), 951
Leverhulme Trust : First Report on the Leverhulme Research Awards, 951
    Award of Research Fellowships and Grants, 1442
Levin, Dr. Irvin : Retinal Type of Photovoltaic Cell, 832
Levine, M. A. : Extremely High Temperatures (Design of Force-free Coils in Producing Strong Magnetic Fields), 1381
Levine, Dr. S., and Wrigley, H. E.: Interaction in Ionic Solutions (Interaction of Two Univalent Ions at Small Separations), 240
Leviseur, Shirley, and others : An Acid-free Bacillus isolated from the Lungs of the Cape Hyrax, *Procavia capensis* (Pallas), 284
Levy, A., and others : Isotopic Tracer Method for Measurement of Iron Lost into and Re-absorbed from Gastro-intestinal Bleeding Lesions, *errata*, 603
Lewis, E. L. (Walker, Dr. G. B., and) : Vacuum Breakdown in Dielectric-loaded Waveguides, 38
Lewis, H. E., and Masterton, J. P. : Nutrition and Climatic Stress (Some Aspects of the Feeding of Field Expeditions in Cold Climates), 1644
Lewis, J. (Earnshaw, A., and) : Magnetic Properties of some Binuclear Complexes of Chromium and Iron, 1262
Lewis, Marion, and others : The Diego Blood Group System, 268
    Diego as an Independent Blood Group System, 1598

Lewis, Vaughan : At the Annual Conference of the Geographical Association (Erosion by Cirque and Valley Glaciers), 606
Lewis, W. E. : Appointed conservator of forests (Division of Afforestation), Nyasaland, 458
Lewitus, Dr. Zigmund (Anbar, Michael, and) : Rate of Body-Water Distribution studied with Triple Labelled Water, 344
Lias (Lower) of Dorset : Germanium Enrichment in Lignites from the (A. Hallam and K. W. Payne), 1008
Liassic Therapsid Oligokyphus (Dr. Walter Georg Kühne), *review* by Prof. D. M. S. Watson, 1233
Liberal Studies in Technical Education (A. A. Part), 386
Libocedrus decurrens Torrey : Nature of some Decay-retardant Extractive Components in Incense Cedar Heartwood (Arthur B. Anderson, Eugene Zavarin and Theodore C. Scheffer), 1275
Librarians Here and There (Scottish Branch of Aslib Symposium on), 238
Libraries (J. R. K. Pirie), 746
Libraries : The Golden Chain, a Study in the History of (Prof. R. Irwin), 313
Library Science and Scientific Method (Dr. S. R. Ranganathan), 1509
Lichen Society, British : Formation of the, 602
Lickley, R. L., and Twiss, L. P. : Awarded the George Taylor (Australia) Gold Medal of the Royal Aeronautical Society, 1646
Lidiard, Dr. A. B. : Vacancies and other Point Defects in Metals and Alloys (Diffusion in Ordered Alloys), 451
Lieberman, Harry M. (Rockstein, Morris, and) : Survival Curves for Måle and Female House-Flies (*Musca domestica* L.), 787
Liebesny, Felix : Scientific and Technical Translation (The Economics of Translation), 1044
Liepmann, H. W., and Roshko, A. : Elements of Gasdynamics, *review* by Dr. J. H. Horlock, 1232
Life : Chemistry and, *review* by Prof. M. Stacey, 75
  Modern Science and the Nature of (Dr. William S. Beck), *review* by Dr. Alex Comfort, 1627
  The Origins of (Albert Ducrocq), translated by Alec Brown, *review* by T. H. Hawkins, 1364
  The Physics and Chemistry of (A *Scientific American* Book), *review* by Prof. D. C. Harrison, 985
  The Stress of (Dr. Hans Selye), *review* by Prof. J. Z. Young, 1494
  A Unified Science of, *review*, 1561
Life, an Introduction to Biology (George Gaylord Simpson, Colin S. Pittendrigh and Lewis H. Tiffany), *review*, 1561
Life of *Drosophila subobscura* : Prolongation of the, by a Brief Exposure of Adults to a High Temperature (J. Maynard Smith), 496
Life of Mammals (Prof. J. Z. Young), *review* by Prof. V. C. Wynne-Edwards, 4
Life in the Sea : Conditions of, *review* by Dr. G. E. R. Deacon, 1559
Life of the Shrew (Dr. Peter Crowcroft), *review* by H. R. Hewer, 517
Life and Death of Cells (Dr. Joseph G. Hoffman), *review* by Prof. P. C. Koller, 1363
Life (Human) : Science and (Prof. J. A. V. Butler), *review* by F. I. G. Rawlins, 299
Life (Insect), in the Tropics (T. W. Kirkpatrick), *review*, 732
Life (Wild), and Amenities : Conserving, in the South-East of England (South-Eastern Union of Scientific Societies Conference on), 315
Life and Letters of Patrick Geddes : Pioneer of Sociology—the (Philip Mairet), *review* by R. Brightman, 731
Life Insurance Medical Research Fund of Australia and New Zealand : Grants-in-aid, 1109
  Research Fellowships, 1110
  Travelling Fellowships, 1110
Life-time of an Artificial Earth Satellite (Dr. D. C. M. Leslie), 403
Life-time of Artificial Satellites : Effect of the Earth's Equatorial Bulge on the, and its Use in Determining Atmospheric Scale-Heights (Dr. G. V. Groves), 1055
Life-time of a Satellite : Calculation of the (D. G. Parkyn), 1156
Light : Dependence on, of the Reversible Uptake of Inorganic Phosphate by Hydrodictyon (A. Pirson and Dr. A. Kuhl), 921
  Reduction of Parthion induced by (Dr. E. Sándi), 499
Light (Integrated), of Comet Arend-Roland, 1956*h* : Polarization of the (D. R. Barber), 760
Light (Plane Polarized), from the Blue Sky : A Device for Visualizing the Pattern of (J. A. Chapman), 1393
Light, Colour and Vision (Prof. Yves Le Grand), approved translation by Dr. R. W. G. Hunt, Dr. J. W. T. Walsh and F. R. W. Hunt), *review* by Prof. W. D. Wright, 146
Light and Gibberellic Acid : Radicle Elongation of *Pseudotsuga menziesii* in relation to (Dr. S. D. Richardson), 429
Light and by Heat : Bleaching of Rhodopsin by (Dr. Ruth Hubbard), 1126
Light and Sexual Maturity in the Domestic Fowl (T. R. Morris and S. Fox), 1453
Light Exposure : Effect of a Single, on Germinating Broad Bean Seeds (Dr. G. R. Lane and R. D. Butler), 1080
Light Organ : A New Type of, in the Deep-Sea Fish *Opisthoproctus* (Dr. E. Bertelsen), 862
Light Reactions of Littoral Gastropods (Dr. C. Burdon-Jones and G. H. Charles), 129
Light Scattering : The Practice of (Discussion at the University of Birmingham), 459
Light Scattering and Titration Studies (Spectrophotometric), upon the Interaction of Polyadenylic and Polyuridylic Acids (Dr. Roland F. Beers, jun., and Dr. Robert D. Steiner), 30
Light-sensitive Seeds : Similar Effects of Blue and Infra-Red Radiation on (Dr. P. F. Wareing and M. Black), 1420
Lighting (Fluorescent) : Use of, for Experiments on Photoperiodism (Dr. J. W. L. Beament and Dr. A. D. Lees), 1443
Lightning Discharges : Radio Noise from (F. Horner and C. Clarke), 688
Lignins and Humic Acids (Protein—Lignin Complexes,) : Resistance of, to Microbial Attack (Prof. D. L. Lynch and Prof. C. C. Lynch), 1478
Lignites from the Lower Lias of Dorset : Germanium Enrichment in (A. Hallam and K. W. Payne), 1008
Liley, B. S., and others : Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
Lillegraven, A., and others : Natural Airborne Radioactivity at Kjeller, Norway, 1197
Lilley, Dr. G. M. : Flow Noise (Aerodynamics of Jet Flow), 388
Lime : Effect of, on the Production of a Toadstool (*Omphalia maura* (Fr.) Gill.), (Dr. F. B. Hora), 1668
Limitation of Phenotypic Variation : A Case of (P. H. Fitzgerald), 436
Limited Multiplication of *M. lepraemurium* in Tissue Culture (R. J. W. Rees and P. C. Wong), 359
Limits of Colour Measurement : Scope and (Colour Group of the Physical Society Symposium on), 1704
Limnology : A Treatise of (Prof. G. Evelyn Hutchinson), Vol. 1, Geography, Physics and Chemistry, *review* by Prof. Kaare Strøm, 1360
Limnoria (Wood-boring Isopod), in Southampton Water : Coexistence of Three Species of the (Dr. S. K. Eltringham and A. R. Hockley), 1659
Lin, Dr. Teh Ping (Sherman, Dr. J. K., and) : Effect of Glycerol and Low Temperature on Survival of Unfertilized Mouse Eggs, 785
Lindahl, Per Eric : Separation of Bull Spermatozoa carrying X- and Y-Chromosomes by Counter-Streaming Centrifugation, 784
Lindane : Influence of DDT and, on Chordotonal Organs in the Cockroach (G. Becht), 777
Lindaur, Dr. V. : Relationship between Chlorpromazine and Anoxia, 1341, *errata*, 1510
Lindsey, W. H., and Saxton, W. F. : Awarded the British Silver Medal for Aeronautics of the Royal Aeronautical Society, 1646
Lindsten, J., and others : Congenital Malformations in Children of Mothers Aged 42 and Over, 1545
Lindström, Dr. B., and Brown, Dr. R. (edited by) : Cytochemical Methods with Quantitative Aims—Biophysical and Biochemical Approaches (Proceedings of the Symposium held by the Institute for Medical Cell Research and Genetics, Karolinska Institutet, Stockholm, 1956), (Experimental Cell Research, Supplement 4), *review*, 1029
Linear Pinch (Partially Stabilized) : Magnetic Measurement of Plasma Confinement in a (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt, Dr. R. H. Lovberg and Dr. J. A. Phillips), 224
Linear Stabilized Pinch : New Confinement Phenomena and Neutron Production in a (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt and Dr. R. H. Lovberg), 228
Lingering Effects of Local X-Irradiation on Healing of Burns (R. H. Rixon, J. M. A. Tishler and H. B. Newcombe), 1138
Link between the Aroids and the Duckweeds : *Spirodela polyrrhiza*, the (Satish C. Maheshwari), 1745
Linkage of Carbohydrate to Protein in Ovalbumin (Dr. F. R. Jevons), 1346
Linkage Programmes (Multipoint) : Number of Mating Types required for Balance in (A. W. F. Edwards), 503
Linnaeus (Dr. J. Ramsbottom), 244
Linnaeus Tradition and our Time (Dag Hammarskjöld), 611
Linnean Gold Medals for 1958 awarded to Sir Gavin de Beer and Dr. W. B. Turrill, 1177
Linnean Society of London : Symposium on the Biological Uses of the Electron Microscope, 459
  Award of Gold Medals for 1958 to Sir Gavin de Beer and Dr. W. B. Turrill, 1177
  Award of Silver Darwin—Wallace Commemorative Medals to Dr. Edgar Anderson, Prof. Maurice Caullery, Sir Ronald Fisher, Prof. C. R. Florin, Prof. J. B. S. Haldane, Prof. Roger Heim, Dr. John Hutchinson, Sir Julian Huxley, Dr. Ernst Mayr, Prof. H. J. Muller, Prof. E. Pavlovsky, Dr. Bernard Rensch, Dr. G. Gaylord Simpson, Prof. Carl Skottsberg, Prof. E. A. Stensiö, Dr. H. Hamshaw Thomas, Prof. G. V. Turesson, Dr. V. van Straelen, Prof. D. M. S. Watson and (the late) Dr. J. C. Willis, 1177
  Election of Officers for 1958-59, 1509
Linnett, Dr. J. W. : Electronically Excited Species, 320
Linstead, Dr. R. P. : An Education for Our Times, 95
Lipa, Jerzy J. : Effect on Earthworm and Diptera Populations of BHC Dust applied to Soil, 863
Lipase Activity in the Pectoralis Major Muscle of the Pigeon : Histochemical Demonstration of (Dr. J. C. George and K. S. Scaria), 783
Lipase and Esterase (β-Glucuronidase,), in the Testis of the Cryptorchid Rat (Dr. Masando Hayashi, Kazuhiro Ogata, Takuro Shiraogawa and Osamu Kawase), 186
Lipid' ('Masked), in Mouse Pancreas : Occurrence of (S. Bradbury and B. -P. Clayton), 1347
Lipid Biochemistry, *review* by Dr. F. D. Gunstone, 1028
Lipid Hapten (Pure), isolated from Human Carcinoma : Cytolipin *H*, a (Dr. Maurice M. Rapport, Liselotte Graf, Vladimir P. Skipski and Nicholas F. Alonzo), 1803
Lipids : The—their Chemistry and Biochemistry (Prof. Harry J. Deuel, Jr.), Vol. 3, Biochemistry—Biosynthesis, Oxidation, Metabolism and Nutritional Value, *review* by Dr. F. D. Gunstone, 1028
Lipids ('Masked') : Demonstration of, in the Oocytes of *Chrotogonus trachypterus* with Sudan Black *B* and Phenol 'Unmasking' Techniques (Brij L. Gupta), 555
α-Lipoic Acid : Anticholesterol Activity of (L. Angelucci and E. Mascitelli-Coriandoli), 911
Lipoid (Platelet-) : Phospholipids, Proteins and (J. R. O'Brien), 420
Lipopolysaccharide Antigen of the *Treponema* (Prof. Giuseppe D'Alessandro and Carla del Carpio), 991
Liquid Crystals : Configurations and Interactions of Macromolecules and (Faraday Society General Discussion on), 673
Liquid Impact at Supersonic Speeds : Damage to Solids by (Dr. F. P. Bowden and J. H. Brunton), 873
Liquid Natural Gas : Importation into Britain of, 671
Liquid Paraffin : Influence of Moisture upon the Dielectric Properties of Solid Powders dispersed in (Rempei Gotohi, Tetsuya Hanai and Naokazu Koizumi), 406
Liquid Samples (Small) : A Direct-Plating Method for the Precise Assay of Carbon-14 in (Dr. C. C. McCready), 1406
Liquid Systems : Some Recent Experimental Studies of Diffusion in (Prof. H. S. Harned), 240
Liquids : Amplitude of a Quartz Plate vibrating in (Dr. S. Parthasarathy and Harkrishan Singh), 260
  Cavitation and the Solution of Gases in (Dr. K. S. Iyengar and Prof. E. G. Richardson), 1328
  Instability Effects in Vortex Rings produced with (W. C. Levengood), 1680
  Propagation of Ultrasonic Waves in (Dr. A. K. Dutta and K. Samal), 563
Liquids (Organic) : Temperature Coefficient of Ultrasonic Absorption in (Dr. S. Parthasarathy, M. Pancholy and A. F. Chhapgar), 405
Lister, Dr. A. J. (Penikett, E. J. K., and) : Estimation of Hydrogen Peroxide in Culture Media, 1682
Liston, J., and Shewan, J. M. : Processing of Foods with Ionizing Radiations (Irradiation of Fish), 878

Lithobius forficatus (L.) : Connective-Tissue Pigment of the Centipede (Dr. A. E. Needham), 194
Literature (Russian Scientific) : Translations of, 1109, 1308, 1508
Literature (Scientific), on Fire : References to (Miss E. M. Shakeshaft and Mrs. B. F. W. Rogowski), 1443
Litt, Dr. Mortimer, and Boyd, Prof. William C. : Preservation of Haemocyanin, 1075
Litter (Pine) : Micro-fungi in (W. B. Kendrick), 432
Litters from *C3H* and *CBA* Ovaries orthotopically transplanted into Tolerant *A* Strain Mice (Prof. P. L. Krohn), 1671
Little (Too) : Two Much and (Prof. M. G. Say), 321
Littlefield, Dr. J. W., and Dunn, Dr. D. B. : Natural Occurrence of Thymine and Three Methylated Adenine Bases in several Ribonucleic Acids, 254
Littler, Dr. T. S. : Noise in Industry (Noise Measurement, the Analysis and Evaluation of Harmful Effects), 1697
Littman, Dr. M. L., and Pisano, Dr. Michael A. : Microbial Growth Stimulants in Spleen, 285
Littoral Gastropods : Light Reactions of (Dr. C. Burdon-Jones and G. H. Charles), 129
Litwack, Prof. Gerald : Development of *Micrococcus lysodeikticus* Resistant to Lysozyme, 1348
Litwack, Prof. Gerald, and Carlucci, A. F. : The Pigment of *Micrococcus lysodeikticus*, 904
Liver of Rats : Effect of Aldosterone Mono-acetate and Deoxycorticosterone Acetate on Alkaline Phosphatase Activity in the (Dr. Amiya B. Kar and R. P. Das), 623
Liver in Vitamin B_{12} Dificiency : Effects of Orotic Acid on Coenzyme A and Pantothenic Acid of (Prof. G. Moruzzi, R. Viviani, M. Marchetti and F. Sanguinetti), 416
Liver (Rat) : Effect of Splenectomy on Azo Dye Carcinogenesis of (Dr. Muneaki Takashi and Shoji Iwase), 1211
  Occurrence of Independent Systems for the Cleavage of Folic Acid and Citrovorum Factor in (U. W. Kenkare and Dr. Beatriz M. Braganca), 548
  Soluble Antigens in Microsomes and other Cell-Fractions of (Dr. P. Perlmann and Dr. V. D'Amelio), 491
  Thyroxine Metabolism by Extracts of (Lawrence G. Plaskett), 273
Liver (Rat), treated with 2-Acetylaminofluorene : Conversion of 3-Hydroxyanthranilic Acid to Quinolinic Acid in presence of (E. Quagliariello, S. Auricchio and E. Rinaldi), 624
Liver Cancer : Effects of certain Compounds related to Trypan Blue on the Experimental Production of (K. Fujita, T. Mine, T. Ito and M. Matsuyama), 1732
  Inhibiting Effect of Chlorpromazine on the Experimental Production of (Dr. K. Fujita, S. Iwase, T. Ito and M. Matsuyama), 54
Liver Cancer (Primary Rat) : Phosphorylase Activity of (A. A. Hadjiolov and K. I. Dancheva) ,547
Liver Degeneration (Dietary Necrotic) : Protective Effect of Trace Elements other than Selenium against (J. Bunyan, E. E. Edwin and J. Green), 1801
Liver Microsomes (Rat), in a Cell-free System : Effect of Hypophysectomy on the Ability of, to incorporate Radioactive Amino-Acids into their Proteins (Dr. A. Korner), 422
Liver Regeneration in the Hypophysectomized Rat : Effects of Pituitary Hormones and Cortisone upon (Dr. J. T. Hemingway and Dr. D. B. Cater), 1065
Liver Steatosis : Activity of Glucose-1-phosphate on (Giuliana Gialdroni-Grassi), 53
Liverman, Dr. J. L. : Photoperiodism in Plants and Animals (Interaction between Red Light and various other factors in the Growth of Bean Leaf Disks), 535
Livesley, Dr. R. K. : Recent Advances in Applied Mathematics, *review*, 979
Livestock Breeder : Robert Bakewell—Pioneer (Prof. H. Cecil Pawson), *review* by G. E. Fussell, 868
Livestock (Farm) Research Centre of the Animal Health Trust (Dr. W. R. Wooldridge), 76
Livey, D. T., and others : Mechanical Properties of Non-Metallic Brittle Materials (Effects of Porosity and Microstructure on the Mechanical Properties and Resistance to Thermal Shock of High-Temperature Materials—Pure Oxides), 1578
Living Conditions, International Medical Association for the Study of Health and : Formation of an, 464
Living Things : The Evolution of (Prof. H. Graham Cannon), *review* by T. H. Hawkins, 1364
Living and Working Conditions : Influence of, upon Health (Medical Conference on), 464
Livingston, R., and others (edited by) : Research in Photosynthesis (Papers and Discussions presented at the Gatlinburg Conference, 1955), *review* by Prof. C. P. Whittingham, 974
Lizards : Edible (Allan R. Holmberg), 1187
Lloyd, Dr. P. F., and others : Mammalian Cellulose, 470
Lloyd, R. A. : Application of the Kurie Plot to the Standardization of Pure Beta-Emitters, 1055
Lloyd, R. A. (Owen, B., and) : Correction for the Gamma-Ray Sensitivity of the Beta-Counter in the Standardization of Cobalt-60 by the Beta-Gamma Coincidence Method, 396
Lloyd Library : A Catalogue of the Pharmacopoeias, Dispensatories, Formularies and Allied Publications (1493-1957) in, 1769
Local Administration in a Technological Age, 583
Local X-Irradiation : Lingering Effects of, on Healing in Burns (R. H. Rixon, J. M. A. Tishler and H. B. Newcombe), 1138
Localization of Isocitric Dehydrogenase in Femurs : Organic Composition of Bone—(Robert Van Reen and Fred L. Losee), 1543
Localization of Oxidative Enzyme Systems in the Uterus and Vagina of the Rat (Dr. Charles G. Rosa and Dr. Joseph T. Velardo), 348
Localization Energies and Polarographic Half-Wave Potentials of Aromatic Hydrocarbons : Correlations between (P. H. Given), 1001
Localization (Cytochemical), of Pyridine Nucleotide-linked Dehydrogenases (Dr. R. Hess, Dr. D. G. Scarpelli and Dr. A. G. E. Pearse), 1531
Localization (Cytochemical), of Succinic Dehydrogenase in Mitochondria from *Periplaneta americana* (Dr. A. G. E. Pearse and Dr. D. G. Scarpelli), 702
Localized Electrons in Body-centred Cubic Metals (J. S. Griffith and L. E. Orgel), 170
Locating Tsetse Fly at Night : Use of Reflecting Paints for (B. D. Rennison, W. H. R. Lumsden and C. J. Webb), 1354
Lock, J. M., and others : Dependence of Heat Capacity on Thermal History, 642
Lockett, W. T. : Trade Wastes (Disposal of Gas Works Effluents), 679
Lockner, D. (Ehrenstein, G. v., and) : Sites of the Physiological Breakdown of the Red Blood Corpuscles, 911
Lockspeiser, Sir Ben : Retirement as president of the European Organization for Nuclear Research, 87
  Science in Schools, 1373
Locquin, M., et autres : Traité de Microscopie—Instruments et Techniques, *review* by Dr. John R. Baker, 589
Locus (*am*), in *Neurospora crassa* : Aberrant Recombination at the (J. A. Pateman), 1605
Locust, *Schistocerca gregaria* (Forsk.) : Facilitated Diffusion and Exchange in the Absorption of Glucose by the (J. E. Treherne), 1280
Locust (Desert) : Enzymes of the Tricarboxylic Acid Cycle and Cytochrome Oxidase in the Fat Body of the (Dr. D. A. H. Hearfield and Dr. B. A. Kilby), 546
  An Olfactory Response of Immature Adult of the (W. Loher), 1280
Locusts of Australia : The Grasshoppers and (Dr. J. A. G. Rehn), Vol. 1, Families Tetrigidae and Eumastacidae ; Vol. 2, Family Acrididae, Subfamily Pyrgomorphinae ; Vol. 3, Family Acrididae, Subfamily Cyrtacanthacridinae, tribes Oxyini, Spathosternini and Praxibulini, *review* by Dr. B. P. Uvarov, 1628
Locusts (Albino), with Internally Absorbed Phenol Substrates : Induction of Melanin Patterns and of Hardening as Separate Processes in the Cuticle of (Dr. B. M. Jones and W. Sinclair), 926
Lodin, Z., and others : A Histoautoradiographic Study of the Effect of Section of the Facial Nerve on the Uptake of Methionine-^{35}S by the Cells of the Facial Nerve Nucleus, 341
Loewenstein, Prof. Werner R., and Altamirano-Orrego, R. : Generation and Propagation of Impulses during Refractoriness in a Pacinian Corpuscle, 124
Lofthouse, Dr. E. : Nuclear Energy, 736
Lofthouse, Dr. E. (Wells, I., and) : Nuclear Energy (Fuel Processing in Homogeneous Aqueous Reactors), 736
Logarithmic Time Scale for the Evolution Process (G. F. Phillips), 1652 : (Sir Julian Huxley), 1653
Logarithms : Use of, in recording Serological Reactions (Prof. William C. Boyd), 1348
Logical Problem of Induction (Prof. Georg Henrik von Wright), second edition, *review* by F. I. G. Rawlins, 981
Logical Studies (Prof. Georg Henrik von Wright), *review* by F. I. G. Rawlins, 981
Logical Studies and Induction, *review* by F. I. G. Rawlins, 981
Loher, W. : An Olfactory Response of Immature Adults of the Desert Locust, 1280
Lolium temulentum and *L. perenne* : Chromosome Size in (Beryl Naylor and Dr. H. Rees), 854
Lombard, Prof. Augustin : Géologie Sédimentaire—Les Séries Marines, *review* by Sir Edward Bailey, 658
Lomer, Dr. T. R. : Appointed lecturer in physics at the University of Birmingham, 89
Lomer, Dr. W. M. : Vacancies and other Point Defects in Metals and Alloys (Transport of Atoms through Metallic Lattices in various types of Diffusion Processes), 450
Lomer, Dr. W. M., and Marshall, W. : Band Theory of Metals and the Structure of the Fermi Surface (Electronic Structure of Ferromagnetic Alloys), 526
Lominski, Dr. Iwo, and others : Chaining and Unchaining *Streptococcus faecalis*—a Hypothesis of the Mechanism of Bacterial Cell Separation, 1477
Lominski, Dr. I. R. W. : Elected a Fellow of the Royal Society of Edinburgh, 739
Lona, Prof. Fausto : Photoperiodism in Plants and Animals (Interactions between Gibberellic Acid and Photoperiodic Responses), 535
London, Dr. H. : Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions (Scaling Laws for Stabilized Discharges), 805
London, Dr. Irving M., and others : Adenosine Triphosphate Metabolism in the Rabbit Erythrocyte *in vivo*, 324
London County Council : Film Strip, The Vanishing Prairie, 1310
London Hospital Medical College : Title of professor of pharmacology in the University of London conferred on Dr. Miles Weatherall, 602
  Title of reader in biochemical genetics in the University of London conferred on Dr. Harry Harris, 602
London Planetarium (Dr. H. C. King), 733
London School of Economics and Political Science : Appointment of Dr. F. G. Foster to the University of London readership in statistical computing, 238
  Retirement of Prof. L. Dudley Stamp from the chair of social geography, 1636
  Appointment of Dr. M. J. Wise to a new chair of economic geography, 1637
London School of Hygiene and Tropical Medicine : Appointment of Dr. M. L. Thomson to the University of London readership in applied physiology, 602
London and Home Counties Regional Advisory Council for Higher Technological Education : Ninth Annual Report, 1309
Long, Mrs. I. L. M. : At the Annual Conference of the Geographical Association (The Interpretation of Geographical Pictures by Secondary School Children), 607
Long, J. V. P. : X-Ray Research (Experiments on the Use of Fine-focus X-Ray Tubes and X-Ray Absorption and Emission Spectra for Quantitative Micro-Analysis), 1645
Long, Dr. L. H. : Appointed senior lecturer in chemistry at the University of Exeter, 1182
Long-Day Plant : Photoperiod, Auxin and Sex Balance in a (Prof. J. Heslop-Harrison and Y. Heslop-Harrison), 100
Long-Distance Radio Propagation above 30 Mc./s. (Institution of Electrical Engineers Symposium on), 1184
Long-Period Comets : Distribution of the Directions of Perihelia of (J. G. Tyror), 394
Longuet-Higgins, Prof. H. C. : Structure and Reactivity of Electronically Excited Species (Interactions between Electronic and Vibrational Motions of Polyatomic Molecules), 320
  Elected a Fellow of the Royal Society, 881
  Theory of Solutions, *review*, 978

Longworth, J. F. : Appointed agronomist, West African Cacao Research Institute, Ghana, 459
Lonsdale, Dame Kathleen : Physics of Water and Ice (Results of the latest X-Ray Electron and Neutron Diffraction Experiments), 380
  Science and Society (Social Place of Scientists), 1183
  Science in Schools, 1372
Lonsdale, Dame Kathleen (Grenville-Wells, Dr. H. Judith, and) : X-Ray Study of Laboratory-made Diamonds, 758
Looms, J. S. T. : Electrical Discharges between Coxial Electrodes, 696
Lord, Dr. K. A. : Pest Control, *review*, 1689
Los Alamos Scientific Laboratory, University of California : Columbus II Apparatus, 226
  Columbus S-4 Apparatus, 228
  Perhapsatron S-3 Apparatus, 231
Losee, Fred L. (Van Reen, Robert, and) : Organic Composition of Bone—Localization of Isocitric Dehydrogenase in Femurs, 1543
Loss of Moisture : Effects of Heat and, on the Dormancy of Barley (P. D. Hewett), 424
Loss of Moisture from Vegetation (K. J. Mitchell and R. L. Closs), 1619
Losses caused by *Gloeosporium* spp. in Stored Apples : A Method of Reducing the (Dr. D. M. Spencer and Dr. E. H. Wilkinson), 1603
Losty, H. H. W. (Davidson, H. W., and) : Plasticity of Graphite, 1057
  Mechanical Properties of Non-Metallic Brittle Materials (Elastic and Plastic Properties of Carbon and Graphite), 1578
Louping-ill Virus in Monolayer Tissue Culture of Pig Kidney ; Growth and Titration of (Dr. Holman E. Williams), 497
Lousley, J. E. : The British Flora in 1957, 605
Loutit, Prof. J. F., and others : Avoidance of 'Secondary Disease' in Radiation Chimaeras, 488
Lovberg, Dr. R. H., and others : Controlled Release of Thermonuclear Energy—Magnetic Measurement of Plasma Confinement in a Partially Stabilized Linear Pinch, 224
Lovberg, Dr. R. H. (Burkhardt, Dr. L. C., and) : Controlled Release of Thermonuclear Energy—New Confinement Phenomena and Neutron Production in a Linear Stabilized Pinch, 228
Löve, Åskell and Doris, and Raymond, Marcel : A Cytotaxonomic Study of *Carex*, 1041
Love, R. M., and Haraldsson, S. B. : Thaw Rigor and Cell Rupture, 1334
Loveless, Dr. Anthony : Increased Rate of Plaque-type and Host-range Mutation following Treatment of Bacteriophage *in vitro* with Ethyl Methane Sulphonate, 1212
Lovell, Prof. A. C. B. : The Individual and the Universe (Reith Lectures for 1958), 1378
Lovell, Prof. A. C. B. (Brown, R. Hanbury, and) : The Exploration of Space by Radio, *review* by Dr. F. G. Smith, 1562
Lovell, H. R. : Incorporation of Disodium *p*-Nitrophenylphosphate in Solid Medium for the Detection of Phosphatase Production by *Micrococcus pyogenes* var. *aureus*, 995
Lovelock, Dr. J. E. : Measurement of Low Vapour Concentrations by Collision with Excited Rare Gas Atoms, 1460
Lovelock, Dr. J. E., and Nash, T. : A Colour Reaction for Non-Ionic and Amphoteric Soaps, 1263
Lovett, M. : Trade Wastes (Obligations Imposed by the Pollution Prevention Acts), 679
Lovis, J. D. : A Chromosome Count in *Schizaea*, 1085
Lovisetto, P., and others : A Special Reaction of the Complement Fixation Test applied to the Study of Tumours, 622
Low Air Temperature Record : World, 1109
Low Temperature : Effect of Glycerol and, on Survival of Unfertilized Mouse Eggs (Dr. J. K. Sherman and Dr. Teh Ping Lin), 785
  Improved Resolution of X-Ray Diffraction Patterns of Protein Crystals at (Dr. Murray Vernon King), 263
Low-Temperature Injury to Stored Apples : Reduction of, by Modulation of Environmental Conditions (W. Hugh Smith), 275
Low-Temperature Physics, *review* by Dr. A. B. Pippard, 871
Low-Temperature Physics : Sixth International Conference on, 161
Low-Temperature Specimen Method of Electron Diffraction and Electron Microscopy : Examination of Cellulose Fibre by the (Goro Honjo and Masaru Watanabe), 326
Low Temperatures : Proteins in Solutions at (Simon Freed, James H. Turnbull and William Salmre), 1731
Low Vapour Concentrations : Measurement of, by Collision with Excited Rare Gas Atoms (Dr. J. E. Lovelock), 1460
Low (Abnormally) Supercooling and Freezing Points in an Insect, *Bracon cephi* (Gahan) : Role of Glycerol in producing (R. W. Salt), 1281
Lowe, David : Appointed deputy chairman of the Agricultural Research Council, 1042
Lowenstein, Prof. O. : The Invertebrata, *review*, 1564
Lower Fatty Acids (C_1 to C_{10}) : Separation of the, by High-Voltage Paper Electrophoresis (Dr. D. Gross), 264
Lower Lias of Dorset : Germanium Enrichment in Lignites from the (A. Hallam and K. W. Payne), 1008
Lowy, Dr. Bertram A., and others : Adenosine Triphosphate Metabolism in the Rabbit Erythrocyte *in vivo*, 324
Lowy, Peter H., and others : Isolation of an Erythropoietic Fraction from the Plasma of Rabbits made severely Anaemic with Phenylhydrazine, 1802
Loxham, John : Appointed to the chair of aircraft economics and production in the College of Aeronautics, Cranfield, 385 ; work of, 385
Loyal, D. S. (Mehra, Prof. P. N., and) : Chromosome Number in *Marsilea*, 577
Lubińska, Dr. L. : 'Intercalated' Internodes in Nerve Fibres, 957
Lubrication and Wear (Institution of Mechanical Engineers International Discussion on), *correction*, 161
Lucas, W. J., and others : Long-Distance Radio Propagation above 30 Mc./s. (Tropospheric Propagation), 1186
Lucilia cuprina Wied., the Australian Sheep Blowfly : Resistance to Dieldrin in (G. J. Shanahan), 860
Luck, Prof. C. P. : The Vitreous Body of *Galago crassicaudatus agisymbanus*, 719
Lüderitz, Dr. O., and others : Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a New Sugar, Paratose, 822
Ludlam, F. H., and Scorer, Dr. R. S. : Booklet of lecture notes to accompany two filmstrips entitled 'Clouds', 457
  Cloud Study, *review* by L. C. W. Bonacina, 985
Lumb, G. A. : Selective Uptake of Radiochemical Impurities by Mitochondria, 132
Lumbricillus (Enchytraeidae) : Pseudofertilization in the Genus (B. Christensen and F. B. O'Connor), 1085
Luminescence of Green Plant Materials : Action and Emission Spectra of the (Gordon Tollin, Eiji Fujimori and Prof. Melvin Calvin), 1266
Luminous Watches : Radiation Hazard from (J. L. Haybittle), 1422
Luminous (Self-) Objects : Perceptual Stability of a Stroboscopically Lit Visual Field containing (Dr. D. M. MacKay), 507
Lumsden, Dr. W. H. R. : A Trap for Insects Biting Small Invertebrates, 819
Lumsden, Dr. W. H. R., and others : Use of Reflecting Paints for locating Tsetse Fly at Night, 1354
Lunar Society—Science and Thought in the Eighteenth Century (Departments of Extra-Mural Studies of the University of Birmingham and the University of Nottingham Residential Summer Course on), 1510
Lunar Temperatures : Calculations of (R. W. Muncey), 1458
Lund, Dr. J. W. G. : Biological Productivity of Britain (Primary Production in Fresh Waters), 83
Lundegardh, Prof. H. : Relation between Peroxidase and 'Cytochrome dh' in Wheat Roots, 28
Lung : Fine Structure of the Alveolar Wall of the (Dr. M. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1066
Lung (Mouse), after Inhalation of Colloidal Gold Particles : Alterations in the Ultrastructure of the Blood—Air Barrier in the (Dr. N. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1418
Lung Cancer : Smoking and (Dr. John Burton), 1768
Lungs of the Cape Hyrax, *Procavia capensis* (Pallas) : An Acid-free Bacillus isolated from the (J. C. Wagner, Dr. G. Buchanan, V. Bokkenheuser and Shirley Leviseur), 284
Lupton, V., and others : Ease of Reduction of a Series of Coals and its relation to their Structure, 1059
Lurgi Plant : Scottish (Prof. R. J. Sarjant), 1313
Lustre Mutant Fleece-type in the Australian Merino Sheep : A Dominant Felting (Dr. B. F. Short), 1414
Lutwak-Mann, Dr. C., and others : Use of Labelled Ions in the Study of Blastocyst—Uterine Relationships in the Rabbit, 1715
Luyet, Prof. B. J. : Freezing and Drying, 1694
Lwoff, Dr. André : Elected a Foreign Member of the Royal Society, 1242, 1700 ; work of, 1700
Lyell Fund (a moiety of the) for 1958 of the Geological Society of London awarded to H. R. Warman and to Dr. Eileen Lind Hendriks, 159
Lyell Medal for 1958 of the Geological Society of London awarded to Dr. Helen Muir-Wood, 159
Lyon, A. J., and others : Equatorial Spread-*F* and Magnetic Activity, 1724
Lymph of the Guinea Pig : Distribution of Globulin Permeability Factor and its Inhibitor in the Tissue Fluid and (Prof. A. A. Miles and D. L. Wilhelm), 96
Lymphocyte : An Abnormal Type of (Dr. B. Brausil), 846
Lymphocytes : Antibody Production by, after *in vitro* Contact with Bacterial Antigen and Transfer to New-born Rabbits (Dr. Miroslav Holub), 122
Lymphoma (Murine) : Adaptation to Serum-free Medium by a Phagocytic Cell Strain derived from a (Dr. Alan S. Rabson, Frances Y. Legallais and Samuel Baron), 1343
Lymphoma-bearing Mice (Cancer-bearing and) : Erythrophagocytosis in (Ruth V. Ponder and Dr. Eric Ponder), 1537
Lymphotrophic Antibiotics (Dr. P. Málek, M. Herold, J. Hoffman and J. Kolc), 706
Lynch, Prof. C. C. (Lynch, Prof. D. L., and) : Resistance of Protein—Lignin Complexes, Lignins and Humic Acids to Microbial Attack, 1478
Lynch, Prof. D. L., and Lynch, Prof. C. C. : Resistance of Protein—Lignin Complexes, Lignins and Humic Acids to Microbial Attack, 1478
Lynen, F. : Enzyme Chemistry (The Phosphate Cycle and the Pasteur Effect), 389
Lyon, A. G., and others : Effect of Gibberellin and Indoleacetic Acid on Seta Elongation in *Pellia epiphylla*, 1351
Lyons, M. J., and others : Free-Radicals produced in Cigarette Smoke, 1003
Lysergic Acid Diethylamide : Comparison of Effect of, with Potassium Cyanide and other Respiratory Inhibitors on the Siamese Fighting Fish (Dr. H. A. Abramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
Lysine—Threonine Balance : Bread and the Growth of Weanling Rats—the (J. B. Hutchinson, Dr. T. Moran and Dr. J. Pace), 1733
Lysis of Fungal Mycelia by Bacterial Enzymes (Koki Horikoshi and Sigeji Iida), 917
Lysolecithin : Clearing Action of (Dr. L. Saunders, I. L. Thomas and N. Robinson), 782
Lysozyme : Development of *Micrococcus lysodeikticus* Resistant to (Prof. Gerald Litwack), 1348
Lysozyme-Resistance in *Micrococcus lysodiekticus* : Development of, and its Association with an Increased O-Acetyl Content of the Cell Wall (Dr. W. Brumfitt and Dr. A. C. Wardlaw, and Dr. J. T. Park), 1783
Lyster, R. L. J., and others : Reaction of Ferrimyoglobin with Phenols, 1534
Lythgoe, Prof. B. : Elected a Fellow of the Royal Society, 881
Lyttleton, Dr. R. A. : The Transition from the Ionosphere to Interplanetary Space, 1238

M. LEPRAEMURIUM in Tissue Culture : Limited Multiplication of (R. J. W. Rees and P. C. Wong), 359
M-Regions on the Sun : Identification of (Dr. Kurt Toman), 641
McAfee, K. B. : Extraction of Helium from Gas Mixtures, 1639
McAnulty, E. : *Salmonellae* in Uganda, 576
McArthur, Dr. D. N. : Retirement from the directorship of the Macaulay Institute for Soil Research, Aberdeen, 1105 ; work of, 1105
Macaulay Institute for Soil Research, Aberdeen : Retirement of Dr. D. N. McArthur from the directorship, 1105
  Appointment of Prof. A. B. Stewart as director, 1105
McBride, G. : Relationship between Aggressiveness and Egg Production in the Domestic Hen, 858
MacBride, J. Francis : Flora of Peru, *review* by N. Y. Sandwith, 1366
Maccabaeans, Society of : Meldola Medal for 1957 awarded to Dr. David John Manners, 1374
McCallum, G. J., and Egelstaff, P. A. : Mean Free Path of Phonons in a Lead Crystal, 643

McChesney, C. A. : Occurrence of Rhodanese in a Species of *Thiobacillus*, 347
McClure, D. S. : Structure and Reactivity of Electronically Excited Species (Transfer of Electronic and Vibrational Energy between Weakly Coupled Systems), 320
McClure, T. J. : Temporary Nutritional Stress and Infertility in Mice, 1132
McCollum-Pratt Institute of the Johns Hopkins University, with support from the Atomic Energy Commission : Symposium on the Chemical Basis of Heredity (edited by William D. McElroy and Dr. Bentley Glass), *review* by Prof. M. Stacey, 75
McComb, A. J., and Carr, Prof. D. J. : Evidence from a Dwarf Pea Bioassay for Naturally Occurring Gibberellins in the Growing Plant, 1548
McConnell, R. A. : Elected president of the Parapsychological Association, 884
McCracken, D. D. : Digital Computer Programming, *review* by Dr. M. V. Wilkes, 1755
McCracken, K. G., and others : Effective Magnetic Meridian for Cosmic Rays, 34
  A Survey of the Cosmic-Ray Nucleonic Component along 145° East Longitude using an Airborne Monitor, 1155
McCraw, Dr. Bruce M. : Relaxation of Snails before Fixation, 575
McCrea, Prof. W. H. : Enigmatic Eddington, *review*, 214
McCready, Dr. C. C. : A Direct-Plating Method for the Precise Assay of Carbon-14 in Small Liquid Samples, 1406
McCulloch, E. A. (Howatson, Dr. A. F., and) : Virus-like Bodies in a Transplantable Mouse Plasma Cell Tumour, 1213
McCulloch, N. G. : Presidential Address to the Thirty-eighth Annual General Meeting of the British Cotton Industry Research Association, 466
McCullough, M. E., and Sisk, L. R. : Effect of Age of Young Dairy Calves on Dry-Matter Digestibility of Alfalfa Pellets, 57
McDavid, Miss H. M. R., and Naismith, W. E. F. : Complex Formation between Groundnut Skin Pigments and Conarachin II, 480
McDiarmid, Dr. A.: Elected a Fellow of the Royal Society of Edinburgh, 739
Macdonald, James, and others : Exotic Trees in Great Britain (Forestry Commission, Bulletin No. 30), 747
Macdonald College, McGill : Retirement of Prof. E. M. DuPorte from the chair of entomology, 455
  Appointment of Dr. D. K. McE. Kevan to the chair of entomology, 455
McDowell, C. A. (Arnot, C. L., and) : Structure and Reactivity of Electronically Excited Species (Rate of Transfer of Vibrational Energy to Translational), 321
McDowell, C. A. (Frost, D. C., and) : Structure and Reactivity of Electronically Excited Species (Mass Spectrometer used to determine the Energies of the Excited States of the Ions produced in the instrument), 320
McElroy, William D., and Glass, Dr. Bentley (edited by) : Symposium on the Chemical Basis of Heredity (sponsored by the McCollum-Pratt Institute of the Johns Hopkins University, with support from the Atomic Energy Commission), *review* by Prof. M. Stacey, 75
Maceration of Plant Tissues with Ethylene-diamine-tetra-acetic Acid (Dr. D. S. Letham), 135
McFarland, Clarence (Benedict, Prof. Albert A., and) : Growth of Meningopneumonitis Virus in Normal and Immune Guinea Pig Monocytes, 1742
McGill University : Retirement of Prof. E. M. DuPorte from the chair of entomology in Macdonald College, 455
  Appointment of Dr. D. K. McE. Kevan to the chair of entomology in Macdonald College, 455
  Soddy Commemoration Plaque to be set up in the Chemistry laboratory, 1571
Macgregor, H. C. (Callan, Prof. H. G., and) : Action of Deoxyribonuclease on Lampbrush Chromosomes, 1479
McGrew, Frank C., and others (edited by) : Organic Reactions, Vol. 9, *review* by Prof. John Read, 147
Machado, Marisa P. (Ciferri, Orio, and) : Isolation of a New Flavin produced by an Actinomycete, 484
Machines: Electrical (A. Draper), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Machines as Models in Biological Experiments (Dr. W. Grey Walter), 1187, 1444
Machines (Electrical) : Electricity and, *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
  The General Theory of (Bernard Adkins), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Machlis, Prof. Leonard : A Procedure for the Purification of Sirenin, 1790
Macho, Dr. L. : Cortisone-Glucose Tolerance Test in Normal and Thyroxine-treated Rabbits, 620
McIlroy, W. (Kunen, A. E., and) : Extremely High Temperatures (Propulsion System using Magnetic Compression of the Working Fluid), 1381
McIlwain, Prof. H. : Biochemistry of Glutathione (Glutathione in Animal Tissues), 887
  Chemotherapy and the Central Nervous System, *review* by Dr. G. B. Ansell, 1430
Macintyre, Dr. Sheila : Elected a Fellow of the Royal Society of Edinburgh, 739
Mack, J. G., and others : Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
Mackay, Dr. A. L. : Scientific and Technical Translation, 1044
MacKay, Dr. D. M. : Moving Visual Images produced by Regular Stationary Patterns, 362
  Perceptual Stability of a Stroboscopically Lit Visual Field containing Self-Luminous Objects, 507
McKay, H. A. C. : Appointed director of the Baghdad Pact Nuclear Centre, 529 ; work of, 529
Mackay, K. E., and Johnson, J. D. : Awarded jointly the Consolidated Gold Fields of South Africa, Ltd. Gold Medal for 1956-57 of the Institution of Mining and Metallurgy, 1375
McKay, Prof. Robert : Cereal Diseases in Ireland, *review* by Prof. A. E. Muskett, 515
McKenzie, Howard L. : The Armored Scale Insects of California, *review* by Dr. W. J. Hall, 986
Mackenzie, Dr. Robert C. : Density of Water sorbed on Montmorillonite, 334
Mackenzie, Dr. Robert C. (edited by) : The Differential Thermal Investigation of Clays, *review*, 1561
McKie, Prof. D. : Réaumur, 393
  Elected a Fellow of the Royal Society of Edinburgh, 739
McKinley, J. D., and Polanyi, S. C.: Structure and Reactivity of Electronically Excited Species (Atomic Sodium mixed with Atomic and Molecular Hydrogen—Reactions that might lead to the Chemiluminescence (Sodium *D* Lines) observed), 321
Mackintosh, Colonel E. E. B. : *Obituary* by Dr. H. R. Calvert, 17
McKnight, A. D. : Appointed full-time executive commissioner to the Australian Atomic Energy Commission, 1246
Mackworth-Praed, C. W., and Grant, Capt. C. H. B. : Birds of Eastern and North-Eastern Africa, second edition, *review*, 801
McLaren, Dr. Anne, and Michie, Dr. Donald : An Effect of the Uterine Environment upon Skeletal Morphology in the Mouse, 1147
McLean, Dr. D. : Vacancies and other Point Defects in Metals and Alloys (Activation Energy for Creep at High Temperatures—High-temperature Mechanical Properties), 450
  Grain Boundaries in Metals, *review* by Prof. F. C. Frank, 976
MacLennan, A. : Awarded a Grant by the Leverhulme Trust, 1442
McLennan, Dr. H. : Absence of γ-Aminobutyric Acid from Brain Extracts containing Factor I, 1807
McNisn, A. G., and Huntoon, Dr. R. D. : Importance of the Faraday to Elemental Constants and Electricity Standards, 1194
MacQuarrie, I. G. (von Maltzahn, Dr. K. E., and) : Effect of Gibberellic Acid on the Growth of Protonemata in *Splachnum ampullaceum* (L.) Hedw., 1139
McQuillen, Dr. K., and others : Bacterial Protoplasts, 1713
Macroderma gigas Dobson : 'Recurrence' of (Dr. H. H. Finlayson), 923
Macromolecules and Liquid Crystals : Configurations and Interactions of (Faraday Society General Discussion on), 673
Macrophages *in vitro* : Bactericidal Activity of, against *Escherichia coli* (Dr. D. Rowley), 1738
McTaggart, H. Scott : *Cryptocotyle lingua* in British Mink, 651
McTaggart-Cowan, P. D. : Appointed associate director with Andrew Thomson of the Meteorological Branch of the Canadian Department of Transport, 1444
McWhirter, R. W. P., and others : Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315
MacWilliam, I. C. : Heterogeneity of *R*-Enzyme, 1143
McWilliam, I. G., and Dewar, R. A. : Flame Ionization Detector for Gas Chromatography, 760
Macy, Jr. Foundation (Josiah) : Transactions of the Third Conference on Neuropharmacology, 1956, Princeton (edited by Harold A. Abramson), *review* by Dr. G. B. Ansell, 1430
Maddin, Prof. R. : Vacancies and other Point Defects in Metals and Alloys (Hardening of Polycrystalline Copper by Quenching), 450
Madras Library Association : Library Science and Scientific Method (Dr. S. R. Ranganathan), 1509
Magic, Science and Invention (Seekers and Finders, Book 2), (Amabel Williams-Ellis), *review* by T. H. Hawkins, 1628
Magnes, Dr. J. (Allweis, C., and) : Metabolism of the Perfused Cat Brain during Metrazol Convulsions and Electroshock, 626
Magnesium, the Fifth Major Plant Nutrient (Dr. A. Jacob), translated from the German by Dr. Norman Walker, *review* by Dr. E. J. Hewitt, 799
Magnesium in Plants and Soils, *review* by Dr. E. J. Hewitt, 799
Magnesium-treated Iron Castings : Promoting the Stable Eutectic Reaction in, by Vibration during Solidification (J. H. Gittus), 1004
Magnetic Activity : Equatorial Spread-F and (A. J. Lyon, N. J. Skinner and Dr. R. W. Wright), 1724
Magnetic Construction in Simple Diodes (Dr. B. Meltzer), 1332
Magnetic Deflexion of Arcs (P. E. Secker and Dr. A. R. Guile), 1615
Magnetic Equator : Ionospheric Drift in the F2 Region near the (Dr. B. W. Purslow), 35
Magnetic Field : Confinement of Charged Particles by a (Dr. B. Lehnert), 331
  An Experiment on the Interaction between a Plane Shock and a (Dr. K. Dolder and Dr. R. Hide), 1116
Magnetic Field and the Radiation Syndrome : Biological Effect of a (M. F. Barnothy and J. M. Barnothy), 1785
Magnetic Measurement of Plasma Confinement in a Partially Stabilized Linear Pinch (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt, Dr. R. H. Lovberg and Dr. J. A. Phillips), 224
Magnetic Meridian (Effective), for Cosmic Rays (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 34
Magnetic Moments (Nuclear), in Atomic Beams : Measurement of (Dr. G. K. Woodgate and P. G. H. Sandars), 1395
Magnetic Oxides : Transparent, 237
Magnetic Properties of some Binuclear Complexes of Chromium and Iron (A. Earnshaw and J. Lewis), 1262
Magnetic Resonance (Nuclear) : High Resolution (Radiofrequency Spectroscopy Group Discussion on), 673
Magnetic Susceptibility of the Alloy Pt_3Fe between 20 and 900 Degrees Absolute (Prof. J. Crangle), 644
Magnetic Tape : Recording Television Pictures on, 1174
Magnetism : Electricity and (Prof. B. I. Bleaney and Mrs. B. Bleaney), *review* by Prof. G. O. Jones, 1495
  Remanent (Shigeo Aramaki and Syun-ito Akimoto), 812
Magnetism (Remanent), of the Rajmahal Traps of North-Eastern India (Dr. J. A. Clegg, C. Radakrishnamurty and P. W. Sahasrabudhe), 830
Magnetization (Remanent), of Ancient Bricks (H. A. Atwater and R. T. Ellickson), 404
Magnetization (Remanent), of Archaeological Remains : Intensity of (R. M. Cook), 1421
Magnetohydrodynamics, a Symposium (edited by Rolf K. M. Landshoff,). *review* by Prof. T. G. Cowling, 1361
Magnitude of Discomfort caused by High Brightness (Dr. R. G. Hopkinson), 1076
Mahadevan, S. (Thimann, Prof. Kenneth V., and) : Enzymatic Hydrolysis of Indoleacetonitrile, 1466
Maheshwari, Nirmala, and Lal, Manohar : *In vitro* Culture of Ovaries of *Iberis amara* L., 631
Maheshwari, Satish C. : *Spirodela polyrrhiza*, the Link between the Aroids and the Duckweeds, 1745
Mahon, Dr. June : Immunity in Parasitism, 464

Mairet, Philip : Pioneer of Sociology—the Life and Letters of Patrick Geddes, *review* by R. Brightman, 721
Maitland, Prof. H. B. (Guérault, Armand, and) : Surface Antigens of *Haemophilus pertussis*, 122
Maitland, R. : X-Ray Research (Crystal Structures of Chromous and Chromic Fluorides), 1645
Maize Kernels (Immature) : Auxins in (Dr. Kathleen R. Farrar, Joyce A. Bentley, G. Britton and S. Housley), 553
Majumdar, S. K., and Bose, Dr. S. K. : Mycobacillin, a New Antigungal Antibiotic produced by *Bacillus subtilis*, 134
Makerere College (Margaret A. Keay), 1445
Makin, Dr. M. J. : Vacancies and other Point Defects in Metals and Alloys (Mechanisms of Irradiation-hardening of Copper after Neutron Bombardment), 451
Making of a Scientist (British Social Biology Council Conference on), 603
Makings, P. (O.Rourke, Prof. Fergus J., and) : An Inexpensive Easily Constructed Fish-marking Tag, 577
Makinson, W., and Hellings, G. M.: Awarded the Navigation Prize of the Royal Aeronautical Society, 1646
Malacological Society of Australia : *Journal* of the, No. 1, 1574
Malacology : Australian, 1574
Malaya, Government of the Federation of, and Unesco : Symposium on Phytochemistry, 466
Malayan Orchid Hybrides (M. R. Henderson and G. H. Addison), *review*, 517
Male and Female House-Flies (*Musca domestica* L.) : Survival Curves for (Morris Rockstein and Harry M. Lieberman), 787
Maleic Hydrazide in the Control of the Bulbous Weed *Oxalis pes-carprae* (N. G. Marinos), 1143
Maleic Hydrazide in Plants : Formation of a Glycoside of (Prof. G. H. N. Towers, A. Hutchinson and W. A. Andreae), 1535
Málek, Dr. P., and others : Lymphotrophic Antibiotics, 706
Malformations (Congenital), in Children of Mothers Aged 42 and Over (Prof. J. A. Böök, M. Fraccaro, C. G. Hagert and J. Lindsten), 1545
Maling, Harriet M., and others : Distribution of Norepinephrine in the Heart, 848
Malloch, Dr. J. C. : At the Conference of the Scottish Branch of Aslib (Technical Information in the Modern World), 746
Malta : Science Education in, 815
Maly, Dr. Ernest : Paper Chromatography of the Polycyclic Tar Hydrocarbons, 698
Mammal-like Reptile : A Fossil, *review* by Prof. D. M. S. Watson, 1233
Mammalia (Comité de Direction et d'Administration of) and the Société pour l'Étude et la Protection des Mammifères : Colloquium on Systematics and Biology of the Ungulates, 237
Mammalian Activity Rhythm independent of Temperature (Dr. G. Edgar Folk, jun., Mona R. Meltzer and Richard E. Grindeland), 1598
Mammalian Cellulose (Dr. D. A. Hall, Dr. P. F. Lloyd and H. Saxl, and Dr. F. Happey), 470
Mammalian Development : Parthenogenesis and Polyploidy in (Dr. R. A. Beatty), *review* by Prof. Robert Matthey, 1497
Mammalian Hormones : Ovulation Induced in Frog with (Dr. L. S. Ramaswami and A. B. Lakshman), 1210
Mammalian Peripheral Nerve : Effect of a Raised Peripheral Temperature upon the Rate of Regeneration in a (H. J. Gamble), 287
Mammalian Spermatozoa : Capacitation of (Dr. C. R. Austin and Dr. M. W. H. Bishop), 851
Mammals : Biology of, *review* by Prof. V. C. Wynne-Edwards, 4
  Life of (Prof. J. Z. Young), *review* by Prof. V. C. Wynne-Edwards, 4
Mammifères, Société pour l'Étude et la Protection des (Comité de Direction et d'Administration of *Mammalia* and the) : Colloquium on Systematics and Biology of the Ungulates, 237
Mammoth in Mexico : Man and (Dr. Helmut de Terra), translated from the German by Alan Houghton Brodrick, review by Dr. G. H. S. Bushnell, 1432
Man : Ancient, *review* by M. C. Burkitt, 1234
  Direct Registration of an Instantaneous X-Ray Effect in Rats and (Prof. R. Brinkman and H. B. Lamberts), 774
  Rubidium-86 as a Tracer of Potassium in (M. Mencer Martin and Geoffrey Walker), 705
  The Transformations of (Lewis Mumford), *review*, 983
  Vision and the Evolution of, *review* by Prof. R. W. Pickford, 1429
Man's Journey through Time, a First Step in Physical and Cultural Anthropochronology (Prof. L. S. Palmer), *review* by M. C. Burkitt, 1691
Man (Common) : Evolution and the, 1649
Man (Fossil) : Finding (Robin Place), *review* by M. C. Burkitt, 1234
Man May be : What—the Human Side of Science (Prof. George Russell Harrison), *review* by Prof. C. A. Coulson, 7
Man and Mammoth in Mexico (Dr. Helmut de Terra), translated from the German by Alan Houghton Brodrick, *review* by Dr. G. H. S. Bushnell, 1432
Man-power : Scientific and Technical, in Britain, 741
Man-power in the Atomic Energy Authority, 439
Management : The Employment Function of (Institute of Personnel Management Residential Study Course in), 20
  The Engineer and (Sir Ewart Smith), 611
Management, British Institute of : Work Study Conference, 20
  Annual Conference (Management and Research), 307
  Conference on the Finding and Development of Managers for Industry, 816
Management (Personnel), in a Small Firm (Mrs. J. M. Collingridge and Mrs. J. M. Ritchie), 1310
Management (Scientific), in Nationalized Industries, 511
Management Control of Small Engineering Firms (L. Fontaine, J. W. Walker and W. R. Spencer), 1113
Management Development (T. H. Hawkins), 816
Management Training, 611
Management, Group Conflict and the Sciences (Earl of Halsbury), 95
Management and Research (T. H. Hawkins), 307
Managers : Sixteen Questions about the Selection and Training of (Colonel Lyndall F. Urwick), 1244
Managers for Industry : The Finding and Development of (British Institute of Management Conference on), 816
Manchester College of Science and Technology : Gift of £21,000 from Unilever, Ltd., £2,000 to be allocated to the staff college, the balance to be divided equally between the Chemistry and Chemical Engineering Departments, 238
  Chemical Engineering Building of the, 1641
Manchester Literary and Philosophical Society : Election of Officers, 1771
Manchester Museum : Annual Report for 1956-57, 1638
Manchester Public Libraries : Annual Report for 1956-57, 1180
Mandelstam, Dr. J., and Rogers, Dr. H. J. : Chloramphenicol-Resistant Incorporation of Amino-Acids into *Staphylococci* and Cell-Wall Synthesis, 956
Manganese Deposition and Deep Water Movements in the Caribbean (Peter J. Wangersky and Prof. G. E. Hutchinson), 108
Manganous Sulphate Solutions : An Ultrasonic Investigation of Chemical Kinetics in (Sushil Kumar Kor), 1462
Mango : The (S. R. Gangolly, Ranjit Singh, S. L. Katyal and Daljit Singh), *review* by T. A. Russell, 1364
Mango Displayed : The Indian, *review* by T. A. Russell, 1364
Mankiewicz, Edith M. (Juhasz, Dr. Stephen E., and) : Atypical Forms of Tubercle Bacilli (Strain *B.C.G.*), 929
Manley, Prof. Gordon : The Meteorological Office—Annual Report (1956-57), 392
Mann, Mrs. Jean : Children and Young People, 1381
Mann, K. H. : The River Studies Centre of the University of Reading, 1106
Mann, Dr. Monica (Callingham, B. A., and) : Adrenaline and Noradrenaline Content of the Adrenal Gland of the Rat following Depletion with Reserpine, 423
Manners, Dr. David John : Awarded the Meldola Medal for 1957 of the Society of Maccabaeans, 1374 ; work of, 1374
Mansi, W. : Slide Gel Diffusion Precipitin Test, 1289
Manson, W. (Eckford, R. J. A., and) : Awarded (jointly) the Wollaston Fund for 1958 of the Geological Society of London, 159
Manton, Dr. S. M. : Embryology of Pogonophora and Classifications of Animals, 748
Maoris : Absence of the Diego Blood Group and Abnormal Haemoglobins in 92 (Dr. H. Lehmann, Dr. A. North and Dr. J. M. Staveley), 791
Map of the World on the Millionth Scale : International—Report for 1955 (United Nations), 817
Mapson, Dr. L. W. : Biochemistry of Glutathione (Metabolism of Glutathione in Plants), 887
Mapson, Dr. L. W. (Turner, J. F., and): Aerobic Inhibition of Glycolysis, 270
Marchetti, M., and others : Effects of Orotic Acid on Coenzyme A and Pantothenic Acid of Liver in Vitamin B_{12} Deficiency, 416
Marcus, N. (Teitel, A., and) : Physicochemical Investigations of Erythrocyte Membranes, 714
Marcus, R. A. : Structure and Reactivity of Electronically Excited Species (Electronically Excited Molecules Reacting Unimolecularly), 321
Margolis, Dr. J. : Activation of a Permeability Factor in Plasma by Contact with Glass, 635
Marine Biological Association of the United Kingdom : Grant of £12.000 from the Nuffield Foundation, towards the cost of reconstructing the tanks of its aquarium, 1311
Marine Ecology and Paleoecology : Treatise on (edited by Joel W. Hedgpeth), Vol. I, Ecology, *review* by Dr. G. E. R. Deacon, 1559
Marine Flagellates : Metabolism of (R. G. S. Bidwell), 1769
Marine Institute of the University of Georgia (National Science Foundation and the) : Conference on Salt Marshes, 161, 1512
Marine Sediments : Geological Interpretation of, *review* by Sir Edward Bailey, 658
Marinos, N. G. : Maleic Hydrazide in the Control of the Bulbous Weed *Oxalis pes-caprae*, 1143
Marion, Léo (Grimshaw, James, and) : The Pyridine Ring and the Problem of its Biosynthesis, 112
Market Gardening : History of the Development of (Dr. L. G. Bennett), 536
Markowitz, Dr. A. S., and Henderson, Jack R.: A Rapid and Specific Method for the Isolation of Pneumococcal Polysaccharide, 771
Markowitz, Dr. Wm., and others : Variation in the Speed of Rotation of the Earth since June 1955, 1054
Marks, Carol R., and others : Antigenicity of Avidin, 619
Markus, John, and Zeluff, Vin : Handbook of Industrial Electronic Control Circuits, *review* by Denis L. Johnston, 73
Marlow Medal and Prize for 1958 of the Faraday Society awarded to Dr. J. A. Pople, 1246
Marples, E. : Automation in the Post Office, 92
Marrian, Prof. G. F. : Elected a member of the Advisory Board of the Beit Memorial Fellowships for Medical Research, 1507
Marriott, Dr. F. H. C. : A Theory of Visual Thresholds, 1487
Marriott, R. : History and Work of the Medical Research Council's Industrial Psychology Research Group, 1772
Marrow (Bone) : Effects of Alkoxyglycerols especially Selachyl Alcohol on the, in connexion with Irradiation Treatment and in Leukaemia Therapy (Astrid Brohult), 1484
Marrow (Human Bone) : Transformation of Megaloblasts to Normoblasts by cultivating, in Presence of Vitamin B_{12} and Vitamin B_{12}-binding Protein (Dr. I. Pendl and Dr. W. Franz), 488
Marrow (Isologous Bone) : Protection of August Rats against Lethal Doses of a Dimethyl Homologue of Myleran by (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Marrow Seeds (Germinating) : *Iso*citritase in (M. T. Heydeman), 627
Marrow Suspensions (Bone) : Assay of Erythropoietin in (Leslie R. Schroeder, Clifford W. Gurney and Nancy Wackman), 1537
Marsh, D. M., and others : Polymer-type Elasticity in Non-polymer Crystals, 1678
Marsh, W. : Appointed lecturer in orthodontics at the University of Birmingham, 813
Marshall, Colin : Climate, Vegetation and Land Utilization in the Humid Tropics (Scientific Land-use Planning), 598
Marshall, Dr. H. B. : Appointed director, Department of Chemistry of the Ontario Research Foundation, 315
Marshall, Dr. R. D., and others : Carbohydrate Peptide Complex from Egg Albumin, 1345
Marshall, Dr. T. J. : Permeability and the Size Distribution of Pores, 477
Marshall, W. (Lomer, Dr. W. M., and) : Band Theory of Metals and the Structure of the Fermi Surface (Electronic Structure of Ferromagnetic Alloys), 526
Marshes : Salt (National Science Foundation and the Marine Institute of the University of Georgia Conference on), 161, 1512
Marsilea : Chromosome Number in (Prof. P. N. Mehra and D. S. Loyal), 577
Marsland, Dr. E. A. : Appointed to a senior lectureship in dental pathology at the University of Birmingham, 1181

Marston, Dr. Hedley R., and others : Provision of Cobalt to Ruminants by means of Heavy Pellets, 1367
Martin, Dr. A. E. : Integration of Absorption Bands, 1195
Martin, Dr. A. J. P. : Column Packings for Gas Chromatography, 604
Martin, D. L. : Melting, Diffusion and related Topics (Measurements in the Region of Melting), 319
Martin, Dr. F. S. : The British Nuclear Energy Conference—Symposium on Nuclear Energy, 735
Martin, Sir Leslie : Appointed part-time commissioner to the Australian Atomic Energy Commission, 1246
Martin, L., and Claringbold, Dr. P. J. : A Highly Sensitive Assay for Œstrogens, 620
Martin, L. H. : 'Whistlers' in the Antarctic, 1796
Martin, M. Mencer, and Walker, Geoffrey : Rubidium-86 as a Tracer of Potassium in Man, 705
Martinsons, Dr. E. (Helgebostad, Dr. A., and) : Nutritional Anaemia in Mink, 1660
Marton, L. (edited by) : Advances in Electronics and Electron Physics, Vol. 9, *review* by Dr. J. A. Saxton, 1688
Mascitelli-Coriandoli, E., and others : Effect of Creatine Phosphate Administration on the Cardiac Adenosine Triphosphate of Thyroxinized Rats, 419
  Cardiac Damage caused by Experimental Stress, 1215
Mascitelli-Coriandoli, E. (Angelucci, Dr. L., and) : Anticholesterol Activity of α-Lipoic Acid, 911
Masculinizing Action of Pregneninolone on Female Gonads in the Cyprinodont, *Lebistes reticulatus* R. (Dr. T. Mohsen), 1074
'Masked Lipid' in Mouse Pancreas : Occurrence of (S. Bradbury and B. -P. Clayton), 1347
'Masked' Lipids : Demonstration of, in the Oocytes of *Chrotogonus trachypterus* with Sudan Black *B* and Phenol 'Unmasking' Techniques (Brij L. Gupta), 555
Mason, Dr. B. J.: Physics of Water and Ice (Transitions from Water to Ice, and from Water-vapour to Ice), 382 ; (Super-cooling and Freezing of Water Drops), 382
  The Physics of Clouds, *review* by J. R. Atkinson, 1298
Mason, Dr. B. J. (Hallett, J., and) : Influence of Organic Vapours on the Crystal Habit of Ice, 467
Mason, Vice-Admiral Sir Frank : Appointed chairman of the Mechanical Engineering Research Board of the Department of Scientific and Industrial Research, 1576
Mason, Dr. R. : Electron Mobility in Biological Systems and its relation to Carcinogenesis, 820
Mason, Revel : An Early Stone Age (Later African Chelles-Acheul) Site at Wonderboom South, Pretoria, 1377
Mason, Dr. Warren P. : Properties of Synthetic Piezoelectric Crystals, *review*, 588
Mass Measurements (Critical), for the Merlin Research Reactor (D. R. Chick, K. Firth, M. Kerridge and A. J. Salmon), 1171
Mass-Spectrometer : Assay of Isotopic Nitrogen by (A. P. Sims and Dr. E. C. Cocking), 474
Mass-Spectrometric Observations of Ions in Flames (P. F. Knewstubb and Dr. T. M. Sugden), 474
Mass-Spectrometric Observations of Ions in Hydrocarbon Flames (P. F. Knewstubb and Dr. T. M. Sugden), 1261
Mass Spectrometry (Mass Spectrometry Panel of the Hydrocarbon Research Group of the Institute of Petroleum and Committee E-14 of the American Society for Testing Materials Conference on), 1771
Mass Spectrometry: Ion Identification in Flames by (J. Deckers and Prof. A. Van Tiggelen), 1460
Massachusetts Institute of Technology : Establishment of the Department of Nuclear Engineering, 1106
  Appointment of Dr. Manson Benedict as head of the Department of Nuclear Engineering, 1106
  Soviet Education for Science and Technology (Alexander G. Korol), 1491
Massey, Prof. H. S. W., and Boyd, Dr. R. L. F. : Scientific Observations of the Artificial Earth Satellites and their Analysis, 78
Massey, Dr. Vincent : Introduction to Enzymology, *review*, 1029
Massola, Aldo : Drum Types of Eastern New Guinea, 1639
Masson, J. L. : Appointed senior assistant conservator of forests, Northern Nigeria, 458
Mast Cells (Dr. Tadeus Niebroj), 991
Mast Cells in Non-Epidermal Stratified Squamous Epithelium : The Dendritic Cell System and (Dr. L. O. Zwillenberg), 1343
Mastership of Clare College, Cambridge, 1038
Masterton, J. P. (Lewis, H. E., and) : Nutrition and Climatic Stress (Some Aspects of the Feeding of Field Expeditions in Cold Climates), 1644
Mated and Unmated Females of an African Strain of *Aedes aegypti* : Biting Behaviour of (M. M. J. Lavoipierre), 1781
Materia Medica at Edinburgh, 882
Materials (Engineering) : The Science of (edited by J. E. Goldman), *review* by K. J. Pascoe, 1496
Materials (High-Molecular) : Physics of (Dr. L. R. G. Treloar), 1633
Materials (Insulating) : Triboelectricity and Electron Traps in—some Correlations (Dr. E. Fukada and Dr. J. F. Fowler), 693
Materials (Non-Metallic Brittle): Mechanical Properties of (Mining Research Establishment of the National Coal Board and the Building Research Station of the Department of Scientific and Industrial Research Conference on), 1577
Materials (Sheet Insulating) : Influence of the Ambient Medium on the Breakdown Voltage of (W. P. Baker), 1726
Materials (Textile) : Mechanical Properties of (Textile Institute Conference on), 1640
Mathematical Association : Annual General Meeting, 1107, 1310
  Presidential Address, Secondary School Mathematics—an International Survey (W. J. Langford), 1107, 1310
Mathematical Colloquium : Tenth British, 161
Mathematician Extraordinary, *review* by Dr. Graham Higman, 1365
Mathematics at Bedford College, 670
Mathematics at the University of Exeter, 1178
Mathematics in Secondary Schools, *review* by W. J. Langford, 979
Mathematics : Applied (Proceedings of Symposia, Vol. 7, Applied Probability), (American Mathematical Society), 245
  Secondary School—an International Survey (W. J. Langford), 1107, 1310
  The Teaching of (Incorporated Association of Assistant Masters in Secondary Schools), *review* by W. J. Langford, 979
Mathematics and Computers (Dr. George R. Stibitz and Prof. Jules A. Larrivee), *review* by Dr. M. V. Wilkes, 1755
Mathematics (Applied), at Durham, 312
Mathematics (Applied): Recent Advances in, *review* by Dr. R. K. Livesley, 979
Mathematics (Modern), for the Engineer (edited by Prof. Edwin F. Beckenbach), *review* by Dr. R. K. Livesley, 979
Mathematics (Pure), at Cambridge, 528
Mathematics Research Center, United States Army : Symposium on Numerical Approximation, 531
Mathematics and Statistics for Use in Pharmacy, Biology and Chemistry (L. Saunders and R. Fleming), *review* by Dr. D. J. Finney, 147
Mather, Dr. J. W. (Hagerman, Dr. D. C., and) : Controlled Release of Thermonuclear Energy—Neutron Production in a High-Power Pinch Apparatus, 226
Mather, Prof. K. : Chromosome Science, *review*, 973
Matheson, N. A. (Hunt, Sheila M. V., and) : Adenosine Triphosphatase and Contraction in Dehydrated Muscle Fibres, 472
Mathews, Dr. Martin B. : Isomeric Chondroitin Sulphates, 421
Mathot, V. (Prigogine, Prof. I., with the collaboration of Bellemans, A., and) : The Molecular Theory of Solutions, *review* by Prof. H. C. Longuet-Higgins, 978
Mating : Influence of Time of, on the Segregation Ratio of Alleles at the *T* Locus in the House Mouse (Dr. A. W. H. Braden), 786
Mating Types required for Balance in Multipoint Linkage Programmes : Number of (A. W. F. Edwards), 503
Matrices (Preference) : The General Relationship between Test Factors and Person Factors—Application to (Patrick Slater), 1225
Matsuda, Ryuichi, and Usinger, Robert L. : Insects of Micronesia, Vol. 7, No. 3, Heteroptera Aradidae (Bernice P. Bishop Museum, Honolulu), 819
Matsudaira, H., and others : A Comparative Biochemical Study of Nucleohistones from Different Vertebrates, 343
Matsushima, Yoshio : Forestry in Japan, 1311
Matsuyama, G. (Kolthoff, Prof. I. M., and Belcher, R., with the co-operation of Stenger, V. A., and) : Volumetric Analysis, Vol. 3, Titration Methods, Oxidation-Reduction Reactions, *review* by E. I. Johnson, 800
Matsuyama, M., and others : Inhibiting Effect of Chlorpromazine on the Experimental Production of Liver Cancer, 54
  Effects of certain Compounds related to Trypan Blue on the Experimental Production of Liver Cancer, 1732
Matter (Organic) : Effect of the Nitrogen and Sulphur Content of, on the Production of Ammonium and Sulphate (N. J. Barrow), 1806
Matthews, Sir Bryan : Appointed a vice-president of the Royal Society, 87
Matthews, H. I. : Electron Microscopy, *review*, 1626
Matthews, Dr. R. E. F. : Plant Virus Serology, *review* by Dr. Kenneth M. Smith, 72
Matthey, Prof. Robert : Mammalian Development, *review*, 1497
Mattingly, P. F. : Noxious and Obnoxious Insects of the Pacific, *review*, 1234
Mature Vaccinia Virus : Structural Differential in the Nucleoid of (Dr. M. A. Epstein), 784
Maturity (Sexual), in the Domestic Fowl : Light and (T. R. Morris and S. Fox), 1453
Maule, Dr. H. G. : At the thirteenth International Congress of Applied Psychology (Usefulness of Training Courses by Correspondence for Patients staying for long periods in British Hospitals), 1580
Maule, J. P. : Elected a Fellow of the Royal Society of Edinburgh, 739
Mauny, R. : The Development of the West African Environment, 1580
Maw, W. A., and others : Presence of Œstrone, Œstradiol and Œstriol in Extracts of Ovaries of Laying Hens, 351
Mawby, M. A. E. : Honorary membership of the Institution of Mining and Metallurgy conferred on, 1375
Maxwell, A., and Swarup, G. : A New Spectral Characteristic in Solar Radio Emission, 36
May and Baker, Ltd. : Drying of Winchester Bottles, 161
Mayer (André) Fellowships (Food and Agriculture Organization of the United Nations), 1110
Mayer (Charles Léopold) Prize for 1957 of the Société de Chimie biologique awarded to Prof. J. Brachet, 1182
Mayer, Prof. R. F. : Nominated as national representative for Portugal on the North Atlantic Treaty Organization Science Committee, 739
Mayhew, Y. R. (Rogers, G. F. C., and) : Engineering Thermodynamics—Work and Heat Transfer, *review* by Dr. J. H. Horlock, 1028
Mayneord, Prof. W. V., and others : Alpha-Ray Activities of Humans and their Environment, 518
Mayorcas, R. : Flames and Industry (Relevance of the work of the International Flame Research Foundation to Conditions in Steel Furnaces), 16
Mayr, Dr. Ernst : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Mazur, Dr. P. : Freezing and Drying, 1694
Mead, J. A. : Physical Properties of Polymers, 1634
Mead, Dr. Margaret : Awarded a Viking Fund Medal and Prize for 1957 by the Wenner-Gren Foundation, 882
Meadows, R. W. : Long-Distance Radio Propagation above 30 Mc./s. (Research on Ionospheric Scattering), 1185
Mean Free Path of Phonons in a Lead Crystal (G. J. McCallum and P. A. Egelstaff), 643
Meaning of Density-Dependence and related Terms in Population Dynamics (Dr. M. E. Solomon), 1778 ; (Prof. G. C. Varley), 1780
Meaning of Eddington's 'Fundamental Theory' : The Development and (Dr. Noel B. Slater), *review* by Prof. W. H. McCrea, 214
Measurement of Air Pollution—Recommended Methods for Deposited Matter, Smoke and Sulphur Dioxide (Fuel Research Board), 1244
Measurement of Colour (Prof. W. D. Wright), second edition, *review* by Dr. W. S. Stiles, 1297
Measurement of the Ionospheric Faraday Effect by Radio Waves reflected from the Moon (Fred B. Daniels and Siegfried J. Bauer), 1392
Measurement of Iron Lost into and Re-absorbed from Gastro-intestinal Bleeding Lesions : Isotopic Tracer Method for (M. Roche, M. E. Perez-Gimenez and A. Levy), *errata*, 603
Measurement of Levels of Health (World Health Organisation, Technical Report Series No. 137), 1244
Measurement of Low Vapour Concentrations by Collision with Excited Rare Gas Atoms (Dr. J. E. Lovelock), 1460
Measurement of the Neutron Spectrum from ZETA (B. Rose, A. E. Taylor and E. Wood), 1630

Measurement of Nuclear Magnetic Moments in Atomic Beams (Dr. G. K. Woodgate and P. G. H. Sandars), 1395
Measurement (Automatic), of Quality in Process Plants (Society of Instrument Technology Conference on), 165
Measurement (Colour) : Scope and Limits of (Colour Group of the Physical Society Symposium on), 1704
Measurement (Magnetic), of Plasma Confinement in a Partially Stabilized Linear Pinch (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt, Dr. R. H. Lovberg and Dr. J. A. Phillips), 224
Measurement (Thickness), of Epitaxially Grown Films (Dr. O. S. Heavens and D. C. Pandeya), 1394
Measurements of the Thickness of the Helium Film (Prof. L. C. Jackson), 527
Measurements (Critical Mass), for the Merlin Research Reactor (D. R. Chick, K. Firth, M. Kerridge and A. J. Salmon), 1171
Measurements (Temperature), of Shock Waves by the Spectrum-Line Reversal Method (J. G. Clouston, Dr. A. G. Gaydon and Prof. I. I. Glass), 1325
Measuring Evaporation from Natural Surfaces : An Instrument for (R. J. Taylor and A. J. Dyer), 408
Measuring Synthesis of Deoxyribonucleic Acid : Pitfalls of Specific Radioactivity in (Dr. L. G. Lajtha), 1609
Meat : Quality in (D. M. Joubert), 394
Mechanical Engineering in the University of Western Australia, 86
Mechanical Engineering Research Board : Appointment of Vice-Admiral Sir Frank Mason as chairman, 1576
Mechanical Engineering Research Laboratory of the Department of Scientific and Industrial Research, East Kilbride : Open Days, 743
Mechanical Engineers, Institution of : International Discussion on Lubrication and Wear, *correction*, 161
  Management Control of Small Engineering Firms (L. Fontaine, J. W. Walker and W. R. Spencer), 1113
Mechanical Properties of Crystals : Dislocations and—an International Conference held at Lake Placid, 1956 (edited by J. C. Fisher, W. G. Johnston, R. Thompson and T. Vreeland, Jr.), *review* by Dr. R. A. Hyman, 1562
Mechanical Properties of Non-Metallic Brittle Materials (Mining Research Establishment of the National Coal Board and the Building Research Station of the Department of Scientific and Industrial Research Conference on), 1577
Mechanical Properties of Textile Materials (Textile Institute Conference on), 1640
Mechanics of Normal Muscular Activity (Dr. R. J. Whitney), 942
Mechanics of Stellar Systems : Introduction to the (Rudolf Kurth), *review* by Dr. R. H. Garstang, 1029
Mechanics' Institutes of Lancashire and Yorkshire before 1951 (Dr. Mabel Tylecote), *review* by Prof. W. H. G. Armytage, 485
Mechanism of Addition Reactions : An Electronic (Lakhbir Singh), 110 ; (D. W. Davies), 903
Mechanism of Bacterial Cell Separation : Chaining and Unchaining *Streptococcus faecalis*—a Hypothesis of the (Dr. Iwo Lominski, John Cameron and George Wyllie), 1477
Mechanism in Behaviour, *review* by Dr. J. T. Eayrs, 216
Mechanism of Deposition and Extension of Primary Cell Walls (G. Setterfield and S. T. Bayley), 530
Mechanism of Gelation : The Biuret Complex of Gelatin and the (J. Bello and J. R. Vinograd), 273
Mechanism of Insect Flight, *review* by Dr. Graham Hoyle, 971
Mechanism of Oxidation-Reduction Reactions in Solution : One-Electron *versus* Two-Electron Transfer Processes in the (Prof. Joseph Weiss), 825
Mechanism of Resistance to Parathion in *Musca domestica* (L.), (F. J. Oppenoorth), 425
Mechanism (Permeability) : N-Terminal Histidine at the Active Centre of a (W. D. Stein), 1662
Mechanisms of Formation of Stereoisomers of 2,3-Butanediol during Microbial Fermentation of Sugars (Mary B. Taylor and Dr. Elliot Juni), 1389
Mechanisms (Behaviour), in Monkeys (Prof. Heinrich Klüver), second impression, *review* by Dr. J. T. Eayrs, 216
Mechano-Chemical Anodic Dissolution (Dr. T. P. Hoar and J. M. West), 835
Medal of the New York Academy of Medicine awarded to Dr. Alphonse R. Dochez, 238
Medals of the Tokyo Geographical Society awarded to Prof. L. Dudley Stamp and Prof. Hans Ahlmann, 20
Medawar, Prof. P. B. : The Uniqueness of the Individual, *review* by Dr. D. A. Parry, 969
Medd, D. L. : Awarded a Home Civil Service Fellowship of the Commonwealth Fund, 1181
Media : Influence of, on the Counts of *Clostridium butyricum* in Soils (Dr. D. J. Ross), 1142
Media Free of Insoluble Constituents : Culture of *Nitrosomonas europaea* in (M. S. Engel and Prof. M. Alexander), 136
Medical Association for the Study of Health and Living Conditions, International : Formation of an, 464
Medical Colour Television, 1768
Medical Conference on the Influence of Living and Working Conditions upon Health, 464
Medical Radiation Biology (Friedrich Ellinger), *review*, 984
Medical Research : Beit Fellowships for, 1507
  Statistical Tables for Biological, Agricultural and (Prof. Sir Ronald Fisher and Dr. Frank Yates), fifth edition, *review*, 299
  The Support of (edited by Sir Harold Himsworth and J. F. Delafresnaye), a Symposium organized by the Council for International Organizations of Medical Sciences, *review*, 147
Medical Research, National Institute for : Appointment of Dr. D. G. Evans as director of the Division of Biological Standards, 673
Medical Research (British) : Architect of, *review* by Sir William Gavin, 513
Medical Research Council : Requests for Compounds in the Steroid Reference Collection, 315
  History and Work of the Industrial Psychology Research Group (R. Marriott), 1772
Medical Sciences, International Organizations of : Symposium on the Support of Medical Research (edited by Sir Harold Himsworth and J. F. Delafresnaye), *review*, 147
  Handbook on the Planning of International Meetings, 1574
Medical Students and Practitioners (Report of the Willink Committee on), 18
Medical Uses of Ionizing Radiations (Sir Ernest Rock Carling), 93
Medicina : Elementos de (Dr. John Brown), Spanish translation from a manuscript by Dr. Don Luis José Montana (edited by Dr. J. J. Izquierdo), *review* by Dr. Douglas Guthrie, 296
Medicinal Plants (Indian) : Glossary of (R. N. Chopra, S. L. Nayar and I. C. Chopra), *review* by S. B. Challen, 984
Medicine : Radiation Physics in, *review* by G. W. Reed, 727
  Tropical, *review* by Prof. P. C. C. Garnham, 1428
Medicine (Social), at Aberdeen, 740
Medicine (Social and Preventive), at Belfast, 599
Medulla (Adrenal), of the Sheep Foetus : Response of the, to Asphyxia (Dr. R. S. Comline and Marian Silver), 283
Meek, Dr. E. S. (Hewer, T. F., and) : Intestinal Carcinoma in Mice following Injection of Herring-Sperm Deoxyribonocleic Acid, 990
Meeuse, Prof. B. J. D., and Fluegel, Walter : Carbohydrases in the Sugar-Gland Juice of *Cryptochiton* (Polyplacophora, Mollucca), 699
Megaloblasts to Normoblasts : Transformation of, by Cultivating Human Bone Marrow in Presence of Vitamin B_{12} and Vitamin B_{12}-binding Protein (Dr. I. Pendl and Dr. W. Franz), 488
Mehler, Alan H. : Introduction to Enzymology, *review* by Dr. Vincent Massey, 1029
Mehra, Prof. P. N., and Loyal, D. S. : Chromosome Number of *Marsilea*, 577
Mehta, R. K., and others : Induced Polyploidy in Egyptian and Indian Clovers, 32
Meikle, R. D. : Snowdrops and Snowflakes, *review*, 1691
Meiklejohn, Dr. A.: Elected a Fellow of the Royal Society of Edinburgh, 739
Meinel, Dr. Aden B. : Appointed director of the new United States National Astronomical Observatory, 740 ; work of, 740
Melanin Patterns and of Hardening : Induction of, as Separate Processes in the Cuticle of Albino Locusts with Internally Absorbed Phenol Substrates (Dr. B. M. Jones and W. Sinclair), 926
Melanocyte-stimulating Hormone : Behavioural Changes in Animals after Intracisternal Injection with Adrenocorticotrophic Hormone and (Prof. W. Ferrari), 925
Melanocytes in the Skin : Effect of Ovariectomy, Œstrogen and Progesterone on the Activity of the (P. G. Bischitz and Dr. R. S. Snell), 1413
  Effect of Testosterone and Orchidectomy on the Activity of the (P. G. Bischitz and Dr. R. S. Snell), 187
Meldola Medal for 1957 of the Society of Maccabaeans, 161 ; awarded to Dr. David John Manners by the Royal Institute of Chemistry, 1374
Melibiose : Bacterial Oxidation of Lactose and (Dr. B. P. Eddy), 904
Mellanby, Dr. K. : Nature of Immune Responses in Parasitism (Reactions to Insect Bites and Infestation by Mites and Ticks), 465
  Professional Problems of Biologists serving Overseas, 677
  Science and Society, 1183
  Water Content and Insect Metabolism, 1403
Melnick, S. C. : Occurrence of Collagen in the Phylum Mollusca, 1483
Melophagus ovinus (L.) : Transfer of Sheep Keds, from Ewes to their Lambs (W. A. Nelson), 56
Melting, Diffusion and related Topics (Low Temperature and Solid State Physics Group of the Division of Pure Physics of the National Research Council of Canada Symposium on), 319
Meltzer, Dr. B. : Magnetic Constriction in Simple Diodes, 1332
Meltzer, Dr. B., and Brown, I. F. : Digital Field Computers, 1384
Meltzer, Mona R., and others : A Mammalian Activity Rhythm independent of Temperature, 1598
Melville, Dr. Colin : An Apparent Beneficial Effect of Gamma-Radiation on the Flour Mite, 1403
Melville, Sir Harry : Chemical Structure and Physical Behaviour of High Polymers (Kelvin Lecture of the Institution of Electrical Engineers), 1045
  Recent Advances in Polymer Technology, 1303
Membrane (Innervated and Non-innervated), of an Isolated Single Electroplax of the Skate : A Method for Studying separately the Properties of the (Dr. Ernest Schoffeniels), 287
Membrane (Plasma) (β-Cytomembrane) : Occurrence of Foldings of, in Cells of Pig's Carpal Organ as revealed by Electron Microscopy (K. Kurosumi and T. Kitamura), 489
Membrane Filter in Mycological Class-work : Use of the (Dr. Sigurd Funder), 1606
Membrane Resistance and Threshold of Atrial Muscle Fibres : Effect of Acetylcholine on the (Dr. Edward A. Johnson and P. A. Robertson), 910
Membrane-like Fraction (A Cytoplasmic), from Cells of the Ehrlich Mouse Ascites Carcinoma (Prof. P. C. Rajam and Anne-Louise Jackson), 1670
Membranes (Erythrocyte) : Physicochemical Investigations of (A. Teitel and N. Marcus), 714
Men : Fossil (Prof. Marcellin Boule and Prof. Henri V. Vallois), translated from the fifth French edition by Michael Bullock, *review* by Sir Wilfrid Le Gros Clark, 1165
Men against the Frozen North (Ritchie Calder), *review* by Dr. G. C. L. Bertram, 729
Men, Steel and Technical Change (Olive Banks and Dr. W. M. Scott), 1180
Mendel, H., and others : Interaction in Ionic Solutions (X-Ray Diffraction Studies of Aqueous Electrolyte Solutions), 241
Mendelssohn, Dr. K. : What is the Right Attitude to Science ?, 88
Meningopneumonitis Virus : Growth of, in Normal and Immune Guinea Pig Monocytes (Prof. Albert A. Benedict and Clarence McFarland), 1742
Menzies, Rt. Hon. R. G. : Laboratories of the Australian Atomic Energy Commission and the first Australian Nuclear Reactor opened by, 1433
β-Mercaptoethanol : Effects of, on Morphogenesis in Amphibian Eggs (Prof. J. Brachet), 1736
Mercer, Dr. D. M. A. : Flow Noise (Effect of Nicking on Organ Flue Pipes), 388
Mercer, E. H. : Fixation of Bacteria for Electron Microscopy, 1550
Mercer, Councillor T. G. : Microtexts and Microrecording, 1573
Mercury Discharge Spectrum : Colour Filters for the 4358-A. line of the (Dr. A. Burawoy and A. G. Roach), 762
Mercury Line (Green) : Width of the, from a 198-Isotope Lamp (Dr. H. von Klüber), 1007
Mercury-Drop Electrode : A Rotating Hanging (E. Barendrecht), 764
Meredith, Prof. R. : Elected a Fellow of the Royal Society of Edinburgh, 739
Meridian (Effective Magnetic), for Cosmic Rays (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 34

Merino Sheep (Australian) : A Dominant Felting Lustre Mutant Fleece-type in (Dr. B. F. Short), 1414
Meristem (Apical): Cytological Techniques and the (Prof. C. W. Wardlaw), 237
Meristematic Tissues : Graft Unions between, 530
Merle, Mlle. : Flow Noise (The 'Back Reaction' or Resonance Mechanism), 389
Merlin Research Reactor : Critical Mass Measurements for the (D. R. Chick, K. Firth, M. Kerridge and A. J. Salmon), 1171
Merulius lacrymans and *M. himantioides* : Relationship between (L. Harmsen, B. K. Bakshi and T. G. Choudhury), 1011
Mervyn Premium of the Television Society awarded to Dr. E. L. C. White, 1246
Meryman, Dr. H. T. : Freezing and Drying, 1694
Mesopause Region of the Ionosphere (Dr. J. B. Gregory), 753
Mesothoracic Leg of the American Cockroach (*Periplaneta americana* L.) : Muscle Fibres of the Fast and the Slow Contracting Muscles of the (W. A. Smit), 1073
Meta- and *Para-* Xylenes in Aromatic Mixtures : Gas Chromatographic Separation of (Dr. Albert Zlatkis, Lawrence O'Brien and Philip R. Scholly), 1794
Metabolic Products (Nitrate) : Adverse Effect of, on Sheep Growth (N. D. Jamieson), 1601
Metabolic Rate and Body Temperature in Hypophysectomized Rats and the Action of Cortisone : Immediate Effect of *l*-3 : 5 : 3'-Tri-iodothyroacetic Acid on (Prof. Sz. Donhoffer, I. Várnai and E. Sziebert-Horváth), 345
Metabolic Role of Xanthopterin (J. A. Blair), 996
Metabolism : Calcium (Prof. J. T. Irving), *review* by Dr. E. J. Hewitt, 799
Metabolism of *Azotobacter vinelandii* : Silicate in the (Dr. R. F. Keeler and J. E. Varner), 127
Metabolism of Barley Grain : Influence of the Enclosing Protective Tissues on the (F. S. Mitchell, F. Caldwell and G. Hampson), 1270
Metabolism of Marine Flagellates (R. G. S. Bidwell), 1769
Metabolism of the Perfused Cat Brain during Metrazol Convulsions and Electroshock (C. Allweis and Dr. J. Magnes), 626
Metabolism (Adenosine Triphosphate), in the Rabbit Erythrocyte *in vivo* (Dr. Bertram A. Lowy, Dr. Bracha Ramot and Dr. Irving M. London), 324
Metabolism (Algal), and Ecology : Role of Plant Hormones in (Dr. Joyce A. Bentley), 1499, *erratum*, 1703
Metabolism (Arginine), of some Higher Plants : Occurrence of Ornithine in Sulphur-deficient Flax and the Possible Place of Ornithine and Citrulline in the (R. G. Coleman), 776
Metabolism (Chlorophyll), and Nodule Formation in Soya Bean : Relation between (C. Sironval), 1272
Metabolism (Glycerol), of the Brown Rot Mould *Poria vaillantii* (Bienvenido C. Sison, jun., and Walter J. Schubert), 1015
Metabolism (Insect) : Water Content and (Dr. Kenneth Mellanby), 1403
Metabolism (Nitrogen), of Plants : Trace Metals in the (Dr. D. J. D. Nicholas), 672
Metabolism (Ribonucleic Acid), in *E. coli* infected with *T2* Phage : Effect of Chloramphenicol on (Prof. Itaru Watabane, Dr. Yukio Kiho and Dr. Kin-ichiro Miura), 1127
Metabolism (Serotonin), in Herbivores (Kengo Nakai), 1734
Metabolism (Thyroxine), by Extracts of Rat Liver (Lawrence G. Plaskett), 273
Metabolite of Urocanic Acid : Dye Reduction by a (Studies of Urocanic Acid), (Robert H. Feinberg and Prof. David M. Greenberg), 898
Metabolites of some Rhizospheric Microflora of Egyptian Cotton Varieties : Growth Responses of *Fusarium oxysporum* to (Dr. M. S. Naim and A. M. Hussein), 578
Metabolites (Phenylalanine) : Inhibition of 5-Hydroxytryptophan Decarboxylase by (Dr. A. N. Davison and Dr. M. Sandler), 186
Metakaolin : Exothermic Reaction of, between 950° and 1,000° C. (Thaisa Demediuk and W. F. Cole), 1400
Metal Industry (Non-Ferrous), in India—a Symposium held at the National Metallurgical Laboratory, 1954 (edited by Dr. B. R. Nijhawan and Dr. A. B. Chatterjea), *review* by Prof. F. C. Thompson, 1498
Metal Ions (Adsorbed), on the Surface of Cellulose Microfibrils : Electron Diffraction Study of (D. S. Belford, A. Myers and Prof. R. D. Preston), 1516
Metal Sections : Observation of, by means of the 300-kV. Electron Microscope (Hidetsugu Tsuchikura and Keiji Ichige), 694
Metal-Chelating Properties of Plant-Growth Substances (Dan Cohen and Ben-Zion Ginsburg and Dr. Carla Heitner-Wirguin), 686
β^1-Metal-combining Globulin : Method of Isolating the, from Human Blood Plasma (E. W. Boettcher, P. Kistler and Prof. Hs. Nitschmann), 490
Metal-Enzyme Complex (SH-Dependent) : Phosphomannoisomerase, an (Dr. Friedrich H. Bruns and Ernst Noltmann), 1467
Metallic Conduction : Plasma Approach to (Dr. Louis Gold), 1316
Metallic Ion : Effect of the, on the Infra-Red Spectra of Salts of Carboxylic Acids (Bryan Ellis and H. Pyszora), 181
Metallic Ions : Influence of, on the Reaction of Ethylene Diamine with Epinephrine and Norepinephrine (Prof. Guy Nadeau, L. P. Joly and G. Sobolewski), 1061
Metallographic Studies of Iron Carbide and Tungsten Carbide (F. J. Radd and L. H. Crowder), 258
Metallurgical Aspects of Semi-Conductors (Metal Physics Committee of the Institute of Metals Symposium on), 238
Métallurgie, Société Française de (Non-destructive Testing Group of the Institute of Physics and the) : Joint Conference in Paris, 813
Metallurgist (Ministry of Iron and Steel of the U.S.S.R.), No. 1, 1180
Metallurgists, Institution of : Behaviour of Metals at Elevated Temperatures (Lectures delivered at the Refresher Courses, 1956), *review* by Prof. F. C. Thompson, 1299
  Election of Officers, 1576
Metallurgy at Cambridge, 1177
Metallurgy of the Unusual (Dr. W. S. Kroll), 159
Metals : The Band Theory of, and the Structure of the Fermi Surface (Physical Society Conference on), 525
  Grain Boundaries in (Dr. D. McLean), *review* by Prof. F. C. Frank, 976
  Pressure Welding of (Department of Industrial Metallurgy of the University of Birmingham Conference on), 1182
  Surface Hardening of, by Spark Discharge (Prof. Hugh O'Neill), 1421
Metals, Institute of : Election of Officers, 1181
  Platinum Medal awarded to Prof. R. S. Hutton, 1182
  Rosenhain Medal awarded to Dr. J. H. Hollomon, 1182
Metals, Institute of (Metal Physics Committee) : Symposium on Metallurgical Aspects of Semi-Conductors, 238
  Symposium on Vacancies and other Point Defects in Metals and Alloys, 449
Metals at Elevated Temperatures : Behaviour of (Lectures delivered at the Institution of Metallurgists Refresher Course, 1956), *review* by Prof. F. C. Thompson, 1299
Metals (Body-centred Cubic) : Localized Electrons in (J. S. Griffith and L. E. Orgel), 170
Metals (Non-ferrous) : Surface Hardening of, by Spark Discharge (Dr. N. C. Welsh), 1005
Metals (Ten) : Corrosion of, in Boiling Hydrochloric Acid when in Contact with Rhodium, Palladium, Iridium and Platinum (W. Roger Buck, III, and Henry Leidheiser, jun.), 1681
Metals (Trace), in the Nitrogen Metabolism of Plants (Dr. D. J. D. Nicholas), 672
Metals and Alloys : Vacancies and other Point Defects in (Metal Physics Committee of the Institute of Metals Symposium on), 449
Metals and Alloys (Engineering) : Industrial Failure of—a Symposium organized by the National Metallurgical Laboratory, 1953 (edited by Dr. B. R. Nijhawan), *review* by Prof. F. C. Thompson, 1498
Metaphysics : Physics and, *review* by Prof. L. Rosenfeld, 658
  Physics and (Prof. Louis de Broglie), 1814 ; (Prof. L. Rosenfeld), 1814
Metastable Polymers : Separation of, by Starch Gel Electrophoresis (Geoffrey Franglen and Cécile Gosselin), 1152
Metcalf, R. L. (edited by) : Advances in Pest Control Research, Vol. I, *review* by Dr. K. A. Lord, 1689
Meteorite (Carbo) : Distribution of Helium-3 in the (E. L. Fireman), 1725
Meteorite Crater (Arizona) : Distribution of Meteoritic Debris about the (J. S. Rinehart), 1777
Meteorite Fall (Sikhote-Alin) : Argon-39 in the (E. L. Fireman), 1613
Meteoritic Debris : Distribution of, about the Arizona Meteorite Crater (J. S. Rinehart), 1777
Meteoritic Stones : Origin of Chondrules in (Dr. L. J. Spencer), 680
Meteorologica Sinica, Acta (Academia Sinica, Peking), 160
Meteorological Office : Reorganization of the, 241
  Annual Report for 1956-57, 392
  Retirement of Dr. J. Glasspoole, 1767
Meteorological Society, Royal : Election of Prof. Tor Bergeron, Sir David Brunt, E. Gold, Prof. Sverre Petterssen and Sir George Simpson to honorary membership, 1375
  Buchan Prize awarded to Dr. R. M. Goody, 1375
  Hugh Robert Mill Medal and Prize awarded to L. C. W. Bonacina, 1375
  Discussion on Atmospheric Aerosols, 1703
  Discussion on Aeronautical Meteorology, 1703
Meteorology : Aeronautical (Royal Meteorological Society Discussion on), 1703
Meteors : Radio Noise from (Gerald S. Hawkins), 1610
Metford, J. C. J. : Universities of Latin America, 609
Methane Sulphonate (Ethyl) : Increased Rate of Plaque-type and Host-range Mutation following Treatment of Bacteriophage *in vitro* with (Dr. Anthony Loveless), 1212
Methionine-^{35}S (Uptake of), by the Cells of the Facial Nerve Nucleus : A Histoautoradiographic Study of the Effect of Section of the Facial Nerve on the (J. Fischer, Z. Lodin and Dr. J. Koloušek), 341
Method : A Micro-electrophoretic (Dr. J. Kohn), 839
Method of Isolating the β_1-Metal-combining Globulin from Human Blood Plasma (E. W. Boettcher, P. Kistler and Prof. Hs. Nitschmann), 490
Method for Isolating *Pseudomonas morsprunorum* Phages from the Soil (J. E. Crosse and M. K. Hingorani), 60
Method of Reducing the Losses caused by *Gloeosporium* spp. in Stored Apples (Dr. D. M. Spencer and Dr. E. H. Wilkinson), 1603
Method of Studying separately the Properties of the Innervated and Non-innervated Membrane of an Isolated Single Electroplax of the Skate (Dr. Ernest Schoffeniels), 287
Method (Beta-Gamma Coincidence) : Correction for the Gamma-Ray Sensitivity of the Beta-Counter in the Standardization of Cobalt-60 by the (B. Owen and R. A. Lloyd), 396
Method (Chromatographic), for Studying Simple Compounds in Plants (R. N. Greenshields), 280
Method (Differential Thermal), for determining Reactivity of Calcium Oxide (T. L. Webb and T. van der Walt), 411
Method (Direct-Plating), for the Precise Assay of Carbon-14 in Small Liquid Samples (Dr. C. C. McCready), 1406
Method (Isotopic Tracer), for Measurement of Iron Lost into and Re-absorbed from Gastro-intestinal Bleeding Lesions (M. Roche, M. E. Perez-Gimenez and A. Levy), *errata*, 603
Method (Low-Temperature Specimen), of Electron Diffraction and Electron Microscopy : Examination o Cellulose Fibre by the (Goro Honjo and Masaru Watanabe), 326
Method (Microchemical), for the Determination of Sakaguchi-positive Antibiotics (Dr. I. Szilágyi and I. Szabó), 52
Method (New), for the Chemical Determination of Rutin : Use of Defoliants for Drying Buckwheat in the Field, and a (V. Brejcha and P. Horák), 505
Method (New), for separating Strychnine and Brucine by Paper Chromatography (G. Dušinsky and Dr. M. Tyllová), 1335
Method (Optical), of Obtaining the Frequency Response of a Lens (K. Hacking), 1158
Method (Rapid and Specific), for the Isolation of Pneumococcal Polysaccharide (Dr. A. S. Markowitz and Jack R. Henderson), 771
Method (Scientific) : Library Science and (Dr. S. R. Ranganathan), 1509
Method (Shorter Microbiological Assay), for Oxytetracycline and Chlortetracycline (Nyiri László), 648
Method (Simple), for absorbing Heterologous Antibodies from Precipitating Sera (Dr. Joseph Böszörményi), 1344
Method (Spectrum-Line Reversal) : Temperature Measurements of Shock Waves by the (J. G. Clouston, Dr. A. G. Gaydon and Prof. I. I. Glass), 1325
Methodology of the Study of Ageing (Ciba Foundation Colloquia on Ageing, Vol. 3, edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by Prof. P. L. Krohn, 74

Methods : Biological Staining (George T. Gurr), sixth edition, *review* by S. Bradbury, 988
  Modern Computing (National Physical Laboratory, Notes on Applied Science No. 16), *review* by S. Weintroub, 985
Methods in Enzymology (edited by Sidney P. Colowick and Nathan O. Kaplan), Vols. 3 and 4, *review* by Dr. Edwin C. Webb, 1431
Methods (Cytochemical), with Quantitative Aims—Biophysical and Biochemical Approaches (Proceedings of the Symposium held by the Institute for Medical Cell Research and Genetics, Karolinska Institutet, Stockholm, 1956), edited by Dr. B. Lindström and Dr. R. Brown (Experimental Cell Research, Supplement 4), *review*, 1029
Methods (Modern), of Microscopy (edited by A. E. J. Vickers), *review* by S. Bradbury, 1096
Methods (Newer Preparative), in Organic Chemistry (Chemical Society and the Fine Chemicals Group of the Society of Chemical Industry Symposium on), 239
Methods (Scale-up), in Chemical Engineering : Pilot Plants, Models and (Dr. Robert Edgeworth Johnstone and Prof. Meredith W. Thring), *review* by Prof. D. M. Newitt, 1094
Methods (Variational), for Eigenvalue Problems (Prof. S. H. Gould), *review* by Dr. R. G. Cooke, 978
Methods and Criteria of Reasoning (Rupert Crawshay-Williams), *review* by Dr. C. K. Grant, 869
3β-Methoxy-5-androsten-16β-ol, a Cytostatic and Fungistatic Steroid (Prof. R. W. Jones, G. Rebell and Prof. M. N. Huffman), 49
Methyl Chloride Vapour : Second Virial Coefficient of (the late Prof. R. Whytlaw-Gray, C. G. Reeves and Dr. G. A. Bottomley), 1004
4-Methyl-2-thiouracil : Influence of, on the Teratogenic Activity of Hypervitaminosis-A (Dr. D. H. M. Woollam and Dr. J. W. Millen), 992
Methylated Adenine Bases : Natural Occurrence of Thymine and Three, in several Ribonucleic Acids (Dr. J. W. Littlefield and Dr. D. B. Dunn), 254
Methylesterase (Pectin), in Tobacco Pith Sections : Effect of 2,4-Dichlorophenoxyacetic Acid on (K. T. Glasziou), 428
γ-Methylproline from the Hydrolysis of a Natural Product : α-Amino*iso*butyric Acid, β-Hydroxyleucine and (Prof. G. W. Kenner and R. C. Sheppard), 48
Metmyoglobin with Hydrogen Peroxide : Free Radical produced in the Reaction of (Dr. J. F. Gibson, Dr. D. J. E. Ingram and P. Nicholls), 1398
Metrazol Convulsions and Electroshock : Metabolism of the Perfused Cat Brain during (C. Allweis and Dr. J. Magnes), 626
Metric System : British Association Inquiry into the, 1571
Metrology and Gauging (S. A. J. Parsons), *review* by P. W. Harrison, 988
Metropolitan-Vickers Irradiation Laboratory, 1775
Metselaar, D., and others : Absence of Abnormal Haemoglobins in some Groups of the Papua Population of Dutch New Guinea, 1279
México : El Brownismo en (Dr. J. J. Izquierdo), *review* by Dr. Douglas Guthrie, 296
  Brunonian Doctrine in, *review* by Dr. Douglas Guthrie, 296
  Man and Mammoth in (Dr. Helmut de Terra), translated from the German by Alan Houghton Brodrick, *review* by Dr. G. H. S. Bushnell, 1432
Micas : Infra-Red Absorption of OH Bonds in (Dr. José M. Serratosa and Dr. W. F. Bradley), 111
Mice : Calcium Exchanges of Ehrlich Ascites Tumour Cells of (Doreen Thomason and Raymond Schofield), 1207
  Demonstration of Antibody in Passive Transplantation Immunity to Crocker Tumour in, using the Schultz-Dale Technique (Prof. B. D. Baruah), 624
  Effect of Two Extreme Temperatures on Growth and Tail-length of (Dr. M. A. El-R. Ashoub), 284
  Intestinal Carcinoma in, following Injection of Herring-Sperm Deoxyribonucleic Acid (T. F. Hewer and Dr. E. S. Meek), 990
  Temporary Nutritional Stress and Infertility in (T. J. McClure), 1132
Mice (Cancer-bearing and Lymphoma-bearing) : Erythrophagocytosis in (Ruth V. Ponder and Dr. Eric Ponder), 1537
Mice (Normal and Immune) : Distribution of Radioiodinated, Acetone-killed *Brucella abortus* in the Tissues of (Dr. D Sulitzeanu), 495
Mice (Tolerant *A* Strain) : Litters from *C3H* and *CBA* Ovaries orthotopically transplanted into (Prof. P. L. Krohn), 1671
Mice *T/T* : *In vitro* Study of Cartilage Induction in (Dorothea Bennett), 1286
Michael, Richard P. : Sexual Behaviour and the Vaginal Cycle in the Cat, 567
Michelson, Dr. A. M. : Synthesis of Ribonucleic Acid, 303
  A Hypothesis for the Biosynthesis of Ribonucleic Acid and Protein, 375
Michie, Dr. Donald (McLaren, Dr. Anne, and) : An Effect of the Uterine Environment upon Skeletal Morphology in the Mouse, 1147
'Micro 58', an Exhibition of Photography with the Microscope (Royal Microscopical Society), 1246
Microbenthos of the Shore at Whitstable, Kent (E. J. Perkins), 791
Microbial Attack : Resistance of Protein—Lignin Complexes, Lignins and Humic Acids to (Prof. D. L. Lynch and Prof. C. C. Lynch), 1478
Microbial Fermentation of Sugars : Mechanism of Formation of Stereoisomers of 2,3-Butanediol during (Mary B. Taylor and Dr. Elliot Juni), 1389
Microbial Growth Stimulants in Spleen (Dr. M. L. Littman and Dr. Michael A. Pisano), 285
Microbiological Assay Method (A Shorter), for Oxytetracycline and Chlortetracycline (Nyiri László), 648
Microchemical Method for the Determination of Sakaguchi-positive Antibiotics (Dr. I. Szilágyi and I. Szabó), 52
Microclimate : Shelter Belts and (Dr. J. M. Caborn), 160
Micrococcus lysodeikticus : Cytochromes of (F. L. Jackson and Valerie D. Lawton), 1539
  Development of, Resistant to Lysozyme (Prof. Gerald Litwack), 1348
  Development of Lysozyme-Resistance in, and its Association with an Increased O-Acetyl Content of the Cell Wall (Dr. W. Brumfitt and Dr. A. C. Wardlaw, and Dr. J. T. Park), 1783
  The Pigment of (Prof. Gerald Litwack and A. F. Carlucci), 904
Micrococcus pyogenes var. *aureus* : Incorporation of Disodium *p*-Nitrophenylphosphate in Solid Medium for the Detection of Phosphatase Production by (H. R. Lovell), 995
Microdiffusion Analysis and Volumetric Error (Prof. Edward J. Conway), fourth edition, *review* by E. I. Johnson, 1029
Micro-electrophoretic Method (Dr. J. Kohn), 839
Micro Estimation of Urea (D. Watson and D. A. H. Pratt), 1475
Microfibrillar Organization in Plant Cell Walls : Spatial and Temporal Variation of (D. S. Belford, Dr. A. Myers and Prof. R. D. Preston), 1251
Microfibrils (Cellulose) : Electron Diffraction Study of Adsorbed Metal Ions on the Surface of (D. S. Belford, A. Myers and Prof. R. D. Preston), 1516
Microfilariae (*Wuchereria bancrofti*) : 24-Hr. Rhythms in Blood Eosinophils and, Before and After Δ^{1}-9α-Fluorocortisol (Rudolf Engel, Dr. Franz Halberg, W. L. P. Dassanayake and Justin de Silva), 1135
Microflora (Rhizospheric), of Egyptian Cotton Varieties : Growth Responses of *Fusarium oxysporum* to Metabolites of some (Dr. M. S. Naim and A. M. Hussein), 578
Micro-fungi in Pine Litter (W. P. Kendrick), 432
Micrographs (Electron), of a Crystalline Lattice Structure in Yolk Platelets of the Amphibian Embryo (Shiichi Karasaki and Tsutomu Komoda), 407
Micrographs (Electron), of Monolayers of Stearic Acid (Herman E. Ries, jun., and Wayne A. Kimball), 901
Micro-indentation : Surface Hardness of Explosive Materials by (Dr. G. Todd and E. Parry), 260
Micronesia : Insects of (Dr. W. E. China), 818
  Insects of (Richard M. Bohart), Vol. 12, No. 1, Diptera, Culicidae, *review* by P. F. Mattingly, 1234
Micro-organisms : An Alternative Pathway for the Degradation of Cholic Acid by (Shohei Hayakawa, Yasuo Saburi, Keizo Tamaki and Hideyuki Hoshijima), 906
  Continuous Cultivation of (Institute of Biology of the Czechoslovak Academy of Sciences Symposium on), 1042
  Dependence of the Observed Oxygen Effect on the Post-Irradiation Treatment of (Tikvah Alper and Dr. N. E. Gillies), 961
Micro-organisms (Soil) : Effects of Gibberellic Acid on (Dr. K. C. Lu, C. M. Gilmour, A. C. Zagallo and W. B. Bollen), 189
Micro-organisms and Animal Tissues : Reduction of Organic Hydroperoxides by (Dr. D. M. Updegraff and Dr. F. A. Bovey), 890
Microrecording : Microtexts and (Proceedings of a Symposium held at Hatfield Technical College), 1573
Microscope : Lecture Notes on the Use of the (R. Barer), second edition, *review* by S. Bradbury, 801
  'Micro 58', an Exhibition of Photography with the (Royal Microscopical Society), 1246
Microscopic Optical Crystallography : An Improved Orientation Stage for (H. G. C. Vincent), 693
Microscopical Society, Royal : Election of John Bunyan as president, 238
  Honorary fellowships conferred on Dr. Edwin H. Land and Dr. Maria Rooseboom, 885
  'Micro 58', an Exhibition of Photography with the Microscope, 1246
Microscopie : Traité de—Instruments et Techniques (A. Policard, M. Bessis et M. Locquin), *review* by Dr. John R. Baker, 589
Microscopy : Analytical (Dr. T. E. Wallis), second edition, *review* by S. B. Challen, 1758
  Modern Methods of (edited by A. E. J. Vickers), *review* by S. Bradbury, 1096
  Practical Modern, *review* by Dr. John R. Baker, 589
Microscopy To-day, *review* by S. Bradbury, 1096
Microscopy Symposium : The 1958, 813
Microseisms: Periodicity in Sea Roughness and Origin of (Dr. J. N. Nanda, K. Achyuthan and N. K. Balachandran), 646
  Possible Correlations between Earthquakes and (C. A. Nanney), 802
  Refraction of (H. M. Iyer, D. Lambeth and B. J. Hinde), 646
Microsomes and other Cell-Fractions of Rat Liver : Soluble Antigens in (Dr. P. Perlmann and Dr. V. D'Amelio), 491
Microsomes (Rat Liver), in a Cell-free System : Effect of Hypophysectomy on the Ability of, to incorporate Radioactive Amino-Acids into their Proteins (Dr. A. Korner), 422
Microsomes (Reticulocyte) : Participation of, in the Incorporation of Iron into Haemoglobin (Dr. M. Rabinovitz and M. E. Olson), 1665
Microtexts and Microrecording (Proceedings of a Symposium held at Hatfield Technical College), 1573
Microtron : The (D. Aitken and Dr. R. E. Jennings), 1726
Microwave Mixer : A New (Prof. H. M. Barlow, Dr. J. Brown and Dr. K. V. Gopala Krishna), 1008
Microwave Spectra of Diazomethane and its Deutero Derivatives (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1000
Microwave Spectrum of Nickel Cyclopentadienyl Nitrosyl and the Configuration of the Molecule (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1157
Microwave Theory and Techniques (United States Institute of Radio Engineers Professional Group 1958 National Symposium on), 885
Microwave Valves (Institution of Electrical Engineers International Convention on), 673, 1378
Middle East Technical University, Ankara (Dr. Turgut Yaziciogly), 382
Middle Jurassic (Scottish) : Palynology of the Brora Coal of the (N. F. Hughes and R. A. Couper), 1482
Middle Lamella of Plant Tissue : Evidence for a Protein Component in the —a Possible Site for Indolylacetic Acid Action (B. Z. Ginzburg), 398
Middleton, L. J. : Absorption and Translocation of Strontium and Caesium by Plants from Foliar Sprays, 1300
Midland Industrial Film Association : Conference on the Industrial Film in Technical Education, 1508
Midwestern Universities Research Association, Madison : Grant of 160,000 dollars from the National Science Foundation, for the support of basic research entitled 'High Energy Accelerator Studies', 313
Migrants : Internal Migration, a Study of the Frequency of Movement of (John A. Rowntree), (General Register Office, Studies on Medical and Population Subjects, No. 11), 1574
Migrating Elvers (*Anguilla vulgaris* Turt.) : Use of Tidal Streams by (F. Creutzberg), 857
Migration : Internal—a Study of the Frequency of Movement of Migrants (John A. Rowntree), (General Register Office, Studies on Medical and Population Subjects, No. 11,) 1574
Migrdichian, Dr. Vartkes : Organic Synthesis, Vol. I, Open-Chain Saturated Compounds ; Vol. 2, Open-Chain Unsaturated Compounds, Alicyclic Compounds, Aromatic Compounds, *review* by Prof. John Read, 515

Mild Steel : Stress Condition for Brittle Fracture of (Prof. Takeo Yokobori and Prof. Hiroto Hamamoto and Akio Otsuka), 1719
Mildew (*Erysiphe polygoni* DC) : Control of Turnip and Cabbage, by Zinc (Dr. J. A. Tomlinson and M. J. W. Webb), 1352
Miles, Prof. A. A., and Wilhelm, D. L. : Distribution of Globulin Permeability Factor and its Inhibitor in the Tissue Fluid and Lymph of the Guinea Pig, 96
Miles, Dr. H. T., and others : Controlled Release of Thermonuclear Energy —A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
Miles, Miss S. W. : Social Structure and Archaeological Setting of the Pokom-Maya in the Sixteenth Century, 1180
Milford Haven Conservancy Bill, 937, 1040
Milk : Acetylcholine in (V. P. Whittaker), 856
  First and Second Cycle Casein in (Dr. T. A. J. Payens), 114
  Goitrogen of, produced on Kale (Evan Wright), 1602
  Interrelationships of the Concentrations of Sodium, Potassium, Lactose and Water in (J. A. F. Rook and Marian Wood), 1284
  Passive Transfer of Antitumour Factors through, in Rats (Prof. B. Sekla), 1600
  Rapid Determination of Casein in (J. Jakubowski, Z. Sienkiewicz and Eugenia Nowak), 1277
Milk (Coconut), and Cow's Urine : Fortifying Influences of, on 2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the Coconut (S. R. Gangolly and Dr. K. M. Pandalai), 855
Milk (Dried) : Effects of Crystallinity on the Infra-red Absorption Spectra of Lactose and (J. D. S. Goulden and Jonathan W. White, jun), 266
Milk (Goat) : Inhomogeneity of α-Casein from (Dr. T. Hofman), 633
Milk (Goat's) : Distribution of Carbon-14 in Components of, with Sodium Formate-^{14}C as Precursor (Samuel Misler, Leon Tumerman and Henry R. Roberts), 346
Milk (Strongly Heated) : Formation of Lactulose and Tagatose from Lactose in (Susumu Adachi), 840
Milk and Butterfat Recording (E. D. Ashton), *review* by Helen R. Chapman, 982
Milk Whey (Human) : Chromatographic Separation of Lactalbumin from, on Calcium Phosphate Columns (Dr. Bengt Johansson), 996
Milkweed Bug, *Oncopeltus fasciatus* (Dallas) : Hormonal Regulation of Reproduction in the (A. S. Johansson), 198
Mill (Hugh Robert) Medal and Prize of the Royal Meteorological Society awarded to L. C. W. Bonacina, 1375
Millar, Elaine C. P. (edited by Wolstenholme, G. E. W., and) : Ageing in Transient Tissues (Ciba Foundation Colloquia on Ageing, Vol. 2), *review* by Prof. P. L. Krohn, 74
Millen, Dr. J. W., and Woollam, Dr. D. H. M. : Insulin—Cortisone Relationship in Experimental Teratogenesis, 418
Millen, Dr. J. W. (Woollam, Dr. D. H. M., and): Influence of 4-Methyl-2-thiouracil on the Teratogenic Activity of Hypervitaminosis-A, 992
Millenary Celebrations of Al-Mas'Udi (Institute of Islamic Studies, Aligarh, and the Indian Society for the History of Science), 883
Miller, D. M., and Colhoun, E. H. : Apparatus for Stimulation of Insect Sense-Organs by Air Puffs, 126
Miller, D. S. (Platt, Prof. B. S., and) : Nutritive Value of Proteins (The Quantity and Quality of Protein for Human Nutrition), 153
Miller, Dr. E. J. : Novel Action of Potassium on a Yeast and a Counteraction by Aluminium, 191
Miller, Dr. Genevieve : The Adoption of Inoculation for Smallpox in England and France, *review* by Dr. W. R. Bett, 1690
Miller, Mrs. Margaret (Dunsheath, Dr. P., and) : Convocation in the University of London—the First Hundred Years, 1442
Miller, Sh. (Avi-Dor, Y., and) : Effect of Electrolytes on the Uptake by Bacteria of Labelled Glutamate, 190
Millington, Dr. A. J. (Callaghan, Dr. A. R., and) : The Wheat industry in Australia, *review* by Dr. D. J. Watson, 730
Millington, G. (Kitchen, F. A., and) : Long-Distance Radio Propagation above 30 Mc./s. (Research on Ionospheric Scattering), 1184
Milne, A. A. : Contact Stresses (Rolling Contact), 1774
Minami, Kazumori : Isolation of a Soil Coccus capable of utilizing 'Tween 80' as a Sole Source of Carbon, 430
Mine, T., and others : Effects of certain Compounds related to Trypan Blue on the Experimental Production of Liver Cancer, 1732
Mineral (New) : Koutekite, a (Zdenek Johan), 1553
Mineralogical Society : The Differential Thermal Investigation of Clays (edited by Robert C. Mackenzie), *review*, 1561
Mineralogy and Crystal Structure of Greenalite (R. Steadman and Dr. R. F. Youell), 45
Minerals : Distribution of Radioactivity in Rocks and, and the Effect of Weathering on Determinations of Uranium (Dr. E. Hamilton), 697
  Isomorphous Replacement in the Kaolin Group of (Dr. R. F. Youell), 557
Minerals (Soil) : Release of Phosphate from, by Hydrogen Sulphide (Joan I. Sperber), 934
Mining : Opencast, 889
Mining Association Educational Trust (British Overseas) : Scholarships in Mining Engineering and related Subjects, 1771
Mining Engineering and related Subjects : Scholarships in (British Overseas Mining Association Educational Trust), 1771
Mining Engineers, Institution of : Election of T. A. Rogers as president for 1959-60, 1378
Mining Research Establishment of the National Coal Board, and the Building Research Station of the Department of Scientific and Industrial Research : Conference on the Mechanical Properties of Non-Metallic Brittle Materials, 1577
Mining and Metallurgy, Institution of : Gold Medal for 1957 awarded to Dr. J. F. Thompson, 1375
  Honorary membership conferred on R. Annan, Dr. F. Dixey and on M. A. E. Mawby, 1375
  Consolidated Gold Fields of South Africa, Ltd. Gold Medal for 1956-57 awarded jointly to K. E. Mackay and J. D. Johnson, 1375
  Consolidated Gold Fields of South Africa, Ltd. Premium for 1956-57 awarded to J. Morison Caw, 1375
  Claudet (Arthur) Student's Prize awarded to Dr. J. K. Almond, 1375
  Frechville (William) Student's Prize awarded to Dr. Barry Scott, 1375
Mink : Nutritional Anaemia in (Dr. A. Helgebostad and Dr. E. Martinsons), 1660
Mink (British) : *Cryptocotyle lingua* in (H. Scott McTaggart), 651
Minkoff, G. J. : Structure and Reactivity of Electronically Excited Species (Polymerization of Acetylene), 321
Minnis, C. M. : Solar Activity and the Ionosphere, 543
Minnis, C. M., and Bazzard, G. H. : Solar-Flare Effect in the *F*2-Layer of the Ionosphere, 690
  Similarities in the Characteristics of Solar Radiation at λ10.7 cm. and in the Far Ultra-violet, 1796
Minor Constituents and Trace Elements in Negev Phosphate Rocks (Dr. E. Foa), 1676
Misler, Samuel, and others : Distribution of Carbon-14 in Components of Goat's Milk, with Sodium Formate-^{14}C as Precursor, 346
Misra, G., and Sahu, G. : Interaction of Hormone and Photoperiod in an Early Variety of Rice, 637
Missiles (Guided), in War and Peace (Nels A. Parson, jun.), *review*, 731
Missouri Botanical Garden, St. Louis : Appointment of Dr. F. W. Went as director, 1640
Mitamura, T., and others : Muscular Exercise and Adrenal 17-Hydroxycorticosteroid Secretion in Dogs, 715
Mitchell, Dr. A. D. : Complexometric Titrations, *review*, 987
Mitchell, D. S. : Appointed director of personnel and administration in the Industrial Group of the United Kingdom Atomic Energy Authority, 530
Mitchell, F. S., and others : Influence of the Enclosing Protective Tissues on the Metabolism of Barley Grain, 1270
Mitchell, K. J., and Closs, R. L. : Loss of Moisture from Vegetation, 1619
Mite (Flour) : An Apparent Beneficial Effect of Gamma-Radiation on the (Dr. Colin Melville), 1403
Mitochondria : Selective Uptake of Radiochemical Impurities by (G. A. Lumb), 132
Mitochondria from *Periplaneta americana* : Cytochemical Localization of Succinic Dehydrogenase in (Dr. A. G. E. Pearse and Dr. D. G. Scarpelli), 702
Mitochondria in the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon : Relative Distribution of the (Dr. J. C. George and R. M. Naik), 782
Mitochondria (*Ricinus*) : Some Effects of Carbon Dioxide—Bicarbonate Mixtures on the Oxidation and Reduction of Cytochrome *c* by (D. S. Bendall, Dr. S. L. Ranson and D. A. Walker), 133
Mitochondria (Yeast) : Morphology of (Dr. Rudolf Müller), 1809
Mitochondrial Oxidations : Substrate-Selective Inhibition of, by Enhanced Tonicity (Diane Johnson and Prof. Henry Lardy), 701
Mitosis and Chromosome Numbers in the Euglenineae (Flagellata), (Gordon F. Leedale), 502
Mitotic Delay in Irradiated Roots of *Vicia faba*—the Effect of Oxygen (Dr. H. J. Evans, Dr. G. J. Neary and Miss S. M. Tonkinson), 1083
Mitra, G. C. (Wardlaw, Prof. C. W., and) : Responses of a Fern Apex to Gibberellic Acid, Kinetin and α-Naphthaleneacetic Acid, 400
Mitra, Prof. S. K. : Elected a Fellow of the Royal Society, 881
Mitteleuropa : Flora von Nord- und (Frieudrich Hermann), *review* by Prof. T. G. Tutin, 972
Mittler, Dr. Sidney: Protection against Death due to Ozone Poisoning, 1063
Miura, Jiroo, and others : Serological Determination of Developing Muscle Protein in Chick Embryo, 620
Miura, Dr. Kin-ichiro, and Watanabe, Prof. I. : Nucleic Acids (Nucleotide Composition of Ribonucleic Acid), 1511
Miura, Dr. Kin-ichiro, and others : Effect of Chloramphenicol on Ribonucleic Acid Metabolism in *E. coli* infected with *T*2 Phage, 1127
Mixer : A New Microwave (Prof. H. M. Barlow, Dr. J. Brown and Dr. K. V. Gopala Krishna), 1008
Mixture of Mono-nitro-phenols : Isolation of 2-Nitro-phenol from the (Dr. Tamás Széll and Árpád Furka), 481
Mixtures (Carbon Dioxide—Bicarbonate) : Some Effects of, on the Oxidation and Reduction of Cytochrome c by *Ricinus* Mitochondria (D. S. Bendall, Dr. S. L. Ranson and D. A. Walker), 133
Miyagi, Prof. O. : At the thirteenth International Congress of Applied Psychology (Clinical Analysis of Social Pathology), 1580
Miyazaki, M., and others : Gamma-Amino-Butyric Acid in Ocular Tissue, 1200
Miyazaki, M. (Takemura, S., and) : Nucleic Acids (Hydrazinolysis of Nucleic Acids, leading to the Preparation of Ribo- and Deoxyribo-apyrimidinic Acid), 1511
Mizuno, K., and others : Gamma-Amino-Butyric Acid in Ocular Tissue, 1200
Mobility : Academic (Discussion on, at the Home Universities Conference), 165
Mobility (Electron), in Biological Systems and its relation to Carcinogenesis (Dr .R. Mason), 820
Mode of Action of Chelates in protecting against *Clostridium perfringens* Toxin (Prof. Merwin Moskowitz), 550
Mode of Action of Organophosphorus Insecticides (Dr. K. van Asperen), 355
Model of the Chromosomes : Deoxyribonucleic Acid Side-Chain (Dr. Drew Schwartz), 1149
Model (Statistical), of some Time Series (D. S. Palmer), 1677
Model (Three-Dimensional), of the Myoglobin Molecule obtained by X-Ray Analysis (Dr. J. C. Kendrew, Dr. G. Bodo, Dr. H. M. Dintzis, Dr. R. G. Parrish, Dr. H. Wyckoff and Dr. D. C. Phillips), 662
Model (Tidal), at the University of Southampton (Prof. P. B. Morice), 944
Model System for Cysteine Desulphydrase Action—*Pyridoxal* Phosphate—Vanadium (Prof. F. Bergel, R. C. Bray and K. R. Harrap), 1654
Model Systems : Dealkylation of N-Alkyl-amines by (James R. Gillette, James V. Dingell and Bernard B. Brodie), 898
Models in Biological Experiments : Machines as (Dr. W. Grey Walter), 1187, 1444
Models (Genetic) : Monte Carlo Analyses of (A. S. Fraser), 208
Models and Scale-up Methods in Chemical Engineering : Pilot Plants, (Dr. Robert Edgeworth Johnstone and Prof. Meredith W. Thring), *review* by Prof. D. M. Newitt, 1094
Modern Cereal Chemistry (Dr. D. W. Kent-Jones and Dr. A. J. Amos), fifth edition, *review* by Dr. J. B. Hutchinson, 1361
Modern Computing Methods (National Physical Laboratory, Notes on Applied Science No. 16), *review* by S. Weintroub, 985
Modern Mathematics for the Engineer (edited by Prof. Edwin F. Beckenbach), *review* by Dr. R. K. Livesley, 979
Modern Methods of Microscopy (edited by A. E. J. Vickers), *review* by S. Bradbury, 1096
Modern Microscopy : Practical, *review* by Dr. John R. Baker, 589

Modern Physics : Causality and Chance in (Prof. David Bohm), *review* by Prof. L. Rosenfeld, 658
  Determinism and Indeterminism in (Ernst Cassirer), translated by O. Theodor Benfry, *review* by F. I. G. Rawlins, 590
Modern Pidduck : A, *review* by Prof. G. O. Jones, 1495
Modern Science : The Race Question in (Unesco), *review* by Prof. T. S. Simey, 1232
Modern Science, 1300-1800 : The Origins of (Prof. H. Butterfield), new edition, *review* by Dr. H. D. Anthony, 731
Modern Science and the Nature of Life (Dr. William S. Beck), *review* by Dr. Alex Comfort, 1627
Modern World : Problems of Government in the, 141
Modified Technique in Chromatography (Prof. K. Krishnamurti and B. V. Dhareshwar), 766
Modifiers of Pineapple Indoleacetic Acid Oxidase : Ferulic and *p*-Coumaric Acids in Pineapple Tissue as (Dr. Willis A. Gortner, Martha J. Kent and Dr. G. K. Sutherland), 630
Modreanu, Florin, and others : Paper Chromatography of Potassium, Rubidium and Caesium, 1618
Modulation of Environmental Conditions : Reduction of Low-Temperature Injury to Stored Apples by (W. Hugh Smith), 275
Mohsen, Dr. T. : Masculinizing Action of Pregneninolone on Female Gonads in the Cyprinodont, *Lebistes reticulatus* R., 1074
Moir, G. F. J., and others : Coenzyme A and Aldolase in Rubber-bearing Plants, 628
Moisture : Effects of Heat and Loss of, on the Dormancy of Barley (P. D. Hewett), 424
  Influence of, upon the Dielectric Properties of Solid Powders dispersed in Liquid Paraffin (Rempei Gotohi, Tetsuya Hanai and Naokazu Koisumi), 406
  Loss of, from Vegetation (K. J. Mitchell and R. L. Closs), 1619
Molar Sound Velocity of Solids (Dr. J. Schuyer), 1394
Molecular Complexes : Absorption Spectra of (R. Foster), 337
Molecular physics, Vol. 1, No. 1, 456
Molecular Rearrangement in the Reaction of Cysteine with 1-Fluoro-2,4-Dinitrobenzene (Dr. H. P. Burchfield), 49
Molecular Sieve : Crystal Structure of Chabazite, a (L. S. Dent and Prof. J. V. Smith), 1794
Molecular Sieves as Subtractors in Gas Chromatographic Analysis (Nathaniel Brenner and Vincent J. Coates), 1401
Molecular Spectroscopy (Spectroscopic Panel of the Hydrocarbon Research Group of the Institute of Petroleum Conference on), 89
Molecular Structure and Spectroscopy (Ohio State University Symposium on), 813
Molecular Theory of Solutions (Prof. I. Prigogine, with the collaboration of A. Bellemans and V. Mathot), *review* by Prof. H. C. Longuet-Higgins, 978
Molecular Weight of Condensed Tannins as a Factor determining their Affinity for Collagen (Dr. David G. Roux), 1793
Molecular (High-) Materials : Physics of (Dr. L. R. G. Treloar), 1633
Molecule : Microwave Spectrum of Nickel Cyclopentadienyl Nitrosyl and the Configuration of the (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1157
Molecule (Myoglobin) : A Three-Dimensional Model of the, obtained by X-Ray Analysis (Dr. J. C. Kendrew, Dr. G. Bodo, Dr. H. M. Dintzis, Dr. R. G. Parrish, Dr. H. Wyckoff and Dr. D. C. Phillips), 662
Molecules : Giant (Prof. W. T. Astbury), 94
Molecules (Chain), in Dilute Solutions : Dynamics of, with special reference to Non-Newtonian Viscosity (Dr. Roger Cerf), 558
Molecules (Large) : Influence of Time on the Reversible Association between— the Collagen System (Dr. Jerome Gross), 556
Molecules (Two- and Three-Stranded Helical) : Formation of, by Polyinosinic Acid and Polyadenylic Acid (Dr. Alexander Rich), 521
Molgula Eggs : Feulgen-Positive Cytoplasm of (Dr. Daniel S. Grosch), 1078
Mollaret, H. (Heinzelin, J., and): Biotopes de Haute Altitude Ruwenzori, I, 19
Möllerberg, Dr. H. (Heijkenskjöld, Dr. R., and) : Amino-acids in Anthracite, 334
Mollusca (Phylum) : Occurrence of Collagen in the (S. C. Melnick), 1483
Monckton of Brenchley, Viscount : Opening Address at the Annual Conference of the British Institute of Management (Management and Research), 307
Moncrieff, Prof. Alan : Children and Young People, 1381
Mond Nickel Fellowships, 458
Monde : l'Énergie nucléaire dans le (T. Reis), *review* by Sir John Cockcroft, 445
Monitor (Airborne) : A Survey of the Cosmic-Ray Nucleonic Component along 145° East Longitude using an (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 1155
Monk, Dr. C. B., and others : Interaction in Ionic Solutions (Study of various Ion Association Equilibria by Spectrophotometry), 241
Monkeys : Behaviour Mechanisms in (Prof. Heinrich Klüver), second impression, *review* by Dr. J. T. Eayrs, 216
  Haemoglobins in (G. F. Jacob and Dr. N. C. Tappen), 197
Mono-, Di- and Tri-Chloroacetic Acids : Structure of Cupric Salts with (Dr. Ryutaro Tsuchida, Dr. Shoichiro Yamada and Hiroji Nakamura), 479
Monoacetate (Aldosterone), and Deoxycorticosterone Acetate : Effect of, on Alkaline Phosphatase Activity in the Liver of Rats (Dr. Amiya B. Kar and R. P. Das), 623
Monochromatischen Korona : Struktur und Variationen der (Die Sonnenkorona (Prof. M. Waldmeier), Band 2), *review* by Prof. R. O. Redman, 871
Monocytes (Guinea Pig) : Growth of Meningo-pneumonitis Virus in Normal and Immune (Prof. Albert A. Benedict and Clarence McFarland), 1742
Monod, Prof. Th. : The Development of the West African Environment, 1580
Monofactorial Dominant in Tetraploid Wheats : 'Purple Pericarp', a (Dr. B. C. Sharman), 929
Monohydrate (Lead Styphnate) : Effects of Nuclear Irradiation upon the Decomposition of (Dr. Ted. B. Flanagan), 42
Monolayer Tissue Culture of Pig Kidney : Growth and Titration of Louping-ill Virus in (Dr. Holman E. Williams), 497
Monolayers of Stearic Acid : Electron Micrographs of (Herman E. Ries, jun., and Wayne A. Kimball), 901
Mono-nitro-phenols : Isolation of 2-Nitro-phenol from the Mixture of (Dr. Tamás Széll and Árpád Furka), 481
Monoxide (Carbon) : Reaction of, with Graphitic Carbon at 450° C. (Victor R. Deitz and Edward J. Prosen), 109
Monoxide (Carbon), Cyanide and Azide : Genetic Effects of, on *Drosophila* (Dr. A. M. Clark), 500
Monte Carlo Analyses of Genetic Models (A. S. Fraser), 208
Monteith, Mrs. D. : At the Annual Conference of the Geographical Association (The Development of Saffron Walden), 607
Montgomerie, J. F. : Awarded a Home Civil Service Fellowship of the Commonwealth Fund, 1181
Montgomeryshire : Occurrence of a 'Rare' Earthworm in (K. Sylvia Richards), 575
Montmorillonite : Density of Water sorbed on (Dr. Robert C. Mackenzie), 334
Moody, B. E. : Radioisotopes and Glass (Investigation of Glass Flow in Furnaces by Radioactive Tracers), 318
Mookerjee (H. K.) Memorial Volume of the Proceedings of the Zoological Society, Calcutta (edited by J. L. Bhaduri, B. Biswas and S. P. Ray-Chaudhuri), *review* by Dr. A. Glucksmann, 589
Moon : Measurement of the Ionospheric Faraday Effect by Radio Waves reflected from the (Fred B. Daniels and Siegfried J. Bauer), 1392
Moore, C. W. E. (Scurfield, G., and) : Effect of Gibberellic Acid on Species of *Eucalyptus*, 1276
Moore, Prof. John A. : Principles of Zoology, *review* by Prof. John E. Harris, 1430
Moore, J. C. : Natural History of the Fox Squirrel, 322
Moore, Patrick (edited by Bates, Prof. D. R., in association with) : Space Research and Exploration, *review*, 1299
Moore, R. V. : Appointed director of reactor design in the Industrial Group of the United Kingdom Atomic Energy Authority, 1510
Moore, Dr. Thomas C. : Effect of Gibberellic Acid on the Growth of Pea Seedlings when imbibed through the Seed Coat, 500
Moore, W. C. : The Study of Bacterial Plant Pathogens, *review*, 1094
Mora, Dr. P. T., and Young, B. G. : Interaction between Synthetic Polyglucose Sulphate and Biologically Active Basic Polypeptides and Proteins, 1402
Moran, Dr. T., and others : Bread and the Growth of Weanling Rats—The Lysine—Threonine Balance, 1733
Morgan, B. H., and others : Processing of Foods with Ionizing Radiations, 877
Morgan, J. P. (Russell, R. J., and) : Salt Marshes (Morphology of the Louisiana Marshes and the Coastal Changes following Hurricane 'Audrey'), 1512
Morgan, M. B. : Awarded the Branch Prize for 1958 of the Royal Aeronautical Society, 1646
Morgan, Dr. Winfield S. : Affinity of Neutral Red for Cells with Basophilic Cytoplasm, 1132
Morgan, Prof. W. T. J. : Appointed a member of the Ministry of Supply's Advisory Council on Scientific Research and Technical Development, 1442
Morgans, D. B., and others : Interaction in Ionic Solutions (Study of various Ion Association Equilibria by Spectrophotometry), 241
Morgans, W. T. A. (Terry, N. B., and) : Mechanical Properties of Non-Metallic Brittle Materials (Rheological Behaviour of Coal), 1578
Morice, Dr. P. B. : Appointed to the chair of civil engineering in the University of Southampton, 87 ; work of, 87
  The Tidal Model at the University of Southampton, 944
Morikawa, Ichiro, and others : Crystalline Cytochrome *c*—Crystallization of Cytochrome *c* from Cow Kidney, 1589 ; Crystallization of Cytochrome *c* from Wheat Germ, 1590
  Two Crystalline Haemoproteins of Wheat, 1656
Moriwaki, Tarumi, and others : A New Reaction for the Differentiation of *cis*- and *trans*-Isomers of Nitrophenylhydrazones of some α-Keto Acids, 639
Morphine : Blocking Effect of, on the Secretion of Thyroid-stimulating Hormone in Rats (Milan Sámel), 845
Morphine in the Rat : Influence of Cocarboxylase on Tolerance to (Dr. Luciano Angelucci), 967
Morphogenesis in Amphibian Eggs : Effects of β-Mercaptoethanol on (Prof. J. Brachet), 1736
Morphological Structures : Cellular Basis for the Induction of (Dr. R. Brown), 1546
Morphologie und Physiologie des Nervensystems (Prof. Paul Glees), *review* by Prof. Ragnar Granit, 1493
Morphology of Yeast Mitochondria (Dr. Rudolf Müller), 1809
Morphology (Skeletal), in the Mouse : An Effect of the Uterine Environment upon (Dr. Anne McLaren and Dr. Donald Michie), 1147
Morphology (Zoospore), of the California Strain of *Plasmopara viticola* (Dr. Vincent Santilli), 924
Morris, Alan D., and Gore, Willis C. : Extremely High Temperatures (The Thermionic Direct Current Electric Arc), 1380
Morris, Sir Charles : Presidential Address at the Annual Meeting of the Science Masters' Association, 391
Morris, C. E. H., and Dale, R. N. : Awarded Ablett Prizes for 1957 of the Iron and Steel Institute, 885
Morris, Dr. D. F. C., and Schmeising, H. N. : Estimation of Electron Affinities of Oxygen by Extrapolations of Ionization Potentials, 469
Morris, Dr. J. N. : Uses of Epidemiology, *review* by Dr. Kenneth Newell, 800
Morris, T. R., and Fox, S. : Light and Sexual Maturity in the Domestic Fowl, 1453
Morrison, J. A., and Rudham, R. : Melting Diffusion and related Topics (Mechanism of the Anion Diffusion Process in Sodium and Potassium Chloride Crystals), 320
Morrison, Major J. C. : Appointed a member of the Nature Conservancy, 1312
Morrison, Prof. J. L. M. : Appointed chairman of the Ministry of Supply's Advisory Council on Scientific Research and Technical Development, 1442
Morrison, Dr. S. D. : Nutrition and Climatic Stress, 1644
Mortality of the Mosquito, *Culex fatigans* Wied., exposed to DDT : Laboratory Variations in (T. Koshi and S. K. Ranganathan), 199
Mortality among Workers in Cigarette Factories : Smoking Habits and (Dr. R. A. M. Case), 84
Mortelmans, Dr. J., and others : Isolation of *Salmonella infantis* from an Aborted Bovine Foetus, 1539
Mortier, Dr. P., and others : Role of Photons in Argon—Alcohol Counters, 1327

Mortimer, Dr. C. H. : Elected a Fellow of the Royal Society, 881
Morton, Prof. R. K. : Enzymic Synthesis of Coenzyme I in relation to Chemical Control of Cell Growth, 540
Moruzzi, Prof. G., and others : Effects of Orotic Acid on Coenzyme A and Pantothenic Acid of Liver in Vitamin B_{12} Deficiency, 416
Mosaic Virus (Alfalfa) : Size and Shape of (Prof. John B. Bancroft and Prof. Paul Kaesberg), 720
Mosaic Virus (Tobacco) : Effect of Thiosemicarbazones on the Multiplication of (Tokuzo Hirai, Toru Shimomura and Yonosuke Nishikawa), 352
    Kinetics of Heat Inactivation of Ribonucleic Acid of (Dr. William Ginoza), 958
Mosaic Virus (Tobacco), and Virus Nucleic Acid : The Latent Period after Infection with (Prof. G. Schramm and R. Engler), 916
Mosaic Virus Protein (Tobacco) : Polymerization—Depolymerization of (Max A. Lauffer, Allen T. Ansevin, T. E. Cartwright and C. C. Brinton, jun.), 1338
Mosinger, Dr. B. (Braun, Dr. T., and) : Effect of Hypothermia on Death by Starvation, 968
Moskowitz, Prof. Merwin : Mode of Action of Chelates in protecting against *Clostridium perfringens* Toxin, 550
Mosquito : Adenosine-5'-phosphates as the Stimulating Agent in Blood for inducing Gorging of the (Teruhiko Hosoi), 1664
Mosquito, *Culex fatigans* Wied., exposed to DDT : Laboratory Variations in Mortality of the (T. Koshi and S. K. Ranganathan), 199
Mosquitoes : Inhibition of Blood Digestion in, by Cations and Cation-Antibiotic Mixtures (Dr. Levon A. Terzian), 282
Moth (Hemileucid) : Interaction between Consecutive Responses in a, and the Evolution of Insect Communication (A. D. Blest), 1077
Mother to the Foetus : Passage of Serum Albumins from the (Prof. A. M. Schechtman and K. C. Abraham), 120
Mothers Aged 42 and Over : Congenital Malformations in Children of (Prof. J. A. Böök, M. Fraccaro, C. G. Hagert and J. Lindsten), 1545
Mothersole, P. L. (Doherty, S. N. F., and) : Awarded the Mullard Premium of the Television Society, 1246
Motion Picture Studies (Lapse-time), of Soil-burrowing Insects (B. C. Green and J. W. T. Spinks), 434
Motokawa's Technique for Investigating Retinal Function : Validity of (Dr. C. I. Howarth and M. Treisman), 843
Mott, Prof. N. F. : Band Theory of Metals and the Structure of the Fermi Surface (Band Theory and Ferromagnetism), 525
    Appointed a member of the Ministry of Supply's Advisory Council on Scientific Research and Technical Development, 1442
Moudgal, N. R., and others : Influence of some Iodoamino-Acids and Iodoproteins on the Growth of *Corcyra cephalonica* St., 1655
Moul, E. T. : Salt Marshes (Algal Flora of Salt Pans on a Marsh), 1512
Mould *Poria vaillantii* (Brown Rot) : Glycerol Metabolism of the (Bienvenido C. Sison, jun., and Walter J. Schubert), 1015
Moulds : Specificity of Crystalline Saccharogenic Amylase of (Yoshio Tsujisaka, Juichiro Fukumoto and Takehiro Yamamoto), 770
Moult (Final), in *Pratylenchus* : Development of Eggs before the (M. R. Sauer), 129
Moulton, Hon. H. Fletcher : Elected to a Fellowship of the Imperial College of Science and Technology, 1182
Moulton Medal of the Institution of Chemical Engineers awarded to W. D. Armstrong, H. H. Rosenbrock and W. L. Wilkinson, 1312
    Moulton Medal (Junior) for 1957 of the Institution of Chemical Engineers awarded to Dr. D. Train, 1312
Mountain Flora : East African, *review* by Dr. G. Taylor, 1027
Mountford, Sir James : Procedure for the Selection of Undergraduate Students, 164
Mourant, Dr. A. E., and others : Haemoglobin E and the Diego Blood Group Antigen in Sarawak and Burma, 119
Mouse : An Effect of the Uterine Environment upon Skeletal Morphology in the (Dr. Anne McLaren and Dr. Donald Michie), 1147
Mouse (Growing Albino) : Heat Output and Body-weight in the (E. G. G. Clarke and A. E. Hawkins), 1599
Mouse (House) : Influence of Time of Mating on the Segregation Ratio of Alleles at the *T* Locus in the (Dr. A. W. H. Braden), 786
    Selection for an Invariant Character—'Vibrissa Number'—in the (R. B. Dun and A. S. Fraser), 1018
Mouse Ascites Carcinoma (Ehrlich) : A Cytoplasmic Membrane-like Fraction from Cells of the (Prof. P. C. Rajam and Anne-Louise Jackson), 1670
Mouse Brains infected with Semliki Forest Virus ; Infectivity of Ribonucleic Acid from (Dr. Ping-yao Cheng), 1800
Mouse Eggs (Unfertilized) : Effect of Glycerol and Low Temperature on Survival of (Dr. J. K. Sherman and Dr. Teh Ping Lin), 785
Mouse Kidney : Effect of Testosterone Propionate upon the Incorporation of Labelled Glycine into Homogenates of (Dr. Edward H. Frieden and Dr. Edward H. Cohen), 912
Mouse Lung after Inhalation of Colloidal Gold Particles : Alterations in the Ultrastructure of the Blood—Air Barrier in the (Dr. N. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1418
Mouse Pancreas : Occurrence of 'Masked Lipid' in (S. Bradbury and B.-P. Clayton), 1347
Mouse Plasma Cell Tumour : Virus-like Bodies in a Transplantable (Dr. A. F. Howatson and E. A. McCulloch), 1213
Mouse Sarcoma : A Correlation between Electrical Surface Charge and some Biological Characteristics during the Stepwise Progression of a (Mrs. L. Purdom and E. J. Ambrose, and Prof. G. Klein), 1586
Mouse-virulence of Group A Streptococci : Enhancement of, by Bactericidal Resorcinols (John Cameron), 919
Moussa, Dr. Raouf S. : Antigenic Formulae for the Genus *Clostridium*, 123
Mouton, R. F., and others : Processing of Foods with Ionizing Radiations (Autolytic Changes occurring during Storage of Sterile Muscle Samples), 878
Movement of Migrants : Internal Migration, a Study of the Frequency of (John A. Rowntree), (General Register Office, Studies on Medical and Population Subjects, No. 11), 1574
Movements (Deep Water), in the Caribbean : Manganese Deposition and (Peter J. Wangersky and Prof. G. E. Hutchinson), 108
Moving Visual Images produced by Regular Stationary Patterns (Dr. M. H. Pirenne), 362 ; (F. W. Campbell and J. G. Robson), 362 ; (Dr. D. M. MacKay), 362
Moving and Standing Waves in a Positive Column : Simultaneous Occurrence of (A. W. M. Cooper, J. R. M. Coulter and Prof. K. G. Emeléus), 1326
MSF—Standard Frequency Transmissions from the United Kingdom (National Physical Laboratory Pamphlet on), new edition, 952
Much (Too), and Too Little (Prof. M. G. Say), 321
Mucopolysaccharides : Chemical and Physical Structure of (National Science Foundation and the Retina Foundation Conference on), 1246
Mucus' (Para-) : 'Gastric (Dr. Franklin Hollander), 847
Mudd, J. S. : Scope and Limits of Colour Measurement, 1705
Mueller, Dr. G. P. : Degradation of Steroidal Sapogenins to 16-Dehydropregnan-20-ones, 771
Muggleton, Audrey, and Danielli, Prof. J. F. : Ageing of *Amoeba proteus* and *A. discoides* Cells, 1738
Muggleton, Dr. P. W. : Freezing and Drying, 1695
Muir-Wood, Dr. Helen : Awarded the Lyell Medal for 1958 of the Geological Society of London, 159
Mulder, G. J. A. : Elected to honorary membership of the Royal Netherlands Geographical Society, 1771
Mullard Company : Offer of £50,000 towards the cost of the new College at Oxford, 1378
Mullard Premium of the Television Society awarded to S. N. F. Doherty and P. L. Mothersole, 1246
Muller, Prof. H. J. : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Müller, Dr. Rudolf : Morphology of Yeast Mitochondria, 1809
Mulliken, R. S. : Structure and Reactivity of Electronically Excited Species (Energies of Excited Molecular States), 321
Mullite : A New Concept of the Transformation Sequence of Kaolinite to (Prof. G. W. Brindley and Dr. M. Nakahira), 1333
'Multiple' Haemoglobins in the Horse (Dr. A. D. Bangham and Dr. H. Lehmann), 267
Multiple-Mutation Theory of Carcinogenesis (J. C. Fisher), 651
Multiplication of *Fusarium* in Soil : Effect of Carbon Dioxide on (Dr. R. H. Stover and Dr. S. R. Freiberg), 788
Multiplication of Solitary HeLa Cells (Dr. Peter Wildy and Michael Stoker), 1407
Multiplication of Tobacco Mosaic Virus : Effect of Thiosemicarbazones on the (Tokuzo Hirai, Toru Shimomura and Yonosuke Nishikawa), 352
Multiplication (Limited), of *M. lepraemurium* in Tissue Culture (R. J. W. Rees and P. C. Wong), 359
Multipoint Linkage Programmes : Number of Mating Types required for Balance in (A. W. F. Edwards), 503
Mumford, Lewis : The Transformations of Man, *review*, 983
Muncey, R. W. : Calculations of Lunar Temperatures, 1458
Mundie, Dr. J. H. : The Natural Resources of the Country and their Value for Teaching and Research (The Freshwater Environment as a Field of Study), 1313
Munro, G. H., and White, R. B. : Observations in Australia of Radio Transmissions from the First Artificial Earth Satellite, 104
Munz, Dr. Frederick W. : Retinal Pigments of a Labrid Fish, 1012
Murakami, Yukio (Yamagata, Noboru, and) : A Cobalt-Accumulator Plant, *Clethra barbinervis* Sieb. et Zucc., 1808
Muramatsu, Michiko, and others : Enzymatic Formation of Aminomalonic Acid from Ketomalonic Acid, 417
Murchison Fund for 1958 of the Geological Society of London awarded to Dr. Geoffrey Bond, 159
Murchison Grant of the Royal Geographical Society awarded to Prof. E. G. Bowen, 810
Murchison Medal for 1958 of the Geological Society of London awarded to Dr. R. G. S. Hudson, 159
Murexide Test in Paper Chromatography (N. B. Chanda and S. Chakraborty), 836
Murine Lymphoma : Adaptation to Serum-free Medium by a Phagocytic Cell Strain derived from a (Dr. Alan S. Rabson, Frances Y. Legallais and Samuel Baron), 1343
Murnaghan, Prof. Maurice F. : Neuro-Anatomical Site in Tick Paralysis, 131
Murray, A. M. (Strachan, Dr. C., and) : Spin-Orbit Coupling and the Extraordinary Hall Effect, 1260
Murray, P., and others : Mechanical Properties of Non-Metallic Brittle Materials (Effects of Porosity and Microstructure on the Mechanical Properties and Resistance to Thermal Shock of High-Temperature Materials—Pure Oxides), 1578
Murrell, J. N. : Structure and Reactivity of Electronically Excited Species (Transfer of Electronic and Vibrational Energy between Weakly Coupled Systems), 320
Murrell, S. A. F., and Price, N. J. : Mechanical Properties of Non-Metallic Brittle Materials (Triaxial Compression Tests at Confining Pressures up to 4,000 lb./in.^{2}), 1577
Murrell, S. A. F. (Evans, I., and) : Mechanical Properties of Non-Metallic Brittle Materials (The Action of Tools), 1579
Murthy, V. S. R., and Venkataramaiah, A. : The Diatom *Asterionella* in the Krishna Estuary Region, 360
Musca domestica (L.) : A Mechanism of Resistance to Parathion in (F. J. Oppenoorth), 425
    Survival Curves for Male and Female House-Flies (Morris Rockstein and Harry M. Lieberman), 787
Musca domestica vicina Macq. : Nutritional Requirements of the Common Housefly (Prof. J. T. Chang and Miss M. Y. Wang), 566
Muscina stabulans (Fall.) (Muscidae) : Sex-linked and Sex-limited Mutation in the Fly (H. E. Paterson), 932
Muscle : Effect of Insulin on Sodium in (Dr. R. Creese, J. L. D'Silva and Jean Northover), 1278
    Repetitive Stimulation of (M. T. Osborne), 1798
Muscle (Intestinal) : Pigmentation of, in Steatorrhoea (Dr. G. Austin Gresham and J. G. Cruickshank, and J. C. Valentine), 538
Muscle (Normal and Denervated Gastrocnemius) : Quantitative Determination of Cholinesterase Activity in Individual End-plates of (M. Brzin and Prof. J. Zajicek), 626
Muscle (Pectoralis Major), of the Pigeon : Histochemical Demonstration of Lipase Activity in the (Dr. J. C. George and K. S. Scaria), 783
    Relative Distribution and Chemical Nature of the Fuel Store of the Two Types of Fibres in the (Dr. J. C. George and R. M. Naik), 709
    Relative Distribution of the Mitochondria in the Two Types of Fibres in the (Dr. J. C. George and R. M. Naik), 782
Muscle (Pig Heart) : Synthesis of Succinate from Acetate by an Enzyme System of (Dr. D. D. Davies), 339

: Crystalization of Cytochrome c from (Bunji iro Sekuzu, Kunio Tagawa, Masahiko Yoneda and Prof. kunuki), (Crystalline Cytochrome c), 1588
quid) : Changes in Adenine Nucleotides of (Tsuneyuki Saito, Ken-ichi Arai and Tsune Tanaka), 1127
Muscle (Tonic), of the Frog : Action of Acetone on the (Dr. Adolf Zeleny and Jaroslav Kozák), 1340, *errata*, 1510
Muscle (Tunny) : Presence of a Threonine-containing Phospholipid in (Hisanao Igarashi, Kôichi Zama and Muneo Katada), 1282
Muscle Collagen : Isolation of a Glycine-Carbohydrate Residue from (K. Konno and K. I. Altman), 994
Muscle Fibres of the Fast and the Slow Contracting Muscles of the Mesothoracic Leg of the American Cockroach (*Periplaneta americana* L.), (W. A. Smit), 1073
Muscle Fibres (Atrial) : Effect of Acetylcholine on the Membrane Resistance and Threshold of (Dr. Edward A. Johnson and P. A. Robertson), 910
Muscle Fibres (Dehydrated) : Adenosine Triphosphatase and Contraction in (Sheila M. V. Hunt and N. A. Matheson), 472
Muscle Protein in Chick Embryo : Serological Determination of Developing (Dr. Yoshito Ogawa, Takatada Kawahara and Jiroo Miura), 621
Muscle-Relaxing Factors (J. R. Bendall), 1188
Muscles (the Fast and the Slow Contracting), of the Mesothoracic Leg of the American Cockroach (*Periplaneta americana* L) : Muscle Fibres of (W. A. Smit), 1073
Muscovite : Kinetics of the Trigonal-to-Cubic Transition in Crystals of Caesium Nitrate on (E. Ferroni and M. Cocchi), 903
Muscular Activity : Mechanics of Normal (Dr. R. J. Whitney), 942
Muscular Activity prior to Venepuncture : Effect of, on the Respiration of Leucocytes *in vitro* (Sheenah K. Bisset and W. D. Alexander), 909
Muscular Exercise and Adrenal 17-Hydroxycorticosteroid Secretion in Dogs (Prof. T. Suzuki, K. Yamashita and T. Mitamura), 715
Museum (National), Bloemfontein : Annual Report (1956-57), 602
Museum (National), of Victoria : Memoirs No. 22, Part 7, Drum Types of Eastern New Guinea (Aldo Massola), 1639
Museum (National), of Wales : Annual Report for 1956-57, 1376
Muskett, Prof. A. E. : Diseases of Cereal Crops, *review*, 515
Mutagenic Action of Actinophages (S. I. Alikhanian and T. S. Iljina), 1476
Mutagens (Chemical) : Use of 'Brood Patterns' in Research on (Dr. C. Auerbach), 754, 757 ; (Dr. O. G. Fahmy and Dr. Myrtle J. Fahmy), 755
Mutant of *Palanus amphitrite* : A Freshwater (Dr. H. H. Shatoury), 790
Mutant Fleece-type in the Australian Merino Sheep : A Dominant Felting Lustre (Dr. B. F. Short), 1414
Mutation : Sex-linked and Sex-limited, in the Fly *Muscina stabulans* (Fall.) (Muscidae), (H. E. Paterson), 932
Mutation (Plaque-type and Host-range) : Increased Rate of, following Treatment of Bacteriophage *in vitro* with Ethyl Methane Sulphonate (Dr. Anthony Loveless), 1212
Mutation (Unstable), in *Salmonella typhimurium* (P. F. Smith-Keary), 1672
Mutchmor, J. A., and Beckel, Dr. W. E. : Importance of Photoperiod and Temperature in Inducing Diapause in the European Corn Borer, *Pyrausta nubilalis* (Hbn.), 204
Mutual Assistance in Africa South of the Sahara : Foundation for, 601, 811
Muzik, Prof. T. J., and Cruzado, H. J. : Transmission of Juvenile Rooting Ability from Seedlings to Adults of *Hevea brasiliensis*, 1288
Mycelia (Fungal) : Lysis of, by Bacterial Enzymes (Koki Horikoshi and Sigeji Iida), 917
Mycobacillin, a New Antifungal Antibiotic produced by *Bacillus subtilis* (S. K. Majumdar and Dr. S. K. Bose), 134
Mycobacterium avium : Relationship between Porphyrin and Isoniazid Resistance of (Mikiyasu Goto and Nobuhiko Katsunuma), 916
Mycobacterium johnei : A Purified Complement-fixing Antigen from (E. Annau), 1206
Mycological Class-work : Use of the Membrane Filter in (Dr. Sigurd Funder), 1606
Mycology : A Glossary of (Walter H. Snell and Esther A. Dick), *review* by Dr. J. Grainer, 517
Mycorrhiza (Vesicular-Arbuscular), in Gramineae (Dr. T. H. Nicolson), 718
Myelinated Nerve Fibres : Variations in Axonal Diameters of—Apparent or Real ? (Dr. G. T. Ashley), 125 ; (Dr. P. L. Williams and Dr. C. P. Wendell-Smith), 125
Myers, Dr. A., and others : Spatial and Temporal Variation of Microfibrillar Organization in Plant Cell Walls, 1251
Myers, A., and others : Electron Diffraction Study of Adsorbed Metal Ions on the Surface of Cellulose Microfibrils, 1516
Myers, K., and Mykytowycz, R. : Social Behaviour in the Wild Rabbit, 1515
Myers, L. H. : Appointed supernumerary deputy director of surveys, Jamaica, 458
Mykytowycz, R. (Myers, K., and) : Social Behaviour in the Wild Rabbit, 1515
Myleran : Protection of August Rats against Lethal Doses of a Dimethyl Homologue of, by Isologous Bone Marrow (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Myoglobin Molecule : A Three-Dimensional Model of the, obtained by X-Ray Analysis (Dr. J. C. Kendrew, Dr. G. Bodo, Dr. H. M. Dintzis, Dr. R. G. Parrish, Dr. H. Wyckoff and Dr. D. C. Phillips), 662
Myoneural Synapses : Lead-Reactive Substances in (Dr. Gy. Sávay and Dr. B. Csillik), 1137
Myrothrecium Cellulase : Zone Electrophoresis of (R. Thomas and Dr. D. R. Whitaker), 715
Mysidacea : Bibliography of the (Joan Gordan), 457

NACHTRIEB, N. H. : Melting, Diffusion and related Topics (Diffusion in Liquid and Solid Pure Metals and in Alloys), 319
Nadeau, Prof. Guy, and others : Influence of Metallic Ions on the Reaction of Ethylene Diamine with Epinephrine and Norepinephrine, 1061
Naets, Dr. J. P. : Erythropoiesis in Nephrectomized Dogs, 1134
Nagabhushanam, A. K. : *Sacculina gonoplaxae* Guérin-Ganivet, 1911, a Rhizocephalan Parasite New to British Waters, 57
Nagai, Y., and Kimura, Y. : Detection of Inositol and Inositol Diphosphate on Paper Chromatograms, 1730
Nagayama, Hideo, and others : Enzymatic Formation of Aminomalonic Acid from Ketamalonic Acid, 417
Nagels, P. : Elimination of Dialysis in the Preparation of Hydrophobic Sols, 638
Nagpur : Bixbyite from (B. L. Sreenivas), 864
Naik, R. M. (George, Dr. J. C., and) : Relative Distribution and Chemical Nature of the Fuel Store of the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon, 709
  Relative Distribution of the Mitochondria in the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon, 782
Nail found within a Hen's Egg (Prof. Hadley Kirkman and Gladys Tracy Kirkman), 1159
Naim, Dr. M. S., and Hussein, A. M. : Growth Responses of *Fusarium oxysporum* to Metabolites of some Rhizospheric Microflora of Egyptian Cotton Varieties, 578
Naismith, R. : Solar Activity and Radio Communication, 954
Naismith, W. E. F. (McDavid, Miss H. M. R., and) : Complex Formation between Groundnut Skin Pigments and Conarachin II, 480
Naithani, S. P., and Raghuvanshi, S. S. : Cytogenetical Studies in the Genus *Citrus*, 1406
Nakahira, Dr. M. (Brindley, Prof. G. W., and) : A New Concept of the Transformation Sequence of Kaolinite to Mullite, 1333
Nakai, Kengo : Serotonin Metabolism in Herbivores, 1734
Nakamura, Hiroji, and others : Structure of Cupric Salts with Mono-, Di- and Tri-Chloroacetic Acids, 479
Nancollas, Dr. G. H. : Interaction in Ionic Solutions (Heat and Entropy Changes for Ion Association Reactions), 241
Nanda, Dr. J. N., and others : Periodicity in Sea Roughness and Origin of Microseisms, 646
Nanney, C. A. : Possible Correlations between Earthquakes and Microseisms, 802
Naoi, M., and others : Nucleic Acids (Specificity of Two Ribonucleases (T_1 and T_2) Isolated from Takadiastase), 1511
α-Naphthaleneacetic Acid : Responses of a Fern Apex to Gibberellic Acid, Kinetin and (Prof. C. W. Wardlaw and G. C. Mitra), 400
Náray-Szabó, I. : Structure and Density of Glass, 40
Nasal Salt Secretion in the Humboldt Penguin (Prof. Knut Schmidt-Nielsen and Dr. W. J. L. Sladen), 1217
Nash, C. A. M. : Appointed senior assistant conservator of forests, Northern Nigeria, 458
Nash, T. (Lovelock, Dr. J. E., and) : A Colour Reaction for Non-ionic and Amphoteric Soaps, 1263
Nasmyth, P. W., and others : Sub-audible Geomagnetic Fluctuations, 1258
National Academy of Sciences of India : Symposium on the Chemistry of Co-ordination Compounds, 1246
National Astronomical Observatory, United States (United States National Science Foundation and the Association of Universities for Research in Astronomy, Inc., contract for a), 236
  Appointment of Dr. Aden B. Meinel as director, 740
National Academy of Sciences (United States)—National Research Council, and others : International Congress of Radiation Research, 1444
National Coal Board (Mining Research Establishment), and the Building Research Station of the Department of Scientific and Industrial Research : Conference on the Mechanical Properties of Non-Metallic Brittle Materials, 1577
National Conference between Industry and the Technical Colleges : Report of the Second (Federation of British Industries), 370
National Conference on Social Work, British : Third Meeting (Children and Young People), 1381
National Congress of Chemistry : Eighth (Italian Chemical Society and the Society of Chemical Industry), 1246
National Council for Technological Awards : Report for December 1955 to July 1957, 814
National Fuel Policy, 1108
National Institute of Industrial Psychology : Appointment of J. D. Handyside as controller of research, 885, 1042
  H. M. Vernon Prize for 1958 awarded to A. T. Welford, 1510
National Institute of Industrial Psychology (Institute of Personnel Management in conjunction with the) : Course in the Use of Statistics in Personnel Management, 20
National Institute for Medical Research : Appointment of Dr. D. G. Evans as director of the Division of Biological Standards, 673
National Institute for Research in Dairying : Retirement of Prof. H. D. Kay from the directorship, 1506
National Museum, Bloemfontein : Annual Report (1956-57), 602
National Museum of Victoria : Memoirs No. 22, Part 7, Drum Types of Eastern New Guinea (Aldo Massola), 1639
National Museum of Wales, Cardiff : Annual Report for 1956-57, 1376
National Museum, United States : Annual Report for 1957, 1310
National Joint Advisory Council (Report by a Sub-Committee of the) : Training for Skill—Recruitment and Training of Young Workers in Industry, 1293
National Oceanographic Council : Annual Report for 1956-57 (Prof. K. F. Bowden), 888
National Parks in Britain, 950
National Parks Commission : Eighth Report (1956-57), 950
National Physical Laboratory : Appointment of Dr. F. H. Todd as superintendent of the Ship Division, 456
  Appointment of Dr. Edward Lee as deputy director, 600
  Reorganization of the, 600
  Report for 1956, 607
  MSF—Standard Frequency Transmissions from the United Kingdom, new edition, 952
  Notes on Applied Science No. 16, Modern Computing Methods, *review* by S. Weintroub, 985
  Open Days, 1246
National Research Council of Canada : Retirement of Dr. J. B. Collip from the directorship of the Division of Medical Research, 311
  Appointment of Prof. R. F. Farquharson as vice-president (medical), 312
  Fortieth Annual Report (1956-57), 1249
  Review for 1957, 1574
National Research Council of Canada (Low Temperature and Solid State Physics Group of the Division of Pure Physics) : Symposium on Melting, Diffusion and related Topics), 319
National Research Council, United States (Photobiology Committee) : International Symposium on Photoperiodism in Plants and Animals, 535

National Research Council, United States, and others : International Congress of Radiation Research, 1444
National Research Development Corporation : Report and Statement of Accounts (1956-57), 1448
National Science Foundation, United States : Reviews of Data on Research and Development, No. 8, Funds for Research in Agricultural Experiment Stations (1953-54), 160
  Reviews of Data on Research and Development, No. 6, Scientific Research Activities at Colleges and Universities in the United States, 167
  Grant of 300,000 dollars to the State College of Washington, Pullman, for a research reactor, 313
  Grant of 150,000 dollars to the University of Virgina, Charlottesville, for a research reactor, 313
  Grant of 160,000 dollars to the Midwestern Universities Research Association, Madison, for the support of basic research entitled 'High Energy Accelerator Studies', 313
  Federal Funds for Science, 6, The Federal Research and Development Budget, Fiscal Years 1956, 1957 and 1958, 534
  Basic Research—a National Resource, 679
  Grants, 1181
  Bulletin on Immigration of Technical Personnel to the United States, 1243
  Fellowships for 1958-59, 1377
  Seventh Annual Report (1956-57), 1710
  Government—University Relationships in Federally Sponsored Scientific Research and Development, 1712
National Science Foundation, United States, and the Association of Universities for Research in Astronomy, Inc. : Contract for a United States National Astronomical Observatory, 236
National Science Foundation, United States, and the Retina Foundation : Conference on the Chemical and Physical Structure of Mucopolysaccharides, 1246
National Science Foundation, United States, and the Marine Institute of the University of Georgia : Conference on Salt Marshes, 161, 1512
National Scientific Documentation Centre (Indian) : Annual Report for 1956-57, 1109
National Service : Science Teachers and (House of Commons Debate on), 948
National Symposium on Microwave Theory and Techniques (United States Institute of Radio Engineers Professional Group), 885
National Trust : Sixty-second Annual Report (1956-57), 167
National Union of Students : Grants Year Book, 1770
National Vegetable Research Station Association : Members' Day, 1444
National Zoological Park, Washington : Appointment of Dr. Theodore H. Reed as director, 1106
Nationalized Industries: The Boards of (Lord Simon of Wythenshawe), 511
  Scientific Management in, 511
NATO : Nominations of national representatives on the Science Committee, 739
NATO (Combustion and Propulsion Panel of the Advisory Group for Aeronautical Research and Development) : Third Colloquium (Current Propulsion Problems), 458
NATO (Wind Tunnel and Model Testing Panel) : Meeting in Freiburg im Breisgau, 458
Natural, Medical and Surgical Sciences, Association for the Advancement of (Amsterdam) : Gold Medal awarded to Sir Hans Krebs, 743
Natural Airborne Radioactivity at Kjeller, Norway (S. H. Small, A. Lillegraven and P. B. Storebø), 1197
Natural Cross-Pollination in Lettuce, *Lactuca sativa* L. (L. E. Watts), 1084
Natural Gas in Scotland (T. S. Ricketts), 1042
Natural Gas (Liquid) : Importation into Britain of, 671
Natural History of the Fox Squirrel (J. C. Moore), 322
Natural History Society for the Bibliography of : Election of Officers, 1246
Natural History Societies : Directory of (New edition to be published by the British Association for the Advancement of Science), 741
Natural Occurrence of Thymine and Three Methylated Adenine Bases in several Ribonucleic Acids (Dr. J. W. Littlefield and Dr. D. B. Dunn), 254
Natural Product : α-Aminoisobutyric Acid, β-Hydroxyleucine and γ-Methylproline from the Hydrolysis of a (Prof. G. W. Kenner and R. C. Sheppard), 48
Natural Products : Stereochemistry and the Chemistry of (Dr. I. L. Finar), (Organic Chemistry, Vol. 2), *review* by Dr. W. D. Ollis, 6
Natural Resources of the Country and their Value for Teaching and Research (Papers at the Annual Meeting of the Association of British Zoologists), 1313
Natural Resources of Lake Victoria : Utilizing the, for the Benefit of Fisheries and Agriculture (R. S. A. Beauchamp), 1634
Natural Surfaces : An Instrument for Measuring Evaporation from (R. J. Taylor and A. J. Dyer), 408
Naturalists Trust—their Contribution to Nature Conservation (South-Eastern Union of Scientific Societies Symposium on), 1447
Naturally Occurring Gibberellins in the Growing Plant : Evidence from a Dwarf Pea Bioassay for (A. J. McComb and Prof. D. J. Carr), 1548
Nature : A Chimaera of *Alaria* and *Laminaria* found in (Jun Tokida, Hokoei Ohmi and Minoru Imashima), 923
  The Council for, 867
Nature of the Antigens responsible for the Acquired Tolerance of Turkeys to Rous Sarcoma Agent (Dr. R. J. C. Harris and P. J. Simons), 1485
Nature of some Decay-retardant Extractive Components in Incense Cedar Heartwood (*Libocedrus decurrens* Torrey), (Arthur B. Anderson, Eugene Zavarin and Theodore C. Scheffer), 1275
Nature of Immune Responses in Parasitism (Parasitology Group of the Institute of Biology Discussion on), 464
Nature of Life : Modern Science and the (Dr. William S. Beck), *review* by Dr. Alex Comfort, 1627
Nature in South-East England : Conservation of (South-Eastern Union of Scientific Societies Conference on), 743, 1446
Nature Conservancy : Appointment of A. Blenkinsop, Lieut.-Colonel C. M. Floyd, Major J. C. Morrison and Prof. L. Dudley Stamp as members, 1312
  Appointment of Michael Noble, A. R. Wannop and Prof. C. M. Yonge as members of the Scottish Committee, 1312
  Appointment of Prof. N. A. Burges and Dr. A. S. Watt as members of the Committee for England, 1312
  Appointment of Prof. W. G. V. Balchin and
  members of the Committee for Wales, 1312
  New Nature Reserve on the Gower Peninsula, Glam
  Coed Tremadoc and Bridgwater Bay Reserves (extension of
  Rusland Moss Nature Reserve, 1572
  Rodney Stoke Nature Reserve (further additions to the), 1572
  Eighth Annual Report (1956-57), 1647
Nature Reserves : New (Nature Conservancy), 1572
Nature Reserves in Britain : New (Nature Conservancy), 1379
Nauck, Prof. Ernst Georg (herausgegeben von) : Lehrbuch der Tropenkrankheinten, *review* by Prof. P. C. C. Garnham, 1428
Nautical Almanack (1958) : Indian Ephemeris and, 314
Navigation Prize of the Royal Aeronautical Society awarded to W. Makinson and G. M. Hellings, 1646
Navy Estimates : The Isaac Newton Telescope at the Royal Greenwich Observatory and the, 811
Nayar, S. L., and others : Glossary of Indian Medicinal Plants, *review* by S. B. Challen, 984
Naylor, Dr. A. : Photoperiodism in Plants and Animals (Effects of certain Synthetic Hormones on Flowering of *Xanthium*), 535
Naylor, Beryl, and Rees, Dr. H. : Chromosome Size in *Lolium temulentum* and *L. perenne*, 854
Naylor, Dr. Margaret : Chronosomes and Chromocentres in the Nuclei of *Halidrys siliquosa* (L.) Lyngb., 853
Neal, Dr. G. E., and Hulme, Dr. A. C. : Activity of Cytoplasmic Particules isolated from Apples, 1469
Neary, Dr. G. J., and others : Mitotic Delay in Irradiated Roots of *Vivia faba*—the Effect of Oxygen, 1083
Neckel, Dr. Heinz : A Photographic Observation of the Satellite 1957β leaving the Earth's Shadow, 257
Necrosis (Caudal), in Suckling Rats (P. K. Dikshit and S. Sriramachari), 63
Necrotic Liver Degeneration (Dietary) : Protective Effect of Trace Elements other than Selenium against (J. Bunyan, E. E. Edwin and J. Green), 1801
Nectria stenospora : Cytoplasmic Variation in (Mrs. Ann Gibson and Dr. D. M. Griffin), 1222
Needham, Dr. A. E. : Connective-Tissue Pigment of the Centipede, *Lithobius forficatus* (L.), 194
Nef, Prof. John U. : Cultural Foundations of Industrial Civilization, *review*, 1427
Negev Phosphate Rocks : Minor Constitutents and Trace Elements in (Dr. E. Foa), 1676
Negroes : Js, a 'New' Blood Group Antigen found in (Dr. Eloise R. Giblett), 1221
Neill Prize for 1955-57 of the Royal Society of Edinburgh awarded to Monica Taylor, 673
Neish, William J. P. : Effect of some Nitrogen Mustard Derivatives on Growth of Rabbit's Hair, 188
Nel, W., and others : Flame Ionization Detector for Gas Chromatography, 177
Nelson, W. A. : Transfer of Sheep Keds, *Melophagus ovinus* (L.), from Ewes to their Lambs, 56
Nephrectomized Dogs : Erythropoiesis in (Dr. J. P. Naets), 1134
Nereis fucata : Biliverdin in the Eggs of (J. Green and R. Phillips Dales), 1412
Nermut, Dr. M. V., and Drášil, Dr. V. : Changes in the Dry Weight and the Deoxyribonucleic Acid Content of *Proteus vulgaris* caused by Penicillin, 1740
Nerve (Facial) : A Histoautoradiographic Study of the Effect of Section of the, on the Uptake of Methionine-^{35}S by the Cells of the Facial Nerve Nucleus (J. Fischer, Z. Lodin and Dr. J. Koloušek), 341
Nerve (Mammalian Peripheral) : Effect of a Raised Peripheral Temperature upon the Rate of Regeneration in a (H. J. Gamble), 287
Nerve Cord (Thoracic), of *Periplaneta americana* L. : Physical Release of Acetylcholine from the (E. H. Colhoun), 490
Nerve Fibres : 'Intercalated' Internodes in (Dr. L. Lubińska), 957
Nerve Fibres (Myelinated) : Variations in Axonal Diameters of—Apparent or Real ? (Dr. G. T. Ashley), 125 ; (Dr. P. L. Williams and Dr. C. P. Wendell-Smith), 125
Nerve Nucleus (Facial) : A Histoautoradiographic Study of the Effect of Section of the Facial Nerve on the Uptake of Methionine-^{35}S by the Cells of the (J. Fischer, Z. Lodin and Dr. J. Koloušek), 341
Nervensystems : Morphologie und Physiologie des (Prof. Paul Glees), *review* by Prof. Ragnar Granit, 1493
Nervous Control of Cilia in Amphioxus (*Branchiostoma*), (Quentin Bone), 193
Nervous System : Physiology of the (Dr. E. Geoffrey Walsh), *review* by Prof. D. Whitteridge, 1095
Nervous System (Cat's Optic) : Sensory Deprivation and the (Dr. Lawrence Weiskrantz), 1047
Nervous System (Central) : Chemotherapy and the (Dr. Henry McIlwain), *review* by Dr. G. B. Ansell, 1430
Ness (Mrs. Patrick) Award of the Royal Geographical Society awarded to Capt. A. G. Bomford, 810
Netherlands Geographical Society, Royal : Election of Prof. J. Büdel, Prof. H. C. Darby and G. J. A. Mulder to honorary membership, 1771
Netherlands Telecommunications Services (Staff of the Ionosphere and Radio Astronomy Section of the) : A Remarkable Solar Radio Event, 542
Netschert, B. C., and Schurr, S. H. : Atomic Energy Applications with reference to Underdeveloped Countries, *review* by Sir John Cockcroft, 1167
Nettleship, Prof. Anderson : Contraction of Time and Protoplasm, 562
Network Synthesis : Passive (Dr. James E. Storer), *review* by S. A. Stigant, 1564
Networks in Electrical Communication and other Fields : The Theory of (F. E. Rogers), *review* by K. R. Sturley, 6
Networks (Electrical) : The Theory of, *review* by K. R. Sturley, 6
Neuberger, Prof. A., and others : Carbohydrate Peptide Complex from Egg Albumin, 1345
Neugebauer, Dr. O. : The Exact Sciences in Antiquity, second edition, *review* by Dr. A. Armitage, 1097
Neural Lobe (Rat Pituitary) : Histological and Chemical Changes in the, following Treatment with Neurohypophysical Substances (Dr. J. de Groot), 650
Neuraminidase : The Influenza Virus (Dr. Alfred Gottschalk), 377
Neuro-Anatomical Site in Tick Paralysis (Prof. Maurice F. Murnaghan), 131

ew by Prof. Ragnar Granit, 1493
ysical Substances : Histological and Chemical Changes in the at Pituitary Neural Lobe following Treatment with (Dr. J. de Groot), 650
Neuromuscular Blocking Activity of Ethylene*bis*-(Trimethylammonium) : Reaction of Ethylene Bromide with Trimethylamine and the (Dr. Allan P. Gray and Thomas B. O'Dell), 634
Neuron Cell-Bodies in Sodium-free Media : Electrical Responses of (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 1798
Neurones (Supra-optic) : Relation between Nucleolar Volume and Cell Body Content of Ribonucleic Acid in (J.-E. Edström and D. Eichner), 619
Neuropharmacology—Transactions of the Third Conference, 1956, Princeton (edited by Harold A. Abramson), *review* by Dr. G. B. Ansell, 1430
Neurophysiology, *review* by Prof. D. Whitteridge, 1095
Neurophysiology (Clinical) : Fundamentals of (Dr. Paul O. Chatfield), *review* by Prof. D. Whitteridge, 1095
Neuro-Psycho-pharmacology : International Collegium for (First International Symposium), 315
Neurosecretory Cells in some Cirripedes (H. Barnes and J. J. Gonor), 194
Neurospora crassa : Aberrant Recombination at the *am* Locus in (J. A. Pateman), 1605
  Para-Amino-Benzoic Acid and Sulphanilamide in the Nutrition of (Prof. D. V. Siva Sankar), 629
Neutral Red: Affinity of, for Cells with Basophilic Cytoplasm (Dr. Winfield S. Morgan), 1132
Neutral Salts : Effect of, on the Structure of Collagen and Gelatin (William F. Harrington), 997
Neutron Production in a High-Power Pinch Apparatus (Controlled Release of Thermonuclear Energy), (Dr. D. C. Hagerman and Dr. J. W. Mather), 226
Neutron Production in a Linear Stabilized Pinch : New Confinement Phenomena and (Controlled Release of Thermonuclear Energy), (Dr. L. B. Burkhardt and Dr. R. H. Lovberg), 228
Neutron Spectrum from ZETA : Measurement of the (B. Rose, A. E. Taylor and E. Wood), 1630
Neutron-irradiated Sodium Chlorate : Nuclear Quadrupole Resonance of (Joseph Depireux and Prof. Jules Duchesne), 759
Neutrons from a Stabilized Toroidal Pinch (Controlled Release of Thermonuclear Energy), (Dr. J. Honsaker, Dr. H. Karr, Dr. J. Osher, Dr. J. A. Phillips and Dr. J. L. Tuck), 231
Neve, R. A. : Sex Chromosomes in the Hop, *Humulus lupulus*, 1084
New to British Waters : *Sacculina gonoplaxae* Guérin-Ganivet, 1911, a Rhinocephalan Parasite (A. K. Nagabhushanam), 57
New Antifungal Antibiotic produced by *Bacillus subtilis* : Mycobacillin, a (S. K. Majumdar and Dr. S. K. Bose), 134
New Anti-neoplastic Agent : The Anionic Polyelectrolyte, Polyethylene Sulphonate, as a (Dr. William Regelson and James F. Holland), 46
New Aphid on Chicory : Virus Transmission by *Dactynotus cichoricola* H.R.L., a (Dr. J. Semal), 721
New Approach to Electricity, *review* by G. R. Noakes, 870
'New' Blood Group Antigen found in Negroes : Js, a (Dr. Eloise R. Giblett), 1221
New British Fish (*Gobius forsteri*), (P. G. Corbin), 1659
New Class of Antibiotic Salts of Reduced Toxicity (F. A. Alves, M. F. C. A. N. Graça and H. L. Baptista), 182
New Compound from a Species of *Penicillium* : Decumbin, a (Dr. V. L. Singleton, N. Bohonos and A. J. Ullstrup), 1072
New Concept of the Transformation Sequence of Kaolinite to Mullite (Prof. G. W. Brindley and Dr. M. Nakahira), 1333
New Confinement Phenomena and Neutron Production in a Linear Stabilized Pinch (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt and Dr. R. H. Lovberg), 228
New Crystalline Antifungal Antibiotic : Flavofungin, a—Origin and Biological Properties (Dr. J. Uri and I. Békési), 908
New Deal for Australian Universities (Sir Eric Ashby), 300
New 'Deleted' *Rh*-Chromosome (Dr. K. Henningsen), 502
New Developments in Analytical Psychology (Michael Fordham), *review* by Dr. Clifford Allen, 298
New Flavin produced by an Actinomycete : Isolation of a (Orio Ciferri and Marisa P. Machado), 484
New Guinea (Dutch) : Absence of Abnormal Haemoglobins in some Groups of the Papua Population of (Prof. J. H. P. Jonxis, Dr. T. H. J. Huisman, G. J. da Costa and D. Metselaar), 1279
New Guinea (Eastern) : Drum Types of (Aldo Massola), 1639
New Hebrides : Biogeography of the (Dr. Alan Solem), 1253
New Herbicide—1:1'-Ethylene-2:2'-Dipyridylium Dibromide (R. C. Brian, R. F. Homer and J. Stubbs, and R. L. Jones), 446
New Hypotensive Drug : 1 : 2 : 2 : 6 : 6-Pentamethylpiperidine, a (G. E. Lee, W. R. Wragg, S. J. Corne, N. D. Edge and H. W. Reading), 1717
New Installations for B.B.C. Television, 1046
New Intermediate Physics (G. R. Noakes), *review* by W. H. Dowland, 586
New Journal of Geophysics, 1376
New Method for the Chemical Determination of Rutin : Use of Defoliants for Drying Buckwheat in the Field, and a (V. Brejcha and P. Horák), 505
New Method for separating Strychnine and Brucine by Paper Chromatography (G. Dušinsky and Dr. M. Tyllová), 1335
New Mexico : Silicified Permian Fossils from Texas and—Pleurotomariacea (Prof. R. L. Batten), 1639
New Microwave Mixer (Prof. H. M. Barlow, Dr. J. Brown and Dr. K. V. Gopala Krishna), 1008
New Mineral : Koutekite, a (Zdenek Johan), 1553
New Nature Reserves (Nature Conservancy), 1572
New Nature Reserves in Britain (Nature Conservancy), 1379
New Reaction for the Differentiation of *cis* and *trans*-Isomers of Nitrophenylhydrazones of some α-Keto Acids (Hirohiko Katsuki, Köichirö Sumizu, Tarumi Moriwaki, Shözö Tanaka and Ichirö Hayashi), 639
New Reactor at Harwell, 947
New Roads, 601
New Route of Breakdown of the Indole Nucleus : Bacterial Dissimilation of Indoleacetic Acid—a (Michael H. Proctor), 1345
New Series of Anthelmintics (F. C. Copp, O. D. Standen, J. Scarnell, Deirdre A. Rawes and R. B. Burrows), 183
New Series of Ganglion-blocking Agents : Polyalkylpiperidines, a (Dr. A. Spinks and Prof. E. H. P. Young), 1397
New Species of *Atolla* (Dr. F. S. Russell), 1811
New Species of *Protopitys* (J. Walton), 1377
New Spectral Characteristic in Solar Radio Emission (A. Maxwell and G. Swarup), 36
New Steroid : 'Ledercort', a (Lederle Laboratories Division of Cyanamid of Great Britain, Ltd.), 1311
New Subterranean Crustacean from the West Indies (Dr. Isabella Gordon), 1552
New Sugar, Paratose : Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
New Superstructure in Gamma-Ferric Oxide (G. W. van Oosterhout and Dr. C. J. M. Rooijmans), 44
New Synthesis of Histidyl Peptides (Prof. Shiro Akabori, Kenji Okawa and Fumio Sakiyama), 772
New Thermal Image-Converter (W. R. Harding, C. Hilsum and D. C. Northrop), 691
New Transaminase of *Corynebacterium diphtheriae* (Michael Bagdasarian), 1399, *erratum*, 1640
New Type of Light Organ in the Deep-Sea Fish *Opisthoproctus* (Dr. E. Bertelsen), 862
New Year Honours List, 86
New York Academy of Medicine : Medal awarded to Dr. Alphonse R. Dochez, 238
New Zealand Department of Scientific and Industrial Research : Publication of the *New Zealand Journal of Geology and Geophysics*, 1179
  Thirty-first Annual Report (1957), 1383
New Zealand Journal of Agricultural Research, Vol. 1, No. 1, 1310
New Zealand Journal of Geology and Geophysics (New Zealand Department of Scientific and Industrial Research), No. 1, 1179
Newbery, Prof. E. : Elected president for 1958 of the Royal Society of South Africa, 1378
Newborn : Comparative Aspects of Haemolytic Disease of the (Dr. G. Fulton Roberts), *review*, 588
New-born Rabbits : Antibody Production by Lymphocytes after *in vitro* Contact with Bacterial Antigen and Transfer to (Dr. Miroslav Holub), 122
Newcombe, H. B., and others : Lingering Effects of Local X-Irradiation on Healing of Burns, 1138
Newell, B. S. (Garrod, D. J., and) : Ring Formation in *Tilapia esculenta*, 1411
Newell, Dr. Kenneth : Epidemiology, *review*, 800
Newer Preparative Methods in Organic Chemistry (Chemical Society and the Fine Chemicals Group of the Society of Chemical Industry Symposium on), 239
Newitt, Prof. D. M. : Technological Initiative, *review*, 1094
Newly Calcified Tissues : A Histological Stain for (Prof. J. T. Irving), 704
Newly Recognized Polyzoan from British Waters : *Bugula simplex* Hincks, a (J. S. Ryland), 1146
Newman, A. J. : Mechanical Properties of Non-Metallic Brittle Materials (Recent Research on the Influence of the Method of Testing upon the Results obtained in Compressive Strength Tests of Bricks), 1577
Newton : Franklin and—an Enquiry into Speculative Newtonian Experimental Science and Franklin's Work in Electricity as an Example Thereof (Prof. I. Bernard Cohen), *review* by Dr. M. A. Hoskin, 295
Newton (Isaac) Telescope at the Royal Greenwich Observatory, and the Navy Estimates, 811
Newts in the Laboratory : Rearing, for Experimental Purposes (Dr. David D. Williams), 933
Ney, Prof. E. P., and others : Cosmic Rays and the Sunspot Cycle (Primary α-Particle Intensity at Sunspot Maximum), 1319
Niblett, Prof. W. R. : The Place of Residence in the University To-day, 164
Nicholas, Dr. D. J. D. : Trace Metals in the Nitrogen Metabolism of Plants, 672
Nicholls, C. M. : Nuclear Energy (Development of the Butex Process for the Industrial Separation of Plutonium from Nuclear Reactor Fuels), 735
Nicholls, C. M. (Gillieson, Dr. A. H., and) : Nuclear Energy (Nuclear Criticality in Chemical Plants), 736
Nicholls, Dr. J. G. : Awarded a Beit Junior Fellowship for Medical Research, 1507
Nicholls, P., and others : Free Radical produced in the Reaction of Metmyoglobin with Hydrogen Peroxide, 1398
Nichols, B. W. (Aylward, Dr. Francis, and) : Isolation of β-Sitosterol-D-Glucoside from Groundnut Phospholipids, 1064
Nichols, R. : Propagation of Cacao in Plastic Bags, 580
  A Possible Source of Error in the Chemical Detection of Indolyl Acetic Acid in Plants, 919
Nicholson, A. M. : Contact Stresses (Rolling Contact), 1774
Nicholson, Dr. D. C. (Gray, Prof. C. H., and) : Dextrorotatory Urobilin-IXα and Racemic *d*-Urobilin, 483
Nicholson, Dr. D. C., and others : The IX-α Structure of the Common Bile Pigments, 183
Nicholson, E. M. : Biological Productivity of Britain, 83
Nicholson, L. F. : Awarded the Simms Gold Medal of the Royal Aeronautical Society, 1646
Nickel (II) : Complexes of, with 2-Pyridinaldoxime (Prof. Ronald A. Krause and Daryle H. Busch), 1529
Nickel (Tetrakistrifluorophosphine-) : Raman Spectrum of (Dr. L. A. Woodward and J. R. Hall), 831
Nickel Cyclopentadienyl Nitrosyl : Microwave Spectrum of, and the Configuration of the Molecule (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1157
Nickell, Dr. L. G. : Gibberellin and the Growth of Plant Tissue Cultures, 499
Nickels, H. C., and Grubb, D. M. B. : The B.B.C. Riverside Television Studios—some Aspects of Technical Planning and Equipment (B.B.C. Engineering Monograph No. 14), 1046
Nickerson, W. J., and others : Yeasts (edited by W. Roman), *review* by R. B. Gilliland, 798
Nicol, Prof. T., and others : Effect of various Stilbene Compounds on the Phagocytic Activity of the Reticulo-Endothelial System, 1538
  Effect of certain Polyphenylated Aliphatic Hydrocarbons on the Phagocytic Activity of the Reticulo-Endothelial System, 1804
Nicol, Prof. T. (Sewell, I. A., and) : Effect of Antibiotics on the Phagocytic Activity of the Reticulo-Endothelial System, 1662

Nicolaus, R. A., and others : The IX-α Structure of the Common Bile Pigments, 183
Nicolson, Dr. T. H. : Vesicular-Arbuscular Mycorrhiza in the Gramineae, 718
Nicotiana Plants : Effects of Gibberellic Acid on (L. G. Burk and Dr. T. C. Tso), 1672
Niebroj, Dr. Tadeus : Mast Cells, 991
Niemann, Carl, and others (edited by) : Organic Reactions, Vol. 9, *review* by Prof. John Read, 147
Nigerian African Populations : Haptoglobin Types in British, Spanish Basque and (Dr. A. C. Allison, Dr. B. S. Blumberg and Mrs. ap Rees), 824
Night : Detection of Tsetse Fly at (G. R. Jewell), 1354
  Use of Reflecting Paints for locating Tsetse Fly at (B. D. Rennison, W. H. R. Lumsden and C. J. Webb), 1354
Night Sky : The, in February, 314 ; in March, 603 ; in April, 884 ; in May, 1182 ; in June, 1510 ; in July, 1771
Night Sky : The, 1958 (Times Publishing Co., Ltd.), 530
Nightingale, A. : Electrical Noise from 'Polarization Cells' and from Human Tissues, 192
Niimoto, Alice (Zeitlin, Dr. Harry, and) : The Reflectance Spectrum of Acetone-2,4-dinitrophenylhydrazone, 1616
Nijhawan, Dr. B. R. : Given the award of 'Padma Shri' by the President of the Republic of India, 885
Nijhawan, Dr. B. R. (edited by) : Industrial Failure of Engineering Metals and Alloys—a Symposium organized by the National Metallurgical Laboratory, 1953, *review* by Prof. F. C. Thompson, 1498
Nijhawan, Dr. B. R., and Chatterjea, Dr. A. B. (edited by) : Non-Ferrous Metal Industry in India—a Symposium held at the National Metallurgical Laboratory, 1954, *review* by Prof. F. C. Thompson, 1498
Nilsson, Inga Marie, and Yamashina, Ikuo : Effect of Human α_1-Acid Glycoprotein on Blood Coagulation, 711
Nimmo, M. (Edlin, H. L., and) : Tree Injuries, *review* by Dr. L. Chalk, 732
Ninhydrin : Detection of α-Ketoglutaric Acid and other Keto-Acids on Paper Chromatograms with (Dr. R. Rabson and N. E. Tolbert), 50
Niobium in Ascidians (Dr. D. B. Carlisle), 933
Niobium in Sea-Water (Dr. D. B. Carlisle and L. G. Hummerstone), 1002
Nishi, S., and others : Electrical Responses of Frog Spinal Ganglion Cells in Sodium-free Media, 703
  Electrical Responses of Neuron Cell-Bodies in Sodium-free Media, 1798
Nishikawa, Yonosuke, and others : Effect of Thiosemicarbazones on the Multiplication of Tobacco Mosaic Virus, 352
Nitrate Metabolic Products : Adverse Effect of, on Sheep Growth (N. D. Jamieson), 1601
Nitrate (Caesium), on Muscovite : Kinetics of the Trigonal-to-Cubic Transition in Crystals of (E. Ferroni and M. Cocchi), 903
Nitric Oxide Flames : Effect of Pressure on Burning Velocity of (G. A. McD. Cummings), 1327
Nitride Precipitates (Fine Aluminium), in Steel (Prof. C. C. Hsiao), 1527
Nitrogen (Isotopic) : Assay of, by Mass-Spectrometer (A. P. Sims and Dr. E. C. Cocking), 474
Nitrogen-containing Disaccharides : Enzymic Synthesis of, by α-Galactosyl Transfer (Dr. Winifred M. Watkins), 117
Nitrogen Fixation in *Elaeagnus* Root Nodules (I. C. Gardner), 717
Nitrogen Metabolism of Plants : Trace Metals in the (Dr. D. J. D. Nicholas), 672
Nitrogen Mustard Derivatives : Effect of some, on Growth of Rabbit's Hair (William J. P. Neish), 188
Nitrogen Mustard Phosphamide Ester (B 518-ASTA) : Chemotherapeutic Action of a Cyclic, in Experimental Tumours of the Rat (Herbert Arnold, Friedrich Bourseaux and Norbert Brock), 931
Nitrogen and Sulphur Content of Organic Matter : Effect of the, on the Production of Ammonium and Sulphate (N. J. Barrow), 1806
2-Nitro-phenol : Isolation of, from the Mixture of Mono-nitro-phenols (Dr. Tamás Széll and Árpád Furka), 481
Nitrophenylhydrazones of some α-Keto Acids : A New Reaction for the Differentation of *cis*- and *trans*-Isomers of (Hirohiko Katsuki Köichirö Sumizu, Tarumi Moriwaki, Shözö Tanaka and Ichirö Hayashi), 639
Nitrosomonas europaea : Culture of, in Media Free of Insoluble Constituents (M. S. Engel and Prof. M. Alexander), 136
Nitrosyl (Nickel Cyclopentadienyl) : Microwave Spectrum of, and the Configuration of the Molecule (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1157
Nitschmann, Prof. Hs., and others : Method of Isolating the β_1-Metal-combining Globulin from Human Blood Plasma, 490
Nitta, I., and others : Structure of Kainic Acid and its Isomer, Allokainic Acid, 761
Nixon, W. E. : Honorary companionship of the Royal Aeronautical Society awarded to, 1646
Noakes, G. R. : Physical Optics, *review*, 5
  New Intermediate Physics, *review* by W. H. Dowland, 586
  A New Approach to Electricity, *review*, 870
Nobel Prize-Winners : Annual Conference of, 1444
Noble, Dr. Mary J. McD. : Elected a Fellow of the Royal Society of Edinburgh, 739
Noble, Michael : Appointed a member of the Scottish Committee of the Nature Conservancy, 1312
Noble, W. (Pate, K., and) : Mechanical Properties of Non-Metallic Brittle Materials (Strength of Ceramic Materials—Street-Strain Relationships in Heavy Clay Products), 1578
Nóbrega, P. (Reis, J., e): Tratado de Doenças das Aves, 4 vols., *review* by Dr. C. A. Wright, 1756
Node (Atrio-ventricular) : Transmembrane Potentials of Single Fibres of the (Dr. Brian F. Hoffman, A. Paes de Carvalho and W. Carlos de Mello), 66
Nodule Formation in Soya Bean : Relation between Chlorophyll Metabolism and (C. Sironval), 1272
Nodules of *Trifolium alexandrinum* : Occurrence of a Blue-Green Alga in the (S. Bhaskaran and G. S. Venkataraman), 277
Nodules (*Elaeagnus* Root) : Nitrogen Fixation in (I. C. Gardner), 717
Nodulization in Dwarf Beans (*Phaseolus vulgaris*) : Inhibitory Effect of Gibberellins on (G. A. Thurber, J. R. Douglas and A. W. Galston), 1082
Noise : Flow (Acoustics Group of the Physical Society and the North-Eastern Branch of the Institute of Physics Discussion on), 388
Noise in Industry (British Occupational Hygiene Societ 813, 1696
Noise on Television Pictures : Visibility of (R. Fatehchand), 1797
Noise (Electrical), from 'Polarization Cells' and from Human Tissues (Nightingale), 192
Noise (Radio), from Lightning Discharges (F. Horner and C. Clarke), 688
Noise (Radio), from Meteors (Gerald S. Hawkins), 1610
Noise (Solar) : Duration and Band-width of Short-lived Transients in (T. de Groot), 1676
Noltmann, Ernst (Bruns, Dr. Friedrich H., and) : Phosphomannoisomerase, an SH-Dependent Metal-Enzyme Complex, 1467
Nomenclature : A Suggested Revision of—Angiotensin (Dr. Eduardo Braun-Menendez and Dr. Irvine H. Page), 1061
  Zoological, 88
Nomenclature (Zoological), International Commission on : Retirement of Francis Hemming as honorary secretary, 1308
  New address, 1703
Nomenclature of Cell Strains (Dr. John Paul), 650
Non-Biologists : Biology for (C. H. Bailey), 392
Non-Central *t*-Distribution : Tables of the (George J. Resnikoff and Gerald J. Leiberman), *review*, 985
Non-Conservation of Parity (Prof. A. Salam), 447, *errata*, 885
Non-Enzymic Browning Reaction : A Novel (Dr. H. Rinderknecht and Dr. L. Jurd), 1268
Non-Epidermal Stratified Squamous Epithelium : The Dendritic Cell System and Mast Cells in (Dr. L. O. Zwillenberg), 1343
Non-Ferrous Metal Industry in India—a Symposium held at the National Metallurgical Laboratory, 1954 (edited by Dr. B. R. Nijhawan and Dr. A. B. Chatterjea), *review* by Prof. F. C. Thompson, 1498
Non-ferrous Metals : Surface Hardening of, by Spark Discharge (Dr. N. C. Welsh), 1005
Non-Fibrillar Components of the Walls of *Valonia ventricosa* : Constitution of the Fibrillar and (Prof. R. D. Preston and J. Cronshaw), 248
Non-Flowering Strains of Herbage Grasses (Prof. M. L. Peterson, Dr. J. P. Cooper and P. B. Vose), 591
Non-Hormonal Anti-Rheumatic Drugs : A Possible Basis for the Anti-inflammatory Activity of Salicylates and other (S. S. Adams and R. Cobb), 773
Non-innervated Membrane of an Isolated Single Electroplax of the Skate : A Method for Studying Separately the Properties of the Innervated and (Dr. Ernest Schoffeniels), 287
Non-Ionic and Amphoteric Soaps : A Colour Reaction for (Dr. J. E. Lovelock and T. Nash), 1263
Non-Metallic Brittle Materials : Mechanical Properties of (Mining Research Establishment of the National Coal Board and the Building Research Station of the Department of Scientific and Industrial Research Conference on), 1577
Non-Multiplying Animal Cell : Turnover of Protein in a (Dr. H. Harris and J. W. Watts), 1582
Non-Newtonian Viscosity : Dynamics of Chain Molecules in Dilute Solutions, with special reference to (Dr. Roger Cerf), 558
Non-polymer Crystals : Polymer-type Elasticity in (J. E. Gordon, A. T. K. Seville and D. M. Marsh), 1678
Non-Stable Stars (edited by George H. Herbig), *review* by Prof. R. O. Redman, 731
Non-toxigenic Cultures of *Corynebacterium diphtheriae* : Role of Phage Antibodies in the Development of (Paul S. Anderson, jun., and Prof. Philip B. Cowles), 350
Noradrenaline Content (Adrenaline and), of the Adrenal Gland of the Rat following Depletion with Reserpine (B. A. Callingham and Dr. Monica Mann), 423
Nord, Prof. F. F., and others : Acetylation of Trypsin in Organic Solvents, 414
Nord- und Mitteleuropa : Flora von (Friedrich Hermann), *review* by Prof. T. G. Tutin, 972
Norepinephrine : Distribution of, in the Heart (Parkhurst A. Shore, Victor H. Cohn, jun., Benjamin Highman and Harriet M. Maling), 848
  Influence of Metallic Ions on the Reaction of Ethylene Diamine with Epinephrine and (Prof. Guy Ladeau, L. P. Joly and G. Sobolewski), 1061
Normal Adults : The Relationships between Electroencephalographic and Psychological Data in (Dr. P. F. Werre), *review* by Dr. Clifford Allen, 983
Normal Muscular Activity : Mechanics of (Dr. R. J. Whitney), 942
Normal and Cancer Cells (Homologous Human) : Ribonuclease Activity and Ribonucleic Acid Content of (L. Ledoux, S. Brändli and J. C. De Paepe), 913
Normal and Denervated Gastrocnemius Muscle : Quantitative Determination of Cholinesterase Activity in Individual End-plates of (M. Brzin and Prof. J. Zajicek), 626
Normal and Immune Guinea Pig Monocytes : Growth of Meningopneumonitis Virus in (Prof. Albert A. Benedict and Clarence McFarland), 1742
Normal and Immune Mice : Distribution of Radioiodinated, Acetone-killed *Brucella abortus* in the Tissues of (Dr. D. Sulitzeanu), 495
Normal and Thyroxine-treated Rabbits : Cortisone-Glucose Tolerance Test in (Dr. L. Macho), 620
Normal and Tumorous Nuclei : Special Conditions in (Prof. A. Stolk), 1739
Normoblasts : Transformation of Megaloblasts to, by Cultivating Human Bone Marrow in Presence of Vitamin B_{12} and Vitamin B_{12}-binding Protein (Dr. I. Pendl and Dr. W. Franz), 488
Noro, T., and others : Gamma-Aminobutyrylcholine, 1336
Norris, K. P., and Greenstreet, J. E. S. : Infra-red Absorption Spectra of Casein and Lactose, 265
Norris, M. J. (Mrs. O. W. Richards) : Influence of Photoperiod on Imaginal Diapause in Acridids, 58
Norrish, Prof. R. G. W. : Column Packings for Gas Chromatography, 604
North, Dr. A., and others : Absence of the Diego Blood Group and Abnormal Haemoglobins in 92 Maoris, 791
North, Dr. Edgar A., and Doery, Hazel M. : Antagonism between the Actions of Staphylococcal Toxin and Tiger Snake Venom, 1542
North, Wheeler, J. (Ghelardi, Raymond J., and) : A Possible Ecological Effect of Upwelling in a Submarine Canyon, 207
North (Frozen) : Men against the (Ritchie Calder), *review* by Dr. G. C. L. Bertram, 729
North American Birds : Check-List of (Committee of the American Ornithologists Union), *review* by Dr. W. Rydzewski, 590

ican Snakes, *review*, 872
Atlantic Treaty Organization : Nominations of national representatives on the Science Committee, 739
North Atlantic Treaty Organization (Combustion and Propulsion Panel of the Advisory Group for Aeronautical Research and Development): Third Colloquium (Current Propulsion Problems), 458
North Atlantic Treaty Organization (Wind Tunnel and Model Testing Panel) : Meeting in Freiburg im Breisgau, 458
North Greenland Expedition : British, 1952-54—Scientific Results (R. A. Hamilton), 1030
North and Central European Flora, *review* by Prof. T. G. Tutin, 972
North-Eastern Africa (Eastern and) : Birds of (C. W. Mackworth-Praed and Capt. C. H. B. Grant), second edition, *review*, 801
North-Eastern India : Remanent Magnetism of the Rajmahal Traps of (Dr. J. A. Clegg, C. Radakrishnamurty and P. W. Sahasrabudhe), 830
Northcote, T. G. : Effect of Photoperiodism on Response of Juvenile Trout to Water Currents, 1283
Northern Ireland : Relict *Rotlehm* in (V. B. Proudfoot), 1287
Northern Route (Great), in the U.S.S.R. (V. F. Burkhanov), 1245
Northover, Jean, and others : Effect of Insulin on Sodium in Muscle, 1278
Northrop, D. C., and others : A New Thermal Image-Converter, 691
Nossal, G. J. V., and Lederberg, Prof. Joshua : Antibody Production by Single Cells, 1419
Notes and Records, Vol. 12, No. 2 (Royal Society of London), 1181
Nour-Eldin, Dr. F., and Wilkinson, Dr. John F. : Peculiar Disorder of Plasma Thromboplastin Production, 989
Novae : The Galactic (Prof. Cecilia Payne-Gaposchkin), *review* by Prof. Zdenek Kopal, 1688
Novák, S., and others : Effect of Heparin on Pathologically Decreased Serum Esterase in Carcinoma, 908
Novel Action of Potassium on a Yeast and a Counteraction by Aluminium (Dr. E. J. Miller), 191
Novel Non-Enzymic Browning Reaction (Dr. H. Rinderknecht and Dr. L. Jurd), 1268
Novel Type of Aromaticity (Prof. D. P. Craig and N. L. Paddock), 1052
Nowak, Eugenia, and others : Rapid Determination of Casein in Milk, 1277
Noxious and Obnoxious Insects of the Pacific, *review* by P. F. Mattingly, 1234
Noyes, Dr. R. W., and others : Capacitation of Rabbit Spermatozoa, 1209
Noyes, W. A. (Heicklen, J., and) : Structure and Reactivity of Electronically Excited Species (Photochemical Experiments with Ketones and Bi-acetyl), 321
Nucléaire : La Chimie, et ses applications (M. Haïssinsky), *review* by G. N. Walton, 975
Nucléaire (l'Énergie) dans le Monde (T. Reis), *review* by Sir John Cockcroft, 445
Nuclear Chemistry, *review* by G. N. Walton, 975
Nuclear Electronics : International Symposium on (Société des Radioélectriciens), 1640
Nuclear Energy (Federation of British Industries Conference on), 459
  British Nuclear Energy Conference Symposium on, 735
  Industrial Health Problems in the Use of, 1023
  Peaceful Uses of (House of Commons Debate on), 948
Nuclear Energy Agency, European : White Paper on the, 952
Nuclear Energy Conference, British : Symposium on Nuclear Energy, 735
Nuclear Energy Developments and Oceanography, 1685
Nuclear Engineering, 1106
Nuclear Fusion : Harnessing, 213
Nuclear Irradiation : Effects of, upon the Decomposition of Lead Styphnate Monohydrate (Dr. Ted B. Flanagan), 42
Nuclear Magnetic Moments in Atomic Beams : Measurement of (Dr. G. K. Woodgate and P. G. H. Sandars), 1395
Nuclear Magnetic Resonance : High Resolution (Radiofrequency Spectroscopy Group Discussion on), 673
Nuclear Physics (Physical Society Conference on), 885
  International Congress on (Low Energy Nuclear Interactions and Nuclear Structure), (International Union of Pure and Applied Physics, and Unesco), 459
  Progress in (edited by Prof. O. R. Frisch), Vol. 6, *review* by Dr. T. G. Pickavance, 1362
  Recent, *review* by Dr. T. G. Pickavance, 1362
  Recent Advances in (Dr. A. M. Lane), 886
Nuclear Polyhedral Virus of the Wattle Bagworm : Occurrence of Strains of the (L. L. J. Ossowski), 648
Nuclear Power Stations : Siting of (House of Commons Debate on), 462
Nuclear Quadrupole Resonance of Neutron-irradiated Sodium Chlorate (Joseph Depireux and Prof. Jules Duchesne), 759
Nuclear Reactions in a Gas Discharge : Production of High Temperatures and (Controlled Release of Thermonuclear Energy), (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, R. W. P. McWhirter, R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217, 315
Nuclear Reactor Accident : Iodine-131 in Sheep before and after a (Prof. L. Van Middlesworth), 256
Nuclear Reactor Safety, 601
Nuclear Reactor Technology : Recent Developments in (United Kingdom Atomic Energy Authority Conference on), 458
Nuclear Reactors for Research (edited by Clifford K. Beck), *review* by F. W. Fenning, 984
Nuclear Research, European Organization for : Appoints, 87
  Election of François de Rose as president, 87
  Laboratories of the, 670
  Second Annual Report (1956), 747
  International Conference on High Energy Physics, (1958), 884
Nuclear Resonance (Electron and), in Chemistry: Applications of (Chemical Society Symposium on), 161
Nuclear Sciences 'Boris Kidrich', Institute of : Bulletin of the, Vol. 7, *review* by Prof. H. W. B. Skinner, 590
Nuclear Transplantation in *Xenopus laevis* (M. Fischberg, J. B. Gurdon and T. R. Elsdale), 424
Nuclei of *Halidrys siliquosa* (L.) Lynbg. : Chromosomes and Chromocentres in the (Dr. Margaret Naylor), 853
Nuclei (Atmospheric Condensation) : Third Symposium on (Cavendish Laboratory, Cambridge), 1640
Nuclei (Normal and Tumorous): Special Conditions in (Prof. A. Stolk), 1739
Nuclei (Polyploid), of Human Amnion Epithelium : Sex Chromatin in (Harold P. Klinger and Hans G. Schwarzacher), 1150
Nucleic Acid (Virus) : The Latent Period after Infection with Tobacco Mosaic Virus and (Prof. G. Schramm and R. Engler), 916
Nucleic Acid Research, Association for : Seventh Symposium on Nucleic Acids, 1511
Nucleic Acids (Association for Nucleic Acid Research Seventh Symposium on), 1511
  Japanese Investigations on (Prof. A. Sibatani), 1511
Nucleic Acids in *Bacillus cereus* : Effects of 8-Azaguanine on the Synthesis of Protein and (Prof. H. Chantrenne and S. Devreux), 1737
Nucleic Acids and Nucleo-proteins : Structure and Physical Chemistry of (Colloid and Biophysics Committee of the Faraday Society Discussion on), 885
Nucleohistones from Different Vertebrates : A Comparative Biochemical Study of (Dr. R. Vendrely, A. Knobloch and H. Matsudaira), 343
Nucleoid of Mature Vaccinia Virus : Structural Differentiation in the (Dr. M. A. Epstein), 784
Nucleoid (Rous Virus) : Composition of the (Dr. M. A. Epstein), 1808
Nucleolar Inclusions : Interpretation of (Prof. J. A. Serra), 1544
Nucleolar Volume and Cell Body Content of Ribonucleic Acid in Supraoptic Neurones: Relation between (J.-E. Edström and D. Eichner), 619
Nucleolus : Division of a Nucleus lacking a (R. C. von Borstel and M. L. Rekemeyer), 1597
Nucleonic Component (Cosmic Ray), along 145° East Longitude : A Survey of the, using an Airborne Monitor (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 1155
Nucleonic Thickness Gauge (Baldwin Instrument Co., Ltd., Dartford), 457
Nucleo-proteins : Structure and Physical Chemistry of Nucleic Acids and (Colloid and Biophysics Committee of the Faraday Society Discussion on), 885
Nucleotide (Pyridine) Synthesis by Erythrocytes : Species Differance in (P. G. Tulpule), 1804
Nucleotide-linked Dehydrogenases (Pyridine) : Cytochemical Localization of (Dr. R. Hess, Dr. D. G. Scarpelli and Dr. A. G. E. Pearse), 1531
Nucleotides and the Bacterial Cell Wall (J. J. Armstrong, Prof. J. Baddiley, Dr. J. G. Buchanan and Dr. B. Carss), 1692
Nucleotides (Adenine), of Squid Muscle : Changes in (Tsuneyuki Saito, Ken-ichi Arai and Tsune Tanaka), 1127
Nucleus lacking a Nucleolus : Division of a (R. C. von Borstel and M. L. Rekemeyer), 1597
Nucleus (Facial Nerve) : A Histoautoradiographic Study of the Effect of Section of the Facial Nerve on the Uptake of Methionine-^{35}S by the Cells of the (J. Fischer, Z. Lodin and Dr. K. Koloušek), 341
Nucleus (Indole) : Bacterial Dissimilation of Indoleacetic Acid—a New Route of Breakdown of the (Michael H. Proctor), 1345
Nuclides : Trilinear Chart of (William H. Sullivan), second edition, *review* by Dr. E. Bretscher, 987
Nuffield Foundation : Five-year grant to the British Trust for Ornithology, for the appointment of a migration research officer, 456
  Ageing on the Factory Floor (F. Le Gros Clark), (Studies of Ageing within the Conditions of Modern Industry), 744
  Grant of £12,000 to the Marine Biological Association of the United Kingdom, towards the cost of reconstructing the tanks of its aquarium, 1311
Nuffield Foundation (Royal Society and) Commonwealth Bursaries : Awards, 89
Number of Mating Types required for Balance in Multipoint Linkage Programmes (A. W. F. Edwards), 503
Number of Seedlings in Rice Cultivations : Planting Distance and (N. K. Jain), 202
Numerical Approximation (Mathematics Research Center, United States Army, Symposium on), 531
Nutrient (Plant) : Magnesium, the Fifth Major (Dr. A. Jacob), translated from the German by Dr. Norman Walker, *review* by Dr. E. J. Hewitt, 799
Nutrition of the Legumes (Fifth Easter School in Agricultural Science at the University of Nottingham School of Agriculture), 315
Nutrition of *Neurospora crassa* : *Para*-Amino-Benzoic Acid and Sulphanilamide in the (Prof. D. V. Siva Sankar), 629
Nutrition Society : Symposium on the Nutritive Value of Proteins, 151
  Symposium on Fish, 531
Nutrition Society (Scottish Group) : Symposium on Nutrition and Climatic Stress, 949, 1644
Nutrition and Climatic Stress (Scottish Group of the Nutrition Society Symposium on), 949, 1644
Nutritional Anaemia in Mink (Dr. A. Helgebostad and Dr. E. Martinsons), 1660
Nutritional Requirements of *Colletotrichum coffeanum* Noack : Some (S. Bartniski-García and Dr. C. Casas-Campillo), 565
Nutritional Requirements of the Common Housefly, *Musca domestica vicina* Macq., (Prof. J. R. Chang and Miss M. Y. Wang), 566
Nutritional Stress (Temporary), and Infertility in Mice (T. J. McClure), 1132
Nutritive Value of Proteins (Nutrition Society Symposium on), 151
Nutt, Dr. C. W. : Appointed to a senior lectureship in chemical engineering at the University of Birmingham, 1181
Nuttall, Dr. J. M. : *Obituary* by Prof. G. D. Rochester, 1307
Nutting, Dr. J. : Vacancies and other Point Defects in Metals and Alloys (Vacancies in Technical Creep-resisting Alloys), 451
Nuttonson, M. Y. : Barley—Climate Relationships, *review* by Dr. E. C. Humphries, 1689
  Rye—Climate Relationships, *review* by Dr. E. C. Humphries, 1689
  Wheat—Climate Relationships, *review* by Dr. E. C. Humphries, 1689
Nye, Dr. J. F. : Surges in Glaciers, 1450
Nyholm, Paula, and others : Stress in Hypothermia, 612
Nyholm, Prof. R. S. : Elected a Fellow of the Royal Society, 881

OAK Ridge Institute of Studies (American Association for the Advancement of Science and co-sponsored by the) : Symposium on Atomic Energy and Agriculture, Atlanta, 1955 (edited by C. L. Comar), *review* by Dr. R. F. Glascock, 1097
Oak Ridge National Laboratory (Biology Division) : Eleventh Biology Research Conference (Genetic Aspect of Somatic Cell Variation), 1706

Oats : Occurrence of *Fusarium culmorum* (W. G. Sm.) Sacc. in the Rhizosphere of (D. Parkinson and Prof. C. G. C. Chesters), 1746
Objects of Irregular Cross-sectional Shape and Constant Weight per Unit Length : Birefringence Determination in (S. C. Simmens), 1260
Obnoxious Insects of the Pacific : Noxious and, *review* by P. F. Mattingly, 1234
O'Brien, Dr. J. R. : Phospholipids, Proteins and Platelet-Lipoid, 420
  Heparin and Christmas Factor, 1801
O'Brien, Lawrence, and others : Gas Chromatographic Separation of *Meta-* and *Para*-Xylenes in Aromatic Mixtures, 1794
Observation (Photographic), of the Satellite 1957 Beta leaving the Earth's Shadow (Dr. Heinz Neckel), 257
Observations in Australia of Radio Transmissions from the First Artificial Earth Satellite (G. H. Munro and R. B. White), 104
Observations (Mass-Spectrometric), of Ions in Flames (P. F. Knewstubb and Dr. T. M. Sugden), 474
Observations (Mass-Spectrometric), of Ions in Hydrocarbon Flames (P. F. Knewstubb and Dr. T. M. Sugden), 1261
Observations (Scientific), of the Artificial Earth Satellites and their Analysis (Prof. H. S. W. Massey and Dr. R. L. F. Boyd), 78
Observatory, United States National Astronomical (United States National Science Foundation and the Association of Universities for Research in Astronomy, Inc., contract for a), 236
  Appointment of Dr. Aden B. Meinel as director, 740
Observed Oxygen Effect : Dependence of the, on the Post-Irradiation Treatment of Micro-organisms (Tikvah Alper and Dr. N. E. Gillies), 961
Observer : The World and the (Lord Russell), 810
Obtaining the Frequency Response of a Lens : An Optical Method of (K. Hacking), 1158
Occupational Diseases, *review* by Prof. W. Hobson, 728
Occupational Hygiene Society, British : Conference on Noise in Industry, 813, 1696
Occupations : The Diseases of (Dr. Donald Hunter), second edition, *review* by Prof. W. Hobson, 728
Occurrence of D-Acylase in Soil Bacteria (Prof. Yukio Kameda, Etsuko Toyoura and Yukio Kimura), 1225
Occurrence of Beryllium Oxide in Polycrystalline Beryllium (V. D. Scott and Dr. H. Wilman), 902
Occurrence of a Blue-Green Alga in the Nodules of *Trifolium alexandrinum* (S. Bhaskaran and G. S. Venkataraman), 277
Occurrence of Collagen in the Phylum Mollusca (S. C. Melnick), 1483
Occurrence of *Donsiella limnoriae* (Stephensen) (Copepoda, Harpacticoida) in the Southampton Area (S. Krishnaswamy and L. T. Jones), 1016
Occurrence of Foldings of Plasma Membrane (β-Cytomembrane) in Cells of Pig's Carpal Organ as revealed by Electron Microscopy (K. Kurosumi and T. Kitamura), 489
Occurrence of *Fusarium culmorum* (W. G. Sm.) Sacc. in the Rhizosphere of Oats (D. Parkinson and Prof. C. G. C. Chesters), 1746
Occurrence of Independent Systems for the Cleavage of Folic Acid and Citrovorum Factor in Rat Liver (U. W. Kenkare and Dr. Beatriz M. Braganca), 548
Occurrence of 'Masked Lipid' in Mouse Pancreas (S. Bradbury and B.-P. Clayton), 1347
Occurrence of Ornithine in Sulphur-deficient Flax and the Possible Place of Ornithine and Citrulline in the Arginine Metabolism of some Higher Plants (R. G. Coleman), 776
Occurrence of a 'Rare' Earthworm in Montgomeryshire (K. Sylvia Richards), 575
Occurrence of Rhodanese in a Species of *Thiobacillus* (C. A. McChesney), 347
Occurrence of Sex Chromatin in the Basal Cells of the Epidermis and in Basal Cell Carcinomata (David J. B. Ashley), 427
Occurrence of Soft Rot Bacteria in Scottish Soils (Dr. D. C. Graham), 61
Occurrence of Spermatophores in the Genus *Dolops* (Crustacea : Branchiura), (G. Fryer), 1011
Occurrence of Strains of the Nuclear Polyhedral Virus of the Wattle Bagworm (L. L. J. Ossowski), 648
Occurrence (Natural), of Thymine and Three Methylated Adenine Bases in several Ribonucleic Acids (Dr. J. W. Littlefield and Dr. D. B. Dunn), 254
Occurrence (Simultaneous), of Moving and Standing Waves in a Positive Column (A. W. M. Cooper, J. R. M. Coulter and Prof. K. G. Emeléus), 1326
Occurrence (Spontaneous), of Intranuclear Inclusion Bodies in Continuous Cultures of Renal Cells (Dr. N. M. Larin), 1477
Occurrence and Filterability of Protoplast-like Elements in Aged Bacterial Cultures (Dr. J. Sinkovics), 566
Ocean Cores (Equatorial Indian) : Diatoms from (N. Ingram Hendey), 953
Ocean-Level : Radiocarbon Dating of the Eustatic Rise in (Dr. H. Godwin, R. P. Suggate and Dr. E. H. Willis), 1518
Ocean Waters (Southern) : Age Determinations of (J. W. Brodie and R. W. Burling), 107
Ocean Weather Ships (British) : Ten Years' Work of the (Comdr. C. E. N. Frankcom), 236
Oceanographic Council, National : Annual Report for 1956-57 (Prof. K. F. Bowden), 888
Oceanography : Nuclear Energy Developments and, 1685
O'Connor, Cecilia M. (edited by Wolstenholme, G. E. W., and) : Methodology of the Study of Ageing (Ciba Foundation Colloquia on Ageing, Vol. 3), *review* by Prof. P. L. Krohn, 74
O'Connor, Dr. D. C. J. : Phenobarbitone Therapy in Epilepsy, 1377
O'Connor, F. B. (Christensen, B., and) : Pseudofertilization in the Genus *Lumbricillus* (Enchytraeidae), 1085
Ocular Tissue : Gamma-Amino-Butyric Acid in (Prof. K. Kojima, M. Mizuno and M. Miyazaki), 1200
O'Dell, Thomas B. (Gray, Dr. Allan P., and) : Reaction of Ethylene Bromide with Trimethylamine and the Neuromuscular Blocking Activity of Ethylene*bis*-(Trimethylammonium), 634
O'Dette, R. E. : Russian Translation, 1509
O'Dogherty, M. J., and others : Mechanical Properties of Non-Metallic Brittle Materials (Laboratory Experiments in 'Ploughing' the Face off a Block of Coal), 1579
Odontoblasts and Cells of the Oral Epithelium : Sudanophil Inclusions in Ameloblasts, (Prof. J. T. Irving), 569
Œstradiol-17β : Chromatographic Separation of Œstriol, Œstrone and (Tokuichiro Seki), 768
Œstradiol and Œstriol (Œstrone,) : Presence of, in Extracts of Laying Hens (D. S. Layne, Prof. R. H. Common, W. A. Maw R. M. Fraps), 351
Œstriol, Œstrone and Œstradiol-17β : Chromatographic Separation of (Tokuichiro Seki), 768
Œstriol (Œstrone, Œstradiol and) : Presence of, in Extracts of Ovaries of Laying Hens (D. S. Layne, Prof. R. H. Common, W. A. Maw and R. M. Fraps), 351
Œstrogen and Progesterone (Ovariectomy,) : Effect of, on the Activity of the Melanocytes in the Skin (P. G. Bischitz and Dr. R. S. Snell), 1413
Œstrogen Stilboestrol (Synthetic) : Effect of the, on Pregnancy in the Rabbit (Dr. A Sharaf and Dr. E. S. E. Hafez), 1211
Œstrogens : A Highly Sensitive Assay for (L. Martin and Dr. P. J. Claringbold), 620
Œstrone, Œstradiol and Œstriol : Presence of, in Extracts of Ovaries of Laying Hens (D. S. Layne, Prof. R. H. Common, W. A. Maw and R. M. Fraps), 351
Œstrone and Œstradiol-17β ; Chromatographic Separation of Œstriol, (Tokuichiro Seki), 768
Oftebro, R., and others : Radioprotective Properties of Cystamine, Cysteamine and Cysteine when tested with Chick Fibroblasts *in vitro*, 344
Oftedal, P., and others : Radioprotective Properties of Cystamine, Cysteamine and Cysteine when tested with Chick Fibroblasts *in vitro*, 344
Ogata, Kazuhiro, and others : β-Glucuronidase, Lipase and Esterase in the Testis of the Cryptorchid Rat, 186
Ogawa, Dr. Yoshito, and others : Serological Determination of Developing Muscle Protein in Chick Embryo, 621
Ogg, Sir William : Retirement from the directorship of Rothamsted Experimental Station, 89, 158 ; work, of 158
Oginsky, Evelyn L., and others : Photosensitization of Bacteria by Furocoumarins and related Compounds, 571
O'Gorman, Lieut.-Colonel Mervyn : *Obituary* by Sir Henry Tizard, 1175
Ogston, Dr. A. G. : Conditions for Differential Reaction of 'Identical' Chemical Groups, 1462
Ogston, Dr. A. G., and Sherman, T. F. : Electrophoretic Removal of Protein from Hyaluronic Acid, 482
Oguamah, D. (Service, M. W., and) : Colonization of *Anopheles funestus*, 1225
Ohio State University : Symposium on Molecular Structure and Spectroscopy, 813
Ohmi, Hikoei, and others : A Chimaera of *Alaria* and *Laminaria* found in Nature, 923
Oils (Vitamin A) : Assay of (Prof. E. Brunius), 395
Okabe, H. : Structure and Reactivity of Electronically Excited Species (Fluorescence and Photolysis of Hexafluoroacetone), 321
Okawa, Kenji, and others : A New Synthesis of Histidyl Peptides, 772
Okazaki, T. and R. : Nucleic Acids (Biosynthesis of Deoxyribonucleic Acid), 1512
O'Keefe, John A. : Origin of Tektites, 172
Okhotsimskii, D. E., and Eneev, T. M. : Some Variation Problems connected with the Launching of Artificial Satellites of the Earth, 1311
Okuda, Jun (Yagi, Dr. Kunio, and) : Phosphorylation of Riboflavin by Transferase Action, 1663
Okunuki, Prof. Kazuo, and others : Activation of Cytochrome Oxidase by Synthetic Detergents, 1339
  Crystalline Cytochrome *c*—Crystallization of Cytochrome *c* from Pigeon Breast Muscle, 1588 ; Crystallization of Cytochrome *c* from Cow Kidney, 1589 ; Crystallization of Cytochrome *c* from Wheat Germ, 1590
  Two Crystalline Haemoproteins of Wheat, 1656
Old Stone Age (Stevan Celebonovic), *review* by M. C. Burkitt, 801
Olduvai Gorge, Tanganyika : Recent Discoveries at (Dr. L. S. B. Leakey), 1099
Olfactory Response of Immature Adults of the Desert Locust (W. Loher), 1280
Oligokyphus : The Liassic Therapsid (Dr. Walter Georg Kühne), *review* by Prof. D. M. S. Watson, 1233
Oliver, D. A. : Design of Physics Research Laboratories, 91
Oliver Memorial Fund : Award for original work or services in connexion with Blood Transfusion, 1771
Ollerton, E. : Contact Stresses (Stationary Contact), 1773
Ollis, Dr. W. D. : Advanced Organic Chemistry, *review*, 6
Olomucki, Dr. Eugenia : Action of Ethylene Dibromide on Hen Gonadotrophic Hormones, *erratum*, 459
Olson, M. E. (Rabinovitz, Dr. M., and) : Participation of Reticulocyte Microsomes in the Incorporation of Iron into Haemoglobin, 1665
ω-(3-Indolyl) alkanecarboxylic Acids in Plant Tissues: β-Oxidation of (Dr. C. H. Fawcett, Prof. R. L. Wain and Dr. F. Wightman), 1387
Omphalia maura (Fr.) Gill. : Effect of Lime on the Production of a Toadstool (Dr. F. B. Hora), 1668
Oncopeltus fasciatus (Dallas) : Hormonal Regulation of Reproduction in the Milkweed Bug (A. S. Johansson), 198
One-Electron *versus* Two-Electron Transfer Processes in the Mechanism of Oxidation-Reduction Reactions in Solution (Prof. Joseph Weiss), 825
O'Neill, Prof. Hugh : Surface Hardening of Metals by Spark Discharge, 1421
Onsager, Prof. L. : Interaction in Ionic Solutions (Mathematical Advances which might help in the Electrolyte Problem), 240
Ontario Research Foundation : Appointment of Dr. A. E. R. Westman as director of research of the Foundation, 315
  Appointment of Dr. H. B. Marshall as director, Department of Chemistry, 315
  Appointment of Dr. S. G. Reid as assistant director, Department of Chemistry, 315
Oocytes of *Chrotogonus trachypterus* : Demonstration of some 'Masked' Lipids in the, with Sudan Black B and Phenol 'Unmasking' Techniques (Brij L. Gupta), 555
Oosting, Prof. Henry J. : The Study of Plant Communities, second edition, *review* by Dr. Maurice Ashby, 661
Opencast Coal Bill, 889
Opencast Mining, 889
Operational Research Society : Open Conference (Aids to Decision Making), 949
Öpik, Dr. E. J. : Artificial Satellites, 1311

Öpik, U. : Structure and Reactivity of Electronically Excited Species (Interactions between Electronic and Vibrational Motions of Polyatomic Molecules), 320
Opisthoproctus (Deep-Sea Fish) : A New Type of Light Organ in the (Dr. E. Bertelsen), 862
Oppenoorth, F. J. : A Mechanism of Resistance to Parathion in *Musca domestica* (L.), 425
Optic Nervous System (Cat's) : Sensory Deprivation and the (Dr. Lawrence Weiskrantz), 1047
Optical Coefficients (Stress), of Different Specimens of Vitreous Silica (Dr. R. S. Krishnan, E. S. Jog and R. Srinivasan), 692
Optical Crystallography (Microscopic) : An Improved Orientation Stage for (H. C. G. Vincent), 693
Optical Image Assessment using Frequency Response Techniques (Imperial College of Science and Technology Summer School on), 1510
Optical Method of Obtaining the Frequency Response of a Lens (K. Hacking), 1158
Opticians Bill : Second reading in the House of Lords, 1572
Optics : Physical, *review* by G. R. Noakes, 5
  Physical (Dr. R. A. Houstoun), *review* by G. R. Noakes, 5
  Physiological, *review* by Prof. W. D. Wright, 146
  Wave (Dr. C. Curry), *review* by G. R. Noakes, 5
Oral Epithelium : Sudanophil Inclusions in Ameloblasts, Odontoblasts and Cells of the (Prof. J. T. Irving), 569
Orbit of the Russian Earth Satellite 1957β : Effect of Air Drag on the—Comparison of Theory and Observation (D. G. King-Hele and Dr. D. C. M. Leslie), 1761
Orbit of *Sputnik* 3 (Satellite 1958δ), 1507
Orbital Characteristics of an Earth Satellite : Determination of, from Single-Station Radio-Transit Observations (Gordon Grant, A. L. Jones, R. W. Burhans, P. S. Fay and David Frazier), 900
Orchid Hybrids: Malayan (M. R. Henderson and G. H. Addison), *review*, 517
Orchidectomy : Effect of Testosterone and, on the Activity of the Melanocytes in the Skin (P. G. Bischitz and Dr. R. S. Snell), 187
Ordish, George : History of Crop Pests and the Measures taken to Overcome Them, 536
Ordnance Survey Department : Redundancies in the, 670
Ore, Prof. Oystein : Niels Henrik Abel—Mathematician Extraordinary, *review* by Dr. Graham Higman, 1365
Organ (Light) : A New Type of, in the Deep-Sea Fish *Opisthoproctus* (Dr. E. Bertelsen), 862
Organic Chemistry (Dr. I. L. Finar), Vol. 2, Stereochemistry and the Chemistry of Natural Products, *review* by Dr. W. D. Ollis, 6
  Advanced, *review* by Dr. W. D. Ollis, 6
  Electronic Theory and Reaction Mechanism (Rowland I. Reed and Dr. S. Horwood Tucker), *review* by G. Fowles, 299
  Guides to, *review* by Prof. John Read, 515
  Newer Preparative Methods in (Chemical Society and the Fine Chemicals Group of the Society of Chemical Industry Symposium on), 239
Organic Composition of Bone—Localization of Isocitric Dehydrogenase in Femurs (Robert Van Reen and Fred L. Losee), 1543
Organic Compounds containing Phosphorus and Fluorine : Some Aspects of the Chemistry and Toxic Action of (Dr. Bernard Charles Saunders), *review* by Sir Rudolph Peters, 1295
Organic Hydroperoxides : Reduction of, by Micro-organisms and Animal Tissues (Dr. D. M. Updegraff and Dr. F. A. Bovey), 890
Organic Liquids : Temperature Coefficient of Ultrasonic Absorption in (Dr. S. Parthasarathy, M. Pancholy and A. F. Chhapgar), 405
Organic Matter : Effect of the Nitrogen and Sulphur Content of, on the Production of Ammonium and Sulphate (N. J. Barrow), 1806
Organic Reactions (edited by Roger Adams, A. H. Blatt, Arthur C. Cope, David Y. Curtin, Frank C. McGrew and Carl Niemann), Vol. 9, *review* by Prof. John Read, 147
Organic Solvents : Acetylation of Trypsin in (Spyros Vratsanos, M. Bier and Prof. F. F. Nord), 414
  Anomalous Behaviour of β-Diketone Complexes of the Lanthanons in (Dr. N. K. Dutt and P. Bandyopadhyay), 1682
Organic Substances (Dried), as Food for Larval Annelids (Dr. D. I. D. Howie), 1486
Organic Synthesis (Dr. Vartkes Migrdichian), Vol. I, Open-Chain Saturated Compounds ; Vol. 2, Open-Chain Unsaturated Compounds, Alicyclic Compounds, Aromatic Compounds, *review* by Prof. John Read, 515
Organic Systems : Radiation Chemistry of (Thames Valley Section of the Royal Institute of Chemistry Symposium on), 1110
Organic Vapours : Influence of, on the Crystal Habit of Ice (J. Hallett and Dr. B. J. Mason), 467
Organisms (Pleuro-pneumonia-like), in Rats : Use of Sulphonamides in the Treatment of (R. T. Charles and O. Rees), 1213
Organization : Evolution and, *review* by Dr. J. M. Thoday, 1025
Organization of British Central Government, 1914-1956 (A Survey by a Study Group of the Royal Institute of Public Administration, edited by D. N. Chester, written by F. M. G. Willson), 141 ; *review*, 299
Organization of Chemical Engineering Projects (European Federation of Chemical Engineering Symposium on), 1042, 1312
Organization for Control of Health and Safety in the United Kingdom Atomic Energy Authority : Report of the Committee appointed by the Prime Minister to examine the (Atomic Energy Office), 1023, 1043
Organization for European Economic Co-operation : Setting up of a special Office of Scientific and Technical Man-power, 1572
  Appointment of Dr. Alexander King as director of the Office of Scientific and Technical Man-power, 1572
Organization for European Economic Co-operation (European Productivity Agency) : Land Consolidation (Project No. 199), 1114
  Project No. 212, Control of Pests in Stored Agricultural Products with special reference to Grain (Dr. J. A. Freeman), 1639
Organization of Respiration, 1244
Organization (Chemical), of Cells, Normal and Abnormal (Conference at the University of Wisconsin), 1576
Organization (Microfibrillar), in Plant Cell Walls : Spatial and Temporal Variation of (D. S. Belford, Dr. A. Myers and Prof. R. D. Preston), 1251
Organizations of Conferences, 1574
Organophosphorus Insecticides : Mode of Action of (Dr. K. van Asperen), 355
Organs (Chordotonal), in the Cockroach : Influence of DDT and Lindane on (G. Becht), 777
Orgel, L. E. (Griffiths, J. S., and) : Localized Electrons in Body-centred Cubic Metals, 170
Orientation (Bird) : Repetition of an Experiment on (Klaus Hoffmann), 1435
Orientation Stage for Microscopic Optical Crystallography : An Improved (H. C. G. Vincent), 693
Origin of Chondrules in Meteoritic Stones (Dr. L. J. Spencer), 680
Origin of Comets, 394
Origin of Microseisms : Periodicity in Sea Roughness and (Dr. J. N. Nanda, K. Achyuthan and N. K. Balachandran), 646
Origin of Tektites (John A. O'Keefe), 172 ; (Carlos M. Varsavsky), 173 ; (Prof. T. Gold), 173 ; (Dr. Virgil E. Barnes), 1457 ; (Prof. Zdenek Kopal), 1457 ; (Prof. Harold C. Urey), 1458
Origins of Life (Albert Ducrocq), translated by Alec Brown, *review* by T. H. Hawkins, 1364
Origins of Modern Science, 1300-1800 (Prof. H. Butterfield), new edition, *review* by Dr. H. D. Anthony, 731
Ornithine in Sulphur-deficient Flax : Occurrence of, and the Possible Place of Ornithine and Citrulline in the Arginine Metabolism of some Higher Plants (R. G. Coleman), 776
Ornithine and Citrulline in the Arginine Metabolism of some Higher Plants : Occurrence of Ornithine in Sulphur-deficient Flax and the Possible Place of (R. G. Coleman), 776
Ornithology, British Trust for : Five-year grant from the Nuffield Foundation, for the appointment of a migration research officer, 456
  Appointment of Kenneth Williamson as migration research officer, 456
Orotic Acid : Effects of, on Coenzyme A and Pantothenic Acid of Liver in Vitamin B_{12} Deficiency (Prof. G. Moruzzi, R. Viviani, M. Marchetti and F. Sanguinetti), 416
O'Rourke, Prof. Fergus J., and Makings, P. : An Inexpensive Easily Constructed Fish-marking Tag, 577
Orthoptera : Current Research on (Anti-Locust Research Centre), 742
Osawa, S. : Nucleic Acids (Metabolism and Function of Ribonucleic Acid and Ribonucleoprotein), 5111
Osborne, Dr. D. V. : Elected a Fellow of the Royal Society of Edinburgh, 739
Osborne, M. T. : Repetitive Stimulation of Muscle, 1798
Osborne, Dr. R. : Elected a Fellow of the Royal Society of Edinburgh, 739
Oscillograph : The Cathode Ray (J. Czech), *review* by Denis L. Johnston, 73
Osher, Dr. J., and others : Controlled Release of Thermonuclear Energy—Neutrons from a Stabilized Toroidal Pinch, 231
Osmoregulation in Salmonid Fishes : Size and (Gwyneth Parry (Mrs. Howells)), 1218
Ossowski, L. L. J. : Occurrence of Strains of the Nuclear Polyhedral Virus of the Wattle Bagworm, 648
Osteoclastomata : Histogenesis of (Dr. W. J. Pepler), 633
Oster, Dr. G. : Photoperiodism in Plants and Animals (Reversible Photochemical Properties of certain Dyes), 535
Otsuji, N., and Takagi, Y. : Nucleic Acids (Role of Deoxyribonucleic Acid Synthesis in Enzyme Formation), 1512
Otsuka, Akio, and others : Stress Condition for Brittle Fracture of Mild Steel, 1719
Ottaway, F. J. H. : Processing of Foods with Ionizing Radiations (Prevention of Mould Growth in Wrapped Baked Products), 878
Ottaway, Dr. J. H., and Sarkar, A. K. : Formation of Lactate from Acetoacetate in the Perfused Heart, 1791
Otter, R. J., and others : Interaction in Ionic Solutions (Precise Spectrophotometric Results for Copper Sulphate Solutions), 241
Otter : The Sea (Karl W. Kenyon), 1115
Ottewill, Dr. R. H. : *Obituary* of Dr. A. V. Few, 668
Our Times : An Education for (Dr. R. P. Linstead), 95
Outbred Lines of *Drosophila melanogaster* : Biochemical Differences between Inbred and, studied by Paper Partition Chromatography (H. F. Hoenigsberg and M. C. Castiglioni), 1404
Output of Chemical Engineers in Britain, 1382
Ovalbumin : Linkage of Carbohydrate to Protein in (Dr. F. R. Jevons), 1346
Ovariectomy, Œstrogen and Progesterone : Effect of, on the Activity of the Melanocytes in the Skin (P. G. Bischitz and Dr. R. S. Snell), 1413
Ovaries of some Foetal and Prepubertal Giraffes, *Giraffa camelopardalis* (Linnaeus), (Dr. L. M. Kellas, Dr. E. W. van Lennep and Prof. E. C. Amoroso), 487
Ovaries of *Iberis amara* L. : *In vitro* Culture of (Nirmala Maheshwari and Manohar Lal), 631
Ovaries of Laying Hens : Presence of Œstrone, Œstradiol and Œstriol in Extracts of (D. S. Layne, Prof. R. H. Common, W. A. Maw and R. M. Fraps), 351
Ovaries (*C3H* and *CBA*), orthotopically transplanted into Tolerant *A* Strain Mice : Litters from (Prof. P. L. Krohn), 1671
Oven : The Gardiner Vacuum (Griffin and George, Ltd.), 314
Overend, Dr. W. G., and others : Coenzyme *A* and Aldolase in Rubber-bearing Plants, 628
Oversea Civil Service Fellowships (Commonwealth Fund Awards for 1958-59), 1181
Overseas : Professional Problems of Biologists serving (Institute of Biology Discussion on) 677
Overseas Resources Development Bill : Second Reading, 1582
Overseas Service in British Colonial Territories, 610
Overseas Service Bill, 610
Overseas (British) Mining Association Educational Trust : Scholarships in Mining Engineering and related Subjects, 1771
Ovington, Dr. J. D. : Biological Productivity of Britain (Forestry in Britain), 83
Ovulation induced in Frog with Mammalian Hormones (Dr. L. S. Ramaswami and A. B. Lakshman), 1210
Owen, B., and Lloyd, R. A.: Correction for the Gamma-Ray Sensitivity of the Beta-Counter in the Standardization of Cobalt-60 by the Beta-Gamma Coincidence Method, 396
Owston, P. G., and others : Isomerism among Binuclear Thiocyanato-bridged Complexes, 43
Ox and Buffalo : Haemoglobin Types in (Dr. Francis Vella), 564
Oxalacetate and Aspartate : Formation of, from Phospho-Enol-Pyruvate in Spinach Leaf Chloroplast Extract (Lawson L. Rosenberg, John B. Capindale and F. R. Whatley), 632
Oxalis pes-caprae : Maleic Hydrazide in the Control of the Bulbous Weed (N. G. Marinos), 1143

Oxidase (Cytochrome) : Activation of, by Synthetic Detergents (Takashi Yonetani, Shigeki Takemori, Ichiro Sekuzu and Prof. Kazuo Okunuki), 1339
Oxidase (Cytochrome), in the Fat Body of the Desert Locust : Enzymes of the Tricarboxylic Acid Cycle and (Dr. D. A. H. Hearfield and Dr. B. A. Kilby), 546
Oxidase (Pineapple Indoleacetic Acid) : Ferulic and *p*-Coumaric Acids in Pineapple Tissue as Modifiers of (Dr. Willis A. Gortner, Martha J. Kent and Dr. G. K. Sutherland), 630
Oxidase Activity (Human Caeruloplasmin) : Colorimetric Detection of, after Electrophoresis in Agar Plates or after Immunoelectrophoresis (José Uriel), 999
Oxidase System (Succinic) : Reconstitution of the, from Soluble Succinic Dehydrogenase and a Particulate Cytochrome System Preparation (Prof. D. Keilin and Dr. Tsoo E. King), 1520
Oxidation by Air of Tri-isopropyl Phosphite : Gamma-Radiation Catalysis of the (Dr. D. G. Coe), 1519
β-Oxidation of ω-(3-Indolyl) alkanecarboxylic Acids in Plant Tissues (Dr. C. H. Fawcett, Prof. R. L. Wain and Dr. F. Wightman), 1387
Oxidation (Bacterial), of Lactose and Melibiose (Dr. B. P. Eddy), 904
Oxidation (Radiation-induced), of Protein in Aqueous Systems : Formation of $<C=O$ Bonds in the (Michael E. Jayko and Warren M. Garrison), 413
Oxidation Products of Leucoanthocyanins as Inhibitors of Fungal Polygalacturonase in Rotting Apple Fruit (M. Cole), 1596
Oxidation-Reduction Reactions in Solution : One-Electron *versus* Two-Electron Transfer Processes in the Mechanism of (Prof. Joseph Weiss), 825
Oxidation and Reduction of Cytochrome *c* by *Ricinus* Mitochondria : Some Effects of Carbon Dioxide—Bicarbonate Mixtures on the (D. S. Bendall, Dr. S. L. Ranson and D. A. Walker), 133
Oxidations (Mitochondrial) : Substrate-Selective Inhibition of, by Enhanced Tonicity (Diane Johnson and Prof. Henry Lardy), 701
Oxidative Enzyme Systems in the Uterus and Vagina of the Rat : Localization of (Dr. Charles G. Rosa and Dr. Joseph T. Velardo), 348
Oxidative Phosphorylation : A Theory of (K. Harrison), 1131
 —a Chemical Approach using Quinol Phosphates (Dr. V. M. Clark, G. W. Kirby and Sir Alexander Todd), 1650
Oxide (Beryllium) : Occurrence of, in Polycrystalline Beryllium (V. D. Scott and Dr. H. Wilman), 902
Oxide (Calcium) : Differential Thermal Method for determining Reactivity of (T. L. Webb and T. van der Walt), 411
Oxide (Gamma-Ferric) : A New Superstructure in (G. W. van Oosterhout and Dr. C. J. M. Rooijmans), 44
Oxides : Transparent Magnetic, 237
Oxley, T. A. : Processing of Foods with Ionizing Radiations (Elimination of Micro-organisms in Damp Grain), 878
Oxygen : Estimation of Electron Affinities of, by Extrapolations of Ionization Potentials (Dr. D. F. C. Morris and H. N. Schmeising), 469
 Mitotic Delay in Irradiated Roots of *Vicia faba*—the Effect of (Dr. H. J. Evans, Dr. G. J. Neary and Miss S. M. Tonkinson), 1083
 Role of, in the Formation of α-Amino-butyric Acid by a Staphylococcus (P. B. Riley and H. K. Robinson), 905
Oxygen Consumption of Two Species of Intertidal Crabs : Effect of Photoperiod on the (Prof. Paul A. Dehnel), 1415
Oxygen-cutting in Vanadium (G. Coates), 479
Oxygen-dependent Radiosensitivity : Effect of Inert Gases on (Effect on Radiosensitivity of Inert Gases), (Dr. Michael Ebert, Mrs. Shirley Hornsey and Dr. Alma Howard), 613
Oxygen Effect (Observed) : Dependence of the, on the Post-Irradiation Treatment of Micro-organisms (Tikvah Alper and Dr. N. E. Gillies), 961
OBr Radical : Absorption Spectrum of the (A. P. Zeelenberg), 42
OH Bonds in Micas : Infra-Red Absorption of (Dr. José M. Serratosa and Dr. W. F. Bradley), 111
Oxytetracycline and Chlortetracycline : A Shorter Microbiological Assay Method for (Nyiri László), 648
Oxytocin : Hypothalamus and (A. W. Duggan and G. W. Reed), 1278
Oyster Larvae : Ultra-Violet Sterilization of Water used for Rearing (G. Duncan Waugh), 1747
Oyster Tissues : Cytochrome System in (Kiyozo Kawai), 1468
Oysters : Effects of Ultra-Violet Radiation on (Dr. I. A. Aboul-Ela), 1013
Ozone : Chromosome Breakage in *Vicia faba* by (Dr. Robert H. Fetner), 504
Ozone as a Possible Radiomimetic Gas (Prof. R. Brinkman and H. B. Lamberts), 1202
Ozone Poisoning : Protection against Death due to (Dr. Sidney Mittler), 1063

PACE, Dr. J., and others : Bread and the Growth of Weanling Rats—the Lysine-Threonine Balance, 1733
Pacific : Noxious and Obnoxious Insects of the, *review* by P. F. Mattingly, 1234
Pacific Science Congress : Ninth (Symposium on Climate, Vegetation and Land Utilization in the Humid Tropics), 596
Pacinian Corpuscle : Generation and Propagation of Impulses during Refractoriness in a (Prof. Werner R. Loewenstein and R. Altamirano-Orrego), 124
Paddock, N. L. (Craig, Prof. D. P., and) : A Novel Type of Aromaticity, 1052
Paes de Carvalho, A., and others : Transmembrane Potentials of Single Fibres of the Atrio-ventricular Node, 66
Page, Dr. Irvine H. (Braun-Menendez, Dr. Eduardo, and) : A Suggested Revision of Nomenclature—Angiotensin, 1061
Painter, Dr. R. B., and others : Distribution of Tritium-labelled Thymidine in *Escherichia coli* during Cell Multiplication, 328
Paints (Reflecting) : Use of, for locating Tsetse Fly at Night (B. D. Rennison, W. H. R. Lumsden and C. J. Webb), 1354
Palaeolithic Site in Pretoria, 1377
Palaeoliths from Borneo : Carbon-14 Dated (Tom Harrisson), 792
Palaeomagnetic Significance : Age of a Pilansberg Dyke of (G. D. L. Schreiner), 1330
Palaeontological Association : *Palaeontology*, Vol. 1, Part 1, 811
Palaeontology (Palaeontological Association), Vol. 1, Part 1, 811
Paleg, Leslie, and Aspinall Donald : Inhibition of the Development of the Barley Spike by Gibberellic Acid, 1743
Paleoecology : Treatise on Marine Ecology and (edited by Joel W. Hedgpeth), Vol. 1, Ecology, *review* by Dr. G. E. R. Deacon, 1559
Paléontologie, Traité de (Dr. Jean Piveteau), Tome 7, Vers la forme humaine ; Le problème biologique de l'homme ; Primates—paléontologie humaine, *review* by Sir Wilfrid Le Gros Clark, 1165
Paléontologie Humaine : Archives de l'Institut de, Mémoire 28, La Grotte de Fontéchevade, Première Partie, Historique, Fouilles, Stratigraphie, Archéologie (Mlle. G. Henri-Martin), *review* by M. C. Burkitt, 1564
Palladium, Iridium and Platinum (Rhodium,) : Corrosion of Ten Metals in Boiling Hydrochloric Acid when in Contact with (W. Roger Buck, III, and Henry Leidheiser, jun.), 1681
Palmer, D. S. : A Statistical Model of some Time Series, 1677
Palmer, Prof. L. S. : Man's Journey through Time, a First Step in Physical and Cultural Anthropochronology, *review* by M. C. Burkitt, 1691
Palmer, R. F. (Kawin, B., and) : Absorption and Distribution in Rats of Radioactive Phosphorus biologically Incorporated in Food, 127
Palynology of the Brora Coal of the Scottish Middle Jurassic (N. F. Hughes and R. A. Couper), 1482
Pancholy, M., and others : Temperature Coefficient of Ultrasonic Absorption in Organic Liquids, 405
Pancreas (Mouse) : Occurrence of 'Masked Lipid' in (S. Bradbury and B. -P. Clayton), 1347
Pancreatic Juice of the Rat : Spontaneous Crystallization of Amylase from (Dr. N. G. Heatley), 1069
Pandalai, Dr. K. M. (Gangolly, S. R., and): Fortifying Influences of Coconut Milk and Cow's Urine on 2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the Coconut, 855
Pandey, Dr. K. K. : Time of the *S* Allele Action, 1220
Pandeya, D. C. (Heavens, Dr. O. S., and) : Thickness Measurement of Epitaxially Grown Films, 1394
Pantelouris, Dr. E. M. : Protection of Foetuses against Radiation Injury, 563
Pantin, Dr. C. F. A. : Elected president for 1958–59 of the Linnean Society of London, 1509
Pantothenic Acid of Liver in Vitamin B_{12} Deficiency : Effects of Orotic Acid on Coenzyme A and (Prof. G. Moruzzi, R. Viviani, M. Marchetti and F. Sanguinetti), 416
Paolella, Dr. A. : At the thirteenth International Congress of Applied Psychology (Projective Tests administered to a Group of Twenty Murderers), 1580
Paper (Fully Acetylated) : Qualitative, Quantitative and Preparative Chromatography of Steroids on (F. J. Ritter and J. Hartel), 765
Paper (Silica-treated) : Adsorption Chromatography on (J. B. Roberts), 338
Paper Chromatograms : Acidity of Sprays used in Detecting Ketohexoses on (Dr. R. W. Bailey), 836
 Detection of Inositol and Inositol Diphosphate on (Y. Nagai and Y. Kimura), 1730
 Detection of α-Ketoglutaric Acid and other Keto-Acids on, with Ninhydrin (Dr. R. Rabson and N. E. Tolbert), 50
 Detection of Triterpenoid Acids on (Dr. B. Pasich), 765
 Determination of Epinephrine and related Compounds on (Dr. George L. Ellman), 768
 Distribution of Carbon-14 in Labelled Amino-Acids separated on (K. H. Hallowes, Dr. F. P. W. Winteringham and Dr. W. J. Le Quesne), 336
Paper Chromatographic Separation of Glucose and Sorbitol : A Solvent for the (Dr. W. R. Rees and T. Reynolds), 767
Paper Chromatography : Murexide Test in (N. B. Chanda and S. Chakraborty), 836
 A New Method for separating Strychnine and Brucine by (G. Dušinsky and Dr. M. Tyllová), 1335
 Quantitative Determination of Hydroxyproline by (Henry R. Roberts and Michael G. Kolor), 837
Paper Chromatography of the Polycyclic Tar Hydrocarbons (Dr. Ernest Maly), 698
Paper Chromatography of Potassium, Rubidium and Caesium (Florin Modreanu, Simon Fisel and Adrian Carpov), 1618
Paper Electrophoresis : Determination of Transaminase Activity of Serum Protein Fractions separated by (Dr. Miroslav Sevela), 915
Paper Electrophoresis (High-Voltage) : Separation of the Lower Fatty Acids (C_1 to C_{10}) by (Dr. D. Gross), 264
Paper-Making, *review* by Dr. Julius Grant, 975
Paper Partition Chromatography : Biochemical Differences between Inbred and Outbred Lines of *Drosophila melanogaster* studied by (H. F. Hoenigsberg and M. C. Castiglioni), 1404
Paper Partition Chromatography (Quantitative), of Sialic Acids (Elisabet Svennerholm and Dr. Lars Svennerholm), 1154
Papua Population of Dutch New Guinea : Absence of Abnormal Haemoglobins in some Groups of the (Prof. J. H. P. Jonxis, Dr. T. H. J. Huisman, G. J. da Costa and D. Metselaar), 1279
Para- (*Meta*- and) Xylenes in Aromatic Mixtures : Gas Chromatographic Separation of (Dr. Albert Zlatkis, Lawrence O'Brien and Philip R. Scholly), 1794
Paradox (Stokes's) : Use of an Analogue to resolve (Sir Richard Southwell), 1257
Paraffin (Liquid) : Influence of Moisture upon the Dielectric Properties of Solid Powders dispersed in (Rempei Gotohi, Tetsuya Hanai and Naokazu Koizumi), 406
Paralysis (Tick) : Neuro-Anatomical Site in (Prof. Maurice F. Murnaghan), 131
Paramecium caudatum : Effects of Kinetin on Cell Division in (Ruth Guttman and Avigdor Back), 852
Parametric Amplifier : A Travelling-Wave (Prof. A. L. Cullen), 332
Para-Mucus' : 'Gastric (Dr. Franklin Hollander), 847
Parapsychological Association : Formation of the , 884
 Election of R. A. McConnell as president, 884
Parasite (Rhinocephalan), New to British Waters : *Sacculina gonoplaxae* Guérin-Ganivet, 1911, a (A. K. Nagabhushanam), 57
Parasite and Host, *review* by Dr. G. Lapage, 1362
Parasites of Vertebrates : First Symposium on Host Specificity among (International Union of Biological Sciences and the University of Neuchâtel), *review* by Dr. G. Lapage, 1362
Parasitic Protozoa (Free-living and) : Catalog of Laboratory Strains of (Society of Protozoologists), 161
Parasitism : Immunity in (Dr. June Mahon), 464
 Nature of Immune Responses in (Parasitology Group of the Institute of Biology Discussion on), 464
Parasitization : Influence of, on Form Determination in Aphids (Dr. Bruce Johnson), 205

Parathion : Reduction of, induced by Light (Dr. E. Sándi), 499
Parathion in *Musca domestica* (L.) : A Mechanism of Resistance to (F. J. Oppenoorth), 425
Parathyroid (Rat) : Leucine Aminopeptidase in, and its relation to Parathyroid Hormone Production (Dr. A. G. E. Pearse and Dr. G. Tremblay), 1532
Parathyroid Hormone Production : Leucine Aminopeptidase in Rat Parathyroid and its relation to (Dr. A. G. E. Pearse and Dr. G. Tremblay), 1532
Paratose (New Sugar,) : Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
Parc National Albert : Exploration du, Fasc. 3, Biotopes de Haute Altitude Ruwenzori, I (J. Heinzelin and H. Mollaret), 19
Parents with Reduced Immunological Reactivity : Distant Hybrids from (Marta Vojtíšková), 927
Parfitt, Dr. G. G. : Flow Noise (The Hydrodynamic Oscillator), 388
Parija, Prof. P. : Elected president for 1958 of the Indian Society for Plant Physiology, 1640
Paris Academy of Sciences : Appointment of a French National Committee of Biochemistry to represent France in connexion with the International Union of Biochemistry, 1444
Parity Conservation (Royal Society Discussion on), 447, *errata*, 885
Park, D. : *Fusarium oxysporum* as a Soil Saprophyte, 1509
Park, Dr. J. T. (Hancock, R., and) : Cell-Wall Synthesis by *Staphylococcus aureus* in the Presence of Chloramphenicol, 1050
Park, Dr. J. T., and others : Development of Lysozyme-Resistance in *Micrococcus lysodiekticus* and its Association with an Increased O-Acetyl Content of the Cell Wall, 1783
Parke, Davis and Co., Ltd., Hounslow : Appointment of Dr. H. O. J. Collier as director of pharmacological research, 161
Parker, Dr. C. A. : Photobiological Investigations (Recent Advances in Spectrofluorimetry and Chemical Actinometry), 1314
Parkes, Dr. A. S. : Freezing and Drying, 1694
Parkins, Dr. R. N. (Gane, N., and) : Anomaly in the Age-Hardening Behaviour of Aluminium—Zinc Alloys, 1198
Parkinson, D., and Chesters, Prof. C. G. C. : Occurrence of *Fusarium culmorum* (W. G. Sm.) Sacc. in the Rhizosphere of Oats, 1746
Parkinson, D. H., and others : Dependence of Heat Capacity on Thermal History, 642
Parkman, N. : Physical Properties of Polymers, 1634
Parks Commission, National : Eighth Report (1956-57), 950
Parks (National), in Britain, 950
Parkyn, D. G. : Calculation of the Life-time of a Satellite, 1156
Parliamentary and Scientific Committee : Annual Report for 1957, 1179
Parmakian, John : Waterhammer Analysis, *review* by T. M. Charlton, 1495
Parratt, N. J. : Strength of Glass Fibres, 1726
Parrish, Dr. R. G., and others : A Three-Dimensional Model of the Myoglobin Molecule obtained by X-Ray Analysis, 662
Parry, Dr. D. A. : The Individual—Unique but Imperfect, *review*, 969
Parry, D. Wynn, and Smithson, Dr. Frank : Silicification of Bulliform Cells in Grasses, 1549
Parry, E. (Todd, Dr. G., and) : Surface Hardness of Explosive Materials by Microindentation, 260
Parry, Gwyneth (Mrs. Howells) : Size and Osmoregulation in Salmonid Fishes, 1218
Parry, J. V. L., and others : Variation in the Speed of Rotation of the Earth since June 1955, 1054
Parson, jun., Nels A. : Guided Missiles in War and Peace, *review*, 731
Parsons, P. A. : Evolution of Sex in the Flowering Plants of South Australia, 1673
Parsons, S. A. J. : Metrology and Gauging, *review* by P. W. Harrison, 988
Part, A. A. : Liberal Studies in Technical Education, 386
    Technical Students in Britain, 1112
    Industry and the Technical Colleges (Background to the Present Position in Technical Education), 1573
Parthasarathy, Dr. S., and Singh, Harkrishan : Amplitude of a Quartz Plate vibrating in Liquids, 260
Parthasarathy, Dr. S., and others : Temperature Coefficient of Ultrasonic Absorption in Organic Liquids, 405
Parthenogenesis in Viviparous Toothcarps : Pathological (Prof. A. Stolk), 1660
Parthenogenesis and Polyploidy in Mammalian Development (Dr. R. A. Beatty), *review* by Prof. Robert Matthey, 1497
Partial Inhibitory Effect of *Plistophora culicis* on the Sporogonic Cycle of *Plasmodium cynomolgi* in *Anopheles stephensi* (Miss L. Bano), 430
Partially Stabilized Linear Pinch : Magnetic Measurement of Plasma Confinement in a (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt, Dr. R. H. Lovberg and Dr. J. A. Phillips), 224
Participation of Reticulocyte Microsomes in the Incorporation of Iron into Haemoglobin (Dr. M. Rabinovitz and M. E. Olson), 1665
α-Particle Intensity (Primary), at Sunspot Maximum (Cosmic Rays and the Sunspot Cycle), (P. S. Freier, Prof. E. P. Ney and P. H. Fowler), 1319
Particles : Currents, Fields and (Prof. Francis Bitter), *review* by G. R. Noakes, 870
Particles (Charged) : Confinement of, by a Magnetic Field (Dr. B. Lehnert), 331
Particles (Colloidal Gold) : Alterations in the Ultrastructure of the Blood—Air Barrier in the Mouse Lung after Inhalation of (Dr. N. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1418
Particles (Cytoplasmic), isolated from Apples : Activity of (Dr. G. E. Neal and Dr. A. C. Hulme), 1469
Particles (Small) : Abrasion of the Insect Cuticle by Aqueous Suspensions of (Prof. V. B. Wigglesworth), 779
Particulate Cytochrome System Preparation : Reconstitution of the Succinic Oxidase System from Soluble Succinic Dehydrogenase and a (Prof. D. Keilin and Dr. Tsoo E. King), 1520
Particulate Preparations from Barley Roots : Carbon Dioxide Fixation in (Dr. L. C. T. Young and Janet S. D. Graham), 1071
Partington, Prof. J. R. : Through Alchemy to Chemistry, *review*, 986
    Inorganic Chemistry, *review*, 1097
    Treatise on Inorganic Chemistry, Vol. 2, Sub-Groups of the Periodic Table and General Topics, *review*, 1366
    Reports on the Progress of Applied Chemistry, *review*, 1432
Partition Chromatography (Paper) : Biochemical Differences between Inbred and Outbred Lines of *Drosophila melanogaster* studied by (H. F. Hoenigsberg and M. C. Castiglioni), 1404
Partition Chromatography (Quantitative Paper), of Sialic Acids (Elisabet Svennerholm and Dr. Lars Svennerholm), 1154
Partridge, Dr. M. W., and others : Carcinogenicity of Tricycloquinazoline, 838
Pascoe, K. J. : Solid-State Science for the Engineer, *review*, 1496
Pasich, Dr. B. : Detection of Triterpenoid Acids on Paper Chromatograms, 765
Paskell, E. (edited by) : Semiconductor Abstracts (compiled by Battelle Memorial Institute), Vol. 3, 1955, *review* by Dr. J. R. Tillman, 1168
Passage of Phosphate through the Human Tooth (Dr. P. Pincus), 844, *erratum*, 1771
Passage of Serum Albumins from the Mother to the Foetus (Prof. A. M. Schechtman and K. C. Abraham), 120
Passive Network Synthesis (Dr. James E. Storer), *review* by S. A. Stigant, 1564
Passive Transfer of Antitumour Factors through Milk in Rats (Prof. B. Sekla), 1600
Passive Transplantation Immunity to Crocker Tumour in Mice : Demonstration of Antibody in, using the Schultz-Dale Technique (Prof. B. D. Baruah), 624
Pasteur's Work on Fermentation and its Significance for Present-day Studies in Biochemistry (Prof. T. K. Walker), 940
Pasteurella multocida : Failure of the Agglutination Test to Identify Types of (Dr. G. R. Carter), 1138
Pasture : Growth and Reproduction in Worm-free Sheep at (Dr. C. R. W. Spedding, T. H. Brown and I. A. N. Wilson), 168
Pate, K., and Noble, W. : Mechanical Properties of Non-Metallic Brittle Materials (Strength of Ceramic Materials—Stress-Strain Relationships in Heavy Clay Products), 1578
Patel, B. S. (Crisp, Dr. D. J., and) : Relation between Breeding and Ecdysis in Cirripedes, 1078
Pateman, Dr. J. A. : Appointed a senior lecturer in botany at the University of Melbourne, 20
    Aberrant Recombination at the *am* Locus in *Neurospora crassa*, 1605
Patent Office : The Comptrollership of the, 725, 947, 1246
Paterson, H. E. : Sex-linked and Sex-limited Mutation of the Fly *Muscina stabulans* (Fall.) (Muscidae), 932
Paterson, S. : Mechanical Properties of Non-Metallic Brittle Materials (Studies of the Energy Partition in Shattering Stone Blocks with an Explosive Charge), 1578
Path of Carbon in Photosynthesis (Dr. J. A. Bassham and Prof. M. Calvin), *review* by Dr. C. P. Whittingham, 1231
Path (Mean Free), of Phonons in a Lead Crystal (G. J. McCallum and P. A. Egelstaff), 643
Pathogenic Race in *Fusarium oxysporum* f. *pisi* : A Change of, Induced by Root Exudate from a Resistant Host (E. W. Buxton), 1222
Pathogenicity : A Two-stage Transfer of, between the *MEL* and *NWS* Strains of Influenza *A* Virus (K. B. Fraser), 195
Pathogens (Bacterial Plant) : The Study of, *review* by W. C. Moore, 1094
Pathological Parthenogenesis in Viviparous Toothcarps (Prof. A. Stolk), 1660
Pathologically Decreased Serum Esterase in Carcinoma : Effect of Heparin on (Dr. J. Skořepa, S. Novák and H. Todorovičová), 908
Pathology (Chemical), at Cape Town, 1179
Pathway (An Alternative), for the Degradation of Cholic Acid by Micro-organisms (Shohei Hayakawa, Yasuo Saburi, Keizo Tamaki and Hideyuki Hoshijima), 906
Patki, Dr. S. J., and others : Interaction of Phenolic Compounds with Bacteria, 712
Paton, Dr. A. M. : Pectin-decomposing Strains of *Pseudomonas*, 61
Patrick, Dr. C. R. : Thermal Stability of Polytetrafluoroethylene, 698
Patrick, R. M. (Janes, G. S., and) : Extremely High Temperatures (Production of High-Temperature Gas by Magnetic Acceleration), 1380
Patron's Medal of the Royal Geographical Society awarded to Dr. Paul A. Siple, 810
Pattern of Humus Decomposition in East African Soils (H. F. Birch), 788
Pattern of Plane Polarized Light from Blue Sky : A Device for Visualizing the (J. A. Chapman), 1393
Patterns (Melanin), and of Hardening : Induction of, as Separate Processes in the Cuticle of Albino Locusts with Internally Absorbed Phenol Substrates (Dr. B. M. Jones and W. Sinclair), 926
Patterns (Regular Stationary) : Moving Visual Images produced by (Dr. M. H. Pirenne), 362 ; (F. W. Campbell and J. G. Robson), 362 ; (Dr. D. M. MacKay), 362
Patton, J. : Appointed to a supernumerary lectureship in agricultural bacteriology at Queen's University, Belfast, 1042
Patwardhan, M. V. : Role of Ferrous Iron in Enzymatic Transamination, 187
Paul, H. D. : At the thirteenth International Congress of Applied Psychology (Present Position of Psychology in German Medical Schools), 1580
Paul, I. : Appointed senior assistant consercator of forests, Sierra Leone, 458
Paul, Dr. John : Nomenclature of Cell Strains, 650
Paull, Prof. Wolfgang : Elected to honorary fellowship of the Chemical Society, 1312
Pavlov, Ivan V.—Toward a Scientific Psychology and Psychiatry (Dr. Harry K. Wells), *review* by Prof. John Cohen, 1233
Pavlov, Psychology and Psychiatry, *review* by Prof. John Cohen, 1233
Pavlovsky, Prof. E. : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Pawson, Prof. H. Cecil : Robert Bakewell, Pioneer Livestock Breeder, *review* by G. E. Fussell, 868
Payens, Dr. T. A. J. : First and Second Cycle Casein in Milk, 114
Payne, A. R. : Physical Properties of Polymers, 1634
Payne, K. W. (Hallam, A., and) : Germanium Enrichment in Lignites from the Lower Lias of Dorset, 1008
Payne, Dr. R. M., and others : Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
Payne-Gaposchkin, Prof. Cecilia : The Galactic Novae, *review* by Prof. Zdenek Kopal, 1688
Pea Apices (Severed) : Regeneration of (H. F. Gulline and R. Walker), 530
Pea Bioassay (Dwarf) : Evidence from a, for Naturally Occurring Gibberellins in the Growing Plant (A. J. McComb and Prof. D. J. Carr), 1548

Pea-crabs (*Pinnotheres*) : British (Dr. D. Atkins), 1087

Pea Seedlings : Effect of Gibberellic Acid on the Growth of, when imbibed through the Seed Coat (Dr. Thomas C. Moore), 500

Peace : Guided Missiles in War and (Nels A. Parson, jun.), *review*, 731

Peace, Science for : Annual Conference, 743

Peace and Security : Report on Defence—Britain's Contribution to, 1229

Peaceful Uses of Atomic Energy (Australian Atomic Energy Commission, and others, Symposium on), 238

Peaceful Uses of Atomic Energy (Prof. J. Rotblat), (British Association for the Advancement of Science lecture for children), 528

Peaceful Uses of Atomic Energy (United Nations Second International Conference on), 884

Peaceful Uses of Atomic Energy : Geneva Series on the —Nuclear Reactors for Research (edited by Clifford K. Beck), *review* by F. W. Fenning, 984

Peaceful Uses of Nuclear Energy (House of Commons Debate on), 948

Peacock, Dr. R. D. : Appointed a lecturer in chemistry at the University of Birmingham, 813

Pear Trees (Healthy) : Effect of Transmitted Ribonucleic Acid from, upon the Synthesis and Composition of Protein (Dr. B. Kessler), 201

Pearce, J. H., and others : Acquired Immunological Tolerance to Bovine Ribonuclease, 1208

Pearce, Dr. R. : Awarded the *Electronic Engineering* Premium of the Television Society, 1246

Pearce, Willard J. : Extremely High Temperatures (Calculation of the Radial Distribution of Photon Emitters), 1381

Pearsall, Prof. W. H. : Biological Productivity of Britain, 84

Pearse, Dr. A. G. E., and Scarpelli, Dr. D. G. : Cytochemical Localization of Succinic Dehydrogenase in Mitochondria from *Periplaneta americana*, 702

Pearse, Dr. A. G. E., and Tremblay, Dr. G. : Leucine Aminopeptidase in Rat Parathyroid and its relation to Parathyroid Hormone Production, 1532

Pearse, Dr. A. G. E., and others : Cytochemical Localization of Pyridine Nucleotide-linked Dehydrogenases, 1531

Pearson, Dr. J. W. : Phenobarbitone Therapy in Epilepsy, 1377

Pease, R. S. : Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions (Experiments with ZETA), 804

Pease, R. S., and others : Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315

Pectin-decomposing Strains of *Pseudomonas* (Dr. A. M. Paton), 61

Pectin Methylesterase in Tobacco Pith Sections : Effect of 2,4-Dichlorophenoxyacetic Acid on (K. T. Glasziou), 428

Pectoralis Major Muscle of the Pigeon : Histochemical Demonstration of Lipase Activity in the (Dr. J. C. George and K. S. Scaria), 783

  Relative Distribution of the Mitochondria in the Two Types of Fibres in the (Dr. J. C. George and R. M. Naik), 782

  Relative Distribution and Chemical Nature of the Fuel Store of the Two Types of Fibres in the (Dr. J. C. George and R. M. Naik), 709

Peculiar Disorder of Plasma Thromboplastin Production (Dr. F. Nour-Eldin and Dr. John F. Wilkinson), 989

Peculiar Distribution of the Diego Factor among the Warrau (Dr. Miguel Layrisse, Dr. Tulio Arends and Johannes Wilbert), 118

Peek (Cuthbert) Grant of the Royal Geographical Society awarded to Dr. Peter H. Davis, 810

Peierls, Prof. R. E. : Parity Conservation, 447

  Recent Advances in Nuclear Physics (The Theoretical Basis of the Shell-Model and Optical Model), 886

Pellets (Alfalfa) : Effect of Age of Young Dairy Calves on Dry-Matter Digestibility of (M. E. McCullough and L. R. Sisk), 57

Pellets (Heavy) : Provision of Cobalt to Ruminants by means of (D. W. Dewey, H. J. Lee and Dr. Hedley R. Marston), 1367

Pellia epiphylla : Effect of Gibberellin and Indoleacetic Acid on Seta Elongation in (Prof. G. F. Aspray, K. Benson-Evans and A. G. Lyon), 1351

Pelnard, J. (Benassy-Chauffard, C., and) : At the thirteenth International Congress of Applied Psychology (Occupational Mobility of Young Workers), 1580

Pelzer, Dr. Karl : Climate, Vegetation and Land Utilization in the Humid Tropics (Shifting Cultivation), 598

Pemberton, Dr. J. : Appointed to the chair of social and preventive medicine in Queen's University, Belfast, 600 ; work of, 600

Pembroke College, Cambridge : Pre-election of Prof. W. V. D. Hodge as Master, 946

Pendl, Dr. I., and Franz, Dr. W. : Transformation of Megaloblasts to Normoblasts by Cultivating Human Bone Marrow in Presence of Vitamin B_{12} and Vitamin B_{12}-binding Protein, 488

Pengelly, A. E. : Flames and Industry (Experimental Methods used at the Royal Dutch Steelworks at Ijmuiden), 15

Penguin (Humboldt) : Nasal Salt Secretion in the (Prof. Knut Schmidt-Nielsen and Dr. W. J. L. Sladen), 1217

Penicillin : Changes in the Dry Weight and Deoxyribonucleic Acid Content of *Proteus vulgaris* caused by (Dr. M. V. Nermut and Dr. V. Drášil), 1740

  Uridine Diphosphate Amino-sugar Compounds from *Staphylococcus aureus* inhibited by (Eiji Ito, Nobutoshi Ishimoto and Masahiro Saito), 906

Penicillin Action : Some Changes in the Surface Structure of Gram-Negative Bacteria induced by (Dr. M. R. J. Salton and Dr. F. Shafa), 1321

Penicillium : Decumbin, a New Compound from a Species of (Dr. V. L. Singleton, N. Bohonos and A. J. Ullstrup), 1072

Penikett, E. J. K., and Lister, Dr. A. J. : Estimation of Hydrogen Peroxide in Culture Media, 1682

Penman, Dr. H. L. : Biological Productivity of Britain (Agricultural Value of Field Drainage), 84

Penman, Dr. J. : Phenobarbitone Therapy in Epilepsy, 1377

Penney, Sir William : Appointed a vice-president of the Royal Society, 87

Penning, Dr. F. M. : Electrical Discharges in Gases, *review* by Dr. P. C. Thonemann, 1498

Penny, L. F. : *Obituary* of Prof. H. King, 1177

1:2:2:6:6-Pentamethylpiperidine, a New Hypotensive Drug (G. E. Lee, W. R. Wragg, S. J. Corne, N. D. Edge and H. W. Reading), 1717

Pentelow, F. T. K. : River Boards in Britain, 1568

People (Young) : Children and (British National Conference on Social Work), 1381

Peover, M. E., and others : Ease of Reduction of a Series of Coals and its relation to their Structure, 1059

Pepler, Dr. W. J. : Histogenesis of Osteoclastomata, 633

Pepsin (Whale) : Structure of Sperm- and Sei-Whale Insulins and their Breakdown by (Yoshio Ishihara, Tsuneyuki Saito, Yasuzo Ito and Masahiko Fujino), 1468

Peptide Complex (Carbohydrate), from Egg Albumin (P. Johansen, Dr. R. D. Marshall and Prof. A. Neuberger), 1345

Peptides in Sea-Urchin Eggs and Embryos (Pure Species and Hybrids) : Species-Specific Differences in Free Amino-Acids and (Dr. P. S. Chen snd Prof. F. Baltzer), 98

Peptides (Histidyl) : A New Synthesis of (Prof. Shiro Akabori, Kenji Okawa and Fumio Sakiyama), 772

Perceptual Stability of a Stroboscopically Lit Visual Field containing Self-Luminous Objects (Dr. D. M. MacKay), 507

Perchlorate (Ferric), Complex Ion (R. A. Horne), 410

Perez-Gimenez, M. E., and others : Isotopic Tracer Method for Measurement of Iron Lost into and Re-absorbed from Gastro-intestinal Bleeding Lesions, *errata*, 603

Perfused Cat Brain : Metabolism of the, during Metrazol Convulsions and Electroshock (C. Allweis and Dr. J. Magnes), 626

Perfused Heart : Formation of Lactate from Acetoacetate in the (Dr. J. H. Ottaway and A. K. Sarkar), 1791

Perhapsatron S-3 Apparatus at the Los Alamos Scientific Laboratory, University of California, Los Alamos, 231

Pericarp' : 'Purple—a Monofactorial Dominant in Tetraploid Wheats (Dr. B. C. Sharman), 929

Perihelia of Long-Period Comets : Distribution of the Directions of (J. G. Tyror), 394

Periodate : Action of, on some Polysaccharides containing Aldoheptose Sugars (Dr. A. B. Foster, D. A. L. Davies and M. J. Crumpton), 412

Periodic Acid : Effect of, on Histochemical Aldehyde Blockades (Dr. P. H. Staple), 288

Periodicals (Scientific), World List of : Preparation of a fourth edition, 529

Periodicity in Sea Roughness and Origin of Microseisms (Dr. J. N. Nanda, K. Achyuthan and N. K. Balachandran), 646

Periosteum (Ageing) : Enzyme Changes in the (Dr. E. A. Tonna), 486

Peripheral Nerve (Mammalian) : Effect of a Raised Peripheral Temperature upon the Rate of Regeneration in a (H. J. Gamble), 287

Peripheral Temperature (Raised) : Effect of a, upon the Rate of Regeneration in a Mammalian Peripheral Nerve (H. J. Gamble), 287

Periplaneta americana : Cytochemical Localization of Succinic Dehydrogenase in Mitochondria from (Dr. A. G. E. Pearse and Dr. D. G. Scarpelli), 702

Periplaneta americana L. : Muscle Fibres of the Fast and Slow Contracting Muscles of the Mesothoracic Leg of the American Cockroach (W. A. Smit), 1073

  Physical Release of Acetylcholine from the Thoracic Nerve Cord of (E. H. Colhoun), 490

Perkin Medal Address to the American Section of the Society of Chemical Industry (Dr. W. S. Kroll), 159

Perkins, E. J. : Microbenthos of the Shore at Whitstable, Kent, 791

Perlmann, Dr. P., and D'Amelio, Dr. V. : Soluble Antigens in Microsomes and other Cell-Fractions of Rat Liver, 491

Permeability and the Size Distribution of Pores (Dr. M. R. J. Wyllie and Dr. G. H. F. Gardner), 477 ; (Dr. T. J. Marshall), 477

Permeability (Ion), of the Plasmalemma of the Plant Cell (N. A. Walker), 1288 ; (Prof. G. E. Briggs), 1289

Permeability Factor in Plasma : Activation of a, by Contact with Glass (Dr. J. Margolis), 635

Permeability Factor (Globulin) : Distribution of, and its Inhibitor in the Tissue Fluid and Lymph of the Guinea Pig (Prof. A. A. Miles and D. L. Wilhelm), 96

Permeability Mechanism : N-Terminal Histidine at the Active Centre of a (W. D. Stein), 1662

Permian Fossils (Silicified), from Texas and New Mexico—Pleurotomariacea (Prof. R. L. Batten), 1639

Pernis, Dr. B. (Ceppellini, Dr. R., and) : Presence of Plasma Globulins in the Hyaline Tissue in Cases of Silicosis, 55

Perosis and Folic Acid Antagonism in Chickens (J. H. Arundel), 343

Peroxidase and 'Cytochrome *dh*' in Wheat Roots : Relation between (Prof. H. Lundegardh), 28

Peroxide Accumulation Hypothesis of Isoniazid Action : Rejection of the (Ian H. Holmes and Prof. Sydney D. Rubbo), 1203

Peroxide (Hydrogen) : Estimation of, in Culture Media (E. J. K. Penikett and Dr. A. J. Lister), 1682

  Free Radical produced in the Reaction of Metmyoglobin with (Dr. J. F. Gibson, Dr. D. J. E. Ingram and P. Nicholls), 1398

  Inability of, to influence the Survival-Time of Rats bearing *RD*3 Sarcoma and the Walker Carcinoma (Dr. F. N. Ghadially and Dr.G. Wiseman), 1067

Peroxide (Hydrogen), and Tumour Therapy (Prof. H. N. Green and J. W. Westrop), 128

Perrin, R. M. S. : Rothamsted Experimental Station, 242

Perry, Dr. J. W. : Scope and Limits of Colour Measurement, 1704

Perry, Dr. W. L. M .: Appointed to the chair of materia medica in the University of Edinburgh, 882 ; work of, 882

Persistance of Aldrin and Dieldrin Residues in Sheep Fleece (I. R. Harrison and C. A. Johnson), 1267

Person Factors : The General Relationship between Test Factors and—Application to Preference Matrices (Patrick Slater), 1225

Personality : The Problem of, *review* by Dr. Clifford Allen, 5

Personnel (Technical) : Immigration of, to the United States, 1243

Personnel Management : The Use of Statistics in (Institute of Personnel Management in conjunction with the National Institute of Industrial Psychology Course in), 20

Personnel Management, Institute of : Residential Study Course in the Employment Function of Management, 20

Personnel Management, Institute of, in conjunction with the National Institute of Industrial Psychology : Course in the Use of Statistics in Personnel Management, 20

Personnel Management in a Small Firm (Mrs. J. M. Collingridge and Mrs. J. M. Ritchie), 1310

Peru : Flora of (J. Francis MacBride), *review* by N. Y. Sandwith, 1366

Pest Control, *review* by Dr. K. A. Lord, 1689

Pest Control Research : Advances in (edited by R. L. Metcalf), Vol. 1, *review* by Dr. K. A. Lord, 1689

Pesticides in Foodstuffs : Residues of (Pesticides Group of the Society of Chemical Industry and the Association of British Insecticide Manufacturers Discussion on), 22
Pests in Stored Agricultural Products with special reference to Grain : Control of (Dr. J. A. Freeman), (European Productivity Agency of the Organization for European Economic Co-operation, Project No. 212), 1639
Pests (Crop) : History of, and the Measures taken to Overcome Them (George Ordish), 536
Peters, James M., and Greenberg, Prof. David M. : Dihydrofolic Acid Reductase, 1669
Peters, Sir Rudolph : Phosphorofluoridates and Fluoroacetates, *review*, 1295
Petersen, G. H. : Distinction between *Cardium edule* L. and *Cardium lamarcki* Reeve, 356
Peterson, L. (Winckler, J. R., and) : Cosmic Rays and the Sunspot Cycle (A Large Cosmic-Ray Decrease accompanying the Solar Maximum of 1957), 1317
Peterson, Prof. M. L., and others : Non-Flowering Strains of Herbage Grasses, 591
Peterson, V. K., and others : Processing of Foods with Ionizing Radiations, 877
Petris, M. A. : Appointed veterinary officer, Class I, Cyprus, 459
Petroleum, Institute of : Formation of the Gas Chromatography Discussion Group in association with the Hydrocarbon Research Group of the, 1041
Petroleum, Institute of (Mass Spectrometry Panel of the Hydrocarbon Research Group), and Committee *E*-14 of the American Society for Testing Materials : Conference on Mass Spectrometry, 1771
Petroleum, Institute of (Spectroscopic Panel of the Hydrocarbon Research Group) : Conference on Molecular Spectroscopy, 89
Petroleum, Institute of (Gas Chromatography Discussion Group, associated with the) : Symposium on Column Packings for Gas Chromatography, 604
Petroleum Engineering (Chemical and), Exhibition at Olympia, 1312
Pets : Advice on (Zoological Society of London), 1180
Pets (Domestic) : Economics of (Political and Economic Planning, Broadsheet No. 415), 1180
Petterssen, Prof. Sverre : Elected to honorary membership of the Royal Meteorological Society, 1375
Pettersson, Prof. Hans : Rate of Accretion of Cosmic Dust on the Earth, 330
Pettet, A. E. J. : Trade Wastes, 678
Pfeiffer, John : The Changing Universe, *review* by Dr. F. G. Smith, 980
Phage (*T*2) : Effect of Chloramphenicol on Ribonucleic Acid Metabolism in *E. coli* infected with (Prof. Itaru Watanabe, Dr. Yukio Kiho and Dr. Kin-ichiro Miura), 1127
Phage Antibodies : Role of, in the Development of Non-Toxigenic Cultures of *Corynebacterium diphtheriae* (Paul S. Anderson, jun., and Prof. Philip B. Cowles), 350
Phages (*Pseudomonas mors-prunorum*), from the Soil : A Method for Isolating (J. E. Crosse and M. K. Hingorani), 60
Phagocytic Activity of the Reticulo-Endothelial System : Effect of Antibiotics on the (I. A. Sewell and Prof. T. Nicol), 1662
  Effect of certain Polyphenylated Aliphatic Hydrocarbons on the (Prof. T. Nicol, C. C. Ware and Dr. D. L. J. Bilbey), 1804
  Effect of various Stilbene Compounds on the (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 1538
Phagocytic Cell Strain derived from a Murine Lymphoma : Adaptation to Serum-free Medium by a (Dr. Alan S. Rabson, Frances Y. Legallais and Samuel Baron), 1343
Pharmacology of Phenolic Substances (Plant Phenolics Group Symposium on), 531
Pharmacopoeias, Dispensatories, Formularies and Allied Publications, (1493-1957), in Lloyd Library : A Catalogue of the, 1769
Pharmacy, Biology and Chemistry : Mathematics and Statistics for Use in (L. Saunders and R. Fleming), *review* by Dr. D. J. Finney, 147
Phase (Active), of End-Plate Potential : Direct Determination of the (Prof. Noriko Takeuchi and Akira Takeuchi), 779
Phase Rule : The, *review* by Dr. F. Din, 587
Phase Theory : Chemical (Prof. J. Zernike), *review* by Dr. F. Din, 587
Phaseolus vulgaris : Effect of Gibberellic Acid and Kinetin on Growth of the Primary Leaf of Dwarf Bean (E. C. Humphries), 1081
  Inhibitory Effect of Gibberellins on Nodulization in Dwarf Beans (G. A. Thurber, J. R. Douglas and A. W. Galston), 1082
Phenobarbital : An Attempt to adapt Explanted Tissues to an Anticonvulsant ('Trimedal') and to (E. Holečková and Dr. Z. Servít), 1541
Phenobarbitone : Effect of, on the Requirement of *Lactobacillus leichmannii* for Vitamin B_{12} (Dr. G. H. Spray), 859
Phenobarbitone Therapy in Epilepsy, 1377
Phenol Substrates : Induction of Melanin Patterns and of Hardening as Separate Processes in the Cuticle of Albino Locusts with Internally Absorbed (Dr. B. M. Jones and W. Sinclair), 926
Phenol 'Unmasking' Techniques ; Demonstration of some 'Masked' Lipids in the Oocytes of *Chrotogonus trachypterus* with Sudan Black *B* and (Brij L. Gupta), 555
Phenolic Compounds : Interaction of, with Bacteria (Dr. A. H. Beckett, Dr. S. J. Patki and Ann E. Robinson), 712
Phenolic Glucosides : Synthesis of Phlorin and other, by Plant Tissues (A. Hutchinson, Chita Roy and Prof. G. H. N. Towers), 841
Phenolic Substances : Pharmacology of (Plant Phenolics Group Symposium on), 531
Phenols : Reaction of Ferrimyoglobin with (Prof. Philip George, R. L. J. Lyster and J. Beetlestone), 1534
Phenomena (Co-operative), in Hot Plasmas (Controlled Release of Thermonuclear Energy), (Prof. Lyman Spitzer), 221
Phenomena (Solid State), in Electronics and Telecommunications (Postal and Telecommunications Group of the Brussels Universal and International Exhibition International Conference on), 813
Phenomenön : Ångström Radiation as, and as Tool, *review* by Prof. A. J. C. Wilson, 727
Phenotypic Variation : A Case of Limitation of (P. H. Fitzgerald), 436
Phenylalanine Metabolites : Inhibition of 5-Hydroxytryptophan Decarboxylase by (Dr. A. N. Davison and Dr. M. Sandler), 186
Phenylhydrazine : Isolation of an Erythropoietic Fraction from the Plasma of Rabbits made severely Anaemic with (Peter H. Lowy, Geoffrey Keighley, Henry Borsook and Ashton Graybiel), 1802
L-threo-β-Phenylserine and L-erythro-β-Phenylserine : Enzymatic Cleavage and Synthesis of (Friedrich H. Bruns and Liselore Fiedler), 1533
Phillips, C. S. G. : Column Packings for Gas Chromatography, 604
Phillips, Dr. D. C., and others : A Three-Dimensional Model of the Myoglobin Molecule obtained by X-Ray Analysis, 662
Phillips, G. F. : A Logarithmic Time Scale for the Evolution Process, 1652
Phillips, Dr. J. A., and others : Controlled Release of Thermonuclear Energy—Magnetic Measurement of Plasma Confinement in a Partially Stabilized Linear Pinch, 224
  Controlled Release of Thermonuclear Energy—Neutrons from a Stabilized Toroidal Pinch, 231
Phillips, Prof. J. F. V. : The Development of the West African Environment (The Influence of Man on the Environment), 1581
Phillips, Dr. John H., and others: Antigenicity of a Bacterial Deoxyribonucleic Acid, 573
Phillips, Dr. M. A. (Chapman, C., and) : Fluoroacetamide as a Systemic Insecticide, 1810
Phillipson, A. T., and Reid, C. S. W. : Distention of the Rumen and Salivary Secretion, 1722
Phlorin and other Phenolic Glucosides : Synthesis of, by Plant Tissues (A. Hutchinson, Chita Roy and Prof. G. H. N. Towers), 841
Phonons in a Lead Crystal : Mean Free Path of (G. J. McCallum and P. A. Egelstaff), 643
Phosphamide Ester, B 518-ASTA (Cyclic Nitrogen Mustard) : Chemotherapeutic Action of a, in Experimental Tumours of the Rat (Herbert Arnold, Friedrich Bourseaux and Norbert Brock), 931
Phosphatase Production by *Micrococcus pyogenes* var. *aureus* : Incorporation of Disodium *p*-Nitrophenylphosphate in Solid Medium for the Detection of (H. R. Lovell), 995
Phosphatase (Alkaline) Activity in the Liver of Rats : Effect of Aldosterone Monoacetate and Deoxycorticosterone Acetate on (Dr. Amiya B. Kar and R. P. Das), 623
Phosphate : Passage of, through the Human Tooth (Dr. P. Pincus), 844, *erratum*, 1771
Phosphate from Soil Minerals : Release of, by Hydrogen Sulphide (Joan I. Sperber), 934
Phosphate Isomerase Reactions (Aldolase and Triose) : Absolute Configuration of Enantiomorphic Carbanions involved in the (Ben Bloom and Yale J. Topper), 1128
Phosphate Rocks (Negev) : Minor Constituents and Trace Elements in (Dr. E. Foa), 1676
Phosphate (Calcium) Columns : Chromatographic Separation of Lactalbumin from Human Milk Whey on (Dr. Bengt Johansson), 996
Phosphate (Creatine) Administration : Effect of, on the Cardiac Adenosine Triphosphate of Thyroxinized Rats (L. Angelucci, R. Boldrini and E. Mascitelli-Coriandoli), 419
Phosphate (Inorganic) : Dependence on Light of the Reversible Uptake of, by *Hydrodictyon* (A. Pirson and Dr. A. Kuhl), 921
Phosphate (Sodium) Crystals on Salt Fish (Dr. W. J. Dyer, Doris I. Fraser and J. R. Dingle), 858
Phosphate—Vanadium (Pyridoxal) : A Model System for Cystine Desulphydrase Action—(Prof. F. Bergel, R. C. Bray and K. R. Harrap), 1650
Phosphates (Alkyl) : Formation of, in Wheat Leaves (V. C. Runeckles), 1470
Phosphates (Quinol) : Oxidative Phosphorylation—a Chemical Approach using (Dr. V. M. Clark, G. W. Kirby and Sir Alexander Todd), 1650
Phosphide (Gallium) : Grain Boundaries and Electroluminescence in (D. A. Holt, Dr. G. F. Alfrey and C. S. Wiggins), 109
Phosphite (Tri-isopropyl) : Gamma-Radiation Catalysis of the Oxidation by Air of (Dr. D. G. Coe), 1519
Phospho-Enol-Pyruvate in Spinach Leaf Chloroplast Extract : Formation of Oxalacetate and Aspartate from (Lawson L. Rosenberg, John B. Capindale and F. R. Whatley), 632
Phospholipid (Threonine-containing), in Tunny Muscle : Presence of a (Hisanao Igarashi, Kôichi Zama and Muneo Katada), 1282
Phospholipids (Groundnut) : Isolation of β-Sitosterol-D-Glucoside from (Dr. Francis Aylward and B. W. Nichols), 1064
Phospholipids, Proteins and Platelet-Lipoid (J. R. O'Brien), 420
Phosphomannoisomerase, an SH-Dependent Metal-Enzyme Complex (Dr. Friedrich H. Bruns and Ernst Noltmann), 1467
Phosphorofluoridates and Fluoroacetates, *review* by Sir Rudolph Peters, 1295
Phosphorus-32 : Labelling of Bull Semen with, *in vivo* (Dr. R. M. C. Dawson), 1014
Phosphorus in Silicon : Control of Surface Concentration in the Diffusion of (M. J. Coupland), 1331
Phosphorus (Radioactive), biologically incorporated in Food : Absorption and Distribution in Rats of (B. Kawin and R. F. Palmer), 127
Phosphorus and Fluorine : Some Aspects of the Chemistry and Toxic Action of Organic Compounds containing (Dr. Bernard Charles Saunders), *review* by Sir Rudolph Peters, 1295
Phosphorylase Activity of Primary Rat Liver Cancer (A. A. Hadjiolov and K. I. Dancheva), 547
Phosphorylation : Oxidative—a Chemical Approach using Quinol Phosphates (Dr. V. M. Clark, G. W. Kirby and Sir Alexander Todd), 1650
Phosphorylation of Riboflavin by Transferase Action (Dr. Kunio Yagi and Jun Okuda), 1663
Phosphorylation (Oxidative) : A Theory of (K. Harrison), 1131
Photobiological Investigations (Dr. E. J. Bowen), 1314
Photobiology Group : Discussion on Photobiological Investigations, 1314
Photochemical Apparatus : The—its Structure and Function (Eleventh Brookhaven Symposium in Biology), 1042
Photodestruction of Indoleacetic Acid : Intermediates and Competing Reactions in the (Peter M. Ray and George M. Curry), 895
Photoelectric Response of Selenium-type Photovoltaic Cells to X-Rays (Dr. R. Feinberg), 1057
Photographic Aspects of Electron Microscopy (Scientific and Technical Group of the Royal Photographic Society and the Electron Microscopy Group of the Institute of Physics Meeting on), 1312
Photographic Observation of the Satellite 1957 Beta leaving the Earth's Shadow (Dr. Heinz Neckel), 257
Photographic Society, Royal : Silver Progress Medal for 1957 awarded to Dr. Edwin H. Land, 312
  Honorary fellowship conferred on Dr. John I. Crabtree and on Dr. Edwin H. Land, 313
Photographic Society, Royal (Scientific and Technical Group), and the Electron Microscopy Group of the Institute of Physics : Meeting on Photographic Aspects of Electron Microscopy, 1312

Photographie scientifique : Manuel de (Gérard de Vaucouleurs, Jean Dragesco et Pierre Selme, avec la collaboration de Henriette Faraggi et H. Tellez-Plasencia), *review* by J. Walton Siddorn, 798
Photography : Scientific, *review* by J. Walton Siddorn, 798
Photography with the Microscope : 'Micro 58', an Exhibition of (Royal Microscopical Society), 1246
Photo-ionization in Self-quenching Geiger Counters (Prof. Rafi M. Chaudhri, Mustafa Yar Khan, Abida Khawaja and Rehana Dar), 1526
Photomicrography : Use of Electronic Flash in (Dr. David A. Erasmus), 1290
Photons : Role of, in Argon—Alcohol Counters (Dr. P. Mortier, J. Demuynck and O. Segaert), 1327
Photoperiod : Effect of, on the Oxygen Consumption of Two Species of Intertidal Crabs (Prof. Paul A. Dehnel), 1415
  Influence of, on Imaginal Diapause in Acridids (M. J. Norris (Mrs. O. W. Richards)), 58
  Interaction of Hormone and, in an Early Variety of Rice (G. Misra and G. Sahu), 637
Photoperiod, Auxin and Sex Balance in a Long-Day Plant (Prof. J. Heslop-Harrison and Y. Heslop-Harrison), 100
Photoperiod and Temperature : Importance of, in Inducing Diapause in the European Corn Borer, *Pyrausta nubilalis* (Hbn.), (J. A. Mutchmor and Dr. W. E. Backel), 204
Photoperiodic Control of Flowering in *Lemna perpusilla* (William S. Hillman), 1275
Photoperiodism : Effect of, on Response of Juvenile Trout to Water Currents (T. G. Northcote), 1283
  Use of Fluorescent Lighting for Experiments on (Dr. J. W. L. Beament and Dr. A. D. Lees), 1443
Photoperiodism in Plants and Animals (Photobiology Committee of the United States National Research Council International Symposium on), 535
Photosensitization of Bacteria by Furocoumarins and related Compounds (Dr. W. L. Fowlks, D. G. Griffith and Evelyn L. Oginsky), 571
Photosynthesis, *review* by Dr. C. P. Whittingham, 1231
  The Path of Carbon in (Dr. J. A. Bassham and Prof. M. Calvin), *review* by Dr. C. P. Whittingham, 1231
  Research in (edited by H. Gaffron, A. H. Brown, C. S. French, R. Livingston, E. I. Rabinowitch, B. L. Strehler and N. E. Tolbert), (Papers and Discussions presented at the Gatlinburg Conference, 1955), *review* by Dr. C. P. Whittingham, 974
  Xylose as a Specific Inhibitor of (Dr. K. A. Hassall), 1273
Photosynthetic Bacteria : Inhibition of Carotenoid Synthesis in—Specific Inhibition of Carotenoid Synthesis in a Photosynthetic Bacterium and its Physiological Consequences (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250 ; Suppression of Carotenoid Synthesis and its Effect on the Activity of Photosynthetic Bacterial Chromatophores (Dr. R. C. Fuller and I. C. Anderson), 252
Photosynthetic Bacterial Chromatophores : Suppression of Carotenoid Synthesis and its Effect on the Activity of (Inhibition of Carotenoid Synthesis in Photosynethetic Bacteria), (Dr. R. C. Fuller and I. C. Anderson), 252
Photosynthetic Bacterium : Specific Inhibition of Carotenoid Synthesis in a, and its Physiological Consequences (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250
Photosynthetic Fixation of Carbon Dioxide : Thioctic Acid and (B. B. Biswas and Dr. S. P. Sen), 1219
Phototropism of *Phycomyces* Sporangiophores (G. H. Hanbury), 358 ; (M. J. Carlile), 359
Photovoltaic Cell : Retinal Type of (Dr. Irvin Levin), 832
Photovoltaic Cells (Selenium-type) : Photoelectric Response of, to X-Rays (Dr. R. Feinberg), 1057
Phthalocyanine (Copper) : Lattice Image of Twin Structure observed directly by Electron Microscope in a Crystal of (Prof. E. Suito, N. Uyeda, H. Watanabe and T. Komoda), 332
Phycomyces Sporangiophores : Phototropism of (G. H. Hanbury), 358 ; (M. J. Carlile), 359
Phylum Mollusca : Occurrence of Collagen in the (S. C. Melnick), 1483
Physical Bases of the Electrohysterogram (Dr. S. D. Larks), 67
Physical Behaviour of High Polymers : Chemical Structure and (Sir Harry Melville), 1045
Physical Chemistry of Nucleic Acids and Nucleo-proteins : Structure and (Colloid and Biophysics Committee of the Faraday Society Discussion on), 885
Physical Optics, *review* by G. R. Noakes, 5
Physical Optics (Dr. R. A. Houstoun), *review* by G. R. Noakes, 5
Physical Properties of Polymers (Plastics and Polymer Group of the Society of Chemical Industry Silver Jubilee Symposium on), 531, 1633
Physical Release of Acetylcholine from the Thoracic Nerve Cord of *Periplaneta americana* L. (E. H. Colhoun), 490
Physical Society : Conference on the Band Theory of Metals and the Structure of the Fermi Surface, 525
  Duddell Lecture (Prof. L. C. Jackson), 527
  Annual Exhibition of Scientific Instruments and Apparatus, 673
  Handbook of Scientific Instruments and Apparatus (1958 Exhibition), 743
  Conference on Nuclear Physics, 885
  Conference on Spectroscopy of Solids, 1042
  Year Book for 1957, 1046
  Election of Officers for 1958-59, 1640
Physical Society (Acoustics Group), and the North-Eastern Branch of the Institute of Physics : Discussion on Flow Noise, 388
Physical Society (Colour Group) : Symposium on the Scope and Limits of Colour Measurement, 1704
Physical Stabilizing Effect of the Halteres : Static Sense of *Calliphora* and the (Dr. G. Schneider), 1355 ; (Dr. J. W. S. Pringle), 1356
Physical Structure (Chemical and), of Mucopolysaccharides (National Science Foundation and the Retina Foundation Conference on), 1246
Physical Theory : Irreversible Processes in (Prof. R. C. L. Bosworth), 402 ; (Prof. Karl R. Popper), 402
Physical and Cultural Anthropochronology : Man's Journey through Time, a First Step in (Prof. L. S. Palmer), *review* by M. C. Burkitt, 1691
Physicochemical Investigations of Erythrocyte Membranes (A. Teitel and N. Marcus), 714
Physics in Indian Universities (Dr. P. C. Bhattacharya), 23
Physics : Dr. Irving Langmuir's Contributions to (Dr. Albert W. Hull), 148
  Cloud, *review* by J. R. Atkinson, 1298
  Elements of Classical Thermodynamics, for Advanced Students of (Dr. A. B. Pippard), *review* by S. Angus, 1755
  Handbook of Chemistry and (edited by Prof. Charles D. Hodgman, in association with Prof. Robert C. Weast and Dr. Samuel M. Selby), thirty-ninth edition, *review*, 661
  High Energy (European Organization for Nuclear Research 1958 Annual International Conference on), 884
  Low-Temperature, *review* by Dr. A. B. Pippard, 871
  New Intermediate (G. R. Noakes), *review* by W. H. Dowland, 586
  Nuclear (Physical Society Conference on), 885
  Radiological (M. E. J. Young), *review* by G. W. Reed, 727
  Seminar on (University of Calcutta), 23
  Sixth-Form, *review* by W. H. Dowland, 586
Physics, Institute of (Education Group and the South-Western Branch) : Joint Easter Conference on Physics in Schools, 743
Physics, Institute of (London and Home Counties Branch) : Conference on the Design of Physics Research Laboratories, 90
Physics, Institute of (London and Home Counties Branch), and others : Symposium on Science and Society, 603, 1183
Physics, Institute of (Stress Analysis Group) : Symposium on Contact Stresses, 1773
Physics, Institute of (X-Ray Analysis Group) : Spring Conference, 531, 1645
Physics, Institute of (North-Eastern Branch), (Acoustics Group of the Physical Society and the) : Discussion on Flow Noise, 388
Physics, Institute of (Electron Microscopy Group), (Scientific and Technical Group of the Royal Photographic Society and the) : Meeting on Photographic Aspects of Electron Microscopy, 1312
Physics, Institute of (Non-destructive Testing Group), and the Société Française de Métallurgie : Joint Conference in Paris, 813
Physics of Clouds (Dr. B. J. Mason), *review* by J. R. Atkinson, 1298
Physics of Fluids (American Institute of Physics), Vol. 1, No. 1, 601
Physics of High-Molecular Materials (Dr. L. R. G. Treloar), 1633
Physics in Schools (Education Group and the South-Western Branch of the Institute of Physics joint Easter Conference on), 743
Physics of Water and Ice (Royal Society Discussion on), 380
Physics and Chemistry of Life (A *Scientific American* Book), *review* by Prof. D. C. Harrison, 985
Physics (Electron) : Advances in Electronics and (edited by L. Marton), Vol. 9, *review* by Dr. J. A. Saxton, 1688
Physics (Low-Temperature) : Sixth International Conference on, 161
Physics (Modern) : Causality and Chance in (Prof. David Bohm), *review* by Prof. L. Rosenfeld, 658
  Determinism and Inderterminism in (Ernst Cassirer), translated by O. Theodor Benfey, *review* by F. I. G. Rawlins, 590
Physics, Molecular, Vol. 1, No. 1, 456
Physics (Nuclear) : International Congress on (Low Energy Nuclear Interactions and Nuclear Structure), (International Union of Pure and Applied Physics, and Unesco), 459
  Progress in (edited by Prof. O. R. Frisch), Vol. 6, *review* by Dr. T. G. Pickavance, 1362
  Recent, *review* by Dr. T. G. Pickavance, 1362
  Recent Advances in (Dr. A. M. Lane), 886
Physics (Pure and Applied), International Union of : 1958 International Conference on Semi-conductors, 885
Physics (Pure and Applied), International Union of, and Unesco : International Congress on Nuclear Physics (Low Energy Nuclear Interactions and Nuclear Structure), 459
Physics (Radiation), in Medicine, *review* by G. W. Reed, 727
Physics (Theoretical), in Manchester, 1767
Physics (Theoretical Atomic), in Copenhagen, 1767
Physics and Metaphysics, *review* by Prof. L. Rosenfeld, 658
Physics and Metaphysics (Prof. Louis de Broglie), 1814 ; (Prof. L. Rosenfeld), 1814
Physics Research Laboratories : Design of (London and Home Counties Branch of the Institute of Physics Conference on), 90
Physik : Handbuch der (herausgegeben von S. Flügge), Band 30, Röntgenstrahlen : Band 32, Strukturforschung, *review* by Prof. A. J. C Wilson, 727
  Handbuch der (herausgegeben von S. Flügge), Band 14, Kältephysik I ; Band 15, Kältephysik II, *review* by Dr. A. B. Pippard, 871
  Handbuch der (herausgegeben von S. Flügge), Band 35, Atome I ; Band 36, Atome II, *review* by Prof. R. Eisenschitz, 1625
Physiography : Lake, *review* by Prof. Kaare Strøm, 1360
Physiological Breakdown of the Red Blood Corpuscles : Sites of the (G. v. Ehrenstein and D. Lockner), 911
Physiological Chemistry in the University of Reading, 670
Physiological Consequences : Specific Inhibition of Carotenoid Synthesis in a Photosynthetic Bacterium and its (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250
Physiological Optics, *review* by Prof. W. D. Wright, 146
Physiologie des Nervensystems : Morphologie und (Prof. Paul Glees), *review* by Prof. Ragnar Granit, 1493
Physiology : Fish, *review* by Prof. J. Z. Young, 971
Physiology of Fishes (edited by Margaret E. Brown), Vol. 1, Metabolism, Vol. 2, Behaviour, *review* by Prof. J. Z. Young, 971
Physiology of the Hatching of Eggs of *Ascaris lumbricoides* (Prof. W. P. Rogers), 1410
Physiology of the Nervous System (Dr. E. Geoffrey Walsh), *review* by Prof. D. Whitteridge, 1095
Physiology of the Pituitary Gland of Fishes (Grace E. Pickford and James W. Atz), *review* by Prof. J. Z. Young, 971
Physiology of Reproduction in Fungi (Dr. Lilian E. Hawker), *review* by Prof. W. Brown, 297
Physiology and Biochemistry of Lactation (Dr. S. J. Folley), *review* by Dr. J. A. B. Smith, 986
Physiology (Animal), at Cambridge, 882
Physiology (Plant), Indian Society for : Inaugural Meeting, 1639
  Election of Officers for 1958, 1640
Phytochemistry (Government of the Federation of Malaya and Unesco Symposium on), 466
Phyto-Immunity : A Possible Basis for (D. H. Taysum), 174

Pickavance, Dr. T. G. : Recent Nuclear Physics, *review*, 1362
Pickford, Grace E., and Atz, James W. : The Physiology of the Pituitary Gland of Fishes, *review* by Prof. J. Z. Young, 971
Pickford, Prof. R. W. : Colour Vision of Three Albinos, 361
  Vision and the Evolution of Man, *review*, 1429
Pickford, Prof. R. W. (Gaddini, R., and) : At the thirteenth International Congress of Applied Psychology (Impact of Hospitalization on Young Children who are Chronic Invalids or who suffer from Organic Disability), 1580
α-Picoline from *Rumex obtusifolius* L. (S. Wilkinson), 636
Pictures (Television) : Visibility of Noise on (R. Fatehchand), 1797
Pictures (Telvision), on Magnetic Tape : Recording, 1174
Pidduck : A Modern, *review* by Prof. G. O. Jones, 1495
Pierce, W. J. : *Obituary* of F. J. Welch, 1766
Piéron, Prof. H. : Opening Discourse at the thirteenth International Congress of Applied Psychology, 1579
Piezoelectric Crystals (Synthetic) : Properties of, *review* by Dr. Warren P. Mason, 588
Piezoelectricity (General Post Office, Selected Engineering Reports), *review* by Dr. Warren P. Mason, 588
Pig Heart Muscle : Synthesis of Succinate from Acetate by an Enzyme System of (Dr. D. D. Davies), 339
Pig Kidney : Growth and Titration of Louping-ill Virus in Monolayer Tissue Culture of (Dr. Holman E. Williams), 497
Pig's Carpal Organ : Occurrence of Foldings of Plasma Membrane (β-Cytomembrane) in Cells of, as revealed by Electron Microscopy (K. Kurosumi and T. Kitamura), 489
Pigeon : Histochemical Demonstration of Lipase Activity in the Pectoralis Major Muscle of the (Dr. J. C. George and K. S. Scaria), 783
  Relative Distribution of the Mitochondria in the Two Types of Fibres in the Pectoralis Major Muscle of the (Dr. J. C. George and R. M. Naik), 782
  Relative Distribution and Chemical Nature of the Fuel Store of the Two Types of Fibres in the Pectoralis Major Muscle of the (Dr. J. C. George and R. M. Naik), 709
Pigeon Breast Muscle : Crystallization of Cytochrome c from (Bunji Hagihara, Ichiro Sekuzu, Kunio Tagawa, Masahiko Yoneda and Prof. Kazuo Okunuki), (Crystalline Cytochrome c), 1588
Pigment of *Micrococcus lysodeikticus* (Gerald Litwack and A. F. Carlucci), 904
Pigment (Connective-Tissue), of the Centipede, *Lithobius forficatus* (L.), (Dr. A. E. Needham), 194
Pigmentation of Intestinal Muscle in Steatorrhoea (Dr. G. Austin Gresham and J. G. Cruickshank, and J. C. Valentine), 538
Pigments (Common Bile) : The IX-α Structure of the (Prof. C. H. Gray, Dr. D. C. Nicholson and R. A. Nicolaus), 183
Pigments (Groundnut Skin), and Conarachin II : Complex Formation between (Miss H. M. R. McDavid and W. E. F. Naismith), 480
Pigments (Retinal), of a Labrid Fish (Dr. Frederick W. Munz), 1012
Pike, Dr. R. B. : Awarded a Grant by the Leverhulme Trust, 1442
Pilansberg Dyke of Palaeomagnetic Significance : Age of a (G. D. L. Schreiner), 1330
Pillai, Dr. Aiyappan : Awarded a Scholarship by the Lady Tata Memorial Fund, 1703
Pillemer, Prof. Louis : *Obituary* by Dr. Bernard Cinader, 234
Pilot Plants, Models and Scale-up Methods in Chemical Engineering (Dr. Robert Edgeworth Johnstone and Prof. Meredith W. Thring), *review* by Prof. D. M. Newitt, 1094
Pinazzi, Dr. C. P. : Recent Advances in Polymer Technology (Hydroxymethyl Resorcinol Polycondensates in Rubber), 1305
Pinch (Linear Stabilized) : New Confinement Phenomena and Neutron Production in a (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt and Dr. R. H. Lovberg), 228
Pinch (Partially Stabilized Linear) : Magnetic Measurement of Plasma Confinement in a (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt, Dr. R. H. Lovberg and Dr. J. A. Phillips), 224
Pinch (Stabilized Toroidal) : Neutrons from a (Controlled Release of Thermonuclear Energy), (Dr. J. Honsaker, Dr. H. Karr, Dr. J. Osher, Dr. J. A. Phillips and Dr. J. L. Tuck), 1231
Pinch Apparatus (High-Pwer) : Neutron Production in a (Controlled Release of Thermonuclear Energy), (Dr. D. C. Hagerman and Dr. J. W. Mather), 226
Pinchbeck, Dr. Ivy : Title of reader in social studies in the University of London conferred on, 69
Pinckers, F., and others : Isolation of *Salmonella infantis* from an Aborted Bovine Foetus, 1539
Pincus, Dr. Gregory : Awarded the Oliver Bird Trust Prize for 1957, 1703
Pincus, Dr. P : Passage of Phosphate through the Human Tooth, 844, *erratum*, 1771
Pine Litter : Micro-fungi in (W. B. Kendrick), 432
Pineapple Indoleacetic Acid Oxidase : Ferulic and *p*-Coumaric Acids in Pineapple Tissue as Modifiers of (Dr. Willis A. Gortner, Martha J. Kent and Dr. G. K. Sutherland), 630
Pineapple Tissue : Ferulic and *p*-Coumaric Acids in, as Modifiers of Pineapple Indoleacetic Acid Oxidase (Dr. Willis A. Gortner, Martha J. Kent and Dr. G. K. Sutherland), 630
Pinner, Dr. S. H., and Charlesby, Prof. A. : Recent Advances in Polymer Technology, 1303
Pinnotheres : British Pea-crabs (Dr. D. Atkins), 1087
Pioneer of Sociology—the Life and Letters of Patrick Geddes (Philip Mairet), *review* by R. Brightman, 731
Pioneer Livestock Breeder : Robert Bakewell—(Prof. H. Cecil Pawson), *review* by G. E. Fussell, 868
Pippard, Dr. A. B. : Band Theory of Metals and the Structure of the Fermi Surface (The Anomalous Skin Effect), 526
  Low-Temperature Physics, *review*, 871
  Elements of Classical Thermodynamics for Advanced Students of Physics, *review* by S. Angus, 1755
Pippard, Prof. A. J. S. : Elected to a Fellowship of the Imperial College of Science and Technology, 1182
Pippard, Prof. A. J. S., and Baker, Dr. J. F. : The Analysis of Engineering Structures, third edition, *review* by Prof. W. F. Cassie, 1498
Pirenne, Dr. M. H. : Moving Visual Images produced by Regular Stationary Patterns, 362
Pirie, J. R. K. : Libraries, 746
Pirie, N. W. : Biological Productivity of Britain (Synthesis in Food Production), 84
Pirrie, Dr. D. : Phenobarbitone Therapy in Epilepsy, 1377
Pirson, A., and Kuhl, Dr. A. : Dependence on Light of the Reversible Uptake of Inorganic Phosphate by *Hydrodictyon*, 921
Pirt, S. J., and others : Structure of an Acidic Polysaccharide elaborated by *Aerobacter aerogenes*, 999
Pisano, Dr. Michael A. (Littman, Dr. M. L., and) : Microbial Growth Stimulants in Spleen, 285
Pitfalls of Specific Radioactivity in Measuring Synthesis of Deoxyribonucleic Acid (Dr. L. G. Lajtha), 1609
Pith Sections (Tobacco) : Effect of 2,4-Dichlorophenoxyacetic Acid on Pectin Methylesterase in (K. T. Glasziou), 428
Pits (Spiral), on Silicon Carbide (Prof. V. G. Bhide), 1006
Pitt, Hugh : Construction of the Katarinaberget in Stockholm, and other underground buildings in Sweden, 1376
Pitt-Rivers, Dr. Rosalind (Shellabarger, Dr. Claire J., and) : Presence of Triiodothyronine in Fowl, 546
Pittendrigh, Dr. C. S. : Photoperiodism in Plants and Animals (Possible Nature of the Clock Mechanism in Endogenous Rhythms), 536
Pittendrigh, Dr. C. S., and others : Life, an Introduction to Biology, *review*, 1561
Pituitary Gland of Fishes : The Physiology of the (Grace E. Pickford and James W. Atz), *review* by Prof. J. Z. Young, 971
Pituitary Grafts in Rats : Effect of Stress and Cortisone on the Cytomorphology of (Dr. K. Kovács, M. A. Dávid and I. W. Horváth), 1417
Pituitary Hormones and Cortisone : Effects of, upon Liver Regeneration in the Hypophysectomized Rat (Dr. J. T. Hemingway and Dr. D. B. Cater), 1065
Pituitary Neural Lobe (Rat) : Histological and Chemical Changes in the, following Treatment with Neurohypophysial Substances (Dr. J. de Groot), 650
Piveteau, Dr. Jean : Traité de Paléontologie, Tome 7, Vers le forme humaine ; Le probléme biologique de l'homme ; Primates—paléontologie humaine, *review* by Sir Wilfrid Le Gros Clark, 1165
Place, Robin : Finding Fossil Man, *review* by M. C. Burkitt, 1234
Place of Residence in the University To-day (Discussion on, at the Home Universities Conference), 164
Place (Possible), of Ornithine and Citrulline in the Arginine Metabolism of some Higher Plants : Occurrence of Ornithine in Sulphur-deficient Flax and the (R. G. Coleman), 776
Planck, Max (1858-1947), (Prof. H. T. Flint), 1098
Plane Polarized Light from Blue Sky : A Device for Visualizing the Pattern of (J. A. Chapman), 1393
Plane Shock and a Magnetic Field : An Experiment on the Interaction between a (Dr. K. Dolder and Dr. R. Hide), 1116
Planetarium : The London (Dr. H. C. King), 733
Plankton and the Herring Fisheries, 1575
Plankton—Herring Relationship : A Study of the Jakob Jakobsson), 1575
Planktonic Environment of the Herring (R. S. Glover), 1575
Planning of International Meetings (International Organizations of Medical Sciences), 1574
Planning of Primary Schools (Transvaal Provincial Administration, Department of Education School Buildings Committee, Report on), 1108
Plant, *Clethra barbinervis* Sieb. et Zucc. : A Cobalt-Accumulator (Noboru Yamagata and Yukio Murakami), 1808
Plant and Processes (Chemical) : The Scaling-up of (Proceedings of the Institution of Chemical Engineers, in co-operation with the Chemical Engineering Group of the Society for Chemical Industry Symposium on), 1769
Plant (Growing) : Evidence from a Dwarf Pea Bioassay for Naturally Occurring Gibberellins in the (A. J. McComb and Prof. D. J. Carr), 1548
  The Soil and the, *review* by Sir John Russell, 1627
Plant (Long-Day) : Photoperiod, Auxin and Sex Balance in a (Prof. J. Heslop-Harrison and Y. Heslop-Harrison), 100
Plant Cell : Ion Permeability of the Plasmalemma of the (N. A. Walker), 1288 ; (Prof. G. E. Briggs), 1289
Plant Cell Walls : Spatial and Temporal Variation of Microfibrillar Organization in (D. S. Belford, Dr. A. Myers and Prof. R. D. Preston), 1251
Plant Communities : The Study of (Prof. Henry J. Oosting), second edition, *review* by Dr. Maurice Ashby, 661
Plant Diseases due to Bacteria (Dr. W. J. Dowson), second edition, *review* by W. C. Moore, 1094
Plant Growth on 'Fly Ash' (R. Holliday, D. R. Hodgson, W. N. Townsend and J. W. Wood), 1079
Plant Growth and Flowering : Role of Gibberellin-like Hormones in Regulation of (Dr. P. W. Brian), 1122
Plant-Growth Substances : Metal-Chelating Properties of (Dan Cohen and Ben-Zion Ginzburg and Dr. Carla Heitner-Wirguin), 686
Plant Hormones : Role of, in Algal Metabolism and Ecology (Dr. Joyce A. Bentley), 1499, *erratum*, 1703
Plant Material collected after the Accident at Windscale No. 1 Pile : Radioactivity of (G. Kimber and A. Booth), 1391
Plant Materials (Green): Action and Emission Spectra of the Luminescence of (Gordon Tollin, Eiji Fujimori and Prof. Melvin Calvin), 1266
Plant Nutrient : Magnesium, the Fifth Major (Dr. A. Jacob), translated from the German by Dr. Norman Walker, *review* by Dr. E. J. Hewitt, 799
Plant Pathogens (Bacterial) : The Study of, *review* by W. C. Moore, 1094
Plant Phenolics Group : Symposium on the Pharmacology of Phenolic Substances, 531
Plant Physiology, Indian Society for : Inaugural Meeting, 1639
  Election of Officers for 1958, 1640
Plant Sociology : A Practical Guide to, for Foresters and Agriculturists (Prof. F. R. Bharucha and Dr. W. C. DeLeeuw), *review* by Maurice Ashby, 987
Plant Tissue : Evidence for a Protein Component in the Middle Lamella of—a Possible Site for Indolylacetic Acid Action (B. Z. Ginzburg), 398
Plant Tissue Cultures : Gibberellin and the Growth of (Dr. L. G. Nickell), 499
Plant Tissues : Maceration of, with Ethylene-diamine-tetra-acetic Acid (Dr. D. S. Letham), 135
  β-Oxidation of ω-(3-Indolyl)alkanecarboxylic Acids in (Dr. C. H. Fawcett, Prof. R. L. Wain and Dr. F. Wightman), 1387
  Serine—Glycine Interconversion in (A. P. Wilkinson and Dr. D. D. Davies), 1070
  Synthesis of Phlorin and other Phenolic Glucosides by (A. Hutchinson, Chita Roy and Prof. G. H. N. Towers), 841

Plant Virus Serology (Dr. R. E. F. Matthews), *review* by Dr. Kenneth M. Smith, 72
Plant Viruses : Interference between (A. D. Thomson), 1547
  The Serological Approach to the Study of, *review* by Dr. Kenneth M. Smith, 72
Plantation Crops : Choice and Application of Fungicides to, with special reference to *Hevea brasiliensis* (E. J. Risdon), 1017
Planting Distance and Number of Seedlings in Rice Cultivation (N. K. Jain), 202
Plants : Absorption and Translocation of Strontium and Caesium by, from Foliar Sprays (L. J. Middleton), 1300
  Afroalpine Vascular (Olov Hedberg), *review* by Dr. G. Taylor, 1027
  A Chromatographic Method for Studying Simple Compounds in (R. N. Greenshields), 280
  Formation of a Glycoside of Maleic Hydrazide in (Prof. G. H. N. Towers, A. Hutchinson and W. A. Andreae), 1535
  Poisonous, *review* by Dr. F. N. Howes, 729
  A Possible Source of Error in the Chemical Detection of Indolyl Acetic Acid in (R. Nichols), 919
  Trace Metals in the Nitrogen Metabolism of (Dr. D. J. D. Nicholas), 672
Plants in the English Lake District : Accumulation of Radioactive Fall-out by (Eville Gorham), 1523
Plants (Flowering), of South Australia : Evolution of Sex in the (P. A. Parsons), 1673
Plants (Higher) : Occurrence of Ornithine in Sulphur-deficient Flax and the Possible Place of Ornithine and Citrulline in the Arginine Metabolism of some (R. G. Coleman), 776
Plants (Indian Medicinal) : Glossary of (R. N. Chopra, S. L. Nayar and I. C. Chopra), *review* by S. B. Challen, 984
Plants (*Nicotiana*) : Effects of Gibberellic Acid on (L. G. Burk and Dr. T. C. Tso), 1672
Plants (Rubber-bearing) : Coenzyme *A* and Aldolase in (J. A. Gascoigne, Dr. W. G. Overend, G. F. J. Moir and Dr. G. Hübscher), 628
Plants (Toxic), of Western Australia (C. A. Gardner and H. W. Bennetts), *review* by Dr. F. N. Howes, 729
Plants (Woody and Herbaceous) : Water Relations of Leaves from (Dr. J. S. Kennedy and C. O. Booth), 1271
Plants and Animals : Photoperiodism in (Photobiology Committee of the United States National Research Council International Symposium on), 535
Plants and Soils : Magnesium in, *review* by Dr. E. J. Hewitt, 799
Plaque-type and Host-range Mutation : Increased Rate of, following Treatment of Bacteriophage *in vitro* with Ethyl Methane Sulphonate (Dr. Anthony Loveless), 1212
Plaskett, Lawrence G. : Thyroxine Metabolism by Extracts of Rat Liver, 273
Plasma : Activation of a Permeability Factor in, by Contact with Glass (Dr. J. Margolis), 635
Plasma of Rabbits made severely Anaemic with Phenylhydrazine : Isolation of an Erythropoietic Fraction from the (Peter H. Lowy, Geoffrey Keighley, Henry Borsook and Ashton Graybiel), 1802
Plasma (Human Blood) : Method of Isolating the β_1-Metal-combining Globulin from (E. W. Boettcher, P. Kistler and Prof. Hs. Nitschmann), 490
Plasma Approach to Metallic Conduction (Dr. Louis Gold), 1316
Plasma Cell Tumour (Mouse) : Virus-like Bodies in a Transplantable (Dr. A. F. Howatson and E. A. McCulloch), 1213
Plasma Confinement in a Partially Stabilized Linear Pinch : Magnetic Measurement of (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt, Dr. R. H. Lovberg and Dr. J. A. Phillips), 224
Plasma Esterases (Blood) : Electrophoretic Separation and Classification of (Dr. Klas-Bertil Augustinsson), 1786
Plasma Globulins : Presence of, in the Hyaline Tissue in Cases of Silicosis (Dr. R. Ceppellini and Dr. B. Pernis), 55
Plasma Membrane (β-Cytomembrane) : Occurrence of Foldings of, in Cells of Pig's Carpal Organ as revealed by Electron Microscopy (K. Kurosumi and T. Kitamura), 489
Plasma Thromboplastin Production : Peculiar Disorder of (Dr. F. Nour-Eldin and Dr. John F. Wilkinson), 989
Plasmalemma of the Plant Cell : Ion Permeability of the (N. A. Walker), 1288 ; (Prof. G. E. Briggs), 1289
Plasmas (Hot) : Co-operative Phenomena in (Controlled Release of Thermonuclear Energy), (Prof. Lyman Spitzer), 221
Plasmatic Zone in Blood Circulation : Adherence and Viscosity of Blood Contacting Foreign Surfaces, and the (Dr. Alfred L. Copley), 551
Plasmodium cynomolgi in *Anopheles stephensi* : Partial Inhibitory Effect of *Plistophora culicis* on the Sporogonic Cycle of (Miss L. Bano), 430
Plasmolysis : Effect of, on the Rate of Respiration of a Green Alga (Dr. F. J. Taylor), 136
Plasmopara viticola : Zoospore Morphology of the California Strain of (Dr. Vincent Santilli), 924
Plastic Bags : Propagation of Cacao in (R. Nichols), 580
Plastic Deformation : Effect of, on the Electrical Resistivity of Chromium (M. E. de Morton), 477
Plastic Design of Portal Frames (Dr. Jacques Heyman), *review* by Prof. W. Fisher Cassie, 987
Plastic Wrappers, 1702
Plasticity of Clay-Water Systems (A. K. Chatterji), 1118
Plasticity of Graphite (H. W. Davidson and H. H. W. Losty), 1057
Plastics : Bombardment of, in a Glow Discharge (L. Holland), 1727
  Bonding of Bone Fractures with (Bernard Bloch), 1701
Plastics Federation, British : Report of the Toxicity Sub-Committee of the Main Technical Committee, 1702
Plastics Industry Education Fund : Second Progress Report (1955-57), 1245
Plastics Institute : Second Progress Report of the Plastics Industry Education Fund (1955-57), 1245
Plastics Institute (Institution of the Rubber Industry and the) : Conference on Recent Advances in Polymer Technology, 89, 1303
Plate : The Rolling of Strip, Sheet and (Eustace C. Larke), *review* by Dr. L. S. Goddard, 988
Platelet-Lipoid : Phospholipids, Proteins and (J. R. O'Brien), 420
Platelets (Blood) : Increase of 5-Hydroxytryptamine in, by Isopropyl-isonicotinic Acid Hydrazide (A. Pletscher and A. Bernstein), 1133
Platelets (Yolk), of the Amphibian Embryo : Electron Micrographs of a Crystalline Lattice Structure in (Shuichi Karasaki and Tsutomu Komoda), 407
Platinum (Rhodium, Palladium, Iridium and) : Corrosion of Ten Metals in Boiling Hydrochloric Acid when in Contact with (W. Roger Buck, III, and Henry Leidheiser, jun.), 1681
Platinum Medal of the Institute of Metals awarded to Prof. R. S. Hutton, 1182
Platinum and Carbon : Simultaneous Evaporation of, for Possible Use in High-Resolution Shadow-Casting for the Electron Microscope (D. E. Bradley), 875
Pt_3Fe (Alloy) : Magnetic Susceptibility of the, between 20 and 900 Degrees Absolute (Prof. J. Crangle), 644
Platt, Prof. B. S., and Miller D. S. : Nutritive Value of Proteins (The Quantity and Quality of Protein for Human Nutrition), 153
Plescia, Dr. Otto J., and others : Antigenicity of a Bacterial Deoxyribonucleic Acid, 573
Pletscher, A., and Bernstein, A. : Increase of 5-Hydroxytryptamine in Blood Platelets by Isopropyl-isonicotinic Acid Hydrazide, 1133
Pleurisy (Turpentine), in Rats : Experimental Suppression of the Early Inflammatory Phenomena of (W. G. Spector and D. A. Willoughby), 708
Pleuro-pneumonia-like Organisms in Rats : Use of Sulphonamides in the Treatment of (R. T. Charles and O. Rees), 1213
Pleutotomariacea : Silicified Permian Fossils from Texas and New Mexico—(Prof. R. L. Batten), 1639
Plistophora culicis : Partial Inhibitory Effect of, on the Sporogonic Cycle of *Plasmodium cynomolgi* in *Anopheles stephensi* (Miss L. Bano), 430
Plutonium : Removal of Internally Deposited (V. H. Smith), 1792
Pneumococcal Polysaccharide : A Rapid and Specific Method for the Isolation of (Dr. A. S. Markowitz and Jack R. Henderson), 771
Podocarpaceae : Chromosomal Evolution in the (Dr. J. B. Hair and E. J. Beuzenberg), 1584
Pogonophora : Embryology of, and Classifications of Animals (Dr. S. M. Manton), 748
Pogonophora from the Atlantic (Dr. A. J. Southward and E. C. Southward), 1607
Pogonophora in the Skagerrak : Records of the Group (J. B. Kirkegaard), 1086
Point Defects in Metals and Alloys : Vacancies and other (Metal Physics Committee of the Institute of Metals Symposium on), 449
Point-Plane Gap in Air : The Impulse Break-down Characteristic of a (J. J. Kritzinger and Prof. G. R. Bozzoli), 1259
Poisoned Air, *review* by R. S. Scorer, 1167
Poisoning (Ozone) : Protection against Death due to (Dr. Sidney Mittler), 1063
Poisonous Plants, *review* by Dr. F. N. Howes, 729
Poisson, Prof. Raymond : Hétéroptères aquatiques, *review* by Dr. W. E. China, 1691
Pokom-Maya in the Sixteenth Century : Social Structure and Archaeological Setting of the (Miss S. W. Miles), 1180
Polanyi, J. C. : Structure and Reactivity of Electronically Excited Species (Rate of Transfer of Vibrational Energy to Translational), 321
Polanyi, S. C. (McKinley, J. D., and) : Structure and Reactivity of Electronically Excited Species (Atomic Sodium mixed with Atomic and Molecular Hydrogen—Reactions that might lead to the Chemiluminescence (Sodium *D* Lines) observed), 321
Polarization of Atmospherics (F. Horner), 1678 ; (Prof. S. R. Khastgir), 1679
Polarization of the Integrated Light of Comet Arend-Roland, 1956h (D. R. Barber), 760
Polarization (Abnormal), of the Atmospheric Pulses reflected successively from the Ionosphere (Prof. S. R. Khastgir), 404
'Polarization Cells' : Electrical Noise from, and from Human Tissues (E. Nightingale), 192
Polarized Light (Plane), from Blue Sky : A Device for Visualizing the Pattern of (J. A. Chapman), 1393
Polarographic Conference at Veszprém (Proceedings of the), 20
Polarographic Half-Wave Potentials of Aromatic Hydrocarbons : Correlations between Localization Energies and (P. H. Given), 1001
Polarographic Society : One-day Meeting at Ardeer, 1771
Policard, A., et autres : Traité de Microscopie—Instruments et Techniques, *review* by Dr. John R. Baker, 589
Polge, Dr. C., and Soltys, Dr. M. A. : Freezing and Drying, 1696
Policies : Positive Employment—Examples of Management Practice contributing to Good Relations in Industry (Ministry of Labour and National Service), 1425
Policy : A Wages (T. H. Hawkins), 162
Policy for Water (Political and Economic Planning, Broadsheet No. 418), 953
Political and Economic Planning : Broadsheet No. 418, Policy for Water, 953
  Broadsheet No. 417 ; The Growth of Government, 1108
  Broadsheet No. 412, Free Trade and Social Security, 1164
  Broadsheet No. 414, Designs for Europe, 1163
  Broadsheet No. 415, Economics of Domestic Pets, 1180
Pollination (Cross-) in Lettuce, *Lactuca sativa* L. : Natural (L. E. Watts), 1084
Pollution : Air—Based on Papers given at a Conference held at the University of Sheffield, 1956 (edited by Prof. M. W. Thring), *review* by R. S. Scorer, 1167
Pollution (Air) : Measurement of—Recommended Methods for Deposited Matter, Smoke and Sulphur Dioxide (Fuel Research Board), 1244
Pollution (Atmospheric) : The Investigation of—a Report on Observations in the Year 1955-56, 1702
Polyadenylic Acid : Formation of Two- and Three-Stranded Helical Molecules by Polyinosinic Acid and (Dr. Alexander Rich), 521
Polyadenylic and Polyuridylic Acids : Spectrophotometric, Light Scattering and Titration Studies upon the Interaction of (Dr. Roland F. Beers, jun., and Dr. Robert F. Steiner), 30
Polyak, Stephen : The Vertebrate Visual System (edited by Prof. Heinrich Klüver), *review* by Prof. R. W. Pickford, 1429
Polyalkylpiperidines, a New Series of Ganglien-blocking Agents (Dr. A. Spinks and Prof. E. H. P. Young), 1397
Polycrystalline Beryllium : Occurrence of Beryllium Oxide in (V. D. Scott and Dr. H. Wilman), 902
Polycyclic Tar Hydrocarbons : Paper Chromatography of the (Dr. Ernest Maly), 698
Polyelectrolyte (The Anionic), Polyethylene Sulphonate, as a New Antineoplastic Agent (Dr. William Regelson and James F. Holland), 46
Polyethylene Envelope : Fumigation under a (W. M. Graham and S. Kockum), 1675

Polyethylene Sulphonate : The Anionic Polyelectrolyte, as a New Antineoplastic Agent (Dr. William Regelson and James F. Holland), 46
Polygalacturonase (Fungal), in Rotting Apple Fruit : Oxidation Products of Leucoanthocyanins as Inhibitors of (M. Cole), 1596
Polyglucose Sulphate (Synthetic) : Interaction between, and Biologically Active Basic Polypeptides and Proteins (Dr. P. T. Mora and B. G. Young), 1402
Polyhedral Virus (Nuclear), of the Wattle Bagworm : Occurrence of Strains of the (L. L. J. Ossowski), 648
Polyinosinic Acid and Polyadenylic Acid : Formation of Two- and Three-Stranded Helical Molecules by (Dr. Alexander Rich), 521
Polymely in *Xenopus laevis* (Dr. B. M. Hobson), 862
Polymer Electrolyte (Ion-exchange) : Thermocell with (W. T. Grubb), 338
Polymer Technology : Recent Advances in (Institution of the Rubber Industry and the Plastics Institute Conference on), 89, 1303
Polymer (High-) Chemistry (*Scientific American* issue devoted to), 94
Polymer-type Elasticity in Non-polymer Crystals (J. E. Gordon, A. T. K. Seville and D. M. Marsh), 1678
Polymerization—Depolymerization of Tobacco Mosaic Virus Protein (Max A. Lauffer, Allen T. Ansevin, T. E. Cartwright and C. C. Brinton, jun.), 1338
Polymers : Physical Properties of (Plastics and Polymer Group of the Society of Chemical Industry Silver Jubilee Symposium on), 531, 1633
Polymers (High) : Chemical Structure and Physical Behaviour of (Sir Harry Melville), 1045
Polymers (Metastable) : Separation of, by Starch Gel Electrophoresis (Geoffrey Franglen and Cécile Gosselin), 1152
Polymorphic Population : Effects of Disruptive Selection—the Experimental Production of a (Dr. J. M. Thoday), 1124
Polymorphic Transitions in Anhydrous Sodium Sulphate : Effect of Water upon the (E. L. Kreidl and Ivan Simon), 1529
Polymorphism in the β-Globulins of Sheep (G. C. Ashton), 849
Polymorphism (Possible), of Bovine α-Lactalbumin (B. S. Blumberg and M. P. Tombs), 683
Polynuclear Aromatic Compounds in Coal (Dr. D. W. van Krevelen, M. P. Groenewege and B. J. Rietveld), 640
Polypeptides and Proteins (Biologically Active Basic) : Interaction between Synthetic Polyglucose Sulphate and (Dr. P. T. Mora and B. G. Young), 1402
Polyphenylated Aliphatic Hydrocarbons : Effect of certain, on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, C. C. Ware and Dr. D. L. J. Bilbey), 1804
Polyploid Nuclei of Human Amnion Epithelium : Sex Chromatin in (Harold P. Klinger and Hans G. Schwarzacher), 1150
Polyploidy in Bluebells (J. Yenney Wilson), 431
Polyploidy in Mammalian Development : Parthenogenesis and (Dr. R. A. Beatty), *review* by Prof. Robert Matthey, 1497
Polyploidy in Yeasts (Juan Santa María), 1740
Polyploidy (Induced), in Egyptian and Indian Clovers (S. M. Sikka, M. S. Swaminathan and R. K. Mehta), 32
Polysaccharide (Acidic), elaborated by *Aerobacter aerogenes* : Structure of an (Dr. S. A. Barker, Dr. A. B. Foster, I. R. Siddiqui, Prof. M. Stacey and S. J. Pirt), 999
Polysaccharide (Acidic), for Wound Healing : Importance of the Synthesis of (Dr. Laurence L. Layton, Doris R. Frankel, Irving H. Sher, Sylvia Scapa and Gladys Friedler), 1543
Polysaccharide (Pneumococcal) : A Rapid and Specific Method for the Isolation of (Dr. A. S. Markowitz and Jack R. Henderson), 771
Polysaccharides containing Aldoheptose Sugars : Action of Periodate on some (Dr. A. B. Foster, D. A. L. Davies and M. J. Crumpton), 412
Polysaccharides (Bacterial) : Contribution of Deoxymethylpentoses to the Serological Specificity of some, and the Recognition of a New Sugar, Paratose (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
Polytetrafluoroethylene : Thermal Stability of (Dr. C. R. Patrick), 698
Polythionate in Cultures of *Thiobacilli* : Detection of, by means of the Folin-Ciocalteu Reagent (Prof. D. P. Pratt), 1075
Polyuridylic Acids (Polyadenylic and) : Spectrophotometric, Light Scattering and Titration Studies upon the Interaction of (Dr. Roland F. Beers, jun., and Dr. Robert F. Steiner), 30
Polyzoan from British Waters : *Bugula simplex* Hincks, a Newly Recognized (J. S. Ryland), 1146
Pomeroy, C. D. : Mechanical Properties of Non-Metallic Brittle Materials (The Action of Tools), 1579
Pomeroy, C. D. (Brown, J. H., and) : Mechanical Properties of Non-Metallic Brittle Materials (Friction between Coal and Metal Surfaces), 1579
Pomeroy, C. D. (Evans, I., and) : Mechanical Properties of Non-Metallic Brittle Materials (Random Variability of the Strength of Coal in Uniaxial Compression), 1577
Pomeroy, L. R. : Salt Marshes (Diatom Flora on Sapelo Island Marshes), 1513
Ponder, Dr. Eric (Ponder, Ruth V., and) : Erythrophagocytosis in Cancer-bearing and Lymphoma-bearing Mice, 1537
Ponder, Ruth V., and Ponder, Dr. Eric : Erythrophagocytosis in Cancer-bearing and Lymphoma-bearing Mice, 1537
Ponten, Dr. Jan : Awarded a grant from the Lady Tata Memorial Fund, 1703
Pool, R. A. H., and others : The Triple Point of Argon as a Thermometric Fixed Point, 831
Pooling Scientific Resources in the Western World, 313
Pope, N. K. (Henshaw, D. G., and) : Melting, Diffusion and related Topics (Determination of the Radial Distribution Function in Solid and Liquid Helium and Neon and in Liquid Argon), 320
Pople, Dr. J. A. : Awarded the Marlow Medal and Prize for 1958 of the Faraday Society, 1246
Popper, Prof. Karl R. : Irreversible Processes in Physical Theory, 402
Popular Account of Radio-Astronomy, *review* by Dr. F. G. Smith, 980
Population : World (Colin Clark), 1235
Population of Jamaica (George W. Roberts), *review* by W. Brass, 442
Population sensitive to *Vicia faba* or Haemolytic Anaemia induced by Drugs : Enzymatic Abnormality of Erythrocytes of a (Dr. A. Szeinberg, Dr. Ch. Sheba and A. Adam), 1256
Population (Papua), of Dutch New Guinea : Absence of Abnormal Haemoglobins in some Groups of the (Prof. J. H. P. Jonxis, Dr. T. H. J. Huisman, G. J. da Costa and D. Metselaar), 1279
Population (Polymorphic) : Effects of Disruptive Selection—the Experimental Production of a (Dr. J. M. Thoday), 1124
Population Dynamics : Meaning of Density-Dependence and related Terms in (Dr. M. E. Solomon), 1778 ; (Prof. G. C. Varley), 1780
Population Statistics for England and Wales, 1573
Populations : Haptoglobin Types in British, Spanish Basque and Nigerian African (Dr. A. C. Allison, Dr. B. S. Blumberg and Mrs. ap Rees), 824
Populations (Earthworm and Diptera) : Effect on, of BHC Dust applied to Soil (Jerzy J. Lipa), 863
Pores : Permeability and the Size Distribution of (Dr. M. R. J. Wyllie and Dr. G. H. F. Gardner), 477 ; (Dr. T. J. Marshall), 477
Poria vaillantii : Glycerol Metabolism of the Brown Rot Mould (Bienvenido C. Sison, jun., and Walter J. Schubert), 1015
Porous Sorbents : Dispersion Energies in (Prof. R. M. Barrer), 176
Porphobilinogen : Intermediates in the Biosynthesis of Porphyrins from, by *Rhodopseudomonas spheroides* (Dr. D. S. Hoare and Dr. H. Heath), 1592
Porphyrin and Isoniazid Resistance of *Mycobacterium avium* : Relationship between (Mikiyasu Goto and Nobuhiko Katsunuma), 916
Porphyrins from Porphobilinogen by *Rhodopseudomonas spheroides* : Intermediates in the Biosynthesis of (Dr. D. S. Hoare and Dr. H. Heath), 1592
Porrocaecum decipiens Larvae : Glucose, Trehalose and Glycogen in (Dr. D. Fairbairn), 1593
Portal Frames : Plastic Design of (Dr. Jacques Heyman), *review* by Prof. W. Fisher Cassie, 987
Porter, Prof. A. : Appointed dean of engineering in the University of Saskatchewan, 1178 ; work of, 1178
Portsmouth, Bishop of : Scientific Arrogance, 1107
Portsmouth College of Technology : Open Day, 1443
  Appeal for subscriptions towards a Research Fund, 1443
Positive Column : Sumultaneous Occurrence of Moving and Standing Waves in a (A. W. M. Cooper, J. R. M. Coulter and Prof. K. G. Emeléus), 1326
Positive Employment Policies—Examples of Management Practice contributing to Good Relations in Industry (Ministry of Labour and National Service), 1425
Possible Basis for the Anti-inflammatory Activity of Salicylates and other Non-Hormonal Anti-Rheumatic Drugs (S. S. Adams and R. Cobb), 773
Possible Basis for Phyto-Immunity (D. H. Taysum), 174
Possible Correlations between Earthquakes and Microseisms (C. A. Nanney), 802
Possible Ecological Effect of Upwelling in a Submarine Canyon (Raymond J. Ghelardi and Wheeler J. North), 207
Possible Existence of Anti-Matter in Bulk (Philip J. Wyatt), 1194
Possible Intermediate in the Biosynthesis of Tryptophan—1-Deoxy-1-N-*o*-Carboxyphenyl-Ribulose (Dr. F. W. E. Gibson, C. H. Doy and Shelagh B. Segall), 549
Possible Place of Ornithine and Citrulline in the Arginine Metabolism of some Higher Plants : Occurrence of Ornithine in Sulphur-deficient Flax and the (R. G. Coleman), 776
Possible Polymorphism of Bovine α-Lactalbumin (B. S. Blumberg and M. P. Tombs), 683
Possible Radiomimetic Gas : Ozone as a (Prof. R. Brinkman and H. B. Lamberts), 1202
Possible Site for Indolylacetic Acid Action : Evidence for a Protein Component in the Middle Lamella of Plant Tissue—a (B. Z. Ginzburg), 398
Possible Source of Error in the Chemical Detection of Indolyl Acetic Acid in Plants (R. Nichols), 919
Possible Use in High-Resolution Shadow-Casting for the Electron Microscope : Simultaneous Evaporation of Platinum and Carbon for (D. E. Bradley), 875
Possum, *Trichosurus vulpecula* : Variations in the Erythrocyte Potassium and Sodium in the (Jennifer M. Barker), 492
Post Office : Automation in the (E. Marples), 92
  Automation in the—Technology and Humanism, 71
  Technical Education in the, 1309
Post Office, General : Selected Engineering Reports—Piezoelectricity, *review* by Dr. Warren P. Mason, 588
Postgraduate Medical School of London : Appointment of Dr. Mary Barber to the University of London readership in clinical bacteriology, 459
Postgraduate Scholarships in Husbandry (Ministry of Agriculture, Fisheries and Food and the Department of Agriculture for Scotland), 603
Postgraduate Studentships (British Egg Marketing Board), 1510
Postgraduate Training Grants in Fishery Research (Development Commissioners, in association with the Ministry of Agriculture, Fisheries and Food, and the Scottish Home Department), 1312
Post-Irradiation Treatment of Micro-organisms : Dependence of the Observed Oxygen Effect on the (Tikvah Alper and Dr. N. E. Gillies), 961
Post-natal Development of Thermoregulation in the Rat : Significance of the Adrenal Glands during (Dr. P. Hahn and O. Koldovsky), 847
Potassium : Novel Action of, on a Yeast and a Counteraction by Aluminium (Dr. E. J. Miller), 191
Potassium in Man : Rubidium-86 as a Tracer of (M. Mencer Martin and Geoffrey Walker), 705
Potassium, Lactose and Water in Milk : Interrelationships of the Concentrations of Sodium, (J. A. F. Rook and Marian Wood), 1284
Potassium, Rubidium and Caesium : Paper Chromatography of (Florin Modreanu, Simon Fisel and Adrian Carpov), 1618
Potassium Cyanide : Effect of, on Apparent Free Space in a Brown Alga (P. L. Bergquist), 1270
Potassium Cyanide and other Respiratory Inhibitors : Comparison of Effect of Lysergic Acid Diethylamide with, on the Siamese Fighting Fish (Dr. H. A. Abramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
Potassium Hyaluronate Solution : Reduction of the Viscosity of a, by Ultra-violet Irradiation (Eigill Hvidberg, Sven Ancher Kvorning, Arne Schmidt and Jens Schou), 1338
$(K_xNa_{1-x})NbO_3$ Single Crystals : Electric Double Hysteresis in (L. E. Cross), 178
Potassium and Sodium (Erythrocyte), in the Possum, *Trichosurus vulpecula* : Variations in the (Jennifer M. Barker), 492
Potato : A Soil-borne Virus associated with the Corky Ringspot Disease of (C. H. Walkinshaw and Dr. R. H. Larson), 1146

INDEX

Potential (End-Plate) : Direct Determination of the Active Phase of (Prof. Noriko Takeuchi and Akira Takeuchi), 779
Potentialities (Developmental), of Fern Leaf Primordia (E. G. Cutter), 314
Potentials (Intermolecular) : Use of Gaussian Functions for (Dr. K. Singer), 262
Potentials (Ionization) : Estimation of Electron Affinities of Oxygen by Extrapolations of (Dr. D. F. C. Morris and H. N. Schmeising), 469
Potentials (Polarographic Half-Wave), of Aromatic Hydrocarbons : Correlations between Localization Energies and (P. H. Given), 1001
Potentials (Transmembrane), of Single Fibres of the Atrio-ventricular Node (Dr. Brian F. Hoffman, A. Paes de Carvalho and W. Carlos de Mello), 66
Potter, Dr. E. C. : Awarded one hundred and fifty guineas from the Sir George Beilby Memorial Fund, 1375
Potts, F. A. (Borrodaile, the late L. A., and) : The Invertebrata, third edition revised by G. A. Kerkut, *review* by Prof. O. Lowenstein, 1564
Poulik, E. (Poulik, Dr. M. D., and) : Isolation of the Lethal Factor of Diphtheria Toxin by Electrophoresis in Starch Gel, 354
Poulik, Dr. M. D., and Poulik, E. : Isolation of the Lethal Factor of Diphtheria Toxin by Electrophoresis in Starch Gel, 354
Powder (Tin) : Sintering of (R. F. Smart and E. C. Ellwood), 833
Powders (Solid), dispersed in Liquid Paraffin : Influence of Moisture upon the Dielectric Properties of (Rempei Gotohi, Tetsuya Hanai and Naokazu Koizumi), 406
Powell, D. B. (Burton, W. G., and) : Processing of Foods with Ionizing Radiations (Prevention of Sprouting of Potatoes), 878
Powell, Dr. R. W. : Physics of Water and Ice (Interferometric Measurements of the Coefficient of Expansion of Large Single Crystals of Ice in Two Directions), 381
Powell, W. I. : Appointed agronomist, Somaliland, 459
Power as a Factor of Development in Undeveloped Countries (Eleventh Sectional Meeting of the World Power Conference), 1502
Power Development in Hitherto Underdeveloped Countries (F. D. Robinson), 1502
Power Industries : Investment in the, 1638
Power (High-) Pinch Apparatus : Neutron Production in a (Controlled Release of Thermonuclear Energy), (Dr. D. C. Hagerman and Dr. J. W. Mather), 226
Practical Guide to Plant Sociology for Foresters and Agriculturists (Prof. F. R. Bharucha and Dr. W. C. DeLeeuw), *review* by Maurice Ashby, 987
Practical Modern Microscopy, *review* by Dr. John R. Baker, 589
Practice Foreshadowing Science, *review* by G. E. Fussell, 868
Practice of Light Scattering (Discussion at the University of Birmingham), 459
Practice of Shield Design : The Theory and, *review* by J. Edwards, 976
Practitioner, The : Vol. 180, No. 5, Symposium on the Clinical Use of Hormones, 602
Practitioners : Medical Students and (Report of the Willink Committee on), 18
Practitioners (General) : Public Health Training of (World Health Organization, Technical Report No. 140, Report of the Conference on, Geneva, 1956), 1047
Prairie : The Vanishing (London County Council Film Strip), 1310
Pratt, Dr. C. L. : Procedure for the Selection of Undergraduate Students, 164
Pratt, D. A. H. (Watson, D., and) : Micro Estimation of Urea, 1475
Pratt, Prof. D. P. : Detection of Polythionate in Cultures of *Thiobacilli* by means of the Folin—Ciocalteu Reagent, 1075
Pratt, Dr. H. R. C. : Appointed leader of the chemical engineering section in the Division of Industrial Chemistry, Commonwealth Scientific and Industrial Research Organization, 459
Pratt, Dr. P. L. : Vacancies and other Point Defects in Metals and Alloys (The Role of Point Defects in determining the Mechanical Properties of Ionic Crystals), 450
Pratylenchus : Development of Eggs before the Final Moult in (M. R. Sauer), 129
Pray, Alfred R. : Nonaqueous Chemistry (Comprehensive Inorganic Chemistry, by Prof. M. Cannon Sneed and Prof. Robert C. Brasted, Vol. 5, Part 2), *review*, 1428
Precipitates (Fine Aluminium Nitride), in Steel (Prof. C. C. Hsiao), 1527
Precipitating Antibodies in Serum following Infection with the Virus of Foot-and-Mouth Disease : Immunoelectrophoretic Evidence for the Presence of Two (Dr. F. Brown), 1130
Precipitating Sera : A Simple Method for absorbing Heterologous Antibodies from (Dr. Joseph Böszörményi), 1344
Precipitation (Atmospheric) : The Influence and Importance of Daily Weather Conditions in the Supply of Chloride, Sulphate and other Ions to Fresh Waters from (E. Gorham), 1650
Precipitation Reaction (Agar Double-Diffusion) : A Specific Diffusible Antigen of Rinderpest Virus demonstrated by the (G. White), 1409
Precipitation Reaction (Agar Double Diffusion), applied to the Study of *Asterococcus mycoides* (G. White), 278
Precipitin Reaction : Demonstration of Thyroglobulin in the Presence of other Proteins by the (Dr. R. Bird and Dorothy Jackson), 1405
Precipitin Test : Slide Gel Diffusion (W. Mansi), 1289
Precise Assay of Carbon-14 in Small Liquid Samples : A Direct-Plating Method for the (Dr. C. C. McCready), 1406
Precision Determination of the Velocity of Electromagnetic Waves (K. D. Froome), 258
Precursor : Distribution of Carbon-14 in Components of Goat's Milk, with Sodium Formate-^{14}C as (Samuel Misler, Leon Tumerman and Henry R. Roberts), 346
Preference Matrices : The General Relationship between Test Factors and Person Factors—Application to (Patrick Slater), 1225
Pregnancy in the Rabbit : Effect of the Synthetic Œstrogen Stilboestrol on (Dr. A. Sharaf and Dr. E. S. E. Hafez), 1211
Pregnant Women : Leucocyte Antibodies in Sera from (J. J. van Rood, J. G. Eernisse and Miss A. van Leeuwen), 1735
Pregneninolone : Musculinizing Action of, on Female Gonads in the Cyprinodont, *Lebistes reticulatus* R. (Dr. T. Mohsen), 1074
Prehistoric Africa, *review* by Miles Burkitt, 1095
Prehistoric Denmark, *review* by M. C. Burkitt, 215
Prehistory of Africa (Prof. H. Alimen), translated by Alan Houghton Brodrick, *review* by Miles Burkitt, 1095
Preiss, Dr. John W. (Klein, Shimon, and) : Reversibility of the Red—Far-red Reaction by Irradiation at Different Sites, 200
Prejudice : Racial, *review* by Prof. T. S. Simey, 1232
Preliminary Investigations of the Silicon Boride, SiB_6 (Dr. Carl F. Cline), 476
Prentice, R. E. : Application of Science to Industry, 1108
Preparation of Fresh Soil Samples : Use of Deep-Freezing in the Preservation and (J. K. R. Gasser), 1334
Preparation of Hydrophobic Sols : Elimination of Dialysis in the (P. Nagels), 638
Preparation of Skeletons (Dr. D. H. Thompsett), 1509
Preparation of Transparent Starch Gels after Electrophoresis (Dr. J. M. Fine and E. Waszczenko-Z), 269
Preparation (Small-Scale), of Glyoxylic Acid labelled with Carbon-14 (R. M. Krupka and Prof. G. H. N. Towers), 335
Preparations (Particulate), from Barley Roots : Carbon Dioxide Fixation in (Dr. L. C. T. Young and Janet S. D. Graham), 1071
Preparative Chromatography (Qualitative, Quantitative and), of Steroids on Fully Acetylated Paper (F. J. Ritter and J. Hartel), 765
Preparative Methods (Newer), in Organic Chemistry (Chemical Society and the Fine Chemicals Group of the Society of Chemical Industry Symposium on), 239
Prepubertal Giraffes (Foetal and), *Giraffa camelopardalis* (Linnaeus) : Ovaries of some (Dr. L. M. Kellas, Dr. E. W. van Lennep and Prof. E. C. Amoroso), 487
Presence of Chloramphenicol : Cell-Wall Synthesis by *Staphylococcus aureus* in the (R. Hancock and Dr. James T. Park), 1050
Presence of Ethionine : Protein Degradation of Foetal and Cancer Tissues in the (Dr. Renzo Rendi), 351
Presence of Œstrone, Œstradiol and Œstriol in Extracts of Ovaries of Laying Hens (D. S. Layne, Prof. R. H. Common, W. A. Maw and R. M. Fraps), 351
Presence of Plasma Globulins in the Hyaline Tissue in Cases of Silicosis (Dr. R. Ceppellini and Dr. B. Pernis), 55
Presence of a Threonine-containing Phospholipid in Tunny Muscle (Hisanao Igarashi, Kôichi Zama and Muneo Katada), 1282
Presence of Two Precipitating Antibodies in Serum following Infection with the Virus of Foot-and-Mouth Disease : Immunoelectrophoretic Evidence for the (Dr. F. Brown), 1130
Present-day Studies in Biochemistry : Pasteur's Work on Fermentation and its Significance for (Prof. T. K. Walker), 940
Presentation of Science, 795
Presentation of Science to the Public (Ritchie Calder), 392
Preservation of the Countryside, 937
Preservation of Hadrian's Wall, 670
Preservation of Haemocyanin (Dr. Mortimer Litt and Dr. William C. Boyd), 1075
Preservation and Preparation of Fresh Soil Samples : Use of Deep-Freezing in the (J. K. R. Gasser), 1334
Pressure : Effect of, on Burning Velocity of Nitric Oxide Flames (G. A. McD. Cummings), 1327
Pressure (Vapour), of Tritiated Water (A. H. Price), 262
Pressure developed within the Reticular Compartment of the Ruminant Stomach (F. R. Bell), 494
Pressure Data (Central) : Cardiac Output and (Robert L. Evans), 1471
Pressure Welding of Metals (Department of Industrial Metallurgy of the University of Birmingham Conference on), 1182
Preston, Prof. R. D., and Cronshaw, J. : Constitution of the Fibrillar and Non-Fibrillar Components of the Walls of *Valonia ventricosa*, 248
Preston, Prof. R. D., and others : Spatial and Temporal Variation of Microfibrillar Organization in Plant Cell Walls, 1251
  Electron Diffraction Study of Adsorbed Metal Ions on the Surface of Cellulose Microfibrils, 1516
Prestressing, International Federation of : Third Congress, 673
Pretoria : An Early Stone Age (Later African Chelles-Acheul) Site at Wonderboom South (Revel Mason), 1377
Pretorius, Dr. V., and others : Flame Ionization Detector for Gas Chromatography, 177
Preventive Medicine (Social and), at Belfast, 599
Price, A. H. : Vapour Pressure of Tritiated Water, 262
Price, Prof. A. T. : Appointed head of the Department of Mathematics at the University of Exeter, 1179
Price, B. T., and others : Radiation Shielding, *review* by J. Edwards, 976
Price, C. F. (Bonin, J. H., and) : Extremely High Temperatures (Behaviour of Materials subjected to Ultra-high Temperature Environments), 1381
Price, N. J. (Murrell, S. A. F., and) : Mechanical Properties of Non-Metallic Brittle Materials (Triaxial Compression Tests at Confining Pressures up to 4,000 lb./in.^{2}), 1577
Price, N. J., and Shepherd, R. : Mechanical Properties of Non-Metallic Brittle Materials (Studies of the Penetration of a Roller Bit into Concrete containing a Strong Rock Aggregate), 1578
Price, Prof. W. C. : Physics of Water and Ice (Infra-red Absorption Studies of Water adsorbed on Alkali Halides), 381
Pride : A Reason for (Cleveland Museum of Natural History, Ohio), 160
Priestley, Sir Raymond : Science in Schools, 1373
Prigogine, Prof. I., with the collaboration of Bellemans, A., and Mathot, V. : The Molecular Theory of Solutions, *review* by Prof. H. C. Longuet-Higgins, 978
Primary α-Particle Intensity at Sunspot Maximum (Cosmic Rays and the Sunspot Cycle), (P. S. Freier, Prof. E. P. Ney and P. H. Fowler), 1319
Primary Cell Walls : Mechanism of Deposition and Extension of (G. Setterfield and S. T. Bayley), 530
Primary Leaf of Dwarf Bean (*Phaseolus vulgaris*) : Effect of Gibberellic Acid and Kinetin on Growth of (E. C. Humphries), 1081
Primary Rat Liver Cancer : Phosphorylase Activity of (A. A. Hadjiolov and K. I. Dancheva), 547
Primary Schools : The Planning of (Transvaal Provincial Administration, Department of Education School Buildings Committee Report on), 1108
Primates : Evolution of the, *review* by Sir Wilfrid Le Gros Clark, 1165
Primordia (Fern Leaf) : Developmental Potentialities of (E. G. Cutter), 314
Primula sinensis : Anthocyanins in the Flowers of (H. S. A. Sherratt), 26
  Distribution of Flavonoids in Genotypes of (J. B. Harborne and H. S. A. Sherratt), 25
Primulaceae : Anthocyanidins of the (J. B. Harborne), 26
  Flavonoids of the—Distribution of Flavonoids in Genotypes of *Primula sinensis* (J. B. Harborne and H. S. A. Sherratt), 25 ; Anthocyanins in the Flowers of *Primula sinensis* (H. S. A. Sherratt), 26 ; Anthocyanidins of the Primulaceae (J. B. Harborne), 26

Principles of Analysis, *review* by C. O. Harvey, 869
Principles of Epidemiology (Ian Taylor and John Knowelden), *review* by Dr. Kenneth Newell, 800
Principles of Zoology (Prof. John A. Moore), *review* by Prof. John E. Harris, 1430
Principles (Fundamental), of Transistors (Dr. J. Evans), *review* by Dr. J. R. Tillman, 1168
Pringle, Dr. J. W. S. : Insect Flight, *review* by Dr. Graham Hoyle, 971
  Static Sense of *Calliphora* and the Physical Stabilizing Effect of the Halteres, 1356
Pringle, Dr. Ross B., and Braun, Armin C. : Constitution of the Toxin of *Helminthosporium victoriae*, 1205
Priroda : November 1957 issue devoted to the fortieth anniversary of the Soviet regime, 1109
Probability : Applied (Vol. 7 of Proceedings of Symposia in Applied Mathematics of the American Mathematical Society), 245
  Selected Papers in Statistics and (Abraham Wald), second printing, *review*, 661
Probability, Credibility and Error : Statistical Theory, the Relationship of (Prof. Lancelot Hogben), *review* by I. J. Good, 1687
Probability (Subjective), Gambling and Intelligence (H. C. A. Dale), 363 ; (Prof. John Cohen and C. E. M. Hansel), 1160, 1620 ; (Prof. O. V. S. Heath), 1620 ; (Dr. S. T. Bowden), 1620
Problem of its Biosynthesis : The Pyridine Ring and the (James Grimshaw and Léo Marion), 112
Problem of Personality, *review* by Dr. Clifford Allen, 5
Problem (Coding), in Proteins (Dr. Drew Schwartz), 769
Problem (The Colour), of Ruby (Lakhbir Singh), 1264
Problem (Language) : Scientific and Technical Translating and other Aspects of the (Unesco), second edition, 1044
Problem (The Logical), of Induction (Prof. Georg Henrik von Wright), second edition, *review* by F. I. G. Rawlins, 981
Problems of Government in the Modern World, 141
Problems of Humid Tropical Regions (Unesco), 1380
Problems of Progress in Industry : No. 1, Men, Steel and Technical Change (Olive Banks and Dr. W. M. Scott), 1180
Problems of Training (Ergonomics Research Society Conference on), 949
Problems (Business) : Electric Computers and (Dundee Technical College Special Summer programme on), 1042
Problems (Eigenvalue) : Solution of, *review* by Dr. R. G. Cooke, 978
  Variational Methods for (Prof. S. H. Gould), *review* by Dr. R. G. Cooke, 978
Problems (Industrial Health), in the Use of Nuclear Energy, 1023
Problems (Professional), of Biologists serving Overseas (Institute of Biology Discussion on), 677
Problems (Salinity), in Arid Zones (Unesco and the Iranian Government Symposium on), 1378
Problems (Some Variation), connected with the Launching of Artificial Satellites of the Earth (D. E. Okhotsimskii and T. M. Eneev), 1311
Problems (Water Quality), in the United Kingdom (Society for Visiting Scientists Discussion on), 24
Procavia capensis (Pallas) : An Acid-free Bacillus isolated from the Lungs of the Cape Hyrax (J. C. Wagner, Dr. G. Buchanan, V. Bokkenheuser and Shirley Leviseur), 284
Procedure for the Purification of Sirenin (Prof. Leonard Machlis), 1790
Procedure for the Selection of Undergraduate Students (Discussion on, at the Home Universities Conference), 164
Process Plants : Automatic Measurement of Quality in (Society of Instrument Technology Conference on), 165
Processes (Chemical Plant and) : The Scaling-up of (Proceedings of the Institution of Chemical Engineers, in co-operation with the Chemical Engineering Group of the Society for Chemical Industry Symposium on), 1769
Processes (Irreversible), in Physical Theory (Prof. R. C. L. Bosworth), 402 ; (Prof. Karl R. Popper), 402
Processes (Separate) : Induction of Melanin Patterns and of Hardening as, in the Cuticle of Albino Locusts with Internally Absorbed Phenol Substrates (Dr. B. M. Jones and W. Sinclair), 926
Processing of Foods with Ionizing Radiations (Dr. B. Coleby), 877
Processing (Electronic Data), for Business : Developments in (Dundee Technical College Special Summer programme on), 1042
Procházka, Pavel, and others : Effect of Calcium Ions on the Inhibition of Hydrolases by Chlortetracycline, 1201
Proctor, Michael H. : Bacterial Dissimilation of Indoleacetic Acid—a New Route of Breakdown of the Indole Nucleus, 1345
Producing Fruit Bodies of Wood-destroying Basidiomycetes : A Simple Technique for (N. Tamblyn and E. W. B. Da Costa), 578
Product (Natural) : α-Aminoisobutyric Acid, β-Hydroxyleucine and γ-Methylproline from the Hydrolysis of a (Prof. G. W. Kenner and R. C. Sheppard), 48
Production of Ammonium and Sulphate : Effect of the Nitrogen and Sulphur Content of Organic Matter on the (N. J. Barrow), 1806
Production of Convulsions in Hamsters by High Butterfat Intake (Prof. R. L. Swank and R. Engel), 1214
Production of High Temperatures and Nuclear Reactions in a Gas Discharge (Controlled Release of Thermonuclear Energy), (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, R. W. P. McWhirter, R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217, 315
Production of a Toadstool (*Omphalia maura* (Fr.) Gill.) : Effect of Lime on the (Dr. F. B. Hora), 1668
Production (Antibody), by Lymphocytes after *in vitro* Contact with Bacterial Antigen and Transfer to New-born Rabbits (Dr. Miroslav Holub), 122
Production (Antibody), by Single Cells (G. J. V. Nossal and Prof. Joshua Lederberg), 1419
Production (Experimental), of Liver Cancer : Effects of certain Compounds related to Trypan Blue on the (K. Fujita, T. Mine, T. Ito and M. Matsuyama), 1732
  Inhibiting Effect of Chlorpromazine on the (Dr. K. Fujita, S. Iwase, T. Ito and M. Matsuyama), 54
Production (Experimental), of a Polymorphic Population : Effects of Disruptive Selection—the (Dr. J. M. Thoday), 1124
Production (Neutron), in a High-Power Pinch Apparatus (Controlled Release of Thermonuclear Energy), (Dr. D. C. Hagerman and Dr. J. W. Mather), 226
Production (Neutron), in a Linear Stabilized Pinch : New Confinement Phenomena and (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt and Dr. R. H. Lovberg), 228
Production (Phosphatase), by *Micrococcus pyogenes* var. *aureus* : Incorporation of Disodium *p*-Nitrophenylphosphate in Solid Medium for the Detection of (H. R. Lovell), 995
Production (Seed) : 2,4-Dichlorophenoxyacetic Acid as an Aid to, when widely separated *Solanum* Species are Crossed (Leo A. Dionne), 361
Production, Transportation and Utilization of Fuel and Energy : Economic Trends in the (Canadian Sectional Meeting of the World Power Conference), 1245
Production and Use of Fertilizers : Influence of War on the, *review* by Dr. G. W. Cooke, 371
Productivity (Biological), of Britain (Institute of Biology Symposium on), 82
Products (Extracellular), in Pure Cultures of a Brown Alga (Dr. G. E. Fogg and G. T. Boalch), 789
Products (Intermediate), in the Enzymatic Degradation of Urocanic Acid (Studies of Urocanic Acid), (Robert H. Feinberg and Prof. David M. Greenberg), 897
Products (Natural) : Stereochemistry and the Chemistry of (Dr. I. L. Finar), (Organic Chemistry, Vol. 2), *review* by Dr. W. D. Ollis, 6
Products (Nitrate Metabolic) : Adverse Effect of, on Sheep Growth (N. D. Jamieson), 1601
Products (Oxidation), of Leucoanthocyanins as Inhibitors of Fungal Polygalacturonase in Rotting Apple Fruit (M. Cole), 1596
Professional Engineers Appointments Bureau : Report for 1957, 1309
Professional Problems of Biologists serving Overseas (Institute of Biology Discussion on), 677
Progesterone : Effect of Ovariectomy, Œstrogen and, on the Activity of the Melanocytes in the Skin (P. G. Bischitz and Dr. R. S. Snell), 1413
Programme Design for Automatic Digital Computing Machines (Mathematical Laboratory of the University of Cambridge Summer School in), 1246
Progress of Applied Chemistry : Reports on the (Society of Chemical Industry), Vol. 41, 1956, *review* by Prof. J. R. Partington, 1432
Progress in Atomic Power, 458
Progress in Cereal Science, *review* by Dr. J. B. Hutchinson, 1361
Progress in Industry : Problems of, No. 1, Men, Steel and Technical Change (Olive Banks and Dr. W. M. Scott), 1180
Progress in Nuclear Physics (edited by Prof. O. R. Frisch), Vol. 6, *review* by Dr. T. G. Pickavance, 1362
Progress in Semiconductors (edited by Dr. Alan F. Gibson, Prof. R. E. Burgess and Prof. P. Aigrain), Vol. 2, *review* by Dr. J. R. Tillman, 1168
Progress of Sputnik 2 (1957β), (D. G. King-Hele), 738
Progress of World Health (Dr. G. Lapage), 1776
Progression (Stepwise), of a Mouse Sarcoma : A Correlation between Electrical Surface Charge and some Biological Characteristics during the (Mrs. L. Purdom and E. J. Ambrose, and Prof. G. Klein), 1586
Prolongation of the Life of *Drosophila subobscura* by a Brief Exposure of Adults to a High Temperature (J. Maynard Smith), 496
Promoting the Stable Eutectic Reaction in Magnesium-treated Iron Castings by Vibration during Solidification (J. H. Gittus), 1004
Propagation : Long-Distance Radio, above 30 Mc./s. (Institution of Electrical Engineers Symposium on), 1184
Propagation of Cacao in Plastic Bags (R. Nichols), 580
Propagation of Impulses during Refractoriness in a Pacinian Corpuscle : Generation and (Prof. Werner R. Loewenstein and R. Altamirano-Orrego), 124
Propagation of Radio Waves from Cosmical Sources (Dr. E. Chvojková), 105
Propagation of Ultrasonic Waves in Liquids (Dr. A. K. Dutta and K. Samal), 563
Propagation (Single-Hop), of Radio Waves to a Distance of 5,300 km. (E. Warren and E. L. Hagg), 34
Propagation (Single-Hop), of Radio Waves to a Distance of 5,300 Miles (F. Kift), 1459
Properties of Dislocations, *review* by Dr. R. A. Hyman, 1562
Properties of the Innervated and Non-innervated Membrane of an Isolated Single Electroplax of the Skate : A Method for Studying separately the (Dr. Ernest Schoffeniels), 287
Properties of Synthetic Piezoelectric Crystals, *review* by Dr. Warren P. Mason, 588
Properties (Dielectric), of Solid Powders dispersed in Liquid Paraffin : Influence of Moisture upon the (Rempei Gotohi, Tetsuya Hanai and Naokazu Koizumi), 406
Properties (Electrophoretic), of Serum Protein : Effect of Ultra-Violet Irradiation on (Dr. N. M. Larin), 65
Properties (Magnetic), of some Binuclear Complexes of Chromium and Iron (A. Earnshaw and J. Lewis), 1262
Properties (Mechanical), of Crystals : Dislocations and—an International Conference held at Lake Placid, 1956 (edited by J. C. Fisher, W. G. Johnston, R. Thompson and T. Vreeland, Jr.), *review* by Dr. R. A. Hyman, 1562
Properties (Mechanical), of Non-Metallic Brittle Materials (Mining Research Establishment of the National Coal Board and the Building Research Station of the Department of Scientific and Industrial Research Conference on), 1577
Properties (Mechanical), of Textile Materials (Textile Institute Conference on), 1640
Properties (Metal-Chelating), of Plant-Growth Substances (Dan Cohen and Ben-Zion Ginzburg and Dr. Carla Heitner-Wirguin), 686
Properties (Physical), of Polymers (Plastics and Polymer Group of the Society of Chemical Industry Silver Jubilee Symposium on), 531, 1633
Properties (Radioprotective), of Cystamine, Cysteamine and Cysteine when tested with Chick Fibroblasts *in vitro* (P. Oftedal, R. Oftebro and R. Eker), 344
Properties (Thermoelectric), of Bismuth Telluride and its Alloys (D. A. Wright), 834
Propionate (Testosterone) : Effect of, upon the Incorporation of Labelled Glycine into Homogenates of Mouse Kidney (Dr. Edward H. Frieden and Dr. Edward H. Cohen), 912
Propulsion Elements : Rocket (George P. Sutton), second edition, *review*, 986
Prosen, Edward J. (Deitz, Victor R., and) : Reaction of Carbon Monoxide with Graphitic Carbon at 450° C., 109
Protecting against *Clostridium perfringens* Toxin : Mode of Action of Chelates in (Prof. Merwin Moskowitz), 550

Protection of August Rats against Lethal Doses of a Dimethyl Homologue of Myleran by Isologous Bone Marrow (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Protection against Death due to Ozone Poisoning (Dr. Sidney Mittler), 1063
Protection of Foetuses against Radiation Injury (Dr. E. M. Pantelouris), 563
Protective Effect of Trace Elements other than Selenium against Dietary Necrotic Liver Degeneration (J. Bunyan, E. E. Edwin and J. Green), 1801
Protective Tissues : Influence of the Enclosing, on the Metabolism of Barley Grain (F. S. Mitchell, F. Caldwell and G. Hampson), 1270
Protein : Effect of Transmitted Ribonucleic Acid from Healthy Pear Trees upon the Synthesis and Composition of (Dr. B. Kessler), 201
  Electrophoretic Removal of, from Hyaluronic Acid (Dr. A. G. Ogston and T. F. Sherman), 482
  A Hypothesis for the Biosynthesis of Ribonucleic Acid and (Dr. A. M. Michelson), 375
  'Purity' of Gelatin as a (G. Russell), 102
  Turnover of, in a Non-Multiplying Animal Cell (Dr. H. Harris and J. W. Watts), 1582
Protein (Muscle), in Chick Embryo : Serological Determination of Developing (Dr. Yoshito Ogawa, Takatada Kawahara and Jiroo Miura), 621
Protein (Sclero-) of the Sponge *Hippospongia equina* : Amino-acid Composition of (Dr. J. Saper and W. E. White), 285
Protein (Serum) : Effect of Ultra-Violet Irradiation on Electrophoretic Properties of (Dr. N. M. Larin), 65
Protein (Tobacco Mosaic Virus) : Polymerization—Depolymerization of (Max A. Lauffer, Allen T. Ansevin, T. E. Cartwright and C. C. Brinton, jun.), 1338
Protein (Vitamin B_{12}-binding) : Transformation of Megaloblasts to Normoblasts by Cultivating Human Bone Marrow in Presence of Vitamin B_{12} and (Dr. I. Pendl and Dr. W. Franz), 488
Protein in Aqueous Systems : Formation of $>C=O$ Bonds in the Radiation-induced Oxidation of (Michael E. Jayko and Warren M. Garrison), 413
Protein in Ovalbumin : Linkage of Carbohydrate to (Dr. F. R. Jevons), 1346
Protein Component in the Middle Lamella of Plant Tissue : Evidence for a—a Possible Site for Indolylacetic Acid Action (B. Z. Ginzburg), 398
Protein Crystals at Low Temperature : Improved Resolution of X-Ray Diffraction Patterns of (Dr. Murray Vernon King), 263
Protein Degradation of Foetal and Cancer Tissues in the Presence of Ethionine (Dr. Renzo Rendi), 351
Protein Fractions (Serum), separated by Paper Electrophoresis : Determination of Transaminase Activity of (Dr. Miroslav Sevela), 915
Protein—Lignin Complexes, Lignins and Humic Acids : Resistance of, to Microbial Attack (Prof. D. L. Lynch and Prof. C. C. Lynch), 1478
Protein and Nucleic Acids in *Bacillus cereus* : Effects of 8-Azaguanine on the Synthesis of (Prof. H. Chantrenne and S. Devreux), 1737
Proteins : Coding Problem in (Dr. Drew Schwartz), 769
  Demonstration of Thyroglobulin in the Presence of other, by the Precipitin Reaction (Dr. R. Bird and Dorothy Jackson), 1405
  Effect of Hypophysectomy on the Ability of Rat Liver Microsomes in a Cell-free System to incorporate Radioactive Amino-Acids into their (Dr. A. Korner), 422
  Nutritive Value of (Nutrition Society Symposium on), 151
  Rapid Sedimentation of, through Starch (Dr. N. G. Anderson), 45
Proteins in Solutions at Low Temperatures (Simon Freed, James H. Turnbull and William Salmre), 1731
Proteins and Platelet-Lipoid : Phospholipids, (J. R. O'Brien), 420
Proteins (Biologically Active Basic Polypeptides and) : Interaction between Synthetic Polyglucose Sulphate and (Dr. P. T. Mora and B. G. Young), 1402
Proteins (Bovine Eye Lens) : N-Terminal Amino-acids of (H. Bloemendal and Prof. G. Ten Cate), 340
Proteins (Nucleo-) : Structure and Physical Chemistry of Nucleic Acids and (Colloid and Biophysics Committee of the Faraday Society Discussion on), 885
Proteus L Form : Electron Microscopy of a Stable (Dr. K. G. Thorsson and Prof. C. Weibull), 1348
Proteus vulgaris : Cell Wall Composition in Bacterial and *L* Forms of (Dr. O. Kandler, A. Hund and C. Zehender), 572
  Changes in the Dry Weight and Deoxyribonucleic Acid Content of, caused by Penicillin (Dr. M. V. Nermut and Dr. V. Drášil), 1740
Prothoracic Glands in *Tenebrio molitor* L. (Coleoptera : Tenebrionidae), (U. S. Srivastava), 1668
Protoplasts : Bacterial (Dr. S. Brenner, Dr. F. A. Dark, Dr. P. Gerhardt, Dr. M. H. Jeynes, Dr. O. Kandler, Dr. E. Kellenberger, Dr. E. Klieneberger-Nobel, Dr. M. McQuillen, Dr. M. Rubio-Huertos, Dr. M. R. J. Salton, Dr. R. E. Strange, Dr. J. Tomcsik and Dr. C. Weibull), 1713
Protocatechuic Acid in the Integument of the Silkworm (Shigemi Kawase), 1350
Protogynous Hermaphroditism in *Coris julis* L. (Prof. G. Bacci and A. Razzauti), 432
Protonemata in *Splachnum ampullaceum* (L.) Hedw. : Effect of Gibberellic Acid on the Growth of (Dr. K. E. von Maltzahn and I. G. MacQuarrie), 1139
Protopitys : A New Species of (J. Walton), 1377
Protoplasm : Contraction of Time and (Prof. Anderson Nettleship), 562
Protoplast-like Elements in Aged Bacterial Cultures : Occurrence and Filterability of (Dr. J. Sinkovics), 566
Protozoa (Free-living and Parasitic) : Catalog of Laboratory Strains of (Society of Protozoologists), 161
Protozoologists, Society of : Catalog of Laboratory Strains of Free-living and Parasitic Protozoa, 161
Proudfoot, V. B. : Relict *Rotlehm* in Northern Ireland, 1287
Provision of Cobalt to Ruminants by means of Heavy Pellets (D. W. Dewey, H. J. Lee and Dr. Hedley R. Marston), 1367
Prue, Dr. J. E. : Interaction in Ionic Solutions, 240
Prue, Dr. J. E., and others : Interaction in Ionic Solutions (Precise Spectrophotometric Results for Copper Sulphate Solutions), 241
Pryce, Prof. M. H. L. : Structure and Reactivity of Electronically Excited Species (Interactions between Electronic and Vibrational Motions of Polyatomic Molecules), 320
Pseudofertilization in the Genus *Lumbricillus* (Enchytraeidae), (B. Christensen and F. B. O'Connor), 1085
Pseudomonas : Pectin-decomposing Strains of (Dr. A. M. Paton), 61
Pseudomonas aeruginosa : Formation of β-Alanine from Spermine and Spermidine by (Dr. S. Razin, U. Bachrach and I. Gery), 700
  An Infectious Fertility Factor for (Dr. B. W. Holloway and Pamela A. Jennings), 855
Pseudomonas mors-prunorum Phages from the Soil : A Method for Isolating (J. E. Crosse and M. K. Hingorani), 60
Pseudotsuga menziesii : Radicle Elongation of, in relation to Light and Gibberellic Acid (Dr. S. D. Richardson), 429
Psychiatry : Pavlov, Psychology and, *review* by Prof. John Cohen, 1233
Psychiatry (Scientific Psychology and) : Ivan V. Pavlov—Toward a (Dr. Harry K. Wells), *review* by Prof. John Cohen, 1233
Psychological Data : The Relationships between Electroencephalographic and, in Normal Adults (Dr. P. F. Werre), *review* by Dr. Clifford Allen, 983
Psychology at University College, London, 18
Psychology : Humanistic (Prof. John Cohen), *review* by Prof. L. S. Hearnshaw, 1493
  Industrial, 1772
Psychology (Analytical) : New Developments in (Michael Fordham), *review* by Dr. Clifford Allen, 298
Psychology (Applied) : International Congress of (Prof. John Cohen), 1579
Psychology (Industrial), National Institute of ; Appointment of J. D. Handyside as controller of research, 885, 1042
  H. M. Vernon Prize for 1958 awarded to A. T. Welford, 1510
Psychology (Industrial), National Institute of (Institute of Personnel Management in conjunction with the) : Course on the Use of Statistics in Personnel Management, 20
Psychology (Jungian) : Advances in, *review* by Dr. Clifford Allen, 298
Psychology and Psychiatry : Pavlov, *review* by Prof. John Cohen, 1233
Psychology and Psychiatry (Scientific) : Ivan V. Pavlov—Toward a (Dr. Harry K. Wells), *review* by Prof. John Cohen, 1233
Public : Interpretation of Science to the (Sir Lawrence Bragg), 807
  Interpretation of Science to the—Future Activities of the British Association, 8
  The Presentation of Science to the (Ritchie Calder), 392
Public Administration, Royal Institute of (A Survey by a Study Group of the) : The Organization of British Central Government, 1914-1956 (edited by D. N. Chester, written by F. M. G. Willson), 141 ; *review*, 299
Public Health Training of General Practitioners : Report of the Conference on (Geneva, 1956), (World Health Organization, Technical Report No. 140), 1047
Puck, T. T. : Genetic Aspect of Somatic Cell Variation (Usefulness of *in vitro* Cultivation of Mammalian Cells in Studying Cell Variations), 1707
Puffs (Air) : Apparatus for Stimulation of Insect Sense-Organs by (D. M. Miller and E. H. Colhoun), 126
Pugh, Sir William : Radiometric and Geochemical Survey Techniques, 594
Pugsley, Sir Alfred : The Theory of Suspension Bridges, *review* by T. M. Charlton, 982
Pulmonary Arteriosclerosis due to Serotonin (Dr. Paolo Rossi and Dr. Luciano Zamboni), 1216
Pulses (Atmospheric), reflected successively from the Ionosphere : Abnormal Polarization of the (Prof. S. R. Khastgir), 404
Pumphrey, Prof. R. J. (Gray, Dr. E. G., and) : Ultra-structure of the Insect Ear, 618
Purchon, Prof. R. D. : Professional Problems of Biologists serving Overseas, 678
Purdom, Mrs. L., and others : A Correlation between Electrical Surface Charge and some Biological Characteristics during the Stepwise Progression of a Mouse Sarcoma, 1586
Pure Beta-Emitters : Application of the Kurie Plot to the Standardization of (R. A. Lloyd), 1055
Pure Cultures of a Brown Alga : Extracellular Products in (Dr. G. E. Fogg and G. T. Boalch), 789
Pure Lipid Hapten isolated from Human Carcinoma : Cytolipin *H*, a (Dr. Maurice M. Rapport, Liselotte Graf, Vladimir P. Skipski and Nicholas F. Alonzo), 1803
Pure Mathematics at Cambridge, 528
Pure and Applied Physics, International Union of : 1958 International Conference on Semi-conductors, 885
Pure and Applied Physics, International Union of, and Unesco : International Congress on Nuclear Physics (Low Energy Nuclear Interactions and Nuclear Structure), 459
Purification of Chemical Substances : Purity and (Prof. Arne Tiselius), 387
Purification of Sirenin : A Procedure for the (Prof. Leonard Machlis), 1790
Purification (Sewage), Institute of (Midland Branch) : Symposium on Trade Wastes, 678
Purified Complement-fixing Antigen from *Mycobacterium johnei* (E. Annau), 1206
Purines : Effect of Caffeine and other, upon the Ribonucleic Acid/Deoxyribonucleic Acid Ratio in Leaves, and the Suitability of these Leaves for Aphids (Dr. B. Kessler, Dr. E. Swirski and Dr. A. S. Tahori), 1595
'Purity' of Gelatin as a Protein (G. Russell), 102
Purity and Purification of Chemical Substances (Prof. Arne Tiselius), 387
Purnell, Dr. J. H. : Column Packings for Gas Chromatography, 604
'Purple Pericarp', a Monofactorial Dominant in Tetraploid Wheats (Dr. B. C. Sharman), 929
Purpose in Teacher Training (Monica Wingate), *review* by T. H. Hawkins, 517
Pursey, Dr. D. L. : Parity Conservation (β-Decay and μ-Decay Theory), 447
Purslow, Dr. B. W. : Ionospheric Drift in the *F*2 Region near the Magnetic Equator, 35
Putman, J. L. : Radioisotopes and Glass, 318
Pye Premium of the Television Society awarded to Ian Atkins, 1246
Pyke, M., and others : Yeasts (edited by W. Roman), *review* by R. B. Gilliland, 798
Pyrausta nubilalis (Hbn.) (European Corn Borer) : Importance of Photoperiod and Temperature in Inducing Diapause in the (J. A. Mutchmor and Dr. W. E. Beckel), 204
2-Pyridinaldoxime : Complexes of Nickel (II) with (Prof. Ronald A. Krause and Daryle H. Busch), 1529
Pyridine Nucleotide Synthesis by Erythrocytes : Species Difference in (P. G. Tulpule), 1804
Pyridine Nucleotide-linked Dehydrogenases : Cytochemical Localization of (Dr. R. Hess, Dr. D. G. Scarpelli and Dr. A. G. E. Pearse), 1531

Pyridine Ring and the Problem of its Biosynthesis (James Grimshaw and Léo Marion), 112
Pyridine-2-thiol-N-oxide and a Derivative : Internal Seed Disinfection with (J. Dekker, O. M. van Andel and A. Kaars Sijpesteijn), 1017
Pyridoxal Phosphate—Vanadium : A Model System for Cysteine Desulphydrase Action— (Prof. F. Bergel, R. C. Bray and K. R. Harrap), 1654
Pyrogallol : Autoxidation of—General Characteristics and Inhibition by Catalase (S. M. Siegel and B. Z. Siegel), 1153
Pyruvate : Accumulation of α-Alanine and of, in Diphtherial Culture Filtrate and its relation to Iron Deficiency of Medium (Prof. Masahiko Yoneda and Hiroshi Ishihara), 272
Pyszora, H. (Ellis, Bryan, and) : Effect of the Metallic Ion on the Infra-Red Spectra of Salts of Carboxylic Acids, 181

QUADRUPOLE Resonance (Nuclear), of Neutron-irradiated Sodium Chlorate (Joseph Depireux and Prof. Jules Duchesne), 759
Quagliariello, E., and others : Conversion of 3-Hydroxyanthranilic Acid to Quinolinic Acid in presence of Rat Liver treated with 2-Acetylaminofluorene, 624
Qualitative, Quantitative and Preparative Chromatography of Steroids on Fully Acetylated Paper (F. J. Ritter and J. Hartel), 765
Quality of Craftsmen : Supply and, *review* by T. H. Hawkins, 373, 531
Quality in Meat (D. M. Joubert), 394
Quality in Process Plants : Automatic Measurement of (Society of Instrument Technology Conference on), 165
Quality in Technical Education, 1491
Quality Control (Statistical), and Acceptance Sampling (Birmingham College of Technology Course on), 1703
Quality Problems (Water), in the United Kingdom (Society for Visiting Scientists Discussion on), 24
Quanta of Circulation (Single) : Detection of, in Rotating Helium II (Dr. W. F. Vinen), 1524
Quantitative Aims : Cytochemical Methods with—Biophysical and Biochemical Approaches (Proceedings of the Symposium held by the Institute for Medical Cell Research and Genetics, Karolinska Institutet, Stockholm, 1956), edited by Dr. B. Lindström and Dr. R. Brown (Experimental Cell Research, Supplement 4), *review*, 1029
Quantitative Determination of Cholinesterase Activity in Individual Endplates of Normal and Denervated Gastrocnemius Muscle (M. Brzin and Prof. J. Zajicek), 626
Quantitative Determination of Hydroxyproline by Paper Chromatography (Henry R. Roberts and Michael G. Kolor), 837
Quantitative Gram-staining with Labelled Iodine (Dr. D. Shugar and Miss J. B[illegible]owska), 357
Qua[illegible]lysis (Prof. G. Charlot and Denise Bézier), trans-

Effect of Reserpine on the Intracellular Distribution of Catecholamines in the Brain Stem of the (Dr. H. Weil-Malherbe and A. D. Bone), 1474
Effect of the Synthetic Œstrogen Stilboestrol on Pregnancy in the (Dr. A. Sharaf and Dr. E. S. E. Hafez), 1211
Giant Compound Hair Follicles in the Skin of the (Dr. H. J. Whiteley), 850
Use of Labelled Ions in the Study of Blastocyst—Uterine Relationships in the (J. P. Bennett, Dr. J. C. Boursnell and Dr. C. Lutwak-Mann), 1715
Rabbit (Wild) : Social Behaviour in the (K. Myers and R. Mykytowycz), 1515
Rabbit Erythrocyte *in vivo* : Adenosine Triphosphate Metabolism in the (Dr. Bertram A. Lowy, Dr. Bracha Ramot and Dr. Irving M. London), 324
Rabbit Spermatozoa : Capacitation of (Dr. R. W. Noyes, Dr. A. Walton and Dr. C. E. Adams), 1209
Rabbit's Hair : Effect of some Nitrogen Mustard Derivatives on Growth of (William J. P. Neish), 188
Rabbits : Effects of Clipping and Spraying on various Homoeothermic Responses of, at an Elevated Environmental Temperature (Dr. Harold D. Johnson, Chu Shan Cheng and A. C. Ragsdale), 842
Rabbits made severely Anaemic with Phenylhydrazine : Isolation of an Erythropoietic Fraction from the Plasma of (Peter H. Lowy, Geoffrey Keighley, Henry Borsook and Ashton Graybiel), 1802
Rabbits (New-born) : Antibody Production by Lymphocytes after *in vitro* Contact with Bacterial Antigen and Transfer to (Dr. Miroslav Holub), 122
Rabbits (Normal and Thyroxine-treated) : Cortisone-Glucose Tolerance Test in (Dr. L. Macho), 620
Rabi, Prof. I. I. : Nominated as national representative for the United States on the North Atlantic Treaty Organization Science Committee, 739
Rabinovitz, Dr. M., and Olson, M. E. : Participation of Reticulocyte Microsomes in the Incorporation of Iron into Haemoglobin, 1665
Rabinowitch, E. I., and others (edited by) : Research in Photosynthesis (Papers and Discussions presented at the Gatlinburg Conference, 1955), *review* by Prof. C. P. Whittingham, 974
Rabor, Dr. Dioscoro S. : Climate, Vegetation and Land Utilization in the Humid Tropics (Wild Life in the Philippines), 597
Rabson, Dr. Alan S., and others : Adaptation to Serum-free Medium by a Phagocytic Cell Strain derived from a Murine Lymphoma, 1343
Rabson, Dr. R., and Tolbert, N. E. : Detection of α-Ketoglutaric Acid and other Keto-Acids on Paper Chromatograms with Ninhydrin, 50
Race Question in Modern Science (Unesco), *review* by Prof. T. S. Simey, 1232
Racemic *d*-Urobilin : Dextrorotatory Urobilin-IXα and (Prof. C. H. Gray and D. C. Nicholson), 483
Racial Prejudice, *review* by Prof. T. S. Simey, 1232
Radakrishnamurty, C., and others : Remanent Magnetism of the Rajmahal Traps of North-Eastern India, 830
Radd, F. J., and Crowder, L. H. : Metallographic Studies of Iron Carbide and Tungsten Carbide, 258
[illegible] Velocities of Southern *B* Stars (M. W. Feast, A. D. Thackeray and [illegible] Wesselink), 1116
[illegible] (Dr. W. B. Bonnor), 11[illegible]

Radicals (Free) : Infra-Red Spectra of (Dr. K. Nolen Tanner and Raymond L. King), 963
Radicals (Free-), produced in Cigarette Smoke (M. J. Lyons, L. F. Gibson and Dr. D. J. E. Ingram), 1003
Radicle Elongation of *Pseudotsuga menziesii* in relation to Light and Gibberellic Acid (Dr. S. D. Richardson), 429
Radio : The Exploration of Space by (R. Hanbury Brown and Prof. A. C. B. Lovell), *review* by Dr. F. G. Smith, 1562
Radio Astronomy (edited by H. C. van de Hulst), (International Astronomical Union, Symposium No. 4, held at the Jodrell Bank Experimental Station, 1955), *review* by Dr. J. S. Hey, 1432
  A Popular Account of, *review* by Dr. F. G. Smith, 980
Radio Communication : Solar Activity and (R. Naismith), 954
Radio Emission (Solar) : A New Spectral Characteristic in (A. Maxwell and G. Swarup), 36
Radio Event (Solar) : A Remarkable (Staff of the Ionosphere and Radio Astronomy Section of the Netherlands Telecommunications Services), 542
Radio Noise from Lightning Discharges (F. Horner and C. Clarke), 688
Radio Noise from Meteors (Gerald S. Hawkins), 1610
Radio Propagation above 30 Mc./s. : Long-Distance (Institution of Electrical Engineers Symposium on), 1184
Radio-Propagation Elements due to an Artificial Earth Satellite : Determination of (Dr. E. Woyk-Chvojková), 1195
Radio Research Station, Slough, 1642
Radio Scintillations of Satellite 1958*a* (O. B. Slee), 1610
Radio Signals (Doppler), from Earth Satellites : Theoretical Analysis of (Dr. William C. Guier and George C. Weiffenbach), 1525
Radio Transmissions from the First Artificial Earth Satellite : Observations in Australia of (G. H. Munro and R. B. White), 104
Radio Universe : The, *review* by Dr. F. G. Smith, 1562
Radio Waves : Propagation of, from Cosmical Sources (Dr. E. Chvojková), 105
  Single-Hop Propagation of, to a Distance of 5,300 km. (E. Warren and E. L. Hagg), 34
  Single-Hop Propagation of, to a Distance of 5,300 Miles (F. Kift), 1459
Radio Waves (18-Mc./s. Cosmic) : Auroral Absorption of, on February 11, 1958 (Dr. R. Fleischer), 1156
Radio Waves reflected from the Moon : Measurement of the Ionospheric Faraday Effect by (Fred B. Daniels and Siegfried J. Bauer), 1392
Radioactive Amino-Acids into their Proteins : Effect of Hypophysectomy on the Ability of Rat Liver Microsomes in a Cell-free System to incorporate (Dr. A. Korner), 422
Radioactive Contamination (Surface) : Rapid Assessment of (Prof. F. Behounek), 695
Radioactive Fall-out : Accumulation of, by Plants in the English Lake District (Eville Gorham), 1523
Radioactive Phosphorus biologically incorporated in Food : Absorption and Distribution in Rats of (B. Kawin and R. F. Palmer), 127
Radioactivity of Plant Material collected after the Accident at Win
  No. 1 Pile (G. Kimber and A. Booth), 1391
Radioactivity in [illegible]

Raeven, F. M. : At the thirteenth International Congress of Applied Psychology (Social Influences on Delinquency), 1580
Raghupathy, E., and others : Influence of some Iodoamino-Acids and Iodoproteins on the Growth of *Corcyra cephalonica* St., 1655
Raghuvanshi, S. S. (Naithani, S. P., and) : Cytogenetical Studies in the Genus *Citrus*, 1406
Ragotzkie, Dr. R. A. : Salt Marshes (Marsh Drainage Patterns), 1512
Ragsdale, A. C., and others : Effects of Clipping and Spraying on various Homoeothermic Responses of Rabbits at an Elevated Environmental Temperature, 842
Rahman, A. : At the Millenary Celebrations of Al-Mas'udi (Science at the time of Al-Mas 'udi), 883
Railways : The Electrification of (the late G. H. Fletcher, delivered by R. Ledger), 387
Railways in Britain : Train Control on, 883
Rain Water : Chemicals Dissolved in, 1650
Rainfall in East Africa : Artificial Stimulation of, by means of Rockets (J. H. Brazell and C. M. Taylor), 1421
Rainfall Distribution in East Africa : Annual (J. F. Griffiths), 1331
Raised Peripheral Temperature : Effect of a, upon the Rate of Regeneration in a Mammalian Peripheral Nerve (H. J. Gamble), 287
Rajam, Prof. P. C., and Jackson, Anne-Louise : A Cytoplasmic Membrane-like Fraction from Cells of the Ehrlich Mouse Ascites Carcinoma, 1670
Rajam, Dr. R. V. : Elected a Fellow of the Royal Society of Edinburgh, 739
Rajmahal Traps of North-Eastern India : Remanent Magnetism of the (Dr. J. A. Clegg, C. Radakrishnamurty and P. W. Sahasrabudhe), 830
Raman Spectrum of Tetrakistrifluorophosphinenickel (Dr. L. A. Woodward and J. R. Hall), 831
Ramaswami, Dr. L. S., and Lakshman, A. B. : Ovulation induced in Frog with Mammalian Hormones, 1210
Ramot, Dr. Bracha, and others : Adenosine Triphosphate Metabolism in the Rabbit Erythrocyte *in vivo*, 324
Rampton, Dr. C. S. (Scott, Dr. G. R., and) : Freezing and Drying, 1695
Ramsay, D. A. (Dressler, K., and) : Structure and Reactivity of Electronically Excited Species (The Renner Effect in Linear Molecules), 320
Ramsay, H. T.: Mechanical Properties of Non-Metallic Brittle Materials, 1578
Ramsay, Dr. J. A. : *Obituary* of Dr. J. A. Venn, 1104
Ramsay Memorial Fellowship in Chemistry, 459
Ramsbottom, Dr. J. : Linnaeus, 244
  Elected president of the Society for the Bibliography of Natural History, 1246
  The Genus *Achlya*, *review*, 1297
  Obituary of A. H. G. Alston, 1306
Ramsden, C. E. : Radioisotopes and Glass, 318
Ramsden, Dr. S. A., and others : Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315
Ramsden Laboratory of Ilford Limited (Dr. G

Rat (Cryptorchid) : β-Glucuronidase, Lipase and Esterase in the Testis of the (Dr. Masando Hayashi, Kazuhiro Ogata, Takuro Shiraogawa and Osamu Kawase), 186
Rat (Hypophysectomized) : Effects of Pituitary Hormones and Cortisone upon Liver Regeneration in the (Dr. J. T. Hemingway and Dr. D. B. Cater), 1065
Rat Bone : Retention of Sodium-22 in (Dr. G. M. Kellerman), 914
Rat Kidney (Hypertensive) : Lesions in the, produced by Hydralazine (Dr. D. L. Gardner), 915
Rat Liver : Effect of Splenectomy on Azo Dye Carcinogenesis of (Dr. Muneaki Takashi and Shoji Iwase), 1211
  Occurrence of Independent Systems for the Cleavage of Folic Acid and Citrovorum Factor in (U. W. Kenkare and Dr. Beatriz M. Braganca), 548
  Soluble Antigens in Microsomes and other Cell-Fractions of (Dr. P. Perlmann and Dr. V. D'Amelio), 491
  Thyroxine Metabolism by Extracts of (Lawrence G. Plaskett), 273
Rat Liver treated with 2-Acetylaminofluorene : Conversion of 3-Hydroxyanthranilic Acid to Quinolinic Acid in presence of (E. Quagliariello, S. Auricchio and E. Rinaldi), 624
Rat Liver Cancer (Primary) : Phosphorylase Activity of (A. A. Hadjiolov and K. I. Dancheva), 547
Rat Liver Microsomes in a Cell-free System : Effect of Hypophysectomy on the Ability of, to incorporate Radioactive Amino-Acids into their Proteins (Dr. A. Korner), 422
Rat Parathyroid : Leucine Aminopeptidase in, and its relation to Parathyroid Hormone Production (Dr. A. G. E. Pearse and Dr. G. Tremblay), 1532
Rat Pituitary Neural Lobe : Histological and Chemical Changes in the, following Treatment with Neurohypophysial Substances (Dr. J. de Groot), 650
Rat Red Cells (Growing) : Carbon Dioxide Fixation in some Components of (G. Giustina and E. Lazzarini), 1285
Ratcliffe, J. A. : The Transition from the Ionosphere to Interplanetary Space, 1237
  Elected president for 1958-59 of the Physical Society, 1640
Rate of Accretion of Cosmic Dust on the Earth (Prof. Hans Pettersson), 330
Rate of Body-Water Distribution studied with Triple Labelled Water (Michael Anbar and Dr. Zigmund Lewitus), 344
Rate of Calcium Loss resulting from Ammonium Sulphate Treatment of a Tea Soil (N. G. Gokhalé), 426
Rate of Regeneration in a Mammalian Peripheral Nerve : Effect of a Raised Peripheral Temperature upon the (H. J. Gamble), 287
Rate of Respiration of a Green Alga : Effect of Plasmolysis on the (Dr. F. J. Taylor), 136
Rate of Uptake of Rubidium-86 : Influence of Water-Content of Sand on (Dr. L. K. Wiersum), 106
Rate (increased), of Plaque-type and Host-range Mutation following Treatment of Bacteriophage *in vitro* with Ethyl Methane Sulphonate (Dr. Anthony Loveless), 1212
Rathenau, Prof. G. W. (de Jong, M., and) : Change of Length during Transformation of Iron under Stress, 1396
Ratio of Green to Dried Hops : Systemic Insecticides and the (H. S. Darling), 1811
Ratio (Segregation) of Alleles at the *T* Locus in the House Mouse : Influence of Time of Mating on the (Dr. A. W. H. Braden), 786
Ratoon Stunting Disease in Sugar Cane : A Staining Technique for detecting (Robert Antoine), 276
Rats : Absorption and Distribution in, of Radioactive Phosphorus biologically incorporated in Food (B. Kawin and R. F. Palmer), 127
  Audiogenic Epileptic Seizures evoked in, by Artificial Epileptogenic Foci (Dr. Zd. Servít and J. Sterc), 1475
  Blocking Effect of Morphine on the Secretion of Thyroid-stimulating Hormone in (Milan Sámel), 845
  Effect of Aldosterone Monoacetate and Deoxycorticosterone Acetate on Alkaline Phosphatase Activity in the Liver of (Dr. Amiya B. Kar and R. P. Das), 623
  Effect of Stress and Cortisone on the Cytomorphology of Pituitary Grafts in (Dr. K. Kovács, M. A. Dávid and I. W. Horváth), 1417
  Experimental Suppression of the Early Inflammatory Phenomena of Turpentine Pleurisy in (W. G. Spector and D. A. Willoughby), 708
  Passive Transfer of Antitumour Factors through Milk in (Prof. B. Sekla), 1600
  Use of Sulphonamides in the Treatment of Pleuro-pneumonia-like Organisms in (R. T. Charles and O. Rees), 1213
Rats bearing *RD3* Sarcoma and the Walker Carcinoma : Inability of Hydrogen Peroxide to influence the Survival-Time of (Dr. F. N. Ghadially and Dr. G. Wiseman), 1067
Rats (Adrenalectomized) : Adrenocorticotrophic Hormone in the Blood of (G. S. Cox and Dr. J. R. Hodges), 420
Rats (Albino) : Strain Sensivity of, to Reserpine (Dr. R. E. Coupland), 930
Rats (August) : Protection of, against Lethal Doses of a Dimethyl Homologue of Myleran by Isologous Bone Marrow (Prof. Timothy R. Talbot and Dr. L. A. Elson), 684
Rats (Hypophysectomized) : Immediate Effect of *l*-3 : 5 : 3'-Tri-iodothyroacetic Acid on Metabolic Rate and Body Temperature in, and the Action of Cortisone (Prof. Sz. Donhoffer, I. Várnai and E. Sziebert-Horváth), 345
Rats (Suckling) : Caudal Necrosis in (P. K. Dikshit and S. Sriramachari), 63
Rats (Thyroxinized) : Effect of Creatine Phosphate Administration on the Cardiac Adenosine Triphosphate of (L. Angelucci, R. Boldrini and E. Mascitelli-Coriandoli), 419
Rats (Weaning) : Bread and the Growth of—the Lysine-Threonine Balance (J. B. Hutchinson, Dr. T. Moran and Dr. J. Pace), 1733
Rats and Man : Direct Registration of an Instantaneous X-Ray Effect in (Prof. R. Brinkman and H. B. Lamberts), 774
Rattray, J. M. (Whyte, Dr. R. O., and) : The Grass Cover of Africa, 80
Raup, H. M., and Johnson, F. : Salt Marshes (Archaeology and Salt Marshes of Grassy Island in Massachusetts), 1513
Raven, Dr. A. M. : Appointed to a supernumerary lectureship in agricultural chemistry at Queen's University, Belfast, 1042
Raw, Dr. C. J. G. (Yourgrau, Dr. W., and) : Time Variation of Chemical Affinity, 480
Rawes, Deirdre A., and others : A New Series of Anthelmintics, 183
Rawlins, F. I. G. : Science and Human Life, *review*, 299
  Determinism and Indeterminism in Modern Physics, *review*, 590
  Logical Studies and Induction, *review*, 981
  Reality Explored, *review*, 1687
Rawson, Dr. K. S. : Photoperiodism in Plants and Animals (Endogenous Rhythms of Activity in the Hamster), 536
Ray, Dr. Margery P. F. Marsden : Formation of Jerusalem Artichoke Tubers in Sterile Culture, 1480
Ray, Peter M., and Curry, George M. : Intermediates and Competing Reactions in the Photodestruction of Indoleacetic Acid, 895
Ray (Cosmic-) Decrease : A Large, accompanying the Solar Maximum of 1957 (Cosmic Rays and the Sunspot Cycle), (J. R. Winckler and L. Peterson), 1317
Ray (Cosmic-) Nucleonic Component along 145° East Longitude : A Survey of the, using an Airborne Monitor (J. R. Storey, Dr. A. G. Fenton and K. B. McCracken), 1155
Ray-Chaudhuri, S. P., and others (edited by) : H. K. Mookerjee Memorial Volume of the Proceedings of the Zoological Society, Calcutta, *review* by Dr. A. Glucksmann, 589
α-Ray Activities of Humans and their Environment (R. C. Turner, J. M. Radley and Prof. W. V. Mayneord), 518
γ-Ray Sensitivity of the Beta-Counter : Correction for the, in the Standardization of Cobalt-60 by the Beta-Gamma Coincidence Method (B. Owen and R. A. Lloyd), 396
Raymond, Marcel (Löve, Åskell and Doris, and) : A Cytotaxonomic Study of *Carex*, 1041
Raynor, G. V. (Smith, R. W., and) : Melting, Diffusion and related Topics (Investigations on the Grey Tin/White Tin Transformation), 320
Rays (Cosmic) : Effective Magnetic Meridian for (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 34
Rays (Cosmic), and the Sunspot Cycle—A Large Cosmic-Ray Decrease accompanying the Solar Maximum of 1957 (J. R. Winckler and L. Peterson), 1317 ; Primary α-Particle Intensity at Sunspot Maximum (P. S. Freier, Prof. E. P. Ney and P. H. Fowler), 1319
Razin, Dr. S., and others : Formation of β-Alanine from Spermine and Spermidine by *Pseudomonas aeruginosa*, 700
Razvedka i Okhrana Nedr (Prospecting and Protection of Subsoil) : A French translation to be published by the Bureau de Recherches Géologiques, Géophysiques et Miniéres, Paris, 1510
Razzauti, A. (Bacci, Prof. G., and) : Protogynous Hermaphroditism in *Coris julis* L., 432
Reaction : A Novel Non-Enzymic Browning (Dr. H. Rinderknecht and Dr. L. Jurd), 1268
Reaction of Carbon Monoxide with Graphitic Carbon at 450° C. (Victor R. Deitz and Edward J. Prosen), 109
Reaction of Cysteine with 1-Fluoro-2,4-Dinitrobenzene : Molecular Rearrangement in the (Dr. H. P. Burchfield), 49
Reaction of Ethylene Bromide with Trimethylamine and the Neuromuscular Blocking Activity of Ethylene*bis*-(Trimethylammonium), (Dr. Allan P. Gray and Thomas B. O'Dell) 634
Reaction of Ethylene Diamine with Epinephrine and Norepinephrine : Influence of Metallic Ions on the (Prof. Guy Ladeau, L. P. Joly and G. Sobolewski), 1061
Reaction of Ferrimyoglobin with Phenols (Prof. Philip George, R. L. J. Lyster and J. Beetlestone), 1534
Reaction of Metmyoglobin with Hydrogen Peroxide : Free Radical produced in the (Dr. J. F. Gibson, Dr. D. J. E. Ingram and P. Nicholls), 1398
Reaction (Agar Double-Diffusion Precipitation) : A Specific Diffusible Antigen of Rinderpest Virus demonstrated by the (G. White), 1409
Reaction (Agar Double-Diffusion Precipitation), applied to the Study of *Asterococcus mycoides* (G. Wnite), 278
Reaction (Colour), for Non-Ionic and Amphoteric Soaps (Dr. J. E. Lovelock and T. Nash), 1263
Reaction (Colour), of Vitamin E with Vitamin K and Cysteine (Eduardo Cruz-Coke), 49
Reaction (Differential), of 'Identical' Chemical Groups : Conditions for (Dr. A. G. Ogston), 1462
Reaction (Exothermic), of Metakaolin between 950° and 1,000° C. (Thaisa Demediuk and W. F. Cole), 1400
Reaction (New), for the Differentiation of *cis*- and *trans*-Isomers of Nitrophenylhydrazones of some α-Keto Acids (Hirohiko Katsuki, Köichirö Sumizu, Tarumi Moriwaki, Shözö Tanaka and Ichirö Hayashi), 639
Reaction (Precipitin) : Demonstration of Thyroglobulin in the Presence of other Proteins by the (Dr. R. Bird and Dorothy Jackson), 1405
Reaction (Red—Far-red) : Reversibility of the, by Irradiation at Different Sites (Shimon Klein and Dr. John W. Preiss), 200
Reaction (Special), of the Complement Fixation Test applied to the Study of Tumours (Prof. A. Serra, G. Guarini, P. Lovisetto, D. Castelli and F. Balzola), 622
Reaction (Stable Eutectic), in Magnesium-treated Iron Castings : Promoting the, by Vibration during Solidification (J. H. Gittus), 1004
Reactions : Controlled Thermonuclear (Joint United States—United Kingdom Conference to exchange information on), 386
  Organic (edited by Roger Adams, A. H. Blatt, Arthur C. Cope, David Y. Curtin, Frank C. McGrew and Carl Niemann), Vol. 9, *review* by Prof. John Read, 147
Reactions (Addition) : An Electronic Mechanism of (Lakhbir Singh), 110 ; (D. W. Davies), 903
Reactions (Aldolase and Triose Phosphate Isomerase) : Absolute Configuration of Enantiomorphic Carbanions involved in the (Ben Bloom and Yale J. Topper), 1128
Reactions (Competing) : Intermediates and, in the Photodestruction of Indoleacetic Acid (Peter M. Ray and George M. Curry), 895
Reactions (Controlled Thermonuclear) : Experimental Results with the ZETA Apparatus on (Royal Society Discussion on), 238, 803
Reactions (Immune), to *Trichostrongylus colubriformis* Infestation in Sheep (Dr. D. F. Stewart and H. McL. Gordon), 921
Reactions (Light), of Littoral Gastropods (Dr. C. Burdon-Jones and G. H. Charles), 129
Reactions (Nuclear), in a Gas Discharge : Production of High Temperatures and (Controlled Release of Thermonuclear Energy), (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, R. W. P. McWhirter R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217

Reactions (Oxidation-Reduction), in Solution : One-Electron *versus* Two-Electron Transfer Processes in the Mechanism of (Prof. Joseph Weiss), 825
Reactions (Radiation-induced Chemical) : Dose-Rate Effects in (J. P. Keene), 387
Reactions (Serological) : Use of Logarithms in recording (Prof. William C. Boyd), 1348
Reactivity of Calcium Oxide : Differential Thermal Method for determining (T. L. Webb and T. van der Walt), 411
Reactivity of Electronically Excited Species : Structure and (Physical Chemistry Division of the Chemical Institute of Canada Symposium on), 320
Reactivity (Reduced Immunological) : Distant Hybrids from Parents with (Marta Vojtíšková), 927
Reactor (Merlin Research) : Critical Mass Measurements for the (D. R. Chick, K. Firth, M. Kerridge and A. J. Salmon), 1171
Reactor (New), at Harwell, 947
Reactor Accident (Nuclear) : Iodine-131 in Sheep before and after a (Prof. L. Van Middlesworth), 256
Reactor Safety : Nuclear, 601
Reactor Technology (Nuclear) : Recent Developments in (United Kingdom Atomic Energy Authority Conference on), 458
Reactors (Nuclear), for Research (edited by Clifford K. Beck), *review* by F. W. Fenning, 984
Reactors (Research) : Grants for (National Science Foundation, Washington), 313
Read, Prof. John : Organic Reactions, *review*, 147
  Guides to Organic Chemistry, *review*, 515
  Through Alchemy to Chemistry, *review* by Prof. J. R. Partington, 986
Read, John : Effect of Radiosensitivity on Inert Gases—Effect of a Combined Treatment with 8-Ethoxycaffeine and Argon on the Roots of *Vicia faba*, 616
Read, J. E., and others : Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
Reader : The Darwin (edited by Prof. Marston Bates and Dr. Philip S. Humphrey), *review* by Dr. G. S. Carter, 970
Readett, A. G. : Scientific and Technical Translation (Training for Translating Work), 1044
Reading, H. W., and others : 1:2:2:6:6-Pentamethylpiperidine, a New Hypotensive Drug, 1717
Reading : The Birds of (Dr. C. C. Balch), 1708
  The Geology of, with reference to the Kingsclere Excursion (Prof. H. L. Hawkins), 1708
Reagent (Folin—Ciocalteu) : Detection of Polythionate in Cultures of *Thiobacilli* by means of the (Prof. D. P. Pratt), 1075
Real Gas Effects in High Speed Flow (Symposium at the Armament Research and Development Establishment, Fort Halstead), 671
Reality : In Search of (Viscount Samuel), *review* by F. I. G. Rawlins, 1687
Reality Explored, *review* by F. I. G. Rawlins, 1687
Rearing Newts in the Laboratory for Experimental Purposes (Dr. David D. Williams), 933
Rearing Oyster Larvae : Ultra-Violet Sterilization of Water used for (G. Duncan Waugh), 1747
Rearrangement (Molecular), in the Reaction of Cysteine with 1-Fluoro-2,4-Dinitrobenzene (Dr. H. P. Burchfield), 49
Reason for Pride (Cleveland Museum of Natural History, Ohio), 160
Reason and Chance in Scientific Discovery (Dr. R. Taton), translated by A. J. Pomerans, *review* by Sir Edward Appleton, 983
Reason and Controversy, *review* by Dr. C. K. Grant, 869
Reasoning : Methods and Criteria of (Rupert Crawshay-Williams), *review* by Dr. C. K. Grant, 869
Réaumur (Prof. D. McKie), 393
Rebell, G., and others : 3β-Methoxy-5-androstern-16β-ol, a Cytostatic and Fungistatic Steroid, 48
Receptor (An Electrical), in Fishes (P. G. Wright), 64
Recherches Géologiques, Géophysiques et Minières, Bureau de : To publish a French translation of *Razvedka i Okhrana Nedr* (Prospecting and Protection of Subsoil), 1510
Reciprocal Crosses : Embryological Investigation in *Hibiscus sabdariffa* x *H. cannabinus* and their (P. Sanyal), 1352
Recognition of a New Sugar, Paratose : Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
Recognition (Vowel), in Clipped Speech (Rais Ahmed), 210
Recombination (Aberrant), at the *am* Locus in *Neurospora crassa* (J .A. Pateman), 1605
Reconstitution of the Succinic Oxidase System from Soluble Succinic Dehydrogenase and a Particulate Cytochrome System Preparation (Prof. D. Keilin and Dr. Tsoo E. King), 1520
Recording Serological Reactions : Use of Logarithms in (Prof. William C. Boyd), 1348
Recording Television Pictures on Magnetic Tape, 1174
Records of the Group Pogonophora in the Skagerrak (J. B. Kirkegaard), 1086
Recruitment of Skilled Trades (Prof. Lady Gertrude Williams), *review* by T. H. Hawkins, 373, 531
Recruitment and Training of Teachers (House of Commons Debate on), 950
Rectification (Faradaic) : Use of, for the Study of Rapid Electrode Processes (Dr. G. C. Barker, R. L. Faircloth and A. W. Gardner), 247
Rectifying Effects of Sodium Chloride Crystals (Dr. S. Császár), 1158
'Recurrence' of *Macroderma gigas* Dobson (Dr. H. H. Finlayson), 923
Red (Neutral) : Affinity of, for Cells with Basophilic Cytoplasm (Dr. Winfield S. Morgan), 1132
Red—Far-red Reaction : Reversibility of the, by Irradiation at Different Sites (Shimon Klein and Dr. John W. Preiss), 200
Red Blood Corpuscles : Sites of the Physiological Breakdown of the (G. v. Ehrenstein and D. Lockner), 911
Red Cell Agglutinability affected by Disease (Dr. F. Stratton, P. H. Renton and Jeanne A. Hancock), 62
Red Cells (Growing Rat) : Carbon Dioxide Fixation in some Components of (G. Giustina and E. Lazzarini), 1285
Red Sea and Southern Arabia : Fishes of the (Henry W. Fowler), Vol. I, Branchiostomida to Polynemida, *review* by Dr. E. Trewavas, 298
Red Sea Fishes, *review* by Dr. E. Trewavas, 298
Reddish, W. : Physical Properties of Polymers, 1634
Redfield, A. C. : Salt Marshes (Movement of Heat, Salt and Water in the Soil of Barnstaple Marsh, Mass.), 1513
Redlich, Dr. O., and Hood, Dr. G. C. : Interaction in Ionic Solutions (Raman and Nuclear Magnetic-Resonance Investigations of the Dissociation of Strong Acids), 240
Redman, Prof. R. O. : Non-Stable Stars, *review*, 731
  The Solar Corona without an Eclipse, *review*, 871
Reduced Immunological Reactivity : Distant Hybrids from Parents with (Marta Vojtíšková), 927
Reduced Toxicity : A New Class of Antibiotic Salts of (F. A. Alves, M. F. C. A. N. Graça and H. L. Baptista), 182
Reducing the Losses caused by *Gloeosporium* spp. in Stored Apples : A Method of (Dr. D. M. Spencer and Dr. E. H. Wilkinson), 1603
Reducing Compounds : Presence of, in *Ascophyllum nodosum* (Chemical Composition of the Brown Alga *Ascophyllum nodosum* (L.) Le Jol. (Bjørn Larsen and Arne Haug), 1224
Reductase : Dihydrofolic Acid (James M. Peters and Prof. David M. Greenberg), 1669
Reduction of Cytochrome *c* by *Ricinus* Mitochondria : Some Effects of Carbon Dioxide—Bicarbonate Mixtures on the Oxidation and (D. S. Bendall, Dr. S. L. Ranson and D. A. Walker), 133
Reduction of Low-Temperature Injury to Stored Apples by Modulation of Environmental Conditions (W. Hugh Smith), 275
Reduction of Organic Hydroperoxides by Micro-organisms and Animal Tissues (Dr. D. M. Updegraff and Dr. F. A. Bovey), 890
Reduction of Parathion induced by Light (Dr. E. Sándi), 499
Reduction of a Series of Coals : Ease of, and its relation to their Structure (P. H. Given, V. Lupton and M. E. Peover), 1059
Reduction of the Viscosity of a Potassium Hyaluronate Solution by Ultraviolet Irradiation (Eigill Hvidberg, Sven Ancher Kvorning, Arne Schmidt and Jens Schou), 1338
Reductones : The Chemistry and Biochemistry of the, *review* by Prof. E. L. Hirst, 145
Reduktone und Reduktonate : Chemie und Biochemie der (Prof. Dr. Hans von Euler und Prof. Dr. Bernd Eistert), *review* by Prof. E. L. Hirst, 145
Reece, M. P. : Burning Voltage of Arcs in High Vacuum, 475
Reed, G. W. : Radiation Physics in Medicine, *review*, 727
Reed, G. W. (Duggan, A. W., and) : Hypothalamus and Oxytocin, 1278
Reed, Rowland I., and Tucker, Dr. S. Horwood : Organic Chemistry—Electronic Theory and Reaction Mechanism, *review* by G. Fowles, 299
Reed, Dr. Theodore H. : Appointed director of the National Zoological Park, Washington, 1106 ; work of, 1106
Rees, Mrs. ap, and others : Haptoglobin Types in British, Spanish Basque and Nigerian African Populations, 824
Rees, David : Appointed to the chair of pure mathematics in the University of Exeter, 1178 ; work of, 1178
Rees, D. I. : Appointed J. Lyons Research fellow in analytical chemistry in the University of Birmingham, 813
Rees, Dr. H. (Naylor, Beryl, and) : Chromosome Size in *Lolium temulentum* and *L. perenne*, 854
Rees, O. (Charles, R. T., and) : Use of Sulphonamides in the Treatment of Pleuro-pneumonia-like Organisms in Rats, 1213
Rees, R. J. W., and Wong, P. C. : Limited Multiplication of *M. lepreamurium* in Tissue Culture, 359
Rees, Dr. W. R., and Reynolds, T. : A Solvent for the Paper Chromatographic Separation of Glucose and Sorbitol, 767
Reeves, C. G., and others : Second Virial Coefficient of Methyl Chloride Vapour, 1004
Reflectance Spectrum of Acetone-2-,4-dinitrophenylhydrazone (Dr. Harry Zeitlin and Alice Niimoto), 1616
Reflecting Paints : Use of, for locating Tsetse Fly at Night (B. D. Rennison, W. H. R. Lumsden and C. J. Webb), 1354
Refraction of Microseisms (H. M. Iyer, D. Lambeth and B. J. Hinde), 646
Refraction (Anomalous Atmospheric), at Sea (Dr. B. M. Cwilong), 181
Refractoriness in a Pacinian Corpuscle : Generation and Propagation of Impulses during (Prof. Werner R. Loewenstein and R. Altamirano-Orrego), 124
Refresher Course on Elementary Fourier Analysis (Imperial College of Science and Technology), 1510
Refrigeration, International Institute of : Conference of the First Commission, 161
Regelson, Dr. William, and Holland, James F. : The Anionic Polyelectrolyte, Polyethylene Sulphonate, as a New Anti-neoplastic Agent, 46
Regeneration in a Mammalian Peripheral Nerve : Effect of a Raised Peripheral Temperature upon the Rate of (H. J. Gamble), 287
Regeneration of Severed Pea Apices (H. F. Gulline and R. Walker), 530
Regeneration (Epimorphic), during Hibernation (Timothy J. Hunt), 290
Regeneration (Liver), in the Hypophysectomized Rat : Effects of Pituitary Hormones and Cortisone upon (Dr. J. T. Hemingway and Dr. D. B. Cater), 1065
Regeneration (Stipe), and Fruit-body Production in *Collybia velutipes* (Curt.) Fr. (E. A. Bevan and R. F. O. Kemp), 1145
Regional Advisory Council for Higher Technological Education (London and Home Counties) : Ninth Annual Report, 1309
Regional Cartographic Conference for Asia and the Far East (1955, Mussoorie, India), Vol. 2, Proceedings of the Conference and Technical Papers (United Nations), 817
Regional Council (Southern), for Further Education (Southern Regional Council of the Federation of British Industries, in co-operation with the) : Report of the Regional Conference on Industry and the Technical Colleges, 1573
Registrar General : Statistical Review of England and Wales for the Year 1956, Part 2, Tables, Civil, 1573
Registration (Direct), of an Instantaneous X-Ray Effect in Rats and Man (Prof. R. Brinkman and H. B. Lamberts), 774
Regular Stationary Patterns : Moving Visual Images produced by (Dr. M. H. Pirenne), 362 ; F. W. Campbell and J. G. Robson), 362 ; (Dr. D. M. MacKay), 362
Regulation of Plant Growth and Flowering : Role of Gibberellin-like Hormones in (Dr. P. W. Brian), 1122
Regulation (Hormonal), of Reproduction in the Milkweed Bug, *Oncopeltus fasciatus* (Dallas), (A. S. Johansson), 198
Rehberg, Prof. P. B. : Nominated as national representative for Denmark on the North Atlantic Treaty Organization Science Committee, 739

Rehn, Dr. J. A. G.: The Grasshoppers and Locusts of Australia, Vol. 1, Families Tetrigidae and Eumastacidae; Vol. 2, Family Acridinae, Subfamily Pyrgomorphinae; Vol. 3, Family Acrididae, Subfamily Cyrtacanthacridinae, tribes Oxyini, Spathosternini and Praxibulini, *review* by Dr. B. P. Uvarov, 1628
Reid, C. S. W. (Phillipson, A. T., and): Distension of the Rumen and Salivary Secretion, 1722
Reid, Dr. S. G.: Appointed assistant director, Department of Chemistry of the Ontario Research Foundation, 315
Reiner, Prof. Markus (Blair, Dr. G. W. Scott, and): Agricultural Rheology, *review* by Dr. E. C. Childs, 1166
Reis, J., e Nóbrega, P.: Tratado de Doenças das Aves, 4 vols., *review* by Dr. C. A. Wright, 1756
Reis, T.: l'Énergie nucléaire dans le Monde, *review* by Sir John Cockcroft, 445
Reith Lectures for 1958 (Prof. A. C. B. Lovell), 1378
Rejection of the Peroxide Accumulation Hypothesis of Isoniazid Action (Ian H. Holmes and Prof. Sydney D. Rubbo), 1203
Rekemeyer, M. L. (von Borstel, R. C., and): Division of a Nucleus lacking a Nucleolus, 1597
Relation between Breeding and Ecdysis in Cirripedes (Dr. D. J. Crisp and B. S. Patel), 1078
Relation between Chlorophyll Metabolism and Nodule Formation in Soya Bean (C. Sironval), 1272
Relation between Nucleolar Volume and Cell Body Content of Ribonucleic Acid in Supra-optic Neurones (J.-E. Edström and D. Eichner), 619
Relation between Peroxidase and 'Cytochrome *dh*' in Wheat Roots (Prof. H. Lundegardh), 28
Relations: Industrial, 1425
Relations (Industrial): Technical Change and, 1180
Relations (Water), of Leaves from Woody and Herbaceous Plants (Dr. J. S. Kennedy and C. O. Booth), 1271
Relationship between Aggressiveness and Egg Production in the Domestic Hen (G. McBride), 858
Relationship between Chlorpromazine and Anoxia (Dr. V. Lindaur), 1341, *errata*, 1510
Relationship between some Clovers and *Ditylenchus destructor* Thorne, 1945 (V. E. Henderson), 59
Relationship between *Merulius lacrymans* and *M. himantioides* (L. Harmsen, B. K. Bakshi and T. G. Choudhury), 1011
Relationship between Porphyrin and Isoniazid Resistance of *Mycobacterium avium* (Mikiyasu Goto and Nobuhiko Katsunuma), 916
Relationship of Probability, Credibility and Error: Statistical Theory, the (Prof. Lancelot Hogben), *review* by I. J. Good, 1687
Relationship of Tectoquinone to Durability in *Tectona grandis* (Dr. P. Rudman, E. W. B. Da Costa, F. J. Gay and A. H. Wetherly), 721
Relationship (General), between Test Factors and Person Factors—Application to Preference Matrices (Patrick Slater), 1225
Relationship (Plankton—Herring): A Study of the (Jakob Jakobsson), 1575
Relationships: Barley—Climate (M. Y. Nuttonson), *review* by Dr. E. C. Humphries, 1689
  Rye—Climate (M. Y. Nuttonson), *review* by Dr. E. C. Humphries, 1689
  Soil—Plant (Dr. C. A. Black), *review* by Sir John Russell, 1627
  Wheat—Climate (M. Y. Nuttonson), *review* by Dr. E. C. Humphries, 1689
Relationships between Electroencephalographic and Psychological Data in Normal Adults (Dr. P. F. Werre), *review* by Dr. Clifford Allen, 983
Relationships (Plastocyst—Uterine), in the Rabbit: Use of Labelled Ions in the Study of (J. P. Bennett, Dr. J. G. Boursnell and Dr. C. Lutwak-Mann), 1715
Relationships (Government—University), in Federally Sponsored Scientific Research and Development (National Science Foundation, Washington), 1712
Relative Distribution of the Mitochondria in the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon (Dr. J. C. George and R. M. Naik), 782
Relative Distribution and Chemical Nature of the Fuel Store of the Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon (Dr. J. C. George and R. M. Naik), 709
Relative Instability of Chlorpromazine in *N* Alkali (Dr. I. Gordon Fels, Marty Kaufman and A. G. Karczmar), 1266
Relativistic Aberration Formula (Dr. J. H. M. Whiteman), 560
Relativistic Gas: The (Prof. J. L. Synge), *review* by Dr. N. B. Slater, 374
Relaxation of Snails before Fixation (Dr. Bruce M. McCraw), 575
Release of Phosphate from Soil Minerals by Hydrogen Sulphide (Joan I. Sperber), 934
Release (Controlled), of Thermonuclear Energy—Co-operative Phenomena in Hot Plasmas (Prof. Lyman Spitzer), 221; A Stabilized High-Current Toroidal Discharge producing High Temperatures (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, T. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222; Magnetic Measurement of Plasma Confinement in a Partially Stabilized Linear Pinch (Dr. L. C. Burkhardt, Dr. R. H. Lovberg and Dr. J. A. Phillips), 224; Neutron Production in a High-Power Pinch Apparatus (Dr. D. C. Hagerman and Dr. J. W. Mather), 226; New Confinement Phenomena and Neutron Production in a Linear Stabilized Pinch (Dr. L. C. Burkhardt and Dr. R. H. Lovberg), 228; Neutrons from a Stabilized Toroidal Pinch (Dr. J. Honsaker, Dr. H. Karr, Dr. J. Osher, Dr. J. A. Phillips and Dr. J. L. Tuck), 231; Production of High Temperatures and Nuclear Reactions in a Gas Discharge (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, R. W. P. McWhirter, R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217, 315
Release (Physical), of Acetylcholine from the Thoracic Nerve Cord of *Periplaneta americana* L. (E. H. Colhoun), 490
Relict *Rotlehm* in Northern Ireland (V. B. Proudfoot), 1287
Remanent Magnetism (Shigeo Aramaki and Syun-ito Akimoto), 812
Remanent Magnetism of the Rajmahal Traps of North-Eastern India (Dr. J. A. Clegg, C. Radakrishnamurty and P. W. Sahasrabudhe), 830
Remanent Magnetization of Ancient Bricks (H. A. Atwater and R. T. Ellickson), 404
Remanent Magnetization of Archaeological Remains: Intensity of (R. M. Cook), 1421
Remarkable Solar Radio Event (Staff of the Ionosphere and Radio Astronomy Section of the Netherlands Telecommunications Services), 542
Removal of Internally Deposited Plutonium (V. H. Smith), 1792
Removal (Electrophoretic), of Protein from Hyaluronic Acid (Dr. A. G. Ogston and T. F. Sherman), 482
Remy, Prof. H.: Treatise on Inorganic Chemistry, Vol. 2, Sub-Groups of the Periodic Table and General Topics (translated by Prof. J. S. Anderson; edited by Prof. J. Kleinberg), *review* by Prof. J. R. Partington, 1366
Renal Cells: Spontaneous Occurrence of Intranuclear Inclusion Bodies in Continuous Cultures of (Dr. N. M. Larin), 1477
Rendi, Dr. Renzo: Protein Degradation of Foetal and Cancer Tissues in the Presence of Ethionine, 351
Rennison, B. D., and others: Use of Reflecting Paints for locating Tsetse Fly at Night, 1354
Rensch, Dr. Bernhard: Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Renton, D.: Siting of Nuclear Power Stations, 462
Renton, P. H., and others: Red Cell Agglutinability affected by Disease, 62
Reorganization of the Meteorological Office, 241
Repetition of an Experiment on Bird Orientation (Klaus Hoffman), 1435
Repetitive Stimulation of Muscle (M. T. Osborne), 1798
Replacement (Isomorphous), in the Kaolin Group of Minerals (Dr. R. F. Youell), 557
Reproduction in Fungi, *review* by Prof. W. Brown, 297
  The Physiology of (Dr. Lilian E. Hawker), *review* by Prof. W. Brown, 297
Reproduction of Fused Larvae in the Boring Sponge, *Cliona celata* Grant (Frederick E. Warburton), 493
Reproduction in the Milkweed Bug, *Oncopeltus fasciatus* (Dallas): Hormonal Regulation of (A. S. Johansson), 198
Reproduction in Worm-free Sheep at Pasture: Growth and (Dr. C. R. W. Spedding, T. H. Brown and I. A. N. Wilson), 168
Reptile: A Fossil Mammal-like, *review* by Prof. D. M. S. Watson, 1233
Reptile Faunules (Donald Baird), 1575
Requirement of *Lactobacillus leichmannii* for Vitamin B_{12}: Effect of Phenobarbitone on the (Dr. G. H. Spray), 859
Requirement (Apparent), for Vitamin K of Rumen Strains of *Fusiformis nigrescens* (Dr. M. Lev), 203
Research: Waverley Gold Medal Essay Competition, 1042
Research at Imperial Chemical Industries, 1039
Research at the University of Melbourne, 1181
Research: Aeronautical, 458
  Agricultural, 160
  Arctic—the Current Status of Research and some Immediate Problems in the North American Arctic and Sub-arctic (edited by Diana Rowley), *review* by Dr. G. C. L. Bertram, 729
  Arid Zone, No. 10, Climatology—Reviews of Research (Unesco), 1443
  Basic—a National Resource (United States National Science Foundation), 679
  Colonial (1956-57), (Colonial Office), 1032
  Freedom in (Dr. J. R. Baker), 1107
  Hydraulics, 235
  Ionospheric, *review* by Dr. R. L. Smith-Rose, 726
  Management and (T. H. Hawkins), 307
  The Natural Resources of the Country and their Value for Teaching and (Papers at the Annual Meeting of the Association of British Zoologists), 1313
  Nuclear Reactors for (edited by Clifford K. Beck), *review* by F. W. Fenning, 984
  Safety in Mines (Prof. S. G. Ward), 676
  South African, 1702
  Swedish Forest, 742
  X-Ray (Dr. R. L. Gordon), 1645
Research in Agricultural Experiment Stations, 1953-54: Funds for (United States National Science Foundation, Reviews of Data on Research and Development, No. 8), 160
Research in Astronomy, Inc., Association of Universities for (United States National Science Foundation and the): Contract for a United States National Astronomical Observatory, 236
Research on Chemical Mutagens: Use of 'Brood Patterns' in (Dr. C. Auerbach), 754, 757; (Dr. O. G. Fahmy and Dr. Myrtle J. Fahmy), 755
Research in Dairying, National Institute for: Retirement of Prof. H. D. Kay from the directorship, 1506
Research on Leukaemia and Allied Diseases (Lady Tata Memorial Fund Awards for 1958-59), 1703
Research on Orthoptera: Current (Anti-Locust Research Centre), 742
Research in Photosynthesis (edited by H. Gaffron, A. H. Brown, C. S. French, R. Livingston, E. I. Rabinowitch, B. L. Strehler and N. E. Tolbert), (Papers and Discussions presented at the Gatlinburg Conference, 1955), *review* by Prof. C. P. Whittingham, 974
Research (Agricultural): Estimated Expenditure on, 671
Research (Agricultural), New Zealand Journal of, Vol. 1, No. 1, 1310
Research (Basic), in the United States, 679
Research (Biological, Agricultural and Medical): Statistical Tables for (Prof. Sir Ronald A. Fisher and Dr. Frank Yates), fifth edition, *review*, 299
Research (British Medical): Architect of, *review* by Sir William Gavin, 513
Research (Civil): Government Support for, 1702
Research (Current Scientific), at South African Universities, 1956: Register of (South African Council for Scientific and Industrial Research), 1702
Research (Fishery): Postgraduate Training Grants in (Development Commissioners, in association with the Ministry of Agriculture, Fisheries and Food, and the Scottish Home Department), 1312
Research (Geological), in Scotland and the north of England: Funds available from the Clough Memorial Research Fund of the Edinburgh Geological Society, 603
Research (Geophysical): Electronics in, *review* by Dr. J. A. Saxton, 1688
Research (Government): Appointment of a Committee on, 1507
Research (Government-Sponsored), in the United States, 1712
Research (Industrial), and Development Costs in American Industry, 1638
Research (Medical): Beit Fellowships for, 1507
  The Support of (edited by Sir Harold Himsworth and J. F. Delafresnaye), a Symposium organized by the Council for International Organizations of Medical Sciences, *review*, 147
Research (Medical), National Institute for: Appointment of Dr. D. G. Evans as director of the Division of Biological Standards, 673

- Research (Nuclear), European Organization for: Appointments, 87
  - Election of François de Rose as president, 87
  - Laboratories of the, 670
  - Second Annual Report (1956), 747
  - International Conference on High Energy Physics (1958), 884
- Research (Nucleic Acid), Association for: Seventh Symposium on Nucleic Acids, 1511
- Research (Pest Control): Advances in (edited by R. L. Metcalf), Vol. I, *review* by Dr. K. A. Lord, 1689
- Research (Radiation): International Congress of (National Academy of Sciences—National Research Council and the Radiation Research Society in co-operation with the European Committee on Radiobiology), 1444
- Research (Scientific): Beit Fellowships for (Election of F. J. J. Clarke and D. G. Watts to), 1444
- Research (Space), and Exploration (edited by Prof. D. R. Bates, in association with Patrick Moore), *review*, 1299
- Research Activities (Scientific), at Colleges and Universities in the United States (United States National Science Foundation, Reviews of Data on Research and Development, No. 6), 167
- Research Awards: Leverhulme (First Report of the Leverhulme Trust on the), 951
- Research Conferences: Gordon, for 1958, 458
- Research Development Corporation, National: Report and Statement of Accounts (1956-57), 1448
- Research Fellowships (Extension of the Imperial Chemical Industries Scheme), 159
- Research Fellowships (Life Insurance Medical Research Fund of Australia and New Zealand), 1110
- Research Fellowships: Carlsberg—Wellcome Travelling (Awards for 1958-59), 743
- Research Fellowships and Grants (Leverhulme Trust Awards), 1442
- Research Laboratories (Physics): Design of (London and Home Counties Branch of the Institute of Physics Conference on), 90
- Research Medal of the Royal Agricultural Society of England awarded to Dr. W. A. Sexton and W. G. Templeman, 1506
- Research Reactor (Merlin): Critical Mass Measurements for the (D. R. Chick, K. Firth, M. Kerridge and A. J. Salmon), 1171
- Research Reactors: Grants for (National Science Foundation, Washington), 313
- Research Students: European Interchange Scheme for (Department of Scientific and Industrial Research), 1770
- Research Workers: Notes on D. S. I. R. Grants for Graduate Students and, 1110
- Research and Development: Co-operation in, 655
  - Reviews of Data on, No. 8, Funds for Research in Agricultural Experiment Stations, 1953-54 (United States National Science Foundation), 160
  - Reviews of Data on, No. 6, Scientific Research Activities at Colleges and Universities in the United States (United States National Science Foundation), 167
- Research and Development Budget: Federal, Fiscal Years 1956, 1957 and 1958 (National Science Foundation, Federal Funds for Science, 6), 534
- Research and Development (Scientific): Government—University Relationships in Federally Sponsored (National Science Foundation, Washington), 1712
- Reserpine: Adrenaline and Noradrenaline Content of the Adrenal Gland of the Rat following Depletion with (B. A. Callingham and Dr. Monica Mann), 423
  - Effect of, on the Intracellular Distribution of Catecholamines in the Brain Stem of the Rabbit (Dr. H. Weil-Malherbe and A. D. Bone), 1474
  - Isolation of, from *Vinca rosea* Linn (Dr. N. K. Basu and B. Sarkar), 552
  - Strain Sensitivity of Albino Rats to (Dr. R. E. Coupland), 930
- Residence in the University Today: The Place of (Discussion on, at the Home Universities Conference), 164
- Residential Study Course in the Employment Function of Management (Institute of Personnel Management), 20
- Residential Summer Course on the Lunar Society—Science and Thought in the Eighteenth Century (Departments of Extra-Mural Studies of the University of Birmingham and the University of Nottingham), 1510
- Residues of Pesticides in Foodstuffs (Pesticides Group of the Society of Chemical Industry and the Association of British Insecticide Manufacturers Discussion on), 22
- Resistance to Dieldrin in *Lucilia cuprina* Wied., the Australian Sheep Blowfly (G. J. Shanahan), 860
- Resistance to Flow in Vascular Beds (S. D. Carlill), 1607
- Resistance to Parathion in *Musca domestica* (L.): A Mechanism of (F. J. Oppenoorth), 425
- Resistance of Protein—Lignin Complexes, Lignins and Humic Acids to Microbial Attack (Prof. D. L. Lynch and Prof. C. C. Lynch), 1478
- Resistance (Acquired), to Experimental Allergic Encephalomyelitis (I. A. Svet-Moldavskaya and G. J. Svet-Moldavsky), 1536
- Resistance (Isoniazid), of *Mycobacterium avium*: Relationship between Porphyrin and (Mikiyasu Goto and Nobuhiko Katsunuma), 916
- Resistance (Membrane), and Threshold of Atrial Muscle Fibres: Effect of Acetylcholine on the (Dr. Edward A. Johnson and P. A. Robertson), 910
- Resistance Thermometry near the Absolute Zero (J. E. Kunzler, T. H. Geballe and G. W. Hull), 1245
- Resistant Host: A Change of Pathogenic Race in *Fusarium oxysporum* f. *pisi* induced by Root Exudate from a (E. W. Buxton), 1222
- Resistivity (Electrical), of Chromium: Effect of Plastic Deformation on the (M. E. de Morton), 477
- Resnikoff, George J., and Leiberman, Gerald J.: Tables of the Non-Central *t*-Distribution, *review*, 985
- Resolution (High) Nuclear Magnetic Resonance (Radiofrequency Spectroscopy Group Discussion on), 673
- Resolution (High-) Shadow-Casting for the Electron Microscope: Simultaneous Evaporation of Platinum and Carbon for Possible Use in (D. E. Bradley), 875
- Resolution (Improved), of X-Ray Diffraction Patterns of Protein Crystals at Low Temperature (Dr. Murray Vernon King), 263
- Resonance (Electron and Nuclear), in Chemistry: Application of (Chemical Society Symposium on), 161
- Resonance (Electron Spin), of Coals—Saturation Effect (J. Smidt), 176
- Resonance (Nuclear Magnetic): High Resolution (Radiofrequency Spectroscopy Group Discussion on), 673
- Resonance (Nuclear Quadrupole), of Neutron-irradiated Sodium Chlorate (Joseph Depireux and Prof. Jules Duchesne), 759
- Resorcinols (Bactericidal): Enhancement of Mouse-virulence of Group A Streptococci by (John Cameron), 919
- Resources: Fuel Consumption and, 745
- Resources (Natural), of the Country and their Value for Teaching and Research (Papers at the Annual Meeting of the Association of British Zoologists), 1313
- Resources (Natural), of Lake Victoria: Utilizing the, for the Benefit of Fisheries and Agriculture (R. S. A. Beauchamp), 1634
- Resources (Water), of Britain, 953
- Respiration in Chlorophyllous Cells (W. O. James and V. S. R. Das), 1244
- Respiration of a Green Alga: Effect of Plasmolysis on the Rate of (Dr. F. J. Taylor), 136
- Respiration of Leucocytes *in vitro*: Effect of Muscular Activity prior to Venepuncture on the (Sheenah K. Bisset and W. D. Alexander), 909
- Respiration (Bacterial): Streptomycin and (F. L. Jackson), 281
- Respiratory Inhibitors: Comparison of Effect of Lysergic Acid Diethylamide with Potassium Cyanide and other, on the Siamese Fighting Fish (Dr. H. A. Abramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
- Response of the Adrenal Medulla of the Sheep Foetus to Asphyxia (Dr. R. S. Comline and Marian Silver), 283
- Response of Juvenile Trout to Water Currents: Effect of Photoperiodism on (T. G. Northcote), 1283
- Response (Frequency), of a Lens: An Optical Method of Obtaining the (K. Hacking), 1158
- Response (Olfactory), of Immature Adults of the Desert Locust (W. Loher), 1280
- Response (Photoelectric), of Selenium-type Photovoltaic Cells to X-Rays (Dr. R. Feinberg), 1057
- Response Techniques (Frequency): Optical Image Assessment using (Imperial College of Science and Technology Summer School on), 1510
- Responses of a Fern Apex to Gibberellic Acid, Kinetin and α-Naphthaleneacetic Acid (Prof. C. W. Wardlaw and G. C. Mitra), 400
- Responses (Consecutive), in a Hemileucid Moth: Interaction between, and the Evolution of Insect Communication (A. D. Blest), 1077
- Responses (Electrical), of Frog Spinal Ganglion Cells in Sodium-free Media (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 703
- Responses (Electrical), of Neuron Cell-Bodies in Sodium-free Media (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 1798
- Responses (Escape), of Herbivorous Gastropods when Stimulated by Carnivorous Gastropods (W. C. Clark), 137
- Responses (Growth), of *Fusarium oxysporum* to Metabolites of some Rhizospheric Microflora of Egyptian Cotton Varieties (Dr. M. S. Naim and A. M. Hussein), 578
- Responses (Immune), in Parasitism: Nature of (Parasitology Group of the Institute of Biology Discussion on), 464
- Restoration of Agricultural and other Soils (Association of Applied Biologists Meeting on), 390
- Retention of Sodium-22 in Rat Bone (Dr. G. M. Kellerman), 914
- Reticular Compartment of the Ruminant Stomach: Pressure developed within the (F. R. Bell), 494
- Reticulo-endothelial Cells: A Theory of Antibody Formation involving Eosinophils and (Dr. Robert S. Speirs), 681
- Reticulo-endothelial Society: Second Symposium, 315
- Reticulo-Endothelial System: Effect of Antibiotics on the Phagocytic Activity of the (I. A. Sewell and Prof. T. Nicol), 1662
  - Effect of certain Polyphenylated Aliphatic Hydrocarbons on the Phagocytic Activity of the (Prof. T. Nicol, C. C. Ware and Dr. D. L. J. Bilbey), 1804
  - Effect of various Stilbene Compounds on the Phagocytic Activity of the (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 1538
- Reticulocyte Microsomes: Participation of, in the Incorporation of Iron into Haemoglobin (Dr. M. Rabinovitz and M. E. Olson), 1665
- Retina Foundation (National Science Foundation and the): Conference on the Chemical and Physical Structure of Mucopolysaccharides, 1246
- Retinal Function: Validity of Motokawa's Technique for Investigating (Dr. C. I. Howarth and M. Treisman), 843
- Retinal Pigments of a Labrid Fish (Dr. Frederick W. Munz), 1012
- Retinal Summation and Human Visual Thresholds (Dr. R. A. Weale), 154
- Retinal Type of Photovoltaic Cell (Dr. Irvin Levin), 832
- Retrospect on Evolution, *review* by Prof. L. A. Harvey, 1296
- Reversal of Thymine Xyloside Inhibition in *Escherichia coli* by Glutathione (Prof. Thomas D. Brock), 269
- Reversal Method (Spectrum-Line): Temperature Measurements of Shock Waves by the (J. G. Clouston, Dr. A. G. Gaydon and Prof. I. I. Glass), 1325
- Reversibility of the Inactivation of Rous Sarcoma Extracts by Detergents (Dr. Dino Guerritore), 419
- Reversibility of the Red—Far-red Reaction by Irradiation at Different Sites (Shimon Klein and Dr. John W. Preiss), 200
- Reversible Association between Large Molecules: Influence of Time on the—the Collagen System (Dr. Jerome Gross), 556
- Reversible Uptake of Inorganic Phosphate by *Hydrodictyon*: Dependence on Light of the (A. Pirson and Dr. A. Kuhl), 921
- Revision of Nomenclature—Angiotensin: A Suggested (Dr. Eduardo Braun-Menendez and Dr. Irvine H. Page), 1061
- Rey, Prof. L. R.: Freezing and Drying, 1695
- Reynolds, T. (Rees, Dr. W. R., and): A Solvent for the Paper Chromatographic Separation of Glucose and Sorbitol, 767
- Rheology: Agricultural (Dr. G. W. Scott Blair and Prof. Markus Reiner), *review* by Dr. E. C. Childs, 1166
- Rheology on the Land, *review* by Dr. E. C. Childs, 1166
- Rhind, D.: Professional Problems of Biologists serving Overseas (Biological Research in Colonial Territories), 678
- Rhinocephalan Parasite New to British Waters: *Sacculina gonoplaxae* Guérin-Ganivet, 1911, a (A. K. Nagabhushanam), 57
- Rhizosphere of Oats: Occurrence of *Fusarium culmorum* (W. G. Sm.) Sacc. in the (D. Parkinson and Prof. C. G. C. Chesters), 1746
- Rhizospheric Microflora of Egyptian Cotton Varieties: Growth Responses of *Fusarium oxysporum* to Metabolites of some (Dr. M. S. Naim and A. M. Hussein), 578

Rhodanese in a Species of *Thiobacillus* : Occurrence of (C. A. McChesney), 347
Rhodin, J. (edited by Sjöstrand, F. S., and) : Electron Microscopy—Proceedings of the Stockholm Conference, 1956, *review* by H. I. Matthews, 1626
Rhodium, Palladium, Iridium and Platinum : Corrosion of Ten Metals in Boiling Hydrochloric Acid when in Contact with (W. Roger Buck, III, and Henry Leidheiser, jun.), 1681
Rhodopseudomonas spheroides : Intermediates in the Biosynthesis of Porphyrins from Porphobilinogen by (Dr. D. S. Hoare and Dr. H. Heath), 1592
Rhodopsin : Bleaching of, by Light and by Heat (Dr. Ruth Hubbard), 1126
Rhodotorula gracilis : Separation of Carotenoid Synthesis from Fat Synthesis in, by Diphenylamine (L. Slechta, O. Gabriel and Dr. O. Hoffmann-Ostenhof), 268
Rhythm (A Mammalian Activity), independent of Temperature (Dr. G. Edgar Folk, jun., Mona R. Meltzer and Richard E. Grindeland), 1598
Rhythms (24-Hr.), in Blood Eosinophils and *Wuchereria bancrofti* Microfilariae Before and After Δ^1-9α-Fluorocortisol (Rudolf Engel, Dr. Franz Halberg, W. L. P. Dassanayake and Justin de Silva), 1135
Riboflavin : Phosphorylation of, by Transferase Action (Dr. Kunio Yagi and Jun Okuda), 1663
Ribonuclease (Bovine) : Acquired Immunological Tolerance to (Dr. B. Cinader, J. H. Pearce and B. G. Carter), 1208
Ribonuclease Activity and Ribonucleic Acid Content of Homologous Human Normal and Cancer Cells (L. Ledoux, S. Brändli and J. C. De Paepe), 913
Ribonucleic Acid : Synthesis of (Dr. A. M. Michelson), 303
Ribonucleic Acid from Mouse Brains infected with Semliki Forest Virus : Infectivity of (Dr. Ping-yao Cheng), 1800
Ribonucleic Acid in Root Tips : Chemical Determination of, before and after Cold Treatment (Dr. J. K. Heyes and Dr. G. W. Shaw), 1337
Ribonucleic Acid in Supra-optic Neurones : Relation between Nucleolar Volume and Cell Body Content of (J.-E. Edström and D. Eichner), 619
Ribonucleic Acid of Tobacco Mosaic Virus : Kinetics of Heat Inactivation of (Dr. William Ginoza), 958
Ribonucleic Acid Content of Homologous Human Normal and Cancer Cells : Ribonuclease Activity and (L. Ledoux, S. Brändli and J. C. De Paepe), 913
Ribonucleic Acid Metabolism in *E. coli* infected with *T*2 Phage : Effect of Chloramphenicol on (Prof. Itaru Watanabe, Dr. Yukio Kiho and Dr. Kin-ichiro Miura), 1127
Ribonucleic Acid (Transmitted), from Healthy Pear Trees : Effect of, upon the Synthesis and Composition of Protein (Dr. B. Kessler), 201
Ribonucleic Acid/Deoxyribonucleic Acid Ratio in Leaves : Effect of Caffeine and other Purines upon the, and the Suitability of these Leaves for Aphids (Dr. B. Kessler, Dr. E. Swirski and Dr. A. S. Tahori), 1595
Ribonucleic Acid and Protein : A Hypothesis for the Biosynthesis of (Dr. A. M. Michelson), 375
Ribonucleic Acids : Natural Occurrence of Thymine and Three Methylated Adenine Bases in several (Dr. J. W. Littlefield and Dr. D. B. Dunn), 254
Ribonucleoprotein from Amphibian Gastrulae (A. S. G. Curtis), 185
Rice : Interaction of Hormone and Photoperiod in an Early Variety of (G. Misra and G. Sahu), 637
Rice Cultivation : Planting Distance and Number of Seedlings in (N. K. Jain), 202
Rich, Dr. Alexander : Formation of Two- and Three-Stranded Helical Molecules by Polyinosinic Acid and Polyadenylic Acid, 521
Richards, E. G. : Long-Distance Radio Propagation above 30 Mc./s. (Theory of Tropospheric Scatter Propagation), 1186
Richards, E. G., and others : Long-Distance Radio Propagation above 30 Mc./s. (The Mechanism of Propagation responsible for the Permanent Residual Fields), 1186
Richards, Prof. E. J. : Flow Noise, 388
Richards, John F. C. (Introduction, Greek Text, English translation, and Commentary, by Caley, Earle R., and) : Theophrastus on Stones, *review* by Dr. V. A. Eyles, 1686
Richards, K. Sylvia : Occurrence of a 'Rare' Earthworm in Montgomeryshire, 575
Richards, Mrs. O. W. (M. J. Norris) : Influence of Photoperiod on Imaginal Diapause in Acridids, 58
Richards, Prof. P. W. (Stamp, Prof. L. Dudley, and) : Climate, Vegetation and Land Utilization in the Humid Tropics, 596
Richards, Dr. R.-E. : Automatic Measurement of Quality in Process Plants (Nuclear Magnetic Resonance), 166
Richards, Dr. R. K. : Digital Computer Components and Circuits, *review* by Dr. M. V. Wilkes, 1755
Richardson, Alan : Science and Existence, *review* by T. H. Hawkins, 517
Richardson, Prof. E. G. : Flow Noise, 388
Richardson, Prof. E. G. (Iyengar, Dr. K. S., and) : Cavitation and the Solution of Gases in Liquids, 1328
Richardson, Dr. S. D. : Radicle Elongation of *Pseudotsuga menziesii* in relation to Light and Gibberellic Acid, 429
Richmond, I. J., and others : Long-Distance Radio Propagation above 30 Mc./s. (The Mechanism of Propagation responsible for the Permanent Residual Fields), 1186
Ricinus Mitochondria : Some Effects of Carbon Dioxide—Bicarbonate Mixtures on the Oxidation and Reduction of Cytochrome *c* by (D. S. Bendall, Dr. S. L. Ranson and D. A. Walker), 133
Ricketts, T. S. : Natural Gas in Scotland, 1042
Rider, G. C. : Long-Distance Radio Propagation above 30 Mc./s. (Tropospheric Propagation), 1186
Ridley, Mrs. E. C. : Band Theory of Metals and the Structure of the Fermi Surface (6*s*-, 6*p*-, 7*s*-, 6*d*-, 5f-Wave Functions of Metallic Uranium), 526
Ridley, Dr. E. C. (Cavanagh, Dr. P. E., and) : Parity Conservation (Experimental Techniques for Measuring Electron Polarization and Electron-neutrino Correlation), 447
Ridout, Cyril W. : The Science of Cosmetics, *review*, 444
Ries, jun., Herman E., and Kimball, Wayne A. : Electron Micrographs of Monolayers of Stearic Acid, 901
Rietveld, B. J., and others : Polynuclear Aromatic Compounds in Coal, 640
Right Attitude to Science ? : What is the (Dr. K. Mendelssohn), 88
Rigor (Thaw), and Cell Rupture (R. M. Love and S. B. Haraldsson), 1334
Riley, Dr. J. P. (Burton, J. D., and) : Germanium and Gallium in Sea Water—Germanium, 179
Riley, Dr. J. P. (Culkin, F., and) : Germanium and Gallium in Sea-Water—Gallium, 180
Riley, M. M. : Physical Properties of Polymers, 1634
Riley, P. B., and Robinson, H. K. : Role of Oxygen in the Formation of α-Aminobutyric Acid by a Staphylococcus, 905
Rinaldi, E., and others : Conversion of 3-Hydroxyanthranilic Acid to Quinolinic Acid in presence of Rat Liver treated with 2-Acetylaminofluorene, 624
Rinderknecht, Dr. H., and Jurd, Dr. L. : A Novel Non-Enzymic Browning Reaction, 1268
Rinderpest Virus : A Specific Diffusible Antigen of, demonstrated by the Agar Double-Diffusion Precipitation Reaction (G. White), 1409
Rinehart, J. S. : Distribution of Meteoritic Debris about the Arizona Meteorite Crater, 1777
Ring Formation in *Tilapia esculenta* (D. J. Garrod and B. S. Newell), 1411
Ringspot Disease (Corky), of Potato : A Soil-borne Virus associated with the (C. H. Walkinshaw and Dr. R. H. Larson), 1146
Ripple Effect in the Audiogram (E. Elliott), 1076
Risdon, E. J. : Choice and Application of Fungicides to Plantation Crops, with special reference to *Hevea brasiliensis*, 1017
Rishbeth, Dr. J. : Detection of Viable Air-borne Spores in Air, 1549
Ritchie, Mrs. J. M. (Collingridge, Mrs. J. M., and) : Personnel Management in a Small Firm, 1310
Ritter, F. J., and Hartel, J. : Qualitative, Quantitative and Preparative Chromatography of Steroids on Fully Acetylated Paper, 765
River Boards in Britain (F. T. K. Pentelow), 1568
River Studies Centre of the University of Reading (K. H. Mann), 1106
Riverside Television Studios: The B.B.C.—the Architectural Aspects (E. A. Fowler), 1046
    The B.B.C.—some Aspects of Technical Planning and Equipment (H. C. Nickels and D. M. B. Grubb), 1046
Rivet, Dr. Paul : *Obituary* by Dr. G. H. S. Bushnell, 1374
Rixon, R. H., and others : Lingering Effects of Local X-Irradiation on Healing of Burns, 1138
Roach, A. G. (Burawoy, Dr. A., and) : Colour Filters for the 4358-A. line of the Mercury Discharge Spectrum, 762
Road Research Laboratory : Open Days, 531
Road Research Laboratory (Scottish Branch) : Open Days, 1510
Roads : Concrete (Dr. R. H. H. Kirkham), 462
    New, 601
Rob, Prof. C. G. : Freezing and Drying, 1696
Roberts, Dr. G. Fulton : Comparative Aspects of Haemolytic Disease of the Newborn, *review*, 588
Roberts, George W. : The Population of Jamaica, *review* by W. Brass, 442
Roberts, Henry R., and Kolor, Michael G. : Quantitative Determination of Hydroxyproline by Paper Chromatography, 837
Roberts, Henry R., and others : Distribution of Carbon-14 in Components of Goat's Milk, with Sodium Formate-^{14}C as Precursor, 346
Roberts, Dr. J. A. Fraser : Elected president of the Royal Anthropological Institute for 1957-59, 315
Roberts, J. B. : Adsorption Chromatography on Silica-treated Paper, 338
Roberts, Dr. L. E. J. : The Heaviest Elements, *review*, 1496
Roberts, L. M., and others : Dependence of Heat Capacity on Thermal History, 642
Robertson, Prof. J. Monteath : Granted leave of absence from the University of Glasgow, to enable him to hold a visiting professorship in the College of Chemistry at the University of California, Berkeley, 459
Robertson, Dr. M. : Nature of Immune Responses in Parasitism (Antibody Response of Cows and Heifers to Infection with *Trichomonas foetus*), 464
Robertson, P. A. (Johnson, Dr. Edward A., and) : Effect of Acetylcholine on the Membrane Resistance and Threshold of Atrial Muscle Fibres, 910
Robinson, Ann E., and others : Interaction of Phenolic Compounds with Bacteria, 712
Robinson, F. D. : Power Development in Hitherto Under-developed Countries, 1502
Robinson, G. W., and DiGiorgio, V. E. : Structure and Reactivity of Electronically Excited Species, 320
Robinson, H. K. (Riley, P. B., and) : Role of Oxygen in the Formation of α-Aminobutyric Acid by a Staphylococcus, 905
Robinson, N., and others : Clearing Action of Lysolecithin, 782
Robinson, R. : Excretion of 17-Ketogenic Steroids in Subjects with Complete Transverse Lesions of the Spinal Cord, 484
Robinson, Prof. R. A. : Phytochemistry, 466
Robinson Bros., Ltd., West Bromwich : Production of Tetrahydrothiophen, 160
Robson, Mrs. E. (Rowe, Dr. T. W., and) : Freezing and Drying, 1695
Robson, J. G. (Campbell, F. W., and) : Moving Visual Images produced by Regular Stationary Patterns, 362
Robson, Dr. William : Title of professor of biochemistry in the University of London at King's College conferred on, 602
Robust but Sensitive Detector for Gas-Liquid Chromatography (Dr. D. W. Turner), 1265
Roche, Dr. M. : At the thirteenth International Congress of Applied Psychology (Training of Driving Instructors on a Sound Pedagogical Basis), 1579
Roche, M., and others : Isotopic Tracer Method for Measurement of Iron Lost into and Re-absorbed from Gastro-intestinal Bleeding Lesions, *errata*, 603
Rochester, Prof. G. D. : Elected a Fellow of the Royal Society, 881
    Obituary of Dr. J. M. Nuttall, 1307
Rockefeller Foundation, New York : Grant of 8,500 dollars to the University of Sheffield, for research in microbiology, 673
    Appointment of Dr. Frank Brink, jun., as dean of graduate studies, 529
Rocket Propulsion Elements (George P. Sutton), second edition, *review*, 986
Rockets : Artificial Stimulation of Rainfall in East Africa by means of (J. H. Brazell and C. M. Taylor), 1421
Rocks (Negev Phosphate) : Minor Constitutents and Trace Elements in (Dr. E. Foa), 1676
Rocks and Minerals : Distribution of Radioactivity in, and the Effect of Weathering on Determinations of Uranium (Dr. E. Hamilton), 697

Rockstein, Morris, and Lieberman, Harry M. : Survival Curves for Male and Female House-Flies (*Musca domestica* L.), 787
Rodger, A., and others : At the thirteenth International Congress of Applied Psychology (A fresh approach to the Study of Vocational Interests), 1580
Rodney Stoke Nature Reserve : Further additions to the (Nature Conservancy), 1572
Rogers, Prof. C. A. : Appointed to the Astor chair of mathematics at University College, London, 1378
Rogers, F. E. : The Theory of Networks in Electrical Communication and other Fields, *review* by K. R. Sturley, 6
Rogers, G. F. C., and Mayhew, Y. R. : Engineering Thermodynamics—Work and Heat Transfer, *review* by Dr. J. H. Horlock, 1028
Rogers, Dr. H. J. (Mandelstam, Dr. J., and) : Chloramphenicol-Resistant Incorporation of Amino-Acids into *Staphylococci* and Cell-Wall Synthesis, 956
Rogers, Dr. M. A. T. : Appointed research controller of Imperial Chemical Industries, Ltd., 1039 ; work of, 1039
Rogers, T. A. : Elected president for 1959-60 of the Institution of Mining Engineers, 1378
Rogers, Prof. W. P. : Physiology of the Hatching of Eggs of *Ascaris lumbricoides*, 1410
Rogowski, Mrs. B. F. W. (Shakeshaft, Miss E. M., and) : References to Scientific Literature on Fire, 1443
Rokos, Dr. Josef, and others : Effect of Calcium Ions on the Inhibition of Hydrolases by Chlortetracycline, 1201
Role of Ferrous Iron in Enzymatic Transamination (M. V. Patwardhan), 187
Role of Gibberellin-like Hormones in Regulation of Plant Growth and Flowering (Dr. P. W. Brian), 1122
Role of Glycerol in producing Abnormally Low Supercooling and Freezing Points in an Insect, *Bracon cephi* (Gahan), (R. W. Salt), 1281
Role of Oxygen in the Formation of α-Aminobutyric Acid by a Staphylococcus (P. B. Riley and H. K. Robinson), 905
Role of Phage Antibodies in the Development of Non-toxigenic Cultures of *Corynebacterium diphtheriae* (Paul S. Anderson, jun., and Prof. Philip B. Cowles), 350
Role of Photons in Argon—Alcohol Counters (Dr. P. Mortier, J. Demuynck and O. Segaert), 1327
Role of Plant Hormones in Algal Metabolism and Ecology (Dr. Joyce A. Bentley), 1499, *erratum*, 1703
Role (Metabolic), of Xanthopterin (J. A. Blair), 996
Rolling of Strip, Sheet and Plate (Eustace C. Larke), *review* by Dr. L. S. Goddard, 988
Rolt, L. T. C. : Isambard Kingdom Brunel, a Biography, *review* by H. P. Spratt, 1754
Roman, W. (edited by) : Yeasts (K. Arima, W. J. Nickerson, M. Pyke, H. Schanderl, A. S. Schultz, A. C. Thaysen and R. S. W. Thorne), *review* by R. B. Gilliland, 798
Roman Occupation Site at St. Albans : An Assemblage of Arthropod Remains from a (P. L. Bradley), 435
Röntgen Award for 1958 of the British Institute of Radiology awarded to Dr. P. R. J. Burch, 531
Röntgenstrahlen (Handbuch der Physik, herausgegeben von S. Flügge, Band 30), *review* by Prof. A. J. C. Wilson, 727
Rooijmans, Dr. C. J. M. (van Oosterhout, G. W., and) : A New Superstructure in Gamma-Ferric Oxide, 44
Rook, J. A. F., and Wood, Marian : Interrelationships of the Concentrations of Sodium, Potassium, Lactose and Water in Milk, 1284
Rooseboom, Dr. Maria : Elected to honorary fellowship of the Royal Microscopical Society, 885
Roosts : Starling (H. A. S. Key), 167
Root Diffusates of *Solanum tuberosum* and *Digitalis purpurea* (Dr. C. Ellenby), 920
Root Elongation in *Lepidium* : Effect of Stereoisomeric Tartrates on (Torbjörn Aasheim), 922
Root Exudate from a Resistant Host : A Change of Pathogenic Race in *Fusarium oxypsorum* f. *pisi* induced by (E. W. Buxton), 1222
Root Nodules (*Elaeagnus*) : Nitrogen Fixation in (I. C. Gardner), 717
Root Tips : Chemical Determination of Deoxyribonucleic Acid in, before and after Cold Treatment (Dr. J. K. Heyes and Dr. G. W. Shaw), 1337
Rooting Ability (Juvenile) : Transmission of, from Seedlings to Adults of *Hevea brasiliensis* (Prof. T. J. Muzik and H. J. Cruzado), 1288
Roots of *Vicia faba* : Effect of a Combined Treatment with 8-Ethoxycaffeine and Argon on the (Effect on Radiosensitivity of Inert Gases), (John Read), 616
Roots (Barley) : Carbon Dioxide Fixation in Particulate Preparations from (Dr. L. C. T. Young and Janet S. D. Graham), 1071
Roots (Irradiated), of *Vicia faba* : Mitotic Delay in—the Effect of Oxygen (Dr. H. J. Evans, Dr. G. J. Neary and Miss S. M. Tonkinson), 1083
Roots (Wheat) : Relation between Peroxidase and 'Cytochrome *dh*' in (Prof. H. Lundegardh), 28
Rootstocks (Citrus) : Spot Chromatography Identification of (Prof. Raymond M. Selle), 506
Rosa, Dr. Charles G., and Velardo, Dr. Joseph T. : Localization of Oxidative Enzyme Systems in the Uterus and Vagina of the Rat, 348
Rosca, Prof. : At the thirteenth International Congress of Applied Psychology (Evaluation of Educational Achievement ('Docimology')—Effect of Alternating Activities on Proficiency in Schoolwork), 1580
Rose, B., and others : Isolation of Antibodies on Antigen—Polystyrene Conjugates, 1465
Rose, B., and others : Measurement of the Neutron Spectrum from ZETA, 1630
Rose, Dr. Francis : Conservation of Nature in South-East England (Possible Nature Reserves in Kent, Sussex and Surrey), 1446
Rosenberg, Dr. H. M. : Vacancies and other Point Defects in Metals and Alloys (Electrical Resistivity Changes during Fatigue of Copper), 451 ; (Heat Conductivity in Strained α-Brass Single Crystals), 451
Rosenberg, Lawson L., and others : Formation of Oxalacetate and Aspartate from Phospho-Enol-Pyruvate in Spinach Leaf Chloroplast Extract, 632
Rosenblatt, Prof. Murray (Grenander, Dr. Ulf, and) : Statistical Analysis of Stationary Time Series, *review* by Prof. M. G. Kendall, 1494
Rosenbrock, H. H., and others : Awarded the Moulton Medal of the Institution of Chemical Engineers, 1312
Rosenfeld, Prof. L. : Physics and Metaphysics, *review*, 658
  Appointed professor in the new Nordik Institute for Theoretical Atomic Physics at Copenhagen, 1767 ; work of, 1767
  Physics and Metaphysics, 1814
Rosenhain Medal of the Institute of Metals awarded to Dr. J. H. Hollomon, 1182
Rosenhead, Prof. L. : Appointed a member of the Ministry of Supply's Advisory Council on Scientific Research and Technical Development, 1442
Roshko, A. (Liepmann, H. W., and) : Elements of Gasdynamics, *review* by Dr. J. H. Horlock, 1232
Ross, Prof. A. D. : Mechanical Properties of Non-Metallic Brittle Materials (Relative Contributions of Elasticity, Creep and Shrinkage to the Total Strain in Concrete), 1578
Ross, Dr. D. J. : Influence of Media on the Counts of *Clostridium butyricum* in Soils, 1142
Ross, K. A. : Appointed veterinary Officer, Northern Rhodesia, 459
Ross, Dr. T. K. : Theory of Instrumentation, *review*, 73
Ross, Dr. W. C. J. (Simonsen, the late Sir John, and) : The Terpenes, Vol. 4, The Triterpenes and their Derivatives—Hydrocarbons, Alcohols, Hydroxy-aldehydes, Ketones and Hydroxy-ketones, *review* by Prof. A. J. Birch, 445
Rosseland, Prof. S. : Nominated as national representative for Norway on the North Atlantic Treaty Organization Science Committee, 739
Rossi, Dr. Paolo, and Zamboni, Dr. Luciano : Pulmonary Arteriosclerosis due to Serotonin, 1216
Rossoff, Arthur L. (Dewitt, David, and) : Transistor Electronics, *review* by Dr. J. R. Tillman, 1168
Rotating Hanging Mercury-Drop Electrode (E. Barendrecht), 764
Rotating Helium II : Detection of Single Quanta of Circulation in (Dr. W. F. Vinen), 1524
Rotation of the Earth since June 1955 : Variation in the Speed of (Dr. L. Essen, J. V. L. Parry, Dr. Wm. Markowitz and Dr. R. G. Hall), 1054
Rotatory Dispersion of Cytochrome *c* (Dr. Gunther L. Eichhorn and Dr. Joan F. Cairns), 994
Rotblat, Prof. J. : Peaceful Uses of Atomic Energy (British Association for the Advancement of Science lecture for children), 528
Rothamsted Experimental Station : Retirement of Sir William Ogg as director, 89, 158
  Appointment of F. C. Bawden as director, 89, 158
  Report for 1956, 242
  Appointment of Prof. P. H. Gregory as head of the Department of Plant Pathology, 1312
Rothamsted Park Grass (1856-1949), 1311
Rotherham, Leonard : Appointed a full-time member of the Central Electricity Generating Board, 20
Rothwell, Peter S. : Investigations into Temperature Changes on the Surface of Human Tooth Enamel, 1805
Rotlehm in Northern Ireland : Relict (V. B. Proudfoot), 1287
Rotting Apple Fruit : Oxidation Products of Leucoanthocyanins as Inhibitors of Fungal Polygalacturonase in (M. Cole), 1596
Roughness (Sea) : Periodicity in, and Origin of Microseisms (Dr. J. N. Nanda, K. Achyuthan and N. K. Balachandran), 646
Rous Sarcoma Agent : Nature of the Antigens responsible for the Acquired Tolerance of Turkeys to (Dr. R. J. C. Harris and P. J. Simons), 1485
Rous Sarcoma Extracts : Reversibility of the Inactivation of, by Detergents (Dr. Dino Guerritore), 419
Rous Virus Nucleoid : Composition of the (Dr. M. A. Epstein), 1808
Route (New), of Breakdown of the Indole Nucleus : Bacterial Dissimilation of Indoleacetic Acid—a (Michael H. Proctor), 1345
Roux, Dr. David G. : Biogenesis of Condensed Tannins from Leucoanthocyanins, 1454
  Molecular Weight of Condensed Tannins as a Factor determining their Affinity for Collagen, 1793
'Roving Eye' : An Improved (T. Worswick and G. W. H. Larkby), 1046
Rowden, R. A., and others : Long-Distance Radio Propagation above 30 Mc./s., 1185
Rowe (N. E.) Medal of the Royal Aeronautical Society awarded to P. A. Champion, 1646
Rowe, Dr. T. W., and Robson, Mrs. E. : Freezing and Drying, 1695
Rowinski, P., and others : Processing of Foods with Ionizing Radiations (Autolytic Changes occurring during Storage of Sterile Muscle Samples), 878
Rowley, Dr. D. : Bactericidal Activity of Macrophages *in vitro* against *Escherichia coli*, 1738
Rowley, Diana (edited by) : Arctic Research, the Current Status of Research and some Immediate Problems in the North American Arctic and Sub-arctic, *review* by Dr. G. C. L. Bertram, 729
Rowntree, John A. : Internal Migration, a Study of the Frequency of Movement of Migrants (General Register Office, Studies on Medical and Population Subjects, No. 11), 1574
Roy, Chitra, and others : Synthesis of Phlorin and other Phenolic Glucosides by Plant Tissues, 841
Royal Academy of Arts : Appointment of Dr. L. A. Jordan as professor of chemistry, 531
Royal Aeronautical Society : Honorary fellowship awarded to Sir Richard Southwell, 1646
  Honorary companionship awarded to W. E. Nixon, 1646
  Gold Medal awarded to Sir Sydney Camm, 1646
  Silver Medal awarded to Dr. P. B. Walker, 1646
  Bronze Medal awarded to Dr. D. Williams, 1646
  British Gold Medal for Aeronautics awarded to S. D. Davies, 1646
  British Silver Medal for Aeronautics awarded to W. H. Lindsey and W. F. Saxton, 1646
  Wakefield Gold Medal awarded to W. Tye, 1646
  R. P. Alston Medal awarded to Mrs. Anne Burns, 1646
  N. E. Rowe Medal awarded to P. A. Champion, 1646
  Simms Gold Medal awarded to L. F. Nicholson, 1646
  George Taylor (Australia) Gold Medal awarded to R. L. Lickley and L. P. Twiss, 1646
  Edward Busk Memorial Prize awarded to Dr. D. Küchemann, 1646
  Orville Wright Prize awarded to Prof. A. R. Collar, 1646
  Herbert Ackroyd Stuart Memorial Prize awarded to Dr. R. R. Jamison, 1646
  J. E. Hodgson Prize awarded to Prof. H. J. van der Maas, 1646
  Branch Prize for 1958 awarded to M. B. Morgan, 1646
  Navigation Prize awarded to W. Makinson and G. M. Hellings, 1646
  Usborne Memorial Prize awarded to D. G. Drake, 1646
  Office of president taken by Sir Arnold Hall, 1646

Royal Agricultural Society of England : Research Medal awarded to Dr. W. A. Sexton and W. G. Templeman, 1506
Royal Anthropological Institute : Election of Dr. J. A. Fraser Roberts as president for 1957-59, 315
Royal Astronomical Society : Gold Medal awarded to Prof. André Danjon, 531
  Eddington Medal awarded to Dr. H. W. Babcock, 531
  Geophysical Discussion on Radiometric and Geochemical Survey Techniques, 594
  Geophysical Discussion on the Transition from the Ionosphere to Interplanetary Space, 1238
  Geophysical Journal, Vol. I, No. I, 1376
Royal Botanic Gardens, Kew : Open Days (Dr. W. B. Turrill), 1569
Royal Geographical Society : Patron's Medal awarded to Dr. Paul A. Siple, 810
  Founder's Medal awarded to Sir Edmund Hillary, 810
  Special Gold Medal awarded to Dr. Vivian Fuchs, 810
  Victoria Medal awarded to Prof. Roberto Almagià, 810
  Murchison Grant awarded to Prof. E. G. Bowen, 810
  Back Grant awarded to Ingénieur-en-Chef Bertrand Imbert, 810
  Cuthbert Peek Grant awarded to Dr. Peter H. Davis, 810
  Gill Memorial awarded to Dr. M. J. Wise, 810
  Mrs. Patrick Ness Award awarded to Capt. A. G. Bomford, 810
Royal Greenwich Observatory : The Isaac Newton Telescope at the, and the Navy Estimates, 811
Royal Institute of British Architects : Symposium on the Design of Teaching Laboratories in Universities and Colleges of Advanced Technology, 459
Royal Institute of Chemistry: Meldola Medal of the Society of Maccabaeans, 161, 1374
  Beilby Memorial Awards, 161
  Humphry Davy Lectures, 387
  Index of Films on Chemistry, 1245
Royal Institute of Chemistry (Thames Valley Section) : Symposium on Radiation Chemistry of Organic Systems, 1110
Royal Institute of Chemistry, and others : Symposium on Science and Society, 603, 1183
Royal Institute of Public Administration (A Survey by a Study Group of the) : The Organization of British Central Government, 1914-1956 (edited by D. N. Chester, written by F. M. G. Willson), 141 ; *review*, 299
Royal Institution : Election of Officers, 1312
Royal Meteorological Society : Election of Prof. Tor Bergeron, Sir David Brunt, E. Gold, Prof. Sverre Petterssen and Sir George Simpson to honorary membership, 1375
  Buchan Prize awarded to Dr. R. M. Goody, 1375
  Hugh Robert Mill Medal and Prize awarded to L. C. W. Bonacina, 1375
  Discussion on Atmospheric Aerosols, 1703
  Discussion on Aeronautical Meteorology, 1703
Royal Microscopical Society : Election of John Bunyan as president, 238
  Honorary fellowships conferred on Dr. Edwin H. Land and Dr. Maria Rooseboom, 885
  'Micro 57', an Exhibition of Photography with the Microscope, 1246
Royal Netherlands Geographical Society : Election of Prof. J. Büdel, Prof. H. C. Darby and G. J. A. Mulder to honorary membership, 1771
Royal Photographic Society : Silver Progress Medal for 1957 awarded to Dr. Edwin H. Land, 312
  Honorary fellowship conferred on Dr. John I. Crabtree and on Dr. Edwin H. Land, 313
Royal Photographic Society (Scientific and Technical Group), and the Electron Microscopy Group of the Institute of Physics : Meeting on Photographic Aspects of Electron Microscopy, 1312
Royal Society of Edinburgh : Keith Prize for 1955-57 awarded to Dr. I. M. H. Etherington, 673
  Neill Prize for 1955-57 awarded to Monica Taylor, 673
  Election of Fellows, 739
  David Anderson-Berry Prizes for 1958 awarded to W. M. Court Brown and Dr. Richard Doll, and to Dr. C. E. Ford, 1571
Royal Society of London : Appointment of vice-presidents, 87
  Discussion on the Physics of Water and Ice, 380
  Discussion on Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions, 238, 803
  Discussion on Parity Conservation, 447, *errata*, 885
  New Fellows of the, 881
  Meeting on Recent Advances in Nuclear Physics, 886
  Notes and Records, Vol. 12, No. 2, 1181
  New Foreign Members of the, 1242, 1700
  Appointment of Dr. P. M. B. Walker to the Royal Society Research Fellowship, 1378
  Appointment of N. Tebble to a John Murray Travelling Studentship for 1958, 1378
Royal Society and Nuffield Foundation Commonwealth Bursaries : Awards, 89
Royal Society, in co-operation with the Royal Society of New Zealand : Expedition to Southern Chile, 949
Royal Society of New Zealand (Royal Society, in co-operation with the) : Expedition to Southern Chile, 949
Royal Society of South Africa : Election of Officers for 1958, 1378
Royal Society of Tasmania : Election of Officers, 1110
Royal Statistical Society : Election of Officers, 1703
  Guy Medal in silver awarded to Prof. G. A. Barnard, 1703
  Frances Wood Memorial Prize awarded to David Hewitt, 1703
Royal Statistical Society (Birmingham Group of the Industrial Applications Section) : Conference on Statistical Sampling in Industry, 885
Royal University of Malta : Formation of a Statutory Commission, 89
Rubber Industry, Institution of the, and the Plastics Institute : Conference on Recent Advances in Polymer Technology, 89, 1303
Rubber-bearing Plants : Coenzyme A and Aldolase in (J. A. Gascoigne, Dr. W. G. Overend, G. F. J. Moir and Dr. G. Hübscher), 628
Rubbo, Prof. Sydney D. (Holmes, Ian H., and) : Rejection of the Peroxide Accumulation Hypothesis of Isoniazid Action, 1203
Rubidium-86 ; Influence of Water-Content of Sand on Rate of Uptake of (Dr. L. K. Wiersum), 106
Rubidium-86 as a Tracer of Potassium in Man (M. Mencer Martin and Geoffrey Walker), 705
Rubidium and Caesium : Paper Chromatography of Potassium, (Florin Modreanu, Simon Fisel and Adrian Carpov), 1618
Rubio-Huertos, Dr. M., and others : Bacterial Protoplasts, 1713
Ruby : The Colour Problem of (Lakhbir Singh), 1264
Rucker, Prof. A. : Nominated as national representative for Germany on the North Atlantic Treaty Organization Science Committee, 739
Ruddleston, R. (Fitch, E., and) : Long-Distance Radio Propagation above 30 Mc./s. (Terminal Equipment), 1185
Rudham, R. (Morrison, J. A., and) : Melting, Diffusion and related Topics (Mechanism of the Anion Diffusion Process in Sodium and Potassium Chloride Crystals), 320
Rudman, Dr. P., and others : Relationship of Tectoquinone to Durability in *Tectona grandis*, 721
Rumen and Salivary Secretion : Distension of the (A. T. Phillipson and C. S. W. Reid), 1722
Rumen Strains of *Fusiformis nigrescens* : Apparent Requirement for Vitamin K of (Dr. M. Lev), 203
Rumex obtusifolius L. : α-Picoline from (S. Wilkinson), 636
Ruminant Stomach : Pressure developed within the Reticular Compartment of the (F. R. Bell), 494
Ruminants : Provision of Cobalt to, by means of Heavy Pellets (D. W. Dewey, H. J. Lee and Dr. Hedley R. Marston), 1367
Rundqvist, Stig : Two Borides with the Cementite Structure, 259
Runeckles, V. C. : Formation of Alkyl Phosphates in Wheat Leaves, 1470
Rupture (Cell) : Thaw Rigor and (R. M. Love and S. B. Haraldsson), 1334
Rural Economy : Types of—Studies in World Agriculture (Prof. René Dumont), *review* by Sir John Russell, 144
Rushton, B. J. : Appointed chemist, Geological Survey, Tanganyika, 459
Rusland Moss Nature Reserve (Nature Conservancy), 1572
Russell, Dr. F. S. : *Obituary* of Dr. G. A. Steven, 1505
  A New Species of *Atolla*, 1811
Russell, G. : 'Purity' of Gelatin as a Protein, 102
  Chemically Distinct Major Constituents of Gelatin, 537
Russell Sir John : Agriculture in East and West, *review*, 144
  The World of the Soil, *review* by Dr. P. C. DeKock, 297
  The Soil and the Growing Plant, *review*, 1627
Russell, Lord : The World and the Observer, 810
Russell, Dr. R. D. : Appointed associate professor of geophysics in the University of British Columbia, 603
Russell, R. J., and Morgan, J. P. : Salt Marshes (Morphology of the Louisiana Marshes and the Coastal Changes following Hurricane 'Audrey'), 1512
Russell, Prof. R. W. : Resignation from the professorship of psychology at University College, London, 18 ; work of, 18
Russell, T. A. : The Indian Mango Displayed, *review*, 1364
Russian Earth Satellite : Tracking the, 1441
Russian Earth Satellite 1957β : Effect of Air Drag on the Orbit of the—Comparison of Theory and Observation (D. G. King-Hele and Dr. D. C. M. Leslie), 1761
Russian Earth Satellite 1958δ : The Third, 1441
  Some Effects of the Fine Structure of the Ionosphere on Transmissions received from the (F. A. Kitchen and W. R. R. Joy), 1759
Russian Scientific Literature : Translations of, 1109, 1308, 1508
Russian Translation (R. E. O'Dette), 1509
Rutin : Use of Defoliants for Drying Buckwheat in the Field, and a New Method for the Chemical Determination of (V. Brejcha and P. Horák), 505
Ruwenzori (Haute Altitude) : Biotopes de, I (J. Heinzelin and H. Mollaret), 19
Rydzewski, Dr. W. : Check-List of North American Birds, *review*, 590
Rye—Climate Relationships (M. Y. Nuttonson), *review* by Dr. E. C. Humphries, 1689
Ryland, J. S. : *Bugula simplex* Hincks, a Newly Recognized Polyzoan from British Waters, 1146

SABURI, Yasuo, and others : An Alternative Pathway for the Degradation of Cholic Acid by Micro-organisms, 906
Saccharogenic Amylase (Crystalline), of Moulds : Specificity of (Yoshio Tsukjisaka, Juichiro Fukumoto and Takehiro Yamamoto), 770
Sacculina gonoplaxae Guérin-Ganivet, 1911, a Rhinocephalan Parasite New to British Waters (A. K. Nagabhushanam), 57
Sachs, Dr. Roy : Photoperiodism in Plants and Animals (Implications of 'Long-short' Day Plants, such as *Cestrum nocturnum*, for General Theories of Photoperiodism), 535
Sack, R. A. : Structure and Reactivity of Electronically Excited Species (Interactions between Electronic and Vibrational Motions of Polyatomic Molecules), 320
Saddington, K. : Nuclear Energy (Fission Product Disposal), 736
Safety : Nuclear Reactor, 601
Safety (Industrial) : Sir George Earle Trophy for, awarded to Imperial Chemical Industries, Ltd., 1243
Safety in Mines Research Advisory Board : Thirty-fifth Annual Report, 676
Safety in the United Kingdom Atomic Energy Authority : Report of the Committee appointed by the Prime Minister to examine the Organization for Control of Health and (Atomic Energy Office), 1023, 1043
Sagarin, Edward (edited by) : Cosmetics—Science and Technology, *review* by Cyril W. Ridout, 444
Sahara, Commission for Technical Co-operation in Africa South of the : To set up a Foundation for Mutual Assistance in Africa South of the Sahara, 601, 811
Sahara, Foundation for Mutual Assistance in Africa South of the 601, 811
Sahasrabudhe, P. W., and others : Remanent Magnetism of the Rajmahal Traps of North-Eastern India, 830
Sahu, G. (Misra, G., and) : Interaction of Hormone and Photoperiod in an Early Variety of Rice, 637
Sainsbury, P. : At the thirteenth International Congress of Applied Psychology (Electromyographic Observations), 1580
Saito, Masahiro, and others : Uridine Diphosphate Amino-Sugar Compounds from *Staphylococcus aureus* inhibited by Penicillin, 906
Saito, Prof. Nobufusa (Sekine, Tatsuya, and) : Separation of Lanthanum from Thorium by Anion Exchange, 1464
Saito, Tsuneyuki, and others : Changes in Adenine Nucleotides of Squid Muscle, 1127
  Structure of Sperm- and Sei-Whale Insulins and their Breakdown by Whale Pepsin, 1468

Saji, Sh., and others : Gamma-Aminobutyrylcholine, 1336
Sakaguchi-positive Antibiotics : Microchemical Method for the Determination of (Dr. I. Szilágyi and I. Szabó), 52
Sakato, Dr. Y. : Phytochemistry (Recent Advances in Tea Chemistry in Japan), 466
Sakiyama, Fumio, and others : A New Synthesis of Histidyl Peptides, 772
Salam, Prof. A. : Non-Conservation of Parity, 447, *errata*, 885
Salicylates and other Non-Hormonal Anti-Rheumatic Drugs : A Possible Basis for the Anti-inflammatory Activity of (S. S. Adams and R. Cobb), 773
Salinity Problems in Arid Zones (Unesco and the Iranian Government Symposium on), 1378
Salisbury, Sir Edward : *Obituary* of Dr. J. C. Willis, 1103
Salisbury, Dr. F. : Photoperiodism in Plants and Animals (Interaction between various Applied Growth Substances and the Critical Dark Period in *Xanthium*), 535
Salt Marshes (National Science Foundation and the Marine Institute of the University of Georgia Conference on), 161, 1512
Salivary Secretion : Distension of the Rumen and (A. T. Phillipson and C. S. W. Reid), 1722
Salmon, A. J., and others : Critical Mass Measurements for the Merlin Research Reactor, 1171
Salmonella infantis : Isolation of, from an Aborted Bovine Foetus (Dr. J. Mortelmans, C. Huygelen and F. Pinckers), 1539
Salmonella typhimurium : An Unstable Mutation in (P. F. Smith-Keary), 1672
Salmonellae in Uganda (E. McAnulty), 576
Salmonid Fishes : Size and Osmoregulation in (Gwyneth Parry (Mrs. Howells)), 1218
Salmre, William, and others : Proteins in Solutions at Low Temperatures, 1731
Salt, R. W. : Role of Glycerol in producing Abnormally Low Supercooling and Freezing Points in an Insect, *Bracon cephi* (Gahan), 1281
Salt Deficiency : Influence of, on Taste Sensitivity in Human Subjects (Roy Yensen), 1472
Salt Fish : Sodium Phosphate Crystals on (Dr. W. J. Dyer, Doris I. Fraser and J. R. Dingle), 859
Salt Intake, Adrenocortical Function and Hypertension (Dr. Lewis K. Dahl), 989
Salt Secretion (Nasal), in the Humboldt Penguin (Prof. Knut Schmidt-Nielsen and Dr. W. J. L. Sladen), 1217
Salters' Company : Election of Sir Charles Goodeve as Master, 1703
Salters' Institute of Industrial Chemistry, 1770
Salton, Dr. M. R. J., and others : Bacterial Protoplasts, 1713
Salton, Dr. M. R. J., and Shafa, Dr. F. : Some Changes in the Surface Structure of Gram-Negative Bacteria induced by Penicillin Action, 1321
Salts of Carboxylic Acids : Effect of the Metallic Ion on the Infra-Red Spectra of (Bryan Ellis and H. Pyszora), 181
Salts (Ammonium), of the Heteropolyacids as Cation Exchangers (Dr. J. van R. Smit), 1530
Salts (Antibiotic), of Reduced Toxicity : A New Class of (F. A. Alves, M. F. C. A. N. Graça and H. L. Baptista), 182
Salts (Cupric), with Mono-, Di- and Tri-Chloroacetic Acids : Structure of (Dr. Ryutaro Tsuchida, Dr. Shoichiro Yamada and Hiroji Nakamura), 479
Salts (Neutral) : Effect of, on the Structure of Collagen and Gelatin (William F. Harrington), 997
Samal, K. (Dutta, Dr. A. K., and) : Propagation of Ultrasonic Waves in Liquids, 563
Sámel, Milan : Blocking Effect of Morphine on the Secretion of Thyroid-stimulating Hormone in Rats, 845
Samoilov, Dr. O. T. : Interaction in Ionic Solutions (A New Approach to the Study of Hydration of Ions), 241
Samples (Small Liquid) : A Direct-Plating Method for the Precise Assay of Carbon-14 in (Dr. C. C. McCready), 1406
Sampling (Acceptance) : Statistical Quality Control and (Birmingham College of Technology Course on), 1703
Sampling (Statistical), in Industry (Birmingham Group of the Industrial Applications Section of the Royal Statistical Society Conference on), 885
Samuel, Viscount : In Search of Reality, *review* by F. I. G. Rawlins, 1687
Sand : Influence of Water-Content of, on Rate of Uptake of Rubidium-86 (Dr. L. K. Wiersum), 106
Sand Waves (Large), near the Edge of the Continental Shelf (D. Cartwright and A. H. Stride), 41
Sandars, P. G. H. (Woodgate, Dr. G. K., and) : Measurement of Nuclear Magnetic Moments in Atomic Beams, 1395
Sanders, Dr. H. G. : Biological Productivity of Britain (Present Agricultural Production in Britain), 83
Sándi, Dr. E. : Reduction of Parathion induced by Light, 499
Sandler, Dr. M. (Davidson, Dr. A. N., and) : Inhibition of 5-Hydroxytryptophan Decarboxylase by Phenylalanine Metabolites, 186
Sandstone : Cleaning of Inscriptions and Sculptures in (Dr. David Smith), 812
Sandwich Courses (Association of Teachers in Technical Institutions Memorandum on), 1712
Sandwith, N. Y. : Flora of Peru, *review*, 1366
Sanguinetti, F., and others : Effects of Orotic Acid on Coenzyme A and Pantothenic Acid of Liver in Vitamin B_{12} Deficiency, 416
Sankar, Prof. D. V. Siva : *Para*-Amino-Benzoic Acid and Sulphanilamide in the Nutrition of *Neurospora crassa*, 629
Sankar, Prof. D. V. Siva, and others : Antigenicity of Avidin, 619
Sankey, John : Conservation of Nature in South-East England (The Invertebrate Fauna of the Chalk Country and its Conservation), 1446
Sansom, R. C. : Appointed assistant geologist, British Guiana, 459
Santilli, Dr. Vincent : Zoospore Morphology of the California Strain of *Plasmopara viticola*, 924
Santos, Prof. A. C. : Phytochemistry (Biscoclaurine Alkaloids from *Phaeanthus ebracteolatus*, with special reference to Phaeantharine), 466
Santa María, Juan : Polyploidy in Yeasts, 1740
Sanyal, P. : Embryological Investigation in *Hibiscus sabdariffa* x *H. cannabinus* and their Reciprocal Crosses, 1352
Saper, Dr. J., and White, W. E. : Amino-acid Composition of Scleroprotein of the Sponge *Hippospongia equina*, 285
Sapogenins (Steroidal) : Degradation of, to 16-Dehydropregnan-20-ones (Dr. G. P. Mueller), 771
Saprophyte (Soil) : *Fusarium oxysporum* as a (D. Park), 1509
Sarajas, H. S. Samuli, and others : Stress in Hypothermia, 612
Sarawak and Burma : Haemoglobin E and the Diego Blood Group Antigen in (M. J. Colbourne, Elizabeth W. Ikin, Dr. A. E. Mourant, Dr. H. Lehmann and H. Thein), 119
Sarcoma (*RD*3), and the Walker Carcinoma : Inability of Hydrogen Peroxide to influence the Survival-Time of Rats bearing (Dr. F. N. Ghadially and Dr. G. Wiseman), 1067
Sarcoma (Mouse) : A Correlation between Electrical Surface Charge and some Biological Characteristics during Stepwise Progression of a (Mrs. L. Purdom and E. J. Ambrose and Prof. G. Klein), 1586
Sarcoma Agent (Rous) : Nature of the Antigens responsible for the Acquired Tolerance of Turkeys to (Dr. R. J. C. Harris and P. J. Simons), 1485
Sarcoma Extracts (Rous) : Reversibility of the Inactivation of, by Detergents (Dr. Dino Guerritore), 419
Sargent, F. (Johnson, R. E., and) : Nutrition and Climatic Stress (Results of a Marathon Study on U.S. Air Force Personnel in Hot-humid, Temperate and Cold Environments), 1644
Sarjant, Prof. R. J. : Scottish Lurgi Plant, 1313
Sarkar, A. K. (Ottaway, Dr. J. H., and) : Formation of Lactate from Acetoacetate in the Perfused Heart, 1791
Sarkar, B. (Basu, Dr. N. K., and) : Isolation of Reserpine from *Vinca rosea* Linn., 552
Sarma, Prof. P. S., and others : Influence of some Iodoamino-Acids and Iodoproteins on the Growth of *Corcyra cephalonica* St., 1655
Satellite : Calculation of the Life-time of a (D. G. Parkyn), 1156
  End of the Second Artificial Earth, 1107
  Determination of Radio-Propagation Elements due to an Artificial Earth (Dr. E. Woyk-Chvojková), 1195
  Life-time of an Artificial Earth (Dr. D. C. M. Leslie), 403
  Determination of Orbital Characteristics of an Earth, from Single-Station Radio-Transit Observations (Gordon Grant, A. L. Jones, R. W. Burhans, P. S. Fay and David Frazier), 900
  Observations in Australia of Radio Transmissions from the First Artificial Earth (G. H. Munro and R. B. White), 104
  Tracking the Russian Earth, 1441
Satellite 1957β : Effect of Air Drag on the Orbit of the Russian Earth—Comparison of Theory and Observation (D. G. King-Hele and Dr. D. C. M. Leslie), 1761
Satellite 1957β leaving the Earth's Shadow : A Photographic Observation of the (Dr. Heinz Neckel), 257
Satellite, 1958α : Artificial Earth, 367
  Radio Scintillations of (O. B. Slee), 1610
Satellite 1958α (Explorer), over Africa (Dr. David S. Evans), 1173
Satellite 1958β : Fourth Artificial Earth, 810
Satellite 1958δ : The Third Russian Earth, 1441
  Orbit of Artificial Earth, 1507
  Some Effects of the Fine Structure of the Ionosphere on Transmissions received from the Russian Earth (F. A. Kitchen and W. R. R. Joy), 1759
Satellites : Artificial (Dr. E. J. Öpik), 1311
  Effect of the Earth's Equatorial Bulge on the Life-time of Artificial, and its Use in Determining Atmospheric Scale-Heights (Dr. G. V. Groves), 1055
  Scientific Observations of the Artificial Earth, and their Analysis (Prof. H. S. W. Massey and Dr. R. L. F. Boyd), 78
  Theoretical Analysis of Doppler Radio Signals from Earth (Dr. William C. Guier and George C. Weiffenbach), 1525
Satellites (Artificial), of the Earth : Some Variation Problems connected with the Launching of (D. E. Okhotsimskii and T. M. Eneev), 1311
Satellites and Space Flight (Eric Burgess), *review* by D. C. King-Hele, 980
Sato-Asano, K., and others : Nucleic Acids (Specificity of Two Ribonucleases (T_1 and T_2) Isolated from Takadiastase), 1511
Sauer, Dr. Carl : Climate, Vegetation and Land Utilization in the Humid Tropics (Man in the Ecology of Tropical America), 597
Sauer, M. R. : Development of Eggs before the Final Moult in *Pratylenchus*, 129
Saunders, Dr. Bernard Charles : Some Aspects of the Chemistry and Toxic Action of Organic Compounds containing Phosphorus and Fluorine, *review* by Sir Rudolph Peters, 1295
Saunders, D. W. : Physical Properties of Polymers, 1633
Saunders, Dr. L., and Fleming, R. : Mathematics and Statistics for use in Pharmacy, Biology and Chemistry, *review* by Dr. D. J. Finney, 147
Saunders, Dr. L., and others : Clearing Action of Lysolecithin, 782
Saunders, Prof. O. A. : Flames and Industry (The Problems in Gas Turbine Combustion Chambers), 17
  Elected a Fellow of the Royal Society, 881
Saunte, Lise H. : Chromosome Variation in the *Heleocharis palustris-uniglumis* Complex, 1019
Savage, Sir Graham : Science in Schools, 1373
Sávay, Dr. Gy., and Csillik, Dr. B. : Lead-Reactive Substances in Myoneural Synapses, 1137
Savory, T. H. : The Natural Resources of the Country and their Value for Teaching and Research (The Value of Land Invertebrates for Teaching), 1313
Saxl, H., and others : Mammalian Cellulose, 470
Saxton, Dr. J. A. : Long-Distance Radio Propagation above 30 Mc./s., 1184
  Awarded the E.M.I. Premium of the Television Society, 1246
  Electronics in Geophysical Research, *review*, 1688
Saxton, W. F. (Lindsey, W. H., and) : Awarded the British Silver Medal for Aeronautics of the Royal Aeronautical Society, 1646
Say, Prof. M. G. : Too Much and Too Little (Chairman's Address to the Supply Section of the Institution of Electrical Engineers), 321
Scale-Heights, (Atmospheric): Effect of the Earth's Equatorial Bulge on the Life-time of Artificial Satellites and its Use in determining (Dr. G. V. Groves), 1055
Scale Insects of California : The Armored (Howard L. McKenzie), *review* by Dr. W. J. Hall, 986
Scale-up Methods in Chemical Engineering : Pilot Plants, Models and (Dr. Robert Edgeworth Johnstone and Prof. Meredith W. Thring), *review* by Prof. D. M. Newitt, 1094
Scaling-up of Chemical Plant and Processes (Proceedings of the Institution of Chemical Engineers, in co-operation with the Chemical Engineering Group of the Society for Chemical Industry Symposium on the), 1769

- Scapa, Sylvia, and others : Importance of the Synthesis of Acidic Polysaccharide for Wound Healing, 1543
- Scaria, K. S. (George, Dr. J. C., and) : Histochemical Demonstration of Lipase Activity in the Pectoralis Major Muscle of the Pigeon, 783
- Scarnell, J., and others : A New Series of Anthelmintics, 183
- Scarpelli, Dr. D. G., and others : Cytochemical Localization of Pyridine Nucleotide-linked Dehydrogenases, 1531

Science (Modern) : The Origins of, 1300-1800 (Prof. H. Butterfield), new edition, *review* by Dr. H. D. Anthony, 731
  The Race Question in (Unesco), *review* by Prof. T. S. Simey, 1232
Science (Soviet) : Forty Years of, 1109
Sciences (The Exact), in Antiquity (Dr. O. Neugebauer), second edition, *review* by Dr. A. Armitage, 1097
Scientific American: Vol. 197, No. 3, issue devoted to High-Polymer Chemistry, 94
  Cumulative Index (1948-1957), 1767
  Automatic Control, *review* by J. F. Coales, 661
  The Physics and Chemistry of Life, *review* by Prof. D. C. Harrison, 985
Scientific Attaché at the British Embassy in Moscow : Appointment of a, 1507
Scientific Arrogance (Bishop of Portsmouth), 1107
Scientific Centenaries of 1958 (Joan M. Eyles), 9
Scientific Discovery : Reason and Chance in (Dr. R. Taton), translated by A. J. Pomerans, *review* by Sir Edward Appleton, 983
Scientific Documentation Centre (Indian National) : Annual Report for 1956-57, 1109
Scientific Education in the United States, 1250
Scientific Expedition to Ghana : Student (B. M. Gerard), 25
Scientific Instruments and Apparatus (Physical Society Annual Exhibition of), 673
Scientific Instruments and Apparatus, 1958 Exhibition : Handbook of (Physical Society), 743
Scientific Literature on Fire : References to (Miss E. M. Shakeshaft and Mrs. B. F. W. Rogowski), 1443
Scientific Literature (Russian) : Translations of, 1109, 1308, 1508
Scientific Management in Nationalized Industries, 511
Scientific Method : Library Science and (Dr. S. R. Ranganathan), 1509
Scientific Observations of the Artificial Earth Satellites and their Analysis (Prof. H. S. W. Massey and Dr. R. L. F. Boyd), 78
Scientific Periodicals, World List of : Preparation of a fourth edition, 529
Scientific Photography, *review* by J. Walton-Siddorn, 798
Scientific Psychology and Psychiatry : Ivan B. Pavlov—Toward a (Dr. Harry K. Wells), *review* by Prof. John Cohen, 1233
Scientific Radio Union, International : Twelfth General Assembly, 465
  Election of Dr. L. V. Berkner as president, 465
Scientific Research : Beit Fellowships for (Election of F. J. J. Clarke and D. G. Watts to), 1444
Scientific Research (Current), at South African Universities, 1956 : Register of (South African Council for Scientific and Industrial Research), 1702
Scientific Research Activities at Colleges and Universities in the United States (United States National Science Foundation, Reviews of Data on Research and Development, No. 6), 167
Scientific Research and Development : Government—University Relationships in Federally Sponsored (National Science Foundation, Washington), 1712
Scientific Research and Technical Development, Advisory Council on : Appointment of Prof. J. L. M. Morrison as chairman, 1442
  Appointment of Sir William Cook, Sir Ian Heilbron, Prof. W. T. J. Morgan, Prof. N. F. Mott and Prof. L. Rosenhead as members, 1442
Scientific Resources in the Western World : Pooling, 313
Scientific Societies, South-Eastern Union of : Sixty-third Annual Congress, 238
  Conference on Conserving Wild Life and Amenities in the South-East of England, 315
  Annual Conference on Conservation of Nature in South-East England, 743, 1446
  Symposium on Naturalists Trust—their Contribution to Nature Conservation, 1447
  Sixty-third Annual Congress (F. J. Epps), 1707
  Presidential Address : All the World's a Stage (Prof. H. L. Hawkins), 1707
  Presidential Address to the Archaeological Section : Silchester Archaeology (Dr. M. Aylwin Cotton), 1707
  Presidential Address to the Botanical Section : Toadstools (Dr. F. B. Hora), 1708
  Presidential Address to the Zoological Section : The Birds of Reading (Dr. C. C. Balch), 1708
Scientific Unions, International Council of : New address of the Secretariat, 238
Scientific and Industrial Research, Council for : Appointment of Lewis T. Wright as a member, 238
  Committee on Human Sciences in Industry, 948
Scientific and Industrial Research, Department of : Progress of the Five-year Plan, 19
  Retirement of Sir Claude Inglis as director of the Hydraulics Research Station, Wallingford, 235
  Appointment of Fergus H. Allen as director of the Hydraulics Research Station, Wallingford, 235
  Appointment of Dr. F. H. Todd as superintendent of the Ship Division of the National Physical Laboratory, 456
  Open Days at the Road Research Laboratory, 531
  Appointment of Dr. Edward Lee as deputy director of the National Physical Laboratory, 600
  Reorganization of the National Physical Laboratory, 600
  Report of the National Physical Laboratory for 1956, 607
  Open Days at the Mechanical Engineering Research Laboratory, East Kilbride, 743
  National Physical Laboratory Pamphlet on *MSF*—Standard Frequency Transmissions from the United Kingdom, new edition, 952
  National Physical Laboratory Notes on Applied Science, No. 16, Modern Computing Methods, *review* by S. Weintroub, 985
  Appointment of S. H. Clarke as director of the new research station at Stevenage for fuel and process research, 1106
  Notes on D.S.I.R. Grants for Graduate Students and Research Workers, 1110
  Problems of Progress in Industry, No. 1, Man, Steel and Technical Change (Olive Banks and Dr. W. M. Scott), 1180
  Measurement of Air Pollution—Recommended Methods for Deposited Matter, Smoke and Sulphur Dioxide (Fuel Research Board), 1244
  Open Days at the National Physical Laboratory, 1246
  Open Days at the Scottish Branch of the Road Research Laboratory, 1510
  Appointment of Vice-Admiral Sir Frank Mason as chairman of the Mechanical Engineering Research Board, 1576
  Report of the Research Council for 1956-57, 1623, 1637
  The Radio Research Station, Slough, 1642
  European Interchange Scheme for Research Students, 1770
Scientific and Industrial Research, Department of, and Fire Offices' Committee Joint Fire Research Organization : Bibliography of References to Scientific Literature on Fire, Part 8 (Miss E. M. Shakeshaft and Mrs. B. F. W. Rogowski), 1443
Scientific and Industrial Research, Department of (Building Research Station), (Mining Research Establishment of the National Coal Board and the) : Conference on the Mechanical Properties of Non-Metallic Brittle Materials, 1577
Scientific and Industrial Research, Department of (New Zealand) : Publication of the *New Zealand Journal of Geology and Geophysics*, 1179
  Thirty-first Annual Report (1957), 1383
Scientific and Industrial Research, South African Council for : Register of Current Scientific Research at South African Universities (1956), 1702
Scientific and Industrial Research Organization (Commonwealth) : Appointment of E. R. Hoare as officer-in-charge of the Irrigation Research Station, Griffith, N.S.W., 235
  Appointment of Dr. H. R. C. Pratt as leader of the chemical engineering section in the Division of Industrial Chemistry, 459
Scientific and Technical Books : Recent, Supp. viii, January 25 ; Supp. viii, February 22 ; Supp. vi, March 29 ; Supp. vi, April 26 ; Supp. vi, May 31 ; Supp. vi, June 28
Scientific and Technical Man-power in Britain, 741
Scientific and Technical Students, 1309
Scientific and Technical Translation (Aslib Conference on), 1044
Scientific and Technological Education (Edwin Barker), *review* by T. H. Hawkins, 517
Scientifique (Photographie) : Manuel de (Gérard de Vaucouleurs, Jean Dragesco et Pierre Selme, avec la collaboration de Henriette Faraggi et H. Tellez-Plasencia), *review* by J. Walton Siddorn, 798
Scientist : The Making of a (British Social Biology Council Conference on), 603
Scientists and Technologists : Emigration of, 1243
Scientists (Information), Institute of : Inauguration of an, 20
  Formation of the, 387
  Election of Officers, 1576
Scientists (Visiting), Society for : Discussion on Water Quality Problems in the United Kingdom, 24
  Report of the Secretaries, 883
Scintillations (Radio), of Satellite 1958α (O. B. Slee), 1610
Sclerites (Holothurian) : Chemical Analysis of (John S. Hampson), 1608
Sclero-protein of the Sponge *Hippospongia equina* : Amino-acid Composition of (Dr. J. Saper and W. E. White), 285
Scope and Limits of Colour Measurement (Colour Group of the Physical Society Symposium on), 1704
Scorer, Dr. R. S. : Poisoned Air, *review*, 1167
Scorer, Dr. R. S. (Ludlam, F. H., and) : Booklet of lecture notes to accompany two filmstrips entitled 'Clouds', 457
  Cloud Study, *review* by L. C. W. Bonacina, 985
Scotland : Building Programme for Technical Education in, 1309
  Natural Gas in (T. S. Ricketts), 1042
  Technical and Technological Education in, 313
Scott, Dr. Barry : Awarded the William Frechville Student's Prize of the Institution of Mining and Metallurgy, 1375
Scott, Dr. G. R., and Rampton, Dr. C. S. : Freezing and Drying, 1695
Scott, G. S. : Appointed agricultural officer, Uganda, 458
Scott, R. P. W. : Column Packings for Gas Chromatography, 604
Scott, V. D., and Wilman, Dr. H. : Occurrence of Beryllium Oxide in Polycrystalline Beryllium, 902
Scott, Dr. W. J. : Freezing and Drying, 1695
Scott, Dr. W. M. (Banks, Olive, and) : Men, Steel and Technical Change, 1180
Scottish Home Department : Marine Research, 1957, No. 2, Hydrography of the Faroe—Shetland Channel, 1927-1952 (Dr. John B. Tait), *review* by Dr. G. E. R. Deacon, 214
Scottish Home Department (Development Commissioners, in association with the Ministry of Agriculture, Fisheries and Food, and the) : Award of Postgraduate Training Grants in Fishery Research, 1312
Scottish Lurgi Plant (Prof. R. J. Sarjant), 1313
Scottish Middle Jurassic : Palynology of the Brora Coal of the (N. F. Hughes and R. A. Couper), 1482
Scottish Soils : Occurrence of Soft Rot Bacteria in (Dr. D. C. Graham), 61
Sculptures in Sandstone : Cleaning of Inscriptions and (Dr. David Smith), 812
Scurfield, G., and Moore, C. W. E. : Effect of Gibberellic Acid on Species of *Eucalyptus*, 1276
Sea : Anomalous Atmospheric Refraction at (Dr. B. M. Cwilong), 181
  Conditions of Life in the, *review* by Dr. G. E. R. Deacon, 1559
  Report on an Experiment into the Freezing of Fish at (White Fish Authority), 817
Sea Otter : The (Karl W. Kenyon), 1115
Sea Roughness : Periodicity in, and Origin of Microseisms (Dr. J. N. Nanda, K. Achyuthan and N. K. Balachandran), 646
Sea-Urchin Eggs : Effect of Adenosine Triphosphate on Cleavage of (Louis Wolpert), 716
Sea-Urchin Eggs and Embryos (Pure Species and Hybrids) : Species-Specific Differences in Free Amino-Acids and Peptides in (Dr. P. S. Chen and Prof. F. Baltzer), 98
Sea-Water : Germanium and Gallium in—Germanium (J. D. Burton and Dr. J. P. Riley), 179 ; Gallium (F. Culkin and Dr. J. P. Riley), 180
  Niobium in (Dr. D. B. Carlisle and L. G. Hummerstone), 1002
Seaborg, Glenn T. (Katz, Joseph J., and) : The Chemistry of the Actinide Elements, *review* by Dr. L. E. J. Roberts, 1496
Search of Reality : In (Viscount Samuel), *review* by F. I. G. Rawlins, 1687
Seaweed Symposium : Third International, 531
Sebruyns, Dr. M., and others: Fine Structure of the Alveolar Wall of the Lung, 1066
  Alterations in the Ultrastructure of the Blood—Air Barrier in the Mouse Lung after Inhalation of Colloidal Gold Particles, 1418
Secker, P. E., and Guile, Dr. A. E. : Magnetic Deflexion of Arcs, 1615
Second Cycle Casein in Milk : First and (Dr. T. A. J. Payens), 114

Second Virial Coefficient of Methyl Chloride Vapour (the late Prof. R. Whytlaw-Gray, C. G. Reeves and Dr. G. A. Bottomley), 1004
'Secondary Disease' in Radiation Chimaeras : Avoidance of (D. W. H. Barnes, P. L. T. Ilbery and Prof. J. F. Loutit), 488
Secondary School Mathematics—an International Survey (W. J. Langford), 1107
Secondary Schools : Mathematics in, *review* by W. J. Langford, 979
Secondary Schools, Incorporated Association of Assistant Masters in : The Teaching of Mathematics, *review* by W. J. Langford, 979
Secretion of Thyroid-stimulating Hormone in Rats : Blocking Effect of Morphine on the (Milan Sámel), 845
Secretion (Adrenal 17-Hydroxycorticosteroid), in Dogs : Muscular Exercise and (Prof. T. Suzuki, K. Yamashita and T. Mitamura), 715
Secretion (Nasal Salt), in the Humboldt Penguin (Prof. Knut Schmidt-Nielsen and Dr. W. J. L. Sladen), 1217
Secretion (Salivary) : Distension of the Rumen and (A. T. Phillipson and C. S. W. Reid), 1722
Section of the Facial Nerve : A Histoautoradiographic Study of the Effect of, on the Uptake of Methionine-^{35}S by the Cells of the Facial Nerve Nucleus (J. Fischer, Z. Lodin and Dr. J. Kaloušek), 341
Sections (Metal) : Observation of, by means of the 300-kV. Electron Microscope (Hidetsugu Tsuchikura and Keiji Ichige), 694
Security : Report on Defence—Britain's Contribution to Peace and, 1229
Security (Social) : Free Trade and (Political and Economic Planning, Broadsheet No. 412), 1164
Sediment Cores from the Indian Ocean, No. 1, Diatoms from Equatorial Indian Ocean (R. W. Kolbe), 953
Sédimentaire : Géologie—Les Séries Marines (Prof. Augustin Lombard), *review* by Sir Edward Bailey, 658
Sedimentation of Proteins through Starch : Rapid (Dr. N. G. Anderson), 45
Sediments (Marine) : Geological Interpretation of, *review* by Sir Edward Bailey, 658
Sedlacek, R. (Vickery, Dr. R. C., and) : Absorption Spectra of Rare Earths in Glasses, 39
Seed Coat : Effect of Gibberellic Acid on the Growth of Pea Seedlings when imbibed through the (Dr. Thomas C. Moore), 500
Seed Coat Structure of Yellow Chinese Rape (Dr. John G. Vaughan), 650
Seed Disinfection (Internal), with Pyridine-2-thiol-N-oxide and a Derivative (J. Dekker, O. M. van Andel and A. Kaars Sijpesteijn), 1017
Seed Production : 2,4-Dichlorophenoxyacetic Acid as an Aid to, when widely separated *Solanum* Species are Crossed (Leo A. Dionne), 361
Seedless Grapes of *Vitis vinifera* : Effect of Gibberellic Acid on Fruit Set and Berry Enlargement in (Dr. Robert J. Weaver), 851, *erratum*, 1110
Seedlings : Planting Distance and Number of, in Rice Cultivation (N. K. Jain), 202
  Transmission of Juvenile Rooting Ability from, to Adults of *Hevea brasiliensis* (Prof. T. J. Muzik and H. J. Cruzado), 1288
Seedlings (Pea) : Effect of Gibberellic Acid on the Growth of, when imbibed through the Seed Coat (Dr. Thomas C. Moore), 500
Seeds (Broad Bean) : Effect of a Single Light Exposure on Germinating (Dr. G. R. Lane and R. D. Butler), 1080
Seeds (Germinating Marrow) : *Isocitritase* in (M. T. Heydeman), 627
Seeds (Lettuce) : Effect of Anaerobic Conditions on Imbibed (Walter Heydecker), 1140
Seeds (Light-sensitive) : Similar Effects of Blue and Infra-Red Radiation on (Dr. P. F. Wareing and M. Black), 1420
Seekers and Finders (Amabel Williams-Ellis), Book 1, They dared to Ask Questions ; Book 2, Magic, Science and Invention ; Book 3, You Yourself, Fifty Straight Answers to Fifty Fair Questions, *review* by T. H. Hawkins, 1628
Segaert, O., and others : Role of Photons in Argon—Alcohol Counters, 1327
Segall, Shelagh B., and others : A Possible Intermediate in the Biosynthesis of Tryptophan—1-Deoxy-1-N-*o*-Carboxyphenyl-Ribulose, 549
Segments (Allocyclic), of Chromosomes : High Chiasma Frequency in (Dr. N. E. Virkki), 1148
Segregation Ratio of Alleles at the *T* Locus in the House Mouse : Influence of Time of Mating on the (Dr. A. W. H. Braden), 786
Sehon, Dr. A. H., and others : Isolation of Antibodies on Antigen—Polystyrene Conjugates, 1465
Sei-Whale Insulins (Sperm- and) : Structure of, and their Breakdown by Whale Pepsin (Yoshio Ishihara, Tsuneyuki Saito, Yasuzo Ito and Masahiko Fujino), 1468
Seki, Tokuichiro : Chromatographic Separation of Œstriol, Œstrone and Œtradiol-17β, 768
Sekiguchi, M., and Sibatani, Prof. A. : Nucleic Acids (Role of Pre-existing Deoxyribonucleic Acid in the Incorporation of Phosphorus-32 into Isolated Nuclei of Rabbit Appendix), 1512
Sekine, Tatsuya, and Saito, Prof. Nobufusa : Separation of Lanthanum from Thorium by Anion Exchange, 1464
Sekla, Prof. B. : Passive Transfer of Antitumour Factors through Milk in Rats, 1600
Sekuzu, Ichiro, and others : Activation of Cytochrome Oxidase by Synthetic Detergents, 1339
  Crystalline Cytochrome *c*—Crystallization of Cytochrome *c* from Pigeon Breast Muscle, 1588 ; Crystallization of Cytochrome *c* from Cow Kidney, 1589
Selachyl Alcohol : Effects of Alkoxyglycerols and especially, on the Bone Marrow in connexion with Irradiation Treatment and in Leukaemia Therapy (Astrid Brohult), 1484
Selby, Dr. Samuel M. (edited by Hodgman, Prof. Charles D., in association with Weast, Prof. Robert C., and) : Handbook of Chemistry and Physics, thirty-ninth edition, *review*, 661
Seldenrath, Prof. Th. R., and Gramberg, J. : Mechanical Properties of Non-Metallic Brittle Materials (Complexity of the Breakage Phenomena occurring in apparently Simple Compression Tests), 1577
Select Committee on Estimates : Fifth Special Report from the, Session 1956-57, 655
Selection for an Invariant Character—'Vibrissa Number'—in the House Mouse (R. B. Dun and A. S. Fraser), 1018
Selection of Undergraduate Students : Procedure for the (Discussion on, at the Home Universities Conferen[illegible]64
Selection and Training of Managers : Sixteen Q[illegible]tions about the (Colonel Lyndall F. Urwick), 1244
Selection (Disruptive) : Effects of—the Experimental Production of a Polymorphic Population (Dr. J. M. Thoday), 1124
Selective Uptake of Radiochemical Impurities by Mitochondria (G. A. Lumb), 132
Selenium : Protective Effect of Trace Elements other than, against Dietary Necrotic Liver Degenration (J. Bunyan, E. E. Edwin and J. Green), 1801
Selenium-type Photovoltaic Cells : Photo-electric Response of, to X-Rays (Dr. R. Feinberg), 1057
Self-Luminous Objects : Perceptual Stability of a Stroboscopically Lit Visual Field containing (Dr. D. M. MacKay), 507
Self-quenching Geiger Counters : Photo-ionization in (Prof. Rafi M. Chaudhri, Mustafa Yar Khan, Abida Khawaja and Rehana Dar), 1526
Seligmann, Dr. M. : Awarded a grant (renewal) from the Lady Tata Memorial Fund, 1703
Selle, Prof. Raymond M. : Spot Chromatography Identification of Citrus Rootstocks, 506
Selme, Pierre, et autres : Manuel de Photographie scientifique, *review* by J. Walton Siddorn, 798
Selye, Dr. Hans : The Stress of Life, *review* by Prof. J. Z. Young, 1494
Semal, Dr. J. : Virus Transmission by *Dactynotus cichoricola* H.R.L., a New Aphid on Chicory, 721
Semen (Bull) : Labelling of, with Phosphorus-32 *in vivo* (Dr. R. M. Dawson), 1014
Semenoff, Academician Nikolai : Elected a Foreign Member of the Royal Society, 1242, 1700 ; work of, 1700
Semiconductor Abstracts (compiled by Battelle Memorial Institute), edited by E. Paskell, Vol. 3 (1955), *review* by Dr. J. R. Tillman, 1168
Semi-conductors (International Union of Pure and Applied Physics International Conference on), 885
  Metallurgical Aspects of (Metal Physics Committee of the Institute of Metals Symposium on), 238
  Progress in (edited by Dr. Alan F. Gibson, Prof. R. E. Burgess and Prof. P. Aigrain), Vol. 2, *review* by Dr. J. R. Tillman, 1168
Semiconductors and Transistors, *review* by Dr. J. R. Tillman, 1168
Semliki Forest Virus : Infectivity of Ribonucleic Acid from Mouse Brains infected with (Dr. Ping-yao Cheng), 1800
Sen, Hari K., and Guess, Arnold W. : Extremely High Temperatures (Radiation Effects on Rankine-Hugoniot Shock Conditions), 1381
Sen, Dr. S. P. (Biswas, B. B., and) : Thioctic Acid and Photosynthetic Fixation of Carbon Dioxide, 1219
Sense (Static), of *Calliphora* and the Physical Stabilizing Effect of the Halteres (Dr. G. Schneider), 1355 ; (Dr. J. W. S. Pringle), 1356
Sense-Organs (Insect) : Apparatus for Stimulation of, by Air Puffs (D. M. Miller and E. H. Colhoun), 126
Sensitive Assay (A Highly), for Œstrogens (L. Martin and Dr. P. J. Claringbold), 620
Sensitive Detector for Gas-Liquid Chromatography : A Robust but (Dr. D. W. Turner), 1265
Sensitivity of the Spermatogenic Process in the Rat to Radiomimetic Drugs and X-Rays (A. W. Craig, B. W. Fox and Dr. H. Jackson), 353
Sensitivity (Strain), of Albino Rats to Reserpine (Dr. R. E. Coupland), 930
Sensitivity (Taste), in Human Subjects : Influence of Salt Deficiency on (Roy Yensen), 1472
Sensitivity Determinations (Electroretinographic) : Fluorescence of the Crystalline Lens and (Dr. E. Dodt and J. B. Walther), 286
Sensory Deprivation and the Cat's Optic Nervous System (Dr. Lawrence Weiskrantz), 1047
Separate Processes in the Cuticle of Albino Locusts with Internally Absorbed Phenol Substrates : Induction of Melanin Patterns and of Hardening as (Dr. B. M. Jones and W. Sinclair), 926
Separating Strychnine and Brucine by Paper Chromatography : A New Method for (G. Dušinsky and Dr. M. Tyllová), 1335
Separation of Bull Spermatozoa carrying *X*- and *Y*-Chromosomes by Counter-Streaming Centrifugation (Per Eric Lindahl), 784
Separation of Carotenoid Synthesis from Fat Synthesis in *Rhodotorula gracilis* by Diphenylamine (L. Slechta, O. Gabriel and Dr. O. Hoffmann-Ostenhof), 268
Separation of Lanthanum from Thorium by Anion Exchange (Tatsuya Sekine and Prof. Nobufusa Saito), 1464
Separation of the Lower Fatty Acids (C_1 to C_{10}) by High-Voltage Paper Electrophoresis (Dr. D. Gross), 264
Separation of Metastable Polymers by Starch Gel Electrophoresis (Geoffrey Franglen and Cécile Gosselin), 1152
Separation (Bacterial Cell) : Chaining and Unchaining *Streptococcus faecalis*—a Hypothesis for the Mechanism of (Dr. Iwo Lominsky, John Cameron and George Wyllie), 1477
Separation (Chromatographic), of Lactalbumin from Human Milk Whey on Calcium Phosphate Columns (Dr. Bengt Johansson), 996
Separation (Chromatographic), of Œstriol, Œstrone and Œstradiol-17β (Tokuichiro Seki), 768
Separation (Electrophoretic), and Classification of Blood Plasma Esterases (Dr. Klas-Bertil Augustinsson), 1786
Separation (Gas Chromatographic), of *Meta*- and *Para*-Xylenes in Aromatic Mixtures (Dr. Albert Zlatkis, Lawrence O'Brien and Philip R. Scholly), 1794
Separation (Paper Chromatographic), of Glucose and Sorbitol : A Solvent for the (Dr. W. R. Rees and T. Reynolds), 767
Separation, Detection and Estimation of C21 17 : 20-Dihydroxy-20-methyl Steroids (Dr. R. I. Cox), 638
Sera from Pregnant Women : Leucocyte Antibodies in (J. J. van Rood, J. G. Eernisse and Miss A. van Leeuwen), 1735
Sera (Precipitating) : A Simple Method for absorbing Heterologous Antibodies from (Dr. Joseph Böszörményi), 1344
Sergean, R. : Decision-making and the Communication of Information in an Industrial Setting, 1020
Series (New), of Anthelmintics (F. C. Copp, O. D. Standen, J. Scarnell, Deirdre A. Rawes and R. B. Burrows), 183
Series (New), of Ganglion-blocking Agents : Polyalkylpiperidines, a (Dr. A. Spinks and Prof. E. H. P. Young), 1397
Serine—Glycine Interconversion in Plant Tissues (A. P. Wilkinson and Dr. D. D. Davies), 1070
Serological Approach to the Study of Plant Viruses, *review* by Dr. Kenneth M. Smith, 72
Serological Determination of Developing Muscle Protein in Chick Embryo (Dr. Yoshito Ogawa, Takatada Kawahara and Jiroo Miura), 621
Serological Reactions : Use of Logarithms in recording (Prof. William C. Boyd), 1348

Serological Specificity of some Bacterial Polysaccharides : Contribution of Deoxymethylpentoses to the, and the Recognition of a New Sugar, Paratose (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
Serology : Plant Virus (Dr. R. E. F. Matthews), *review* by Dr. Kenneth M. Smith, 72
Serotonin : Pulmonary Arteriosclerosis due to (Dr. Paolo Rossi and Dr. Luciano Zamboni), 1216
Serotonin Metabolism in Herbivores (Kengo Nakai), 1734
Serra, Prof. A., and others : A Special Reaction of the Complement Fixation Test applied to the Study of Tumours, 622
Serra, Prof. J. A. : Interpretation of Nucleolar Inclusions, 1544
Serratosa, Dr. José M., and Bradley, Dr. W. F. : Infra-Red Absorption of OH Bonds in Mica, 111
Serum : Effect of Borate Buffer on the Electrophoresis of (D. R. Cooper), 713
  Immunoelectrophoretic Evidence for the Presence of Two Precipitating Antibodies in, following Infection with the Virus of Foot-and-Mouth Disease (Dr. F. Brown), 1130
Serum-free Medium : Adaptation to, by a Phagocytic Cell Strain derived from a Murine Lymphoma (Dr. Alan S. Rabson, Frances Y. Legallais and Samuel Baron), 1343
Serum Albumin : Site of Catabolism of (Dr. David Gitlin, James R. Klinenberg and Walter L. Hughes), 1064
Serum Albumins : Passage of, from the Mother to the Foetus (Prof. A. M. Schechtman and K. C. Abraham), 120
Serum Esterase in Carcinoma : Effect of Heparin on Pathologically Decreased (Dr. J. Skořepa, S. Novák and H. Todorovičová), 908
Serum β-Globulin Locus in Humans : Third Allele at the (Dr. O. Smithies), 1203
Serum Protein : Effect of Ultra-Violet Irradiation on Electrophoretic Properties of (Dr. N. M. Larin), 65
Serum Protein Fractions separated by Paper Electrophoresis : Determination of Transaminase Activity of (Dr. Miroslav Sevela), 915
Service, M. W., and Oguamah, D. : Colonization of *Anopheles funestus*, 1225
Service of Horticultural Techniques : Science in the (Fifteenth International Horticultural Congress), 315
Service Requirements : Land for, 601
Servico Meteorologico de Angola : Miscelanea Geofisica publicada em Commemoracao do X Aniversario do Servico Meteorologico Nacional, *review* by G. A. Bull, 1299
Servít, Dr. Z., and Sterc, J. : Audiogenic Epileptic Seizures evoked in Rats by Artificial Epileptogenic Foci, 1475
Servít, Dr. Z. (Holečková, E., and) : An Attempt to adapt Explanted Tissues to an Anticonvulsant ('Trimedal') and to Phenobarbital, 1541
Seta Elongation in *Pellia epiphylla* : Effect of Gibberellin and Indoleacetic Acid on (Prof. G. F. Asprey, K. Benson-Evans and A. G. Lyon), 1351
Setterfield, G., and Bayley, S. T. : Mechanism of Deposition and Extension of Primary Cell Walls, 530
Sevela, Dr. Miroslav : Determination of Transaminase Activity of Serum Protein Fractions separated by Paper Electrophoresis, 915
Severed Pea Apices : Regeneration of (H. F. Gulline and R. Walker), 530
Seville, A. T. K., and others : Polymer-type Elasticity in Non-polymer Crystals, 1678
Sewage Purification, Institute of (Midland Branch) : Symposium on Trade Wastes, 678
Sewell, I. A., and Nicol, Prof. T. : Effect of Antibiotics on the Phagocytic Activity of the Reticulo-Endothelial System, 1662
Sex : Evolution of, in the Flowering Plants of South Australia (P. A. Parsons), 1673
Sex Balance in a Long-Day Plant : Photoperiod, Auxin and (Prof. J. Heslop-Harrison and Y. Heslop-Harrison), 100
Sex Chromatin in the Basal Cells of the Epidermis and in Basal Cell Carcinomata : Occurrence of (David J. B. Ashley), 427
Sex Chromatin in Polyploid Nuclei of Human Amnion Epithelium (Harold P. Klinger and Hans G. Schwarzacher), 1150
Sex Chromosomes in the Hop, *Humulus lupulus* (R. A. Neve), 1084
Sex-linked and Sex-limited Mutation of the Fly *Muscina stabulans* (Fall.) (Muscidae), (H. E. Paterson), 932
Sexton, Dr. W. A., and Templeman, W. G. : Awarded the Research Medal of the Royal Agricultural Society of England, 1506 ; work of, 1506
Sexual Behaviour and the Vaginal Cycle in the Cat (Richard P. Michael), 567
Sexual Maturity in the Domestic Fowl : Light and (T. R. Morris and S. Fox), 1453
Shackleton (Margery and James Fisher), *review* by David James, 372
Shadow-Casting (High-Resolution), for the Electron Microscope : Simultaneous Evaporation of Platinum and Carbon for Possible Use in (D. E. Bradley), 875
Shafa, Dr. F. (Salton, Dr. M. R. J., and) : Some Changes in the Surface Structure of Gram-Negative Bacteria induced by Penicillin Action, 1321
Shafi, Dr. M. : At the Millenial Celebrations of Al-Mas'udi (Geographical Contributions of Al-Mas'udi, particularly in the field of Human Geography), 883
Shakeshaft, Miss E. M., and Rogowski, Mrs. B. F. W. : References to Scientific Literature on Fire, 1443
Shaking of Honeybee Queens prior to Flight (M. Delia Allen), 68
Shanahan, G. J. : Resistance to Dieldrin in *Lucilia cuprina* Wied., the Australian Sheep Blowfly, 860
Shand, J. A., and others : Sub-audible Geomagnetic Fluctuations, 1258
Shape of Alfalfa Mosaic Virus : Size and (Prof. John B. Bancroft and Prof. Paul Kaesberg), 720
Shape (Irregular Cross-sectional), and Constant Weight per Unit Length : Birefringence Determination in Objects of (S. C. Simmens), 1260
Sharaf, Dr. A., and Hafez, Dr. E. S. E. : Effect of the Synthetic Œstrogen Stilboestrol on Pregnancy in the Rabbit, 1211
Sharman, Dr. B. C. : 'Purple Pericarp', a Monofactorial Dominant in Tetraploid Wheats, 929
Sharp, Dr. D. H. : Trade Wastes (Methods of Treatment of Industrial Organic Wastes), 679
Sharp, T. M. : *Obituary* of Dr. T. A. Henry, 1699
Shatoury, Dr. H. H. : A Freshwater Mutant of *Balanus amphitrite*, 790
Shaw, Dr. G. W. (Heyes, Dr. J. K., and) : Chemical Determination of Deoxyribonucleic Acid in Root Tips before and after Cold Treatment, 1337
Sheba, Dr. Ch., and others : Enzymatic Abnormality in Erythrocytes of a Population sensitive to *Vicia faba* or Haemolytic Anaemia induced by Drugs, 1256
Sheehy, P. J. : Appointed deputy director of veterinary services, Northern Rhodesia, 459
Sheep : Immune Reactions to *Trichostrongylus colubriformis* Infestation in (Dr. D. F. Stewart and H. McL. Gordon), 921
  Iodine-131 in, before and after a Nuclear Reactor Accident (Prof. L. Van Middlesworth), 256
  Polymorphism in the β-Globulins of (G. C. Ashton), 849
Sheep (Australian Merino): A Dominant Felting Lustre Mutant Fleece-type in the (Dr. B. F. Short), 1414
Sheep (Worm-free), at Pasture : Growth and Reproduction in (Dr. C. R. W. Spedding, T. H. Brown and I. A. N. Wilson), 168
Sheep Blowfly (Australian) : Resistance to Dieldrin in *Lucilia cuprina* Wied., the (G. J. Shanahan), 860
Sheep Fleece : Persistence of Aldrin and Dieldrin Residues in (I. R. Harrison and C. A. Johnson), 1267
Sheep Foetus : Response of the Adrenal Medulla of the, to Asphyxia (Dr. R. S. Comline and Marian Silver), 283
Sheep Growth : Adverse Effect of Nitrate Metabolic Products on (N. D. Jamieson), 1601
Sheep Keds, *Melophagus ovinus* (L.) : Transfer o , from Ewes to their Lambs (W. A. Nelson), 56
Sheet and Plate : The Rolling of Strip, (Eustace C. Larke), *review* by Dr. L. S. Goddard, 988
Sheet Insulating Materials : Influence of the Ambient Medium on the Breakdown Voltage of (W. P. Baker), 1726
Sheffield Town Trustees : Grant of £2,000 a year for five years to the University of Sheffield, to strengthen the recently created Department of Psychiatry, 673
Shell Petroleum Co., Ltd. : Gift of £15,000 to the Development Fund of the University of Sheffield, 20
  Offer of £25,000 towards the cost of the new College at Oxford, with an additional £2,500 for the College library, 1378
Shellabarger, Dr. Claire J., and Pitt-Rivers, Dr. Rosalind : Presence of Triiodothyronine in Fowl, 546
Shelter Belts and Microclimate (Dr. J. M. Caborn), 160
Shephard, Dr. C. Y. : *Obituary* of O. T. Faulkner, 1176
Shepherd, R., and others : Mechanical Properties of Non-Metallic Brittle Materials (Laboratory Experiments in 'Ploughing' the Face off a Block of Coal), 1579
Shepherd, R. (Price, N. J., and) : Mechanical Properties of Non-Metallic Brittle Materials (Studies of the Penetration of a Roller Bit into Concrete containing a Strong Rock Aggregate), 1578
Shepherd, R. D. : At the thirteenth International Congress of Applied Psychology (Response Times to Stimuli varying in the Probability of their Appearance), 1579
Sheppard, R. C. (Kenner, Prof. G. W., and) : α-Amino*iso*butyric Acid, β-Hydroxyleucine, and γ-Methylproline from the Hydrolysis of a Natural Product, 48
Sher, Irving H., and others : Importance of the Synthesis of Acidic Polysaccharide for Wound Healing, 1543
Shercliff, J. A. : Heat and Thermodynamics, *review*, 732
Sheridan, Dr. J. : Automatic Measurement of Quality in Process Plants (Potentialities of Microwave Spectroscopy in Process Control Analysis), 166
Sheridan, Dr. J., and others : Microwave Spectra of Diazomethane and its Deutero Derivatives, 1000
  Microwave Spectrum of Nickel Cyclopentadienyl Nitrosyl and the Configuration of the Molecule, 1157
Sherman, Dr. J. K., and Lin, Dr. Teh Ping : Effect of Glycerol and Low Temperature on Survival of Unfertilized Mouse Eggs, 785
Sherman, T. F. (Ogston, Dr. A. G., and) : Electrophoretic Removal of Protein from Hyaluronic Acid, 482
Sherratt, H. S. A. : Flavonoids of the Primulaceae—Anthocyanins in the Flowers of *Primula sinensis*, 26
Sherratt, H. S. A. (Harborne, J. B., and) : Flavonoids of the Primulaceae—Distribution of Flavonoids in Genotypes of *Primula sinensis*, 25
Shewan, J. M. (Liston, J., and) : Processing of Foods with Ionizing Radiations (Irradiation of Fish), 878
Shield Design : The Theory and Practice of, *review* by J. Edwards, 976
Shielding : Radiation (B. T. Price, C. C. Horton and K. T. Spinney), *review* by J. Edwards, 976
Shields, B. D. C., and others : The Triple Point of Argon as a Thermometric Fixed Point, 831
Shigella shigae Toxin : Action of the, after Intracerebral Injection (Dr. H. Rašková and J. Vaneček), 1129
Shimizu, Prof. Nobuo, and Hamuro, Dr. Yoriaki : Deposition of Glycogen and Changes in some Enzymes in Brain Wounds, 781
Shimizu, Prof. T. : *Obituary* by Prof. G. A. D. Haslewood, 880
Shimizu, the late Prof. T., and others : Gamma-Aminobutyrylcholine, 1336
Shimomura, Toru, and others : Effect of Thiosemicarbazones on the Multiplication of Tobacco Mosaic Virus, 352
Shimura, Dr. Kensuke, and others : Enzymatic Formation of Aminomalonic Acid from Ketomalonic Acid, 417
Shin, Masateru, and others : Crystalline Cytochrome *c*—Crystallization of Cytochrome *c* from Wheat Germ, 1590
  Two Crystalline Haemoproteins of Wheat, 1656
Shinn, D. H. : Long-Distance Radio Propagation above 30 Mc./s. (Terminal Equipment), 1185
Shipbuilding Research Association, British : Election of Dr. S. L. Smith to a Fellowship of the Imperial College of Science and Technology, 1182
Shiraogawa, Takuro, and others : β-Glucuronidase, Lipase and Esterase in the Testis of the Cryptorchid Rat, 186
Shirley Institute : The, 466
Shock (Plane), and a Magnetic Field : An Experiment on the Interaction between a (Dr. K. Dolder and Dr. R. Hide), 1116
Shock Waves : Temperature Measurements of, by the Spectrum-Line Revesral Method (J. G. Clouston, Dr. A. G. Gaydon and Prof. I. I. Glass), 1325
Shoenberg, Dr. D. : Ban[illegible] Metals and the Structure of the Fermi Surface (The de [illegible] Alphen Effect), 526
Shore, Parkhurst A., a[illegible]others : Distribution of Norepinephrine in the Heart, 848

Shore at Whitstable, Kent : Microbenthos of the (E. J. Perkins), 791
Short, Dr. B. F. : A Dominant Felting Lustre Mutant Fleece-type in the Australian Merino Sheep, 1414
Short-lived Transients in Solar Noise : Duration and Band-width of (T. de Groot), 1676
Shorter Microbiological Assay Method for Oxytetracycline and Chlortetracycline (Nyiri László), 648
Shrew : The Life of the (Dr. Peter Crowcroft), *review* by H. R. Hewer, 517
Shrinkage Temperature of Human Collagen : Variation with Age of (Patricia C. Brown and Dr. R. Consden), 349
Shugar, Dr. D., and Baranowska, Miss J. : Quantitative Gram-staining with Labelled Iodine, 357
Shuler, K. E. (Broida, H. P., and) : Structure and Reactivity of Electronically Excited Species (Use of the Reversal of Iron Lines in studying Flame Temperatures), 321
Sialic Acids : Quantitative Paper Partition Chromatography of (Elisabet Svennerholm and Dr. Lars Svennerholm), 1154
Siamese Fighting Fish : Comparison of Effect of Lysergic Acid Diethylamide with Potassium Cyanide and other Respiratory Inhibitors on the (Dr. H. A. Abramson, Dr. B. Weiss and Dr. M. O. Baron), 1136
Sibatani, Prof. A. : Japanese Investigations on Nucleic Acids, 1511
Sibatani, Prof. A. (Sekiguchi, M., and) : Nucleic Acids (Role of Pre-existing Deoxyribonucleic Acid in the Incorporation of Phosphorus-32 into Isolated Nucleic of Rabbit Appendix), 1512
Siberia : Diamonds in (Prof. S. I. Tomkeieff), 323
Siddiqui, I. R., and others : Structure of an Acidic Polysaccharide elaborated by *Aerobacter aerogenes*, 999
Siddorn, J. Walton : Scientific Photography, *review*, 798
Side-Chain Model (Deoxyribonucleic Acid), of the Chromosomes (Dr. Drew Schwartz), 1149
Sidman, J. W. : Structure and Reactivity of Electronically Excited Species (Vibrational and Lattice Frequencies of the Ground and Excited States for the Nitrite Ion), 320
Siegel, B. Z. (Siegel, S. M., and) : Autoxidation of Pyrogallol—General Characteristics and Inhibition by Catalase, 1153
Siegel, S. M., and Siegel, B. Z. : Autoxidation of Pyrogallol—General Characteristics and Inhibitions by Catalase, 1153
Siemens, Sir William : Exhibition at the Science Museum, London, presenting the life and work of, 741
Sienkiewicz, Z., and others : Rapid Determination of Casein in Milk, 1277
Sieve (Molecular) : Crystal Structure of Chabazite, a (L. S. Dent and Prof. J. V. Smith), 1794
Sieves (Molecular), as Subtractors in Gas Chromatographic Analysis (Nathaniel Brenner and Vincent J. Coates), 1401
Signals (Doppler Radio), from Earth Satellites : Theoretical Analysis of (Dr. William C Guier and George C. Weiffenbach), 1525
Significance of the Adrenal Glands during the Post-natal Development of Thermoregulation in the Rat (Dr. P. Hahn and O. Koldovsky), 847
Significance of Biology, *review* by Dr. Alex Comfort, 1627
Significance for Present-day Studies in Biochemistry : Pasteur's Work on Fermentation and its (Prof. T. K. Walker), 940
Significance (Palaeomagnetic) : Age of a Pilansberg Dyke of (G. D. L. Schreiner), 1330
Significance (Spurious), in Genecological Trials (Dr. D. J. Harberd), 138
Sijpesteijn, A. Kaars, and others : Internal Seed Disinfection with Pyridine-2-thiol-N-oxide and a Derivative, 1017
Sikhote-Alin Meteorite Fall : Argon-39 in the (E. L. Fireman), 1613
Sikka, S. M., and others : Induced Polyploidy in Egyptian and Indian Clovers, 32
Silchester Archaeology (Dr. M. Aylwin Cotton), 1707
Silica (Vitreous) : Stress Optical Coefficients of Different Specimens of (Dr. R. S. Krishnan, E. S. Jog and R. Srinivasan), 692
Silica-treated Paper : Adsorption Chromatography on (J. B. Roberts), 338
Silicate in the Metabolism of *Azotobacter vinelandii* (Dr. R. F. Keeler and J. E. Varner), 127
Silicification of Bulliform Cells in Grasses (D. Wynn Parry and Dr. Frank Smithson), 1549
Silicified Permian Fossils from Texas and New Mexico—Pleurotomariacea (Prof. R. L. Batten), 1639
Silicon : Control of Surface Concentration in the Diffusion of Phosphorus in (M. J. Coupland), 1331
Silicon Boride, SiB_6 : Preliminary Investigations of the (Dr. Carl F. Cline), 476
Silicon Carbide : Spiral Pits on (Prof. V. G. Bhide), 1006
Silicon *p-n* Junctions : Electron Emission from (Dr. Jan Tauc), 38
Silicon 'Unijunction' Transistor (General Electric Company of America), 1509
Silicosis : Presence of Plasma Globulins in the Hyaline Tissue in Cases of (Dr. R. Ceppellini and Dr. B. Pernis), 55
Silkworm : Protocatechuic Acid in the Integument of the (Shigemi Kawase), 1350
Silkworm, *Bombyx mori* L. : The 'Brain' Hormone in the (Masatoshi Kobayashi and Jiro Kirimura), 1217
Silver, Marian (Comline, Dr. R. S., and) : Response of the Adrenal Medulla of the Sheep Foetus to Asphyxia, 283
Silver Fox (*Vulpes fulvus* Desm.) : Chromosome Number in the (O. Lande), 1353
Silver Medal of the Royal Aeronautical Society awarded to Dr. P. B. Walker, 1646
Silver Progress Medal for 1957 of the Royal Photographic Society awarded to Dr. Edwin H. Land, 312
Sim, Dr. G. A. : Appointed to a lectureship in chemistry at the University of Glasgow, 459
Simey, Prof. T. S. : Racial Prejudice, *review*, 1232
Similar Effects of Blue and Infra-Red Radiation on Light-sensitive Seeds (Dr. P. F. Wareing and M. Black), 1420
Similarities in the Characteristics of Solar Radiation at λ 10.7 cm. and in the Far Ultra-violet (C. M. Minnis and G. H. Hazzard), 1796
Simmens, S. C. : Birefringence Determination in Objects of Irregular Cross-sectional Shape and Constant Weight per Unit Length, 1260
Simmonds, C. E. : Technical Education in the U.S.S.R., 316
Simms Gold Medal of the Royal Aeronautical Society awarded to L. F. Nicholson, 1646
Simon of Wythenshawe, Lord : The Boards of Nationalized Industries, 511
Simon, Ivan (Kreidl, E. L., and) : Effect of Water upon the Polymorphic Transitions in Anhydrous Sodium Sulphate, 1529
Simon, M., and others : Processing of Foods with Ionizing Radiations, 877
Simons, P. J. (Harris, Dr. R. J. C., and) : Nature of the Antigens responsible for the Acquired Tolerance of Turkeys to Rous Sarcoma Agent, 1485
Simonsen, the late Sir John, and Ross, Dr. W. C. J. : The Terpenes, Vol. 4, The Triterpenes and their Derivatives—Hydrocarbons, Alcohols, Hydroxy-aldehydes, Ketones and Hydroxy-ketones, *review* by Prof. A. J. Birch, 445
Simonsen, Dr. M. : Awarded a grant (renewal) from the Lady Tata Memorial Fund, 1703
Simple Diodes : Magnetic Constriction in (Dr. B. Meltzer), 1332
Simple Method for absorbing Heterologous Antibodies from Precipitating Sera (Dr. Joseph Böszörményi), 1344
Simple Technique for producing Fruit Bodies of Wood-destroying Basidiomycetes (N. Tamblyn and E. W. B. Da Costa), 578
Simpson, Sir George : Elected to honorary membership of the Royal Meteorological Society, 1375
Simpson, Dr. G. Gaylord : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
  Elected a Foreign Member of the Royal Society, 1242, 1701 ; work of, 1701
Simpson, Dr. G. Gaylord, and others : Life, an Introduction to Biology, *review*, 1561
Sims, A. P., and Cocking, Dr. E. C. : Assay of Isotopic Nitrogen by Mass-Spectrometer, 474
Simulium Control : Effects of, on Insectivorous Fishes (Philip S. Corbet), 570
Simulium griseicolle Becker : Filarial Infection in (R. W. Crosskey and M. E. Crosskey), 713
Simultaneous Evaporation of Platinum and Carbon for Possible Use in High-Resolution Shadow-Casting for the Electron Microscope (D. E. Bradley), 875
Simultaneous Occurrence of Moving and Standing Waves in a Positive Column (A. W. M. Cooper, J. R. M. Coulter and Prof. K. G. Emeléus), 1326
Sinclair, W. (Jones, Dr. B. M., and) : Induction of Melanin Patterns and of Hardening as Separate Processes in the Cuticle of Albino Locusts with Internally Absorbed Phenol Substrates, 926
Singer, Dr. K. : Use of Gaussian Functions for Intermolecular Potentials, 262
Singh, Daljit, and others : The Mango, *review* by T. A. Russell, 1364
Singh, Harkrishan (Parthasarathy, Dr. S., and) : Amplitude of a Quartz Plate vibrating in Liquids, 260
Singh, Lakhbir : An Electronic Mechanism of Addition Reactions, 110
  The Colour Problem of Ruby, 1264
Singh, Ranjit, and others : The Mango, *review* by T. A. Russell, 1364
Single Cell : Two Inhibitory Fibres forming Synapses with a (Dr. G. Hoyle), 1134
Single Cells : Antibody Production by (G. J. V. Nossal and Prof. Joshua Lederberg), 1419
Single Crystals (Aluminium—Zinc) : Unloading Effects in (A. T. Thomas), 1728
Single Crystals ($(K_xNa_{1-x})NbO_3$) : Electric Double Hysteresis in (L. E. Cross), 178
Single Electroplax of the Skate : A Method for Studying separately the Properties of the Innervated and Non-innervated Membrane of an Isolated (Dr. Ernest Schoffeniels), 287
Single Fibres of the Atrio-ventricular Node ; Transmembrane Potentials of (Dr. Brian F. Hoffman, A. Paes de Carvalho and W. Carlos de Mello), 66
Single-Hop Propagation of Radio Waves to a Distance of 5,300 km. (E. Warren and E. L. Hagg), 34
Single-Hop Propagation of Radio Waves to a Distance of 5,300 Miles (F. Kift), 1459
Single Light Exposure : Effect of a, on Germinating Broad Bean Seeds (Dr. G. R. Lane and R. D. Butler), 1080
Single Quanta of Circulation in Rotating Helium II : Detection of (Dr. W. F. Vinen), 1524
Single-Station Radio-Transit Observations : Determination of Orbital Characteristics of an Earth Satellite from (Gordon Grant, A. L. Jones, R. W. Burhans, P. S. Fay and David Frazier), 900
Singleton, Dr. V. L., and others : Decumbin, a New Compound from a Species of *Penicillium*, 1072
Sinha, Dr. K. P. : Electronic Configuration of Cations in some Distorted Spinels, 835
Sinkovics, Dr. J. : Occurrence and Filterability of Protoplast-like Elements in Aged Bacterial Cultures, 566
Sintering of Tin Powder (R. F. Smart and E. C. Ellwood), 833
Siple, Dr. Paul A. : Awarded the Patron's Medal of the Royal Geographical Society, 810
Sirenin : A Procedure for the Purification of (Prof. Leonard Machlis), 1790
Sironval, C. : Relation between Chlorophyll Metabolism and Nodule Formation in Soya Bean, 1272
Sisk, L. R. (McCullough, M.E., and) : Effect of Age of Young Dairy Calves on Dry-Matter Digestibility of Alfalfa Pellets, 57
Sisler, Harry H. : Nitrogen, Phosphorus, Arsenic, Antimony and Bismuth (Comprehensive Inorganic Chemistry, by Prof. M. Cannon Sneed and Prof. Robert C. Brasted, Vol. 5, Part I), *review*, 1428
Sison, jun., Bienvenido C., and Schubert, Walter J. : Glycerol Metabolism of the Brown Rot Mould *Poria vaillantii*, 1015
Sissons, H. A. : Freezing and Drying, 1696
Site of Catabolism of Serum Albumin (Dr. David Gitlin, James R. Klinenberg and Walter L. Hughes), 1064
Site (Possible), for Indolylacetic Acid Action : Evidence for a Protein Component in the Middle Lamella of Plant Tissue—a (B. Z. Ginzburg), 398
Sites of the Physiological Breakdown of the Red Blood Corpuscles (G. v. Ehrenstein and D. Lockner), 911
Siting of Nuclear Power Stations (House of Commons Debate on), 462
β-Sitosterol-D-Glucoside : Isolation of, from Groundnut Phospholipids (Dr. Francis Aylward and B. W. Nichols), 1064
Sixteenth Century : Social Structure and Archaeological Setting of the Pokom-Maya in the (Miss S. W. Miles), 1180
Sixth-Form Physics, *review* by W. H. Dowland, 586
Size Differences in *Cucurbita* (K. E. von Maltzahn), 1115
Size Distribution of Pores : Permeability and the (Dr. M. R. J. Wyllie and Dr. G. H. F. Gardner), 477 ; (Dr. T. J. Marshall), 477

Size Variation in *Entamoeba histolytica* (L. Freedman and Dr. R. Elsdon-Dew), 433
Size and Osmoregulation in Salmonid Fishes (Gwyneth Parry (Mrs. Howells)), 1218
Size and Shape of Alfalfa Mosaic Virus (Prof. John B. Bancroft and Prof. Paul Kaesberg), 720
Sizoo, Prof. S. J. : Nominated as national representative for Holland on the North Atlantic Treaty Organization Science Committee, 739
Sjöstrand, F. S., and Rhodin, J. (edited by) : Electron Microscopy—Proceedings of the Stockholm Conference, 1956, *review* by H. I. Matthews, 1626
Skagerrak : Records of the Group Pogonophora in the (J. B. Kirkegaard), 1086
Skate : A Method for Studying separately the Properties of the Innervated and Non-innervated Membrane of an Isolated Single Electroplax of the (Dr. Ernest Schoffeniels), 287
Skeletal Morphology in the Mouse : An Effect of the Uterine Environment upon (Dr. Anne McLaren and Dr. Donald Michie), 1147
Skeletons : Preparation of (Dr. D. H. Thompsett), 1509
Skertchley, A. R. B. : The α-β Transformation in Keratin, 639
Skill : Thinking as a, *review* by Prof. George Humphrey, 1629
  Training for—Recruitment and Training of Young Workers in Industry (Report by a Sub-Committee of the National Joint Advisory Council), 1293
Skilled Trades : Recruitment of (Prof. Lady Gertrude Williams), *review* by T. H. Hawkins, 373, 531
Skin : Effect of Ovariectomy, Œstrogen and Progesterone on the Activity of the Melanocytes in the (P. G. Bischitz and Dr. R. S. Snell), 1413
  Effect of Testosterone and Orchidectomy on the Activity of the Melanocytes in the (P. G. Bischitz and Dr. R. S. Snell), 187
Skin of the Rabbit : Atypical Guard-Hair Follicles in the (William E. Straile), 1604
  Giant Compound Hair Follicles in the (Dr. H. J. Whiteley), 850
Skin Pigments (Groundnut), and Conarachin II : Complex Formation between (Miss H. M. R. McDavid and W. E. F. Naismith), 480
Skinner, Prof. H. W. B. : Bulletin of the Institute of Nuclear Sciences 'Boris Kidrich', *review*, 590
Skinner, N. J., and others : Equatorial Spread-*F* and Magnetic Activity, 1724
Skipski, Vladimir P., and others : Cytolipin *H*, a Pure Lipid Hapten Isolated from Human Carcinoma, 1803
Skorepa, Dr. J., and others : Effect of Heparin on Pathologically Decreased Serum Esterase in Carcinoma, 908
Skottsberg, Prof. Carl : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Skudryzk, Dr. E. : Flow Noise (Noise produced by the Boundary-Layer Turbulence of a Rotating Cylinder), 388
Sky : The Night, in February, 314 ; in March, 603 ; in April, 884 ; in May, 1182 ; in June, 1510 : in July, 1771
  The Night, 1958 (Times Publishing Co., Ltd.), 530
Sky (Blue) : A Device for Visualizing the Pattern of Plane Polarized Light from (J. A. Chapman), 1393
Slack, Dr. R. : Newer Preparative Methods in Organic Chemistry (Organic Oxidations with Hexavalent Chromium), 239
Sladen, Dr. W. J. L. (Schmidt-Nielsen, Prof. Knut, and) : Nasal Salt Secretion in the Humboldt Penguin, 1217
Slater, Dr. Noel B. : The Development and Meaning of Eddington's 'Fundamental Theory', *review* by Prof. W. H. McCrea, 214
  Four-Dimensional Gas, *review*, 374
  Title of reader of applied mathematics in the University of Leeds conferred on, 1576
Slater, Patrick : The General Relationship between Test Factors and Person Factors—Application to Preference Matrices, 1225
Slechta, L., and others : Separation of Carotenoid Synthesis from Fat Synthesis in *Rhodotorula gracilis* by Diphenylamine, 268
Slee, O. B. : Radio Scintillations of Satellite 1958*a*, 1610
Slide Gel Diffusion Precipitin Test (W. Mansi), 1289
Slow Contracting Muscles (Fast and the), of the Mesothoracic Leg of the American Cockroach (*Periplaneta americana* L.) : Muscle Fibres of the (W. A. Smit), 1073
Smalles, Prof. A. E. : At the Annual Conference of the Geographical Association (Urban Studies), 606
Small, S. H., and others : Natural Airborne Radioactivity at Kjeller, Norway, 1197
Small Engineering Firms : Management Control of (L. Fontaine, J. W. Walker and W. R. Spencer), 1113
Small Firm : Personnel Management in a (Mrs. J. M. Collingridge and Mrs. J. M. Ritchie), 1310
Small Invertebrates : A Trap for Insects Biting (Dr. W. H. R. Lumsden), 819
Small Liquid Samples : A Direct-Plating Method for the Precise Assay of Carbon-14 in (Dr. C. C. McCready), 1406
Small Particles : Abrasion of the Insect Cuticle by Aqueous Suspensions of (Prof. V. B. Wigglesworth), 779
Small-Scale Preparation of Glyoxylic Acid labelled with Carbon-14 (R. M. Krupka and Prof. G. H. N. Towers), 335
Smalley, A. E. : Salt Marshes (Creekside *Spartina* Grass on the Georgia Marshes), 1513
Smallman, Dr. R. E. : Vacancies and other Point Defects in Metals and Alloys (Neutron Bombardment of Lithium Fluoride), 451
Smallpox in England and France : The Adoption of Inoculation for (Dr. Genevieve Miller), *review* by Dr. W. R. Bett, 1690
Smart, R. F., and Ellwood, E. C. : Sintering of Tin Powder, 833
Smidt, J. : Electron Spin Resonance of Coals—Saturation Effect, 176
Smit, Dr. J. van R. : Ammonium Salts of the Heteropolyacids as Cation Exchangers, 1530
Smit, W. A. : Muscle Fibres of the Fast and the Slow Contracting Muscles of the Mesothoracic Leg of the American Cockroach (*Periplaneta americana* L.), 1073
Smith, Anthony : Science and Society (Deployment of Scientific Personnel), 1184
Smith, A. G. : Appointed to the chair of aircraft propulsion in the College of Aeronautics, Cranfield, 528 ; work of, 528
Smith, Dr. A. G. : Appointed to a supernumerary lectureship in botany at Queen's University, Belfast, 1042
Smith, Dr. Audrey U. : Freezing and Drying Biological Materials, 1694
Smith, Dr. C. A. B. : Title of reader in genetical statistics in the University of London at University College conferred on, 89
Smith, Dr. David : Cleaning of Inscriptions and Sculptures in Sandstone, 812
Smith, E. : Effect of Hydrogen on the Deformation Characteristics of Alpha-Titanium, 902
Smith, Sir Ewart : The Engineer and Management (Fourth Graham Clark Lecture of the Institution of Civil Engineers), 611
Smith, Dr. E. Lester : Biochemical Functioning of Vitamin B_{12}, 305
Smith, Dr. F. G. : A Popular Account of Radio-Astronomy, *review*, 980
  The Radio Universe, *review*, 1562
Smith, Hamilton, and others : Arsenic in Detergents, 1463
Smith, Dr. J. A. B. : The Physiology and Biochemistry of Lactation, *review*, 986
Smith, Prof. J. E. : Elected a Fellow of the Royal Society, 881
Smith, J. Maynard : Prolongation of the Life of *Drosophila subobscura* by a Brief Exposure of Adults to a High Temperature, 496
Smith, Prof. J. V. (Dent, L. S., and) : Crystal Structure of Chabazite, a Molecular Sieve, 1794
Smith, Dr. Kenneth M. : The Serological Approach to the Study of Plant Viruses, *review*, 72
  Early Stages of Infection with the *Tipula* Iridescent Virus, 966
Smith, M., and Symons, Dr. M. C. R. : Interaction in Ionic Solutions (Effects of Changes of Solvent, added Electrolyte and Temperature on the first Electronic Absorption Band of the Iodide Ion), 241
Smith, P., and Bennett, A. M. H.: Vanillic Acid Excretion during Stress, 709
Smith, P. L. : Band Theory of Metals and the Structure of the Fermi Surface (Electronic Specific Heat of Simple Alloys), 527
Smith, R. E. : Naturalists Trust—their Contribution to Nature Conservation, 1447
Smith, Ray F. (edited by Steinhaus, Edward A., in association with) : Annual Review of Entomology, Vol. 3, *review* by Dr. P. T. Haskell, 1756
Smith, R. N. (King, A. S., and) : Diseases of the Intervertebral Disk of the Cat, 568
Smith, R. W., and Raynor, G. V. : Melting, Diffusion and related Topics (Investigations on the Grey Tin/White Tin Transformation), 320
Smith, Sheila : Induction of Triploidy in the South African Clawed Frog, *Xenopus laevis* (Daudin), 290
Smith, S. B. : *Obituary*, 1506
Smith, Dr. S. L. : Elected to a Fellowship of the Imperial College of Science and Technology, 1182
Smith, V. H. : Removal of Internally Deposited Plutonium, 1792
Smith, W. : Appointed supernumerary agricultural engineer, Mauritius, 459
Smith, Dr. W. Campbell : The Geological Society of London, 149
Smith, W. Hugh : Reduction of Low-Temperature Injury to Stored Apples by Modulation of Environmental Conditions, 275
Smith-Keary, P. F. : An Unstable Mutation in *Salmonella typhimurium*, 1672
Smith-Rose, Dr. R. L. : Ionospheric Research, *review*, 726
  Elsevier's Dictionary of Electronics and Waveguides in Six Languages, *review*, 801
  Long-Distance Radio Propagation above 30 Mc./s., 1186
Smithies, Dr. O. : Third Allele at the Serum β-Globulin Locus in Humans, 1203
Smithson, Dr. Frank (Parry, D. Wynn, and) : Silicification of Bulliform Cells in Grasses, 1549
Smithsonian Institution : Report of the Secretary and Financial Report of the Executive Committee of the Board of Regents for 1956-57, 1709
Smoke : Industrial, 1572
Smoke Abatement, 741
Smoke (Cigarette) : Free-Radicals produced in (M. J. Lyons, L. F. Gibson and Dr. D. J. E. Ingram), 1003
Smoking : Statistics of (Tobacco Manufacturers' Standing Committee, Research Paper No. 1, edited by G. F. Todd), 1181
Smoking and Lung Cancer (Dr. John Burton), 1768
Smoking Habits and Mortality among Workers in Cigarette Factories (Dr. R. A. M. Case), 84
Smyth, Prof. J. D. : Cultivation and Development of Larval Cestode Fragments *in vitro*, 1119
Snails before Fixation : Relaxation of (Dr. Bruce M. McCraw), 575
Snake Venom (Tiger) : Antagonism between the Actions of Staphylococcal Toxin and (Dr. Edgar A. North and Hazel M. Doery), 1542
Snakes : North American, *review*, 872
Snakes of the United States and Canada : Handbook of (Prof. Albert Hazen Wright and Anna Allen Wright), Vols. 1 and 2, *review*, 872
Sneddon, Prof. I. N. : Elected a Fellow of the Royal Society of Edinburgh, 739
Snedden, Sir Richard : A Wages Policy, 162
Sneed, Prof. M. Cannon, and Brasted, Prof. Robert C. : Comprehensive Inorganic Chemistry, Vol. 5, Nitrogen, Phosphorus, Arsenic, Antimony and Bismuth (Harry H. Sisler), Nonaqueous Chemistry (Alfred R. Pray) ; Vol. 6, The Alkali Metals (John F. Suttle), Hydrogen and its Isotopes (Robert C. Brasted), *review*, 1428
Snell, Dr. R. S. (Bischitz, P. G., and) : Effect of Testosterone and Orchidectomy on the Activity of the Melanocytes in the Skin, 187
  Effect of Ovariectomy, Œstrogen and Progesterone on the Activity of the Melanocytes in the Skin, 1413
Snell, Walter H., and Dick, Esther A. : A Glossary of Mycology, *review* by Dr. J. Grainger, 517
Snow Crystals : Symmetry of (Prof. S. Tolansky), 256
Snowdonia : Sub-aerial Volcanicity in (N. Rast, R. V. Beavon and F. J. Fitch), 508
Snowdrops and Snowflakes, a Study of the Genera *Galanthus* and *Leucojum* (F. C. Stern), *review* by R. D. Meikle, 1691
Snowflakes : Snowdrops and, a Study of the Genera *Galanthus* and *Leucojum* (F. C. Stern), *review* by R. D. Meikle, 1691
Soaps (Non-ionic and Amphoteric) : A Colour Reaction for (Dr. J. E. Lovelock and T. Nash), 1263
Sobolewski, G., and others : Influence of Metallic Ions on the Reaction of Ethylene Diamine with Epinephrine and Norepinephrine, 1061
Sobti, S. N. (Khoshoo, Dr. T. N., and) : Cytology of Indian Species of *Artemesia*, 853
Social Behaviour in the Wild Rabbit (K. Myers and R. Mykytowycz), 1515
Social Biology Council, British : Conference on the Making of a Scientist, 603
Social Medicine at Aberdeen, 740
Social Security : Free Trade and (Political and Economic Planning, Broadsheet No. 412), 1164
Social Structure and Archaeological Setting of the Pokom-Maya in the Sixteenth Century (Miss S. W. Miles), 1180

Social Work, British National Conference on : Third Meeting (Children and Young People), 1381
Social and Preventive Medicine at Belfast, 599
Société de Chimie biologique : Charles Léopold Mayer Prize for 1957 awarded to Prof. J. Brachet, 1182
Société pour l'Étude et la Protection des Mammifères (Comité de Direction et d'Administration of *Mammalia* and the) : Colloquium on Systematics and Biology of the Ungulates, 237
Société des Radioélectriciens : International Symposium on Nuclear Electronics, 1640
Société Française de Métallurgie (Non-destructive Testing Group of the Institute of Physics and the) : Joint Conference in Paris, 813
Societies : Steam Intellect, *review* by Prof. W. H. G. Armytage, 585
Societies (Learned) : Covenanted Subscriptions to, 1243
Societies (Natural History) : Directory of (New edition to be published by the British Association for the Advancement of Science), 741
Society : Archaeology and (Prof. Grahame Clark), third edition, *review* by M. C. Burkitt, 374
  Children and, 1381
  Science and (Royal Institute of Chemistry, the Institute of Biology and the Institute of Physics Symposium on), 603, 1183
Sociology : Pioneer of—the Life and Letters of Patrick Geddes (Philip Mairet), *review* by R. Brightman, 731
Sociology of Statistics, *review* by I. J. Good, 1687
Sociology (Plant) : A Practical Guide to, for Foresters and Agriculturists (Prof. F. R. Bharucha and Dr. W. C. DeLeeuw), *review* by Maurice Ashby, 987
Soddy Commemoration Plaques, 1571
Sodium in Muscle : Effect of Insulin on (Dr. R. Creese, J. L. D'Silva and Jean Northover), 1278
Sodium-22 in Rat Bone : Retention of (Dr. G. M. Kellerman), 914
Sodium with Graphite : Lamellar Compound of (R. C. Asher and S. A. Wilson), 409
Sodium, Potassium, Lactose and Water in Milk : Interrelationships of the Concentrations of (J. A. F. Rook and Marian Wood), 1284
Sodium (Erythrocyte Potassium and), in the Possum, *Trichosurus vulpecula* : Variations in the (Jennifer M. Barker), 492
Sodium-free Media : Electrical Responses of Frog Spinal Ganglion Cells in (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 703
  Electrical Responses of Neuron Cell-Bodies in (Prof. K. Koketsu, J. A. Cerf and S. Nishi), 1798
Sodium Chlorate (Neutron-irradiated) : Nuclear Quadrupole Resonance of (Joseph Depireux and Prof. Jules Duchesne), 759
Sodium Chloride Crystals : Etch Figures on (B. Jeszenszky), 559
  Rectifying Effects of (Dr. S. Császár), 1158
Sodium Content of Erythrocytes in Hyperthyroidism (Dr. W. A. Boekelman), 1136
Sodium Formate-^{14}C as Precursor : Distribution of Carbon-14 in Components of Goat's Milk, with (Samuel Misler, Leon Tumerman and Henry R. Roberts), 346
Sodium Phosphate Crystals on Salt Fish (Dr. W. J. Dyer, Doris I. Fraser and J. R. Dingle), 858
Sodium Sulphate (Anhydrous) : Effect of Water upon the Polymorphic Transitions in (E. L. Kreidl and Ivan Simon), 1529
Soft Fruit Growing : History of (Eric Hobbis), 536
Soft Rot Bacteria : Occurrence of, in Scottish Soils (Dr. D. G. Graham), 61
Soil : Effect of Carbon Dioxide on Multiplication of *Fusarium* in (Dr. R. H. Stover and Dr. S. R. Freiberg), 788
  Effect on Earthworm and Diptera Populations of BHC Dust applied to (Jerzy J. Lipa), 863
  Fate of Spores of *Trichoderma viride* Pers. ex Fr. introduced into (R. Caldwell), 1144
  A Method for Isolating *Pseudomonas mors-prunorum* Phages from the (J. E. Crosse and M. K. Hingorani), 60
  The World of the (Sir E. John Russell), *review* by Dr. P. C. DeKock, 297
Soil (Tea) : Rate of Calcium Loss Resulting from Ammonium Sulphate Treatment of a (N. G. Gokhalé), 426
Soil and the Growing Plant, *review* by Sir John Russell, 1627
Soil—Plant Relationships (Dr. C. A. Black), *review* by Sir John Russell, 1627
Soil Bacteria : Occurrence of D-Acylase in (Prof. Yukio Kameda, Etsuko Toyoura and Yukio Kimura), 1225
Soil Coccus capable of utilizing 'Tween 80' as a Sole Source of Carbon : Isolation of a (Kazumori Minami), 430
Soil Micro-organisms : Effects of Gibberellic Acid on (Dr. K. C. Lu, C. M. Gilmour, A. C. Zagallo and W. B. Bollen), 189
Soil Minerals : Release of Phosphate from, by Hydrogen Sulphide (Joan I. Sperber), 934
Soil Samples (Fresh) : Use of Deep-Freezing in the Preservation and Preparation of (J. K. R. Gasser), 1334
Soil Saprophyte : *Fusarium oxysporum* as a (D. Park), 1509
Soil Science, *review* by Dr. P. C. DeKock, 297
Soil-borne Virus associated with the Corky Ringspot Disease of Potato (C. H. Walkinshaw and Dr. R. H. Larson), 1146
Soil-burrowing Insects : Lapse-time Motion Picture Studies of (B. C. Green and J. W. T. Spinks), 434
Soils : Influence of Media on the Counts of *Clostridium butyricum* in (Dr. D. J. Ross), 1142
  Magnesium in Plants and, *review* by Dr. E. J. Hewitt, 799
  Restoration of Agricultural and other (Association of Applied Biologists Meeting on), 390
Soils (British) : Free Acid in (Eville Gorham), 106
Soils (East African) : Pattern of Humus Decomposition in (H. F. Birch), 788
Soils (Scottish) : Occurrence of Soft Rot Bacteria in (Dr. D. C. Graham), 61
Solanine : Identification of (Dr. E. G. C. Clarke), 1152
Solanum Species are Crossed : 2,4-Dichlorophenoxyacetic Acid as an Aid to Seed Production when widely separated (Leo A. Dionne), 361
Solanum tuberosum and *Digitalis purpurea* : Root Diffusates of (Dr. C. Ellenby), 920
Solar Activity and the Ionosphere (C. M. Minnis), 543
Solar Activity and Radio Communication (R. Naismith), 954
Solar Corona without an Eclipse, *review* by Prof. R. O. Redman, 871
Solar-Flare Effect in the *F*2-Layer of the Ionosphere (C. M. Minnis and G. H. Bazzard), 690
Solar Maximum of 1957 : A Large Cosmic-Ray Decrease accompanying (Cosmic Rays and the Sunspot Cycle), (J. R. Winckler and L. Peterson), 1317
Solar Noise : Duration and Band-width of Short-lived Transients in (T. de Groot), 1676
Solar Radiation at λ10.7 cm. and in the Far Ultra-violet : Similarities in the Characteristics of (C. M. Minnis and G. H. Bazzard), 1796
Solar Radio Emission : A New Spectral Characteristic in (A. Maxwell and G. Swarup), 36
Solar Radio Event : A Remarkable (Staff of the Ionosphere and Radio Astronomy Section of the Netherlands Telecommunications Services), 542
Sole Source of Carbon : Isolation of a Soil Coccus capable of utilizing 'Tween 80' as a (Kazumori Minami), 430
Solem, Dr. Alan : Biogeography of the New Hebrides, 1253
Solid Powders dispersed in Liquid Paraffin : Influence of Moisture upon the Dielectric Properties of (Rempei Gotohi, Tetsuya Hanai and Naokazu Koizumi), 406
Solid State Phenomena in Electronics and Telecommunications (Postal and Telecommunications Group of the Brussels Universal and International Exhibition International Conference on), 813
Solid-State Science for the Engineer, *review* by K. J. Pascoe, 1496
Solidification : Promoting the Stable Eutectic Reaction in Magnesium-treated Iron Castings by Vibration during (J. H. Gittus), 1004
Solids : Action of High-Energy Radiation on (Radiation Research Visiting Club Meeting in Cambridge on), 315
  Damage to, by Liquid Impact at Supersonic Speeds (Dr. F. P. Bowden and J. H. Brunton), 873
  Dynamic and Static Elasticities of (Dr. J. F. W. Bell), 1330
  Molar Sound Velocity of (Dr. J. Schuyer), 1394
  Radiation Effects in (G. J. Dienes and G. H. Vineyard), *review* by Dr. A. H. Cottrell, 977
  Spectroscopy of (Physical Society Conference on), 1042
Solids (Irradiated) : Lattice Defects in, *review* by Dr. A. H. Cottrell, 977
Solitary HeLa Cells : Multiplication of (Dr. Peter Wildy and Michael Stoker), 1407
Solomon, Dr. M. E. : Meaning of Density-Dependence and related Terms in Population Dynamics, 1778
Sols (Hydrophobic) : Elimination of Dialysis in the Preparation of (P. Nagels), 638
Soluble Antigens in Microsomes and other Cell-Fractions of Rat Liver (Dr. P. Perlmann and Dr. V. D'Amelio), 491
Soltys, Dr. M. A. (Polge, Dr. C., and) : Freezing and Drying, 1696
Soluble Succinic Dehydrogenase and a Particulate Cytochrome System Preparation : Reconstitution of the Succinic Oxidase System from (Prof. D. Keilin and Dr. Tsoo E. King), 1520
Solution : One-Electron *versus* Two-Electron Transfer Processes in the Mechanism of Oxidation-Reduction Reactions in (Prof. Joseph Weiss), 825
Solution of Eigenvalue Problems, *review* by Dr. R. G. Cooke, 978
Solution of Gases in Liquids : Cavitation and the (Dr. K. S. Iyengar and Prof. E. G. Richardson), 1328
Solution (Potassium Hyaluronate) : Reduction of the Viscosity of a, by Ultra-violet Irradiation (Eigill Hvidberg, Sven Ancher Kvorning, Arne Schmidt and Jens Schou), 1338
Solutions : Theory of, *review* by Prof. H. C. Longuet-Higgins, 978
  The Molecular Theory of (Prof. I. Prigogine, with the collaboration of A. Bellemans and V. Mathot), *review* by Prof. H. C. Longuet-Higgins), 978
Solutions at Low Temperatures : Proteins in (Simon Freed, James H. Turnbull and William Salmre), 1731
Solutions (Aqueous), of Guanylic Acid and Guanosine : Effect of Ionizing Radiation on (G. Hems), 1721
Solutions (Dilute): Dynamics of Chain Molecules in, with special reference to Non-Newtonian Viscosity (Dr. Roger Cerf), 558
Solutions (Ionic) : Interaction in (Faraday Society General Discussion on), 240
Solutions (Manganous Sulphate) : An Ultrasonic Investigation of Chemical Kinetics in (Sushil Kumar Kor), 1462
Solvent for the Paper Chromatographic Separation of Glucose and Sorbitol (Dr. W. R. Rees and T. Reynolds), 767
Solvents (Organic) : Acetylation of Trypsin in (Spyros Vratsanos, M. Bier and Prof. F. F. Nord), 414
  Anomalous Behaviour of β-Diketone Complexes of the Lanthanons in (Dr. N. K. Dutt and P. Bandyopadhyay), 1682
Somatic Cell Variation : Genetic Aspect of (Eleventh Biology Research Conference of the Biology Division of the Oak Ridge National Laboratory), 1706
Somatic Chromosomes : Human (Dr. C. E. Ford and P. A. Jacobs, and Dr. L. G. Lajtha), 1565
Somme, Miss L. : At the Conference of the Scottish Branch of Aslib (Growth of Libraries in Norway since the Second World War), 746
Sonnenkorona : Die (Prof. M. Waldmeier), Band 2, Struktur und Variationen der Monochromatischen Korona, *review* by Prof. R. O. Redman, 871
Sorbents (Porous) : Dispersion Energies in (Prof. R. M. Barrer), 176
Sorbitol : A Solvent for the Paper Chromatographic Separation of Glucose and (Dr. W. R. Rees and T. Reynolds), 767
Soulsby, Dr. E. J. L. : Nature of Immune Responses in Parasitism (Immunological Responses of the Host to Helminth Infestations), 464
Sound Velocity of Solids : Molar (Dr. J. Schuyer), 1394
Source (Sole), of Carbon : Isolation of a Soil Coccus capable of utilizing 'Tween 80' as a (Kazumori Minami), 430
Source of Error (Possible), in the Chemical Detection of Indolyl Acetic Acid in Plants (R. Nichols), 919
South African Clawed Frog, *Xenopus laevis* (Daudin) : Induction of Triploidy in the (Sheila Smith), 290
South African Council for Scientific and Industrial Research : Register of Current Scientific Research at South African Universities (1956), 1702
South African Museum, Cape Town : Annual Report for 1956-57, 1108
South African Research, 1702
South African Universities : Register of Current Scientific Research at, 1956 (South African Council for Scientific and Industrial Research), 1702
South Australia : Evolution of Sex in the Flowering Plants of (P. A. Parsons), 1673
South-East England : Conservation of Nature in (South-Eastern Union of Scientific Societies Conference on), 743, 1446

South-East of England : Conserving Wild Life and Amenities in the (South-Eastern Union of Scientific Societies Conference on), 315
South-Eastern Union of Scientific Societies : Sixty-third Annual Congress, 238 ; (F. J. Epps), 1707
  Conference on Conserving Wild Life and Amenities in the South-East of England, 315
  Annual Conference on Conservation of Nature in South-East England, 743, 1446
  Symposium on Naturalists Trust—their Contribution to Nature Conservation, 1447
  Presidential Address : All theWorld's a Stage (Prof. H. L. Hawkins), 1707
  Presidential Address to the Archaeological Section : Silchester Archaeology (Dr. M. Aylwin Cotton), 1707
  Presidential Address to the Botanical Section : Toadstools (Dr. F. B. Hora), 1708
  Presidential Address to the Zoological Section : The Birds of Reading (Dr. C. C. Balch), 1708
Southampton Area : Occurrence of *Donsiella limnoriae* Stephenson (Copepoda, Harpacticoida) in the (S. Krishnaswamy and L. T. Jones), 1016
Southampton Water : Coexistence of Three Species of the Wood-boring Isopod *Limnoria* in (Dr. S. K. Eltringham and A. R. Hockley), 1659
Southern Arabia : Fishes of the Red Sea and (Henry W. Fowler), Vol. I, Branchiostomida to Polynemida, *review* by Dr. E. Trewavas, 298
Southern Ocean Waters : Age Determinations of (J. W. Brodie and R. W. Burling), 107
Southern Regional Council for Further Education (Southern Regional Council of the Federation of British Industries, in co-operation with the) : Report of the Regional Conference on Industry and the Technical Colleges, organized by the, 1573
Southern *B* Stars : Radial Velocities of (M. W. Feast, A. D. Thackeray and A. J. Wesselink), 1116
Southgate, Dr. B. A. : Water Quality Problems in the United Kingdom, 24
Southward, Dr. A. J., and Southward, E. C. : Pogonophora from the Atlantic, 1607
Southward, E. C. (Southward, Dr. A. J., and) : Pogonophora from the Atlantic, 1607
Southwell, Sir Richard : Use of an Analogue to resolve Stoke's Paradox, 1257
  Honorary fellowship of the Royal Aeronautical Society awarded to, 1646
Soviet Contribution to the International Geophysical Year, 1702
Soviet Education for Science and Technology (Alexander G. Korol), 1491
Soviet Science : Forty Years of, 1109
Soviet and Western Attitudes t Science, 88
Soviet Union : Exchange Visits with the, 947
Soya Bean : Relation between Chlorophyll Metabolism and Nodule Formation in (C. Sironval), 1272
Space : The Exploration of, by Radio (R. Hanbury Brown and Prof. A. C. B. Lovell), *review* by Dr. F. G. Smith, 1562
  Into, *review* by D. G. King-Hele, 980
Space (Apparent Free), in a Brown Alga : Effect of Potassium Cyanide on (P. L. Bergquist), 1270
Space (Interplanetary) : The Transition from the Ionosphere to (Royal Astronomical Society Geophysical Discussion on), 1237
Space Flight : Satellites and (Eric Burgess), *review* by D. G. King-Hele, 980
Space Research and Exploration (edited by Prof. D. R. Bates, in association with Patrick Moore), *review*, 1299
Spaltro, E. (Cesa-Bianchi, M., and) : At the thirteenth International Congress of Applied Psychology (Workers' Mobility in North Italy), 1580
Spanish Basque and Nigerian African Populations : Haptoglobin Types in British, (Dr. A. C. Allison, Dr. B. S. Blumberg and Mrs. ap Rees), 824
Spanish Electronics Bulletin, 1573
'Spansule' Phenobarbitone, 1377
Spark Discharge : Surface Hardening of Metals by (Prof. Hugh O'Neill), 1421
  Surface Hardening of Non-ferrous Metals by (Dr. N. C. Welsh), 1005
Sparkes, Dr. S. R. : Appointed to the new chair of engineering structures in the Imperial College of Science and Technology, 813, 946 ; work of, 946
Sparrow, D. H. B. : European Brewery Convention Trials, 1515
Spatial and Temporal Variation of Microfibrillar Organization in Plant Cell Walls (D. S. Belford, Dr. A. Myers and Prof. R. D. Preston), 1251
Special Conditions in Normal and Tumorous Nuclei (Prof. A. Stolk), 1739
Special Reaction of the Complement Fixation Test applied to the Study of Tumours (Prof. A. Serra, G. Guarini, P. Lovisetto, D. Castelli and F. Balzola), 622
Species : The—Yesterday and To-morrow (J. S. L. Gilmour), 379
Species of *Eucalyptus* : Effect of Gibberellic Acid on (G. Scurfield and C. W. E. Moore), 1276
Species of *Penicillium* : Decumbin, a New Compound from a (Dr. V. L. Singleton, N. Bohonos and A. J. Ullstrup), 1072
Species of *Thiobacillus* : Occurrence of Rhodanese in a (C. A. McChesney), 347
Species (New), of *Atolla* (Dr. F. S. Russell), 1811
Species (New), of *Protopitys* (J. Walton), 1377
Species Difference in Pyridine Nucleotide Synthesis by Erythrocytes (P. G. Tulpule), 1804
Species Hybrids of Tea (D. J. Wood and P. K. Barua), 1674
Species-Specific Differences in Free Amino Acids and Peptides in Sea-Urchin Eggs and Embryos (Pure Species and Hybrids), (Dr. P. S. Chen and Prof. F. Baltzer), 98
Specific Diffusible Antigen of Rinderpest Virus demonstrated by the Agar Double-Diffusion Precipitation Reaction (G. White), 1409
Specific Inhibition of Carotenoid Synthesis in a Photosynthetic Bacterium and its Physiological Consequences (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250
Specific Inhibitor of Photosynthesis : Xylose as a (Dr. K. A. Hassall), 1273
Specific Method (A Rapid and), for the Isolation of Pneumococcal Polysaccharide (Dr. A. S. Markowitz and Jack R. Henderson), 771
Specific Radioactivity : Pitfalls of, in Measuring Synthesis of Deoxyribonucleic Acid (Dr. L. G. Lajtha), 1609
Specific (Species-) Differences in Free Amino-Acids and Peptides in Sea-Urchin Eggs and Embryos (Pure Species and Hybrids), (Dr. P. S. Chen and Prof. F. Baltzer), 98
Specificity of Crystalline Saccharogenic Amylase of Moulds (Yoshio Tsujisaka, Juichiro Fukumoto and Takehiro Yamamoto), 770
Specificity (Serological), of some Bacterial Polysaccharides : Contribution of Deoxymethylpentoses to the, and the Recognition of a New Sugar, Paratose (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
Specimen Carrier in Double-Beam Infra-Red Spectroscopy: Agar as (J. G. Feinberg, H. D. C. Rapson and Mary P. Taylor), 763
Specimen Method (Low-Temperature), of Electron Diffraction and Electron Microscopy : Examination of Cellulose Fibre by the (Goro Honjo and Masaru Watanabe), 326
Specimens (Different), of Vitreous Silica : Stress Optical Coefficients of (Dr. R. S. Krishnan, E. S. Jog and R. Srinivasan), 692
Spector, W. G., and Willoughby, D. A. : Experimental Suppression of the Early Inflammatory Phenomena of Turpentine Pleurisy in Rats, 708
Spectra (Absorption), of Molecular Complexes (R. Foster), 357
Spectra (Absorption), of Rare Earths in Glasses (Dr. R. C. Vickery and R. Sedlacek), 39
Spectra (Emission), of the Luminescence of Green Plant Materials : Action and (Gordon Tollin, Eiji Fujimori and Prof. Melvin Calvin), 1266
Spectra (Infra-Red), of Free Radicals (Dr. K. Nolen Tanner and Raymond L. King), 963
Spectra (Infra-Red), of Salts of Carboxylic Acids : Effect of the Metallic Ion on the (Bryan Ellis and H. Pyszora), 181
Spectra (Infra-red Absorption), of Casein and Lactose (K. P. Norris and J. E. S. Greenstreet), 265
Spectra (Infra-red Absorption), of Lactose and Dried Milk : Effects of Crystallinity on the (J. D. S. Goulden and Jonathan W. White, jun.), 266
Spectra (Microwave), of Diazomethane and its Deutero Derivatives (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1000
Spectral Characteristic (A New), in Solar Radio Emission (A. Maxwell and G. Swarup), 36
Spectrometer (Mass-) : Assay of Isotopic Nitrogen by (A. P. Sims and Dr. E. C. Cocking), 474
Spectrometric (Mass-) Observations of Ions in Flames (P. F. Knewstubb and Dr. T. M. Sugden), 474
Spectrometric (Mass-) Observations of Ions in Hydrocarbon Flames (P. F. Knewstubb and Dr. T. M. Sugden), 1261
Spectrometry : Mass (Mass Spectrometry Panel of the Hydrocarbon Research Group of the Institute of Petroleum and Committee *E*-14 of the American Society for Testing Materials Conference on), 1771
Spectrometry (Mass) : Ion Identification in Flames by (J. Deckers and Prof. A. Van Tiggelen), 1460
Spectrophotometric Study of Stars with High Velocities (Madeleine Chopinet), 1041
Spectrophotometric, Light Scattering and Titration Studies upon the Interaction of Polyadenylic and Polyuridylic Acids (Dr. Roland F. Beers, jun., and Dr. Robert F. Steiner), 30
Spectroscopy : Flame, *review* by Dr. T. M. Sugden, 74
  Molecular (Spectroscopic Panel of the Hydrocarbon Research Group of the Institute of Petroleum Conference on), 89
  Molecular Structure and (Ohio State University Symposium on), 813
Spectroscopy of Flames (Dr. A. G. Gaydon), *review* by Dr. T. M. Sugden, 74
Spectroscopy of Solids (Physical Society Conference on), 1042
Spectroscopy (Double-Beam Infra-Red) : Agar as Specimen Carrier in (J. G. Feinberg, H. D. C. Rapson and Mary P. Taylor), 763
Spectrum (Absorption), of the OBr Radical (A. P. Zeelenberg), 42
Spectrum (Energy), of Cosmic Radiation (Prof. H. Alfvén and Ernst Åström), 330
Spectrum (Mercury Discharge) : Colour Filters for the 4358-A. line of the (Dr. A. Burawoy and A. G. Roach), 762
Spectrum (Microwave), of Nickel Cyclopentadienyl Nitrosyl and the Configuration of the Molecule (A. P. Cox, Dr. L. F. Thomas and Dr. J. Sheridan), 1157
Spectrum (Neutron), from ZETA : Measurement of the (B. Rose, A. E. Taylor and E. Wood), 1630
Spectrum (Raman), of Tetrakistrifluoro-phosphine-nickel (Dr. L. A. Woodward and J. R. Hall), 831
Spectrum (Reflectance), of Acetone-2,4-dinitrophenylhydrazone (Dr. Harry Zeitlin and Alice Niimoto), 1616
Spectrum-Line Reversal Method : Temperature Measurements of Shock Waves by the (J. G. Clouston, Dr. A. G. Gaydon and Prof. I. I. Glass), 1325
Spedding, Dr. C. R. W., and others : Growth and Reproduction in Worm-free Sheep at Pasture, 168
Speech : Language and, Vol. 1, No. 1, 1768
Speech (Clipped) : Vowel Recognition in (Rais Ahmed), 210
Speed of Rotation of the Earth since June 1955 : Variation in the (Dr. L. Essen, J. V. L. Parry, Dr. Wm. Markowitz and Dr. R. G. Hall), 1054
Speed (High) Flow : Real Gas Effects in (Symposium at the Armament Research and Development Establishment, Fort Halstead), 671
Speeds (Supersonic) : Damage to Solids by Liquid Impact at (Dr. F. P. Bowden and J. H. Brunton), 873
Speirs, R. L. (Darbre, Prof. A., and): Constant Temperature Water-Bath, 364
Speirs, Dr. Robert S. : A Theory of Antibody Formation involving Eosinophils and Reticulo-endothelial Cells, 681
Spence, Prof. Basil : Design of Physics Research Laboratories (Design of University Physics Laboratories), 90
Spencer, Dr. D. M., and Wilkinson, Dr. E. H. : A Method of Reducing the Losses caused by *Gloeosporium* spp. in Stored Apples, 1603
Spencer, Dr. L. J. : Origin of Chondrules in Meteoritic Stones, 679
Spencer, Dr. R. S. : Photobiological Investigations (The Biology of Luminous Bacteria), 1314
Spencer, W. R., and others : Management Control of Small Engineering Firms, 1113
Sperber, Joan I. : Release of Phosphate from Soil Minerals by Hydrogen Sulphide, 934
Sperm- and Sei-Whale Insulins : Structure of, and their Breakdown by Whale Pepsin (Yoshio Ishihara, Tsuneyuki Saito, Yasuzo Ito and Masahiko Fujino), 1468
Sperm (Herring-) Deoxyribonucleic Acid : Intestinal Carcinoma in Mice following Injection of (T. F. Hewer and Dr. E. S. Meek), 990
Spermatogenic Process in the Rat : Sensitivity of the, to Radiomimetic Drugs and X-Rays (A. W. Craig, B. W. Fox and Dr. H. Jackson), 353

Spermatophores in the Genus *Dolops* (Crustacea : Brachiura) : Occurrence of (G. Fryer), 1011
Spermatozoa (Bull), carrying *X*- and *Y*-Chromosomes : Separation of, by Counter-Streaming Centrifugation (Per Eric Lindahl), 784
Spermatozoa (Mammalian) : Capacitation of (Dr. C. R. Austin and Dr. M. W. H. Bishop), 851
Spermatozoa (Rabbit) : Capacitation of (Dr. R. W. Noyes, Dr. A. Walton and Dr. C. E. Adams), 1209
Spermine and Spermidine : Formation of β-Alanine from, by *Pseudomonas aeruginosa* (Dr. S. Razin, U. Bachrach and I. Gery), 700
Spiers Memorial Lecture of the Faraday Society (Prof. H. S. Harned), 240
Spike (Barley) : Inhibition of the Development of the, by Gibberellic Acid (Leslie Paleg and Donald Aspinall), 1743
Spin Functionals (Dr. J. Aharoni), 1385
Spin-Orbit Coupling and the Extraordinary Hall Effect (Dr. C. Strachan and A. M. Murray), 1260
Spinach Leaf Chloroplast Extract : Formation of Oxalacetate and Aspartate from Phospho-Enol-Pyruvate in (Lawson L. Rosenberg, John C. Capindale and F. R. Whatley), 632
Spinal Cord : Excretion of 17-Ketogenic Steroids in Subjects with Complete Transverse Lesions of the (R. Robinson), 484
Spinal Ganglion Cells (Frog) : Electrical Responses of, in Sodium-free Media (Prof. K. Koketsau, J. A. Cerf and S. Nishi), 703
Spinels (Distorted) : Electronic Configuration of Cations in some (Dr. K. P. Sinha), 835
Spinks, Dr. A., and Young, Prof. E. H. P. : Polyalkylpiperidines, a New Series of Ganglion-blocking Agents, 1397
Spinks, J. W. T. (Green, B. C., and) : Lapse-time Motion Picture Studies of Soil-burrowing Insects, 434
Spinney, K. T., and others : Radiation Shielding, *review* by J. Edwards, 976
Spiral Pits on Silicon Carbide (Prof. V. G. Bhide), 1006
Spirodela polyrrhiza, the Link between the Aroids and the Duckweeds (Satish C. Maheshwari), 1745
Spitzer, Prof. Lyman : Controlled Release of Thermonuclear Energy—Co-operative Phenomena in Hot Plasmas, 221
Splachnum ampullaceum (L.) Hedw. : Effect of Gibberellic Acid on the Growth of Protonemata in (Dr. K. E. von Maltzahn and I. G. MacQuarrie), 1139
Spleen : Microbial Growth Stimulants in (Dr. M. L. Littman and Dr. Michael A. Pisano), 285
Spleen (Hen) : Antibody Formation by Isolated Cells of, after mixing with Antigen *in vitro* and Transfer to Chicks (Dr. Z. Trnka), 55
Splenectomy : Effect of, on Azo Dye Carcinogenesis of Rat Liver (Dr. Muneaki Takashi and Shoji Iwase), 1211
Sponge *Hippospongia equina* : Amino-acid Composition of Sclero-protein of the (Dr. J. Saper and W. E. White), 285
Sponge (Boring), *Cliona celata* Grant : Reproduction of Fused Larvae in the (Frederick E. Warburton), 493
Sponges (Freshwater) : Ultra-Structure of the Choanocyte Collar-Cells in (R. Rasmont, J. Bouillon, P. Castiaux and G. Vandermeerssche), 58
Spontaneous Crystallization of Amylase from Pancreatic Juice of the Rat (Dr. N. G. Heatley), 1069
Spontaneous Occurrence of Intranuclear Inclusion Bodies in Continuous Cultures of Renal Cells (Dr. N. M. Larin), 1477
Spooner, G. M. : The Natural Resources of the Country and their Value for Teaching and Research (The Resources of the Sea and the Shore), 1313
Sporangiophores (*Phycomyces*) : Phototropism of (G. H. Hanbury), 358 ; (M. J. Carlile), 359
Spores of *Trichoderma viride* Pers. ex Fr. introduced into Soil : Fate of (R. Caldwell), 1144
Spores (Viable Air-borne), in Air : Detection of (Dr. J. Rishbeth), 1549
Sporogonic Cycle of *Plasmodium cynomolgi* in *Anopheles stephensi* : Partial Inhibitory Effect of *Plistophora culicis* on the (Miss L. Bano), 430
Spot Chromatography Identification of Citrus Rootstocks (Prof. Raymond M. Selle), 506
Spot Testing : An Improved Technique for, using a 'Cellophane' Membrane (Dr. B. Camber), 124
Spratt, H. P. : Isambard Kingdom Brunel, *review*, 1754
Spray, Dr. G. H. : Effect of Phenobarbitone on the Requirement of *Lactobacillus leichmannii* for Vitamin B_{12}, 859
Spraying : Effects of Clipping and, on various Homoeothermic Responses of Rabbits at an Elevated Environmental Temperature (Dr. Harold D. Johnson, Chu Shan Cheng and A. C. Ragsdale), 842
Sprays used in Detecting Ketohexoses on Paper Chromatograms : Acidity of (Dr. R. W. Bailey), 836
Spread-*F* (Equatorial), and Magnetic Activity (A. J. Lyon, N. J. Skinner and Dr. R. W. Wright), 1724
Spring, Prof. F. S. : Elected a Fellow of the Royal Society of Edinburgh, 739
Spring on an Arctic Island (Katharine Scherman), *review* by Dr. G. C. L. Bertram, 729
Spurious Significance in Genecological Trials (Dr. D. J. Harberd), 138
Sputnik 2 (Satellite 1957β) : End of, 1107
  Progress of (D. G. King-Hele), 738
Sputnik 3 (Satellite 1958δ) : Orbit of, 1507
Squamous Epithelium (Non-Epidermal Stratified) : The Dendritic Cell System and Mast Cells in (Dr. L. O. Zwillenberg), 1343
Squid Muscle : Changes in Adenine Nucleotides of (Tsuneyuki Saito, Ken-ichi Arai and Tsune Tanaka), 1127
Squirrel (Fox) : Natural History of the (J. C. Moore), 322
Sreenivas, B. L. : Bixbyite from Nagpur, 864
Srinivasan, R., and others : Stress Optical Coefficients of Different Specimens of Vitreous Silica, 692
Sriramachari, S. (Dikshit, P. K., and) : Caudal Necrosis in Suckling Rats, 63
Srivastava, U. S. : Prothoracic Glands in *Tenebrio molitor* L. (Coleoptera : Tenebrionidae), 1668
St. Albans : An Assemblage of Arthropod Remains from a Roman Occupation Site at (P. L. Bradley), 435
St. Aldwyn, Lord : Biological Productivity of Britain, 82
St. Bartholomew's Hospital Medical College : Title of reader in pharmacology in the University of London conferred on J. P. Quilliam, 602
St. Joseph, Dr. J. K. S. : *Obituary* of Dr. O. G. S. Crawford, 156
Stability (Perceptual), of a Stroboscopically Lit Visual Field containing Self-Luminous Objects (Dr. D. M. MacKay), 507
Stability (Thermal), of Polytetrafluoroethylene (Dr. C. R. Patrick), 698
Stabilized High-Current Toroidal Discharge producing High Temperatures (Controlled Release of Thermonuclear Energy), (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, J. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222
Stabilized Linear Pinch : Magnetic Measurement of Plasma Confinement in a Partially (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt, Dr. R. H. Lovberg and Dr. J. A. Phillips), 224
Stabilized Pinch (Linear) : New Confinement Phenomena and Neutron Production in a (Controlled Release of Thermonuclear Energy), (Dr. L. C. Burkhardt and Dr. R. H. Lovberg), 228
Stabilized Toroidal Pinch : Neutrons from a (Controlled Release of Thermonuclear Energy), (Dr. J. Honsaker, Dr. H. Karr, Dr. J. Osher, Dr. J. A. Phillips and Dr. J. L. Tuck), 231
Stabilizing Effect (Physical), of the Halteres : Static Sense of *Calliphora* and the (Dr. G. Schneider), 1355 ; (Dr. J. W. S. Pringle), 1356
Stable Eutectic Reaction in Magnesium-treated Iron Castings : Promoting the, by Vibration during Solidification (J. H. Gittus), 1004
Stable Free Radical : Antioxidant Determinations by the Use of a (Marsden S. Blois), 1199
Stable *Proteus* L Form : Electron Microscopy of a (Dr. K. G. Thorsson and Prof. C. Weibull), 1348
Stacey, Prof. M. : Chemistry and Life, *review*, 75
Stacey, Prof. M., and others : Structure of an Acidic Polysaccharide elaborated by *Aerobacter aerogenes*, 999
Stack Gases in the Atmosphere : The Diffusion of (F. H. Schmidt), 1575
Stage : All the World's a (Prof. H. L. Hawkins), 1707
Stages (Early), of Infection with the *Tipula* Iridescent Virus (Dr. Kenneth M. Smith), 966
Stain (A Histological), for Newly Calcified Tissues (Prof. J. T. Irving), 704
Staining Methods : Biological (George T. Gurr), sixth edition, *review* by S. Bradbury, 988
Staining Technique for Detecting Ratoon Stunting Disease in Sugar Cane (Robert Antoine), 276
Stamp, Prof. L. Dudley : Awarded a Medal of the Tokyo Geographical Society, 20
  Biological Productivity of Britain (Pattern of Land-use in Britain), 82
  Climate, Vegetation and Land Utilization in the Humid Tropics (Land Use in the Humid Tropics—Living Space and Recreation), 598
  Common Lands, *review*, 730
  Fragmented Holdings, 1114
  Appointed a member of the Nature Conservancy, 1312
  Problems of the Humid Tropics, 1380
  Retirement from the chair of social geography in the London School of Economics and Political Science, 1636 ; work of, 1636
Stamp, Prof. L. Dudley, and Richards, Prof. P. W. : Climate, Vegetation and Land Utilization in the Humid Tropics, 596
Standard Frequency Transmissions from the United Kingdom (National Physical Laboratory Pamphlet on), 952
Standardization of Cobalt-60 by the Beta-Gamma Coincidence Method : Correction for the Gamma-Ray Sensitivity of the Beta-Counter in the (B. Owen and R. A. Lloyd), 396
Standardization of Pure Beta-Emitters : Application of the Kurie Plot to the (R. A. Lloyd), 1055
Standards (Electricity) : Importance of the Faraday to Elemental Constants and (A. G. McNish and Dr. R. D. Huntoon), 1194
Standen, O. D., and others : A New Series of Anthelmintics, 183
Standing Waves (Moving and) : Simultaneous Occurrence of, in a Positive Column (A. W. M. Cooper, J. R. M. Coulter and Prof. K. G. Emeléus), 1326
Stanford Studies in Mathematics and Statistics, Vol. I, Tables of the Non-Central t-Distribution (George J. Resnikoff and Gerald J. Leiberman), *review*, 985
Stanier, Prof. R. Y. (Cohen-Bazire, Germaine, and) : Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria—Specific Inhibition of Carotenoid Synthesis in a Photosynthetic Bacterium and its Physiological Consequences, 250
Staphylococcal Toxin and Tiger Snake Venom : Antagonism between the Actions of (Dr. Edgar A. North and Hazel M. Doery), 1542
Staphylococci and Cell-Wall Synthesis : Chloramphenicol-Resistant Incorporation of Amino-Acids into (Dr. J. Mandelstam and Dr. H. J. Rogers), 956
Staphylococcus : Role of Oxygen in the Formation of α-Amino-butyric Acid by a (P. B. Riley and H. K. Robinson), 905
Staphylococcus aureus : Cell-Wall Synthesis by, in the Presence of Chloramphenicol (R. Hancock and Dr. James T. Park), 1050
Staphylococcus aureus inhibited by Penicillin : Uridine Disphosphate Amino-sugar Compounds from (Eiji Ito, Nobutoshi Ishimoto and Masahiro Saito), 906
Staple, Dr. P. H. : Effect of Periodic Acid on Histochemical Aldehyde Blockades, 288
Starch : Rapid Sedimentation of Proteins through (Dr. N. G. Anderson), 45
Starch Convention : International (German Cereals Research Association), 531
Starch Gel : Isolation of the Lethal Factor of Diphtheria Toxin by Electrophoresis in (Dr. M. D. Poulik and E. Poulik), 354
Starch Gel Electrophoresis : Separation of Metastable Polymers by (Geoffrey Franglen and Cécile Gosselin), 1152
Starch Gels (Transparent) : Preparation of, after Electrophoresis (Dr. J. M. Fine and E. Waszczenko-Z), 269
Stark, J. W., and others : Long-Distance Radio Propagation above 30 Mc./s., 1185
Starkey, B. J., and others : Long-Distance Radio Propagation above 30 Mc./s. (The Mechanism of Propagation responsible for the Permanent Residual Fields), 1186
Starling Roosts (H. A. S. Key), 167
Stars : Non-Stable (edited by George H. Herbig), *review* by Prof. R. O. Redman, 731
Stars Month by Month, 530
Stars with High Velocities : Spectrophotometric Study of (Madeleine Chopinet), 1041
Stars (Southern *B*) : Radial Velocities of (M. W. Feast, A. D. Thackeray and A. J. Wesselink), 1116
Starvation : Effect of Hypothermia on Death by (Dr. T. Braun and Dr. B. Mosinger), 968

Stasigenesis in Fissipede Carnivores : A Quantitative Study of (Dr. M. Crusafont-Pairó and Dr. J. Truyols-Santanja), 289
State : Science and the (Sir Hugh Beaver), 1375
State College of Washington, Pullman : Grant of 300,000 dollars from the National Science Foundation, for a research reactor, 313
Statens Skogsforskningsinstitut, Stockholm : Annual Report, 742
Statham, K. W. (Graham, D. R., and) : Tryptophan Content of Wool, 861
Static Elasticities of Solids : Dynamic and (Dr. J. F. W. Bell), 1330
Static Equilibrium (General) : The Theory of (Prof. Eraldo Fossati), edited by Prof. G. L. S. Shackle, *review* by Prof. R. G. D. Allen, 1027
Static Sense of *Calliphora* and the Physical Stabilizing Effect of the Halteres (Dr. G. Schneider), 1355 ; (Dr. J. W. S. Pringle), 1356
Stationary Patterns (Regular) : Moving Visual Images produced by (Dr. M. H. Pirenne), 362 ; (F. W. Campbell and J. G. Robson), 362 ; (Dr. D. M. MacKay), 362
Stationary Time Series : Statistical Analysis of (Dr. Ulf Grenender and Prof. Murray Rosenblatt), *review* by Prof. M. G. Kendall, 1494
Stations (Nuclear Power) : Siting of (House of Commons Debate on), 462
Statistical Analysis of Stationary Time Series (Dr. Ulf Grenender and Prof. Murray Rosenblatt), *review* by Prof. M. G. Kendall, 1494
Statistical Model of some Time Series (D. S. Palmer), 1677
Statistical Quality Control and Acceptance Sampling (Birmingham College of Technology Course on), 1703
Statistical Review of England and Wales for the Year 1956, Part 2, Tables, Civil (Registrar General), 1573
Statistical Sampling in Industry (Birmingham Group of the Industrial Applications Section of the Royal Statistical Society Conference on), 885
Statistical Society, Royal : Election of Officers, 1703
  Guy Medal in silver awarded to Prof. G. A. Barnard, 1703
  Frances Wood Memorial Prize awarded to David Hewitt, 1703
Statistical Society, Royal (Birmingham Group of the Industrial Applications Section) : Conference on Statistical Sampling in Industry, 885
Statistical Tables for Biological, Agricultural and Medical Research (Prof. Sir Ronald A. Fisher and Dr. Frank Yates), fifth edition, *review*, 299
Statistical Theory, the Relationship of Probability, Credibility and Error (Prof. Lancelot Hogben), *review* by I. J. Good, 1687
Statistics : Sociology of, *review* by I. J. Good, 1687
Statistics in Personnel Management : The Use of (Institute of Personnel Management in conjunction with the National Institute of Industrial Psychology Course in), 20
Statistics of Smoking (Tobacco Manufacturers' Standing Committee, Research Paper No. 1, edited by G. F. Todd), 1181
Statistics for Use in Pharmacy, Biology and Chemistry : Mathematics and (L. Saunders and R. Fleming), *review* by Dr. D. J. Finney, 147
Statistics (Population), for England and Wales, 1573
Statistics and Probability : Selected Papers in (Abraham Wald), second printing, *review*, 661
Staub, Dr. A. M., and others : Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a New Sugar, Paratose, 822
Staveley, Dr. J. M., and others : Absence of the Diego Blood Group and Abnormal Haemoglobins in 92 Maoris, 791
Staveley, Dr. L. A. K., and others : The Triple Point of Argon as a Thermometric Fixed Point, 831
Steacie, Dr. E. W. R. : Structure and Reactivity of Electronically Excited Species, 321
  Nominated as national representative for Canada on the North Atlantic Treaty Organization Science Committee, 739
  Elected to honorary fellowship of the Chemical Society, 1312
Steadman, R., and Youell, Dr. R. F. : Mineralogy and Crystal Structure of Greenalite, 45
Steam Intellect Societies, *review* by Prof. W. H. G. Armytage, 585
Stearic Acid : Electron Micrographs of Monolayers of (Herman E. Ries, jun., and Wayne A. Kimball), 901
Steatorrhoea : Pigmentation of Intestinal Muscle in (Dr. G. Austin Gresham and J. G. Cruickshank, and J. C. Valentine), 538
Steatosis (Liver) : Activity of Glucose-1-phosphate on (Giuliana Gialdroni-Grassi), 53
Stedman, Dr. E. : Outline of Steroid Chemistry, *review*, 659
Steel, W. S. : Appointed chief entomologist, Game and Tsetse Control Department, Northern Rhodesia, 458
Steel : Fine Aluminium Nitride Precipitates in (Prof. C. C. Hsiao), 1527
Steel (Mild) : Stress Condition for Brittle Fracture of (Prof. Takeo Yokobori and Prof. Hiroto Hamamoto and Akio Otsuka), 1719
Steel Producers' Conference, British, and the British Constructional Steelwork Association : Offer of £6,000 a year to the Imperial College of Science and Technology, for the establishment of a readership in structural steelwork and the provision of bursaries for post-graduate study in that subject, 314
Steel and Technical Change : Men, (Olive Banks and Dr. W. M. Scott), 1180
Steers, Prof. J. A. (Chapman, Prof. V. J., and) : Salt Marshes, 1512
Stein, W. D. : N-Terminal Histidine at the Active Centre of a Permeability Mechanism, 1662
Steiner, Dr. Robert F. (Beers, jun., Dr. Roland F., and) : Spectrophotometric, Light Scattering and Titration Studies upon the Interaction of Polyadenylic and Polyuridylic Acids, 30
Steinhaus, Edward A., in association with Smith, Ray F. (edited by) : Annual Review of Entomology, Vol. 3, *review* by Dr. P. T. Haskell, 1756
Stellar Explosions, *review* by Prof. Zdenek Kopal, 1688
Stellar Systems : Introduction to the Mechanics of (Rudolf Kurth), *review* by Dr. R. H. Garstang, 1029
Stenger, V. A., and Matsuyama, G. (Prof. I. M. Kolthoff and R. Belcher, with the co-operation of) : Volumetric Analysis, Vol. 3, Titration Methods, Oxidation-Reduction Reactions, *review* by E. I. Johnson, 800
Stensiö, Prof. E. A. : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Stephens, L. A. : Appointed veterinary officer, Kenya, 459
Stephenson, Dr. J. L. : Freezing and Drying, 1695
Stepwise Progression of a Mouse Sarcoma : A Correlation between Electrical Surface Charge and some Biological Characteristics during the (Mrs. L. Purdom and E. J. Ambrose, and Prof. G. Klein), 1586
Sterc, J. (Servít, Dr. Zd., and) : Audiogenic Epileptic Seizures evoked in Rats by Artificial Epileptogenic Foci, 1475
Stercobilin : Electrophoretic Behaviour of *l*-Urobilin and (I. L. Kahán), 773
Stereochemistry and the Chemistry of Natural Products (Dr. I. L. Finar), (Organic Chemistry, Vol. 2), *review* by Dr. W. D. Ollis, 6
Stereoisomers of 2,3-Butanediol during Microbial Fermentation of Sugars : Mechanisms of Formation of (Mary B. Taylor and Dr. Elliot Juni), 1389
Stereoisomeric Tartrates : Effect of, on Root Elongation in *Lepidium* (Torbjörn Aasheim), 922
Sterile Culture : Formation of Jerusalem Artichoke Tubers in (Dr. Margery P. F. Marsden Ray), 1480
Sterilization (Ultra-Violet), of Water used for Rearing Oyster Larvae (G. Duncan Waugh), 1747
Stern, C., and Ephrussi, B. : Genetic Aspect of Somatic Cell Variation (Wide Spectrum of Somatic Cell Variations), 1706
Stern, F. C. : Snowdrops and Snowflakes, a Study of the Genera *Galanthus* and *Leucojum*, *review* by R. D. Meikle, 1691
Steroid : 'Ledercort', a New (Lederle Laboratories Division of Cyanamid of Great Britain, Ltd.), 1311
  3β-Methoxy-5-androsten-16β-ol, a Cytostatic and Fungistatic (Prof. R. W. Jones, G. Rebell and Prof. M. N. Huffman), 48
Steroid Chemistry : Outline of, *review* by Dr. E. Stedman, 659
Steroid Reference Collection : Requests for Compounds in the (Medical Research Council), 315
Steroidal Sapogenins : Degradation of, to 16-Dehydropregnan-20-ones (Dr. G. P. Mueller), 771
Steroids : The Chemistry of (Dr. W. Klyne), *review* by Dr. E. Stedman, 659
  Qualitative, Quantitative and Preparative Chromatography of, on Fully Acetylated Paper (F. J. Ritter and J. Hartel), 765
Steroids (C21 17:20-Dihydroxy-20-methyl) : Separation, Detection and Estimation of (Dr. R. I. Cox), 638
Steroids (17-Ketogenic) : Excretion of, in Subjects with Complete Transverse Lesions of the Spinal Cord (R. Robinson), 484
Steven, Dr. G. A. : *Obituary* by Dr. F. S. Russell, 1505
Stevens, B. : Structure and Reactivity of Electronically Excited Species, 321
Stevens, Dr. K. W. H. : Appointed professor of theoretical physics in the University of Nottingham, 1640
Stevenson, Prof. A. C. : Resignation from the chair of social and preventive medicine in Queen's University Belfast, 599 ; work of, 599
Stewart, Prof. A. B. : Appointed director of the Macaulay Institute for Soil Research, Aberdeen, 1105 ; work of, 1105
Stewart, Dr. C. P. : The Biochemical Lesion, *review*, 215
  Biochemistry of Glutathione, 888
Stewart, Dr. D. F., and Gordon, H. McL. : Immune Reactions to *Trichostrongylus colubriformis* Infestation in Sheep, 921
Stewart, J. C. C. : Appointed a deputy managing director of the Industrial Group of the United Kingdom Atomic Energy Authority, 530
Stewartson, Dr. Keith : Appointed to the chair of applied mathematics in the University of Durham, 312 ; work of, 312
  Resignation as reader in applied mathematics at the University of Bristol, 602
Steyermark, Dr. Julian A., and collaborators ; Contributions to the Flora of Venezuela, *review*, 445
Stibitz, Dr. George R., and Larrivee, Prof. Jules A. : Mathematics and Computers, *review* by Dr. M. V. Wilkes, 1755
Stigant, S. A. : Passive Network Synthesis, *review*, 1564
  Algebra, *review*, 1691
Stilbene Compounds : Effect of various, on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. C. Ware), 1538
Stilboestrol (Synthetic Œstrogen) : Effect of the, on Pregnancy in the Rabbit (Dr. A. Sharaf and Dr. E. S. E. Hafez), 1211
Stiles, Dr. W. S. : Colorimetry, *review*, 1297
Stimulants (Microbial Growth), in Spleen (Dr. M. L. Littman and Dr. Michael A. Pisano), 285
Stimulated by Carnivorous Gastropods : Escape Responses of Herbivorous Gastropods when (W. C. Clark), 137
Stimulating Agent in Blood for inducing Gorging of the Mosquito : Adenosine-5'-phosphates as the (Teruhiko Hosoi), 1664
Stimulation of Insect Sense-Organs by Air Puffs : Apparatus for (D. M. Miller and E. H. Colhoun), 126
Stimulation of Muscle : Repetitive (M. T. Osborne), 1798
Stimulation (Artificial), of Rainfall in East Africa by means of Rockets (J. H. Brazell and C. M. Taylor), 1421
Stipe Regeneration and Fruit-body Production in *Collybia velutipes* (Ort.) Fr. (E. A. Bevan and R. F. O. Kemp). 1145
Stoerk, Dr. H. C., and others : Antimitotic Activity of 5-Tertiary Butyl Benzimidazolone, *erratum*, 238
Stoker, Michael (Wildy, Dr. Peter, and) : Multiplication of Solitary HeLa Cells, 1407
Stoker, Dr. M. G. P. : Appointed first holder of the chair of virology in the University of Glasgow, 1441 ; work of, 1441
Stokes's Paradox : Use of an Analogue to resolve (Sir Richard Southwell), 1257
Stolk, Prof. A. : Pathological Parthenogenesis in Viviparous Toothcarps, 1660
  Special Conditions in Normal and Tumorous Nuclei, 1739
Stoll, Prof. Arthur : Elected a Foreign Member of the Royal Society, 1242, 1701 ; work of, 1701
Stomach (Ruminant) : Pressure developed within the Reticular Compartment of the (F. R. Bell), 494
Stone Age : Old (Stefan Celebonovic), *review* by M. C. Burkitt, 801
Stone Age (Early) (Later African Chelles-Acheul) Site at Wonderboom South, Pretoria (Revel Mason), 1377
Stones : Theophrastus on (Introduction, Greek Text, English translation, and Commentary, by Earle R. Caley and John R. C. Richards), *review* by Dr. V. A. Eyles, 1686
Stones (Meteoritic) : Origin of Chondrules in (Dr. L. J. Spencer), 680
Storebø, P. B., and others : Natural Airborne Radioactivity at Kjeller, Norway, 1197
Stored Agricultural Products : Control of Pests in, with special reference to Grain (Dr. J. A. Freeman), (European Productivity Agency of the Organization for European Economic Co-operation, Project No. 212), 1639
Stored Apples : A Method of Reducing the Losses caused by *Gloeosporium* spp. in (Dr. D. M. Spencer and Dr. E. H. Wilkinson), 1603
  Reduction of Low-Temperature Injury to, by Modulation of Environmental Conditions (W. Hugh Smith), 275

Storer, Dr. James E. : Passive Network Synthesis, *review* by S. A. Stigant, 1564
Storey, C. : Contact Stresses (Stationary Contact), 1773
Storey, J. R., and others : Effective Magnetic Meridian for Cosmic Rays, 34
  A Survey of the Cosmic-Ray Nucleonic Component along 145° East Longitude using an Airborne Monitor, 1155
Stover, Dr. R. H., and Freiberg, Dr. S. R. : Effect of Carbon Dioxide on Multiplication of *Fusarium* in Soil, 788
Strachan, Dr. C., and Murray, A. M. : Spin-Orbit Coupling and the Extraordinary Hall Effect, 1260
Straile, William E. : Atypical Guard-Hair Follicles in the Skin of the Rabbit, 1604
Strain (California), of *Plasmopara viticola* : Zoospore Morphology of the (Dr. Vincent Santilli), 924
Strain Sensitivity of Albino Rats to Reserpine (Dr. R. E. Coupland), 930
Strains of the Nuclear Polyhedral Virus of the Wattle Bagworm : Occurrence of (L. L. J. Ossowski), 648
Strains (Arsenic-resistant and -sensitive), of the Blue Tick, *Boophilus decoloratus* : Total Sulphydryl Content of Embryos of (M. E. Thompson and A. M. Johnston), 647
Strains (Cell) : Nomenclature of (Dr. John Paul), 650
Strains (Laboratory), of Free-living and Parasitic Protozoa : Catalog of (Society of Protozoologists), 161
Strains (Non-Flowering), of Herbage Grasses (Prof. M. L. Peterson, Dr. J. P. Cooper and P. B. Vose), 591
Strange, Dr. J. W. : Scope and Limits of Colour Measurement, 1705
Strange, Dr. R. E., and others : Bacterial Protoplasts, 1713
Strategy of the Genes, a Discussion of Some Aspects of Theoretical Biology (Prof. C. H. Waddington), *review* by Dr. J. M. Thoday, 1025
Stratified Squamous Epithelium : The Dendritic Cell System and Mast Cells in Non-Epidermal (Dr. L. O. Zwillenberg), 1343
Stratton, Dr. F., and others : Red Cell Agglutinability affected by Disease, 62
Streams (Tidal) : Use of, by Migrating Elvers (*Anguilla vulgaris* Turt.), (F. Creutzberg), 857
Strehler, B. L., and others (edited by) : Research in Photosynthesis (Papers and Discussions presented at the Gatlinburg Conference, 1955), *review* by Prof. C. P. Whittingham, 974
Strength of Glass Fibres (Dr. W. F. Thomas), 1006 ; (N. J. Parratt), 1726
Streptococci (Group A) : Enhancement of Mouse-virulence of, by Bactericidal Resorcinols (John Cameron), 919
Streptococcus faecalis : Chaining and Unchaining—a Hypothesis of the Mechanism of Bacterial Cell Separation (Dr. Iwo Lominski, John Cameron and George Wyllie), 1477
Streptomycin and Bacterial Respiration (F. L. Jackson), 281
Stress : Change of Length during Transformation of Iron under (M. de Jong and Prof. G. W. Rathenau), 1396
  Vanillic Acid Excretion during (P. Smith and A. M. H. Bennett), 709
Stress in Hypothermia (H. S. Samuli Sarajas, Paula Nyholm and Paavo Suomalainen), 612
Stress of Life (Dr. Hans Selye), *review* by Prof. J. Z. Young, 1494
Stress and Adaptation, *review* by Prof. J. Z. Young, 1494
Stress and Cortisone : Effect of, on the Cytomorphology of Pituitary Grafts in Rats (Dr. K. Kovács, M. A. Dávid and I. W. Horváth), 1417
Stress (Climatic) : Nutrition and (Scottish Group of the Nutrition Society Symposium on), 949, 1644
Stress (Experimental): Cardiac Damage caused by (E. Mascitelli-Coriandoli, R. Boldrini and Dr. C. Citterio), 1215
Stress (Temporary Nutritional), and Infertility in Mice (T. J. McClure), 1132
Stress Condition for Brittle Fracture of Mild Steel (Prof. Takeo Yokobori and Prof. Hiroto Hamamoto and Akio Otsuka), 1719
Stress Optical Coefficients of Different Specimens of Vitreous Silica (Dr. R. S. Krishnan, E. S. Jog and R. Srinivasan), 692
Stresses : Contact (Stress Analysis Group of the Institute of Physics Symposium on), 1773
Stride, A. H. (Cartwright, D., and) : Large Sand Waves near the Edge of the Continental Shelf, 41
Strip, Sheet and Plate : The Rolling of (Eustace C. Larke), *review* by Dr. L. S. Goddard, 988
Stroboscopically Lit Visual Field containing Self-Luminous Objects : Perceptual Stability of a (Dr. D. M. MacKay), 507
Strøm, Prof. Kaare : Lake Physiography, *review*, 1360
Strongly Heated Milk : Formation of Lactulose and Tagatose from Lactose in (Susumi Adachi), 840
Strontium and Caesium : Absorption and Translocation of, by Plants from Foliar Sprays (L. J. Middleton), 1300
Structural Differentiation in the Nucleoid of Mature Vaccinia Virus (Dr. M. A. Epstein), 784
Structure : Ease of Reduction of a Series of Coals and its relation to their (P. H. Given, V. Lupton and M. E. Peover), 1059
Structure of an Acidic Polysaccharide elaborated by *Aerobacter aerogenes* (Dr. S. A. Baker, Dr. A. B. Foster, I. R. Siddiqui, Prof. M. Stacey and S. J. Pirt), 999
Structure of Brain Ganglioside (Dr. J. Folch-Pi), 314
Structure of Collagen and Gelatin : Effect of Neutral Salts on the (William F. Harrington), 997
Structure of Cupric Salts with Mono-, Di- and Tri-Chloroacetic Acids (Dr. Ryutaro Tsuchida, Dr. Shoichiro Yamada and Hiroji Nakamura), 479
Structure of the Fermi Surface : Band Theory of Metals and the (Physical Society Conference on), 525
Structure of Kainic Acid and its Isomer, Allokainic Acid (I. Nitta, H. Watase and Dr. Y. Tomiie), 761
Structure of Sperm- and Sei-Whale Insulins and their Breakdown by Whale Pepsin (Yoshio Ishihara, Tsuneyuki Saito, Yasuzo Ito and Masahiko Fujino), 1468
IX-*α* Structure of the Common Bile Pigments (Prof. C. H. Gray, Dr. D. C. Nicholson and R. A. Nicolaus), 183
Structure and Architecture : Proceedings of the Symposium on (edited by Prof. Henry J. Cowan), (University of Sydney Extension Board), 1315
Structure (Cementite) : Two Borides with the (Stig Rundqvist), 259
Structure (Chemical), and Physical Behaviour of High Polymers (Sir Harry Melville), 1045
Structure (Chemical and Physical), of Mucopolysaccharides (National Science Foundation and the Retina Foundation Conference on), 1246
Structure (Crystal), of Chabazite, a Molecular Sieve (L. S. Dent and Prof. J. V. Smith), 1794
Structure (Crystal), of Greenalite : Mineralogy and (R. Steadman and Dr. R. F. Youell), 45
Structure (Crystalline Lattice), in Yolk Platelets of the Amphibian Embryo : Electron Micrographs of a (Shuichi Karasaki and Tsutomu Komoda), 407
Structure (Fibrous), in Cheese Curd (N. King and J. Czulak), 113
Structure (Fine), of the Alveolar Wall of the Lung (Dr. M. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1066
Structure (Fine), of the Ionosphere : Some Effects of the, on Transmissions received from the Russian Earth Satellite 1958δ (F. A. Kitchen and W. R. R. Joy), 1759
Structure (Molecular), and Spectroscopy (Ohio State University Symposium on), 813
Structure (Seed-coat), of Yellow Chinese Rape (Dr. John G. Vaughan), 650
Structure (Surface), of Gram-Negative Bacteria : Some Changes in the, induced by Penicillin Action (Dr. M. R. J. Salton and Dr. F. Shafa), 1321
Structure (Twin) : Lattice Image of, observed directly by Electron Microscope in a Crystal of Copper Phthalocyanine (Prof. E. Suito, N. Uyeda, H. Watanabe and T. Komoda), 332
Structure and Density of Glass (I. Náray-Szabó), 40
Structure and Physical Chemistry of Nucleic Acids and Nucleo-proteins (Colloid and Biophysics Committee of the Faraday Society Discussion on), 885
Structure and Reactivity of Electronically Excited Species (Physical Chemistry Division of the Chemical Institute of Canada Symposium on), 320
Structures (Engineering) : The Analysis of (Dr. A. J. S. Pippard and Dr. J. F. Baker), third edition, *review* by Prof. W. F. Cassie, 1498
Structures (Morphological) : Cellular Basis for the Induction of (Dr. R. Brown), 1546
Struktur und Variationen der Monochromatischen Korona (Die Sonnenkorona (Prof. M. Waldmeier), Band 2), *review* by Prof. R. O. Redman, 871
Strukturforschung (Handbuch der Physik, herausgegeben von S. Flügge, Band 32), *review* by Prof. A. J. C. Wilson, 727
Strychnine and Brucine : A New Method for separating, by Paper Chromatography (G. Dušinsky and Dr. M. Tyllová), 1335
Stuart, Alan : Appointed to the chair of geology in the University of Exeter, 87 ; work of, 87
Stuart (Herbert Ackroyd) Memorial Prize of the Royal Aeronautical Society awarded to Dr. R. R. Jamison, 1646
Stubblefield, Dr. C. J. : Elected president for 1958 of the Geological Society, 1312
Stubbs, J., and others : A New Herbicide—I : 1'-Ethylene-2 : 2'-Dipyridylium Dibromide, 446
Student Scientific Expedition to Ghana (B. M. Gerard), 25
Student's Histology (Dr. H. S. D. Garven), *review* by Prof. J. M. Yoffey, 972
Students : Scientific and Technical, 1309
Students, National Union of : Grants Year Book, 1770
Students (Graduate), and Research Workers : Notes on D.S.I.R. Grants for (Department of Scientific and Industrial Research), 1110
Students (Research) : European Interchange Scheme for (Department of Scientific and Industrial Research), 1770
Students (Technical), in Britain (A. A. Part), 1112
Students (Undergraduate) : Procedure for the Selection of (Discussion on, at the Home Universities Conference), 164
Students and Practitioners : Medical (Report of the Willink Committee on), 18
Studentship (Arnold Gerstenberg), for 1959, 1576
Studentships : Postgraduate (British Egg Marketing Board), 1510
Studies of Urocanic Acid (Robert H. Feinberg and Prof. David M. Greenberg), (Intermediate Products in the Enzymatic Degradation of Urocanic Acid), 897 ; (Dye Reduction by a Metabolite of Urocanic Acid), 898
Studies in World Agriculture : Types of Rural Economy—(Prof. René Dumont), *review* by Sir John Russell, 144
Studies (Present-day), in Biochemistry : Pasteur's Work on Fermentation and its Significance for (Prof. T. K. Walker), 940
Study of Ageing : Methodology of the (Ciba Foundation Colloquia on Ageing, Vol. 3, edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by Prof. P. L. Krohn, 74
Study of *Asterococcus mycoides* : Agar Double Diffusion Precipitation Reaction applied to the (G. White), 278
Study of Bacterial Plant Pathogens, *review* by W. C. Moore, 1094
Study of Blastocyst—Uterine Relationships in the Rabbit : Use of Labelled Ions in the (J. P. Bennett, Dr. J. C. Boursnell and Dr. C. Lutwak-Mann), 1715
Study (*In vitro*) of Cartilage Induction in *T/T* Mice (Dorothea Bennett), 1286
Study of Dentine (Dr. W. Warwick James), 19
Study of Health and Living Conditions, International Medical Association for the : Formation of an, 464
Study in the History of Libraries : The Golden Chain, a (Prof. R. Irwin), 313
Study of Human Biology, Society for the : Foundation of the, 1507
Study of the Plankton—Herring Relationships (Jakob Jakobsson), 1575
Study of Plant Communities (Prof. Henry J. Oosting), second edition, *review* by Dr. Maurice Ashby, 661
Study of Plant Viruses : The Serological Approach to the, *review* by Dr. Kenneth M. Smith, 72
Study of Rapid Electrode Processes : Use of Faradaic Rectification for the (Dr. G. C. Barker, R. L. Faircloth and A. W. Gardner), 247
Study of Tumours : A Special Reaction of the Complement Fixation Test applied to the (Prof. A. Serra, G. Guarini, P. Lovisetto, D. Castelli and F. Balzola), 622
Study (Quantitative), of Stasigenesis in Fissipede Carnivores (Dr. M. Crusafont-Pairó and Dr. J. Truyols-Santonja), 289
Study Course (Residential), in the Employment Function of Management (Institute of Personnel Management), 20
Studying Simple Compounds in Plants : A Chromatographic Method for (R. N. Greenshields), 280
Studying separately the Properties of the Innervated and Non-innervated Membrane of an Isolated Single Electroplax of the Skate : A Method for (Dr. Ernest Schoffeniels), 287
Sturley, K. R. : The Theory of Electrical Networks, *review*, 6
Styphnate Monohydrate (Lead) : Effects of Nuclear Irradiation upon the Decomposition of (Dr. Ted. B. Flanagan), 42

Sub-aerial Volcanicity in Snowdonia (N. Rast, R. V. Beavon and F. J. Fitch), 508
Sub-audible Geomagnetic Fluctuations (H. J. Duffus, P. W. Nasmyth, J. A. Shand and Sir Charles Wright), 1258
'Sub-Grains' and Etch Figures in Lead (E. J. Hooker), 180
Subjective Probability, Gambling and Intelligence (H. C. A. Dale), 363 ; (Prof. John Cohen and C. E. M. Hansel), 1160, 1620 ; (Prof. O. V. S. Heath), 1620 ; (Dr. S. T. Bowden), 1620
Subjects with Complete Transverse Lesions of the Spinal Cord : Excretion of 17-Ketogenic Steroids in (R. Robinson), 484
Submarine Canyon : A Possible Ecological Effect of Upwelling in a (Raymond J. Ghelardi and Wheeler J. North), 207
Subscriptions (Covenanted), to Learned Societies, 1243
Substrate-Selective Inhibition of Mitochondrial Oxidations by Enhanced Tonicity (Diane Johnson and Prof. Henry Lardy), 701
Substrates (Phenol) : Induction of Melanin Patterns and of Hardening as Separate Processes in the Cuticle of Albino Locusts with Internally Absorbed (Dr. B. M. Jones and W. Sinclair), 926
Subterranean Crustacean from the West Indies : A new (Dr. Isabella Gordon), 1552
Subtractors in Gas Chromatographic Analysis : Molecular Sieves as (Nathaniel Brenner and Vincent J. Coates), 1401
Succinate from Acetate : Synthesis of, by an Enzyme System of Pig Heart Muscle (Dr. D. D. Davies), 339
Succinic Dehydrogenase in Mitochondria from *Periplaneta americana* : Cytochemical Localization of (Dr. A. G. E. Pearse and Dr. D. G. Scarpelli), 702
Succinic Dehydrogenase (Soluble), and a Particulate Cytochrome System Preparation : Reconstitution of the Succinic Oxidase System from (Prof. D. Keilin and Dr. Tsoo E. King), 1520
Succinic Oxidase System : Reconstitution of the, from Soluble Succinic Dehydrogenase and a Particulate Cytochrome System Preparation (Prof. D. Keilin and Dr. Tsoo E. King), 1520
Suckling Rats : Caudal Necrosis in (P. K. Dikshit and S. Sriramachari), 63
Sudan Black *B* and Phenol 'Unmasking' Techniques : Demonstration of some 'Masked' Lipids in the Oocytes of *Chrotogonus trachypterus* with (Brig L. Gupta), 555
Sudanophil Inclusions in Ameloblasts, Odontoblasts and Cells of the Oral Epithelium (Prof. J. F. Irving), 569
Sugar (New), Paratose : Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a (Dr. D. A. L. Davies, Dr. A. M. Staub, and Dr. I. Fromme, Dr. O. Lüderitz and Prof. O. Westphal), 822
Sugar Analysis, International Commission for Uniform Methods of : Twelfth Session, 1182
Sugar Cane : A Staining Technique for Detecting Ratoon Stunting Disease in (Robert Antoine), 276
Sugar-Gland Juice of *Cryptochiton* (Polyplacophora, Mollusca) : Carbohydrases in the (Prof. B. J. D. Meeuse and Walter Fluegel), 699
Sugarman, B. : Mechanical Properties of Non-Metallic Brittle Materials (Micro- and Macro-strength of Glass), 1577
Sugars : Mechanisms of Formation of Stereoisomers of 2,3-Butanediol during Microbial Fermentation of (Mary B. Taylor and Dr. Elliott Juni), 1389
Sugars (Aldoheptose) : Action of Periodate on some Polysaccharides containing (Dr. A. B. Foster, D. A. L. Davies and M. L. Crumpton), 412
Sugden, Dr. T. M. : Flame Spectroscopy, *review*, 74
Structure and Reactivity of Electronically Excited Species (Green Emission obtained when Nitric Oxide is added to Systems containing Oxygen Atoms), 321
Sugden, Dr. T. M. (Knewstubb, P. F., and) : Mass-Spectrometric Observations of Ions in Flames, 474
Mass-Spectrometric Observations of Ions in Hydrocarbon Flames, 1261
Suggate, R. P., and others : Radiocarbon Dating of the Eustatic Rise in Ocean-Level, 1518
Suggested Revision of Nomenclature—Angiotensin (Dr. Eduardo Braun-Menendez and Dr. Irvine H. Page), 1061
Suitability of these Leaves for Aphids : Effect of Caffeine and other Purines upon the Ribonucleic Acid/Deoxyribonucleic Acid Ratio in Leaves, and the (Dr. B. Kessler, Dr. E. Swirski and Dr. A. S. Tahori), 1595
Suito, Prof. E., and others : Lattice Image of Twin Structure observed directly by Electron Microscope in a Crystal of Copper Phthalocyanine, 332
Sulitzeanu, Dr. D. : Distribution of Radioiodinated, Acetone-killed *Brucella abortus* in the Tissues of Normal and Immune Mice, 495
Sullivan, William H. : Trilinear Chart of Nuclides, second edition, *review* by Dr. E. Bretscher, 987
Sulphanilamide in the Nutrition of *Neurospora crassa* : *Para*-Amino-Benzoic Acid and (Prof. D. V. Siva Sankar), 629
Sulphate : Effect of the Nitrogen and Sulphur Content of Organic Matter on the Production of Ammonium and (N. J. Barrow), 1806
Sulphate and other Ions (Chloride,) : The Influence and Importance of Daily Weather Conditions in the Supply of, to Fresh Waters from Atmospheric Precipitation (E. Gorham), 1650
Sulphate Solutions (Manganous) : An Ultrasonic Investigation of Chemical Kinetics in (Sushil Kumar Kor), 1462
Sulphate (Ammonium) Treatment of a Tea Soil : Rate of Calcium Loss resulting from (N. G. Gokhalé), 426
Sulphate (Anhydrous Sodium) : Effect of Water upon the Polymorphic Transitions in (E. L. Kreidl and Ivan Simon), 1529
Sulphate (Synthetic Polyglucose) : Interaction between, and Biologically Active Basic Polypeptides and Proteins (Dr. P. T. Mora and B. G. Young), 1402
Sulphates : Isomeric Chondroitin (Dr. Martin B. Mathews), 421
Sulphide (Hydrogen) : Release of Phosphate from Soil Minerals by (Joan I. Sperber), 934
Sulphonamides : Use of, in the Treatment of Pleuro-pneumonia-like Organisms in Rats (R. T. Charles and O. Rees), 1213
Sulphonate (Ethyl Methane) : Increased Rate of Plaque-type and Host-range Mutation following Treatment of Bacteriophage *in vitro* with (Dr. Anthony Loveless), 1212
Sulphonate (Polyethylene) : The Anionic Polyelectrolyte, as a New Antineoplastic Agent (Dr. William Regelson and James F. Holland), 46
Sulphur : Recent Work on the Inorganic Chemistry of (Chemical Society Symposium on), 161
Sulphur Content of Organic Matter : Effect of the Nitrogen and, on the Production of Ammonium and Sulphate (N. J. Barrow), 1806
Sulphur-deficient Flax : Occurrence of Ornithine in, and the Possible Place of Ornithine and Citrulline in the Arginine Metabolism of some Higher Plants (R. G. Coleman), 776
SH-Dependent Metal-Enzyme Complex : Phosphomannoisomerase, an (Dr. Friedrich H. Bruns and Ernst Noltmann), 1467
Sulphydryl Content (Total), of Embryos of Arsenic-resistant and -sensitive Strains of the Blue Tick, *Boophilus decoloratus* (M. E. Thompson and A. M. Johnston), 647
Sumizu, Köichirö, and others : A New Reaction for the Differentiation of *cis*- and *trans*-Isomers of Nitrophenylhydrazones of some α-Keto Acids, 639
Summer Course (Residential), on the Lunar Society—Science and Thought in the Eighteenth Century (Departments of Extra-Mural Studies of the University of Birmingham and the University of Nottingham), 1510
Summer Laboratory Course in Techniques and Applications of the Electron Microscope (Cornell University), 743
Summer School on Optical Image Assessment using Frequency Response Techniques (Imperial College of Science and Technology), 1510
Summer School in Programme Design for Automatic Digital Computing Machines (Mathematical Laboratory of the University of Cambridge), 1246
Summer School on the Science and Art of Health Education (Central Council for Health Education), 1703
Sun : Identification of *M*-Regions on the (Dr. Kurt Toman), 641
Sunspot Cycle : Cosmic Rays and the—A Large Cosmic-Ray Decrease accompanying the Solar Maximum of 1957 (J. R. Winckler and L. Peterson), 1317 ; Primary α-Particle Intensity at Sunspot Maximum (P. S. Freier, Prof. E. P. Ney and P. H. Fowler), 1319
Sunspot Maximum : Primary α-Particle Intensity at (Cosmic-Rays and the Sunspot Cycle), (P. S. Freier, Prof. E. P. Ney and P. H. Fowler), 1319
Suomalainen, Paavo, and others : Stress in Hypothermia, 612
Supercooling and Freezing Points (Abnormally Low), in an Insect, *Bracon cephi* (Gahan) : Role of Glycerol in producing (R. W. Salt), 1281
Supersonic Speeds : Damage to Solids by Liquid Impact at (Dr. F. P. Bowden and J. H. Brunton), 873
Superstructure (New), in Gamma-Ferric Oxide (G. W. van Oosterhout and Dr. C. J. M. Rooijmans), 44
Supply, Ministry of : Appointment of Prof. J. L. M. Morrison as chairman of the Advisory Council on Scientific Research and Technical Development, 1442
Appointment of Sir William Cook, Sir Ian Heilbron, Prof. W. T. J. Morgan, Prof. N. F. Mott and Prof. L. Rosenhead as members of the Advisory Council on Scientific Research and Technical Development, 1442
Appointment of Dr. D. H. Black as director of the Armament Research and Development Establishment, Fort Halstead, 1444
Appointment of R. G. Friend as director of electronics research and development (telecommunications), 1576
Supply of Chloride, Sulphate and other Ions to Fresh Waters from Atmospheric Precipitation : The Influence and Importance of Daily Weather Conditions in the (E. Gorham), 1650
Supply of Teachers in Schools and Technical Colleges, 948
Supply and Demand (Prof. J. Greig), 321
Supply and Quality of Craftsmen, *review* by T. H. Hawkins, 373, 531
Support of Medical Research (edited by Sir Harold Himsworth and J. F. Delafresnaye), a Symposium organized by the Council for International Organizations of Medical Sciences, *review*, 147
Support (Government), for Civil Research, 1702
Suppression of Carotenoid Synthesis and its Effect on the Activity of Photosynthetic Bacterial Chromatophores (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Dr. R. C. Fuller and I. C. Anderson), 252
Suppression (Experimental), of the Early Inflammatory Phenomena of Turpentine Pleurisy in Rats (W. G. Spector and D. A. Willoughby), 708
Supra-optic Neurones : Relation between Nucleolar Volume and Cell Body Content of Ribonucleic Acid in (J.-E. Edström and D. Eichner), 619
Surface of Cellulose Microfibrils : Electron Diffraction Study of Adsorbed Metal Ions on the (D. S. Belford, A. Myers and Prof. R. D. Preston), 1516
Surface of Human Tooth Enamel : Investigations into Temperature Changes on the (Peter S. Rothwell), 1805
Surface Antigens of *Haemophilus pertussis* (Armand Guérault and Prof. H. B. Maitland), 122
Surface Concentration : Control of, in the Diffusion of Phosphorus in Silicon (M. J. Coupland), 1331
Surface Hardening of Metals by Spark Discharge (Prof. Hugh O'Neill), 1421
Surface Hardening of Non-ferrous Metals by Spark Discharge (Dr. N. C. Welsh), 1005
Surface Hardness of Explosive Materials by Micro-Indentation (Dr. G. Todd and E. Parry), 260
Surface Radioactive Contamination : Rapid Assessment of (Prof. F. Behounek), 695
Surface Structure of Gram-Negative Bacteria : Some Changes in the, induced by Penicillin Action (Dr. M. R. J. Salton and Dr. F. Shafa), 1321
Surfaces (Natural) : an Instrument for Measuring Evaporation from (R. J. Taylor and A. J. Dyer), 408
Surges in Glaciers (Dr. J. F. Nye), 1450
Survey of the Cosmic-Ray Nucleonic Component along 145° East Longitude using an Airborne Monitor (J. R. Storey, Dr. A. G. Fenton and K. G. McCracken), 1155
Survey of Terrestrial Craters (Dr. C. G. Beals), 559
Survival of Unfertilized Mouse Eggs : Effect of Glycerol and Low Temperature on (Dr. J. K. Sherman and Dr. Teh Ping Lin), 785
Survival Curves for Male and Female House-Flies (*Musca domestrica* L.), (Morris Rockstein and Harry M. Lieberman), 787
Survival Time after Irradiation : Effect of a Dithiol on (Dr. Thomas J. Haley, Anne M. Flesher and Nathan Komesu), 1405
Survival-Time of Rats bearing *RD*3 Sarcoma and the Walker Carcinoma : Inability of Hydrogen Peroxide to influence the (Dr. F. N. Ghadially and Dr. G. Wiseman), 1067

Surviving Frog Heart : Effect of Acetylcholinesterase on the (Prof. A. B. L. Beznák), 1190
Susceptibility (Magnetic) of the Alloy Pt_3 Fe between 20 and 900 Degrees Absolute (Prof. J. Crangle), 644
Suspension Bridges : The Theory of (Sir Alfred Pugsley), *review* by T. M. Charlton, 982
Suspensions (Aqueous), of Small Particles : Abrasion of the Insect Cuticle by (Prof. V. B. Wigglesworth), 779
Sutherland, Dr. G. B. B. M. : Physics of Water and Ice (Infra-red Absorption of Single Crystals of Ice), 381
Sutherland, Dr. G. K., and others : Ferulic and *p*-Coumaric Acids in Pineapple Tissue as Modifiers of Pineapple Indoleacetic Acid Oxidase, 630
Suttle, John F. : The Alkali Metals (Comprehensive Inorganic Chemistry, by Prof. M. Cannon Sneed and Prof. Robert C. Brasted, Vol. 6, Part 1), *review*, 1428
Sutton, George P. : Rocket Propulsion Elements, second edition, *review*, 986
Suzuki, Prof. T., and others : Muscular Exercise and Adrenal 17-Hydroxycorticosteroid Secretion in Dogs, 715
Svennerholm, Elisabet, and Svennerholm, Dr. Lars : Quantitative Paper Partition Chromatography of Sialic Acids, 1154
Svennerholm, Dr. Lars (Svennerholm, Elisabet, and) : Quantitative Paper Partition Chromatography of Sialic Acids, 1154
Svenska Linné-Sällskapets : Årsskrift for 1956-57, 244
Svet-Moldavskaya, I. A., and Svet-Moldavsky, G. J. : Acquired Resistance to Experimental Allergic Encephalomyelitis, 1536
Svet-Moldavsky, G. J. (Svet-Moldavskaya, I. A., and) : Acquired Resistance to Experimental Allergic Encephalomyelitis, 1536
Svorad, Dr. D. : Changes in the Topographical Distribution of Glycogen in the Brain during Animal Hypnosis, 775
Swallow, A. J. : Processing of Foods with Ionizing Radiations (Radiation Chemical Aspects), 878
Swaminathan, M. S., and others : Induced Polyploidy in Egyptian and Indian Clovers, 32
Swank, Prof. R. L., and Engel, R. : Production of Convulsions in Hamsters by High Butterfat Intake, 1214
Swanson, Prof. Carl P. : Cytology and Genetics, *review* by Prof. K. Mather, 973
Swarup, G. (Maxwell, A., and) : A New Spectral Characteristic in Solar Radio Emission, 36
Sweden : Underground Constructions in (Hugh Pitt), 1376
Swedish Academy : Presidential Address (Dag Hammarskjöld), 611
Swedish Deep-Sea Expedition, 1947-1948, Vol. 9, Sediment Cores from the Indian Ocean, No. 1, Diatoms from Equatorial Indian Ocean (R. W. Kolbe), 953
Swedish Forest Research, 742
Swedish Royal Academy of Sciences : Election of Dr. G. E. R. Deacon as a Foreign Member, 387
Swinburne, Sir James : Hundredth Birthday of, 599 ; work of, 599
  Obituary, 1306
Swirski, Dr. E., and others : Effect of Caffeine and other Purines upon the Ribonucleic Acid/Deoxyribonucleic Acid Ratio in Leaves, and the Suitability of these Leaves for Aphids, 1595
Swyer, Dr. G. I. M. : Human Artificial Insemination, *review*, 797
Symmetry of Snow Crystals (Prof. S. Tolansky), 256
Symons, Dr. M. C. R. : Appointed visiting associate professor in the Department of Chemistry of the University of British Columbia, 315
Symons, Dr. M. C. R. (Smith, M., and) : Interactions in Ionic Solutions (Effects of Changes of Solvent, added Electrolyte and Temperature on the first Electronic Absorption Band of the Iodide Ion), 241
Synapses with a Single Gell : Two Inhibitory Fibres forming (Dr. G. Hoyle), 1134
Synapses (Myoneural) : Lead-Reactive Substances in (Dr. Gy. Sávay and Dr. B. Csillik), 1137
Syndrome (Radiation) : Biological Effect of a Magnetic Field and the (M. F. Barnothy and J. M. Barnothy), 1785
Synge, Prof. J. L. : The Relativistic Gas, *review* by Dr. N. B. Slater, 374
  Kandelman's Krim, a Realistic Fantasy, *review* by Prof. T. A. A. Broadbent, 445
Synthesis : Organic (Dr. Vartkes Migrdichian), Vol. 1, Open-Chain Saturated Compounds ; Vol. 2, Open-Chain Unsaturated Compounds, Alicyclic Compounds, Aromatic Compounds, *review* by Prof. John Read, 515
  Passive Network (Dr. James E. Storer), *review* by S. A. Stigant, 1564
Synthesis of Acidic Polysaccharides : Importance of the, for Wound Healing (Dr. Laurence L. Layton, Doris R. Frankel, Irving H. Sher, Sylvia Scapa and Gladys Friedler), 1543
Synthesis of Deoxyribonucleic Acid : Pitfalls of Specific Radioactivity in measuring (Dr. L. G. Lajtha), 1609
Synthesis of Deoxyribonucleic Acid in Tissue Culture with Tritium-labelled Thymidine : Autoradiographic Visualization of (H. Firket and W. G. Verly), 274
Synthesis of General Embryology, *review* by Prof. J. Brachet, 144
Synthesis of L-threo-β-Phenylserine and L-erythro-β-Phenylserine : Enzymatic Cleavage and (Friedrich H. Bruns and Liselore Fiedler), 1533
Synthesis of Phlorin and other Phenolic Glucosides by Plant Tissues (A. Hutchinson, Chitra Roy and Prof. G. H. N. Towers), 841
Synthesis of Protein and Nucleic Acids in *Bacillus cereus* : Effects of 8-Azaguanine on the (Prof. H. Chantrenne and S. Devreux), 1737
Synthesis of Ribonucleic Acid (Dr. A. M. Michelson), 303
Synthesis of Succinate from Acetate by an Enzyme System of Pig Heart Muscle (Dr. D. D. Davies), 339
Synthesis (Arylsulphate), and the Arylsulphatases (H. Baum and Dr. K. S. Dodgson), 115
Synthesis (Carotenoid) : Inhibition of, in Photosynthetic Bacteria—Specific Inhibition of Carotenoid Synthesis in a Photosynthetic Bacterium and its Physiological Consequences (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250 ; Suppression of Carotenoid Synthesis and its Effect on the Activity of Photosynthetic Bacterial Chromatophores (Dr. R. C. Fuller and I. C. Anderson), 252
  Separation of, from Fat Synthesis in *Rhodotorula gracilis* by Diphenylamine (L. Slechta, O. Gabriel and Dr. O. Hoffmann-Ostenhof), 268
  Specific Inhibition of, in a Photosynthetic Bacterium, and its Physiological Consequences (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Germaine Cohen-Bazire and Prof. R. Y. Stanier), 250
  Suppression of, and its Effect on the Activity of Photosynthetic Bacterial Chromatophores (Inhibition of Carotenoid Synthesis in Photosynthetic Bacteria), (Dr. R. C. Fuller and I. C. Anderson), 252
Synthesis (Cell-Wall) : Chloramphenicol-Resistant Incorporation of Amino-Acids into *Staphylococci* and (Dr. J. Mandelstam and Dr. H. J. Rogers), 956
Synthesis (Cell-Wall), by *Staphylococcus aureus* in the Presence of Chloramphenicol (R. Hancock and Dr. James T. Park), 1050
Synthesis (Enzymic), of Coenzyme I in relation to Chemical Control of Cell Growth (Prof. R. K. Morton), 540
Synthesis (Enzymic), of Nitrogen-containing Disaccharides by α-Galactosyl Transfer (Dr. Winifred M. Watkins), 117
Synthesis (Fat) : Separation of Carotenoid Synthesis from, in *Rhodotorula gracilis* by Diphenylamine (L. Slechta, O. Gabriel and Dr. O. Hoffmann-Ostenhof), 268
Synthesis (New), of Histidyl Peptides (Prof. Shiro Akabori, Kenji Okawa and Fumio Sakiyama), 772
Synthesis (Pyridine Nucleotide), by Erythrocytes : Species Difference in (P. G. Tulpule), 1804
Synthesis and Composition of Protein : Effect of Transmitted Ribonucleic Acid from Healthy Pear Trees upon the (Dr. B. Kessler), 201
Synthetic Detergents : Activation of Cytochrome Oxidase by (Takashi Yonetani, Shigeki Takemori, Ichiro Sekuzu and Prof. Kazua Okunuki), 1339
Synthetic Œstrogen Stilboestrol : Effect of the, on Pregnancy in the Rabbit (Dr. A. Sharaf and Dr. E. S. E. Hafez), 1211
Synthetic Piezoelectric Crystals : Properties of, *review* by Dr. Warren P. Mason, 588
Synthetic Polyglucose Sulphate : Interaction between, and Biologically Active Basic Polypeptides and Proteins (Dr. P. T. Mora and B. G. Young), 1402
System (Model), for Cysteine Desulphydrase Action—Pyridoxal Phosphate-Vanadium (Prof. F. Bergel, R. C. Bray and K. R. Harrap), 1654
Systematic Absences and the X-Ray Diagram of Cellulose (K. C. Ellis and Dr. J. O. Warwicker), 1614
Systematics and Biology of the Ungulates (Comité de Direction et d'Administration of *Mammalia* and the Société pour l'Étude et la Protection des Mammifères Colloquium on), 237
Systemic Insecticide : Fluoroacetamide as a (Dr. W. A. L. David and B. O. C. Gardiner), 1810 ; (C. Chapman and Dr. M. A. Phillips), 1810
Systemic Insecticides and the Ratio of Green to Dried Hops (H. S. Darling), 1811
Systems (Independent), for the Cleavage of Folic Acid and Citrovorum Factor in Rat Liver : Occurrence of (U. W. Kenkare and Dr. Beatriz M. Braganca), 548
Systems (Model) : Dealkylation of N-Alkylamines by (James R. Gillette, James V. Dingell and Bernard B. Brodie), 898
Szabó, I. (Szilágyi, Dr. I., and) : Microchemical Method for the Determination of Sakaguchi-positive Antibiotics, 52
Szeinberg, Dr. A., and others : Enzymatic Abnormality in Erythrocytes of a Population sensitive to *Vicia faba* or Haemolytic Anaemia induced by Drugs, 1256
Széll, Dr. Tamás, and Furka, Árpád : Isolation of 2-Nitro-phenol from the Mixture of Mono-nitro-phenols, 481
Sziebert-Horváth, E., and others : Immediate Effect of *l*-3:5:3'-Triiodothyroacetic Acid on Metabolic Rate and Body Temperature in Hypophysectomized Rats and the Action of Cortisone, 345
Szilágyi, Dr. I., and Szabó, I. : Microchemical Method for the Determination of Sakaguchi-positive Antibiotics, 52
Szilágyi, Dr. T., and others : Effect of a Lethal Electric Shock during Hypothermia, 909

TABLES of the Non-Central *t*-Distribution (George J. Resnikoff and Gerald J. Leiberman), *review*, 985
Tables (Statistical), for Biological, Agricultural and Medical Research(Prof. Sir Ronald A. Fisher and Dr. Frank Yates), fifth edition, *review*, 299
Tabor, Dr. D. : Contact Stresses (Stationary Contact), 1773
Tabouret-Keller, Mme. : At the thirteenth International Congress of Applied Psychology (Evaluation of Educational Achievement ('Docimology')—Elimination of Errors in Orthography), 1580
Tag (Fish-marking) : An Inexpensive Easily Constructed (Prof. Fergus J. O'Rourke and P. Makings), 577
Tagatose : Formation of Lactulose and, from Lactose in Strongly Heated Milk (Susumu Adachi), 840
Tagawa, Kunio, and others : Crystalline Cytochrome *c*—Crystallization of Cytochrome *c* from Pigeon Breast Muscle, 1588 ; Crystallization of Cytochrome *c* from Cow Kidney, 1589 ; Crystallization of Cytochrome *c* from Wheat Germ, 1590
  Two Crystalline Haemoproteins of Wheat, 1656
Tagholm, L. F., and others : Long-Distance Radio Propagation above 30 Mc./s., 1185
Tahori, Dr. A. S., and others : Effect of Caffeine and other Purines upon the Ribonucleci Acid/Deoxyribonucleic Acid Ratio in Leaves, and the Suitability of these Leaves for Aphids, 1595
Tail-length of Mice : Effect of Two Extreme Temperatures on Growth and (Dr. M. A. El-R. Ashoub), 284
Tait, Dr. John B. : Hydrography of the Faroe—Shetland Channel, 1927-1952, *review* by Dr. G. E. R. Deacon, 214
  Obituary of Prof. Bjørn Helland-Hansen, 453
Takagi, Y. (Otsuji, N., and) : Nucleic Acids (Role of Deoxyribonucleic Acid Synthesis in Enzyme Formation), 1512
Takanami, M. : Nucleic Acids (Physical and Chemical Studies of Ribonucleoprotein Particles of Rabbit Liver Cells), 1511
Takashi, Dr. Muneaki, and Iwase, Shoji : Effect of Splenectomy on Azo Dye Carcinogenesis of Rat Liver, 1211
Takemori, Shigeki, and others : Activation of Cytochrome Oxidase by Synthetic Detergents, 1339
Takemura, S., and Miyazaki, M. : Nucleic Acids (Hydrazinolysis of Nucleic Acids, leading to the Preparation of Ribo- and Deoxyribo-apyrimidinic Acid), 1511
Takeuchi, Akira (Takeuchi, Prof. Noriko, and) : Direct Determination of the Active Phase of End-Plate Potential, 779

Takeuchi, Prof. Noriko, and Takeuchi, Akira : Direct Determination of the Active Phase of End-Plate Potential, 779
Talbot, Prof. Timothy R., and Elson, Dr. L. A. : Protection of August Rat against Lethal Doses of a Dimethyl Homologue of Myleran by Isologous Bone Marrow, 684
Tamaki, Keizo, and others : An Alternative Pathway for the Degradation of Cholic Acid by Micro-organisms, 906
Tamblyn, N., and Da Costa, E. W. B. : A Simple Technique for producing Fruit Bodies of Wood-destroying Basidiomycetes, 578
Tamiya, H. : Enzyme Chemistry (The Koji as a Source of Enzymes in Japan), 389
Tanaka, Shōzō, and others : A New Reaction for the Differentiation of *cis*- and *trans*-Isomers of Nitrophenylhydrazones of some α-Keto Acids, 639
Tanaka, Tsune, and others : Changes in Adenine Nucleotides of Squid Muscle, 1127
Tandberg-Hanssen, E. (Chapman, S., and) : Extremely High Temperatures (Mathematical Analysis of Thermal Diffusion at High Temperatures in Ionized Gases), 1381
Tanner, Dr. K. Nolen, and King, Raymond L. : Infra-Red Spectra of Free Radicals, 963
Tannins (Condensed) : Biogenesis of, from Leucoanthocyanins (Dr. David G. Roux), 1454
  Molecular Weight of, as a Factor determining their Affinity for Collagen (Dr. David G. Roux), 1793
Tape (Magnetic) : Recording Television Pictures on, 1174
Tappen, Dr. N. C. (Jacob, G. F., and) : Haemoglobins in Monkeys, 197
Tar Hydrocarbons (Polycyclic) : Paper Chromatography of the (Dr. Ernest Malý), 698
Tarr, Dr. S. A. J. : Appointed a lecturer in botany at the University of Exeter, 1182
Tartrates (Stereoisomeric) : Effect of, on Root Elongation in *Lepidium* (Torbjörn Aasheim), 922
Taste Sensitivity in Human Subjects : Influence of Salt Deficiency on (Roy Yensen), 1472
Tata Memorial Fund : Grants, Scholarships or Fellowships for research on Diseases of the Blood, with special reference to Leukaemia, 458
  Awards for 1958-59 for Research on Leukaemia and Allied Diseases, 1703
Taton, Dr. R. : Reason and Chance in Scientific Discovery (translated by A. J. Pomerans), *review* by Sir Edward Appleton, 983
Tauc, Dr. Jan : Electron Emission from Silicon *p-n* Junctions, 38
Tavener, Dr. L. Ellis : The Common Lands of Hampshire, *review* by Prof. L. Dudley Stamp, 730
Taxonomy (Tea) : The Agrotype Concept in (Dr. W. Wight), 893
Tayler, Dr. R. J. : Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions (Stability of Mixed-Field Systems), 806
Tayler, Dr. R. J. : White Dwarfs, *review*, 1366
Taylor, A. E., and others : Measurement of the Neutron Spectrum from ZETA, 1630
Taylor, C. M. (Brazell, J. H., and) : Artificial Stimulation of Rainfall in East Africa by means of Rockets, 1421
Taylor, Dr. F. H. : Awarded a Beit Junior Fellowship for Medical Research, 1507
Taylor, Dr. F. J. : Effect of Plasmolysis on the Rate of Respiration of a Green Alga, 136
Taylor, Dr. G. : East African Mountain Flora, *review*, 1027
Taylor (George) (Australia) Gold Medal of the Royal Aeronautical Society awarded to R. L. Lickley and L. P. Twiss, 1646
Taylor, H. T. : The Basicities of N-Alkyl Anilines, 265
Taylor, Ian, and Knowelden, John : Principles of Epidemiology, *review* by Dr. Kenneth Newell, 800
Taylor, K., and Harrison, R. K. : Coffinite in Cornwall, 363
Taylor, M. : Appointed a lecturer in anatomy at the University of Sheffield, 1576
Taylor, Mary B., and Juni, Dr. Elliot : Mechanisms of Formation of Stereoisomers of 2,3-Butanediol during Microbial Fermentation of Sugars, 1389
Taylor, Mary P., and others : Agar as Specimen Carrier in Double-Beam Infra-Red Spectroscopy, 763
Taylor, Monica : Awarded the Neill Prize for 1955-57 of the Royal Society of Edinburgh, 673
  Sir Bertram Windle (1858-1929), 1247
Taylor, R. J., and Dyer, A. J. : An Instrument for Measuring Evaporation from Natural Surfaces, 408
Taysum, D. H. : A Possible Basis for Phyto-Immunity, 174
Tea : Agrotype Concept in Chemical Analysis of (Dr. D. Wight), 1355
  Boron Deficiency in (Dr. E. M. Chenery), 426
  Species Hybrids of (D. J. Wood and P. K. Barua), 1674
Tea Soil : Rate of Calcium Loss resulting from Ammonium Sulphate Treatment of a (N. G. Gokhalé), 426
Tea Taxonomy : The Agrotype Concept in (Dr. W. Wight), 893
Teacher Training : Purpose in (Monica Wingate), *review* by T H. Hawkins, 517
  Technical, 948
Teachers: Recruitment and Training of (House of Commons Debate on), 950
Teachers in Schools and Technical Colleges : Supply of, 948
Teachers in Technical Institutions, Association of : Memorandum on Sandwich Courses, 1712
Teachers (Science), and National Service (House of Commons Debate on), 948
Teaching of Mathematics (Incorporated Association of Assistant Masters in Secondary Schools), *review* by W. J. Langford, 979
Teaching Zoology in Britain (Dr. H. G. Vevers), 1313
Teaching and Research : The Natural Resources of the Country and their Value for (Papers at the Annual Meeting of the Association of British Zoologists), 1313
Teaching (University) : Colour Television in (C. E. Engel and Prof. Roger Warwick), 91
Teaching Laboratories in Universities and Colleges of Advanced Technology : The Design of (Royal Institute of British Architects Symposium on), 459
Teal, J. M. : Salt Marshes (Metabolism of the Eco-system), 1513
Teale, F. W. J. : Carotenoid-sensitized Fluoresence of Chlorophyll *in vitro*, 415
Teale, R. : Mechanical Properties of Non-Metallic Brittle Materials (Dynamic Loading, Impact and Fragmentation), 1578
Team-work and Discovery in Science, 159
Tebble, N. : Appointed to a John Murray Travelling Studentship for 1958 by the Royal Society, 1378
Technical Age : Administration and Defence in a, 1751
Technical Books : Recent Scientific and, Supp. viii, January 25 ; Supp. viii, February 22 ; Supp. vi, March 29 ; Supp. vi, April 26 ; Supp. vi, May 31 ; Supp. vi, June 28
Technical Change : Men, Steel and (Olive Banks and Dr. W. M. Scott), 1180
Technical Change and Industrial Relations, 1180
Technical Colleges : Industry and the (Report of the Southern Regional Council of the Federation of British Industries, in co-operation with the Southern Regional Council for Further Education Regional Conference on), 1573
  Liberal Education in, 386
  Report of the Second National Conference between Industry and the (Federation of British Industries), 370
  Supply of Teachers in Schools and, 948
Technical Co-operation in Africa South of the Sahara, Commission for : To set up a Foundation for Mutual Assistance in Africa South of the Sahara, 601, 811
Technical Education (H. A. Warren), *review* by T. H. Hawkins, 517
  Apprenticeship and, 1293
  The Industrial Film in (Midland Industrial Film Association Conference on), 1508
  Liberal Studies in (A. A. Part), 386
  Quality in, 1491
Technical Education in the Post Office, 1309
Technical Education in Scotland : Building Programme for, 1309
Technical Education in the U.S.S.R. (C. E. Simmonds), 316
Technical Information : Exchange of, 1111
Technical Man-power : Scientific and, in Britain, 741
Technical Personnel : Immigration of, to the United States, 1243
Technical Schools (Grammar and) : Science accommodation for, 1182
Technical Students : Scientific and, 1309
Technical Students in Britain (A. A. Part), 1112
Technical Teacher Training, 948
Technical Translation : Scientific and (Aslib Conference on), 1044
Technical University (Middle East), Ankara (Dr. Turgut Yazicioglu), 382
Technical and Economic Assistance, 1557
Technical and Technological Education in Scotland, 313
Technique (Humane), in the Laboratory (Report of a Symposium held by the Universities Federation for Animal Welfare), (Laboratory Animals Bureau, Collected Papers Vol. 6), 1178, 1444
Technique (Improved), for Spot Testing, using a 'Cellophane' Membrane (Dr. B. Camber), 124
Technique (Modified), in Chromatography (Prof. K. Krishnamurti and B. V. Dhareshwar), 766
Technique (Motokawa's), for Investigating Retinal Function : Validity of (Dr. C. I. Howarth and M. Treisman), 843
Technique (Schultz-Dale) : Demonstration of Antibody in Passive Transplantation Immunity to Crocker Tumour in Mice, using the (Prof. B. D. Baruah), 624
Technique (Simple), for producing Fruit Bodies of Wood-destroying Basidiomycetes (N. Tamblyn and E. W. B. Da Costa), 578
Technique (Staining), for Detecting Ratoon Stunting Disease in Sugar Cane (Robert Antoine), 276
Techniques : Microwave Theory and (United States Institute of Radio Engineers Professional Group 1958 National Symposium on), 885
  Radiometric and Geochemical Survey (Royal Astronomical Society Geophysical Discussion on), 594
Techniques (Cytological), and the Apical Meristem (Prof. C. W. Wardlaw), 237
Techniques (Frequency Response) : Optical Image Assessment using (Imperial College of Science and Technology Summer School on), 1510
Techniques (Horticultural) : Science in the Service of (Fifteenth International Horticultural Congress), 315
Techniques (Phenol 'Unmasking') : Demonstration of some 'Masked' Lipids in the Oocytes of *Chrotogonus trachypterus* with Sudan Black B and (Brij L. Gupta), 555
Techniques and Applications of the Electron Microscope (Cornell University Summer Laboratory Course in), 743
Technological Advance and European Free Trade, 1163
Technological Age : Education for a, 95
  Local Administration in a, 583
Technological Awards, National Council for : Report for December, 1955, to July, 1957, 814
Technological Education : Scientific and (Edwin Barker), *review* by T. H. Hawkins, 517
Technological Education in Britain, 814
Technological Education in Scotland : Technical and, 313
Technological Education (Higher), London and Home Counties Regional Advisory Council for : Ninth Annual Report, 1309
Technological Humanism, 369
Technological Initiative, *review* by Prof. D. M. Newitt, 1094
Technological University of Eindhoven (Prof. H. B. Dorgelo), 12
Technologists : Emigration of Scientists and, 1243
Technology : Instrument (E. B. Jones), Vol. 2, Analysis Instruments ; Vol. 3, Telemetering and Automatic Control, *review* by Dr. T. K. Ross, 73
  Soviet Education for Science and (Alexander G. Korol), 1491
Technology in Defence : Science and, 1229
Technology (Advanced) : The Design of Teaching Laboratories in Universities and Colleges of (Royal Institute of British Architects Symposium on), 459
Technology (Glass), Society for : Symposium on Radioisotopes and Glass, 318
Technology (Instrument), Society of : Conference on Automatic Measurement of Quality in Process Plants, 165
Technology (Nuclear Reactor) : Recent Developments in (United Kingdom Atomic Energy Authority Conference on), 458
Technology (Polymer) : Recent Advances in (Institute of the Rubber Industry and the Plastics Institute Conference on), 89, 1303

Tectona grandis : Relationship of Tectoquinone to Durability in (Dr. P. Rudman, E. W. B. Da Costa, F J. Gay and A. H. Wetherly), 721
Tectoquinone : Relationship of, to Durability in *Tectona grandis* (Dr. P. Rudman, E. W. B. Da Costa, F. J. Gay and A. H. Wetherly), 721
Tedder, Lord : Elected president of the Institute of Metals, 1181
Teitel, A., and Marcus, N. : Physicochemical Investigations of Erythrocyte Membranes, 714
Tektites : Origin of (John A. O'Keefe), 172 ; (Carlos M. Sarsavsky), 173 ; (Prof. T. Gold), 173 ; (Dr. Virgil E. Barnes), 1457 ; (Prof. Zdenek Kopal), 1457 ; (Prof. Harold C. Urey), 1458
Telecommunications : Solid State Phenomena in Electronics and (Postal and Telecommunications Group of the Brussels Universal and International Exhibition International Conference on), 813
Telecommunications Board, Commonwealth : Ninth General Report (1956), 1638
Telephone System : Full Automation of the (White Paper on), 71
Television : Medical Colour, 1768
Television (B.B.C.) : New Installations for, 1046
Television (Colour), in University Teaching (C. E. Engel and Prof. Roger Warwick), 91
Television Pictures : Visibility of Noise on (R. Fatehchand), 1797
Television Pictures on Magnetic Tape : Recording, 1174
Television Society: *Wireless World* Premium awarded to Dr. D. Gabor, 1246
  Mervyn Premium awarded to Dr. E. L. C. White, 1246
  Mullard Premium awarded to S. N. F. Doherty and P. L. Mothersole, 1246
  E.M.I. Premium awarded to Dr. J. A. Saxton, 1246
  Electronic Engineering Premium awarded to Dr. R. Pearce, 1246
  Pye Premium awarded to Ian Atkins, 1246
Television Studios : The B.B.C. Riverside—the Architectural Aspects (E. A. Fowler), 1046
  The B.B.C. Riverside—some Aspects of Technical Planning and Equipment (H. C. Nickels and D. M. B. Grubb), 1046
Tellez-Plasencia, H. (Gérard de Vaucouleurs, Jean Dragesco et Pierre Selme, avec la collaboration de Henriette Faraggi et) : Manuel de Photographie scientifique, *review* by J. Walton Siddorn, 798
Telluride (Bismuth), and its Alloys : Thermoelectric Properties of (D. A. Wright), 834
Temperature : Importance of Photoperiod and, in Inducing Diapause in the European Corn Borer, *Pyrausta nubilalis* (Hbn.), (J. A. Mutchmor and Dr. W. E. Beckel), 204
  A Mammalian Activity Rhythm independent of (Dr. G. Edgar Folk, jun., Mona R. Meltzer and Richard E. Grindeland), 1598
Temperature (Body), in Hypophysectomized Rats and the Action of Cortisone : Immediate Effect of *l*-3:5:3'-Tri-iodothyroacetic Acid on Metabolic Rate and (Prof. Sz. Donhoffer, I. Várnai and E. Szíebert-Horváth), 345
Temperature (Constant) Water-Bath (Prof. A. Darbre and R. L. Speirs), 364
Temperature (Elevated Environmental) : Effects of Clipping and Spraying on various Homoeothermic Responses of Rabbits at an (Dr. Harold D. Johnson, Chu Shan Cheng and A. C. Ragsdale), 842
Temperature (High) : Prolongation of the Life of *Drosophila subobscura* by a Brief Exposure of Adults to a (J. Maynard Smith), 496
Temperature (Low) : Effect of Glycerol and, on Survival of Unfertilized Mouse Eggs (Dr. J. K. Sherman and Dr. Teh Ping Lin), 785
  Improved Resolution of X-Ray Diffraction Patterns of Protein Crystals at (Dr. Murray Vernon King), 263
Temperature (Low-) Injury to Stored Apples : Reduction of, by Modulation of Environmental Conditions (W. Hugh Smith), 275
Temperature (Low-) Physics, *review* by Dr. A. B. Pippard, 871
  Sixth International Conference on, 161
Temperature (Low-) Specimen Method of Electron Diffraction and Electron Microscopy : Examination of Cellulose Fibre by the (Goro Honjo and Masaru Watanabe), 326
Temperature (Raised Peripheral) : Effect of a, upon the Rate of Regeneration in a Mammalian Peripheral Nerve (H. J. Gamble), 287
Temperature (Shrinkage), of Human Collagen : Variation with Age of (Patricia C. Brown and Dr. R. Consden), 349
Temperature Changes on the Surface of Human Tooth Enamel : Investigations into (Peter S. Rothwell), 1805
Temperature Coefficient of Ultrasonic Absorption in Organic Liquids (Dr. S. Parthasarathy, M. Pancholy and A. F. Chhapgar), 405
Temperature Measurements of Shock Waves by the Spectrum-Line Reversal Method (J. G. Clouston, Dr. A. G. Gaydon and Prof. I. I. Glass), 1325
Temperature Record : World Low Air, 1109
Temperatures : Extremely High (Electronics Research Directorate, Air Force Cambridge Research Center, Bedford, Mass., Conference on), 1380
Temperatures (Elevated) : Behaviour of Metals at (Lectures delivered at the Institution of Metallurgists Refresher Course, 1956), *review* by Prof. F. C. Thompson, 1299
Temperatures (High) : A Stabilized High-Current Toroidal Discharge producing (Controlled Release of Thermonuclear Energy), (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, J. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222
Temperatures (High), and Nuclear Reactions in a Gas Discharge : Production of (Controlled Release of Thermonuclear Energy), (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, R. W. P. McWhirter, R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217
Temperatures (Low) : Proteins in Solutions at (Simon Freed, James H. Turnbull and Willliam Salmre), 1731
Temperatures (Lunar) : Calculations of (R. W Muncey), 1458
Temperatures (Two Extreme) : Effect of, on Growth and Tail-length of Mice (Dr. M. A. El-R. Ashoub), 284
Templeman, W. G. (Sexton, Dr. W. A., and) : Awarded the Research Medal of the Royal Agricultural Society of England, 1506 ; work of, 1506
Temporal Variation (Spatial and), of Microfibrillar Organization in Plant Cell Walls (D. S. Belford, Dr. A. Myers and Prof. R. D. Preston), 1251
Temporary Nutritional Stress and Infertility in Mice (T. J. McClure), 1132
Temporary Waters : Breeding of Dragonflies in (Dr. E. P. Hodgkin and J. A. L. Watson), 1015
Ten Cate, Prof. G. (Bloemendal, H., and) : N-Terminal Amino-acids of Bovine Eye Lens Proteins, 340
Tenebrio molitor L. (Coleoptera : Tenebrionidae) : Prothoracic Glands in (U. S. Srivastava), 1668
Teratogenesis (Experimental) : Insulin—Cortisone Relationship in (Dr. J. W. Millen and Dr. D. H. M. Woollam), 418
Teratogenic Activity of Hypervitaminosis-A : Influence of 4-Methyl-2-thiouracil on the (Dr. D. H. M. Woollam and Dr. J. W. Millen), 992
N-Terminal Amino-acids of Bovine Eye Lens Proteins (H. Bloemendal and Prof. G. Ten Cate), 340
N-Terminal Histidine at the Active Centre of a Permeability Mechanism (W. D. Stein), 1662
Terpenes : The (the late Sir John Simonsen and Dr. W. C. J. Ross), Vol. 4, The Triterpenes and their Derivatives—Hydrocarbons, Alcohols, Hydroxy-aldehydes, Ketones and Hydroxy-ketones, *review* by Prof. A. J. Birch, 445
Terrestrial Craters : A Survey of (Dr. C. S. Beals), 559
Territories (British Dependent), in Africa : The Indigenous Cattle of the (D. E. Faulkner and Dr. H. Epstein), (Colonial Advisory Council of Agriculture, Animal Health and Forestry, Publication No. 5), 1581
Territory (Under-developed) : Demography of an, *review* by W. Brass, 442
Terry, N. B., and Morgans, W. T. A. : Mechanical Properties of Non-Metallic Brittle Materials (Rheological Behaviour of Coal), 1578
5-Tertiary Butyl Benzimidazolone : Antimitotic Activity of (Dr. H. C. Stoerk, R. N. Arison and J. E. Hawkins, jun.), *erratum*, 238
Terzian, Dr. Levon A.: Inhibition of Blood Digestion in Mosquitoes by Cations, and Cation-Antibiotic Mixtures, 282
Test (Murexide), in Paper Chromatography (N. B. Chanda and S. Chakraborty), 836
Test Factors and Person Factors : The General Relationship between—Application to Preference Matrices (Patrick Slater), 1225
Testis of the Cryptorchid Rat : β-Glucuronidase, Lipase and Esterase in the (Dr. Masando Hayashi, Kazuhiro Ogata, Takuro Shiraogawa and Osamu Kawase), 186
Testosterone Propionate : Effect of, upon the Incorporation of Labelled Glycine into Homogenates of Mouse Kidney (Dr. Edward H. Frieden and Dr. Edward H. Cohen), 912
Testosterone and Orchidectomy : Effect of, on the Activity of the Melanocytes in the Skin (P. G. Bischitz and Dr. R. S. Snell), 187
Tetrafluoride (Carbon) : Correlation between Ionizing and Attachment Coefficients and Breakdown Characteristics for (P. R. Howard), 645
Tetrahydrothiophen (Robinson Bros., Ltd., West Bromwich), 160
Tetrakistrifluorophosphine-nickel : Raman Spectrum of (Dr. L. A. Woodward and J. R. Hall), 831
Tetraploid Wheats : 'Purple Pericarp', a Monofactorial Dominant in (Dr. B. C. Sharman), 929
Texas and New Mexico : Silicified Permian Fossils from—Pleurotomariacea (Prof. R. L. Batten), 1639
Textile Institute: 1958 Annual Conference (Fibre Blends and Mixtures), 673
  Conference on the Mechanical Properties of Textile Materials, 1640
Textile Materials : Mechanical Properties of (Textile Institute Conference on), 1640
Thacker, Prof. M. S. : At the Millenial Celebrations of Al-Mas'udi (Collaboration between the Arab Countries and India in the search for Knowledge), 883
Thackeray, A. D., and others : Radial Velocities of Southern *B* Stars, 1116
Thaw Rigor and Cell Rupture (R. M. Love and S. B. Haraldsson), 1334
Thaysen, A. C., and others : Yeasts (edited by W. Roman), *review* by R. B. Gilliland, 798
Thein, H., and others : Haemoglobin E and the Diego Blood Group Antigen in Sarawak and Burma, 119
Theis, Henry W., and others : Antigenicity of Avidin, 619
Theobroma cacao : Incompatibility in (F. W. Cope), 279
Théodorides, Dr. J. : Prof. Heinrich Balss, 531
Theophrastus on Stones (Introduction, Greek Text, English translation, and Commentary, by Earle R. Caley and John F. C. Richards), *review* by Dr. V. A. Eyles, 1686
Theoretical Analysis of Doppler Radio Signals from Earth Satellites (Dr. William H. Guier and George C. Weiffenbach), 1525
Theoretical Atomic Physics in Copenhagen, 1767
Theoretical Biology : The Strategy of the Genes, a Discussion of Some Aspects of (Prof. C. H. Waddington), *review* by Dr. J. M. Thoday, 1025
Theoretical Physics in Manchester, 1767
Theories of Evolution, *review* by T. H. Hawkins, 1364
Theory : Atomic, *review* by Prof. R. Eisenschitz, 1625
  Chemical Phase (Prof. J. Zernike), *review* by Dr. F. Din, 587
  Economic, *review* by Prof. R. G. D. Allen, 1027
  Statistical—the Relationship of Probability, Credibility and Error (Prof. Lancelot Hogben), *review* by I. J. Good, 1687
Theory of Antibody Formation involving Eosinophils and Reticulo-endothelial Cells (Dr. Robert S. Speirs), 681
Theory of Electrical Machines : The General (Bernard Adkins), *review* by T. Wilson, D. A. Jones and Prof. G. W. Carter, 516
Theory of Electrical Networks, *review* by K. R. Sturley, 6
Theory of General Static Equilibrium (Prof. Eraldo Fossati), edited by Prof. G. L. S. Shackle, *review* by Prof. R. G. D. Allen, 1027
Theory of Instrumentation, *review* by Dr. T. K. Ross, 73
Theory of Interspecific Competition : Williamson's (Dr. H. G. Andrewartha and Dr. T. O. Browning), 1415 ; (M. H. Williamson), 1415
Theory of Networks in Electrical Communication and other Fields (F. E. Rogers), *review* by K. R. Sturley, 6
Theory of Oxidative Phosphorylation (K. Harrison), 1131
Theory of Solutions, *review* by Prof. H. C. Longuet-Higgins, 978
Theory of Suspension Bridges (Sir Alfred Pugsley), *review* by T. M. Charlton, 982
Theory of Visual Thresholds (Dr. F. H. C. Marriott), 1487 ; (R. L. Gregory and Violet R. Cane), 1488
Theory (Band), of Metals and the Structure of the Fermi Surface (Physical Society Conference on), 525
Theory (Molecular), of Solutions (Prof. I. Prigogine, with the collaboration of A. Bellemans and V. Mathot), *review* by Prof. H. C. Longuet-Higgins, 978
Theory (Multiple-Mutation), of Carcinogenesis (J. C. Fisher), 651
Theory (Physical) : Irreversible Processes in (Prof. R. C. L. Bosworth), 402 ; (Prof. Karl R. Popper), 402
Theory and Practice of Shield Design, *review* by J. Edwards, 976

Theory and Techniques : Microwave (United States Institute of Radio Engineers Professional Group 1958 National Symposium on), 885
Therapsid Oligokyphus : The Liassic (Dr. Walter Georg Kühne), *review* by Prof. D. M. S. Watson, 1233
Therapy (Leukaemia) : Effects of Alkoxyglycerols and especially Selachyl Alcohol on the Bone Marrow in connexion with Irradiation Treatment and in (Astrid Brohult), 1484
Therapy (Phenobarbitone), in Epilepsy, 1377
Therapy (Tumour) : Hydrogen Peroxide and (Prof. H. N. Green and J. W. Westrop), 128
Therkelsen, Dr. A. J. : Awarded a Scholarship by the Lady Tata Memorial Fund, 1703
Thermal Analysis of Clays, *review*, 1561
Thermal Decomposition of some Antibiotics (Prof. Wesley W. Wendlandt and Morris Zief), 1207
Thermal History : Dependence of Heat Capacity on (J. M. Lock, D. H. Parkinson and L. M. Roberts), 642
Thermal Image-Converter : A New (W. R. Harding, C. Hilsum and D. C. Northrop), 691
Thermal Insulation of Houses, 529
Thermal Insulation (Dwellings) Bill, 529
Thermal Investigation of Clays : The Differential (edited by Robert C. Mackenzie), *review*, 1561
Thermal Method (Differential), for determining Reactivity of Calcium Oxide (T. L. Webb and T. van der Walt), 411
Thermal Stability of Polytetrafluoroethylene (Dr. C. R. Patrick), 698
Thermocell with Ion-exchange Polymer Electrolyte (W. T. Grubb), 338
Thermocline off the Coast of Tropical West Africa (J. C. D. Watts), 863
Thermodynamics : Engineering—Work and Heat Transfer (G. F. C. Rogers and Y. R. Mayhew), *review* by Dr. J. H. Horlock, 1028
  Foundations of, *review* by S. Angus, 1755
  Heat and (Prof. Mark W. Zemansky), fourth edition, *review* by J. A. Shercliff, 732
Thermodynamics (Classical) : Elements of, for Advanced Students of Physics (Dr. A. B. Pippard), *review* by S. Angus, 1755
Thermoelectric Properties of Bismuth Telluride and its Alloys (D. A. Wright), 834
Thermometric Fixed Point : The Triple Point of Argon as a (R. A. H. Pool, B. D. C. Shields and Dr. L. A. K. Staveley), 831
Thermometry (Resistance), near the Absolute Zero (J. E. Kunzler, T. H. Geballe and G. W. Hull), 1245
Thermonuclear Energy : Controlled Release of—Production of High Temperatures and Nuclear Reactions in a Gas Discharge (Dr. P. C. Thonemann, E. P. Butt, R. Carruthers, Dr. A. N. Dellis, D. W. Fry, Dr. A. Gibson, G. N. Harding, D. J. Lees, R. W. P. McWhirter, R. S. Pease, Dr. S. A. Ramsden and S. Ward), 217, 315 ; Co-operative Phenomena in Hot Plasmas (Prof. Lyman Spitzer), 221 ; A Stabilized High-Current Toroidal Discharge producing High Temperatures (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, J. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222 ; Magnetic Measurement of Plasma Confinement in a Partially Stabilized Linear Pinch (Dr. L. C. Burkhardt, Dr. R. H. Lövberg and Dr. J. A. Phillips), 224 ; Neutron Production in a High-Power Pinch Apparatus (Dr. D. C. Hagerman and Dr. J. W. Mather), 226 ; New Confinement Phenomena and Neutron Production in a Linear Stabilized Pinch (Dr. L. C. Burkhardt and Dr. R. H. Lovberg), 228 ; Neutrons from a Stabilized Toroidal Pinch (Dr. J. Honsaker, Dr. H. Karr, Dr. J. Osher, Dr. J. A. Phillips and Dr. J. L. Tuck), 231
Thermonuclear Reactions : Controlled (Joint United States—United Kingdom Conference to exchange Information on), 386
Thermonuclear Reactions (Controlled) : Experimental Results with the ZETA Apparatus on (Royal Society Discussion on), 238, 803
Thermoregulation in the Rat : Significance of the Adrenal Glands during Post-natal Development of (Dr. P. Hahn and O. Koldovsky), 847
Thickness of the Helium Film : Measurements of the (Prof. L. C. Jackson), 527
Thickness Gauge : Nucleonic (Baldwin Instrument Co., Ltd., Dartford), 457
Thickness Measurement of Epitaxially Grown Films (Dr. O. S. Heavens and D. C. Pandeya), 1394
Thigpen, Corbett H., and Cleckley, Hervey M. : The Three Faces of Eve, *review* by Dr. Clifford Allen, 5
Thijsse, Prof. J. T. : Awarded the William Bowie Medal of the American Geophysical Union, 1378
Thimann, Prof. Kenneth V., and Mahadevan, S. : Enzymatic Hydrolysis of Indoleacetonitrile, 1466
Things (Living) : The Evolution of (Prof. H. Graham Cannon), *review* by T. H. Hawkins, 1364
Thinking, an Experimental and Social Study (Sir Frederick Bartlett), *review* by Prof. George Humphrey, 1629
Thinking as a Skilll, *review* by Prof. George Humphrey, 1629
Thiobacilli : Detection of Polythionate in Cultures of, by means of the Folin—Ciocalteu Reagent (Prof. D. P. Pratt), 1075
Thiobacillus: Occurrence of Rhodanese in a Species of (C. A. McChesney), 347
Thioctic Acid and Photosynthetic Fixation of Carbon Dioxide (B. B. Biswas and Dr. S. P. Sen), 1219
Thiocyanato-bridged Complexes (Binuclear) : Isomerism among (Dr. J. Chatt, L. A. Duncanson, F. A. Hart and P. G. Owston), 43
Thiosemicarbazones : Effect of, on the Multiplication of Tobacco Mosaic Virus (Tokuzo Hirai, Toru Shimomura and Yonosuke Nishikawa), 352
Thirkill, Sir Henry : Retirement from the mastership of Clare College, Cambridge, 1038 ; work of, 1038
Thoday, Dr. J. M. : Inaccuracies of Anaphase Estimation of Radiation-induced Chromosome Exchange, 932
  Evolution and Organization, *review*, 1025
  Effects of Disruptive Selection—the Experimental Production of a Polymorphic Population, 1124
Thomas, A. T. : Unloading Effects in Aluminium—Zinc Single Crystals, 1728
Thomas, Sir Ben Bowen : Children and Young People, 1382
Thomas, D. G. : Appointed senior botanist, Uganda, 459
Thomas, F. W. (Higginbotham, R. S., and) : Fluorescent Whitening Agents, 1437
Thomas, Dr. G. H. : Appointed to a senior lectureshp in endocrine chemistry at the University of Birmingham, 1181
Thomas, Dr. H. Dighton (Hastings, Anna B., and) : *Obituary* of Prof. H. A. Kluge, 599
Thomas, Dr. H. Hamshaw : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Thomas, Dr. I. : Elected president for 1958-59 of the Society of Applied Biologists, 1246
Thomas, I. L., and others : Clearing Action of Lysolecithin, 782
Thomas, Dr. L. F., and others : Microwave Spectra of Diazomethane and its Deutero Derivatives, 1000
  Microwave Spectrum of Nickel Cyclopentadienyl Nitrosyl and the Configuration of the Molecule, 1157
Thomas, R., and Whitaker, Dr. D. R. : Zone Electrophoresis of *Myrothrecium* Cellulase, 715
Thomas, Dr. W. F. : Strength of Glass Fibres, 1006
Thomason, Doreen, and Schofield, Raymond : Calcium Exchanges of Ehrlich Ascites Tumour Cells of Mice, 1207
Thompsett, Dr. D. H. : Preparation of Skeletons, 1509
Thompson, Prof. F. C. : Behaviour of Metals at Elevated Temperatures, *review*, 1299
  Awarded a Grant by the Leverhulme Trust, 1442
  Non-Ferrous Metal Industry in India, *review*, 1498
  Industrial Failure of Engineering Metals and Alloys, *review*, 1498
Thompson, G. T., and others : Long-Distance Radio Propagation above 30 Mc./s. (Tropospheric Propagation), 1186
Thompson, H. W. : Restoration of Agricultural and other Soils, 390
  Some Biological Aspects of Opencast Coal Working, 390
Thompson, Dr. J. F. : Awarded the Gold Medal for 1957 of the Institution of Mining and Metallurgy, 1375
Thompson, M. E., and Johnston, A. M. : Total Sulphydryl Content of Embryos of Arsenic-resistant and -sensitive Strains of the Blue Tick, *Boophilus decoloratus*, 647
Thompson, R., and others (edited by) : Dislocations and Mechanical Properties of Crystals—an International Conference held at Lake Placid, 1956, *review* by Dr. R. A. Hyman, 1562
Thompson, Prof. R. H. S. : Biochemistry of Glutathione, 887
Thompson, Prof. R. H. S., and King, Prof. E. J. (edited by) : Biochemical Disorders in Human Disease, *review* by Dr. C. P. Stewart, 215
Thompson, Prof. R. H. S. (Hoffman-Ostenhof, Prof. O., and) : International Commission on Enzymes, 452
Thompson, Dr. W. B. : Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions (Theoretical Analysis of the Operation of ZETA), 806
Thomson, A. D. : Interference between Plant Viruses, 1547
Thomson, Dr. C. G. : Biochemistry of Glutatione (Glutathione in Animal Tissues), 887
Thomson, Sir George : Computing Laboratory of the Univesity of Durham opened by, 312
  Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions, 804
  Obituary of Dr. C. J. Davisson, 808
Thomson, Dr. M. L. : Appointed to the University of London readership in applied physiology at the London School of Hygiene and Tropical Medicine, 602
Thonemann, Dr. P. C. : Experimental Results with the ZETA Apparatus on Controlled Thermonuclear Reactions (The Plasma Physics of ZETA), 803
  Electrical Discharges in Gases, *review*, 1498
Thonemann, Dr. P. C., and others : Controlled Release of Thermonuclear Energy—Production of High Temperatures and Nuclear Reactions in a Gas Discharge, 217, 315
Thoracic Nerve Cord of *Periplaneta americana* L. : Physical Release of Acetylcholine from the (E. H. Colhoun), 490
Thorell, Prof. B. : Awarded a grant (renewal) from the Lady Tata Memorial Fund, 1703
Thorium : Separation of Lanthanum from, by Anion Exchange (Tatsuya Sekine and Prof. Nobufusa Saito), 1464
Thorne, R. S. W., and others : Yeasts (edited by W. Roman), *review by* R. B. Gilliland, 798
Thornley, Margaret J. : Processing of Foods with Ionizing Radiations (Bacterial Counts on Minced Chicken Irradiated with 250,000 rads), 878
Thorsson, Dr. K. G., and Weibull, Prof. C. : Electron Microscopy of a Stable *Proteus* L Form, 1348
Thought in the Eighteenth Century : The Lunar Society—Science and (Departments of Extra-Mural Studies of the University of Birmingham and the University of Nottingham Residential Course on), 1510
Three Faces of Eve (Corbett H. Thigpen and Hervey M. Cleckley), *review* by Dr. Clifford Allen, 5
Three Factors at Three Levels : An Experimental Design for (Robert M. De Baun), 209
Three Levels : An Experimental Design for Three Factors at (Robert M. De Baun), 209
Three-Dimensional Model of the Myoglobin Molecule obtained by X-Ray Analysis (Dr. J. C. Kendrew, Dr. G. Bodo, Dr. H. M. Dintzis, Dr. R. G. Parrish, Dr. H. Wyckoff and Dr. D. C. Phillips), 662
Three-Stranded Helical Molecules : Formation of Two- and, by Polyinosinic Acid and Polyadenylic Acid (Dr. Alexander Rich), 521
Threonine-containing Phospholipid in Tunny Muscle : Presence of a (Hisanao Igarashi, Kôichi Zama and Muneo Katada), 1282
Threshold of Atrial Muscle Fibres : Effect of Acetylcholine on the Membrane Resistance and (Dr. Edward A. Johnson and P. A. Robertson), 910
Thresholds (Human Visual) : Retinal Summation and (Dr. R. A. Weale), 154
Thresholds (Visual) : A Theory of (Dr. F. H. C. Marriott), 1487 ; (R. L. Gregory and Violet R. Cane), 1488
Thring, Prof. M. W. : Flames and Industry (Experimental Methods used at the Royal Dutch Steelworks at IJmuiden), 15
Thring, Prof. M. W. (edited by) : Air Pollution—Based on Papers given at a Conference held at the University of Sheffield (1956), *review* by R. S. Scorer, 1167
Thring, Prof. M. W. (Johnstone, Dr. Robert Edgeworth, and) : Pilot Plants, Models and Scale-up Methods in Chemical Engineering, *review* by Prof. D. M. Newitt, 1094
Thromboplastin (Plasma) Production : Peculiar Disorder of (Dr. F. Nour-Eldin and Dr. John F. Wilkinson), 989
Through Alchemy to Chemistry (Prof. J. Read), *review* by Prof. J. R. Partington, 986

Thunnus thynnus : Amino-Acid Composition of Haemoglobin from (C. De Marco and E. Antonini), 1128
Thurber, G. A., and others : Inhibitory Effect of Gibberellins on Nodulization in Dwarf Beans (*Phaseolus vulgaris*), 1082
Thurston, Dr. H. A. : Resignation as lecturer in mathematics at the University of Bristol, 602
Thurstone, Mrs. T. G. : At the thirteenth International Congress of Applied Psychology (Evaluation of Educational Achievement ('Docimology')—Improvement of Verbal Comprehension), 1580
Thymidine (Tritium-labelled) : Autoradiographic Visualization of Synthesis of Deoxyribonucleic Acid in Tissue Culture with (H. Firket and W. G. Verly), 274
Thymidine (Tritium-labelled), in *Escherichia coli* : Distribution of, during Cell Multiplication (Dr. R. B. Painter, F. Forro, jun., and W. L. Hughes), 328
Thymine and Three Methylated Adenine Bases : Natural Occurrence of, in several Ribonucleic Acids (Dr. J. W. Littlefield and Dr. D. B. Dunn), 254
Thymine Xyloside Inhibition in *Escherichia coli* : Reversal of, by Glutathione (Prof. Thomas D. Brock), 269
Thyratron : A Transistor (General Electric Company of America), 1509
Thyroglobulin in the Presence of other Proteins : Demonstration of, by the Precipitin Reaction (Dr. R. Bird and Dorothy Jackson), 1405
Thyroid-stimulating Hormone in Rats : Blocking Effect of Morphine on the Secretion of (Milan Sámel), 845
Thyroxine Metabolism by Extracts of Rat Liver (Lawrence G. Plaskett), 273
Thyroxine-treated Rabbits : Cortisone-Glucose Tolerance Test in Normal and (Dr. L. Macho), 620
Thyroxinized Rats : Effect of Creatine Phosphate Administration on the Cardiac Adenosine Triphosphate of (L. Angelucci, R. Boldrini and E. Mascitelli-Coriandoli), 419
Tick Paralysis : Neuro-Anatomical Site in (Prof. Maurice F. Murnaghan), 131
Tick (Blue), *Boophilus decoloratus* : Total Sulphydryl Content of Embryos of Arsenic-resistant and -sensitive Strains of the (M. E. Thompson and A. M. Johnston), 647
Tidal Model at the University of Southampton (Prof. P. B. Morice), 944
Tidal Streams : Use of, by Migrating Elvers (*Anguilla vulgaris* Turt.), (F. Creutzberg), 857
Tiffany, Lewis H., and others : Life, an Introduction to Biology, *review*, 1561
Tiffin, Dr. A. Ian : An Antibiotic produced by a *Bacillus* sp., active against *Haemophilus pertussis*, 907
Tiger Snake Venom : Antagonism between the Actions of Staphylococcal Toxin and (Dr. Edgar A. North and Hazel M. Doery), 1542
Tilapia esculenta : Ring Formation in (D. J. Garrod and B. S. Newell), 1411
Tillman, Dr. J. R. : Semiconductors and Transistors, *review*, 1168
Time : Influence of, on the Reversible Association between Large Molecules—the Collagen System (Dr. Jerome Gross), 556
  The Linnaeus Tradition and our (Dag Hammarskjöld), 611
  Man's Journey through, a First Step in Physical and Cultural Anthropochronology (Prof. L. S. Palmer), *review* by M. C. Burkitt, 1691
  Random (Prof. Norbert Wiener and Prof. Aurel Wintner), 561
Time of the S Allele Action (Dr. K. K. Pandey), 1220
Time of Mating : Influence of, on the Segregation Ratio of Alleles at the *T* Locus in the House Mouse (Dr. A. W. H. Braden), 786
Time Scale (A Logarithmic), for the Evolution Process (G. F. Phillips), 1652 ; (Sir Julian Huxley), 1653
Time Series : A Statistical Model of some (D. S. Palmer), 1677
Time Series (Stationary) : Statistical Analysis of (Dr. Ulf Grenender and Prof. Murray Rosenblatt), *review* by Prof. M. G. Kendall, 1494
Time Variation of Chemical Affinity (Dr. W. Yourgrau and Dr. C. J. G. Raw), 480
Time and Protoplasm : Contraction of (Prof. Anderson Nettleship), 562
Times Publishing Co., Ltd. : The Night Sky for 1958, 530
Times (Our) : An Education for (Dr. R. P. Linstead), 95
Tin Powder : Sintering of (R. F. Smart and E. C. Ellwood), 833
Tinkler, Dr. J. : Appointed lecturer in aeronautical engineering at the University of Bristol, 602
Tips (Root) : Chemical Determination of Deoxyribonucleic Acid in, before and after Cold Treatment (Dr. J. K. Heyes and Dr. G. W. Shaw), 1337
Tipula Iridescent Virus : Early Stages of Infection with the (Dr. Kenneth M. Smith), 966
Tiselius, Prof. Arne : Purity and Purification of Chemical Substances (First Humphry Davy Lecture of the Royal Institute of Chemistry), 387
Tishler, J. M. A., and others : Lingering Effects of Local X-Irradiation on Healing of Burns, 1138
Tissue (Connective) : Some Aspects of, in relation to Age (Dr. R. Consden and Dr. P. C. Brown), 538
Tissue (Connective), in the Ewe : Gestational Changes in (Dr. E. G. Bassett), 196
Tissue (Connective-) Pigment of the Centipede, *Lithobius forficatus* (L.), (Dr. A. E. Needham), 194
Tissue (Hyaline), in Cases of Silicosis : Presence of Plasma Globulins in the (Dr. R. Ceppellini and Dr. B. Pernis), 55
Tissue (Ocular) : Gamma-Amino-Butyric Acid in (Prof. K. Kojima, M. Mizuno and M. Miyazaki), 1200
Tissue (Pineapple) : Ferulic and *p*-Coumaric Acids in, as Modifiers of Pineapple Indoleacetic Acid Oxidase (Dr. Willis A. Gortner, Martha J. Kent and Dr. G. K. Sutherland), 630
Tissue (Plant) : Evidence for a Protein Component in the Middle Lamella of—a Possible Site for Indolylacetic Acid Action (B. Z. Ginzburg), 398
Tissue Culture: Limited Mutiplication of *M. lepraemurium* in (R. J. W. Rees and P. C. Wong), 359
Tissue Culture with Tritium-labelled Thymidine : Autoradiographic Visualization of Synthesis of Deoxyribonucleic Acid in (H. Firket and W. G. Verly), 274
Tissue Culture (Monolayer), of Pig Kidney : Growth and Titration of Louping-ill Virus in (Dr. Holman E. Williams), 497
Tissue Cultures (Plant) : Gibberellin and the Growth of (Dr. L. G. Nickell), 499
Tissue Fluid and Lymph of the Guinea Pig : Distribution of Globulin Permeability Factor and its Inhibitor in the (Prof. A. A. Miles and D. L. Wilhelm), 96
Tissue Homogenates of Earthworms : Detection of Uric Acid in the (Dr. Gaber M. Haggag and Dr. A. Khalaf El-Duweini), 191
Tissues of Normal and Immune Mice : Distribution of Radioiodinated, Acetone-killed *Brucella abortus* in the (Dr. D. Sulitzeanu), 495
Tissues (Animal) : Reduction of Organic Hydroperoxides by Micro-organisms and (Dr. D. M. Updegraff and Dr. F. A. Bovey), 890
Tissues (Enclosing Protective) : Influence of the, on the Metabolism of Barley Grain (F. S. Mitchell, F. Caldwell and G. Hampson), 1270
Tissues (Explanted) : An Attempt to adapt, to an Anticonvulsant ('Trimedal') and to Phenobarbital (E. Holečková and Dr. Z. Servít), 1541
Tissues (Foetal and Cancer) : Protein Degradation of, in the Presence of Ethionine (Dr. Renzo Rendi), 351
Tissues (Human) : Electrical Noise from 'Polarization Cells' and from (E. Nightingale), 192
Tissues (Meristematic) : Graft Unions between, 530
Tissues (Newly Calcified) : A Histological Stain for (Prof. J. T. Irving), 704
Tissues (Oyster) : Cytochrome System in (Kiyozo Kawai), 1468
Tissues (Plant) : Maceration of, with Ethylene-diamine-tetra-acetic Acid (Dr. D. S. Letham), 135
  β-Oxidation of ω-(3-Indolyl)alkanecarboxylic Acids in (Dr. C. H. Fawcett, Prof. R. L. Wain and Dr. F. Wightman), 1387
  Serine—Glycine Interconversion in (A. P. Wilkinson and Dr. D. D. Davies), 1070
  Synthesis of Phlorin and other Phenolic Glucosides by (A. Hutchinson, Chita Roy and Prof. G. H. N. Towers), 841
Tissues (Transient) : Ageing in (Ciba Foundation Colloquia on Ageing, Vol. 2, edited by G. E. W. Wolstenholme and Elaine C. P. Millar), *review* by Prof. P. L. Krohn, 74
α-Titanium : Effect of Hydrogen on the Deformation Characteristics of (E. Smith), 902
Titration of Louping-ill Virus in Monolayer Tissue Culture of Pig Kidney : Growth and (Dr. Holman E. Williams), 497
Titration Studies (Spectrophotometric, Light Scattering and), upon the Interaction of Polyadenylic and Polyuridylic Acids (Dr. Roland F. Beers, jun., and Dr. Robert F. Steiner), 30
Titrations : Complexometric (Prof. Gerold Schwarzenbach), translated and revised in collaboration with the author by Dr. Harry Irving, *review* by Dr. A. D. Mitchell, 987
Titterton, Prof. E. W. : Atomic Energy Development in Australia, 1433
Tizard, Sir Henry : *Obituary* of Lieut.-Colonel Mervyn O'Gorman, 1175
  Industry and the Technical Colleges, 1573
Toadstool (*Omphalia maura* (Fr.) Gill.) : Effect of Lime on the Production of a (Dr. F. B. Hora), 1668
Toadstools (Dr. F. B. Hora), 1708
Tobacco Manufacturers' Standing Committee : Research Paper No. 1, Statistics of Smoking (edited by G. F. Todd), 1181
Tobacco Mosaic Virus : Effect of Thiosemicarbazones on the Multiplication of (Tokuzo Hirai, Toru Shimomura and Yonosuke Nishikawa), 352
  Kinetics of Heat Inactivation of Ribonucleic Acid of (Dr. William Ginoza), 958
Tobacco Mosaic Virus Protein : Polymerization—Depolymerization of (Max A. Lauffer, Allen T. Ansevin, T. E. Cartwright and C. C. Brinton, jun.), 1338
Tobacco Mosaic Virus and Virus Nucleic Acid : The Latent Period after Infection with (Prof. G. Schramm and R. Engler), 916
Tobacco Pith Sections : Effect of 2,4-Dichlorophenoxyacetic Acid on Pectin Methylesterase in (K. T. Glasziou), 428
Todd, Sir Alexander : Oxidative Phosphorylation—a Chemical Approach using Quinol Phosphates, 1650
Todd, Dr. A. S. : Fibrinolysis Autographs, 495
Todd, Dr. F. H. : Appointed superintendent of the Ship Division of the National Physical Laboratory, 456 ; work of, 456
Todd, Dr. G., and Parry, E. : Surface Hardness of Explosive Materials by Micro-indentation, 260
Todd, G. F. (edited by) : Statistics of Smoking (Tobacco Manufacturers' Standing Committee, Research Paper No. 1), 1181
Todd, J. D. : Appointed assistant conservator of forests, Northern Rhodesia, 458
Todorovičová, H., and others : Effect of Heparin on Pathologically Decreased Serum Esterase in Carcinoma, 908
Tokida, Jun, and others : A Chimaera of *Alaria* and *Laminaria* found in Nature, 923
Tokyo Geographical Society : Medals awarded to Prof. L. Dudley Stamp and Prof. Hans Ahlmann, 20
Tolansky, Prof. S. : Symmetry of Snow Crystals, 256
  Isotope Enrichment in a Continuous Feed Process, 1730
Tolbert, N. E. (Rabson, Dr. R., and) : Detection of α-Ketoglutaric Acid and other Keto-Acids on Paper Chromatograms with Ninhydrin, 50
Tolbert, N. E., and others (edited by) : Research in Photosynthesis (Papers and Discussions presented at the Gatlinburg Conference, 1955), *review* by Prof. C. P. Whittingham, 974
Tolerance to Morphine in the Rat : Influence of Cocarboxylase on (Dr. Luciano Angelucci), 967
Tolerance (Acquired), of Turkeys to Rous Sarcoma Agent : Nature of the Antigens responsible for the (Dr. R. J. C. Harris and P. J. Simons), 1485
Tolerance (Acquired Immunological), to Bovine Ribonuclease (Dr. B. Cinader, J. H. Pearce and B. G. Carter), 1208
Tolerance Test (Cortisone-Glucose), in Normal and Thyroxine-treated Rabbits (Dr. L. Macho), 620
Tolerant *A* Strain Mice : Litters from *C3H* and *CBA* Ovaries orthotópically transplanted inro (Prof. P. L. Krohn), 1671
Tollin, Dr. Gordon : Photoperiodism in Plants and Animals (Problems of Energy Transfer in Photochemical Systems), 535
Tollin, Dr. Gordon, and others : Action and Emission Spectra of the Luminescence of Green Plant Materials, 1266
Toman, Dr. Kurt : Identification of *M*-Regions on the Sun, 641
Tombs, M. P. (Blumberg, Dr. B. S., and) : Possible Polymorphism of Bovine α-Lactalbumin, 683
Tomcsik, Dr. J., and others : Bacterial Protoplasts, 1713
Tomiie, Dr. Y., and others : Structure of Kainic Acid and its Isomer, Allokainic Acid, 761
Tomkeieff, Prop. S. I. : Diamonds in Siberia, 323
Tomlinson, Dr. J. A., and Webb, M. J. W. : Control of Turnip and Cabbage Mildew (*Erysiphe polygoni* DC.) by Zinc, 1352
Tompa, Dr. H. : *Obituary* of Dr. Emil Abel, 1765
Tonic Muscle of the Frog : Action of Acetone on the (Dr. Adolf Zeleny and Jaroslav Kozák), 1340, *errata*, 1510
Tonicity (Enhanced) : Substrate-Selective Inhibition of Mitochondrial Oxidations by (Diane Johnson and Prof. Henry Lardy), 701

Tonkinson, Miss S. M., and others : Mitotic Delay in Irradiated Roots of *Vicia faba*—the Effect of Oxygen, 1083
Tonna, Dr. E. A. : Enzyme Changes in the Ageing Periosteum, 486
Too Little : Too Much and (Prof. M. G. Say), 321
Too Much and Too Little (Prof. M. G. Say), 321
Tool : Ångström Radiation as Phenomenon and as, *review* by Prof. A. J. C. Wilson, 727
Toole, Dr. E. H. : Photoperiodism in Plants and Animals (Responses of various Light-sensitive Seeds), 535
Tooth (Human) : Passage of Phosphate through the (Dr. P. Pincus), 844, *erratum*, 1771
Tooth Enamel (Human) : Investigations into Temperature Changes on the Surface of (Peter S. Rothwell), 1805
Toothcarps (Viviparous) : Pathological Parthenogenesis in (Prof. A. Stolk), 1660
Toothill, J. N. : Elected a Fellow of the Royal Society of Edinburgh, 739
Topographical Distribution of Glycogen in the Brain during Animal Hypnosis : Changes in the (Dr. D. Svorad), 775
Topper, Yale J. (Bloom, Ben. and) : Absolute Configuration of Enantiomorphic Carbanions involved in the Aldolase and Triose Phosphate Isomerase Reactions, 1128
Toppling Disease (Blackhead), of Bananas (Dr. R. Leach), 204
Toroidal Discharge producing High Temperatures : A Stabilized High-Current (Controlled Release of Thermonuclear Energy), (Dr. N. L. Allen, Dr. T. E. Allibone, D. R. Chick, R. F. Hemmings, T. P. Hughes, Dr. S. Kaufman, B. S. Liley, J. G. Mack, Dr. H. T. Miles, Dr. R. M. Payne, J. E. Read, Dr. A. A. Ware, J. A. Wesson and R. V. Williams), 222
Toroidal Pinch (Stabilized) : Neutrons from a (Controlled Release of Thermonuclear Energy), (Dr. J. Honsaker, Dr. H. Karr, Dr. J. Osher, Dr. J. A. Phillips and Dr. J. L. Tuck), 231
Total Sulphydryl Content of Embryos of Arsenic-resistant and -sensitive Strains of the Blue Tick, *Boophilus decoloratus* (M. E. Thompson and A. M. Johnston), 647
Towers, Prof. G. H. N. (Krupka, R. M., and) : Small-Scale Preparation of Glyoxylic Acid labelled with Carbon-14, 335
Towers, Prof. G. H. N., and others : Synthesis of Phlorin and other Phenolic Glucosides by Plant Tissues, 841
  Formation of a Glycoside of Maleic Hydrazide in Plants, 1535
Townend, Dr. D. T. A. : Flames and Industry, 16
Townsend, W. N., and others : Plant Growth on 'Fly Ash,' 1079
Toxic Action of Organic Compounds containing Phosphorus and Fluorine : Some Aspects of the Chemistry and (Dr. Bernard Charles Saunders), *review* by Sir Rudolph Peters, 1295
Toxic Plants of Western Australia (C. A. Gardner and H. W. Bennetts), *review* by Dr. F. N. Howes, 729
Toxicity : Fluorescence of the Toxin of *Clostridium botulinum* and its relation to (Dr. Daniel A. Boroff and Dr. John E. Fitzgerald), 751
Toxicity (Reduced) : A New Class of Antibiotic Salts of (F. A. Alves, M. F. C. A. N. Graça and H. L. Baptista), 182
Toxicology : Veterinary (formerly Lander's 'Veterinary Toxicology'), (R. J. Garner), *review* by Dr. P. Jewell, 983
Toxin of *Clostridium botulinum* : Fluorescence of the, and its relation to Toxicity (Dr. Daniel A. Boroff and Dr. John E. Fitzgerald), 751
Toxin of *Helminthosporium victoriae* : Constitution of the (Dr. Ross B. Pringle and Armin C. Braun), 1205
Toxin (*Clostridium perfringens*) : Mode of Action of Chelates in protecting against (Prof. Merwin Moskowitz), 550
Toxin (Diphtheria) : Isolation of the Lethal Factor of, by Electrophoresis in Starch Gel (Dr. M. D. Poulik and E. Poulik), 354
Toxin (*Shigella shigae*) : Action of the, after Intracerebral Injection (Dr. H. Rašková and J. Vaneček), 1129
Toxin (Staphylococcal), and Tiger Snake Venom : Antagonism between the Actions of (Dr. Edgar A. North and Hazel M. Doery), 1542
Toyoura, Etsuko, and others : Occurrence of D-Acylase in Soil Bacteria, 1225
Trace Elements in Negev Phosphate Rocks : Minor Constituents and (Dr. E. Foa), 1676
Trace Elements other than Selenium : Protective Effect of, against Dietary Necrotic Liver Degeneration (J. Bunyan, E. E. Edwin and J. Green), 1801
Trace Metals in the Nitrogen Metabolism of Plants (Dr. D. J. D. Nicholas), 672
Tracer of Potassium in Man : Rubidium-86 as a (M. Mencer Martin and Geoffrey Walker), 705
Tracer Method (Isotopic), for Measurement of Iron Lost into and Re-absorbed from Gastro-intestinal Bleeding Lesions (M. Roche, M. E. Perez-Gimenez and A. Levy), *errata*, 603
Trade Wastes (Midland Branch of the Institute of Sewage Purification Symposium on), 678
Trades (Skilled) : Recruitment of (Prof. Lady Gertrude Williams), *review* by T. H. Hawkins, 373, 531
Train, Dr. D. : Awarded the Junior Moulton Medal for 1957 of the Institution of Chemical Engineers, 1312
Train Control on Railways in Britain, 883
Training : Management, 611
  Problems of (Ergonomics Research Society Conference on), 949
  Technical Teacher, 948
Training Grants (Postgraduate), in Fishery Research (Development Commissioners, in association with the Ministry of Agriculture, Fisheries and Food, and the Scottish Home Department), 1312
Training of Managers : Sixteen Questions about the Selection and (Colonel Lyndall F. Urwick), 1244
Training for Skill—Recruitment and Training of Young Workers in Industry (Report by a Sub-Committee of the National Joint Advsory Council), 1293
Training of Teachers : Recruitment and (House of Commons Debate on), 950
Training (Public Health), of General Practitioners : Report of the Conference on (Geneva, 1956), (World Health Organization, Technical Report No. 140), 1047
Training (Teacher) : Purpose in (Monica Wingate), *review* by T. H. Hawkins, 517
Traité de Microscopie—Instruments et Techniques (A. Policard, M. Bessis et M. Locquin), *review* by Dr. John R. Baker, 598
Tran-Vy, M., and others : Phytochemistry (Experimental Research on the Toxicity of Rice infected by *Penicillium citrinum*), 466
Trans-Antarctic Expedition, Commonwealth, 88, 236
  Arrival at Scott Base, 669
Transaminase (New), of *Corynebacterium diphtheriae* (Michael Bagdasarian), 1399, *erratum*, 1640
Transaminase Activity of Serum Protein Fractions separated by Paper Electrophoresis : Determination of (Dr. Miroslav Sevela), 915
Transamination (Enzymatic) : Role of Ferrous Iron in (M. V. Patwardhan), 187
Transfer to Chicks : Antibody Formation by Isolated Cells of Hen Spleen after mixing with Antigen *in vitro* and (Dr. Z. Trnka), 55
Transfer to New-born Rabbits : Antibody Production by Lymphocytes after *in vitro* Contact with Bacterial Antigen and (Dr. Miroslav Holub), 122
Transfer of Pathogenicity (A Two-stage), between the *MEL* and *NWS* Strains of Influenza *A* Virus (K. B. Fraser), 195
Transfer of Sheep Keds, *Melophagus ovinus* (L.), from Ewes to their Lambs (W. A. Nelson), 56
Transfer (Passive), of Antitumour Factors through Milk in Rats (Prof. B. Sekla), 1600
Transfer Processes : One-Electron *versus* Two-Electron, in the Mechanism of Oxidation-Reduction Reactions in Solution (Prof. Joseph Weiss), 825
Transferase Action : Phosphorylation of Riboflavin by (Dr. Kunio Yagi and Jun Okuda), 1663
Transformation of Iron under Stress : Change of Length during (M. de Jong and Prof. G. W. Rathenau), 1396
Transformation of Megaloblasts to Normoblasts by Cultivating Human Bone Marrow in Presence of Vitamin B_{12} and Vitamin B_{12}-binding Protein (Dr. I. Pendl and Dr. W. Franz), 488
α-β Transformation in Keratin (A. R. B. Skertchley), 639 ; (H. J. Woods), 761
  A Quantitative X-Ray Study of (V. D. Gupta), 113
Transformation Sequence of Kaolinite to Mullite : A New Concept of the (Prof. G. W. Brindley and Dr. M. Nakahira), 1333
Transformations of Man (Lewis Mumford), *review*, 983
Transient Tissues : Ageing in (Ciba Foundation Colloquia on Ageing, Vol. 2, edited by G. E. W. Wolstenholme and Elaine C. P. Millar), *review* by Prof. P. L. Krohn, 74
Transients (Short-lived), in Solar Noise : Duration and Band-width in (T. de Groot), 1676
Transistor : The Silicon 'Unijunction' (General Electric Company of America), 1509
Transistor Electronics (David Dewitt and Arthur L. Rossoff), *review* by Dr. J. R. Tillman, 1168
Transistor Thyratron (General Electric Company of America), 1509
Transistors : Fundamental Principles of (Dr. J. Evans), *review* by Dr. J. R. Tillman, 1168
  Semiconductors and, *review* by Dr. J. R. Tillman, 1168
Transition from the Ionosphere to Interplanetary Space (Royal Astronomical Society Geophysical Discussion on), 1237
Transition (Trigonal-to-Cubic), in Crystals of Caesium Nitrate on Muscovite : Kinetics of the (E. Ferroni and M. Cocchi), 903
Transitions (Polymorphic), in Anhydrous Sodium Sulphate : Effect of Water upon the (E. L. Kreidl and Ivan Simon), 1529
Transketolase : Formaldehyde as an Acceptor Aldehyde for, and the Biosynthesis of Triose (Prof. F. Dickens and D. H. Williamson), 1790
Translation : Russian (R. E. O'Dette), 1509
  Scientific and Technical (Aslib Conference on), 1044
Translations of Russian Scientific Literature, 1109, 1308, 1508
Translocation of Strontium and Caesium by Plants from Foliar Sprays : Absorption and (L. J. Middleton), 1300
Transmembrane Potentials of Single Fibres of the Atrio-ventricular Node (Dr. Brian F. Hoffman, A. Paes de Carvalho and W. Carlos de Mello), 66
Transmission of Juvenile Rooting Ability from Seedlings to Adults of *Hevea brasiliensis* (Prof. T. J. Muzik and H. J. Cruzado), 1288
Transmission (Virus), by *Dactynotus cichoricola* H.R.L., a New Aphid on Chicory (Dr. J. Semal), 721
Transmissions received from the Russian Earth Satellite 1958δ : Some Effects of the Fine Structure of the Ionosphere on (F. A. Kitchen and W. R. R. Joy), 1759
Transmissions (Radio), from the First Artificial Earth Satellite : Observations in Australia of (G. H. Munro and R. B. White), 104
Transmissions (Standard Frequency), from the United Kingdom (National Physical Laboratory Pamphlet on), 952
Transmitted Ribonucleic Acid from Healthy Pear Trees : Effect of, upon the Synthesis and Composition of Protein (Dr. B. Kessler), 201
Transparent Magnetic Oxides, 237
Transparent Starch Gels : Preparation of, after Electrophoresis (Dr. J. M. Fine and E. Waszczenko-Z), 269
Transplantable Mouse Plasma Cell Tumour : Virus-like Bodies in a (Dr. A. F. Howatson and E. A. McCulloch), 1213
Transplantation (Nuclear), in *Xenopus laevis* (M. Fischberg, J. B. Gurdon and T. R. Elsdale), 424
Transplantation Immunity (Passive), to Crocker Tumour in Mice : Demonstration of Antibody in, using the Schultz-Dale Technique (Prof. B. D. Baruah), 624
Transportation and Utilization of Fuel and Energy : Economic Trends in the Production, (Canadian Sectional Meeting of the World Power Conference), 1245
Transvaal Museum, Pretoria : Annual Report for 1956-57, 1310
Transvaal Provincial Administration (Department of Education School Buildings Committee) : Report on the Planning of Primary Schools, 1108
Transverse Lesions (Complete), of the Spinal Cord : Excretion of 17-Ketogenic Steroids in Subjects with (R. Robinson), 484
Trap for Insects Biting Small Vertebrates (Dr. W. H. R. Lumsden), 819
Trauma : Effect of, on Growth of Hair (Dr. F. N. Ghadially), 993
Travelling Fellowships (Life Insurance Medical Research Fund of Australia and New Zealand), 1110
Travelling Research Fellowships : Carlsberg—Wellcome (Awards for 1958-59), 743
Travelling-Wave Parametric Amplifier (Prof. A. L. Cullen), 332

Treasure : Buried (Paul Johnstone), *review* by M. C. Burkitt, 147
Treatment of Bacteriophage *in vitro* with Ethyl Methane Sulphonate : Increased Rate of Plaque-type and Host-range Mutation following (Dr. Anthony Loveless), 1212
Treatment of Hops with Dimefox (E. Q. Laws and H. S. Darling), 498
Treatment with Neurohypophysial Substances : Histological and Chemical Changes in the Rat Pituitary Neural Lobe following (Dr. J. de Groot), 650
Treatment of Pleuro-pneumonia-like Organisms in Rats : Use of Sulphonamides in the (R. T. Charles and O. Rees), 1213
Treatment (Cold) : Chemical Determination of Deoxyribonucleic Acid in Root Tips before and after (Dr. J. K. Heyes and Dr. G. W. Shaw), 1337
Treatment (Combined), with 8-Ethoxycaffeine and Argon on the Roots of *Vicia faba* : Effect of a (Effect on Radiosensitivity of Inert Gases), (John Read), 616
Treatment (Irradiation) : Effects of Alkoxyglycerols and especially Selachyl Alcohol on the Bone Marrow in connexion with, and in Leukaemia Therapy (Astrid Brohult), 1484
Treatment (Post-Irradiation), of Micro-organisms : Dependence of the Observed Oxygen Effect on the (Tikvah Alper and Dr. N. E. Gillies), 961
Tree Injuries (H. L. Edlin and M. Nimmo), *review* by Dr. L. Chalk, 732
Trees (Exotic), in Great Britain (James Macdonald, R. F. Wood, M. V. Edwards and J. R. Aldhous), (Forestry Commission, Bulletin No. 30), 747
Trees (Healthy Pear) : Effect of Transmitted Ribonucleic Acid from, upon the Synthesis and Composition of Protein (Dr. B. Kessler), 201
Trehalose and Glycogen in *Porrocaecum decipiens* Larvae : Glucose, (Dr. D. Fairbairn), 1593
Treherne, J. E. : Facilitated Diffusion and Exchange in the Absorption of Glucose by the Locust, *Schistocerca gregaria* (Forsk.), 1280
Treisman, M. (Howarth, Dr. C. I., and) : Validity of Motokawa's Technique for Investigating Retinal Function, 843
Treloar, Dr. L. R. G. : Physics of High-Molecular Materials, 1633
Tremblay, Dr. G. (Pearse, Dr. A. G. E., and) : Leucine Aminopeptidase in Rat Parathyroid and its relation to Parathyroid Hormone Production, 1532
Trentini, G. : At the thirteenth International Congress of Applied Psychology (Immediate Effects of Hospitalizing Cancerous Patients), 1580
Treponema : A Lipopolysaccharide Antigen of the (Prof. Giuseppe Alessandro and Carla del Carpio), 991
Tressler, D. K., and others : Processing of Foods with Ionizing Radiations, 877
Trethewie, Dr. E. R. : Anti-allergic Effect of Cortisone, 625
Trewavas, Dr. E. : Red Sea Fishes, *review*, 298
    Appointed a deputy keeper in the Department of Zoology, British Museum (Natural History), 1042
Trials (Genecological) : A Spurious Significance in (Dr. D. J. Harberd), 138
Triboelectricity and Electron Traps in Insulating Materials—some Correlations (Dr. E. Fukada and Dr. J. F. Fowler), 693
Tricarboxylic Acid Cycle and Cytochrome Oxidase in the Fat Body of the Desert Locust : Enzymes of the (Dr. D. A. H. Hearfield and Dr. B. A. Kilby), 546
Tri-Chloroacetic Acids (Mono-, Di- and) : Structure of Cupric Salts with (Dr. Ryutaro Tsuchida, Dr. Shoichiro Yamada and Hiroji Nakamura), 479
Trichoderma viride Pers. ex Fr. introduced into Soil : Fate of Spores of (R. Caldwell), 1144
Trichostrongylus colubriformis Infestation in Sheep : Immune Reactions to (Dr. D. F. Stewart and H. McL. Gordon), 921
Trichosurus vulpecula : Variations in the Erythrocyte Potassium and Sodium in the Possum (Jennifer M. Barker), 492
Trickett, E. S. : Photobiological Investigations (Problems of Radiation Measurement in relation to Environmental Control), 1315
Tricycloquinazoline : Carcinogenicity of (Dr. R. W. Baldwin, Dr. K. Butler, Dr. F. C. Cooper, Dr. M. W. Partridge and Dr. G. J. Cunningham), 838
Trifolium alexandrinum : Occurrence of a Blue-Green Alga in the Nodules of (S. Bhaskaran and G. S. Venkataraman), 277
Trigonal-to-Cubic Transition in Crystals of Caesium Nitrate on Muscovite : Kinetics of the (E. Ferroni and M. Cocchi), 903
l-3 : 5 : 3'-Tri-iodothyroacetic Acid : Immediate Effect of, on Metabolic Rate and Body Temperature in Hypophysectomized Rats and the Action of Cortisone (Prof. Sz. Donhoffer, I. Várnai and E. Sziebert-Horváth), 345
Triiodothyronine in Fowl : Presence of (Dr. Claire J. Shellabarger and Dr. Rosalind Pitt-Rivers), 546
Tri-isopropyl Phosphite : Gamma-Radiation Catalysis of the Oxidation by Air of (Dr. D. G. Coe), 1519
Trilinear Chart of Nuclides (William H. Sullivan), second edition, *review* by Dr. E. Bretscher, 987
'Trimedal' (Anticonvulsant) : An Attempt to adapt Explanted Tissues to an, and to Phenobarbital (E. Holečková and Dr. Z. Servít), 1541
Trimethylamine : Reaction of Ethylene Bromide with, and the Neuromuscular Blocking Activity of Ethylene*bis*- (Trimethylammonium), (Dr. Allan P. Gray and Thomas B. O'Dell), 634
Triose : Formaldehyde as an Acceptor Aldehyde for Transketolase, and the Biosynthesis of (Prof. F. Dickens and D. H. Williamson), 1790
Triose Phosphate Isomerase Reactions (Aldolase and) : Absolute Configuration of Enantiomorphic Carbanions involved in the (Ben Bloom and Yale J. Topper), 1128
Triphosphatase (Adenosine), and Contraction in Dehydrated Muscle Fibres (Sheila M. V. Hunt and N. A. Matheson), 472
Triphosphate (Adenosine) : Effect of, on Cleavage of Sea Urchin Eggs (Louis Wolpert), 716
    Energy of (K. Burton), 1594
Triphosphate (Adenosine) Metabolism in the Rabbit Erythrocyte *in vivo* (Dr. Bertram A. Lowy, Dr. Bracha Ramot and Dr. Irving M. London), 324
Triphosphate (Cardiac Adenosine), of Thyroxinized Rats : Effect of Creatine Phosphate Administration on the (L. Angelucci, R. Boldrini and E. Mascitelli-Coriandoli), 419
Triple Labelled Water : Rate of Body-Water Distribution studied with (Michael Anbar and Dr. Zigmund Lewitus), 344
Triple Point of Argon as a Thermometric Fixed Point (R. A. H. Pool, B. D. C. Shields and Dr. L. A. K. Staveley), 831
Triploidy in the South African Clawed Frog, *Xenopus laevis* (Daudin) : Induction of (Sheila Smith), 290
Tristram, Dr. G. R. : Gelatin, 537
Triterpenoid Acids : Detection of, on Paper Chromatograms (Dr. B. Pasich), 765
Tritiated Water : Vapour Pressure of (A. H. Price), 262
Tritium-labelled Thymidine : Autoradiographic Visualization of Synthesis of Deoxyribonucleic Acid in Tissue Culture with (H. Firket and W. G. Verly), 274
Tritium-labelled Thymidine in *Escherichia coli* : Distribution of, during Cell Multiplication (Dr. R. B. Painter, F. Forro, jun., and W. L. Hughes), 328
Trnka, Dr. Z. : Antibody Formation by Isolated Cells of Hen Spleen after mixing with Antigen *in vitro* and Transfer to Chicks, 55
Troll, Dr. Carl : Climate, Vegetation and Land Utilization in the Humid Tropics (Mountain Vegetation of the Tropics), 596
Tropenkrankheiten : Lehrbuch der (herausgegeben von Prof. Ernst Georg Nauck), *review* by Prof. P. C. C. Garnham, 1428
Tropical Medicine, *review* by Prof. P. C. C. Garnham, 1428
Tropical Regions (Humid) : Problems of (Unesco), 1380
Tropical West Africa : Thermocline off the Coast of (J. C. D. Watts), 863
Tropics : Biologists in the, 677
    Insect Life in the (T. W. Kirkpatrick), *review*, 732
    Science in the (Institute of Commonwealth Studies Annual Seminar), 1448
Tropics (Humid) : Climate, Vegetation and Land Utilization in the (Pacific Science Congress Symposium on), 596
Trout (Juvenile) : Effect of Photoperiodism on Response of, to Water Currents (T. G. Northcote), 1283
Trowell, Dr. O. A. : Recent Radiobiology, *review*, 660
Truong-Van-Chom, M., and others : Phytochemistry (Experimental Research on the Toxicity of Rice infected by *Penicillium citrinum*), 466
Truyols-Santonja, Dr. J. (Crusafont-Pairó, Dr. M., and) : A Quantitative Study of Stasigenesis in Fissipede Carnivores, 289
Trypan Blue : Effects of certain Compounds related to, on the Experimental Production of Liver Cancer (K. Fujita, T. Mine, T. Ito and M. Matsuyama), 1732
Trypsin : Acetylation of, in Organic Solvents (Spyros Vratsanos, M. Bier and Prof. F. F. Nord), 414
Tryptophan : A Possible Intermediate in the Biosynthesis of—1-Deoxy-1-N o-Carboxyphenyl-Ribulose (Dr. F. W. E. Gibson, C. H. Doy and Shelagh B. Segall), 549
Tryptophan Content of Wool (D. R. Graham and K. W. Statham), 861
Tsetse Fly : Detection of, at Night (G. R. Jewell), 1354
    Use of Reflecting Paints for locating, at Night (B. D. Rennison, W. H. R. Lumsden and C. J. Webb), 1354
Tsetse Fly and Trypanosomiasis Committee : Annual Report for 1956-57, 1036
Tso, Dr. T. C. (Burk, L. G., and) : Effects of Gibberellic Acid on *Nicotiana* Plants, 1672
Tsuchida, Dr. Ryutaro, and others : Structure of Cupric Salts with Mono-, Di- and Tri-Chloroacetic Acids, 479
Tsuchikura, Hidetsugu, and Ichige, Keiji : Observation of Metal Sections by means of the 300-kV. Electron Microscope, 694
Tsujisaka, Yoshio, and others : Specificity of Crystalline Saccharogenic Amylase of Moulds, 770
Tubercle Bacilli (Strain *B.C.G.*) : Atypical Forms of (Dr. Stephen E. Juhasz and Edith M. Mankiewicz), 929
Tubers (Jerusalem Artichoke) : Formation of, in Sterile Culture (Dr. Margery P. F. Marsden Ray), 1480
Tuck, Dr. J. L., and others : Controlled Release of Thermonuclear Energy—Neutrons from a Stabilized Toroidal Pinch, 231
Tucker, Dr. S. Horwood (Reed, Rowland I., and) : Organic Chemistry—Electronic Theory and Reaction Mechanism, *review* by G. Fowles, 299
Tulin, M. P. : Flow Noise (Water-Noise Researches at the U.S. Naval Research Laboratories), 388
Tulpule, P. G. : Species Difference in Pyridine Nucleotide Synthesis by Erythrocytes, 1804
Tumerman, Leon, and others : Distribution of Carbon-14 in Components of Goat's Milk, with Sodium Formate-^{14}C as Precursor, 346
Tumorous Nuclei (Normal and) : Special Conditions in (Prof. A. Stolk), 1739
Tumour (Crocker), in Mice : Demonstration of Antibody in Passive Transplantation Immunity to, using the Schultz-Dale Technique (Prof. B. D. Baruah), 624
Tumour (Mouse Plasma Cell) : Virus-like Bodies in a Transplantable (Dr. A. F. Howatson and E. A. McCulloch), 1213
Tumour Cells (Ehrlich Ascites), of Mice : Calcium Exchanges of (Doreen Thomason and Raymond Schofield), 1207
Tumour Therapy : Hydrogen Peroxide and (Prof. H. N. Green and J. W. Westrop), 128
Tumours : A Special Reaction of the Complement Fixation Test applied to the Study of (Prof. A. Serra, G. Guarini, P. Lovisetto, D. Castelli and P. Balzola), 622
Tumours (Experimental), of the Rat : Chemotherapeutic Action of a Cyclic Nitrogen Mustard Phosphamide Ester (B 518-ASTA) in (Herbert Arnold, Friedrich Bourseaux and Norbert Brock), 931
Tungsten Carbide : Metallographic Studies of Iron Carbide and (F. J. Radd and L. H. Crowder), 258
Tungsten Wires : Embrittlement of, by Contaminants (Dr. G. L. Davis), 1198
Tunley, A. E. : At the Annual Conference of the British Institute of Management (Budgetary Control for Financial Research), 308
Tunny Muscle : Presence of a Threonine-containing Phospholipid in (Hisanao Igarashi, Kôichi Zama and Muneo Katada), 1282
Turesson, Prof. G. V. : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Turkeys : Nature of the Antigens responsible for the Acquired Tolerance of, to Rous Sarcoma Agent (Dr. R. J. C. Harris and P. J. Simons), 1485
Turnbull, James H., and others : Proteins in Solutions at Low Temperatures, 1731
Turner, Dr. D. W. : A Robust but Sensitive Detector for Gas-Liquid Chromatography, 1265
Turner, J. F., and Mapson, Dr. L. W. : Aerobic Inhibition of Glycolysis, 270

Turner, R. C., and others : Alpha-Ray Activities of Humans and their Environment, 518
Turner, W. R., and others : Long-Distance Radio Propagation above 30 Mc./s. (The Mechanism of Propagation responsible for the Permanent Residual Fields), 1186
Turnip and Cabbage Mildew (*Erysiphe polygoni* DC.) : Control of, by Zinc (Dr. J. A. Tomlinson and M. J. W. Webb), 1352
Turnover of Protein in a Non-Multiplying Animal Cell (Dr. H. Harris and J. W. Watts), 1582
Turpentine Pleurisy in Rats : Experimental Suppression of the Early Inflammatory Phenomena of (W. G. Spector and D. A. Willoughby), 708
Turrill, Dr. W. B. : Elected a Fellow of the Royal Society, 881
  Awarded a Linnean Gold Medal for 1958 by the Linnean Society of London, 1177
  The Royal Botanic Gardens, Kew, 1569
Tutin, Prof. T. G. : North and Central European Flora, *review*, 972
Tutin, Prof. T. G., and others: Flora of the British Isles, Illustrations, Part I, Pteridophyta—Papilionaceae, *review*, 1366
'Tween 80' as a Sole Source of Carbon : Isolation of a Soil Coccus capable of utilizing (Kazumori Minami), 430
24-Hr. Rhythms in Blood Eosinophils and *Wuchereria bancroft* Microfilariae Before and After Δ^1-9α-Fluorocortisol (Rudolf Engel, Dr. Franz Halberg, W. L. P. Dassanayake and Justin de Silva), 1135
Twin Structure : Lattice Image of, observed directly by Electron Microscope in a Crystal of Copper Phthalocyanine (Prof. E. Suito, N. Uyeda, H. Watanabe and T. Komoda), 332
Twining of the Hop (*Humulus lupulus* L.), (P. R. Bell), 1009
Twiss, L. P. (Lickley, R. L., and) : Awarded the George Taylor (Australia) Gold Medal of the Royal Aeronautical Society, 1646
Two-Electron Transfer Processes : One-Electron *versus*, in the Mechanism of Oxidation-Reduction Reactions in Solution (Prof. Joseph Weiss), 825
Two-stage Transfer and Pathogenicity between the *MEL* and *NWS* Strains of Influenza *A* Virus (K. B. Fraser), 195
Two Types of Fibres in the Pectoralis Major Muscle of the Pigeon : Relative Distribution and Chemical Nature of the Fuel Store of the (Dr. J. C. George and R. M. Naik), 709
  Relative Distribution of the Mitochondria in the (Dr. J. C. George and R. M. Naik), 782
Two- and Three-Stranded Helical Molecules : Formation of, by Polyinosinic Acid and Polyadenylic Acid (Dr. Alexander Rich), 521
Tye, W. : Awarded the Wakefield Gold Medal of the Royal Aeronautical Society, 1646
Tylecote, Dr. Mabel : The Mechanics' Institutes of Lancashire and Yorkshire before 1851, *review* by Prof. W. H. G. Armytage, 585
Tyler, Prof. C. : Appointed professor of physiological chemistry in the University of Reading, 670
Tyllová, Dr. M. (Dušinsky, G., and) : A New Method for separating Strychnine and Brucine by Paper Chromatography, 1335
Type of Aromaticity : A Novel (Prof. D. P. Craig and N. L. Paddock), 1052
Types of Rural Economy—Studies in World Agriculture (Prof. René Dumont), *review* by Sir John Russell, 144
Types (Two), of Fibres in the Pectoralis Major Muscle of the Pigeon : Relative Distribution and Chemical Nature of the Fuel Store of the (Dr. J. C. George and R. M. Naik), 709
  Relative Distribution of the Mitochondria in the (Dr. J. C. George and R. M. Naik), 782
Tyror, J. G. : Distribution of the Directions of Perihelia of Long-Period Comets, 394
Tyte, Dr. L. C. : Mechanical Properties of Non-Metallic Brittle Materials, 1577

UFFEN, R. J. : Melting, Diffusion and related Topics (Tectonic and Volcanic Phenomena in terms of the Pressure Dependence of Melting of various types of Magma), 320
Uganda : *Salmonellae* in (E. McAnulty), 576
Ullstrup, A. J., and others : Decumbin, a New Compound from a Species of *Penicillium*, 1072
Ultrasonic Absorption in Organic Liquids : Temperature Coefficient of (Dr. S. Parthasarathy, M. Pancholy and A. F. Chhapgar), 405
Ultrasonic Investigation of Chemical Kinetics in Manganous Sulphate Solutions (Sushil Kumar Kor), 1462
Ultrasonic Waves in Liquids : Propagation of (Dr. A. K. Dutta and K. Samal), 563
Ultrastructure of the Blood—Air Barrier in the Mouse Lung after Inhalation of Colloidal Gold Particles : Alterations in the (Dr. N. De Groodt, Dr. A. Lagasse and Dr. M. Sebruyns), 1418
Ultra-Structure of the Choanocyte Collar-Cells in Freshwater Sponges (R. Rasmont, J. Bouillon, P. Castiaux and G. Vandermeerssche), 58
Ultra-structure of the Insect Ear (Dr. E. G. Gray and Prof. R. J. Pumphrey), 618
Ultra-violet (Far) : Similarities in the Characteristics of Solar Radiation at λ10.7 cm. and in the (C. M. Minnis and G. H. Bazzard), 1796
Ultra-Violet Irradiation : Effect of, on Electrophoretic Properties of Serum Protein (Dr. N. M. Larin), 65
  Reduction of the Viscosity of a Potassium Hyaluronate Solution by (Eigill Hvidberg, Sven Ancher Kvorning, Arne Schmidt and Jens Schou), 1338
Ultra-Violet Radiation : Effects of, on Oysters (Dr. I. A. Aboul-Ela), 1013
Ultra-Violet Sterilization of Water used for Rearing Oyster Larvae (G. Duncan Waugh), 1747
Unchaining *Streptococcus faecalis* : Chaining and—a Hypothesis of the Mechanism of Bacterial Cell Separation (Dr. Iwo Lominski, John Cameron and George Wyllie), 1477
Underdeveloped Countries : Atomic Energy Applications with reference to (B. C. Netschert and S. H. Schurr), *review* by Sir John Cockcroft, 1167
  Power Development in Hitherto (F. D. Robinson), 1502
Under-developed Territory : Demography of an, *review* by W. Brass, 442
Undergraduate Students : Procedure for the Selection of (Discussion on, at the Home Universities Conference), 164
Underground Constructions in Sweden (Hugh Pitt), 1376
Undeveloped Countries : Power as a Factor of Development in (Eleventh Sectional Meeting of the World Power Conference), 1502
Unesco : Problems of Humid Tropical Regions, 1380
  The Race Question in Modern Science, *review* by Prof. T. S. Simey, 1232
  Scientific and Technical Translating and other Aspects of the Language Problem, second edition, 1044
  Arid Zone Research, No. 10, Climatology—Reviews of Research, 1443
Unesco and the Iranian Government : Symposium on Salinity Problems in Arid Zones, 1378
Unesco (Government of the Federation of Malaya, and) : Symposium on Phytochemistry, 466
Unesco (International Union of Pure and Applied Physics and) : International Congress on Nuclear Physics (Low Energy Nuclear Interactions and Nuclear Structure), 459
Unfertilized Mouse Eggs : Effect of Glycerol and Low Temperature on Survival of (Dr. J. K. Sherman and Dr. Teh Ping Lin), 785
Ungulates : Systems and Biology of the (Comité de Direction et d'Administration of *Mammalia* and the Société pour l'Étude et la Protection des Mammifères Colloquium on), 237
Unified Science of Life, *review*, 1561
'Unijunction' Transistor : The Silicon (General Electric Company of America), 1509
Unilever, Ltd. : Gift of £21,000 to the Manchester College of Science and Technology under a seven-year covenant, £2,000 to be allocated to the staff college, the balance to be divided equally between the Chemistry and Chemical Engineering Departments, 238
Union Observatory, Johannesburg : Annual Report for 1956, 533
Unions (Graft), between Meristematic Tissues, 530
Uniqueness of the Individual (Prof. P. B. Medawar), *review* by Dr. D. A. Parry, 969
Unit Length : Birefringence Determination in Objects of Irregular Cross-sectional Shape and Constant Weight per (S. C. Simmens), 1260
United Kingdom : Standard Frequency Transmissions from the (National Physical Laboratory Pamphlet on), 952
  Water Quality Problems in the (Society for Visiting Scientists Discussion on), 24
United Kingdom Atomic Energy Authority : Appointment of Leonard Rotherham as a full-time member of the Central Electricity Generating Board, 20
  Appointment of W. R. J. Cook as a full-time member, 311
  Appointment of Dr. B. F. J. Schonland as director, 311
  Organization of the, 385
  Man-power in the, 439
  Report of the Committee appointed by the Prime Minister to examine the Organization of certain parts of the, 439
  Conference on Recent Developments in Nuclear Reactor Technology, 458
  Appointment of Dr. H. Kronberger as director of research and development at the Industrial Group Headquarters at Risley, 530
  Appointment of J. C. C. Stewart as a deputy managing director of the Industrial Group, 530
  Appointment of J. B. W. Cunningham as director of industrial power in the Industrial Group, 530
  Appointment of Dr. R. Hurst as director of the Dounreay Experimental Reactor Establishment, 530
  Appointment of D. S. Mitchell as director of personnel and administration in the Industrial Group, 530
  Appointment of D. W. Fry as a deputy director of the Atomic Energy Research Establishment, 531
  Report of the Committee appointed by the Prime Minister to examine the Organization for Control of Health and Safety in the (Atomic Energy Office), 1023, 1043
  Committee to advise on Training in Radiological Protection, 1442
  Appointment of P. T. Fletcher as a deputy managing director, 1510
  Appointment of H. V. Disney as a director of engineering, 1510
  Appointment of R. V. Moore as director of reactor design, 1510
United Kingdom's Role in Commonwealth Development : White Paper on the, 1582
United Nations : International Map of the World on the Millionth Scale—Report for 1955, 817
  Regional Cartographic Conference for Asia and the Far East (1955, Mussoorie, India), Vol. 2, Proceedings of the Conference and Technical Papers, 817
  Second International Conference on the Peaceful Uses of Atomic Energy, 884
United Nations (Food and Agriculture Organization) : André Mayer Fellowships, 1110
  Report of the Working Party of Specialists on the Consolidation of Fragmented Agricultural Holdings (Rome, 1953), 1114
United Nations (Food and Agriculture Organization) (Sub-Commission on Land and Water Use of the European Commission on Agriculture) : Report of the First Session of the Working Party on Consolidation of Fragmented Holdings (Lisbon, 1956) : Report of the Second Session (Vienna, 1957), 1114
United Nations (World Health Organization) : Technical Report Series No. 140, Report of the Conference on Public Health Training of General Practitioners (Geneva, 1956), 1047
  Technical Report Series No. 137, Measurement of Levels of Health, 1244
  Monograph No. 37, Intermediate Hosts of Schistosoma (Dr. G. Mandahl-Barth), 1244
United States : Basic Research in the, 679
  Federal Research and Development Expenditure in the, 534
  Government-Sponsored Research in the, 1712
  Immigration of Technical Personnel to the, 1243
  Scientific Education in the, 1250
  Scientific Research Activities at Colleges and Universities in the (United States National Science Foundation, Reviews of Data on Research and Development, No. 6), 167
United States and Canada : Handbook of Snakes of the (Prof. Albert Hazen Wright and Anna Allen Wright), Vols. 1 and 2, *review*, 872
United States—United Kingdom Conference to exchange Information on Controlled Thermonuclear Reactions, 386
United States Army (Mathematics Research Center) : Symposium on Numerical Approximation, 531

United States Atomic Energy Commission (McCollum-Pratt Institute of the Johns Hopkins University, with support from the) : Symposium on the Chemical Basis of Heredity (edited by William D. McElroy and Dr. Bentley Glass), *review* by Prof. M. Stacey, 75
United States Institute of Radio Engineers (Professional Group) : 1958 National Symposium on Microwave Theory and Techniques, 885
United States National Academy of Sciences-National Research Council, and others : International Congress of Radiation Research, 1444
United States National Astronomical Observatory (United States National Science Foundation and the Association of Universities for Research in Astronomy, Inc.) : Contract for a, 236
  Appointment of Dr. Aden B. Meinel as director, 740
United States National Museum : Annual Report for 1957, 1310
United States National Research Council (Photobiology Committee) : International Symposium on Photoperiodism in Plants and Animals, 535
United States National Science Foundation : Reviews of Data on Research and Development, No. 8, Funds for Research in Agricultural Experiment Stations (1953-54), 160
  Reviews of Data on Research and Development, No. 6, Scientific Research Activities at Colleges and Universities in the United States, 167
  Grant of 300,000 dollars to the State College of Washington, Pullman, for a research reactor, 313
  Grant of 150,000 dollars to the University of Virginia, Charlottesville, for a research reactor, 313
  Grant of 160,000 dollars to the Midwestern Universities Research Association, Madison, for the support of basic research entitled 'High Energy Accelerator Studies', 313
  Basic Research—a National Resource, 679
  Federal Funds for Science, 6, The Federal Research and Development Budget, Fiscal Years 1956, 1957 and 1958, 534
  Grants, 1181
  Fellowships for 1958-59, 1377
  Bulletin on Immigration of Technical Personnel to the United States, 1243
  Seventh Annual Report (1956-57), 1710
  Government—University Relationships in Federally Sponsored Scientific Research and Development, 1712
United States National Science Foundation and the Association of Universities for Research in Astronomy, Inc. : Contract for a United States National Astronomical Observatory, 236
United States National Science Foundation and the Marine Institute of the University of Georgia : Conference on Salt Marshes, 161, 1512
United States National Science Foundation and the Retina Foundation : Conference on the Chemical and Physical Structure of Mucopolysaccharides, 1246
United States Universities : Science in, 167
Universal and International Exhibition, Brussels : Opening of the, 1179
Universal and International Exhibition, Brussels (Postal and Telecommunications Group) : International Conference on Solid State Phenomena in Electronics and Telecommunications, 813
Universe : The Changing (John Pfeiffer), *review* by Dr. F. G. Smith, 980
  The Individual and the (Prof. A. C. B. Lovell), 1378
  The Radio, *review* by Dr. F. G. Smith, 1562
Universities Conference : Home, 164
Universities in Britain : Expansion of, 600
Universities of the British Commonwealth, Association of : Report for 1956-57, 1770
Universities of Latin America (J. C. J. Metford), 609
Universities in the United States : Scientific Research Activities at Colleges and (United States National Science Foundation, Reviews of Data on Research and Development, No. 6), 167
Universities for Research in Astronomy, Inc., Association of (United States National Science Foundation and the) : Contract for a United States National Astronomical Observatory, 236
Universities and Colleges of Advanced Technology : The Design of Teaching Laboratories in (Royal Institute of British Architects Symposium on), 459
Universities (Australian) : A New Deal for (Sir Eric Ashby), 300
  Report of the Committee on, 300
Universities (British) : Vacant Places in, 1243
Universities (Indian) : Physics in (Dr. P. C. Bhattacharya), 23
Universities (South African) : Register of Current Scientific Research at, 1956 (South African Council for Scientific and Industrial Research), 1702
Universities (United States) : Science in, 167
Universities Federation for Animal Welfare : Report of a Symposium on Humane Technique in the Laboratory (London, 1957), (Laboratory Animals Bureau, Collected Papers Vol. 6), 1187, 1444
University : Chemical Engineering in a (Prof. P. V. Danckwerts), 811
University of Aberdeen : Appointment of Dr. E. Maurice Backett as professor of social medicine, 740
University of Belfast : Appointment of Dr. D. T. Elmore to a lectureship in biochemistry, 20
University of Birmingham : Title of reader in physiology conferred on Dr. I. C. Whitfield, 89
  Appointment of Dr. R. L. Holmes as senior lecturer in anatomy, 89
  Appointment of Dr. T. R. Lomer as lecturer in physics, 89
  Appointment of Dr. G. Gregory as staff tutor in the Institute for Engineering Production, 89
  Appointment of F. D. Hobbs as Paviors lecturer in highway engineering, 89
  Appointment of L. Kay as lecturer in electrical engineering, 89
  Establishment of a graduate course in the Department of Pure Mathematics, leading to a diploma in mathematical statistics, 89
  Establishment of a graduate course in the Department of Engineering Production, leading to the degree of M.Sc. by examination, 89
  Discussion on the Practice of Light Scattering, 459
  Extension to 1960 of Prof. F. H. Garner's tenure as professor of chemical engineering and head of the Department of Chemical Engineering, 813
  Title of reader in mechanical engineering conferred on Dr. B. N. Cole, 813
  Appointment of Dr. R. D. Peacock and Dr. J. Burdon as lecturers in chemistry, 813
  Appointment of T. R. Bott as lecturer in chemical engineering, 813
  Appointment of D. I. Rees as J. Lyons research fellow in analytical chemistry, 813
  Appointment of W. Marsh as lecturer in orthodontics, 813
  Appointment of Dr. D. A. Heath as lecturer in pathology, 813
  New Chemistry Block to be named the Haworth Building, to commemorate the late Sir Norman Haworth, 813
  Appointment of Dr. G. E. Brown to a senior lectureship in mathematical physics, 1181
  Appointment of Dr. J. C. Bevington to a senior lectureship in chemistry, 1181
  Appointment of Dr. J. G. Hawkes to a senior lectureship in botany, 1181
  Appointment of Dr. C. W. Nutt to a senior lectureship in chemical engineering, 1181
  Appointment of Dr. E. A. Marsland to a senior lectureship in dental pathology, 1181
  Appointment of Dr. G. H. Thomas to a senior lectureship in endocrine chemistry, 1181
  Appointment of K. J. Durrands to a lectureship in mechanical engineering, 1182
  Appointment of Dr. G. J. Lawson to a lectureship in mining, 1182
  Conference in the Department of Industrial Metallurgy on the Pressure Welding of Metals, 1182
  Appointment of Dr. D. V. Hubble to the chair of paediatrics and child health, 1640
  Title of reader in physical metallurgy conferred on Dr. R. W. Cahn, 1640
University of Birmingham and the University of Nottingham (Departments of Extra-Mural Studies) : Residential Summer Course on the Lunar Society—Science and Thought in the Eighteenth Century,' 1510
University of Bombay : A History of the, 1857-1957 (S. R. Dongerkery), *review* by Dr. L. A. Jordan, 1757
University of Bristol : Appointment of Dr. T. H. K. Barron as lecturer in physical and inorganic chemistry, 602
  Appointment of R. Bradshaw as lecturer in geology, 602
  Appointment of Dr. R. G. Chambers as senior lecturer in low-temperature physics, 602
  Appointment of Dr. J. Tinkler as lecturer in aeronautical engineering, 602
  Resignation of Prof. G. C. Drew from the chair of psychology, 602
  Resignation of Dr. E. J. Field as lecturer in anatomy, 602
  Resignation of Dr. K. Stewartson as reader in applied mathematics, 602
  Resignation of Dr. H. A. Thurston as lecturer in mathematics, 602
  Gift of £7,773 from the British Empire Cancer Campaign, for cancer research to be carried out in the Departments of Pathology, Physiology and Surgery, 602
  Gift of £1,000 a year for two years from Kodak, Ltd., to the Department of Physics, as an extension of the grant in support of experimental work on the physical properties of silver halides, 602
  Gift of £967 from the Agricultural Council to the Department of Physiology, as renewal of the grant in aid of research on bovine acetonaemia, 602
University of British Columbia : Appointment of Dr. M. C. R. Symons as visiting associate professor in the Department of Chemistry, 315
  Appointment of Dr. R. D. Russell as associate professor of geophysics, 603
University of Calcutta : Seminar on Physics, 23
University of California : Columbus II Apparatus at the Los Alamos Scientific Laboratory, 226
  Columbus S-4 Apparatus at the Los Alamos Scientific Laboratory, 228
  Perhapsatron S-3 Apparatus at the Los Alamos Scientific Laboratory, 231
University of Cambridge : Retirement of Prof. A. S. Besicovitch from the Rouse Ball chair of mathematics, 528
  Appointment of Prof. H. Davenport to the Rouse Ball chair of mathematics, 528
  Retirement of Sir Harold Jeffreys from the Plumian professorship of astronomy and experimental philosophy, 740
  Appointment of Fred Hoyle as Plumian professor of astronomy and experimental philosophy, 740
  Pre-election of Prof. W. V. D. Hodge as Master of Pembroke College, 946
  Retirement of Sir Henry Thirkill from the mastership of Clare College, 1038
  Election of Sir Eric Ashby to the mastership of Clare College, 1039
  Retirement of Prof. G. W. Austin from the Goldsmiths' chair of metallurgy, 1177
  Appointment of Dr. A. H. Cottrell to the Goldsmiths' chair of metallurgy, 1178
  Summer School in Programme Design for Automatic Digital Computing Machines, 1246
  Offer of £50,000 from the Calouste Gulbenkian Foundation, Lisbon, to endow three Gulbenkian Studentships at Churchill College, 1378
  Third Symposium on Atmospheric Condensation Nuclei, to be held in the Cavendish Laboratory, 1640
University of Cape Town : Appointment of Dr. James E. Kench to the chair of chemical pathology, 1179
University of Durham : Prof. E. Lederer to be visiting professor in the Department of Chemistry, King's College, Newcastle-upon-Tyne, 89
  Appointment of Dr. Keith Stewartson to the chair of applied mathematics, 312
  Computing Laboratory opened by Sir George Thomson, 312
University of Edinburgh : Appointment of Dr. W. L. M. Perry to the chair of materia medica, 882
University of Eindhoven : The Technological (Prof. H. B. Dorgelo), 12
University of Exeter : Appointment of Alan Stuart to the chair of geology, 87
  Retirement of Prof. T. Arnold Brown from the chair of mathematics, 1178
  Appointment of David Rees to the chair of pure mathematics, 1178
  Appointment of Prof. A. T. Price as head of the Department of Mathematics, 1179
  Appointment of Dr. D. C. Collins as senior lecturer in education, 1182
  Appointment of Dr. L. H. Long as senior lecturer in chemistry, 1182
  Appointment of Dr. J. Wilkinson as senior lecturer in botany, 1182
  Appointment of Dr. S. A. J. Tarr as a lecturer in botany, 1182
  Appointment of K. Coe as a lecturer in geology, 1182

- University of Georgia (National Science Foundation and the Marine Institute of the) : Conference on Salt Marshes, 161, 1512
- University of Glasgow : Leave of absence granted to Prof. J. Monteath Robertson to enable him to hold a visiting professorship in the College of Chemistry at the University of California, Berkeley, 459
  - Leave of absence granted to Dr. E. Gelles to enable him to hold a research fellowship at Brandeis University, Waltham, Mass., 459
  - Appointment of Dr. G. A. Sim to a lectureship in chemistry, 459
  - Resignation of Dr. W. M. Fairbairn as lecturer in mathematics, 459
  - Appointment of Dr. M. G. P. Stoker as the first holder of the chair of virology, 1441
- University of Leeds : Annual Report of the Librarian for 1956-57, 1109
  - Appointment of Dr. R. E. Dickinson as professor of geography, 1576
  - Title of reader in applied mathematics conferred on Dr. N. B. Slater, 1576
  - Gift of £50,000 from R. W. Crabtree and Sons, Ltd., towards the fund for new buildings, 1576
- University of Liverpool : Appointment of Dr. C. A. Clarke to a readership in medicine, 602
  - Appointment of Dr. J. H. Horlock to the Harrison chair of mechanical engineering, 1576
  - Appointment of Dr. T. Wilson as senior lecturer in tropical hygiene, 1576
- University of London : Resignation of Prof. R. W. Russell from the professorship of psychology at University College, 18
  - Appointment of Prof. G. C. Drew to the chair of psychology in University College, 18
  - Appointment of Prof. H. Lionel Elvin as director of the University of London Institute of Education, 20
  - Title of reader in chemistry in the University (at University College) conferred on Dr. C. A. Bunton and on Dr. A. Wassermann, 20
  - Title of reader in applied mathematics in the University (at the Imperial College of Science and Technology) conferred on Dr. E. P. Wohlfarth, 20
  - Title of professor of pathology in the University (at the Institute of Ophthalmology) conferred on M. H. Ashton, 89
  - Title of reader in the history and philosophy of science in the University (at University College) conferred on Dr. A. Armitage, 89
  - Title of reader in social studies in the University (at Bedford College) conferred on Dr. Ivy Pinchbeck, 89
  - Title of reader in general statistics in the University (at University College) conferred on Dr. C. A. B. Smith, 89
  - Title of reader in civil engineering in the University (at University College) conferred on R. J. Wilkins, 89
  - Appointment of Dr. F. G. Foster to the University readership in statistical computing at the London School of Economics and Political Science, 238
  - Offer of £6,000 a year from the British Steel Producers' Conference and the British Constructional Steelwork Association to the Imperial College of Science and Technology, for the establishment of a readership in structural steelwork and the provision of bursaries for post-graduate study in that subject, 314
  - Development of the Imperial College of Science and Technology, 386
  - Appointment of Dr. H. G. Eggleston to the University chair of mathematics at Bedford College, 459
  - Appointment of Dr. Mary Barber to the University readership in clinical bacteriology at the Postgraduate Medical School of London, 459
  - Title of reader in mathematics in the University (at the Imperial College of Science and Technology) conferred on Dr. M. A. Jaswon, 459
  - Appointment of Dr. M. L. Thomson to the University readership in applied physiology at the London School of Hygiene and Tropical Medicine, 602
  - Title of professor of pharmacology in the University (at King's College) conferred on Dr. George Brownlee, 602
  - Title of professor of biochemistry in the University (at King's College) conferred on Dr. William Robson, 602
  - Title of professor of pharmacology in the University (at the London Hospital Medical College) conferred on Dr. Miles Weatherall, 602
  - Title of reader in dental medicine in the University (at Guy's Hospital Medical School) conferred on B. E. D. Cooke, 602
  - Title of reader in biochemical genetics in the University (at the London Hospital Medical College) conferred on Dr. Harry Harris, 602
  - Title of reader in pharmacology in the University (at St. Bartholomew's Hospital Medical College) conferred on J. P. Quilliam, 602
  - Retirement of Prof. W. N. Bailey from the chair of mathematics at Bedford College, 670
  - Appointment of Dr. H. G. Eggleston to the chair of mathematics at Bedford College, 670
  - Appointment of Dr. S. R. Sparkes to the chair of engineering structures at the Imperial College of Science and Technology, 813, 946
  - Appointment of G. R. Hall to the readership in nuclear technology at the Imperial College of Science and Technology, 813
  - Appointment of Dr. C. P. Whittingham to the University chair of botany in Queen Mary College, 949, 1242
  - Appointment of Dr. A. R. Flint to the University readership in structural steelwork at the Imperial College of Science and Technology, 949
  - Appointment of Dr. Leslie Crombie to the University lectureship in organic chemistry at King's College, 1042
  - Appointment of Dr. Garth Chapman to the University chair of zoology at Queen Elisabeth College, 1182, 1243
  - Title of reader in mineral dressing in the University (at the Imperial College of Science and Technology) conferred on Dr. M. G. Fleming, 1182
  - Title of reader in optics in the University (at the Imperial College of Science and Technology) conferred on Dr. H. H. Hopkins, 1182
  - Election of Prof. H. V. A. Briscoe, C. A. Bristow, Prof. V. C. Illing, the Hon. H. Fletcher Moulton, Prof. A. J. S. Pippard and Dr. S. L. Smith to Fellowships of the Imperial College of Science and Technology, 1182
  - Retirement of Prof. F. M. Haines from the University chair of botany at Queen Mary College, 1242
  - Appointment of Prof. C. A. Rogers to the Astor chair of mathematics at University College, 1378
  - Convocation in the—Centenary Lecture 1958 (Dr. P. Dunsheath), 1442
  - Convocation in the—the First Hundred Years (Dr. P. Dunsheath and Mrs. Margaret Miller), 1442
  - Summer School on Optical Image Assessment using Frequency Response Techniques, at the Imperial College of Science and Technology, 1510
  - Refresher Course on Elementary Fourier Analysis, at the Imperial College of Science and Technology, 1510
  - Fiftieth Annual Report of the Imperial College of Science and Technology (1956-1957), 1573
  - Retirement of Prof. L. Dudley Stamp from the chair of social geography in the London School of Economics, 1636
  - Appointment of Dr. M. J. Wise to a new chair of economic geography in the London School of Economics, 1637
- University of London Institute of Education : Appointment of Prof. H. Lionel Elvin as director, 20
- University of London Institute of Ophthalmology : Title of professor of pathology in the University of London conferred on M. H. Ashton, 89
- University of Malta, Royal : Formation of a Statutory Commission, 89
- University of Manchester : Gift of £21,000 from Unilever, Ltd., to the Manchester College of Science and Technology, £2,000 to be allocated to the staff college, the balance to be divided equally between the Chemistry and Chemical Engineering Departments, 238
  - Chemical Engineering Building of the Manchester College of Science and Technology, 1641
  - Appointment of Dr. Brian H. Flowers to the chair of theoretical physics, 1767
- University of Melbourne : Appointment of Dr. J. A. Pateman as a senior lecturer in botany, 20
  - Research at the, 1181
- University of Michigan : Studies, Scientific Series Vol. 20, The Genus *Achlya*—Morphology and Taxonomy (Terry W. Johnson, Jr.), *review* by Dr. John Ramsbottom, 1297
- University of Neuchâtel (International Union of Biological Sciences and the) : First Symposium on Host Specificity among Parasites of Vertebrates, *review* by Dr. G. Lapage, 1362
- University of New York : Bronze busts of George Westinghouse and Joseph Willard Gibbs to be placed in the Hall of Fame for Great Americans, 87
- University of Nottingham : Title of reader in applied mathematics conferred on John Edward Adkins, 314
  - Appointment of Dr. R. C. Coates to the chair of civil engineering, 455
  - Appointment of Dr. J. P. Hudson to the chair of horticulture, 528
  - Appointment of Dr. J. D. Ivins as professor of agriculture, 1640
  - Appointment of Dr. K. W. H. Stevens as professor of theoretical physics, 1640
  - Appointment of Dr. F. A. Wells as professor of industrial economics, 1640
- University of Nottingham School of Agriculture : Fifth Easter School in Agricultural Science (The Nutrition of the Legumes), 315
- University of Nottingham and the University of Birmingham (Departments of Extra-Mural Studies) : Residential Summer Course on the Lunar Society—Science and Thought in the Eighteenth Century, 1510
- University of Oxford : Appointment of Dr. George Wells Beadle as Eastman Visiting Professor, 1106
  - Offer of £50,000 from the Mullard Company towards the cost of the proposed new College, 1378
  - Offer of £25,000 from the Shell Petroleum Company towards the cost of the new College, with an additional £2,500 for the College library, 1378
  - Offer of £42,000 from the Gulbenkian Foundation, Lisbon, for restoring the fabric of the Old Bodleian Library, 1378
- University of Reading : Appointment of Dr. O. V. S. Heath to the chair of horticulture, 385
  - Establishment of a Department of Physiological Chemistry, 670
  - Appointment of Prof. C. Tyler as professor of physiological chemistry, 670
  - The River Studies Centre of the (K. H. Mann), 1106
  - Retirement of Prof. H. D. Kay from the directorship of the National Institute for Research in Dairying, 1506
- University of St. Andrews : Site for expansion of the, 87
- University of Saskatchewan : Retirement of Dean I. M. Fraser as dean of the College of Engineering, 1178
  - Appointment of Prof. A. Porter as dean of engineering, 1178
- University of Sheffield : Gift of £15,000 from the Shell Petroleum Co., Ltd., to the Development Fund, 20
  - Resignation of Prof. R. P. Jepson on appointment as professor of surgery in the University of Adelaide, 673
  - Resignation of Prof. W. Hobson on appointment as medical officer in training and education in the World Health Organization Regional Office, Copenhagen, 673
  - Grant of £2,000 a year for five years from the Town Trustees, for strengthening the recently created Department of Psychiatry, 673
  - Grant of 8,500 dollars from the Rockefeller Foundation, for research in microbiology, 673
  - Retirement of Prof. L. E. Eastham from the chair of zoology, 1307
  - Appointment of Prof. I. Chester Jones to the chair of zoology, 1308
  - Appointment of P. F. Harris and M. Taylor as lecturers in anatomy, 1576
  - Appointment of Miss E. L. Jervis as lecturer in physiology, 1576
  - Appointment of Dr. D. Hobson as honorary lecturer in bacteriology, 1576
- University of Southampton : Appointment of Dr. P. B. Morice to the chair of civil engineering, 87
  - Appointment of Dr. M. C. R. Symons as visiting associate professor in the Department of Chemistry at the University of British Columbia, 315
  - The Tidal Model at the (Prof. P. B. Morice), 944
- University of Sydney : Appointment of Prof. J. H. Gaddum as third visiting professor of pharmacology, 603
- University of Sydney Extension Board : Architectural Science No. 2, Proceedings of the Symposium on Structure and Architecture (edited by Prof. Henry J. Cowan), 1315
- University of Victoria : Appointment of R. R. Blackwood as chairman of the Interim Council, 315
- University of Virginia, Charlottesville : Grant of 150,000 dollars from the National Science Foundation, for a research reactor, 313

University of Wales : Soddy Commemoration Plaque to be installed in the laboratories at Aberystwyth, 1571
University of Western Australia : Appointment of Dr. D. J. F. Allen-Williams to the chair of mechanical engineering, 86
University of Wisconsin : Conference on the Chemical Organization of Cells, Normal and Abnormal, 1576
University (Middle East Technical), Ankara (Dr. Turgut Yazicioglu), 382
University Apartheid, 671
University Building Projects : Government Grants for, 1702
University College of East Africa : Makerere College (Margaret A. Keay), 1445
University College, London : Resignation of Prof. R. W. Russell from the professorship of psychology, 18
  Appointment of Prof. G. C. Drew to the chair of psychology, 18
  Title of reader in chemistry in the University of London conferred on Dr. C. A. Bunton and on Dr. A. Wassermann, 20
  Title of reader in the history and philosophy of science in the University of London conferred on Dr. A. Armitage, 89
  Title of reader in genetical statistics in the University of London conferred on Dr. C. A. B. Smith, 89
  Title of reader in civil engineering in the University of London conferred on R. J. Wilkins, 89
  Appointment of Prof. C. A. Rogers to the Astor chair of mathematics, 1378
University College of Rhodesia and Nyasaland : Gift of £10,000 from Lever Brothers (Rhodesia), Ltd., to endow a Lever Research Fellowship, 673
University College of Sussex, 600
University Service, World (International Committee on Science and Freedom, in co-operation with the) : Appeal for funds to help non-white South African students, 671
University Teaching : Colour Television in (C. E. Engel and Prof. Roger Warwick), 91
University Today : The Place of Residence in the (Discussion on, at the Home Universities Conference), 164
Unloading Effects in Aluminium—Zinc Single Crystals (A. T. Thomas), 1728
'Unmasking' Techniques (Phenol) : Demonstration of some 'Masked' Lipids in the Oocytes of *Chrotogonous trachypterus* with Sudan Black *B* and (Brij L. Gupta), 555
Unmated Females (Mated and), of an African Strain of *Aedes aegypti* : Biting Behaviour of (M. M. J. Lavoipierre), 1781
Unstabilization : Induced Gene (Prof. Stephen Zamenhof, Miss Rosalie de Giovanni and Dr. Sheldon Greer), 827
Unstable Mutation in *Salmonella typhimurium* (P. F. Smith-Keary), 1672
Unusual : The Metallurgy of the (Dr. W. S. Kroll), 159
Unusual Situations for *B. amphitrite* Darwin : *Balanus tulipiformis* Ellis on the Atlantic Coast of France and an (B. S. Kisch), 206
Updegraff, Dr. D. M., and Bovey, Dr. F. A. : Reduction of Organic Hydroperoxides by Micro-organisms and Animal Tissues, 890
Uptake by Bacteria of Labelled Glutamate : Effect of Electrolytes on the (Y. Avi-Dor and Sh. Miller), 190
Uptake of Methionine-^{35}S by the Cells of the Facial Nerve Nucleus : A Histoautoradiographic Study of the Effect of Section of the Facial Nerve on the (J. Fischer, Z. Lodin and Dr. J. Koloušek), 341
Uptake of Rubidium-86 : Influence of Water-Content of Sand on Rate of (Dr. L. K. Wiersum), 106
Uptake (Reversible), of Inorganic Phosphate by *Hydrodictyon* : Dependence on Light of the (A. Pirson and Dr. A. Kuhl), 921
Uptake (Selective), of Radiochemical Impurities by Mitochondria (G. A. Lumb), 132
Upwelling in a Submarine Canyon : A Possible Ecological Effect of (Raymond J. Ghelardi and Wheeler J. North), 207
Uranium : Distribution of Radioactivity in Rocks and Minerals, and the Effect of Weathering on Determinations of (Dr. E. Hamilton), 697
Urea : Micro Estimation of (D. Watson and D. A. H. Pratt), 1475
Ureogenesis in Elasmobranchs (Prof. Ernest Baldwin), 1591
Urey, Prof. Harold C. : Origin of Tektites, 1458
Uri, Dr. J., and Békési, I. : Flavofungin, a New Crystalline Antifungal Antibiotic—Origin and Biological Properties, 908
Uri, N. : Processing of Foods with Ionizing Radiations (Radiation Chemical Aspects), 878
Uric Acid in the Tissue Homogenates of Earthworms : Detection of (Dr. Gaber M. Haggag and Dr. A. Khalaf El-Duweini), 191
Uridine Diphosphate Amino-sugar Compounds from *Staphylococcus aureus* inhibited by Penicillin (Eiji Ito, Nobutoshi Ishimoto and Masahiro Saito), 906
Uriel, José : Colorimetric Detection of Human Caeruloplasmin Oxidase Activity after Electrophoresis in Agar Plates or after Immuno-electrophoresis, 999
Urine (Cow's) : Fortifying Influences of Coconut Milk and, on 2,4-Dichlorophenoxyacetic Acid in the Control of Button Shedding in the Coconut (S. R. Gangolly and Dr. K. M. Pandalai), 855
i-Urobilin and Stercobilin : Electrophoretic Behaviour of (I. L. Kahán), 773
Urobilin-IX*α* (Dextrorotatory), and Racemic *d*-Urobilin (Prof. C. H. Gray and D. C. Nicholson), 483
d-Urobilin (Racemic) : Dextrorotatory Urobilin-IX*α* and (Prof. C. H. Gray and D. C. Nicholson), 483
Urocanic Acid : Dye Reduction by a Metabolite of (Studies of Urocanic Acid), (Robert H. Feinberg and Prof. David M. Greenberg), 898
  Intermediate Products in the Enzymatic Degradation of (Studies of Urocanic Acid), (Robert H. Feinberg and Prof. David M. Greenberg), 897
  Studies of (Robert H. Feinberg and Prof. David M. Greenberg), (Intermediate Products in the Enzymatic Degradation of Urocanic Acid), 897 ; (Dye Reduction by a Metabolite of Urocanic Acid), 898
Urquhart, Dr. D. J. : Scientific and Technical Translation, 1045
Urwick, Colonel Lyndall F. : Sixteen Questions about the Selection and Training of Managers, 1244
Usborne Memorial Prize of the Royal Aeronautical Society awarded to D. G. Drake, 1646
Use of an Analogue to resolve Stokes's Paradox (Sir Richard Southwell), 1257
Use of 'Brood Patterns' in Research on Chemical Mutagens (Dr. C. Auerbach), 754, 757 ; (Dr. O. G. Fahmy and Dr. Myrtle J. Fahmy), 755
Use of Deep-Freezing in the Preservation and Preparation of Fresh Soil Samples (J. K. R. Gasser), 1334
Use of Defoliants for Drying Buckwheat in the Field, and a New Method for the Chemical Determination of Rutin (V. Brejcha and P. Horák), 505
Use in Determining Atmospheric Scale-Heights : Effect of the Earth's Equatorial Bulge on the Life-time of Artificial Satellites and its (Dr. G. V. Groves), 1055
Use of Electronic Flash in Photomicrography (Dr. David A. Erasmus), 1290
Use of Faradaic Rectification for the Study of Rapid Electrode Processes (Dr. G. C. Barker, R. L. Faircloth and A. W. Gardner), 247
Use of Fertilizers : Influence of War on the Production and, *review* by Dr. G. W. Cooke, 371
Use of Fluorescent Lighting for Experiments on Photoperiodism (Dr. J. W. L. Beament and Dr. A. D. Lees), 1443
Use of Gaussian Functions for Intermolecular Potentials (Dr. K. Singer), 262
Use of Labelled Ions in the Study of Blastocyst—Uterine Relationships in the Rabbit (J. P. Bennett, Dr. J. C. Boursnell and Dr. C. Lutwak-Mann), 1715
Use of Logarithms in recording Serological Reactions (Prof. William C. Boyd), 1348
Use of the Membrane Filter in Mycological Class-work (Dr. Sigurd Funder), 1606
Use of the Microscope : Lecture Notes on the (R. Barer), second edition, *review* by S. Bradbury, 801
Use of Nuclear Energy : Industrial Health Problems in the, 1023
Use in Pharmacy, Biology and Chemistry : Mathematics and Statistics for (L. Saunders and R. Fleming), *review* by Dr. D. J. Finney, 147
Use of Reflecting Paints for locating Tsetse Fly at Night (B. D. Rennison, W. H. R. Lumsden and C. J. Webb), 1354
Use of a Stable Free Radical : Antioxidant Determinations by the (Marsden S. Blois), 1199
Use of Statistics in Personnel Management (Institute of Personnel Management in conjunction with the National Institute of Industrial Psychology Course in), 20
Use of Sulphonamides in the Treatment of Pleuro-pneumonia-like Organisms in Rats (R. T. Charles and O. Rees), 1213
Use of Tidal Streams by Migrating Elvers (*Anguilla vulgaris* Turt.), (F. Creutzberg), 857
Use (Clinical), of Hormones (*The Practitioner*, Vol. 180, No. 5), 602
Use (Possible) in High-Resolution Shadow-Casting for the Electron Microscope : Simultaneous Evaporation of Platinum and Carbon for (D. E. Bradley), 875
Uses of Epidemiology (Dr. J. N. Morris), *review* by Dr. Kenneth Newell, 800
Uses (Biological), of the Electron Microscope (Linnean Society Symposium on), 459
Uses (Medical), of Ionizing Radiations (Sir Ernest Rock Carling), 93
Usinger, Robert L. (Matsuda, Ryuichi, and) : Insects of Micronesia, Vol. 7, No. 3, Heteroptera Aradidae (Bernice B. Bishop Museum, Honolulu), 819
U.S.S.R. : The Great Northern Route in the (V. F. Burkhanov), 1245
  Technical Education in the (C. E. Simmonds), 316
U.S.S.R. Office of Geology and Protection of Subsoil : *Razvedka i Okhrana Nedr* (Prospecting and Protection of Subsoil) to be published in French by the Bureau de Recherches Géologiques, Géophysiques et Minières, Paris, 1510
Uterine Environment : An Effect of the, upon Skeletal Morphology in the Mouse (Dr. Anne McLaren and Dr. Donald Michie), 1147
Uterus and Vagina of the Rat : Localization of Oxidative Enzyme Systems in the (Dr. Charles G. Rosa and Dr. Joseph T. Velardo), 348
Utilization of Fuel and Energy : Economic Trends in the Production, Transportation and Utilization of (Canadian Sectional Meeting of the World Power Conference), 1245
Utilization (Land), in the Humid Tropics : Climate, Vegetable and (Pacific Science Congress Symposium on), 596
Utilizing the Natural Resources of Lake Victoria for the Benefit of Fisheries and Agriculture (R. S. A. Beauchamp), 1634
Uvarov, Dr. B. P. : Australian Acridoidea, *review*, 1628
Uvarov, E. B. : Scientific and Technical Translation, 1044
Uyeda, M., and others : Lattice Image of Twin Structure observed directly by Electron Microscope in a Crystal of Copper Phthalocyanin, 332

VACANCIES and other Point Defects in Metals and Alloys (Metal Physics Committee of the Institute of Metals Symposium on), 449
Vacant Places in British Universities, 1243
Vaccination : Benjamin Waterhouse and the Introduction of (Dr. John B. Blake), *review* by Dr. W. R. Bett, 1690
Vaccination and Inoculation, *review* by Dr. W. R. Bett, 1690
Vaccinia Virus (Mature) : Structural Differentiation in the Nucleoid of (Dr. M. A. Epstein), 784
Vacuum (High) : Burning Voltage of Arcs in (M. P. Reece), 475
Vacuum Breakdown in Dielectric-loaded Wave-guides (Dr. G. B. Walker and E. L. Lewis), 38
Vacuum Oven : The Gardiner (Griffin and George, Ltd.), 314
Vagina of the Rat : Localization of Oxidative Enzyme Systems in the Uterus and (Dr. Charles G. Rosa and Dr. Joseph T. Velardo), 348
Vaginal Cycle in the Cat : Sexual Behaviour and the (Richard P. Michael), 567
Valentine, J. C., and others : Pigmentation of Intestinal Muscle in Steatorrhoea, 538
Valentine, Dr. Robin C. : Contrast in the Electron Microscope Image, 832
Valentini, E. : At the thirteenth International Congress of Applied Psychology (Social Influences on Delinquency), 1580
Validity of Motokawa's Technique for Investigating Retinal Function (Dr. C. I. Howarth and M. Treisman), 843
Vallentyne, J. R.: Salt Marshes (Biochemistry of Mud, particularly in respect of the Breakdown of the Chlorophyll Pigments), 1513
Vallois, Prof. Henri V. (Boule, Prof. Marcellin, and) : Fossil Men (translated from the fifth French edition by Michael Bullock), *review* by Sir Wilfrid Le Gros Clark, 1165
Valonia ventricosa : Constitution of the Fibrillar and Non-Fibrillar Components of the Walls of (Prof. R. D. Preston and J. Cronshaw), 248
Value for Teaching and Research : The Natural Resources of the Country and their (Papers at the Annual Meeting of the Association of British Zoologists), 1313

Value (Nutritive), of Proteins (Nutrition Society Symposium on), 151
Valves : Microwave (Institution of Electrical Engineers International Convention on), 673, 1378
van Andel, O. M., and others : Internal Seed Disinfection with Pyridine-2-thiol-N-oxide and a Derivative, 1017
van Asperen, Dr. K. : Mode of Action of Organophosphorus Insecticides, 355
van Dam-Bakker, Mrs. Anna W. I. : *Iso*leucine and Allo-*iso*leucine, 116, *erratum*, 673
van Deemter, Dr. J. J. : Column Packings for Gas Chromatography, 604
van Eck, Dr. C. L. van Pantaleon : Physics of Water and Ice (X-Ray Diffraction Patterns of Water and its Infra-red Absorption), 381
van Eck, Dr. C. L. van Pantaleon, and others : Interaction in Ionic Solutions (X-Ray Diffraction Studies of Aqueous Electrolyte Solutions), 241
van Krevelen, Prof. D. W., and others : Polynuclear Aromatic Compounds in Coal, 640
van Krevelen, Prof. D. W., and Schuyer, Dr. J. : Coal Science, Aspects of Coal Constitution, *review* by Dr. I. G. C. Dryden, 4
van Leeuwen, Miss A., and others : Leucocyte Antibodies in Sera from Pregnant Women, 1735
van Lennep, Dr. E. W., and others : Ovaries of some Foetal and Prepubertal Giraffes, *Giraffa camelopardalis* (Linnaeus), 487
Van Middlesworth, Prof. L. : Iodine-131 in Sheep before and after a Nuclear Reactor Accident, 256
van Oosterhout, G. W., and Rooijmans, Dr. C. J. M. : A New Superstructure in Gamma-Ferric Oxide, 44
Van Reen, Robert, and Losee, Fred L. : Organic Composition of Bone—Localization of Isocitric Dehydrogenase in Femurs, 1543
van Rood, J. J., and others : Leucocyte Antibodies in Sera from Pregnant Women, 1735
van Steenis, Dr. C. G. G. J. : Climate, Vegetation and Land Utilization in the Humid Tropics (Lowland Vegetation of the Tropics), 596
van Straaten, L. M. : Salt Marshes (Origin of the Tidal Flats of Holland), 1512
van Straelen, Dr. V. : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
Van Tiggelen, Prof. A. (Deckers, J., and) : Ion Identification in Flames by Mass Spectrometry, 1460
van de Hulst, H. C. (edited by) : Radio Astronomy (International Astronomical Union, Symposium No. 4, held at the Jodrell Bank Experimental Station, 1955), *review* by Dr. J. S. Hey, 1432
van den Veen, Dr. R. : Photoperiodism in Plants and Animals (Growing various Species entirely under High-intensity Monochromatic Light), 535
van der Maas, Prof. H. J. : Awarded the J. E. Hodgson Prize of the Royal Aeronautical Society, 1646
van der Walt, T. (Webb, T. L., and) : Differential Thermal Method for determining Reactivity of Calcium Oxide, 411
Vanadium : Oxygen-cutting of (G. Coates), 479
Vandermeerssche, G., and others : Ultra-Structure of the Choanocyte Collar-Cells in Freshwater Sponges, 58
Vaneček, J. (Rašková, Dr. H., and) : Action of the *Shigella shigae* Toxin after Intracerebral Injection, 1129
Vanillic Acid Excretion during Stress (P. Smith and A. M. H. Bennett), 709
Vanishing Prairie (London County Council Film Strip), 1310
Vapour (Methyl Chloride) : Second Virial Coefficient of (the late Prof. R. Whytlaw-Gray, C. G. Reeves and Dr. G. A. Bottomley), 1004
Vapour Concentrations (Low) : Measurement of, by Collision with Excited Rare Gas Atoms (Dr. J. E. Lovelock), 1460
Vapour Pressure of Tritiated Water (A. H. Price), 262
Vapours (Organic) : Influence of, on the Crystal Habit of Ice (J. Hallett and Dr. B. J. Mason), 467
Variation with Age of Shrinkage Temperature of Human Collagen (Patricia C. Brown and Dr. R. Consden), 349
Variation in the Speed of Rotation of the Earth since June 1955 (Dr. L. Essen, J. V. L. Parry, Dr. Wm. Markowitz and Dr. R. G. Hall), 1054
Variation (Chromosome), in the *Heleocharis palustris-uniglumis* Complex (Lise H. Saunte), 1019
Variation (Cytoplasmic) in *Nectria stenospora* (Mrs. Ann Gibson and Dr. D. M. Griffin), 1222
Variation (Phenotypic) : A Case of Limitation of (P. H. Fitzgerald), 436
Variation (Size), in *Entamoeba histolytica* (L. Freedman and Dr. R. Elsdon-Dew), 433
Variation (Spatial and Temporal), of Microfibrillar Organization in Plant Cell Walls (D. S. Belford, Dr. A. Myers and Prof. R. D. Preston), 1251
Variation (Time), of Chemical Affinity (Dr. W. Yourgrau and Dr. C. J. Raw), 480
Variation Problems (Some), connected with the Launching of Artificial Satellites of the Earth (D. E. Okhotsimskii and T. M. Eneev), 1311
Variational Methods for Eigenvalue Problems (Prof. S. H. Gould), *review* by Dr. R. G. Cooke, 978
Variationen der Monochromatischen Korona : Struktur und (Die Sonnenkorona (Prof. M. Waldmeier), Band 2), *review* by Prof. R. O. Redman, 871
Variations in Axonal Diameters of Myelinated Nerve Fibres—Apparent or Real ? (Dr. G. T. Ashley), 125 ; (Dr. P. L. Williams and Dr. C. P. Wendell-Smith), 125
Variations in the Erythrocyte Potassium and Sodium in the Possum, *Trichosurus vulpecula* (Jennifer M. Barker), 492
Variations in Mortality (Laboratory), of the Mosquito, *Culex fatigans* Wied., exposed to DDT (T. Koshi and S. K. Ranganathan), 199
Variety (Early), of Rice : Interaction of Hormone and Photoperiod in an (G. Misra and G. Sahu), 637
Varley, Prof. G. C. : Meaning of Density-Dependence and related Terms in Population Dynamics, 1780
Várnal, I., and others : Immediate Effect of *l*-3:5:3′-Tri-iodothyroacetic Acid on Metabolic Rate and Body Temperature in Hypophysectomized Rats and the Action of Cortisone, 345
Varner, J. E. (Keeler, Dr. R. F., and) : Silicate in the Metabolism of *Azotobacter vinelandii*, 127
Varsavsky, Carlos M. : Origin of Tektites, 173
Vascular Beds : Resistance to Flow in (S. D. Carlill), 1607
Vascular Plants : Afroalpine (Olov Hedberg), *review* by Dr. G. Taylor, 1027
Vat Dye Systems : Changes in (Dr. G. S. Egerton and F. Galil), 1399
Vaughan, Mrs. I. M. : Appointed a member of the Committee for Wales of the Nature Conservancy, 1312
Vaughan, Dr. John G. : Seed-coat Structure of Yellow Chinese Rape, 650
Veale, Sir Douglas : Appointed chairman of a Committee set up by the United Kingdom Atomic Energy Authority to advise on Training in Radiological Protection, 1442
Vegetable Research Station Association, National : Members' Day, 1444
Vegetation : Loss of Moisture from (K. J. Mitchell and R. L. Closs), 1619
Vegetation and Land Utilization in the Humid Tropics : Climate, (Pacific Science Congress Symposium on), 596
Velardo, Dr. Joseph T. (Rosa, Dr. Charles G., and) : Localization of Oxidative Enzyme Systems in the Uterus and Vagina of the Rat, 348
Velasco, Dr. R. : *Obituary* of Prof. M. A. Catalán, 234
Vella, Dr. Francis : Haemoglobin Types in Ox and Buffalo, 564
Velocities (High) : Spectrophotometric Study of Stars with (Madeleine Chopinet), 1041
Velocities (Radial), of Southern *B* Stars (M. W. Feast, A. D. Thackeray and A. J. Wesselink), 1116
Velocity of Electromagnetic Waves : Precision Determination of the (K. D. Froome), 258
Velocity (Burning), of Nitric Oxide Flames : Effect of Pressure on (G. A. McD. Cummings), 1327
Velocity (Molar Sound), of Solids (Dr. J. Schuyer), 1394
Vendrely, Dr. R., and others : A Comparative Biochemical Study of Nucleohistones from Different Vertebrates, 343
Venepuncture : Effect of Muscular Activity prior to, on the Respiration of Leucocytes *in vitro* (Sheenah K. Bisset and W. D. Alexander), 909
Venezuela : Contributions to the Flora of (Dr. Julian A. Steyermark and collaborators), *review*, 445
Venkataramaiah, A. (Murthy, V. S. R., and) : The Diatom *Asterionella* in the Krishna Estuary Region, 360
Venkataraman, G. S. (Bhaskaran, S., and) : Occurrence of a Blue-Green Alga in the Nodules of *Trifolium alexandrinum*, 277
Venn, Dr. J. A. : *Obituary* by Dr. J. A. Ramsay, 1104
Venom (Tiger Snake) : Antagonism between the Actions of Staphylococcal Toxin and (Dr. Edgar A. North and Hazel M. Doery), 1542
VERA (Vision Electronic Recording Apparatus), (B.B.C.), 1174
Verdohaem : Constitution of (Dr. R. Lessing), 1131
Verly, W. G. (Firket, H., and) : Autoradiographic Visualization of Synthesis of Deoxyribonucleic Acid in Tissue Culture with Tritium-labelled Thymidine, 274
Vernon (H. M.) Prize for 1958 of the National Institute of Industrial Psychology awarded to A. T. Welford, 1510
Vernon, Prof. P. E. : At the thirteenth International Congress of Applied Psychology (Evaluation of Educational Achievement ('Docimology')—Assessment of Higher Intellectual Qualities), 1580
Verry, H. R. : Microtexts and Microrecording (A Survey of Microtexts), 1573
Vertebrate Visual System (Stephen Polyak), edited by Prof. Heinrich Klüver, *review* by Prof. R. W. Pickford, 1429
Vertebrates : A Comparative Biochemical Study of Nucleohistones from Different (Dr. R. Vendrely, A. Knobloch and H. Matsudaira), 343
  First Symposium on Host Specificity among Parasites of (International Union of Biological Sciences and the University of Neuchâtel), *review* by Dr. G. Lapage, 1362
Verticillium albo-atrum : Dissemination of, through the Atmosphere (R. R. Davies and Dr. I. Isaac), 649
Veryard, R. G. : *Obituary* of Dr. J. S. Farquharson, 1766
Vesicular-Arbuscular Mycorrhiza in Gramineae (Dr. T. H. Nicolson), 718
Veterinary Toxicology (formerly Lander's 'Veterinary Toxicology'), (R. J. Garner), *review* by Dr. P. Jewell, 983
Vevers, Dr. H. G. : Teaching Zoology in Britain, 1313
Viable Air-borne Spores in Air : Detection of (Dr. J. Rishbeth), 1549
Vibration during Solidification : Promoting the Stable Eutectic Reaction in Magnesium-treated Iron Castings by (J. H. Gittus), 1004
'Vibrissa Number' : Selection for an Invariant Character—in the House Mouse (R. B. Dun and A. S. Fraser), 1018
Vicia faba : Chromosome Breakage in, by Ozone (Dr. Robert H. Fetner), 504
  Effect of a Combined Treatment with 8-Ethoxycaffeine and Argon on the Roots of (Effect on Radiosensitivity of Inert Gases), (John Read), 616
  Mitotic Delay in Irradiated Roots of—the Effect of Oxygen (Dr. H. J. Evans, Dr. G. J. Neary and Miss S. M. Tonkinson), 1083
Vicia faba or Haemolytic Anaemic induced by Drugs : Enzymatic Abnormality in Erythrocytes of a Population sensitive to (Dr. A. Szeinberg, Dr. Ch. Sheba and A. Adam), 1256
Vick, Prof. F. A. : Design of Physics Research Laboratories, 91
Vickers, A. E. J. (edited by) : Modern Methods of Microscopy, *review* by S. Bradbury, 1096
Vickery, Dr. R. C., and Sedlacek, R. : Absorption Spectra of Rare Earths in Glasses, 39
Victoria (Lake) : Utilizing the Natural Resources of, for the Benefit of Fisheries and Agriculture (R. S. A. Beauchamp), 1634
Victoria Medal of the Royal Geographical Society awarded to Prof. Roberto Almagià, 810
Viking Fund Medals and Prizes for 1957 awarded to Dr. Raymond A. Dart, Dr. James B. Griffin and Dr. Margaret Mead, 882
Vikings : Denmark before the (Dr. Ole Klindt-Jensen), *review* by M. C. Burkitt, 215
Vinca rosea Linn. : Isolation of Reserpine from (Dr. N. K. Basu and B. Sarkar), 552
Vincent, H. C. G. : An Improved Orientation Stage for Microscopic Optical Crystallography, 693
Vinen, Dr. W. F. : Detection of Single Quanta of Circulation in Rotating Helium II, 1524
Vineyard, G. H. (Dienes, G. J., and) : Radiation Effects in Solids, *review* by Dr. A. H. Cottrell, 977
Vinograd, J. R. (Bello, J., and) : The Biuret Complex of Gelatin and the Mechanism of Gelation, 273
Virial Coefficient (Second), of Methyl Chloride Vapour (the late Prof. R. Whytlaw-Gray, C. G. Reeves and Dr. G. A. Bottomley), 1004
Virology at Glasgow, 1441
Virulence (Mouse-) of Group *A* Streptococci : Enhancement of, by Bactericidal Resorcinols (John Cameron), 919
Virkki, Dr. N. E. : High Chiasma Frequency in Allocyclic Segments of Chromosomes, 1148
Virus of Foot-and-Mouth Disease : Immunoelectrophoretic Evidence for the Presence of Two Precipitating Antibodies in Serum following Infection with the (Dr. F. Brown), 1130

Virus (Alfalfa Mosaic) : Size and Shape of (Prof. John B. Bancroft and Prof. Paul Kaesberg), 720
Virus (Influenza A) : A Two-stage Transfer of Pathogenicity between the *MEL* and *NWS* Strains of (K. B. Fraser), 195
Virus (Louping-ill), in Monolayer Tissue Culture of Pig Kidney : Growth and Titration of (Dr. Holman E. Williams), 497
Virus (Mature Vaccinia) : Structural Differentiation in the Nucleoid of (Dr. M. A. Epstein), 784
Virus (Meningopneumonitis) : Growth of, in Normal and Immune Guinea Pig Monocytes (Prof. Albert A. Benedict and Clarence McFarland), 1742
Virus (Nuclear Polyhedral), of the Wattle Bagworm : Occurrence of Strains of the (L. L. J. Ossowski), 648
Virus (Rinderpest) : A Specific Diffusible Antigen of, demonstrated by the Agar Double-Diffusion Precipitation Reaction (G. White), 1409
Virus (Semliki Forest) : Infectivity of Ribonucleic Acid from Mouse Brains infected with (Dr. Ping-yao Cheng), 1800
Virus (Soil-borne), associated with the Corky Ringspot Disease of Potato (C. H. Walkinshaw and Dr. R. H. Larson), 1146
Virus (*Tipula* Iridescent) : Early Stages of Infection with the (Dr. Kenneth M. Smith), 966
Virus (Tobacco Mosaic) : Effect of Thiosemicarbazones on the Multiplication of (Tokuzo Hirai, Toru Shimomura and Yonosuke Nishikawa), 352
  Kinetics of Heat Inactivation of Ribonucleic Acid of (Dr. William Ginoza), 958
Virus (Tobacco Mosaic), and Virus Nucleic Acid : The Latent Period after Infection with (Prof. G. Schramm and R. Engler), 916
Virus Neuraminidase : The Influenza (Dr. Alfred Gottschalk), 377
Virus Nucleic Acid : The Latent Period after Infection with Tobacco Mosaic Virus and (Prof. G. Schramm and R. Engler), 916
Virus Nucleoid (Rous) : Composition of the (Dr. M. A. Epstein), 1808
Virus Protein (Tobacco Mosaic) : Polymerization—Depolymerization of (Max A. Lauffer, Allen T. Ansevin, T. E. Cartwright and C. C. Brinton, jun.), 1338
Virus Serology : Plant (Dr. R. E. F. Matthews), *review* by Dr. Kenneth M. Smith, 72
Virus Transmission by *Dactynotus cichoricola* H.R.L., a New Aphid on Chicory (Dr. J. Semal), 721
Virus-like Bodies in a Transplantable Mouse Plasma Cell Tumour (Dr. A. F. Howatson and E. A. McCulloch), 1213
Viruses (Plant) : Interference between (A. D. Thomson), 1547
  The Serological Approach to the Study of, *review* by Dr. Kenneth M. Smith, 72
Viscosity of Blood Contacting Foreign Surfaces : Adherence and, and the Plasmatic Zone in Blood Circulation (Dr. Alfred L. Copley), 551
Viscosity of a Potassium Hyaluronate Solution : Reduction of the, by Ultraviolet Irradiation (Eigill Hvidberg, Sven Ancher Kvorning, Arne Schmidt and Jens Schou), 1338
Viscosity (Non-Newtonian) : Dynamics of Chain Molecules in Dilute Solutions with special reference to (Dr. Roger Cerf), 558
Visibility of Noise on Television Pictures (R. Fatehchand), 1797
Vision : Light, Colour and (Prof. Yves Le Grand), approved translation by Dr. R. W. G. Hunt, Dr. J. W. T. Walsh and F. R. W. Hunt), *review* by Prof. W. D. Wright, 146
Vision and the Evolution of Man, *review* by Prof. R. W. Pickford, 1429
Vision (Colour), of Three Albinos (Prof. R. W. Pickford), 361
Visiting Scientists, Society for : Discussion on Water Quality Problems in the United Kingdom, 24
  Report of the Secretaries, 883
Visits (Exchange), with the Soviet Union, 947
Visser, Miss T. : At the Conference of the Scottish Branch of Aslib (Libraries in Holland), 746
Visual Field (Stroboscopically Lit), containing Self-Luminous Objects : Perceptual Stability of a (Dr. D. M. MacKay), 507
Visual Images (Moving), produced by Regular Stationary Patterns (Dr. M. H. Pirenne), 362 ; (F. W. Campbell and J. G. Robson), 362 ; (Dr. D. M. MacKay), 362
Visual System : The Vertebrate (Stephen Polyak), edited by Prof. Heinrich Klüver, *review* by Prof. R. W. Pickford, 1429
Visual Thresholds : A Theory of (Dr. F. H. C. Marriott), 1487 ; (R. L. Gregory and Violet R. Cane), 1488
Visual Thresholds (Human) : Retinal Summation and (Dr. R. A. Weale), 154
Visualization (Autoradiographic), of Synthesis of Deoxyribonucleic Acid in Tissue Culture with Tritium-labelled Thymidine (H. Firket and W. G. Verly), 274
Visualizing the Pattern of Plane Polarized Light from Blue Sky : A Device for (J. A. Chapman), 1393
Vitamin A Oils : Assay of (Prof. E. Brunius), 395
Vitamin B Committee of Japan : Conference on Water-soluble Vitamins, 390
Vitamin B_{12} : Biochemical Functioning of (Dr. E. Lester Smith), 305
  Effect of Phenobarbitone on the Requirement of *Lactobacillus leichmannii* for (Dr. G. H. Spray), 859
Vitamin B_{12} and Vitamin B_{12}-binding Protein : Transformation of Megaloblasts to Normoblasts by Cultivating Human Bone Marrow in Presence of (Dr. I. Pendl and Dr. W. Franz), 488
Vitamin B_{12} Deficiency : Effects of Orotic Acid on Coenzyme A and Pantothenic Acid of Liver in (Prof. G. Moruzzi, R. Viviani, M. Marchetti and F. Sanguinetti), 416
Vitamin B_{12}-binding Protein : Transformation of Megaloblasts to Normoblasts by Cultivating Human Bone Marrow in Presence of Vitamin B_{12} and (Dr. I. Pendl and Dr. W. Franz), 488
Vitamin E : A Colour Reaction of, with Vitamin K and Cysteine (Eduardo Cruz-Coke), 49
Vitamin K : Apparent Requirement for, of Rumen Strains of *Fusiformis nigrescens* (Dr. M. Lev), 203
Vitamin K and Cysteine : A Colour Reaction of Vitamin E with (Eduardo Cruz-Coke), 49
Vitamins : Water-soluble (Vitamin B Committee of Japan Conference on), 390
Vitis vinifera : Effect of Gibberellic Acid on Fruit Set and Berry Enlargement in Seedless Grapes of (Dr. Robert J. Weaver), 851, *erratum*, 1110
Vitreous Body of *Galago crassicaudatus agisymbanus* (Prof. C. P. Luck), 719
Vitreous Silica : Stress Optical Coefficients of Different Specimens of (Dr. R. S. Krishnan, E. S. Jog and R. Srinivasan), 692
Viviani, R., and others : Effects of Orotic Acid on Coenzyme A and Pantothenic Acid of Liver in Vitamin B_{12} Deficiency, 416
Viviparous Toothcarps : Pathological Parthenogenesis in (Prof. A. Stolk), 1660
Vogt, Marguerite : Genetic Aspect of Somatic Cell Variation (Clones Resistant to Polio Virus in a Human Epidermoid Carcinoma (HeLa) cultivated *in vitro*), 1707
Vojtíšková, Marta : Distant Hybrids from Parents with Reduced Immunological Reactivity, 927
Volatile Amines of Herring Flesh (Dr. R. B. Hughes), 1281
Volcanicity (Sub-aerial), in Snowdonia (N. Rast, R. V. Beavon and F. J. Fitch), 508
Voltage (Breakdown), of Sheet Insulating Materials : Influence of the Ambient Medium on the (W. P. Baker), 1726
Voltage (Burning), of Arcs in High Vacuum (M. P. Reece), 475
Voltage (High-) Paper Electrophoresis : Separation of the Lower Fatty Acids (C_6 to C_{10}) by (Dr. D. Gross), 264
Volterra, Prof. Enrico : *Obituary* of Prof. R. M. Davies, 880
Volumetric Analysis, *review* by E. I. Johnson, 800
Volumetric Analysis (Prof. I. M. Kolthoff and R. Belcher, with the co-operation of V. A. Stenger and G. Matsuyama), Vol. 3, Titration Methods, Oxidation-Reduction Reactions, *review* by E. I. Johnson, 800
Volumetric Error : Microdiffusion Analysis and (Prof. Edward J. Conway), fourth edition, *review* by E. I. Johnson, 1029
von Borstel, R. C., and Rekemeyer, M. L. : Division of a Nucleus lacking a Nucleolus, 1597
von Euler, Prof. Dr. Hans, und Eistert, Prof. Dr. Bernd : Chemie und Biochemie der Reduktone und Reduktonate, *review* by Prof. E. L. Hirst, 145
von Klüber, Dr. H. : Width of the Green Mercury Line from a 198-Isotope Lamp, 1007
von Maltzahn, Dr. K. E. : Size Differences in *Cucurbita*, 1115
von Maltzahn, Dr. K. E., and MacQuarrie, I. G. : Effect of Gibberellic Acid on the Growth of Protonemata in *Splachnum ampullaceum* (L.) Hedw., 1139
von Wright, Prof. Georg Henrik : The Logical Problem of Induction, second edition, *review* by F. I. G. Rawlins, 981
  Logical Studies, *review* by F. I. G. Rawlins, 981
Vortex Rings produced with Liquids : Instability Effects in (W. C. Levengood), 1680

  Interaction between Indole-acetic Acid and Gibberellic Acid in Cambial Activity, 1744
Wareing, Dr. P. F., and Black, M. : Similar Effects of Blue and Infra-Red Radiation on Light-sensitive Seeds, 1420
Warman, H. R. : Awarded a moiety of the Lyell Fund for 1958 of the Geological Society of London, 159
Warrau : Peculiar Distribution of the Diego Factor among the (Dr. Miguel Layrisse, Dr. Tulio Arends and Johannes Wilbert), 118
Warren, E., and Hagg, E. L. : Single-Hop Propagation of Radio Waves to a Distance of 5,300 km., 34
Warren, H. A. : Technical Education, *review* by T. H. Hawkins, 517
Warren, S. Hazzledine : *Obituary* by Dr. H. Godwin, 1241
Warwick, Prof. Roger (Engel, C. E., and) : Colour Television in University Teaching, 91
Warwicker, Dr. J. O. (Ellis, K. C., and) : Systematic Absences and the X-Ray Diagram of Cellulose, 1614
Washington University : Appointment of Dr. F. W. Went as professor of botany, 1640
Wass, D. W. G. : Awarded a Home Civil Service Fellowship of the Commonwealth Fund, 1181
Wassermann, Dr. A. : Title of reader in chemistry in the University of London at University College conferred on, 20
Wassink, Prof. E. C. : Photoperiodism in Plants and Animals (Responses of various Species grown under High-intensity Radiation in Narrow Spectral Regions), 535
Wastes : Trade (Midland Branch of the Institute of Sewage Purification Symposium on), 678
Waszczenko-Z, E. (Fine, Dr. J. M., and) : Preparation of Transparent Starch Gels after Electrophoresis, 269
Watanabe, H., and others : Lattice Image of Twin Structure observed directly by Electron Microscope in a Crystal of Copper Phthalocyanine, 332
Watanabe, Prof. I. (Miura, Dr. Kin-ichiro, and) : Nucleic Acids (Nucleotide Composition of Ribonucleic Acid), 1511
Watanabe, Prof. I., and others : Effect of Chloramphenicol on Ribonucleic Acid Metabolism in *E. coli* infected with T2 Phage, 1127
Watanabe, Masaru (Honjo, Goro, and) : Examination of Cellulose Fibre by the Low-Temperature Specimen Method of Electron Diffraction and Electron Microscopy, 326
Watase, H., and others : Structure of Kainic Acid and its Isomer, Allokainic Acid, 761
Watches (Luminous) : Radiation Hazard from (J. L. Haybittle), 1422
Water : Effect of, upon the Polymorphic Transitions in Anhydrous Sodium Sulphate (E. L. Kreidl and Ivan Simon), 1529
  Emergency Supplies of, 741
  Policy for (Political and Economic Planning, Broadsheet No. 418), 953
Water used for Rearing Oyster Larvae : Ultra-Violet Sterilization of (G. Duncan Waugh), 1747
Water in Milk : Interrelationships of the Concentrations of Sodium, Potassium, Lactose and (J. A. F. Rook and Marian Wood), 1284
Water Sorbed on Montmorillonite : Density of (Dr. Robert C. Mackenzie), 334
Water (Brackish) : Three Zoopagales from (F. R. Jones), 575
Water (Deep) Movements in the Caribbean : Manganese Deposition and (Peter J. Wangersky and Prof. G. E. Hutchinson), 108
Water (Rain) : Chemicals Dissolved in, 1650
Water (Sea-) : Germanium and Gallium in—Germanium (J. D. Burton and Dr. J. P. Riley), 179 ; Gallium (F. Culkin and Dr. J. P. Riley), 180
  Niobium in (Dr. D. B. Carlisle and L. G. Hummerstone), 1002
Water (Triple Labelled) : Rate of Body-Water Distribution studied with (Michael Anbar and Dr. Zigmund Lewitus), 344
Water (Tritiated) : Vapour Pressure of (A. H. Price), 262
Water-soluble Vitamins (Vitamin B Committee of Japan Conference on), 390
Water-Bath : Constant Temperature (Prof. A. Darbre and R. L. Speirs), 364
Water Bill : Second reading of the, 741
Water Content and Insect Metabolism (Dr. Kenneth Mellanby), 1403
Water Content of Sand : Influence of, on Rate of Uptake of Rubidium-86 (Dr. L. K. Wiersum), 106
Water Currents : Effect of Photoperiodism on Response of Juvenile Trout to (T. G. Northcote), 1283
Water Quality Problems in the United Kingdom (Society for Visiting Scientists Discussion on), 24
Water Relations of Leaves from Woody and Herbaceous Plants (Dr. J. S. Kennedy and C. O. Booth), 1271
Water Resources of Britain, 953
Water and Ice : Physics of (Royal Society Discussion on), 380
Waterhammer Analysis (John Parmakian), *review* by T. M. Charlton, 1495
Waterhouse (Benjamin) and the Introduction of Vaccination (Dr. John B. Blake), *review* by Dr. W. R. Bett, 1690
Waters (British) : *Bugula simplex* Hincks, a Newly Recognized Polyzoan from (J. S. Ryland), 1146
  Sacculina gonoplaxae Guérin-Ganivet, 1911, a Rhinocephalan Parasite New to (A. K. Nagabhushanam), 57
Waters (Fresh) : The Influence and Importance of Daily Weather Conditions in the Supply of Chloride, Sulphate and other Ions to, from Atmospheric Precipitation (E. Gorham), 1650
Waters (Southern Ocean) : Age Determinations of (J. W. Brodie and R. W. Burling), 107
Waters (Temporary) : Breeding of Dragonflies in (Dr. E. P. Hodgkin and J. A. L. Watson), 1015
Waterston, Dr. C. D. : Elected a Fellow of the Royal Society of Edinburgh, 739
Watkins, Dr. Winifred M. : Enzymic Synthesis of Nitrogen-containing Disaccharides by α-Galactosyl Transfer, 117
Watson, D., and Pratt, D. A. H. : Micro Estimation of Urea, 1475
Watson, Dr. D. J. : Biological Productivity of Britain, 82
  Wheat in Australia, *review*, 730
Watson, Prof. D. M. S. : Awarded a Silver Darwin—Wallace Commemorative Medal by the Linnean Society of London, 1177
  A Fossil Mammal-like Reptile, *review*, 1233
Watson, H. C. : X-Ray Research (Determining the Structure of β-Naphthol from X-Ray Data), 1645
Watson, Dr. H. E. : The Wealth of India, *review*, 1026
Watson, J. A. L. (Hodgkin, Dr. E. P., and) : Breeding of Dragonflies in Temporary Waters, 1015
Watson, Dr. J. H. L. : What was Expected Professionally of a Trained Electron Microscopist, 816
Watson, Sir James Scott : Elected president for 1958-59 of the British Agricultural History Society, 1443
Watson, Dr. W. F. : Recent Advances in Polymer Technology (Chemical Reactions induced by Polymer Deformation), 1304
Watt, Dr. A. S. : Appointed a member of the Committee for England of the Nature Conservancy, 1312
Wattle Bagworm : Occurrence of Strains of the Nuclear Polyhedral Virus of the (L. L. J. Ossowski), 648
Watts, D. G. : Elected to a Beit Fellowship for Scientific Research at the Imperial College of Science and Technology, 1444
Watts, J. C. D. : Thermocline off the Coast of Tropical West Africa, 863
Watts, Dr. J. T. : Recent Advances in Polymer Technology (Urethane Foam Processes), 1305
Watts, J. W. (Harris, Dr. H., and) : Turnover of Protein in a Non-Multiplying Animal Cell, 1582
Watts, L. E. : Natural Cross-Pollination in Lettuce, *Lactuca sativa* L., 1084
Waugh, G. Duncan : Ultra-Violet Sterilization of Water used for Rearing Oyster Larvae, 1747
Wave (Travelling-) Parametric Amplifier (Prof. A. L. Cullen), 332
Waveguides : Elsevier's Dictionary of Electronics and, in Six Languages (compiled and arranged on an English alphabetical base by W. E. Clason), *review* by Dr. R. L. Smith-Rose, 801
Wave-guides (Dielectric-loaded) : Vacuum Breakdown in (Dr. G. B. Walker and E. L. Lewis), 38
Wave Optics (Dr. C. Curry), *review* by G. R. Noakes, 5
Waverley, Viscount : *Obituary* by Sir Henry Dale, 383
Waverley Gold Medal Essay Competition (*Research*), 1042
Waves (18-mc/s. Cosmic Radio) : Auroral Absorption of, on February 11, 1958 (Dr. R. Fleischer), 1156
Waves (Electromagnetic) : Precision Determination of the Velocity of (K. D. Froome), 258
Waves (Large Sand), near the Edge of the Continental Shelf (D. Cartwright and A. H. Stride), 41
Waves (Moving and Standing) : Simultaneous Occurrence of, in a Positive Column (A. W. M. Cooper, J. R. M. Coulter and Prof. K. G. Emeléus), 1326
Waves (Radio) : Propagation of, from Cosmical Sources (Dr. E. Chvojková), 105
  Single-Hop Propagation of, to a Distance of 5,300 km. (E. Warren and E. L. Hagg), 34
  Single-Hop Propagation of, to a Distance of 5,300 Miles (F. Kift), 1459
Waves (Radio), reflected from the Moon : Measurement of the Ionospheric Faraday Effect by (Fred B. Daniels and Siegfried J. Bauer), 1392

Waves (Shock) : Temperature Measurements of, by the Spectrum-Line Reversal Method (J. G. Clouston, Dr. A. G. Gaydon and Prof. I. I. Glass), 1325
Waves (Ultrasonic) : Propagation of, in Liquids (Dr. A. K. Dutta and K. Samal), 563
Weale, Dr. R. A. : Retinal Summation and Human Visual Thresholds, 154
Wealth of India—Raw Materials, Vol. 4, F-G (with Index), *review* by Dr. H. E. Watson, 1026
Weanling Rats : Bread and the Growth of—the Lysine-Threonine Balance (J. B. Hutchinson, Dr. T. Moran and Dr. J. Pace), 1733
Wear, a new international journal, 1508
Wear : Lubrication and (Institution of Mechanical Engineers International Discussion on), *correction*, 161
Weast, Prof. Robert C., and Selby, Dr. Samuel M. (edited by Hodgman, Prof. Charles D., in association with) : Handbook of Chemistry and Physics, thirty-ninth edition, *review*, 661
Weather Conditions (Daily) : The Influence and Importance of, in the Supply of Chloride, Sulphate and other Ions to Fresh Waters from Atmospheric Precipitation (E. Gorham), 1650
Weather Ships (British Ocean): Ten Years' Work of the (Comdr. G. E. N. Frankcom), 236
Weatherall, Dr. Miles : Title of professor of pharmacology in the University of London at the London Hospital Medical College conferred on, 602
Weatherall, R. : A School Course of Biology, *review*, 1758
Weathering on Determinations of Uranium : Distribution of Radioactivity in Rocks and Minerals, and the Effect of (Dr. E. Hamilton), 697
Weatherly, Dr. E. E. : Professional Problems of Biologists serving Overseas, 677
Weaver, Dr. Robert J. : Effect of Gibberellic Acid on Fruit Set and Berry Enlargement in Seedless Grapes of *Vitis vinifera*, 851, *erratum*, 1110
Webb, C. J., and others : Use of Reflecting Paints for locating Tsetse Fly at Night, 1354
Webb, Dr. Edwin C. : Enzymologists' 'Do-It-Yourself' Manual, *review*, 1431
Webb, Dr. J. S. : Radiometric and Geochemical Survey Techniques (Geochemical Methods of Mineral Exploration), 594
Webb, M. J. : Awarded a Grant by the Leverhulme Trust, 1442
Webb, M. J. W. (Tomlinson, Dr. J. A., and) : Control of Turnip and Cabbage Mildew (*Erysiphe polygoni* DC.) by Zinc, 1352
Webb, T. L., and van der Walt, T. : Differential Thermal Method for determining Reactivity of Calcium Oxide, 411
Weed (Bulbous), *Oxalis pes-caprae* : Maleic Hydrazide in the Control of the (N. G. Marinos), 1143
Weekes, Dr. K. : The Transition from the Ionosphere to Interplanetary Space, 1238
Weevils (Grain), *Calandra granaria* L. and *C. oryzae* L., reared on Irradiated Wheat (P. B. Cornwell and D. M. Burson), 1747
Weibull, Prof. C., and others : Bacterial Protoplasts, 1713
Weibull, Prof. C. (Thorsson, Dr. K. G., and) : Electron Microscopy of a Stable *Proteus* L Form, 1348
Weiffenbach, George C. (Guier, Dr. William H., and) : Theoretical Analysis of Doppler Radio Signals from Earth Satellites, 1525
Weight (Constant) per Unit Length : Birefringence Determination in Objects of Irregular Cross-sectional Shape and (S. C. Simmens), 1260
Weight (Dry), and Deoxyribonucleic Acid Content of *Proteus vulgaris* : Changes in the, caused by Penicillin (Dr. M. V. Nermut and Dr. V. Drášil), 1740
Weil-Malherbe, Dr. H., and Bone, A. D. : Effect of Reserpine on the Intracellular Distribution of Catecholamines in the Brain Stem of the Rabbit, 1474
Weintroub, S. : The National Physical Laboratory—Report for 1956, 607
  Electron Microscopists, 816
  Modern Computing Methods, *review*, 985
  The Physical Society during 1957, 1046
  Australian Atomic Energy Commission—Report for 1956-57, 1248
Weiskrantz, Dr. Lawrence : Sensory Deprivation and the Cat's Optic Nervous System, 1047
Weiss, Dr. B., and others : Comparison of Effect of Lysergic Acid Diethylamide with Potassium Cyanide and other Respiratory Inhibitors on the Siamese Fighting Fish, 1136
Weiss, Prof. Joseph : One-Electron *versus* Two-Electron Transfer Processes in the Mechanism of Oxidation-Reduction Reactions in Solution, 825
Welch, F. J. : *Obituary* by W. J. Pierce, 1766
Welding (Pressure), of Metals (Department of Industrial Metallurgy of the University of Birmingham Conference on), 1182
Welfare in 1956 : Employment and, 532
Welford, A. T. : *Obituary* of Prof. H. S. Langfeld, 1241
  Awarded the H. M. Vernon Prize for 1958 by the National Institute of Industrial Psychology, 1510
Wellcome Foundation, Ltd. : Appointment of Dr. R. S. F. Hennessey as head of the Therapeutic Research Division, 1637
Wellcome Laboratories of Tropical Medicine : Appointment of Dr. L. G. Goodwin as head of the, 1637
Wells, Dr. F. A. : Appointed professor of industrial economics in the University of Nottingham, 1640
Wells, Dr. Harry K. : Ivan V. Pavlov—Toward a Scientific Psychology and Psychiatry, *review* by Prof. John Cohen, 1233
Wells, I., and Lofthouse, Dr. E. : Nuclear Energy (Fuel Processing in Homogeneous Aqueous Reactors), 736
Welsh, Dr. N. C. : Surface Hardening of Non-ferrous Metals by Spark Discharge, 1005
Wen, Dr. Wen-Yang (Frank, Prof. H. S., and) : Interaction in Ionic Solutions (Ion-Solvent Interaction), 241
Wendell-Smith, Dr. C. P. (Williams, Dr. P. L., and) : Variations in Axonal Diameters of Myelinated Nerve Fibres—Apparent or Real ?, 125
Wendlandt, Prof. Wesley W., and Zief, Morris : Thermal Decomposition of some Antibiotics, 1207
Wenner-Gren Foundation : Award of Viking Fund Medals and Prizes for 1957 to Dr. Raymond A. Dart, Dr. James B. Griffin and Dr. Margaret Mead, 882
Went, Dr. F. W. : Photoperiodism in Plants and Animals (Endogenous Rhythms), 536
  Appointed director of the Missouri Botanical Gardens, St. Louis, and professor of botany at Washington University, 1640
Werre, Dr. P. F. : The Relationships between Electroencephalographic and Psychological Data in Normal Adults, *review* by Dr. Clifford Allen, 983
Wesley, Alan : *Obituary* of Prof. W. J. Jongmans, 157
Wesselink, A. J., and others : Radial Velocities of Southern *B* Stars, 1116
Wesson, J. A., and others : Controlled Release of Thermonuclear Energy—A Stabilized High-Current Toroidal Discharge producing High Temperatures, 222
West, Dr. G. B. (Hicks, R., and) : Adrenal Cortical Hormones and the Formation of Histamine and 5-Hydroxytryptamine, 1342
West, H. : New Irradiation Laboratory at the Metropolitan-Vickers Barton Works opened by, 1775
West, J. M. (Hoar, Dr. T. P., and) : Mechano-Chemical Anodic Dissolution, 835
West, Dr. R. G., and Godwin, Dr. H. : The Cromerian Interglacial, 1554
West (East and) : Agriculture in, *review* by Sir John Russell, 144
West Africa (Tropical) : Thermocline off the Coast of (J. C. D. Watts), 863
West African Cacao Research Institute, Ghana : Appointment of B. H. Kenten as biochemist, 459
  Appointment of J. F. Longworth as agronomist, 459
West African Environment : The Development of the (Second Interterritorial Conference of the West African Science Association), 1580
West African Science Association : Second Interterritorial Conference of the (The Development of the West African Environment), 1580
West Indies : A New Subterranean Crustacean from the (Dr. Isabella Gordon), 1552
Westerlund, Prof. G. : At the thirteenth International Congress of Applied Psychology (Large-scale Statistical and 'Inter-disciplinary' Study of Industrial Accidents in Sweden), 1579
Western Attitudes to Science : Soviet and, 88
Western Australia : The Toxic Plants of (C. A. Gardner and H. W. Bennetts), *review* by Dr. F. N. Howes, 729
Western World : Pooling Scientific Resources in the, 313
Westinghouse, George : Bronze bust of, to be placed in the Hall of Fame for Great Americans at the University of New York, 87
Westman, Dr. A. E. R. : Appointed director of research of the Ontario Research Foundation, 315
Westphal, Prof. O., and others : Contribution of Deoxymethylpentoses to the Serological Specificity of some Bacterial Polysaccharides, and the Recognition of a New Sugar, Paratose, 822
Westrop, J. W. (Green, Prof. H. N., and) : Hydrogen Peroxide and Tumour Therapy, 128
Wetherly, A. H., and others : Relationship of Tectoquinone to Durability in *Tectona grandis*, 721
Wetmore, Dr. Ralph : Photoperiodism in Plants and Animals (Structural Changes occurring in Shoot-Apices of *Xanthium* and other species in the Transition from the Vegetative to the Flowering Condition), 535
Whale Insulins (Sperm- and Sei-) : Structure of, and their Breakdown by Whale Pepsin (Yoshio Ishihara, Tsuneyuki Saito, Yasuzo Ito and Masahiko Fujino), 1468
Whale Pepsin : Structure of Sperm- and Sei-Whale Insulins and their Breakdown by (Yoshio Ishihara, Tsuneyuki Saito, Yasuzo Ito and Masahiko Fujino), 1468
Whapham, Dr. A. D. : Vacancies and other Point Defects in Metals and Alloys (Propagation of Slip in Lithium Fluoride Crystals Hardened by Electron Bombardment), 451
What Magnetohydrodynamics is About, *review* by Prof. T. G. Cowling, 1361
What is the Right Attitude to Science ? (Dr. K. Mendelssohn), 88
What Man May Be—the Human Side of Science (Prof. George Russell Harrison), *review* by Prof. C. A. Coulson, 7
Whatley, F. R., and others : Formation of Oxalacetate and Aspartate from Phospho-Enol-Pyruvate in Spinach Leaf Chloroplast Extract, 632
Wheat : Grain in the Glume of (G. M. Wright), 1812
  Two Crystalline Haemoproteins of (Bunji Hagihara, Kunio Tagawa, Ichiro Morikawa, Masateru Shin and Prof. Kazuo Okunuki), 1656
Wheat in Australia, *review* by Dr. D. J. Watson, 730
Wheat (Irradiated) : Grain Weevils, *Calandra granaria* L. and *C. oryzae* L., reared on (P. B. Cornwell and D. M. Burson), 1747
Wheat—Climate Relationships (M. Y. Nuttonson), *review* by Dr. E. C. Humphries, 1689
Wheat Germ : Crystallization of Cytochrome *c* from (Bunji Hagihara, Kunio Tagawa, Ichiro Morikawa, Masateru Shin and Prof. Kazuo Okunuki), (Crystalline Cytochrome *c*), 1590
Wheat Industry in Australia (Dr. A. R. Callaghan and Dr. A. J. Millington), *review* by Dr. D. J. Watson, 730
Wheat Leaves : Formation of Alkyl Phosphates in (V. C. Runeckles), 1470
Wheat Roots : Relation between Peroxidase and 'Cytochrome *dh*' in (Prof. H. Lundegardh), 28
Wheats (Tetraploid) : 'Purple Pericarp', a Monofactorial Dominant in (Dr. B. C. Sharman), 929
Whey (Human Milk) : Chromatographic Separation of Lactalbumin from, on Calcium Phosphate Columns (Dr. Bengt Johansson), 996
'Whistlers' in the Antarctic (L. H. Martin), 1796
Whitaker, Dr. D. R. (Thomas, R., and) : Zone Electrophoresis of *Myrothrecium* Cellulase, 715
White, A. S. : Nuclear Energy, 735
White, Dr. E. L. C. : Awarded the Mervyn Premium of the Television Society, 1246
White, G. : Agar Double-Diffusion Precipitation Reaction applied to the Study of *Asterococcus mycoides*, 28
  A Specific Diffusible Antigen of Rinderpest Virus demonstrated by the Agar Double-Diffusion Precipitation Reaction, 1409

TECHNE TEMPUNIT

The Techne Tempunit is a self-contained constant temperature control for fitting to any vessel.

- Indicating Thermostat.
- Patented pneumatic control.
- ± .05°C. in unlagged 4 gallon bath over the range, room temperature to 90°C.
- Circulation to external apparatus.
- Brushless silent motor.
- Rugged solid drawn 1000w. heater.
- Efficient stirrer.
- Available for 200/250v., 50 cycle a.c. or 100/120v., 50/60 cycle a.c. supply.

for full details write or telephone

ROTAMETER

FLUID MEASUREMENT AND CONTROL
FLOW—DENSITY—LEVEL

Write for Catalogue RP2000/N.

G30

From the simple principle of float-in-tapered-tube ROTAMETER flowmeters have been developed for the measurement of all types of liquids and gases. ROTAMETERS are available as indicators, recorders, controllers, and alarms, and include models for operation at extremes of temperature and pressure. New types are always being developed to add to the 200,000 already in use in almost every industry.

THE BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

"*When I was young Science was regarded as a poor relative of the Arts—now it is the Rich Uncle on whom we all depend.*"—The Marquess of Salisbury.

SCIENCE needs more and more advertisement, interpretation and promotion. The British Association for the Advancement of Science was founded 126 years ago for this purpose, though its charter was not worded in such forthright terms. For many years after its foundation, the Association fulfilled its functions well, especially during those decades when there was nothing much more than a few newspapers and book-publishing houses which were able to act as means of mass communication and education. Then things went well, and the scientists of those days looked forward to their annual meeting from one year to the next. Nevertheless, only for one week during each year was the public able to learn a little about science and scientists, and for the other fifty-one weeks it had scarcely anywhere to turn for scientific enlightenment, unless an individual was sufficiently intrigued to join some local society. Moreover, only a few incidents, such as the Wilberforce–Huxley controversy at Oxford, seemed to arouse widespread and long-continued interest through the medium of the British Association.

Gradually times and outlook began to change, and more recently attitudes towards things scientific have become quite serious and acute. Once upon a time, the British Association was not only the main forum for public discussion of science and the main medium for the promotion of interest in science (apart from the Royal Institution), but also its own agent. Except the learned journals and the more cultured (and therefore the less-widely read) newspapers, there was little or no means available to the non-scientist for following the advances being made in the various branches of science. The layman was left in the dark; certainly his curiosity was not aroused. Now all that has changed—indeed by science itself; and we have sound radio, television, the cinema, more and more popular newspapers and a few first-class journals which include in their multifarious activities the interpretation and also the criticism of science.

But for some time, in fact until comparatively recently, the British Association seemed to be unaware of this, and appeared oblivious of the demands of the public and the excellent opportunities developing around it. It seemed to be gradually drifting into dangerous complacency and even sterility due mainly to lack of youthful vigour. The meetings became annual events supported for one week by a few perennial scientific pillars intermingling with the city fathers at an always-changing venue. Naturally such people looked forward to that week; but the younger and more productive scientists stayed away, and the public consequently suffered. During those times, the non-scientific public was apathetic anyhow, for was not science the poor relative of the arts? Nevertheless, the British Association did little to stir the public out of its apathy; in fact, the annual meeting became the subject of keen criticism and complaint among the younger scientists, pressmen and the more interested general public.

It would serve no useful purpose to seek the reasons for all this: it is sufficient to realize that the present officers of the Association are aware that such things did happen. Now it has become increasingly evident, especially during the past few years, that the British Association is determined to put its house in order. It is now alive to its limitations and very aware of its opportunities. The main conditioning factor is the financial one, and here it is the duty of others to help. The opportunities for valuable work are now available, and, given relief from financial anxiety, the Association is becoming fully equipped and anxious to take advantage of them.

It is desirable, however, to point out a few changes in policy which appear to have been deliberately, though quietly, instigated, for they point the way to still further improvements. It is certain that during the past few years each annual meeting has been better organized, with the result that the Association is attracting more interest and more and more publicity, and thus doing what it was always meant to do—reaching the public eye and ear. For a long time, the elected presidents seemed to alternate in interest and achievement—one year a man from the life sciences followed the next year by one from the physical sciences. This must have made things somewhat difficult for the Council. It certainly resulted sometimes in the election of a president whose claim to the great honour was based mainly on the fact that he was a successful scientist and possibly had attended the annual meetings with uninterrupted regularity over a long period. The result was now and then disappointing, on occasions even lamentable; and some presidential addresses proved to be incomprehensible even to the scientists themselves. It seemed, moreover, that this tendency to specialize percolated throughout the entire organization, affecting (as was once pointed out by Sir Arthur Keith) the sections and their presidents. The few younger research workers who attended the meetings often did so with the main purpose of presenting a research paper which should never have been accepted by the British Association at all; for the Association is not in the academic sense a learned society but rather a teaching and promotion organization.

Reaction to this over-specialization began to set in, and too many scientists either lost or never even gained any interest in the activities of the Association; some who were interested in its fundamental aims lost heart, and the public grew bored. Moreover, some newspaper editors and reporters waxed critical and resentful because they could find little at a British

Association meeting likely to interest their readers; not so much because interesting topics were absent but because they were presented and interpreted so badly that those responsible for writing news or feature articles found themselves out of their depth.

Recent presidential elections and changes in general organization, however, have revealed a determination to get away from all this. The Association is wisely selecting each year as president a man who is not only a scientist but also one of many parts. He is not one of Lord Hailsham's "egg-heads", but a man who is sincerely concerned with the advancement of science outside his own subject and who has proved himself capable of discussing science, its applications and implications, in a very comprehensive and picturesque way which the public likes and can assimilate and appreciate. Some such presidents have been men of drive, fearless in the expression of their views, even when these have been unpopular at the time. This is the kind of president the British Association needs, and will always need; and it is the kind which it has been having more recently, such as H.R.H. The Duke of Edinburgh, Sir John Russell, Prof. P. M. S. Blackett (the outgoing president) and Sir Alexander Fleck (the incoming one).

As in any such large organization, individuals are important to the British Association, and this does does not mean just members of Council and those who, in their turn, make their appearance before the public. Many ideas must inevitably emanate from the permanent staff, in spite of the fact that they may have to be put into effect by the president, presidents of sections, recorders, and those taking part in the reading of papers and in discussions. In the case of the British Association itself, important changes and developments have recently been instituted, others are in process of expansion, and still others are contemplated and being discussed (see p. 8 of this issue). It can be taken for granted that much of this welcome activity was initiated by Sir George Allen, who took office as secretary as recently as 1954. In appointing him, the Association wisely took account of the fact that he is a man with a background not only of academic achievement or work confined within college cloisters or research laboratories. He was formerly vice-chancellor of the University of Malaya, and no vice-chancellor can afford to ignore the environment of his university or the community of peoples which his university serves. Sir George looks upon the problems facing the British Association in various ways: as individual tasks to be tackled efficiently with the assistance of the right people (for example, Sir Hugh Beaver and his Committee appointed to investigate and report on the practicability, implications, consequences both international and domestic, and the cost of the change-over to the metric system by the United Kingdom), and as problems forming a coherent whole whereby in solving them the British Association will become one of the greatest means of advancing and interpreting science.

In our opinion, the Council of the British Association has always been too large and therefore too cumbersome; it does not meet often enough; and it has seldom seemed disposed to enlist the help of younger and more energetic members. The result has been that for too long a time, in spite of occasional, though unsustained, efforts to break away from tradition, the Association has continued to be, at any rate for the layman for whom it really exists, nothing but an annual event of one week spent in useful and pleasurable activities with the rest of the time spent in suspended animation. Now, we are glad to learn, the Association has decided to change that also and become an active and effective force throughout the year.

A new policy is announced for implementing those functions for which the Association was originally founded, but—and this is important—taking into consideration the rapid changes in conditions and attitudes. No longer will the Association be content to remain centred in London, going outside it once each year; for Area Committees are to be formed. Moreover, at the centre, there is to be a Programme Advisory Committee which will work in close liaison with the Section Committees. This is indeed a welcome departure; for now the Association will have the machinery for arranging programmes which itself can be periodically modified or rebuilt to meet the ever-changing needs and demands of science and the community which it serves. It is to be hoped that the Area Committees will not be confined to academic centres throughout the country, but will also be set up wherever density of population or accumulation of industry warrants them. Thus will the Association extend its influence in time and place and so, as never before, take the message of science to all and sundry.

The Area Committees are to work with already existing bodies such as youth organizations, women's institutes, educational associations, and so forth. We would advise such bodies to welcome any approach that an Area Committee may make to them. In this connexion, we would strongly recommend the Rotary movement to the British Association Area Committees. Rotarians meet every week throughout the year, and they have many clubs in towns and cities everywhere. At most meetings there is a short talk, sometimes followed by a discussion. Any scientist who is able to lecture well and is in sympathy with the objectives of the British Association should be pleased to have the opportunity of addressing Rotary clubs, for each club is a good cross-section of the local community—commercial, professional, social and academic. What better audience could the Association wish for? A speaker finds himself treated as an honoured guest, and is presented with the opportunity not only of bringing enlightenment to those sincerely wishing to learn but also of preaching to the unconverted—and the latter is the most important of all audiences.

The organization of a "Junior B.A. Meeting" is also an important step in the right direction. At the Belfast meeting (1952) of the British Association there was a well-attended series of lectures for juvenile audiences. This was an excellent idea, well conceived and executed (no doubt by Sir Eric Ashby, vice-chancellor of The Queen's University of Belfast, and other local individuals and authorities working in collaboration with Association officials). But the idea was not followed up as closely as it should have been. Now sixth-formers are invited to read papers to adult audiences at the meetings—also a good idea. Perhaps the proposed Junior Association will combine the two movements and thus capture the interest and imagination of hundreds of people at the right time and the most significant age. Here the Association will have excellent chances for work in connexion with science in schools. It is to be hoped that it will not confine itself to grammar schools, but will also approach secondary modern schools and even junior schools, for all these have their problems concerning the presentation of science. At the upper end, of course, there is still much work to be done in connexion with sixth-form science as a stepping-stone from school to university and technical college. Neither should the Association ignore school science as a cultural subject in its own right, that is, not as a means to an end, but as an end in itself.

So far as juvenile and lay audiences are concerned, there is an important point which the Association has not always taken into consideration in the past—that is, choice of lecturer. The man or woman needed for this work is not necessarily one who has made a name for himself or herself in the laboratory. In fact, some such people have been known to drive people away rather than attract them. Obviously a lecturer must know something about the subject; but he need not necessarily be a specialist. He must, however, essentially have presence, poise and personality which will command attention as soon as he mounts the platform. A bad lecturer can easily stifle interest in an interesting subject. This point of view the Association would ignore at its peril, for without the inherent ability to grip the attention of his audience (and many scientists lack such ability), a lecturer would do more harm than good and send his audience away bored or amused or even resentful.

During its earlier years, when science was not so advanced as it is to-day, the Association was able to carry on by itself with the help of a few newspapers and journals. But now times have changed, and, to say the least, the public is curious about science. Moreover, to-day the Association has at its disposal extra-mural departments of universities, the Workers' Educational Association, schools, local societies, the Rotary, Round Table and Soroptimist movements, sound broadcasting and television, the cinema and the whole of the newspaper Press and many journals. It is good to learn that the Association proposes making more advances to some or all of these agencies for mass communication and education. Conversely it is to be hoped that such agencies will welcome the advances to be made, for this can bring nothing but good to all concerned and consequently to the community which they serve.

As *The New Scientist* of December 19 states: "Unity among scientists is essential—but it is not enough. Equally important is the interpretation of science to laymen so that they can intelligently insist upon its discoveries being used for the benefit of mankind. . . . This can only be done with any degree of success in a community which is so educated and informed that it is eager to listen to and able to comprehend what the scientists are talking about. It cannot be done by merely introducing more teaching about science and its background, aims and objectives in our schools and then sitting back. On leaving school, our young people go out into a world of high-powered promotion, advertisement and indoctrination. . . . Recognizing that such heavily promoted attractions [such as entertainment, sport, high-pressure salesmanship, and even politics] may always be with us, science cannot afford to sit on the fence. It must enter the lists with its own promotion and continue plugging it long after school-days are past". The British Association is offered, and is now about to take, the wonderful opportunity of becoming a unifying influence, a leading example, in the promotion of science, through its own activities extended through time and area, and in collaboration with other authorities and associations.

The Association is to be congratulated on the greatly modified, and in some cases new, steps which it is about to take, for much work will be involved in all this. The Association has excellent tools for the job at its disposal; moreover, it has the background of past achievements and even mistakes made from which it can draw inspiration and take warnings. Every support from all possible sources should be extended to this important movement. Workers, organizers and good lecturers are to be found in plenty, and no doubt they will willingly come forward. But the whole movement (and here we have been able to refer to only some aspects of it) will essentially incur considerable expense. Yet it will mean money being in good hands and well and wisely spent. It is clear that the Association should be freed from financial anxiety. Obviously such a body cannot expect to depend solely on the subscriptions of its members, especially if the membership is to embrace more younger people. Neither can those who will have to do the work shoulder the expenses. But industry and the Press (to mention only two examples) can, and we hope will, give financial support, not only for their own benefit but also for the good of the community. A sum of £40,000 has already been received: this is good, but by no means enough. We would therefore appeal to industry and the newspaper Press to support this valuable movement; for to them it is a splendid investment which will pay handsome dividends. Industry is constantly demanding more scientists; the expansion of interest in, and knowledge of, science is the first step towards getting them. The Press can now expect bigger and better opportunities for finding interesting 'copy' out of the meetings to be organized by the Association.

If, and when, therefore, the British Association for the Advancement of Science decides to extend its appeal for funds (especially capital funds), it is to be hoped that such an appeal will meet with a generous response.

BIOLOGY OF MAMMALS

Life of Mammals

By Prof. J. Z. Young. Pp. xv+820 (338 figures). (Oxford: Clarendon Press; London: Oxford University Press, 1957.) 84*s*. net.

"THE Life of Mammals" is in a sense a sequel to Prof. Young's "The Life of Vertebrates" published seven years ago, and is an equally massive work. In conception it is entirely original, drawing its subject-matter both from medical anatomy and physiology and from vertebrate and experimental zoology. It is a systematic text-book full of factual information, and will be extremely useful as a work of reference; but it also characteristically presents an important central theme running through the whole book, which is to reveal the fundamentally mechanical nature of living systems, and of their remarkable powers of self-regulation or homeostasis. Prof. Young outlines this theme in Chapter 1 with admirable and stimulating clarity, using the analogies of man-made machines and communication devices with their servo-mechanisms and attainment of regulation by the use of feed-back. He returns to it time and again in the subsequent pages.

In all there are forty-seven chapters arranged in a morphological sequence, starting with the integument and the mechanical systems of the body, and proceeding next in turn to the digestive, circulatory, respiratory and excretory systems. These carry the reader to Chapter 16. Seven chapters follow on the nervous system and five on the various types of receptors; five more deal with endocrinology, and the remaining fourteen chapters are taken up with reproduction and embryology. A bibliography gives a small number of selected references for each chapter, and finally there is an index of 15 pages (30 columns), which incidentally seems barely generous enough for so large a book. For the convenience of those to whom it will be a standard work of reference an index double the size would not have been excessive.

The one obvious criticism to be made stems from the title, which may very well lead the reader to expect an entirely different sort of book. The emphasis here is on life-processes, illustrated for the most part by one or both of two selected types, the primate (especially man) and the rabbit; and it must be admitted that occasionally an impression is given by the author that what applies to this selected material applies to the mammals as a whole, when this is by no means the case. There is actually very little on either the natural history of mammals or on their comparative anatomy and physiology, though these are the particular subjects which one might expect to form the main substance of such a book, judging from the title alone. Students who specialize in the study of mammals may be excused if they feel a momentary disappointment in discovering that, after all, they have still to wait for the particular kind of text-book on mammalian zoology in English that they so badly need; but they may remember that Prof. Young has previously devoted more than two hundred pages to a comparative review of the mammals in "The Life of Vertebrates".

"The Life of Mammals" will commend itself to anatomists and physiologists, partly for the great amount of information it contains which is either new or has never before appeared in a text-book. This applies with particular force to the second half of the book, dealing with the nervous and endocrine systems and with development. But over and above the value of having so much recent material from very diverse sources collected together, they will benefit from the recurring sections in which the author pauses to interpret the facts and explore the general principles or ideas which emerge from them; these are frequently highly original and stimulating, and succeed to an important degree in extending the boundaries of the reader's insight and understanding. As might be expected, the text is very readable. The book can be commended equally well to students of zoology, some of whom may discover in it with advantage many of the classical facts of medical anatomy and physiology for the first time.

Great care has been taken with the illustrations, a large number of which are new and have been specially drawn with considerable skill; they include a very useful series on the anatomy of the rabbit (for which a finding index would be a welcome addition). The general standard of production is excellent, and in relation to the enormous labour of producing such a book the number of minor errors is small. It may be hoped that the complicated task of revising it at intervals to keep pace with advancing knowledge will prove to be possible for many years to come.

V. C. WYNNE-EDWARDS

LANDMARK IN COAL SCIENCE

Coal Science

Aspects of Coal Constitution. By Prof. D. W. Van Krevelen and J. Schuyer. Pp. xii+352. (Amsterdam: Elsevier Publishing Company; London: Cleaver-Hume Press, Ltd.; Princeton, N.J.: D. Van Nostrand Company, Inc., 1957.) 55*s*.

A STUDY of coal in all its varieties involves most of the pure sciences. The basic economic importance of coals, and especially the baffling complexity of some of their properties, justify the treatment of coal science as a separate branch. Coals are porous and amorphous, and appear to consist of aperiodic macromolecules; few standard techniques can be applied to their study without modification, and the results are frequently ambiguous or less informative than those obtained with simpler organic compounds. Special methods have been developed, many unorthodox and most containing an element of empiricism.

It is not easy to assess the significance of the reported results, which vary widely in quality. Owing to the rapid current advance in the subject and the increase in team effort throughout the world, a simple exposition of coal science as a whole is a compelling need, but its satisfaction is correspondingly difficult. The text-book under review, in spite of shortcomings to be expected in a pioneer venture, must be acclaimed as a considerable achievement in this direction.

Coal petrology and systematics together with related physical and colloidal studies—primarily observational approaches—are concisely and authoritatively treated in Part 1 ("Coal in its Various Aspects"); and chemical studies of coal constitution—primarily experimental—are fully described in Part 2 ("Constitution of the Coal Matrix"). It is an especial merit of this book that a powerful attempt is made to integrate these two major branches of coal science, hitherto independent developments.

In Part 2 there is a full description of the novel methods of statistical structural analysis—based on the approximate additivity of certain physical properties in terms of atomic and structural features —which the authors have developed to enable them to estimate numerical parameters of the average molecule once the qualitative pattern has been established by other means. Such methods are especially useful when investigating substances that are intrinsic mixtures, that is, those the molecules of which vary in detail around a norm.

Part 3 of the book ("Principal Physical and Chemical Properties") is concerned largely with the relation of the physical and mechanical properties of coals to their chemical structure, with their oxidation, and with the phenomena that occur when coals are heated. In the chapter on pyrolysis and carbonization, though it is of great interest, insufficient attention is paid to the detail necessary to enable fundamental studies markedly to influence the practice of carbonization.

In parts of the book there is a lack of balance; for example, less prominence might have been given to views and investigations now superseded. Frequently the impression is conveyed that the results and methods discussed have been established with certainty and are universally accepted; the inexperienced reader might wrongly deduce that little remains to be done. There is sometimes a tendency to discount important divergences between different sets of results. These remarks apply especially to parts of Chapters 5–7, 11, 13 and 14.

"Coal Science" is excellently conceived and produced and reasonably priced. Few misprints have been noticed; only the column headings of Table V.4 are misleading from this cause. Stimulating to read and provocative of thought, this book contains a wealth of information indispensable to the student and research worker. It is to be warmly recommended as the most topical and critical text-book available on its subject.

I. G. C. Dryden

THE PROBLEM OF PERSONALITY

The Three Faces of Eve

By Corbett H. Thigpen and Hervey M. Cleckley. Pp. 313. (London: Martin Secker and Warburg, Ltd., 1957.) 18*s.* net.

PERSONALITY has been defined as the integrated activity of all the reaction-tendencies of the daily life of the individual. Yet we must admit that even in normal persons the integration is not always as complete as it might be. Most people, for example, when deep in thought, have found that they have driven a car long distances, but not appreciated they have done so until they 'come to themselves'. Most of us show a different personality when having tea with the vicar and at a riotous reunion. Mothers often say to an erring small daughter, "That's not my little girl", and, indeed, in the sense in which it is said, it is not, since the child is behaving in a way that actors call 'out of character'. However, in spite of such deviations, most personalities are sufficiently united to stand considerable strain before disintegrating. Yet there are others of the hysterical type which divide easily and the reactions split into different groups. This may result in a hysterical fugue, or loss of memory, or in more complicated conditions, dual or multiple personalities. The classical case of the latter was described by Morton Prince in his famous "Clinical and Experimental Studies in Personality". This was an account of a Miss Beauchamp, whose personality divided into a number of parts, some of which were unaware of the consciousness of the others. This may seem difficult to those who do not understand that consciousness is the appreciation of incoming sensations in the light of acquired and inherited reactions. It is apparent that a partial group of such reactions can interpret sufficiently to acquire consciousness.

"The Three Faces of Eve" is a popular account, told in a journalistic fashion with plenty of wonderment, of a woman whose unhappy marriage led to such a breaking of her personality. This was apparently the result of childhood stress with regard to death: first of a man drowned in a pond; and then of seeing her dead grandmother, and being forced, against her will, to touch her face. However, it seems that an unhappy marriage had much to do with the immediate behaviour, since the patient's recovery was consequent to her divorce and remarriage to a man who was more suited to her and whom she loved.

The case-history was read before the American Psychiatric Association in 1954 and published in the *Journal of Abnormal and Social Psychology*. It certainly shows a number of curious personalities, but how far these were unconsciously encouraged by the psychiatrists in charge of her, and how far they emerged spontaneously, it is difficult to say. The morality of expanding technical scientific articles about real persons into matter which is little better than a novel is questionable. Those who enjoy reading sensational psychiatric books will find this one amusing, but the serious workers will probably wish to go to the original publication.

Clifford Allen

PHYSICAL OPTICS

Physical Optics

By Dr. R. A. Houstoun. Pp. vi+300+16 plates. (London and Glasgow: Blackie and Son, Ltd., 1957.) 40*s.* net.

Wave Optics

Interference and Diffraction. By Dr. C. Curry. Pp. viii+155. (London: Edward Arnold (Publishers), Ltd., 1957.) 21*s.* net.

DR. R. A. HOUSTOUN'S book is intended for two types of post-intermediate university student—the physics specialist in the early stages of the honours course, and the non-specialist whose study of optics is subsidiary to that of some other branch of science. For the physics student, as it is essentially a shortened version of the author's "Treatise on Light", it should be a useful introduction to advanced work; although in some places, notably in the chapter on the electromagnetic theory, the attempt to simplify by mere abridgement seems to have operated the other way. The range of topics should give readers of the second type a sound and accurate background, but here it must be remembered that the biologist and the engineer, for example, expect to treat a physics book as a work of reference. It is true that the principles are well explained, and that many recent developments are mentioned; but one feels that a fuller descriptive treatment of spectroscopy, photometry, colour, and the eye, would have been welcomed by such readers. The action of prism and grating on a 'light-pulse', and the problems of Talbot's bands, which figured prominently in the intriguing Chapter 21 of the "Treatise" forty years ago but seem less significant to-day, are mentioned rather too briefly for either type of reader to make much of them. In short, this is a comprehensive and authoritative book which students could profitably use under tutorial guidance, but which would be difficult reading on its own.

Also intended for the post-intermediate student, Dr. Curry's book is a detailed and critical examination of the principles of wave-optics. It is written for only one type of reader, whose mental attitude and difficulties have been very carefully considered by the author. This is the good student who has mastered the usual Advanced-level work on interference and diffraction (with its deceptive appearance of completeness), and is rather appalled when he finds in his honours course that the real depth of the subject is so much greater than the apparent depth as he knew it. This book bridges the gap between the two stages, and does so excellently. The diagrams are good, and except in the sections on the wave theory of aberrations and on the Fresnel integrals, the mathematical work is relatively simple, or is so well explained that it seems so. University teachers often complain that their students arrive with a store of factual knowledge, but with the ability to think as a physicist quite undeveloped; and the reviewer always replies that the schoolmaster does his best, but that this development can only be expected at the university. Dr. Curry would surely concur. Needless to say, this is a book that should be made available to sixth-form boys at school in their last year, so that the proper outlook can begin to penetrate; and, as the author has assessed the needs of the younger university student accurately, and met them uncompromisingly, it should prove very valuable for its intended purpose.

G. R. Noakes

THE THEORY OF ELECTRICAL NETWORKS

The Theory of Networks in Electrical Communication and Other Fields

By F. E. Rogers. Pp. 560. (London: Macdonald and Co. (Publishers), Ltd., 1957.) 65s. net.

FOR some time now university electrical engineering departments have been aware of the dangers of dichotomy between heavy- and light-current engineering, the fundamentals of which are essentially the same. The author of this book on networks is fully aware of the problem, and he has set himself the task of treating the subject from a fundamental viewpoint applicable to heavy-current as well as light-current engineering. Though there is a reference in the second chapter to the Heaviside transient solution, the book is essentially concerned with the sinusoidal approach. The general theory of circulating currents and the solution of mesh equations (Chapter 3) is followed by a statement and explanation of the four important network theorems (Chapter 4) and a discussion of ladder, T and π structures in Chapter 5. The next section, on equivalent networks, is of considerable interest to power engineering students, who will be disappointed that it is not illustrated by examples drawn from complicated power distribution networks. The same opportunity is lost in Chapter 8 on transmission along uniform lines and cables. The value of Foster's reactance theorem is well illustrated under two-terminal networks. The last four chapters on four-terminal networks, insertion loss, filters and measurements are mainly of interest to the light-current engineer.

There are a number of American and English books on networks, and comparison with these is inevitable. In this respect the author is not helped by his publishers, whose ideas of presentation are old-fashioned. The diagrams look amateurish, the lettering often being far too big, and many of the diagrams insufficiently reduced and sometimes not placed in the best position. Typical examples of these faults are found on pages 36 and 236. The author is not entirely blameless for he is not consistent in the captions of the figures, and on page 281 this inconsistency accompanied by a footnote causes confusion; the value of heavy type to denote the so-called vector quantities of current and voltage is doubtful, adding to the cost of production and making a page look untidy.

So far as the material and the manner of using it is concerned, the author has produced a useful contribution to the teaching of fundamental network theory, and the many worked-out examples taken from internal and external examination papers of the University of London will commend it to teachers and undergraduates alike. To get full value from the book the undergraduate needs an understanding of Heaviside's operational calculus, complex quantities, determinants and Fourier analysis; a selected list of references at the end of each chapter contains the names of books which will help the student in furthering his knowledge of the subject.

K. R. Sturley

ADVANCED ORGANIC CHEMISTRY

Organic Chemistry

By Dr. I. L. Finar. Vol. 2: Stereochemistry and the Chemistry of Natural Products. Pp. xi+733. (London and New York: Longmans, Green and Co., Ltd., 1956.) 40s. net.

THIS text-book is written primarily for students who are reading for Part II of a special honours degree in chemistry. It is divided into two main sections; the first part, 177 pages, is concerned with stereochemistry, and the rest, 571 pages, is devoted to the chemistry of the more important types of natural products.

The discussion of stereochemistry is not up to the high standard of the rest of the book. It begins with a chapter devoted to the relationship between physical properties and chemical constitution, but some of the statements in this chapter are not well based. For example, in the section dealing with ultra-violet spectra (p. 16), it is stated that "By this means the main structural features (if not all) may be obtained, and thereby lead to a structure being assigned to a compound under investigation. Thus having obtained a tentative structure, the final proof is obtained by synthesis". This is, of course, quite incorrect and is certainly not good advice for chemists during the final year of their undergraduate training.

There are other chapters dealing with optical isomerism, Walden inversion, geometrical isomerism, the stereochemistry of diphenyl compounds, and the stereochemistry of elements other than carbon. The definitions given (p. 23) for stereoisomerism, optical isomerism and geometrical isomerism are not satisfactory; in fact, absolutely identical descriptions of optical and geometrical isomerism are given. The section dealing with the resolution of racemates is very interesting, but it is unfortunate that a detailed description of current views on the mechanism of substitution reactions is hidden in the chapter "Walden Inversion". This book certainly suffers from the lack of a chapter on the electronic mechanism of organic reactions, and when mechanisms are illustrated the symbolism which is used (for example p. 158) does not agree with that now generally accepted. The author has included terms such as centro-asymmetric (p. 40), auto-racemization (p. 47), asymmetric decomposition (p. 54), and stereomutation (p. 105) which are not generally used.

In the first four chapters it is unfortunate that there are many cases where the numbers referring to diagrams do not match those given in the text. For example, on p. 27, Fig. 6 in the text refers to a diagram labelled Fig. 2.6.

The most important recent development in stereochemistry is conformational analysis and one would certainly expect a discussion of this topic in a general text-book having a long section dealing with stereochemistry. The treatment is unfortunately much too brief, and the terms axial and equatorial are now used rather than the alternatives mentioned (p. 113). Presumably this omission is due to the delay which occurs between the writing and printing of text-books; this also probably accounts for the incorrect statement (p. 220) that sucrose has not yet been synthesized chemically.

The second section, which deals with natural products, is excellent and is certainly one of the best accounts of the subject which has been written at this level. It consists of thirteen chapters which are devoted to carbohydrates, terpenoids, steroids, amino-acids and proteins, alkaloids, anthocyanins, purines and nucleic acids, vitamins, antibiotics and chemotherapeutic agents, hæmoglobin and chlorophyll. Sections dealing with aromatic hydrocarbons, certain heterocyclics, and phthalocyanines are also included.

The treatment of the proof of structure of natural products by degradation and by synthesis is excellent and would certainly excite the interest of the reader in this type of work.

The presentation used in this text-book is very good. The formulæ are well drawn and the index is very comprehensive; the error in the formula of quininic acid (p. 558) should be corrected in future editions. At its price, this second volume of Finar's "Organic Chemistry" is excellent value. W. D. Ollis

HUMANITY AND SCIENCE

What Man May Be

The Human Side of Science. By George Russell Harrison. Pp. iv+262. (London: Cassell and Co., Ltd., 1957.) 18s. net.

It has been estimated that each year sees the discovery of at least one million new scientific facts. Very few of us who are scientists have the capacity to digest more than a minute fraction of this feast, and to see the pattern to which it contributes. Yet we are vastly better off than the non-scientists, whose main contact with science is "through its slums, the half-world of such things as flying saucers and water dowsing". It is for the benefit of both the professional and the non-professional that Prof. G. H. Harrison, dean of the School of Science at the Massachusetts Institute of Technology, has written this book, "What Man May Be".

In at least one respect it is an astonishing book. For there seems scarcely any corner of the vast field of science about which Prof. Harrison is not able to write, simply and interestingly. Beginning with a chapter on what is meant by man's growing control of matter, he goes on through a survey of the human need for energy to the biology of living things, including man. Then he considers how life could first begin and afterwards become increasingly complex; he discusses the 'sharpening of the senses' by our inventions which can do for us things that we could not do by ourselves; this leads to a discussion of the control of information; and thus to an account of what is meant by human personality. The book concludes with a chapter on the age-old conflict between science and religion, and a glimpse into the possibilities for human life in centuries to come.

It is obviously a breath-taking tour of human knowledge, yet the writer bustles us along with an exuberant confidence that seems scarcely to have heard the word 'doubt'. Perhaps the confidence is a little too assured, as when we are told that carbon atoms "have an outer structure consisting of four electrons at the points of a pyramid"; but the number of these false statements is remarkably small for a book that covers so immense a variety of topics. It would indeed be hard to imagine anyone who would not continually find himself arrested, as he read this book, by some chance remark thrown off to illustrate a particular scientific influence. I made a note of two or three dozen such myself, varying from the fact that since he now needs to do less physical work than his father, the average American eats just one-half as much starch as in 1900, to the fact that the troublesome head noises which some people hear continually in their ears are probably the result of Brownian motion, so sensitive is the mechanism of hearing.

It would be impossible to write a book of this kind without raising certain fundamental questions. Prof. Harrison is aware of this, and tries, as dispassionately as possible, to deal with them. But I wonder whether he recognizes quite fully how far his own mode of description commits him to a kind of vitalist position. We find "Mother Nature" all over these pages; and such sentences as, "in the midst of this degeneration appears the directing force called life". Even genes "gradually learn the advantages of co-operation", and "Nature spends eons of time tinkering with her devices before she brings them to perfection". This is a fair enough way of talking if we know why we are doing it. But it can be dangerous; and when it leads the author to suggest that "there is evidence of servo-mechanisms in the soul", we may feel that something is somehow missing in the whole account. The chapter on religion makes clear that this missing element is a sense of the tragic in all life. "Physical pain is a form of evil"; it can be cured by more knowledge: "science furnishes us with one of the best means that men have discovered for discriminating between good and evil". It is so obviously partly true, but yet one cannot help feeling that one dimension in human experience had got left out in the telling.

This is an excellent book to give to almost anyone who wants to understand the way that science has changed both the things we do, and the way we think. There is not a dull moment in its reading, and probably most of those who do read it will catch something of the infectious optimism that underlies each page. Onward and upward in the best of all possible worlds. C. A. Coulson

INTERPRETATION OF SCIENCE TO THE PUBLIC

FUTURE ACTIVITIES OF THE BRITISH ASSOCIATION

THAT the British Association for the Advancement of Science is now seeking new ways of fulfilling its original functions is in keeping with its long tradition and a measure of the influence which it has exerted on scientific thought and public opinion during its 126 years of life. The announcement, made at the 119th annual meeting in Dublin in September 1957, that its activities would in future be continuous throughout the year has, therefore, been the subject of much favourable comment. The Council of the Association has adopted this policy because it is convinced that the more intensive development of scientific resource and talent can only be ensured by increased public understanding of the issues involved. To create this understanding it is essential to communicate authoritatively, objectively and continuously the significance of scientific discovery and its impact on society. It is essential, too, that such communication should be carried out much more intensively in the future than in the past, for the rate of scientific advance has accelerated enormously. Modern science is the greatest force for good or ill in the world to-day. Man has released vast forces of Nature which he is still struggling to control. An understanding of these forces and of the possibility of using them to improve the well-being of mankind is necessary for every citizen, both young and old, who wishes to grasp the essential facts of the contemporary scene.

The Council of the Association does not wish to give the impression that, in any way, it under-rates the important work now being done in this field by many agencies. The activities of the extra-mural departments of the universities, the Royal Institution, the Workers' Educational Association, the schools, local societies and many other organizations—to say nothing of the Press and the broadcasting and television authorities—are of vital importance. The intention of the Association is to help to fill such gaps as exist, to co-operate with other organizations where such co-operation is desired, and to help in the co-ordination, on a national basis, of this urgent task of presenting and disseminating facts about science to the public at large.

Summary of Proposals

(1) *The Annual Meeting.*—This must continue to be the most important single activity of the Association. The objectives of the annual meeting have been recently re-stated, and the main functions of the Association—namely, discussion, integration and dissemination—have been given a fresh emphasis.

The Council has adopted proposals which should make these great meetings even more effective in the future. They include the setting up of a Programme Advisory Committee charged with the duty of ensuring that there is in the programme a proper balance between specialized items, integrating items and popular exposition. The Section Committees are co-operating fully in making these proposals effective, as was evident from the coherent and well-correlated programme of the Dublin meeting, at which special attention was paid to some of the growing-points of science and to topics of broad public interest. The marked success of this year's meeting is proof—if proof were needed—of the importance of the Association's work in this field. A science correspondent, writing from Dublin, summed it up thus: "It is one of the more useful functions of the British Association that it makes visible not only the leaves and branches of the scientific tree of knowledge, but also some of its roots. And it is abundantly clear that the scientific revolution is only beginning". It is also the intention of the annual meetings to provide more frequently a platform on which industrialists and administrators can join scientists in discussions on the social and political consequences of science, because it is clear that modes of thought other than the scientific must contribute to the solution of situations arising out of scientific discovery.

(2) *Inter-Meeting Activities.*—(*a*) The Association proposes to organize throughout the year, in suitable centres and particularly in places outside the immediate range of the universities and colleges, special lectures, exhibitions, discussions and 'brains trusts'. It is hoped, in this way, to reach audiences representative of diverse local groups such as women's societies, scientific societies and trade unions, as well as young people.

(*b*) The organization of a 'Junior B.A. Meeting', with special lectures, demonstrations and exhibitions, designed to stimulate the imagination of young people and to stress the adventure of scientific discovery.

(*c*) The publication of suitable pamphlets and special reports.

(*d*) The organization of conferences on scientific subjects or on subjects arising from the application of science, which are of immediate national or public importance, whenever it is apparent that authoritative and objective comment is necessary.

(*e*) The appointment of study groups to investigate and report upon specific problems.

(*f*) Liaison with the Press, Radio and Television Services to provide more coverage for science throughout the year.

Organization

In order to implement these proposals effectively, it will be necessary to consult and co-operate fully with other organizations concerned directly or indirectly with the exposition of scientific achievement and adaptation. The Council has therefore decided to set up area committees throughout the United Kingdom, which will be composed of members of the Association drawn from as many fields of science as possible and of representatives of other national and local organizations. The functions of these committees will be to advise and consult with the Council of the Association on one hand and local bodies on the other, on the desirability and feasibility of arranging meetings and other activities to present science suitably to various groups in the area; to undertake the arrangements and publicity for such activities through local organizations, and to provide local speakers for certain activities in the area. The Association's Assembly of Corresponding Societies, to which are affiliated some 170 local scientific societies, will—it is expected—be able to contribute to the successful running of these committees. It is hoped to appoint several of these area committees during the first half of 1958. This proposal has been welcomed by several of the large national organizations during preliminary informal discussions, and it is expected that their branches will co-operate fully when the area committees come into being.

The Association is already in close contact with the younger generation through its annual meetings, but it believes that there is much more which it can do to engage the interest of young people in science and scientific careers.

The successful presentation of science, particularly to young people, will depend *inter alia* on the use of good visual material, and the Association seeks the co-operation of industrial and other organizations in arranging exhibitions and illustrating special lectures. Meanwhile, a start is being made by staging, in collaboration with the Director of Education and the schools in the Glasgow area, a special programme for young people at the annual meeting which will be held there during August 27–September 3, under the presidency of Sir Alexander Fleck. The programme will include twelve special lecture demonstrations by distinguished scientists, a science exhibition organized by the schools in the area, a special exhibition arranged by the Association, an open forum with a panel of scientists and a selection of scientific films. It is proposed to hold a Junior British Association meeting in 1959, independently of the annual meeting, organized on the basis of the experience gained in planning the Glasgow programme.

Quite apart from major annual events of this sort, it is planned also to organize a series of special lectures for young people in the schools. The first of these will be given under the auspices of the Association in Ipswich in February 1958, when Prof. J. Rotblat will speak to two audiences totalling more than nine hundred schoolchildren from schools in East Suffolk. These lectures are being organized with the co-operation of the Chief Education Officer and his colleagues in the schools of that area.

The effect which the Association is able to give to its plans in the future will depend in no small measure both on securing the co-operation of scientists who are prepared to lecture to non-specialist audiences and to take part in discussion groups, and on the degree to which it is able to secure support for its primary conviction that the ability to communicate the results and significance of scientific work is of major importance in the world to-day. A panel of speakers is now being compiled, and the ready response is an augury of the success of these activities. The possibility of creating a number of special lectureships to encourage younger scientists to participate in this kind of exposition is also being explored.

It is only possible to report briefly, at this stage, on the many other arrangements that are being made. A conference on "Science in Schools", with particular reference to the urgent problems of the supply of science teachers and the provision of adequate laboratory accommodation and equipment, is now being organized and will be held in London during the coming Easter holidays.

A committee under the chairmanship of Sir Hugh Beaver has been appointed by the Council to investigate and report upon the practicability, implications, consequences both international and domestic, and the cost of a change-over to the metric system by the United Kingdom.

Discussions are now being held with the Atomic Scientists Association about the possibility of the British Association assuming responsibility for bringing before the public of Great Britain the facts about atomic energy and their implications.

Preliminary discussions have already been held with representatives of the British Broadcasting Corporation on science programmes in the radio and television services, and these will soon be resumed.

Development in the past has been hampered by lack of funds, and to carry out the present plans a substantial addition to the Association's present income will be required. As a result of approaches to a small number of leading industrialists in 1957, a significant addition to income has already been obtained. A sum of more than £40,000, mostly on seven-year covenants, has been received, giving an additional £8,000 income for the present year. It is now proposed to extend the appeal, and it is hoped that the response will be sufficient to enable the Association to implement fully its plans. In the first place, it will be necessary to augment the present small staff of the central office and to procure immediately adequate office accommodation. A start, however, has already been made possible as a result of the generosity of the above-mentioned firms.

These are the beginnings. Given more financial support, the establishment of area committees, co-operation from the many organizations concerned with, or affected by, the impact of science on society, and the co-operation of scientists and the schools, there is little doubt that the present plans can be effectively carried out. It is believed that, in these ways, the British Association will be enabled to make a substantial contribution to bringing about that better understanding of the significance of science which is so urgently needed to-day—and so add to its already historic reputation in this field.

SCIENTIFIC CENTENARIES OF 1958

By JOAN M. EYLES

TO pursue the study of both medicine and mathematics would be very unusual, if not impossible, to-day, but this combination of subjects was not uncommon in the sixteenth century. Mathematics led to astronomy, a subject at that time closely linked with astrology, and the supposed advantages of a knowledge of astrology in maintaining good health were generally recognized.

Two well-known men who died in 1558 were both physicians with considerable aptitude in mathematics. Jean Fernel, born in 1497, studied in Paris for several years and then found himself equally attracted by mathematics and medicine. He qualified to practise medicine in 1530, but could not resist the lure of astronomy. It is said that he made use of his wife's dowry to pay for the construction of instruments which he had designed, and this led to a domestic crisis, in which mathematics lost and Fernel agreed to devote himself to medicine. Although his first published book was a mathematical one, it is by his medical works that he has been remembered. He wrote an early account of syphilis, and his books on "Physiologia" and "Pathologia" marked the first introduction of these terms to medicine. He died of a fever in 1558, keeping to the last an accurate record of his symptoms.

Another physician who loved mathematics was the Welshman Robert Recorde, born at Tenby about 1510. His early studies were pursued at Oxford, and in 1531 he became a Fellow of All Souls. At that time his interests appear to have been confined to mathematics, and in 1540 he brought out the first arithmetic to be written in the English language, the "Grounde of Artes", of which many editions appeared during the next 150 years. Recorde then moved to Cambridge to study medicine, graduating M.D. in 1545. He practised as a physician, and is said to have been physician to Edward VI; but unlike Fernel, he did not give up mathematics. He published further books in English on geometry, astronomy and algebra. In his last work, the "Whetstone of Witte", he introduced the sign = for equality, although it did not become universally used until long afterwards. Recorde was one of the first English writers to adopt the Copernican system. His studies seem to have brought him very little worldly profit, for he died while imprisoned for debt in the King's Bench prison, in 1558. His friend John Robins, another Fellow of All Souls, died a month or so later. Although Robins had chosen the Church as a profession, and was made a canon of Christ Church, and later of Windsor, his bent, too, was towards mathematics and astrology, in which, it was said, "he became the ablest person of his time, not excepting his friend Recorde, whose learning was more general". Robins was buried in St. George's Chapel, Windsor.

The year of birth of yet another mathematician, Edward Wright, seems a little uncertain, but is generally taken to have been 1558. Born in Norfolk and educated at Caius College, Cambridge, he applied his mathematical knowledge to navigation, and his ensuing publication, "Certaine Errors in Navigation detected and corrected" (1599), can be said to have revolutionized this science. Wright was for a time mathematical tutor to Henry, Prince of Wales, son of James I, and also gave lectures in mathematics for the East India Company. He died in London in 1615.

When Thomas Brattle, a young American born in Boston in 1658, first went to Harvard, he found he had to teach himself mathematics; but this did not deter him. He watched the comet of 1680 through the Harvard telescope and sent his observations to Flamsteed, the Astronomer Royal, and they were afterwards used by Newton in his "Principia". Brattle also contributed astronomical observations to the *Philosophical Transactions of the Royal Society*. He became a wealthy merchant and made many gifts to Harvard.

The interests of Count Luigi Ferdinando Marsigli (1658–1730) lay in quite a different field. Born in Bologna and by profession a soldier, he spent some years in Turkey, and later fought against the Turks, but was captured and sold to a pasha. Later he was released, but leaving the army he turned to the study of natural history, particularly that of the sea, and he became a pioneer in oceanography. His classic work, entitled "Breve Ristretto del Saggio Fisico intorno alla Storia del Mare", was published in 1711. In 1712 he presented his collections to Bologna, and they formed the nucleus of the Bologna Institute of Science and Arts.

Before passing on to those who died in 1758, we may note that in the present year falls the two hundred and fiftieth anniversary of the death of Edward Tyson and the birth of Albrecht von Haller (1708–77), both well known in their own fields, Haller as a physiologist and Tyson as an anatomist.

Important events in the first half of the eighteenth century were the French scientific expeditions to determine the length of a degree of longitude near the equator and in the north of Sweden. The equatorial party, led by De la Condamine, included Pierre Bouguer (1698–1758), and the measurements made in Peru were published by him in "La Figure de la Terre déterminée" in 1749. At the same time he made the first comparison between the mass of the earth and that of a mountain, Chimborazo in the Andes, and his name is perpetuated by geophysicists in the term 'Bouguer anomaly'. Bouguer made several other contributions to physics, for he invented a photometer in 1729, and later a heliometer, and measured the intensity of the light of the Sun compared to that of the Moon.

One of the party of Frenchmen accompanying De la Condamine and Bouguer was the botanist Joseph de Jussieu. The name De Jussieu is familiar in botanical literature, and an elder brother, Antoine (1686–1758), was professor at the Jardin des Plantes in Paris. Antoine travelled in Spain and Portugal but published little of importance, and his nephew Antoine Laurent de Jussieu is better known.

The year 1758, in which the skies were being eagerly watched for the predicted return of Halley's comet, was also that of the birth of the German astronomer H. W. M. Olbers (died 1840), who evolved a new and accurate method of determining the orbit of a comet. In 1781 he took up residence as a physician in Bremen, but spent many nights at his telescope. He discovered the asteroids Pallas and Vesta, and suggested that their origin was due to the explosion of a primordial planet. In 1815 he observed a comet which became known as Olber's Comet, and which re-appeared in 1887.

Although the study of astrology passed out of favour with medical men as the knowledge of medicine and astronomy increased, there was a period when phrenology seemed almost as popular. The old plaster casts of heads on which phrenological charts are delineated may be the last relics of this period. The founder of this now discredited science was Franz Joseph Gall (1758–1828), born at Tiefenbronn, Baden. Gall was a noted physiologist, and made a special study of the brain, publishing his researches in "Anatomie et Physiologie du Système Nerveux en Général" (1810–19). He compared the shape of the brain and skull with the development of the faculties in men and animals. His lectures on phrenology given in Vienna were extremely popular until in 1802 they were forbidden as dangerous to religion. From 1807, until his death, he resided in Paris.

To occupy a chair of botany for thirty-six years and in this period to give only one lecture (said to be "unsuccessful") may well be a record. The botanist was Humphrey Sibthorp, and the chair was the Sherardian one at Oxford. Humphrey resigned his chair to his son John Sibthorp in 1783, and it is the anniversary of John's birth in 1758 which falls this year. The younger man, who had studied medicine at Edinburgh, was an ardent plant collector. Between 1786 and 1795 he travelled in Greece, Cyprus and Crete in search of plants, but unfortunately caught a cold which led to consumption and he died at the age of thirty-seven. He was buried in Bath Abbey; his collections and books were bequeathed to the University of Oxford, and his name is perpetuated in the Sibthorpian chair of rural economy which he endowed.

Sibthorp was accompanied on one of his botanical journeys by Ferdinand Bauer, the elder of two brothers, Austrian by birth, who were well-known botanical draughtsmen. Both the brothers were protégés of Sir Joseph Banks, the arch-pàtron of young naturalists. Franz Bauer (1758–1840) retains a place in the history of biology for having in 1823 made a drawing of blood corpuscles in which the 'nucleus' was indicated, which seems to be the first use of the word in this connexion. Ferdinand is better known for having accompanied the Scottish botanist Robert Brown (1773–1858) on the voyage of the *Investigator* under Captain Flinders, to explore the coasts of Australia and Tasmania. Brown and Bauer together collected nearly 4,000 species of plants, many new to science, and returned to Britain in 1805. Brown was appointed librarian to the Linnean Society, and later became librarian to Banks and curator of his collections. After Banks's death, the botanical collections were deposited in the British Museum and Brown was appointed keeper. For his many valuable contributions to botany he was awarded a Copley Medal in 1839 by the Royal Society, of which he had been elected a Fellow in 1811. His name will always be associated with the 'Brownian movement', which he was the first to observe. His death took place in London, on June 10, 1858, only ten days before that of his close friend Dawson Turner (born 1775), a wealthy antiquary and amateur botanist, the author of a "Natural History of Fuci" (1808–19). Turner's elder daughter Maria married Sir William Jackson Hooker, and thereby many of his collections are preserved at Kew, though his rich library was sold at auction. The genus *Dawsonia* was named by Brown in honour of his friend.

Two other botanists who died in 1858 were C. G. Nees von Esenbeck (born 1776), and Aimé Bonpland (born 1773). Nees von Esenbeck was professor of botany in Breslau and the author of works on fungi and mosses. For his political activities he was deprived of his chair and spent his remaining years in poverty. Aimé Bonpland, a French naturalist, suffered a rather similar misfortune. As a young man he travelled in Mexico and the Andes with Humboldt. In 1816 he left Paris for South America and was appointed professor of natural history at Buenos Aires, but in 1821, while journeying up the Paraná to collect plants, he was arrested by order of Francia, dictator of Paraguay, and detained for nine years. In spite of these vicissitudes, he lived to be eighty-five.

Passing from botany to chemistry, two chemists who died in 1858 must be mentioned here. Robert Hare (1781–1858) was professor of chemistry in the University of Pennsylvania, and noted for his inventive genius. When only twenty he demonstrated to the Chemical Society of Philadelphia an oxyhydrogen blow-pipe, with which he was able to fuse platinum—a considerable achievement at that time. Later he received the Rumford Medal of the American Academy of Arts and Sciences.

The Swedish chemist Carl Gustav Mosander (1797–1858) was affectionately known as 'Father Moses' by his friends, including Berzelius, to whom he was assistant. He was also curator of the mineral collections at the Stockholm Academy of Sciences, and carried out long and patient work in the identification of rare earths. He showed first that the earth ceria contained another oxide which he named lanthana, and afterwards discovered that with lanthana there occurred yet another oxide which he named didymia. Later he investigated yttria and found in it two new oxides which he named erbia and terbia, taking these names from Ytterby, the small Swedish town where these rare earth minerals were first discovered. Many years later, Carl Auer, Baron von Welsbach, born in the same year that Mosander died, investigated didymia and discovered that it contained two different elements, which he named neodymium and praesodymium respectively. Von Welsbach is perhaps known better for the incandescent gas mantle which he invented.

The great German physiologist Johannes Müller (1801–58) is renowned both for his researches and for his teaching. He attracted many gifted pupils to his classes, including Virchow, Schwann and Bois-Reymond. Müller's name is particularly associated with the principle of specific nerve energies, but he also carried out important researches in embryology. In later life he studied the ocean fauna, especially plankton.

While modern weather forecasting has done much towards predicting the course of hurricanes, and to prevent by adequate warning some of their damaging effects, little was known about them when William Reid (1791–1858), a Scottish military engineer, was sent to the West Indies in 1831. The information he collected about the paths of hurricanes was published in 1838 as "An Attempt to develop the Law of Storms by means of Facts". This work went through many editions, and numerous translations were made, including one into Chinese. Reid was appointed governor of the Bermuda Islands in 1839, and did much to improve education and agriculture there. Afterwards he was appointed governor of Barbados, and in 1851 of Malta; in both islands he continued his policy of improvement. He was made a vice-president of the Royal Society in 1849, and was knighted two years later.

To be responsible for a major revolution in scientific thought can be the lot of few men, but among them can be numbered Max Planck, the centenary of whose birth on April 23, 1858, is the outstanding one of this year. Born at Kiel, when it was still in Denmark, Planck died at Göttingen in 1947, after passing fifty years of his life at the University of Berlin. His death occurred within a few months of his ninetieth birthday. His law of radiation, which stated that the energy of radiation is emitted and absorbed in integral multiples of certain indivisible 'quanta' of energy, received abundant confirmation in the first decade of this century, and explained many anomalies. He was awarded the Nobel Prize for Physics in 1918, and was elected a foreign member of the Royal Society in 1926.

A mathematician whose early brilliance gained him an international reputation was A. R. Forsyth, born at Glasgow in 1858, who held the Sadleirian chair of pure mathematics at Cambridge and later the principal chair of mathematics at the Imperial College of Science and Technology, London. He was elected a Fellow of the Royal Society at the early age of twenty-seven. Forsyth wrote exhaustively on the subject of differential equations, and developed a theory of invariants. He was also active in introducing to British mathematicians the new developments in pure mathematics which had been made on the Continent towards the end of the nineteenth century. Another mathematician whose work might be reviewed this year was the Italian, Giuseppe Peano (1858–1932), one of the early workers on the logistic development of mathematics, who was also interested in the possibility of a universal language.

Passing from mathematics to astronomy, we come to the American astronomer W. H. Pickering. Born at Boston in 1858, he led several Harvard expeditions to observe total solar eclipses. In 1891 he established the Harvard observatory at Arequipa, Peru, and in 1900 he erected a station for Harvard at Mandeville, Jamaica. This he afterwards took over as a private observatory. Pickering discovered Phoebe, ninth satellite of Saturn, in 1899. He did notable work in planetary photography and published a lunar atlas based on observations made at Mandeville. He did not agree with the view that the Moon was without life and published a paper on seasonal changes occurring in lunar craters. He visited craters in Hawaii and the Azores in order to compare them with those of the Moon. Pickering died at Mandeville in 1938.

Two young graduates who left Britain for Australia towards the end of the nineteenth century rose to the front rank of Commonwealth scientists. One was the geologist Sir T. G. Edgeworth David, born at St. Fagans near Cardiff in 1858, who was appointed as a geological surveyor in New South Wales in 1882. Nine years later he became professor of geology in the University of Sydney. He accompanied the Shackleton Antarctic Expedition of 1907–9 and led the party that reached the south magnetic pole. In the First World War he joined the Australian Tunnellers, and in 1918 was appointed chief geological adviser to the British armies. On his return to Sydney he devoted himself to the preparation of a "Geology of the Commonwealth of Australia". He died in 1934, before it was published. The Australian National Research Council was initiated by the joint efforts of Sir Edgeworth David and his fellow scientist Sir David Orme Masson. The latter, born in London in 1858, graduated in both arts and science at Edinburgh, and became lecturer in chemistry at Bristol under Ramsay. In 1886 he was appointed professor of chemistry in the University of Melbourne. His interests lay in the realm of physical chemistry, but administration made increasing demands on his time. As president of the Australian Association for the Advancement of Science he took a leading part in organizing the visit of the British Association in 1914. Masson died in 1937.

The Dutch physiologist Christiaan Eijkmann, who was awarded a Nobel Prize jointly with Sir F. Gowland Hopkins in 1929, was born at Nyerk on August 11, 1858. His work on dietary deficiencies began with a study of beriberi in Batavia, where he was director of the pathological laboratory. By producing food-deficiency disease in fowls and then curing it by feeding the birds with rice-polishings, he greatly stimulated the development of vitamin research. Eijkmann died at Utrecht in 1930.

Sir Jagadis Chandra Bose (1858–1937) was the first Indian of modern times to achieve distinction through scientific work. Educated at Calcutta and Christ's College, Cambridge, he became professor of physics in Presidency College, Calcutta, in 1884, but is better known as the founder and director of the Bose Research Institute at Calcutta. His work in the field of the physics of plant physiology aroused considerable controversy. He was elected a Fellow of the Royal Society in 1920.

Among other scientists born in 1858 may be mentioned Albrecht Penck, German geologist and geographer, noted for his studies of the Ice Age; E. M. Crookshank, who founded in King's College, London, the first bacteriological laboratory to be established in Britain; and the zoologists F. E. Beddard and G. A. Boulenger.

In the field of applied science, metallurgists can celebrate this year the centenary of the birth of Sir Robert Hadfield, the discoverer of manganese steel; and the contemporary vogue for diesel engines in Britain is a reminder that the first successful diesel engine was built in 1897 by Rudolf Diesel (born 1858). The following year he sold the patents and exclusive manufacturing rights in the United States and Canada to Adolphus Busch of St. Louis for a million gold marks. Diesel died mysteriously in 1913, vanishing overboard from the Harwich mail steamer on his way to consult with the British Admiralty.

Other centenaries of the year include those of the founding of several scientific societies, including the Geologists' Association and the British Ornithologists' Union, and the publication of that landmark in the theory of evolution, the famous Darwin–Wallace essay. The latter will be commemorated at the International Zoological Congress in London in July.

THE TECHNOLOGICAL UNIVERSITY OF EINDHOVEN

By PROF. H. B. DORGELO
Rector Magnificus

ON September 19, the Technological University of Eindhoven, brought into being as a result of an Act of Parliament of June 6, 1956, concerning higher technical education in the Netherlands, was officially opened by H.M. Queen Juliana, in the presence of H.R.H. Prince Bernhard, the Prime Minister, Dr. W. Drees, the Minister of Education, Mr. J. M. L. Th. Cals, other Ministers, the Board of the University, under the chairmanship of Prof. J. E. de Quay, Governor of the Province of Noord-Brabant, the Rectores-Magnifici of all the universities in the Netherlands, and many other distinguished guests.

Preparatory committees under the chairmanship of Prof. G. Holst, who has been a pioneer of applied scientific research in the Netherlands, stressed the need for more qualified engineers, thoroughly grounded in scientific technique, in connexion with the industrialization of the country which is in progress. The Government therefore decided to

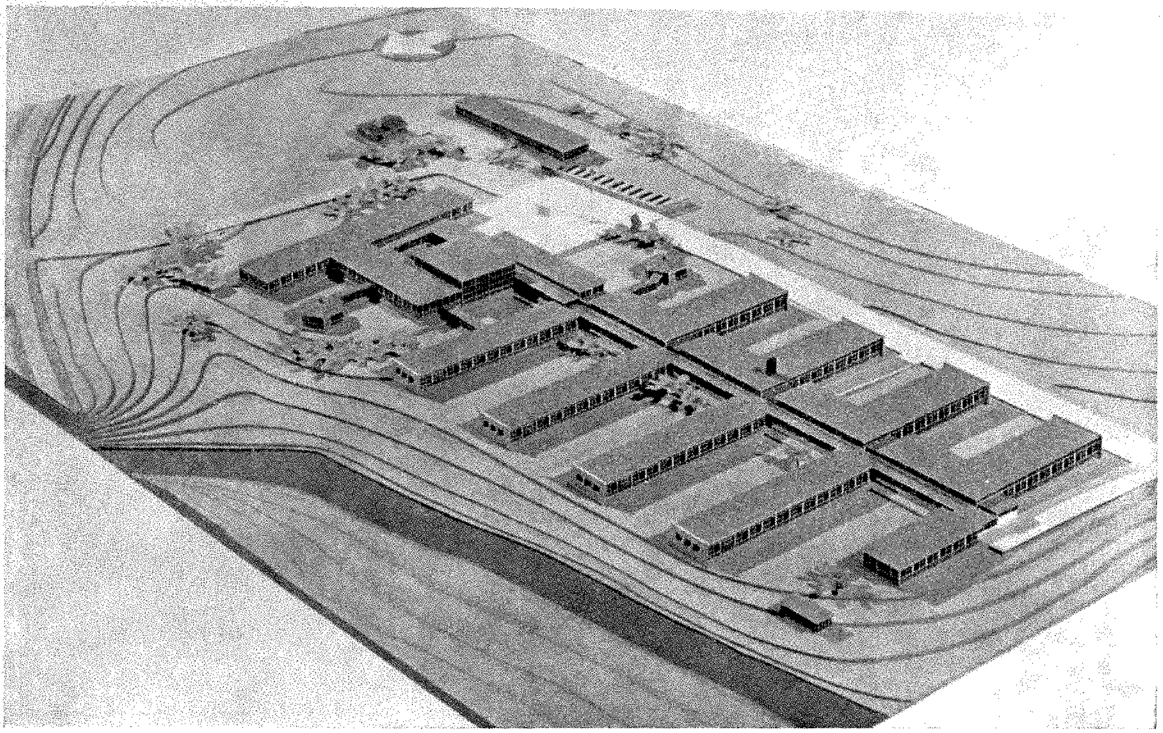

Fig. 1. Model of the provisional buildings

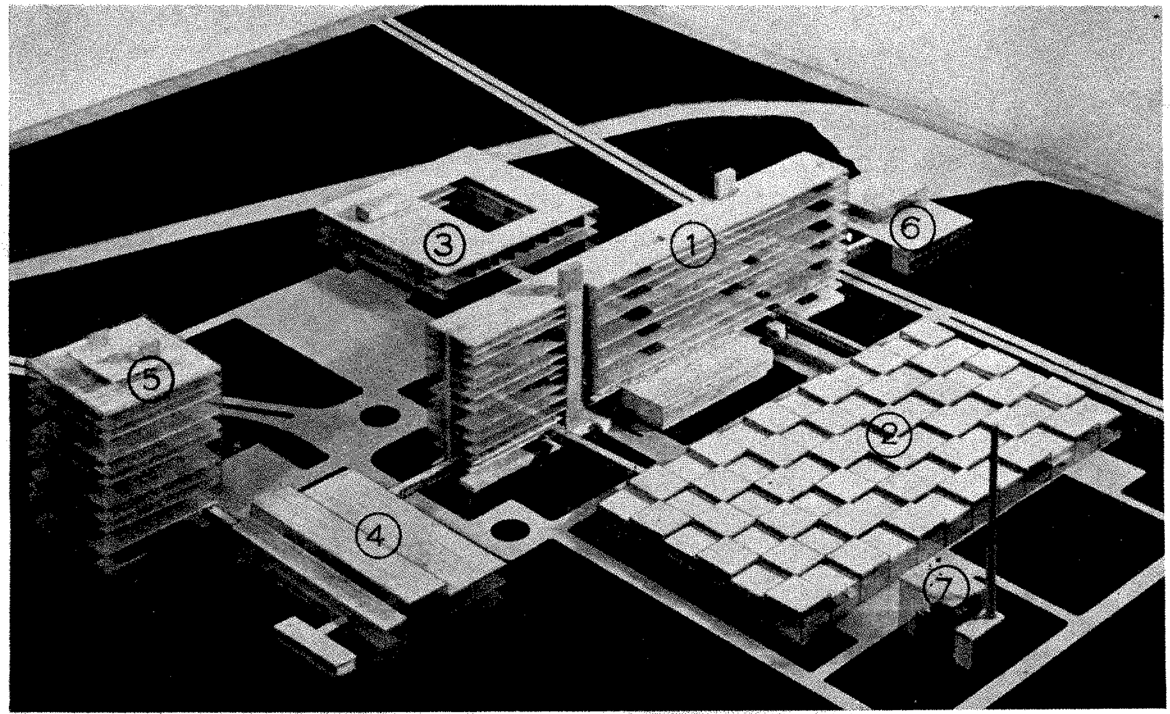
build a new technological university in the southern part of the country, in the hope of making available a new source of technical students. The Act, which made the founding of the new technological university possible, was then prepared by a committee under the chairmanship of Mr. H. L. s'Jacob, Counsellor of the Minister of Education.

Eindhoven, a dynamically developing town, was chosen as the place for the new technological university. The town council generously presented a well-situated site of about 100 acres for the university.

One very important question was thoroughly discussed, namely, whether the new institute should



Copyright Fig 2. Model of the permanent buildings *Martien Coppens, Hoogstraat 312, Eindhoven*

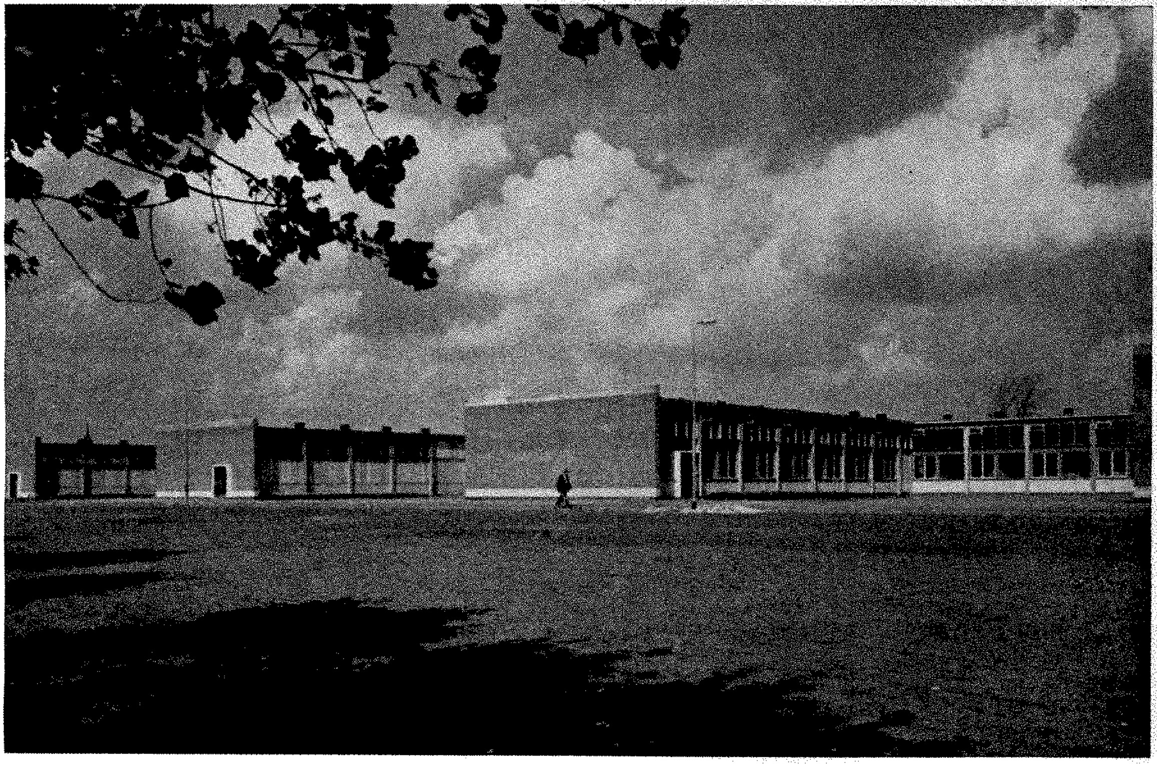


Fig. 3. A part of the building of which the model is shown in Fig. 1

prepare engineers of the same scientific standard as those trained by the Technical University of Delft, or whether the new institute should be something between the existing secondary technical institutes in the Netherlands and that at Delft. Fortunately, the decision was taken that the standard of the Eindhoven Technological University should be the same as that of the Technical University of Delft, but with a different approach to the same goal. A new technological university gives an opportunity, free from traditional bonds, for seeking and finding new ways in scientific, technical and humanistic training, to suit the demands of the technical and ideological age in which the future engineers will have to live and work.

The Technological University of Eindhoven is in the first instance set up with the aim of training three categories of engineers, namely, mechanical, electrotechnical and chemical engineers. It has for that purpose four departments: (*a*) Department of General Sciences (mathematics, physics, philosophy, sociology, economics, etc.). Chairman: Prof. C. Zwikker. (*b*) Department of Mechanical Engineering. Chairman: Prof. W. L. H. Schmid. (*c*) Department of Electrotechnical Engineering. Chairman: Prof. J. L. H. Jonker. (*d*) Department of Chemical Technology. Chairman: Prof. W. van Loon. At the moment the Netherlands urgently need more people with scientific technical training in these branches, therefore the University has started by meeting these requirements.

The secretary of the University is Dr. A. H. M. Wijffels; and the secretary of the Senate is Prof. K. Posthumus.

In developing the programme of study for these three categories of engineers mentioned above, the guiding principles have been: (1) to divide the theoretical and practical courses for the students over eight half-years (semesters); (2) to arrange the examinations to take place as follows: (*a*) an examination at the end of the second semester (the propædeutical examination), as a test for suitability for the studies at a technological university; (*b*) one after the fifth semester (the candidate examination), as a test of achievements, specially concerning the fundamental courses; (*c*) one after the eighth semester (the first part of the final examination), as a test of the achievements in technical science; (3) to ensure that the student should prove his ability to solve a given scientific technical problem on his own, and to make a detailed report of it before obtaining his final degree. It is intended that this work should be done in one or two semesters.

The planning of the buildings for the University was based on the expectation that in the near future the number of students would be about one thousand; should it increase to two thousand, which is likely, extension is easily arranged, because the planning of the main buildings has been arranged with that possibility in view.

In order to start with lectures and practical courses for the students by September 1957, a bungalow-type of building of about 9,250 $m.^2$ floor-area was erected (Fig. 1), provisionally giving accommodation for the theoretical and practicalt raining of students in the first and second years. The number of the students who applied for the first-year courses was 236.

The planning for the permanent buildings of the University is in progress, encouraged by Ir. Th. P. Tromp, member of the Governing Board, and co-ordinated by Prof. P. van der Leeden. Fig. 2 is a photograph of the model of the group of buildings planned by the architect, S. J. van Embden. It will include: (*a*) the main block for the Departments of General Sciences, Electrotechnical Engineering and a part of Mechanical Engineering, with the Library in the centre of the ground floor (Fig. 2, 1), (*b*) a block for the Department of Chemical Technology (Fig. 2, 5), (*c*) a building with the main hall, reception and lecture rooms (Fig. 2, 3), (*d*) a large one-story building to house the heavy equipment of the Department of Mechanical Engineering and the central workshop for the whole University (Fig. 2, 2), (*e*) a laboratory for chemical technology (a similar building is planned for physical technology) (Fig. 2, 4), (*f*) a building for the larger equipment for electrotechnics (Fig. 2, 6), (*g*) a boiler-house for the central heating of the whole University (Fig. 2, 7).

The citizens of Eindhoven have helped and supported the new University in many ways. On the initiative of the Burgomaster of Eindhoven, a committee of leading citizens was formed to help the students in getting accommodation, to build hostels for them, to provide a club-house for the general student society (union building), to promote the possibilities for sport and to found a medical centre. This committee laid the basis for the Eindhoven Technological University Students Welfare Foundation, which is very active in providing the initial necessities for students, and is also stimulating the initiative of the 'freshmen' to build up a new sound student communal life.

The interest of industry in the new University was manifested by founding the Eindhoven University Fund to form a link between the industry in the Netherlands and the new University, this being regarded as of great importance to both. The main purpose of the Fund is to support the scientific work in the Technological University and to promote the contact of the scientific staff of the University with the technical scientific world in the Netherlands and abroad.

The friendly relationship between the Technical University of Delft and its newborn sister found expression in a helpful sharing of ideas during the preparative period and in the token gift of a silver chain of office for the Rector Magnificus of the new University.

The Technological University of Eindhoven has begun its task for the future, a very important task with great responsibilities. As H.M. Queen Juliana said in her opening address: "Technology is the modern mill-stone for our daily bread. It is a gift of God. We have to accept this gift with respect and gratitude, we will not over-estimate it in proud presumption nor abuse it by using it where it will not serve a positive purpose".

FLAMES AND INDUSTRY

THE useful application of science to engineering has nowhere proved more difficult than in the sphere of combustion. In recent years, however, some progress has been made through the work of the International Flame Research Foundation. The main activity of the Foundation has been to establish two experimental furnaces at the Royal Dutch Steelworks at Ijmuiden. These are fully instrumented for fundamental studies and are comparable in size with the smaller furnaces used industrially. One furnace consumes gas or oil and the other pulverized fuel.

The principal object of the work is to provide accurate and usable design formulæ for the types of flame employed in industrial furnaces. It is hoped that in the course of such developments some possibilities of improving current practice may be revealed. The investigations are, however, necessarily concerned with the properties of the flames themselves. The principles governing the transfer of heat from the flame to the work are intimately bound up with the nature of the latter, and advances in this respect must be the responsibility of the industries concerned.

The essence of the work of the Foundation lies, however, in its applicability to the needs of industry. For this reason a symposium was held recently in London, at which papers describing the Ijmuiden investigations were laid beside others from industry dealing with consequential developments. The symposium, which was sponsored by the Institute of Fuel, took place on October 9, at the Institution of Civil Engineers. The presentation of the Ijmuiden papers was presided over by Prof. O. A. Saunders; and Dr. D. T. A. Townend was in the chair for the industrial session.

The experimental methods used at Ijmuiden and the progress made in the understanding of flames were reviewed by Prof. M. W. Thring, assisted by Mr. E. H. Hubbard and Mr. A. E. Pengelly. The work has been almost entirely devoted to turbulent jet diffusion flames, in which a high-velocity jet of fuel, carried by compressed air or steam, entrains air for combustion through its own energy.

The furnaces are both in the form of a tunnel some 2 metres square in section and 6 metres long, with the flame directed along the axis. They have been made large compared with the flames to avoid impingement and to minimize other forms of interference by the furnace walls. As a result of this, recirculation of the combustion products is a prominent feature of the flow pattern. The furnaces are provided with vertical slots down each side for flame radiation measurements, and there are generous provisions for the insertion of probes for sampling, temperature measurement and other purposes. For the essential routine operations of measuring waste gas composition and temperature, paramagnetic oxygen analysers and suction pyrometers respectively are preferred. To estimate air leakage into the combustion chamber the fuel and air input must also be known. Combustion air, gaseous and liquid fuels are measured by orifice meters and pulverized fuel by a constant-feed weighing belt. Air leakage is controlled through furnace pressure by means of conventional dampers, with the aid of draught gauges and a pressure recorder attached to the centre of the furnace roof.

Fuel-air mixing in a turbulent jet diffusion flame is primarily influenced by fuel jet momentum. This is conveniently measured as the reaction thrust on the burner, by means of a counterbalanced suspension system. Radiation from the flame is observed with a total-radiation pyrometer. Radiation and convection are differentiated with the aid of two heat flow meters, differing either in surface temperature or in surface emissivity. Gas velocities are measured with a Pitot tube and the information obtained used to carry out isokinetic sampling at a particular point for flame gases and unburnt solid particles. Gases are analysed in an Orsat type apparatus with Lomchakov absorption vessels. The solid sample is analysed for moisture, volatile matter and ash by micro-methods or by a modified Fenton train for ultimate analysis. Element balances permit calculation of the proportion of fuel burnt at any stage in the flame and its comparison with the degree of mixing on one hand, and with the proportionate heat release on the other.

For gas and oil flames it is found that until about 90 per cent of the total requirement of combustion air has been consumed, relative mixing, reaction and heat release are closely similar. The processes of combustion and heat release can therefore be studied up to this point simply by examining the aerodynamics of the system. This enables aerodynamic similarity criteria to be applied to the scaling-down of industrial gas and oil-fired furnaces for experimental model studies. The similarity condition is that the burner nozzle must be replaced by an equivalent nozzle which gives the same mass flow and momentum, but with the stream density changed to that of the flame gases. At its far end, where the flame is influenced by the re-circulation and re-entrainment of the combustion products, simple similarity relations with cold models do not apply. This is also the case throughout a pulverized fuel flame, for although the combustion of the volatiles may be a rapid process, that of the solid residue is not so. In these circumstances, the physical process of air-fuel mixing is no longer rate-controlling.

The non-luminous radiation and emissivity of the combustion products can be evaluated from a knowledge of the temperature and concentrations of water vapour and carbon dioxide by established methods due to Schmidt and Hottel. Luminous radiation depends mainly upon the particles present in the flame. Emissivity has been successfully related to soot concentration and can be scaled. The soot appears at an early stage in the flame and thereafter decreases, but the laws and mechanism of its formation are not sufficiently understood. The concentration of soot and hence the luminous emissivity is, however, a function of the fraction of the flame length considered, the rate of axial mixing and the carbon–hydrogen ratio of the fuel used.

In the early part of the flame, the edges of the jet form a sheath of high-temperature products while the axis of the flame contains excess fuel at relatively low temperature. Around the hot sheath excess air and recirculated products bring about a considerable reduction in temperature. At a stage where 80–100 per cent of stoichiometric air has reached the centre of the jet, the axial temperature reaches a peak of the order of 1,500–1,700° C. The peak is raised by an increase in fuel input or jet momentum, and by pre-heating. Because a gas flame loses heat less rapidly by radiation than does an oil flame, its temperature is some 100° C. higher throughout.

The Ijmuiden experiments cannot give direct information on the transfer of heat from the flame to the work since conditions in this phase of operations vary so widely. It is here that particular study by each industry becomes necessary. The Ijmuiden investigations have, however, shown how to control flame length, emissivity and coverage. Where there is direct impingement of the flame on the work, heat transfer by convection can be calculated as for a hot gas in contact with a surface. With a cold receiving surface, convection may be responsible for as much as 35 per cent of the total heat transfer.

The relevance of the work of the Foundation to conditions in steel furnaces was discussed by Dr. J. H. Chesters and Mr. R. Mayorcas. In the steel-making industry the Ijmuiden experiments have already stimulated a number of investigations and developments from which production has profited. Cold model experiments have revealed flow and wear patterns. The improved understanding of the mechanism of oil atomization and jet momentum which has resulted from the Ijmuiden work has been employed with great effect on production furnaces. Advantage has also been taken of the function of carbon in increasing flame emissivity, and the output rate of a full-scale furnace has recently been substantially increased by the application of the results of calculations based upon the Ijmuiden and other similar experiments.

The glass industry uses producer gas and liquid-fuel flames of the turbulent jet diffusion type, and has followed the lead of the steel industry in the use of model experiments, some results of which were described by Mr. S. Krusjewski. The luminosity and solid particle radiation of producer gas flames require further study, but the findings of the Foundation and the steel industry on oil flames are applicable to similar flames in glass tanks. Special problems are to obtain good flame coverage without too much loss of access to the walls of the tank, and to limit recirculation so far as possible without exposing the furnace crown unduly to the flame gases. The theory of heat transfer from an oil flame in a glass furnace has been developed by Thring and the problem of heat transfer through the glass itself is to some extent understood in exact terms, but the part played by convection is at the moment appreciated only qualitatively.

The application to boilers was discussed by Dr. W. B. Carlson. The work at Ijmuiden on pulverized fuel flames, which is of particular interest to the boiler industry, has not yet progressed far. Some special factors have to be taken into consideration. Sufficient radiation must be available from flame and furnace to maintain stable ignition. The combustion region must be large enough and of adequate temperature to complete the combustion of the relatively slow-burning particles. This leads to very large combustion chambers, for which an unusually extensive scaling-up of model experiments is necessary. The great height of the boiler results in a large chimney effect within the furnace itself. The size of the flame causes it to become somewhat opaque to its own radiation and this results in a hot flame core from which the heat cannot readily be released. The need to avoid excessive ash deposition within the furnace dictates aerodynamic design to a large extent, and in general precludes compactness. The necessary provisions for ultimate ash retention, either by slagging or collection, still further enlarge the plant. The Ijmuiden pulverized fuel furnace has unfortunately no provision for experiments involving slagging of the ash. The cement industry, represented at the Symposium by Mr. E. Burke and Mr. G. Field, also uses pulverized fuel extensively. Heat transfer to the work would most readily be improved by increase of radiant intensity through control of flame length, temperature and emissivity. The proper distribution of heat transfer throughout the kiln also requires attention.

The problem in gas turbine combustion chambers, as pointed out by Prof. Saunders, is the reverse of that in industrial furnaces—that is to say, to limit the transfer of heat from the flame to the surfaces in order to avoid overheating. The small amount of information at present available suggests that whereas the flames of the lighter fuels used are almost non-luminous, those of the heavier fuels emit considerable luminous radiation. However, the high-rate heat release type of chamber as used in aero-engine design probably minimizes radiation transfer from the flame and for this reason may find favour for industrial use.

J. H. Burgoyne

OBITUARIES

Prof. Léon W. Collet

Prof. Léon W. Collet died peacefully in his seventy-eighth year at Geneva on October 13. His health had been failing sadly of recent years. "Born with a rucksack on my back", he used to say; and he attributed much of his latter-day troubles to previous strenuous exertion.

In his passing, British and American geologists see the end of a career largely devoted to their service; for Collet will long be remembered as an apostle, spreading the nappe theory of the Alps throughout the English-speaking world. Most of the amazing discoveries made since 1893 in regard to the structure of the Alps have been published in French or German. Moreover, as a problem in field-geology, the subject has been bewilderingly confused for outsiders by essential local detail, both geographical and stratigraphical. The findings, too, have been of such an unbelievable nature that to risk an opinion upon their veracity without special introduction and guidance might well seem foolhardy. It was this introduction and guidance that Collet delighted to furnish, by leading excursions, from 1909 onwards, by publishing his "Structure of the Alps" (1927, 1935) and by delivering lectures, especially those at Harvard (1928–29).

Collet's Swiss colleagues may perhaps protest that there are more fundamental reasons for gratitude. There are, for example, many original contributions towards the unravelling of the Alpine story, chief among which stands Collet's description, with Paréjas, of the Jungfrau (1931). Here, indeed, we find work of first-rate geological ability, coupled of necessity with adventurous climbing. There are also his many valuable essays on physical geology and geography, among which must be reckoned his books, "Les Depôts Marins" (1908) and "Les Lacs" (1925).

It so happens that these two books bring us back to the British connexion. In 1904, immediately after taking his D.Sc. at Geneva, Collet joined the temporary, in part international, staff of the Murray–Pullar Survey of the freshwater lochs of Scotland—the Murray concerned was Sir John Murray, of *Challenger* fame. This often brought Collet to Edinburgh, where in two formative years he responded whole-heartedly to the spell cast by Peach and Horne; and their influence remained with him to the end of his days.

Collet at Geneva had been brought up in a die-hard school of Alpine interpretation, still struggling against the new ideas announced by Schardt in 1893; and it is remembered in Edinburgh how, during his sojourn there, he maintained in a lecture that it was possible that his teachers might yet prove correct. Soon after his return, however, to Geneva in 1906 as *Privatdocent* he saw with delight that the new interpretations were irresistible, and he at once joined the happy throng developing the profitable field thrown open to all-comers.

The rest must be put very briefly. During 1912–18 Collet was director of the newly established Federal Hydrographical Survey of Switzerland. During 1918–44 he occupied with great distinction the chair of geology and palæontology at his *alma mater*. He received many honours, but probably none was more highly valued than the foreign membership of the Royal Society of Edinburgh and the LL.D. bestowed on him by the University of Glasgow.

E. B. Bailey

Colonel E. E. B. Mackintosh

Colonel E. E. B. Mackintosh, a former director of the Science Museum, South Kensington, died on November 25. He was the last of a line of distinguished Royal Engineer officers who directed the fortunes of the scientific collections at South Kensington from 1858 until 1945. He and his predecessors, Donnelly, Festing, Abney, Ogilvie and Lyons, brought the Museum to its present fame, as one of the most visited museums in the world.

Mackintosh's contribution to this development was to encourage the organization of special temporary exhibitions, lasting for a few months each, on such subjects as "Noise Abatement", "Very Low Temperatures" and "Science in the Army". These, with their formal opening ceremonies by some public figure, at which Mackintosh was in his element, gave wide publicity to the Museum; and his friendly bonhomie gained much goodwill for the Museum among those who were in a position to support its activities.

Ernest Elliott Buckland Mackintosh was born in 1880 and was educated at Eton and the R.M.A., Woolwich, from which, in 1899, he was commissioned in the Royal Engineers. He served in the Sudan and Egypt before taking part in the First World War in France, for which he was awarded the D.S.O. and appointed to the Legion of Honour. After a period, first in Hong Kong and then as chief engineer, Eastern Command, he was appointed director of the Science Museum in 1933. Almost immediately he became concerned with plans for the proposed new centre block of the Museum, which was to include a planetarium; but all his plans were frustrated by the Second World War and its preliminary crises. From 1939 onwards, except for a short period in 1939 and 1940 when he was commandant of the School of Military Engineering at Chatham, his energies and organizing ability were directed towards the evacuation and preservation of the Museum's collections. The War had only recently ended when, in 1945, he retired on reaching the age limit.

His own collecting instinct manifested itself by an interest in glass, of which he formed a small private collection. In the latter part of 1937 he was instrumental with others, including W. A. Thorpe, of the Victoria and Albert Museum, and John M. Bacon, in founding the Circle of Glass Collectors, of which he became, in 1947, one of the five honorary vice-presidents.

During his time at the Science Museum he was also a governor of the Imperial College of Science and Technology and one of the trustees of the Imperial War Museum.

He is survived by his widow and one daughter. His only son was killed in action in 1944.

H. R. Calvert

NEWS and VIEWS

Psychology at University College, London :

Prof. R. W. Russell

It is now a little more than a year since Prof. Roger Russell resigned from the professorship of psychology at University College to take up an administrative appointment with the American Psychological Association. His decision has occasioned the most lively regret among his many friends and colleagues in Great Britain. In his six years at University College, Prof. Russell transformed his Department into a most active centre of research in experimental and comparative psychology. He will be remembered especially for his work on behaviour disorders in animals and for his more recent studies of the effects of greatly reduced body temperature upon learning and memory in the rat. Prof. Russell also gave devoted service to a variety of bodies concerned with the organization and applications of psychology. In spite of his return to the United States, Prof. Russell hopes to retain his many contacts—personal and scientific—with his psychological colleagues in Britain.

Prof. G. C. Drew

George Drew, who has been appointed to the chair of psychology in University College, went to the Cambridge Psychological Laboratory from the University of Bristol in 1935 as the holder of the Viscount Haldane of Cloan Studentship. He worked there with Sir Frederic Bartlett, finding his main interest in the study of animal behaviour. The award of a Rockefeller Fellowship took him to Harvard, where he worked for two years under Prof. K. S. Lashley. On his return to Cambridge, it was intended that Drew should further develop his animal studies. Unfortunately, the War intervened and he found himself increasingly drawn into the programme of work on human skill and fatigue which became the main war-time preoccupation of the Department. His work with the late Dr. Kenneth Craik on the 'Cambridge Cockpit' is deservedly well known. In 1942 Drew was appointed psychological adviser to the Air Ministry, a post which he successfully held for the remainder of the War. After the War, Drew returned to Bristol as lecturer in psychology. His promotion was rapid; by 1951 he had been appointed professor of psychology with a small independent department. The latter was broadly conceived, embodying genetic and clinical no less than experimental interests. It has also developed as a promising centre of experimental research, some of it undertaken in conjunction with the Road Research Laboratory. Drew has also served as a consultant to the Medical Research Council Applied Psychology Research Unit at Cambridge. To a subject not always noted for its sanity, Prof. Drew brings a resourceful and level-headed approach. By virtue of his background and interests, he would appear particularly well fitted to develop the experimental trend in psychology at University College so courageously initiated by Prof. Russell.

Discovery

The January issue of *Discovery* is the first in the new format. This journal has always been well produced, yet the larger size is a distinct improvement. It allows for the use of bigger type and better spacing. The illustrations are also bigger and the half-tones are consequently most impressive. There is a new lay-out for the page of contents, though this does not seem to show much improvement on the old one. Any scientific journal which has to attract non-scientists must be in itself attractive. *Discovery* is now produced in such a way that many potential readers will be attracted by its illustrations, typography and lay-out. The first issue in the new form contains five articles, all of which are well written and interpret science for the non-specialist in a very desirable way. They are: "Diamond: Fiction, Fancy and Fact", by Prof. S. Tolansky; "The Fascination of Numbers", by W. J. Reichmann; "British Science and Technology for the Brussels Exhibition, 1958", by J. Gardner and Caroline Heller; "A Swiss Guided Missile", by E. Stehli; "The International Geophysical Year: Month by Month", by Angela Croome.

The journal opens up with long notes entitled "The Progress of Science", which deal with recent advances and expression of opinion. They include a well-illustrated account of Marcoule—centre of French atomic power; electronic music; oil under the Sahara (illustrated); Oskar Minkowski (who established the cause of diabetes), and an account of the Symposium on Biological Productivity in Britain which was held under the auspices of the Institute of Biology. The first note under "The Progress of Science" takes the form of a leading article pleading for the need for a strategy of science. This issue also contains a number of useful and authoritative book reviews together with science news. One very useful feature which is being continued is "Science on the Screen".

The Editor and publishers of *Discovery* are to be congratulated on the attractive changes which have been initiated in a very useful journal.

Numbers of Medical Students and Practitioners

The Willink Committee, which was appointed in February 1955, has now reported to Ministers on "the number of medical practitioners likely to be engaged in all branches of the profession in the future, and the consequential intake of medical students required" (H.M.S.O., 2*s*. 6*d*. net). Excluding students from overseas, the present annual output of qualified men from the medical schools of the United Kingdom is 1,855. Allowing for losses due to natural causes, the Committee's view is that from 1962 until about 1975 a smaller number will suffice to meet all estimated needs, and that in consequence the intake of medical students should be reduced by about 10 per cent as soon as practicable. On the other hand, the Committee also believes that by about 1975 more doctors are likely to be needed, and that consequently the student intake should be raised from about 1970. This forecast is necessarily speculative, and the prudent suggestion is made that another review should be made in about ten years time.

In the meantime, it would seem inevitable that the result of these recommendations will be to generate no small measure of despondency and alarm among the scientists in our medical schools. There are 1,200 or so "whole-time university medical teaching and research staff", and the Willink Committee seems to have accepted a quite arbitrary opinion of the Committee of Vice-Chancellors and Principals that these figures should not increase by more than 1 per cent a year. One can only hope that the University Grants Committee will pay little attention to a piece of advice the effect of which can only be to help stifle a body of research workers who number among themselves some fifty Fellows of the Royal Society and two recent Nobel Prize winners.

Department of Scientific and Industrial Research

In reply to a question in the House of Commons on December 17 regarding progress with the five-year plan of the Department of Scientific and Industrial Research, Mr. H. Nicholls, Parliamentary Secretary to the Ministry of Works, representing the Lord President of the Council, said that the first three and a half years of the plan had been completed and the activities of the Department are developing broadly along the lines planned. At the end of 1957–58 it is estimated that the staff will have increased by 750 out of the 800 planned, although the Department has not been able to recruit all the specialist staff needed. The provision of new buildings has also fallen behind, largely owing to restriction on capital expenditure, and by the end of 1957–58 only half the planned building programme will have been completed. Plans for the period 1959–64 are at present in preparation and are being considered by the Council for Scientific and Industrial Research.

In reply to a further question, Mr. Nicholls said that there are close direct contacts between the nine research associations serving the textile industries. Ten years ago the Department established a Standing Consultative Conference on Textile Research to avoid undesirable duplication and to promote collaboration among the research associations, or equivalent organizations engaged in textile research, whether in receipt of a grant-in-aid from the Department or not. He thought there was no doubt that the Conference, which meets every year, its effective committee meeting quarterly, has justified its existence.

Questioned about the Department's postgraduate training grants, Mr. Nicholls said that the Council has set up a Postgraduate Training Grants Committee under the chairmanship of Sir Eric Ashby consisting of three members appointed after consultation with the Committee of Vice-Chancellors and Principals of Universities; one member representing the technical colleges; and professors of high standing in the main broad fields of science and technology, together with the chairman of the University Grants Committee and a Ministry of Education representative as assessors.

Study of Dentine

Teeth consist of a surface layer of enamel and a core of dentine which also forms the root. The dentinal matrix is permeated by canaliculi which, according to the usually accepted view, contain cytoplasmic strands originating from odontoblasts within the pulp cavity. An alternative view about the contents of the tubules was advanced as long ago as 1879, but the classical description does not appear to have been challenged until 1954 when Dr. W. Warwick James published a preliminary account of work which led him to believe, first, that the dentinal tubules open into the pulp cavity between adjacent odontoblasts; secondly, that they contain tissue fluid; and thirdly, that odontoblasts are concerned with the production of the collagenous fibres and mucopolysaccharides of the dentinal matrix. A full report of Dr. James's observations has recently been published in the *Transactions of the Zoological Society of London* (**29**, Part 1; 1957) in the form of a lavishly illustrated monograph. Introductory sections summarize earlier views about the structure of dentine and lead to descriptions of the histological appearance of the tissue as seen in the conventional type of preparation from the teeth of mammals (twenty-two species at various stages of development); reptiles (seven species); amphibians (one species); and fish (ten species). Dr. James develops the thesis that the dentinal tubules originate as a result of mechanical forces set up as adjacent odontoblasts produce columns of fibrous matrix in a space permeated by tissue fluid and enclosed by the cells of the internal dental epithelium. He concludes with an account of some of the physical properties of dentine, and suggests that the high elasticity of the tissue accounts for its peculiar sensory characteristics.

Biotopes of Ruwenzori

In the second series of monographs on the Exploration du Parc National Albert (fasc. 3. *Inst. des Parcs Nat. du Congo Belge, Brussels*, 1956), J. Heinzelin and H. Mollaret have written an introductory account of the "Biotopes de Haute Altitude Ruwenzori, I". The localities inspected, mostly at an altitude of 4,000 metres and above, are seldom visited, except perhaps by native hunters, the more so as there is no season when good weather, and therefore travelling conditions, can be assured. There are, however, brief periods, for example, during January–February, when for a few weeks mist and rainfall may be such as to admit of travel and observation. The equipment used during the expedition is described, and then follow notes and diagrams on selected biotopes, that is, localities in which particular biological materials are to be observed. The monograph is illustrated by some excellent photographs—some in colour—those of the high mountain lakes being of a particular fascination. The main cartographical observations from the present and from earlier surveys of the high massifs of Ruwenzori have been brought together in a new map. Some brief floristic and faunistic notes are given.

Biochemistry of Antibiotics

The first European symposium on "The Biochemistry of Antibiotics" was held during September 10–13, 1956, in Milan. The second volume of *Giornale di Microbiologia* (pp. 503, 1956) is devoted entirely to the papers given at this symposium and to the discussions which followed. The president, Prof. P. Rondoni, contributed the foreword, but unhappily he was not able to be present and he died shortly afterwards. The papers deal with topics such as the chemical composition and biosynthesis of antibiotics and their mode of action on pathogenic bacteria. There were thirty-four communications, most of them given in English; Sir Howard Florey, A. I. Virtanen and S. A. Waksman were among the contributors.

Veszprém Polarographic Conference

The proceedings of the polarographic conference held in Veszprém, Hungary, in August 1955 have now been published in *Acta Chimica* (Hungary), 9; 1956. Forty-six papers were presented at this conference, covering general procedures, inorganic, organic, biochemical and pharmaceutical applications of polarography. Among the subjects discussed were various new types of polarographic electrodes, oscillographic polarography and the use of kinetic currents for the determination of extremely high rates of reaction. The effect of maxima suppressors on the shape of polarograms was considered and an attempt was made to correlate the molecular weight of a suppressing agent with its concentration and maxima-suppressing ability. Methods were described for the polarographic estimation of magnesium, gallium, oxygen, dithionite and various nitrogen-containing inorganic compounds. In the organic field the polarographic reduction of nitrogen-containing heterocyclic compounds, aromatic nitro-compounds, glucosazones and boric acid derivatives of D-glucosazones were among the subjects studied. In the biochemical applications of polarography, investigations were reported on muscle proteins, proteins in serum obtained from liver lesions and mucoproteins in pneumoconiosis. Work on new methods of evaluation of catalytic protein waves was described, as also were researches on the Brdicka polarographic protein reaction. Various applications of polarography to pharmaceutical problems were recorded. Copies of the proceedings can be obtained from Kultura, Budapest VI, Magyar Ifjúság útja 21. Price 126 forints.

Institute of Information Scientists

A meeting will be held on January 23, at 5.30 p.m., at the Institution of Electrical Engineers, Savoy Place, Victoria Embankment, London, W.C.2, to discuss terms of inauguration of an Institute of Information Scientists. The aims of the proposed Institute would include the promotion of high standards in scientific and technical information work, the promotion of educational courses, and the establishment of qualifications for those engaged in such information work. Membership of the Institute would be open, in the first place, to graduate (or similarly qualified) members of scientific, technical or economic information departments. Applications for admission tickets may be made to J. Farradane, Torran, Crofton Road, Orpington, Kent. Applicants should indicate briefly their qualifications and enclose a stamped addressed envelope for reply.

University News:

Belfast

Dr. D. T. Elmore has been appointed to a lectureship in biochemistry.

London

Prof. H. Lionel Elvin has been appointed director of the University of London Institute of Education from October 1, 1958. Since April 1956 Prof. Elvin has held the chair of education with special reference to education in tropical areas at the Institute. The title of reader in chemistry in the University of London has been conferred on Dr. C. A. Bunton and on Dr. A. Wassermann in respect of their posts at University College; and that of reader in applied mathematics in the University of London on Dr. E. P. Wohlfarth in respect of his post at the Imperial College of Science and Technology.

Melbourne

Dr. J. A. Pateman has been appointed a senior lecturer in botany.

Sheffield

The Shell Petroleum Co., Ltd., has made a gift of £15,000 to the Development Fund of the University.

Announcements

Medals of the Tokyo Geographical Society have been awarded to Prof. L. Dudley Stamp, immediate past president, and Prof. Hans Ahlmann, president of the International Geographical Union.

Mr. Leonard Rotherham, director of research and development at the Industrial Group Headquarters of the United Kingdom Atomic Energy Authority, Risley, Warrington, Lancs., has been appointed a full-time member of the Central Electricity Generating Board with effect from April 1.

The Institute of Personnel Management is holding a five-day residential study course in "The Employment Function of Management" during January 26–31 at the Prince of Wales Hotel, De Vere Gardens, Kensington, London, W.8. Further information can be obtained from the Courses Secretary, Institute of Personnel Management, Management House, 80 Fetter Lane, London, E.C.4.

A course in "The Use of Statistics in Personnel Management", organized by the Institute of Personnel Management in conjunction with the National Institute of Industrial Psychology, will be held non-residentially at the National Institute of Industrial Psychology, 14 Welbeck Street, London, W.1, during January 20–24. It is intended for those personnel officers and managers who have had no previous training in the use of statistical methods and their application to personnel administration. Further information can be obtained from the Training Officer, Institute of Personnel Management, Management House, 80 Fetter Lane, London, E.C.4.

The British Institute of Management is holding a work study conference on February 6. The fee for attendance is 7 guineas, which includes morning coffee, buffet luncheon and afternoon tea. The conference will be held in the Caxton Hall, Caxton Street, Victoria Street, London, S.W.1. Further information can be obtained from the British Institute of Management, Management House, 80 Fetter Lane, London, E.C.4.

THE RAMSDEN LABORATORY OF ILFORD LIMITED

By Dr. G. B. HARRISON
Research Director

THE silver halide crystal is the basis of the photographic industry, and the scientific and patent literature of this century contains ample evidence of the effort that has been applied to enhance its amazing efficiency as a detector of radiation. The achievement of the highest possible sensitivity to light must be one of the principal aims of a research group in photographic science, and this must be pursued through experimental emulsion-making, as well as by more fundamental studies of the physics and physical chemistry of the process. In the photographic industry it is still only one of many aims, and it is the task of large laboratory units to evolve all those sensitive materials of highly specialized characteristics which are demanded by the different branches of human activity to which photography makes its contribution.

The film production facilities of Ilford Limited are situated at Brentwood in Essex, and the recent opening of a new building there, the Ramsden Laboratory, is a consequence of the rapid expansion of output, the greater variety of product which it is called upon to produce, and the increasing complexity of the problems which are set by the range of applications of film in the modern world.

The Ramsden Laboratory (Fig. 1) has an area of 30,000 sq. ft. on two floors, divided into three sections: emulsion and chemistry, testing, and physics. In it are blended more or less conventional chemical and physical laboratories and workshops, with a large number of laboratories and dark rooms specially designed for the various operations of photographic technology.

The Emulsion and Chemistry Section has responsibility for emulsion production as well as for research and development leading to improved or new emulsions, and its first care is for the quality of raw materials. These present peculiar problems in this industry, for traces of foreign chemicals which may be almost undetectable chemically or spectrographically may produce marked and damaging effects in photographic emulsions, and the processes of routine analysis in the chemical laboratories must be supplemented by tests in emulsions.

Of all the raw materials, gelatin offers the biggest problem and is of the greatest interest. At Brentwood and in the Ilford laboratory of the Company, the application of the techniques of paper chromatography and electrophoresis, and of polarography, has led to the identification and quantitative determination of the traces of sulphur compounds in gelatin which act as sensitizers of silver halide, and work now in progress at Brentwood is throwing new light on the protein itself.

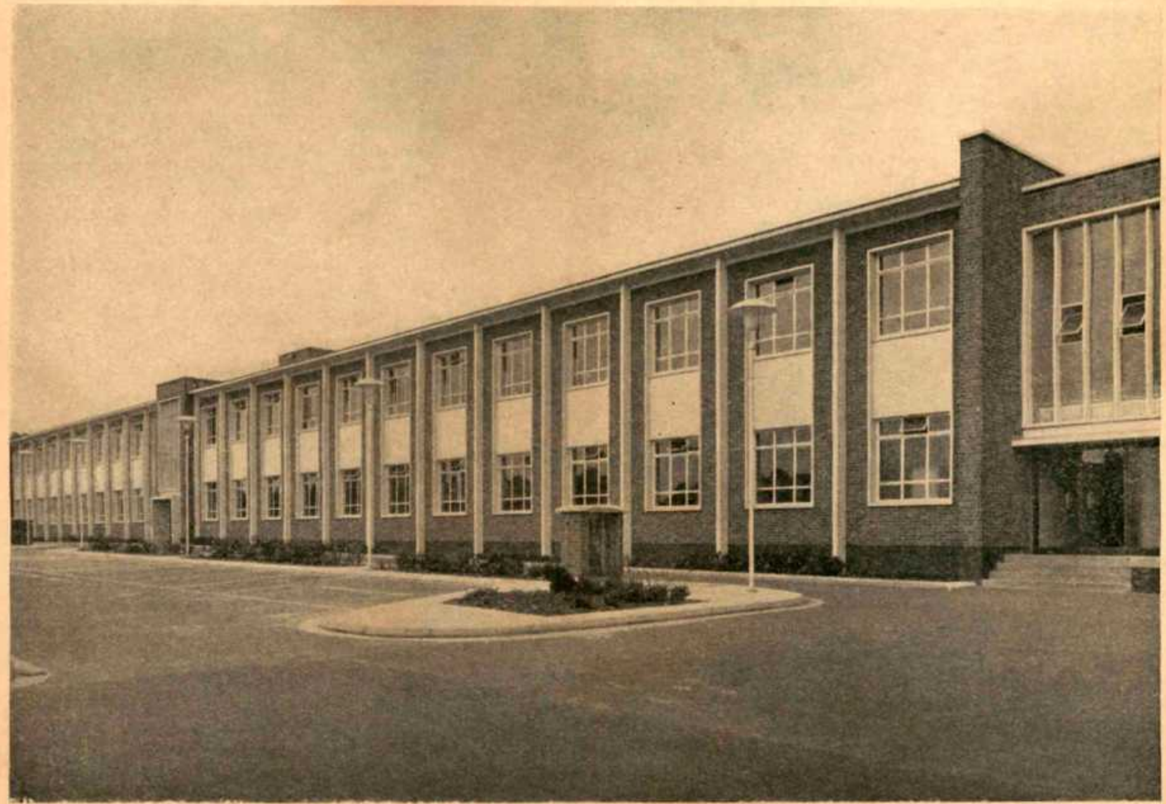

Fig. 1. Front of the Ramsden Laboratory, Ilford Limited, Brentwood, Essex

The eight emulsion-making laboratories are grouped on the ground-floor, and their design has evolved from many years of experience. They are provided with stirring and mixing apparatus for the precipitation of silver halide under closely controlled conditions, and thermostatically controlled tanks for heat treatment. The 'safe-lighting' and ventilation of these laboratories have needed careful planning to achieve the best possible working conditions with the greatest efficiency.

The problems of the emulsion chemist arise in the first place from the variety of films that are nowadays called for. The fast panchromatic films of the miniature camera are closely related to those of the cinema industry, and a little more distantly to the films which meet the needs of aerial photography or oscillograph recording in various forms. The range of emulsions of high contrast used in X-ray work, medical or industrial, are entirely different products. The graphic arts also make their demand on the emulsion makers' time and ingenuity, and the problems met in the development and production of films for colour photography are the most complex of all. Work devoted to the improvement of all these materials is constantly in progress.

The emulsion chemist's task is not by any means limited to production of a material which has the required characteristics of sensitivity, contrast and freedom from fog or from troublesome grain. Besides these and other 'sensitometric' characteristics there are other qualities that the material must possess to give satisfaction under all conditions of handling or mishandling, and these call for a study of such factors as surface hardness, surface friction, wettability, water absorption and the melting point of the swollen emulsion, and the means to modify these qualities. Problems of colloid chemistry arise here, as they do also in the manufacturing process itself. These problems are ultimately technological ones for the emulsion chemist to solve, but the Ramsden Laboratory has a section where rheology and surface chemistry and physics, as they relate to photographic processes, are to be the subjects of basic investigations.

A small department fully equipped for microscopy and photomicrography will provide essential service to all departments of the Laboratory.

The testing of a trial emulsion presents a special problem and covers not only the characteristics of its sensitivity to light but also other features such as resolving power, graininess and physical properties like its susceptibility to scratching or melting point. Nearly all these tests are peculiar to the photographic laboratory, and it is necessary to develop most of the testing equipment within the organization. This is generally part of the work of the physics laboratory which, by the application of physical principles, will first devise the test and then produce at least a working prototype of the final routine test equipment. The physics laboratory is provided with a well-equipped workshop and drawing office which is capable of light precision engineering and can build all kinds of equipment from the odds and ends required in the construction of research 'lash-ups' to a full-scale continuous processing machine for handling cinematograph film. Such a machine is, in fact, being constructed for installation in the processing section and will be capable of processing 35-mm. and 16-mm. colour film. For experimental work a high degree of versatility is required, and the machine will be able to perform any sequence of operations likely to be called for in research on new processes of colour photography, which is one of the chief preoccupations of the physics laboratory to-day. Present-day colour materials start with a more or less conventional black-and-white emulsion having special features which are the product of research in the emulsion laboratories. The problem of introducing colour is one involving both chemistry and physics, and the particular problem of the colour reproduction obtained is very much the concern of the physicist.

Another section of the physics laboratory is concerned with electronics. The use of equipment coming under this general heading is growing rapidly, particularly in testing instrumentation and its progress towards more and more automation. Electronics has in this way played its part in developing colour photography and now it seems to be entering the field of commercial printing of colour materials.

The photographic industry depends more than most industries on its research laboratories, and this new laboratory at Brentwood, which was visited by the Duke of Edinburgh on December 6, is the third new laboratory designed and built by Ilford Limited since the Second World War.

RESIDUES OF PESTICIDES IN FOODSTUFFS

A JOINT meeting of the Pesticides Group of the Society of Chemical Industry with the Association of British Insecticide Manufacturers was held on October 21 to discuss "Residues of Pesticides in Foodstuffs". The chairman of the Pesticides Group, Dr. F. P. Coyne, said that the intention of his committee in organizing the discussion was to give those in the chemical industry engaged in trying to apply current regulations an opportunity to air their views on this rather controversial matter. The Association of British Insecticide Manufacturers had welcomed the proposal and had nominated three speakers who would be recognized as authorities on the particular aspects which they discussed, but none of whom would wish to be taken as speaking for every member of the Association. The presence of 160 in the audience was some indication of the interest aroused, and there would have been at least forty more had seating capacity been available.

The following papers were delivered: "Existing Regulations in the U.K. and Overseas" by Mr. J. I. Hendrie; "Pesticide Residues and Public Health" by Dr. E. F. Edson; and "Determination of Residues" by Mr. J. M. Winchester.

Since the United States and Britain appeared to have progressed more than other countries in providing public safeguards, it was inevitable that the two very different procedures should be compared and contrasted. In the United States no new pesticide can be marketed before the Food and Drug Administration has laid down a tolerance, and if this limit be exceeded the whole of the treated crop is subject to confiscation. In Britain, a voluntary system of notification of new pesticides operates, and there is no provision for enforcement. The principle adopted is to agree on treatments that will result in no toxic hazards to the consumer, and this is considered preferable to any definition of permitted residues. It was stressed that tolerances in the United States do not in themselves indicate basic toxicity to humans, since the Food and Drug

Administration is charged by Congress to prevent unnecessary contamination of food, and its tolerance always takes into consideration the minimum biologically effective dosage—which may differ for different pests on different crops and which relate only to conditions in the United States.

It would be surprising if two such systems had evolved along exactly the same lines, and the factor of legal enforcement probably tends to make the Food and Drug Administration more meticulously precise in its demands. None of the speakers suggested that its requirements were in any way fallacious, but doubts were expressed as to whether all the routine requirements were essential. A recent report from the United States, that the combination of two organo-phosphorus pesticides at residue levels within the permitted tolerance for each caused effects on experimental animals greater than could have been anticipated as normally additive, raised the question of 'potentiation'. This could mean that any new pesticide must be tested in combination with all others to prove its absence of hazard and, while no objection could be made were the case for such action fully proved, the greatest care was needed in ensuring that any such requirement was justified to the full, because of the implications. Theoretically, the possibility of such a happening could not logically be restricted to chemically similar compounds.

Some fear was expressed that the superficial attractiveness of stated tolerances would tend to make other countries favour the United States system, and that without the excellent facilities and high standards of operation in the Food and Drugs Administration there could arise a series of uncoordinated demands on industry, many of them quite unjustified. The analytical side is completely dependent upon the methods available, about which there is frequent disagreement even at national levels. This is one of the reasons why British officials are not enthusiastic about stated tolerances.

Toxicological work presents even more complications, not only in the choice of techniques but also in the interpretation of findings, and Dr. E. F. Edson advocated caution at this early stage, although he was satisfied that there are no grounds for active apprehension. He suggested, and was supported by Mr. J. M. Winchester, that consideration should be given to more extended feeding tests as alternatives to exhaustive chemical investigations into possible metabolites of pesticides. Both speakers agreed with Mr. J. I. Hendrie that closer collaboration between Government and industry is necessary in order to define more accurately the essential requirements. A Board of Trade investigation into demands of overseas countries is being carried out and should elaborate the position reviewed by the first speaker. Efforts to draw up an agreed scheme of testing are at present being made by official and industrial toxicologists in Britain, and such a contribution could well form the basis for discussions with other countries.

Emphasis was laid on the sense of responsibility of the industry and on its desire to do all that is necessary to protect the public ; but it was pointed out that if the difficulties of development of a pesticide became so onerous that the prospects of adequate commercial return appeared to be too remote, finance in the chemical industry will undoubtedly be directed into other channels—as a simple duty to shareholders. Even to-day it is widely agreed, both in the United States and Great Britain, that it is not worth while to attempt to develop a new speciality product with very limited markets, no matter how important the problem involved may be to the branch of agriculture or horticulture concerned. This applies whether the potential pesticide be highly toxic or relatively harmless to humans, since the same procedure must be followed and the same order of expenditure incurred.

In attempting to summarize the three papers, the chairman pointed out that all three contributors were making a case for co-ordination of international standards, in principle at least. It seemed possible, however, that if Britain desired some general international agreement, she may have to be the first to modify current practice. Already in Britain there are tolerances for a limited number of preservatives of foodstuffs, which include fungicides. It would not require any fundamental change to extend these to insecticides, weedkillers, etc. If some such action could be taken there would probably be a much better chance that the system operating in Britain would be acceptable elsewhere.

Opening the discussion, Sir Solly Zuckerman paid a tribute to British industry, not only for its highly developed sense of responsibility, but also for its most co-operative attitude on the voluntary notification scheme. He refused to be perturbed by the present situation, and considered that the essential costs must be shared by government, industry and the user of pesticides. Since Britain, as well as being a leading importer of foodstuffs is also a considerable exporter of chemicals, it was doubly important that we should take a lead in this matter. He advocated caution, however, in making an approach to United Nations agencies, such as the World Health or Food and Agriculture Organizations, which could ultimately be important and helpful, until more progress had been made in settling Britain's own admitted difficulties in chemical and toxicological testing and interpretation. If the collaboration already existing between industry and government were continued in the same spirit he was hopeful that the chief difficulties could be overcome.

An animated discussion followed with views and comments from chemists, toxicologists and administrators in government and in industry. It was clear that everybody concerned was well aware of the difficulties, but there was less unanimity on how to overcome these. A tendency to generalize rather too freely from particular examples was perhaps excusable with such a complex issue, particularly in view of the short period during which current regulations have been operating, either in the United States or Britain. The papers and discussions will be published in full elsewhere.

F. P. Coyne

PHYSICS IN INDIAN UNIVERSITIES

UNDER the auspices of the Indian University Grants Commission, the University of Calcutta arranged a seminar on physics which was held during September 9–11. The conference was attended by Dr. W. W. Buechner, professor of experimental physics in the Massachusetts Institute of Technology, and by delegates from almost all the universities in India at which physics is taught at a postgraduate level, together with representatives from a number of other research institutes. The second and third days of the seminar were devoted to papers on nuclear physics and cosmic rays.

The morning and afternoon sessions of the first day were allotted to a discussion of the teaching of postgraduate physics in Indian universities. While welcoming the guests, Dr. P. C. Bhattacharya, head of the Department of Physics, University of Calcutta, gave a brief account of his Department, first established in 1916, in which such eminent scientists as Sir C. V. Raman, Dr. D. M. Bose, the late Dr. M. N. Saha, Dr. S. K. Mitra and Prof. S. N. Bose worked and inspired the younger generation. Dr. D. M. Bose, director of the Bose Institute, in his presidential address, first gave a description of the teaching of physics in his college days in the Presidency College, Calcutta (1905–6), in Cambridge (1907–11), in London (1911–12) and Berlin (1914–18), under J. C. Bose, J. J. Thomson, C. T. R. Wilson, Jeans, Watson, Rubens, Max Planck and others. He also mentioned the methods of teaching of Einstein and Nernst. As a professor of physics, Dr. Bose revised the M.Sc. syllabus in physics for the University of Calcutta in 1920 on the lines adopted by Planck. Dr. Bose discussed the feasibility of devising a satisfactory syllabus for teaching postgraduate physics in all the universities in India. Young men after getting the degree of M.Sc. generally take up (1) the teaching of physics in high schools and colleges, (2) research work in the universities, government laboratories and industry, (3) administrative work in government, technical and commercial services; and Dr. Bose stressed the importance of the first category to the economic and technological development of India.

Finally, Dr. Bose dealt with the importance of encouraging nuclear research through non-governmental agencies. Like Brookhaven National Laboratory for research and training in nuclear physics which is managed by nine United States universities, he pleaded that similar laboratories should be established in India on a regional basis.

Dr. Buechner gave an impression of his two months tour of India, visiting various universities and institutions. He remarked upon certain similarities between India and the United States as regards the type of student who undertakes postgraduate studies and the lack of financial support for universities. One striking difference is that in the United States, although there are a number of laboratories managed by the government or by industry, the prime centre of research is the university. This is not the case in India, where Dr. Buechner had the impression that the universities are steadily declining in importance, being overshadowed by government and other research institutions. Without government support research cannot flourish, and without research any programme of postgraduate teaching will fail. It is the responsibility of the Indian universities to put forward their claims to the authorities and to make them understand the place of research in the university and in postgraduate teaching.

Sixteen other speakers, mostly heads of departments of physics in various universities, also gave accounts of the methods of postgraduate teaching prevailing in their respective universities, with suggestions for improvements.

The teachers of physics present at the seminar, representing almost all the universities of India, finally resolved (*inter alia*) that:

"As the main burden of the training of future physicists must be borne by the universities, the University Grants Commission is requested to ensure that the emoluments, research grants and other facilities available to the university teachers are adequate and in no way inferior to those available to people in similar positions in the National Laboratories or elsewhere."

The conference viewed with concern the general tendency for men with the best university qualifications to leave their universities for more lucrative jobs elsewhere, including the administrative services in which a knowledge of physics is not necessary, when their knowledge is urgently required for teaching work in the universities. "The best tools must be retained for manufacturing the tools themselves, for this in turn will produce better and better tools."

P. C. BHATTACHARYA

WATER QUALITY PROBLEMS IN THE UNITED KINGDOM

At a meeting of the Society for Visiting Scientists held on October 22, under the chairmanship of Mr. H. W. Cremer, there was an interesting discussion on "Water Quality Problems in the United Kingdom" following short papers on different aspects of this subject by Dr. G. Carter (Metropolitan Water Board), Dr. A. Key (Ministry of Housing and Local Government), and Dr. B. A. Southgate (Water Pollution Research Laboratory).

There is a growing demand for water of good quality, not only for domestic use, but also for industry—in some processes of manufacture the specifications to which the water must conform are more stringent than for drinking water—and for agriculture, particularly for drinking water for attested cattle. To produce water of this high quality from surface supplies a wide range of treatment processes is used; the Metropolitan Water Board, for example, treats Thames water by storage, filtration through rapid and slow sand-filters, and chlorination; industrial supplies may be treated in plants resembling those of municipal water undertakings, and for some purposes may be de-ionized by exchange processes; drinking water for cattle is often chlorinated before use.

At the same time the total volume of water asked for is also rapidly increasing. Usually, whether used for domestic or industrial purposes, the volume returned to a stream is substantially the same as that extracted, the problem being so to treat it that it can, if necessary, be used again farther downstream. For sewage, satisfactory methods of treatment are available, and by taking special precautions—as, for example, by passing the treated sewage effluent through sand-filters—the liquid finally returned to a river may be brought to a high standard of quality, and indeed would often be suitable, after chlorination, for some industrial purposes. Waste waters from industrial processes, having a much wider range of composition, present more difficult problems in treatment.

The large amount of research on these problems now being undertaken, or sponsored, by industry was widely recognized in the discussion. Several speakers referred to the difficult situation which may arise if there is any great increase in the practice of irrigating farm crops in the drier parts of Britain; water used in this way is lost from the cycle of use and re-use, being, of course, evaporated or transpired by plants.

STUDENT SCIENTIFIC EXPEDITION TO GHANA

UNDER the auspices of the Imperial College Exploration Board, seven students from the Imperial College of Science and Technology, London, organized an expedition to Ghana in the summer vacation, 1957. One of the seven, G. A. Matthews, made a detailed and restricted study of the infestation problems of ships' cargoes. The remaining members, including two women students, led by N. D. Jago (a third-year entomologist), undertook ecological research which centred upon soil conservation, one of the most important and fundamental problems in the tropics.

The main body was based in the Bobiri Forest Reserve near Kumasi, where two suitable areas were selected for examination. One was a strip transect containing a stream, thick forest and swamp, and the second a river area now drained and deforested, supporting a rice crop. Rice has only recently been introduced into this district, and the selected areas provided the opportunity for comparative studies.

The usual method of farming in Ghana away from the coastal plain is to clear the mature forest and to plant crops. The humus is immediately dried by the sun, and the soil nutrients, no longer held by an extensive root-system, are leached away by rain and the area is soon allowed to degenerate into secondary bush vegetation. The focal point of the investigation was the factors affecting formation and destruction of humus. In addition, associated problems were studied by individual members of the party.

During the eight-week period in the forest region several trips were made by the students in order to extend the work and see different peoples and places. B. M. Gerard went as far as Agades, on the southern fringes of the Sahara, accompanied by D. H. Barry, lecturer in botany in the Kumasi College of Technology. Together they began an analysis of leaf-hopper associations in different grasslands in the various savannah regions.

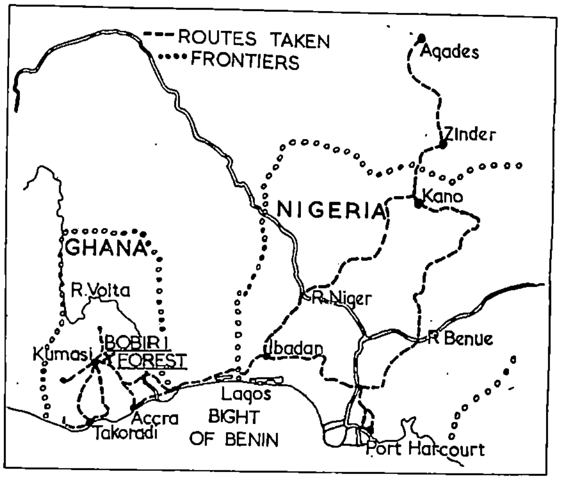

Fig. 1

Just before the party returned, an area of forest was completely cleared of vegetation and it is hoped that other expeditions from the College will be able to study this region and thus continue the work which has had so successful a beginning.

Generous financial support was provided by a number of firms and institutions and invaluable help was also given by several departments of the Ghana Government and of the University College of Ghana, Achimota.

B. M. GERARD

FLAVONOIDS OF THE PRIMULACEAE

Distribution of Flavonoids in Genotypes of *Primula sinensis*

THE Chinese primrose, *Primula sinensis*, a plant of which a wide range of colour mutants is available[1], provides excellent material for investigating the biochemical genetics of the flavonoid plant pigments. Earlier, Scott-Moncrieff[2] showed that red flowers (*K*-genotypes) contained malvidin-3-monoside which was dominant to pelargonidin-3-monoside in coral flowers (*kk* genotypes). A Mendelian factor *Dz* controls the independent production of pelargonidin in the presence of *K*. Other genes present influence flower colour by controlling production of an unidentified flavone co-pigment, by altering the *p*H of the cell sap and by regulating the concentration of anthocyanin.

A re-investigation of the flavonoid pigments of this plant was prompted by the facts that the stocks used by Scott-Moncrieff were still available and that better methods of identifying these pigments had been developed since her investigations. The flavonols and anthocyanidins produced by acid hydrolysis of direct plant extracts have been examined in both the floral and foliar parts of the different genotypes of *P. sinensis*. Identifications have been based on comparisons with authentic compounds using paper chromatography in several solvent systems[3], and spectrophotometry[4]. The results show that all the six common anthocyanidins and also the three flavonols, kæmpherol, quercetin and myricetin, are present in various forms of *P. sinensis*.

The distribution of these pigments, which are all closely related chemically, is as follows. Flowers of *K*-genotypes which are coloured contain mainly malvidin, some petunidin and traces of delphinidin; in the leaves and stems, there is much more of petunidin than of the other two pigments. In the flowers, kæmpferol is the predominating flavonol and lesser amounts of quercetin and myricetin are present. In the leaves and stems, quercetin is present in greater amount than myricetin and kæmpferol. *K*-genotypes which bear white flowers have the same pigment pattern, except, of course, that there are no anthocyanidins in the flowers. In addition, pelargonidin occasionally appears in both floral and foliar parts since, even in the absence of *Dz*, *K* is incompletely dominant in some genetic backgrounds[5]. In the presence of *Dz*, large amounts of pelargonidin are present in the flowers of *K*-genotypes, but the foliar parts only contain traces of this compound.

Flavonoids with hydroxyl (or methoxyl) groups in the 3′, 4′ and 5′ positions, for example, myricetin and delphinidin, are absent from the recessive *kk* genotypes, namely, *kkdzdz* and *kkDzDz*. The latter genotype has the higher absolute content of pigment in the flowers. Both contain mainly pelargonidin, together with a small amount of peonidin (about 10 per cent) and traces of cyanidin in their petals. The foliar parts, however, contain equal amounts of pelargonidin and cyanidin. Kæmpferol and quercetin occur in all parts of the plant. In the flowers, the former predominates, and quercetin is often absent. The situation is reversed in the leaves, where again quercetin is found most abundantly.

Other related polyphenolic compounds are also present in *P. sinensis*. An unidentified flavanone glycoside, sinensin[6], occurs in large quantities in the flowers of *kkDzDz* forms, from which it has been isolated. The aglycone, sinensetin, does not correspond in its properties with any of the commonly occurring flavanones and therefore its structure is under investigation.

The co-occurrence under gene control of anthocyanidins and flavonols having the same hydroxylation pattern was first noted by Geissman *et al.*[7] in *Antirrhinum majus* and *Dianthus caryophyllus*, where the pairs of pigments, cyanidin and quercetin, and pelargonidin and kæmpferol, co-occur in different genotypes. The co-occurrence of anthocyanidins and flavonols at all three levels of hydroxylation of the *B* ring was first observed by one of us[8] in *Solanum* species. *P. sinensis* thus provides a fourth example, the situation being very similar to that in the *Solanum* series. This work, then, supports the theory that flavonols and anthocyanidins are derived from a common precursor, have a similar biosynthetic pathway and only diverge at a very late stage in pigment synthesis.

It is also apparent that in *P. sinensis* the effects of some genes controlling pigment metabolism differ in different parts of the same plant. The only other known case of this phenomenon is that of plants of the tuberous *Solanums*, where tuber and flower contain different anthocyanins[9]. It is hoped to publish full details of this and other work elsewhere.

Anthocyanins in the Flowers of *Primula sinensis*

STUDIES were made previously of the biochemical genetics of the flower pigments of *Primula sinensis*[1]. A crystalline anthocyanin from red flowers, 'primulin', was stated to be malvidin 3-galactoside on the basis of its distribution number between pentanol and water[2], and more recently the pelargonidin derivative present in orange flowers (genotype *kkDzDz*) was stated to be a 3-galactoside[3].

As part of a re-investigation of the polyphenolic components of *P. sinensis*[4], the anthocyanins of *KKdzdz* and *kkDzDz* flowers were examined by paper chromatography. Extracts of flowers in methanolic hydrochloric acid were banded on Whatman No. 3 paper and developed with *n*-butanol/2*N* hydrochloric acid 1/1 (upper layer). The separated anthocyanin bands were cut out and eluted with 5 per cent acetic acid in methanol and purified by re-running in *n*-butanol/acetic acid/water, 4/1/5 (upper layer), and then 15 per cent aqueous acetic acid on washed paper. The purified pigments were hydrolysed and the aglycone and sugar components identified[3].

The anthocyanins in *KK* flowers were found to be malvidin 3-glucoside with an appreciable amount of petunidin 3-glucoside. Orange (*kkDzDz*) flowers contained pelargonidin 3-glucoside, smaller amounts of peonidin 3-glucoside (about 10 per cent) and much smaller amounts of a cyanidin 3-hexoside (about 1 per cent); they also contained two other pelargonidin glucosides which did not correspond in their chromatographic behaviour in five solvent systems with any known pelargonidin derivative.

No galactose was detected in the hydrolysates of any of the anthocyanins. It was, however, readily confirmed by these methods that cyanidin 3-galactoside was present in the leaves of the copper beech, *Fagus sylvatica*[5,6]. A few milligrams of the crystalline anthocyanin, 'primulin', isolated from red flowers of *P. sinensis*, and also a crystalline anthocyanin isolated from magenta flowers[1], were kindly made available by Miss V. C. Sturgess. These were both found to yield only glucose on hydrolysis and to consist of malvidin 3-glucoside containing about 15 per cent of petunidin 3-glucoside. This material would therefore be expected to give a different distribution number from that of malvidin 3-glucoside, which might explain the earlier incorrect identification of 'primulin' as the 3-galactoside.

Anthocyanins which have been isolated so far from flowers of other members of the Primulaceae are all glucosides, namely, malvidin 3-glucoside from *P. polyanthus*[7], malvidin 3 : 5-diglucoside from *P. viscosa* and *P. integrifola*[8], delphinidin 3 : 5-diglucoside from *P. obconica*[9] and hirsutidin 3 : 5-diglucoside from *P. hirsuta*[8]. It is no longer necessary to retain the name 'primulin'[1] for the supposed malvidin 3-galactoside from *P. sinensis*.

Anthocyanidins of the Primulaceae

IN connexion with detailed chemical and genetical investigations of the flavonoid pigments of *Primula* species, a brief survey of the anthocyanidins present

Table 1. VISIBLE SPECTRA AND R_F VALUES OF ANTHOCYANIDINS AND ANTHOCYANINS

Anthocyanidins	$\lambda_{max.}$ (mμ) Solvent: ethanol/0·01 per cent conc. HCl	R_F values on Whatman No. 1 paper		Colours

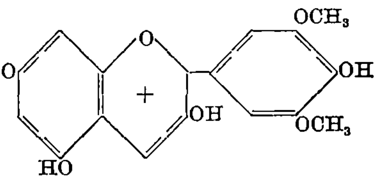
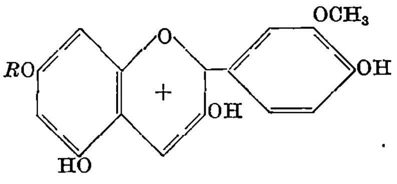
* Only the spectra of these pigments were affected by adding alcoholic aluminium chloride to the cell solution (a test for free vicinal hydroxyl groups)

in the flower petals of a number of wild and cultivated plants of the Primulaceae has been carried out, using modern techniques[1]. The results show that a greater variety of pigments are present than was apparent from an earlier survey carried out using the Robinson tests[2]. All the six commonly occurring anthocyanidins have been detected in one or other of the *Primula* species examined. The rare 7-methylated anthocyanidin, hirsutidin (I, $R = CH_3$), first isolated from *P. hirsuta*[3], has been found in several other species, namely, *P. auricula*, *P. denticulata*, *P. polyanthus* and *P. purpurea*. In addition, a new anthocyanidin has been discovered in *P. rosea*, where it occurs with peonidin, and in a blue form of *P. polyanthus*. This anthocyanidin, for which the name rosinidin is proposed, has not yet been obtained in sufficient amounts for chemical analysis, but from spectral and chromatographic evidence it may well have the structure of 7-methyl peonidin (II, $R = CH_3$):



I



II

Rosinidin occurs in *P. rosea* as a glycoside, probably as a 3 : 5-diglycoside, and is prepared from it by acid hydrolysis. The R_F values and visible maxima of both glycoside and aglycone are listed in Table 1, together with those of known pigments. Rosinidin, while showing all the characteristic colour reactions and solubility properties of an anthocyanidin, differs in its spectral and chromatographic data from any of the known anthocyanidins, all of which have been available for direct comparison.

The following facts suggest that rosinidin is 7-methyl peonidin (II, $R = CH_3$). (1) In its properties, it most closely resembles peonidin rather than any of the other anthocyanidins. The glycoside in particular possesses the bright orange fluorescence in ultra-violet light previously shown only by peonidin 3 : 5-diglycoside. (2) The R_F values of both aglycone and glycoside are higher than those of the known pigments. It is well known that stepwise masking of the hydroxyl groups in anthocyanidins by methylation correspondingly increases the R_F value in aqueous solvents (*cf.* the series delphinidin, petunidin, malvidin and hirsutidin in Table 1). (3) The hypsochromic shift of 9 mμ caused by introducing a 7-methyl group into malvidin (I, $R = H$) to give hirsutidin (I, $R = CH_3$) is exactly paralleled by the difference of 8 mμ in the spectra of rosinidin ($\lambda_{max.}$ 534 mμ) and peonidin ($\lambda_{max.}$ 542 mμ). (4) The occurrence of rosinidin in Primulaceae, a genus known to make a 7-methylated anthocyanidin, that is, hirsutidin, is significant. There is indeed a striking parallel between the occurrence of hirsutidin and malvidin in *P. hirsuta*, and rosinidin and peonidin in *P. rosea*. Furthermore, all four anthocyanidins occur in *P. polyanthus*.

The presence of two rare anthocyanidins, hirsutidin and rosinidin, in Primulaceae fits in with earlier studies of the flavonoid pigments present in this genus. For example, certain *Primula* species are quite exceptional in exuding flavone and, in some cases, 5-hydroxy, or 5 : 8-dihydroxy flavone, as a white dust or 'farina' on their leaves and stems[4]. Several other unusual flavonoid pigments have been detected during this survey and it is hoped to characterize them in due course.

RELATION BETWEEN PEROXIDASE AND 'CYTOCHROME *dh*' IN WHEAT ROOTS

By Prof. H. LUNDEGÅRDH

Penningby, Sweden

PEROXIDASE is present in most non-chlorophyllous plant tissues[1–3]. The main source of this hæmin enzyme is wild horseradish[2], but roots of spring wheat, too, contain considerable quantities, amounting to 10–20 µmoles per litre of root tissue[1]. The peroxidase may be extracted from roots treated with cold acetone. It shows the same spectrum as peroxidase from horseradish, namely, a high band at 404 mµ, which after reduction in dithionite moves to 437 mµ, and a more indistinct broad elevation at about 500 mµ, sloping toward 600 mµ, which at reduction is substituted for a sharp band at 556 mµ. All these bands, as also the complexes with CN^- and F^-, are excellently recorded in living roots[1].

Peroxidase is the quantitatively dominating hæmin enzyme in wheat roots. The concentration commonly exceeds that of the sum of the cytochromes $a + a_3$, $c + c_1$, and b, which are all present in the lower 0–60 mm. of wheat roots from 2–3 week-old seedlings[4]. Peroxidase is claimed to oxidize various substrates, including phenols and polyphenols, quinone compounds, etc., at the expense of hydrogen peroxide[3]. These experiments *in vitro*, however, have not contributed much to knowledge of the role of peroxidase in the cell metabolism. From measurements on horseradish I concluded that peroxidase may conduct at most 10–15 per cent of the total aerobic respiration of wheat roots[4c]. Accumulating evidence in the literature points to the co-operation of manganous ions and complexes between peroxidase and organic compounds in the oxidizing activity of peroxidase. Long ago I showed[5] that the basal respiration of wheat roots is stimulated by manganous ions. Kenten and Mann[6] showed that the oxidation of certain dicarboxylic acids is catalysed by peroxidase systems in the presence of manganous ions. Ray and Thimann[7], studying *Omphalia flavida*, claim that indole-3-acetic acid is oxidized and destroyed by a peroxidase which forms an intermediate, possibly with a skatol compound. Stutz[8] mentions an enzyme with similar properties which, in *Lupinus albus*, requires a phenolic activator and is stimulated by manganous ions. These studies were not supported by spectrophotometric observations on living tissues, however.

During spectrophotometric investigations on wheat roots I observed[4] a band at about 571 mµ appearing under prolonged complete anaerobiosis in a non-streaming medium (aqueous solutions of phosphate or neutral salts). Observations of the time-course of increasing reduction showed that this band may be clearly distinguished from the α-band of cytochrome *b* at 560–562 mµ (cytochrome *b* in plants has bands moved about 1–2 mµ toward the violet, as compared with cytochrome *b* from animals or yeast; it also reacts much more slowly on antimycin *A* than the yeast enzyme). As the formation of the new compound was inhibited by urethane, a complete spectrum of it could be calculated[9a] as the difference: ε(oxygen-free water) minus ε (oxygen-free 10 per cent urethane). Because the compound showed γ-, β-, and α-bands (at 424, 540, and 571 mµ respectively) quite similar to those of the cytochromes and also behaved similarly to cytochromes at reduction and reoxidation it was called 'cytochrome *dh*' [9a–c]. Continued investigations now showed that 'cytochrome *dh*' is probably not a true cytochrome but a peroxidase complex, appearing only under extreme anaerobiosis. An important step to the identification of the complex nature of '*dh*' was the observation that it does not, as a rule, appear either in the mitochondria or in the microsome fractions of root homogenates[10]. The mitochondria show excellent spectra of cytochrome *b*, whereas peroxidase together with fractions of cytochrome *c* and flavoprotein go into the supernate.

The high band of peroxidase at 404 mµ as a rule dominates the γ-spectrum of aerated roots (Fig. 1). The cytochromes *c* and *b*, which according to the 60–85 per cent oxidation normally prevailing[4b] are present mainly as bands at 406 and 418–420 mµ respectively, move the peak of the peroxidase band somewhat toward the red, but the true concentration of peroxidase can generally be calculated from the difference 404–380 mµ.

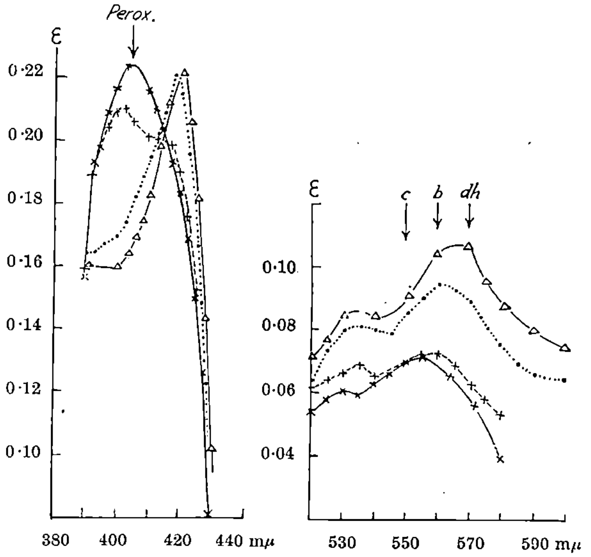

Fig. 1. Direct spectrograms (with 10 layers of Munktell No. 3 filter paper as reference) of a bundle of wheat roots 14 mm. thick (0–20, 20–40 mm. from the tips, packed together; seedlings 2–3 weeks old). Stages of increasing suffocation in non-streaming water (closed tube, containing 6 ml.). ×—×, start from aerated water; +—+, 15 min.; ○—○, 45 min.; △—△, 110 min. from the closure of the tube. The spectrograms show the disappearance of peroxidase and the appearance of the joined γ-bands of cytochromes c, c_1, b, and the peroxidase–*dh* complex (links), and the appearance of joined α-bands of the latter compounds in the time-order $c > b > dh$ (to the right)

The peroxidase is not reduced if the roots are exposed to complete anaerobiosis, but the bands at 404 and 500 mμ nevertheless more or less disappear (Fig. 1). The disappearance of the elevation in the blue-green is conveniently measured from the difference ε(580–520 mμ), the rise of which is the main cause of the rising extinction in the yellow-red part of the root spectrum under anaerobiosis.

Continuous records of the spectral changes occurring in roots which are exposed to states of increasing suffocation now show that the bands of 'cytochrome *dh*' appear synchronously with the disappearance of the peroxidase band at 404 mμ (Fig. 1). Concomitantly a synchronous increase is observed of the difference 580–520 mμ and of the band at 571 mμ (Fig. 2). These observations support the conclusion that '*dh*' is a reduced peroxidase complex. The spectrum of aerated roots gives no clear indication as to the existence of such a complex in an oxidized state. Against the existence of measurable quantities of an oxidized complex is the fact that the quantity of free peroxidase in aerated roots, calculated from the height of the 404-mμ band, tallies with calculations from the peroxidase–CN^- band and from the bands of pyridine hæmochromogen appearing after the addition of cyanide, or pyridine + dithionite, respectively (refs. 1,4c). The direct observations at increasing suffocation, furthermore, clearly show the simultaneous disappearance of free peroxidase and formation of the '*dh*'-complex.

The problem of the nature of the peroxidase acceptor is a difficult one, because the enzyme is apparently able to combine with a variety of substances, which are known to occur in the root tissue, and which may serve as hypothetical acceptors, such as flavone derivatives, ascorbic acid, C_4-acids, and so on. The following observations may be mentioned here.

The aerated roots frequently show a pronounced elevation, or broad band, between about 530 and about 570 mμ, which may only partly be explained from a combination of 60–85 per cent oxidized and 40–15 per cent reduced bands of the cytochromes *c*, c_1, and *b* (cf. ref. 11). This elevation or broad band slowly disappears on prolonged washing of the roots. It was shown several years ago that cut roots exude pigments with a spectrum very similar to that of certain flavone derivatives[12]. The effect of removing the exudate from the roots is spectral changes of *dh*.

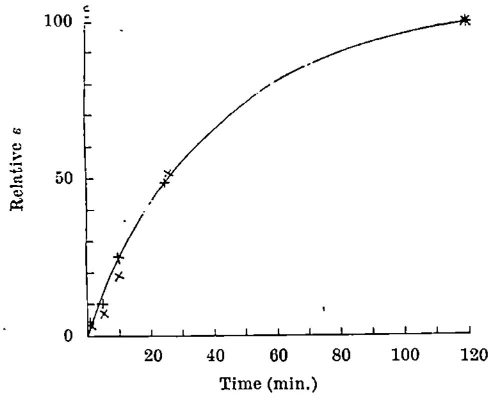

Fig. 2. Curve showing the synchronous disappearance of peroxidase (+—+), measured as the difference ε (580–520 mμ), and the appearance of the peroxidase-*dh* complex (×—×), measured as the height of the band at 571 mμ. The experimental conditions correspond to those in Fig. 1

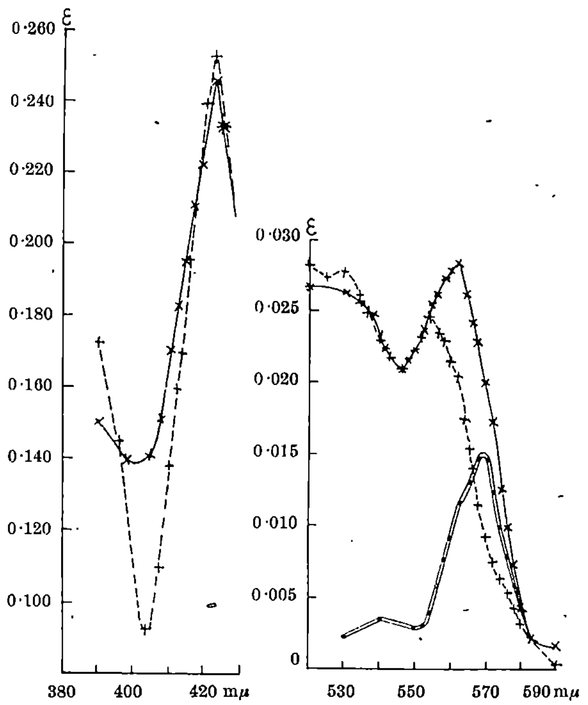

Fig. 3. Links: difference spectrograms of a bundle of roots 18 mm. thick, enclosed in a 6-ml. quartz tube, provided with inlet and outlet. ×—×, ε (non-streaming oxygen-free water) minus ε (aerated streaming water); +—+, ε (non-streaming oxygen-free water) minus ε (streaming oxygen-free water). Peroxidase 404 mμ reappears in the streaming oxygen-free medium, whereas the reduced band of cytochromes $c + c_1$ at 420 mμ remains unmoved. To the right: direct spectrum (cf. Fig. 1) of roots in non-streaming oxygen-free water (×—×) and in streaming oxygen-free water +—+. The difference between them (=) shows the spectrum of the peroxidase-*dh* complex (see the text)

The '*dh*'-complex appears only in non-streaming oxygen-free media. If the oxygen-free medium starts streaming, '*dh*' disappears. An excellent spectrum of '*dh*' can thus be computed as the difference between non-streaming and streaming oxygen-free water (Fig. 3). The cytochromes hereby remain reduced. The possibility cannot be excluded, however, that the streaming solution supplies minute quantities of oxygen sufficient for oxidation of '*dh*'. If roots are homogenized the pigments are recovered in the last supernatant. This has a yellow or light brown colour which deepens on prolonged exposure to oxygen. Dithionite decolourizes the red-brown fraction of the pigments, leaving bright yellow pigments, probably flavone derivatives together with certain quantities of carotene. The reddish pigments are precipitated from the supernatant by 50 per cent ammonium sulphate. Which of these pigments act as peroxidase acceptor cannot yet be decided.

That the acceptor substance is present in the supernatant from centrifugation of homogenized roots is shown by the fact that the combination of an oxygen-free peroxidase preparation with the oxygen-free supernatant shows spectral bands similar to those of '*dh*'. These bands disappear on reoxidation. Bands also appear in the absence of oxygen if a preparation of wheat peroxidase is combined with indole-3-acetic acid + ascorbic acid (bands at 390–400 and 560 mμ) or catechol (bands at 420, 543, and

568 mμ). An interesting effect, which was touched upon in a previous communication[9c], is exerted by fumarate (*p*H 3·6). The bands of '*dh*' are 50–100 per cent stronger in the presence of fumarate. Theoretically fumarate could act as a peroxidase acceptor. Because the development of '*dh*' is positively promoted by adenosine triphosphate[3c] there is a possibility, however, that fumarate acts indirectly by 'internal oxidation' of cytochrome-*b* (cf. refs. 4,*b* and *c*). The '*dh*'-complex acts in the opposite direction from cytochrome-*b* : it is reduced in fumarate and disappears in urethane and partly in succinate, too, whereas cytochrome-*b* is oxidized in the presence of fumarate and reduced in the presence of urethane. This fact may possibly indicate a relation between the peroxidase complex and the cytochrome system ; but the situation is more complicated than that because the formation of the '*dh*'-complex is obviously exposed to competitive exchange reactions. Urethane may thus be presumed to shield the acceptor from the peroxidase enzyme. Similarly cyanide rapidly removes the '*dh*' acceptor and forms peroxidase–CN^-. This is the reason why '*dh*' disappears in the presence of cyanide both aerobically and anaerobically without leaving visible CN-bands other than those of peroxidase–CN^-. Fluoride acts in a similar way, but considerably more slowly, because the reaction between peroxidase and fluoride proceeds fairly slowly[1,2].

More experimental work is needed for elucidation of the mechanism which controls the activity of peroxidase in wheat roots. No direct observations support the idea that hydrogen peroxide co-operates as an oxidant. The relative velocity[9c] of reoxidation of the hæmin enzymes in the roots is $dh > b > c > a + a_3$ and the velocity of reduction is the reverse (cf. ref. 11). The '*dh*' complex is thus operating in a manner which is in full agreement with the assumption that the oxidation of '*dh*' is mediated by the cytochrome system. On the other hand, the fact that '*dh*', formed *in vitro* from a peroxidase preparation and a mixture of root pigments (see above), is reoxidized in the absence of cytochromes points to a certain autoxidation. Because peroxidase is extremely sensitive to cyanide[1,4] the '*dh*' complex cannot co-operate in the 'basal respiration', in which cytochrome *b* is probably acting as an auxiliary oxidase[4b]. From a kinetical point of view peroxidase is probably a slow-acting oxidant. The first step of its activity is obviously the formation of the acceptor complex '*dh*'. This formation, however, proceeds fairly slowly and thus controls the process. The second step, the oxidation of '*dh*' and the liberation of peroxidase, proceeds rapidly. As a consequence very little is seen of the peroxidase–'*dh*' complex in aerated roots. According to the scheme outlined here the formation of a peroxidase complex is an intermediate step in the oxidation of the acceptor and not a complex enzyme, as claimed by others[7,8]. This question needs further elucidation, however.

SPECTROPHOTOMETRIC, LIGHT SCATTERING, AND TITRATION STUDIES UPON THE INTERACTION OF POLYADENYLIC AND POLYURIDYLIC ACIDS

By DR. ROLAND F. BEERS, JUN.

Robert W. Johnson Laboratory of the Bowles Research Fund, Children's Hospital School, Inc., Baltimore 11

AND

DR. ROBERT F. STEINER

Naval Medical Research Institute, National Naval Medical Center, Bethesda 14

IN a previous paper we reported the presence in polyadenylic acid of a hydrogen ion binding group with a *pK* in the vicinity of *p*H 6·0, which we identified as the 6-amino group of adenine[1]. In the present communication we include some of our preliminary findings as to the role of this group in the interaction between polyadenylic acid and polyuridylic acid described by Warner[2] and by Felsenfeld *et al.*[3].

Polyadenylic and polyuridylic acids were prepared as described previously, with particular care being taken to remove all traces of protein[4]. Two different preparations of polyadenylic acid of molecular weights $5·7 \times 10^5$ and $1·5 \times 10^6$ and two different preparations of polyuridylic acid of molecular weights $5·3 \times 10^5$ and $2·1 \times 10^6$ were employed.

The reaction between the two polymers was followed spectrophotometrically by observing the drop in optical density at $\lambda = 259$ mμ over the mean optical density for the non-associated species. At *p*H 7 in 0·1 *M* potassium chloride and 0·05 *M* phosphate the optical density decreases linearly with mole fraction of uridylic acid, reaching a minimum at an adenylic : uridylic mole ratio of 2 : 1, and thenceforth increases linearly, the maximum drop in optical density being about 40 per cent.

Table 1. LIGHT-SCATTERING RESULTS FOR POLYADENYLIC ACID–POLYURIDYLIC ACID (POLY A–POLY U) INTERACTION IN 0·5 M POTASSIUM CHLORIDE*

* The pH is 7·6 unless otherwise specified.
† Weight average molecular weight.
‡ Radius of gyration.

Light-scattering has been employed to follow the interaction between polyadenylic acid and polyuridylic acid at neutral pH. In 0·5 M potassium chloride at pH 7 the change in optical density reaches completion within the period of mixing. The molecular weight also reaches a value close to its final one very rapidly. However, a slow change in molecular configuration without an important further change in molecular weight appears to proceed for a much longer period, as Table 1 shows. This corresponds to an increase in radius of gyration, and probably reflects a rearrangement of the initial imperfect configuration to form a more regular doubly or triply stranded structure, in which 'loops', etc., have been eliminated.

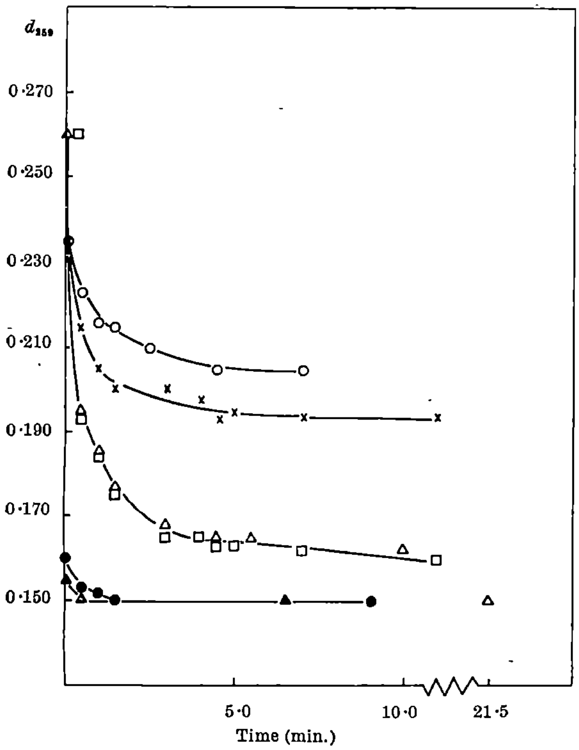

Fig. 1. Fall in optical density at λ = 259 mμ with time for polyadenylic acid IX (molecular weight 5·7 × 10^5) and polyuridylic acid I (molecular weight 5·3 × 10^5) in an adenylic : uridylic mole ratio of 1 : 2 at several pH's. All measurements are in 0·03 M NaOAc.
△, pH 6·5; □, pH 6·1; ×, pH 5·8; ○, pH 5·65; ▲, pH 6·5; 0·002 M Mg⁺⁺; ●, pH 5·65, 0·002 M Mg⁺⁺

The rate of reaction, as followed spectrophotometrically, falls off very rapidly in the region of titration of the 6-amino group of adenine in polyadenylic acid, as Fig. 1 shows. This effect is suppressed by addition of magnesium ions, which likewise suppresses titration of this group in the pH region 5–6[1].

Direct evidence for the involvement of the 6-amino group of adenine has been obtained by treating polyadenylic acid with formaldehyde under the conditions described in the previous paper[1]. In the present instance the 6-amino group is selectively blocked. Polyadenylic acid thus treated gave no evidence of any interaction with polyuridylic acid, both the extinction coefficient at λ = 259 mμ and the weight average molecular weight of equimolar mixtures of the two corresponding closely to the mean values for the two components, as Tables 1 and 2 show.

Table 2. SPECTROPHOTOMETRIC RESULTS FOR MIXING OF POLYURIDYLIC ACID AND FORMALDEHYDE-TREATED POLYADENYLIC ACID*

Solution	Treatment	λ	Optical density
Poly A IX′*q*	2 per cent HCHO for 48 hr. at 25° C.		0·424
Poly A IX*r*	Native poly A	259	0·379
Poly U II*c*	Native poly U	259	0·381
A IX*r*–U II*c*	Equal vols. mixed	259	0·273
A IX′*q*–U II*c*	Equal vols. mixed	259	0·408

* In 0·1 M potassium chloride, 0·001 M NaOAc, pH 7·0.

Further evidence for the involvement of the adenine 6-amino group has been obtained from titration and spectrophotometric data for the complex. The addition of increasing amounts of polyuridylic acid results in a suppression of H+ binding by polyadenylic acid in the pH region 5–6 and a displacement of the region of maximum binding to lower pH's (Fig. 2). This effect reaches its limiting extent at a mole ratio of uridylic : adenylic of 2 : 1.

The extinction coefficient of equimolar mixtures of the two acids is, in contrast to that of polyadenylic acid alone, constant between pH's 5 and 9 in 0·1 M potassium chloride. Below pH 5 a rapid rise in extinction coefficient with decreasing pH occurs, approaching as a limit the mean for the non-associated mixture, as Fig. 2 shows.

We interpret the above results as indicating a lowering of the effective pK of the adenine amino-group as a result of its involvement in an intermolecular linkage with uridine. Binding of a hydrogen ion appears to be accompanied by a dissociation of the complex.

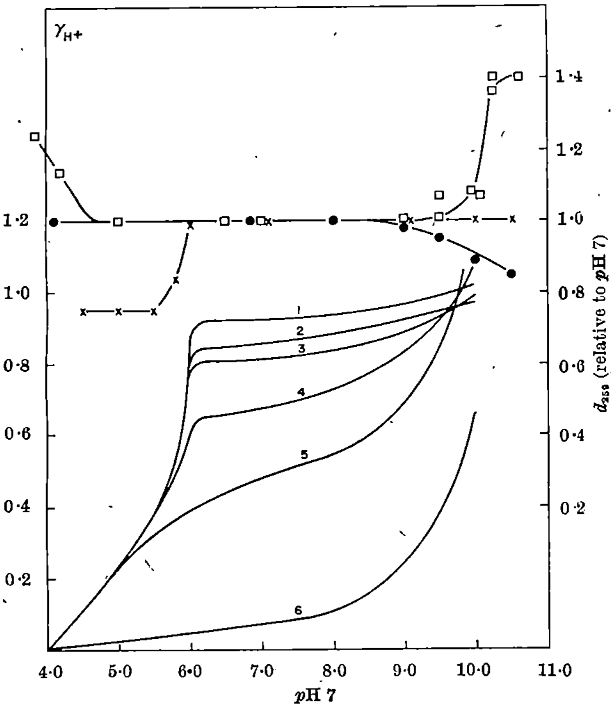

Fig. 2. Spectrophotometric and titration data for polyadenylic acid (molecular weight $1·5 \times 10^5$) and polyuridylic acid (molecular weight $2·1 \times 10^6$) in 0·1 *M* potassium chloride, and 23° C. In all cases the components were mixed at *p*H 7·5 and allowed to stand for 1 hr. before altering the *p*H. The left ordinate is the number of protons released per monomer unit. The right ordinate is the ratio of optical density at the given *p*H to that at *p*H 7.

×, Relative optical density for polyadenylic acid alone; ○, relative optical density for polyuridylic acid alone; ●, relative optical density for 1 : 1 mole ratio of adenylic : uridylic.

Curve 1, titration data for polyadenylic acid alone; Curve 2, uridylic : adenylic = 0·33; Curve 3, uridylic : adenylic = 0·56; Curve 4, uridylic : adenylic = 1·11; Curve 5, uridylic : adenylic = 2·38; Curve 6, polyuridylic acid alone

Polyuridylic acid, like its monomer, possesses a *pK* in the vicinity of *p*H 9·5. Dissociation of a hydrogen ion is accompanied by a decrease in extinction coefficient at λ = 259 mμ (Fig. 2). The equimolar complex with polyadenylic acid shows a sharp rise in extinction coefficient beginning at about *p*H 10. At higher *p*H's the extinction approaches the mean for the two components. The change is reversible if reneutralization is carried out within five minutes. Thus, loss of a hydrogen ion from the pyrimidine base of uridine appears to result in dissociation of the complex.

A direct confirmation of the latter conclusion has been obtained by light scattering (Table 1). Upon adjusting the *p*H of a solution of the complex from neutrality to 10·3, a very pronounced drop in molecular weight occurs. Upon reneutralization after a short interval at *p*H 10·3, most of the drop in molecular weight was recovered.

It appears probable that either the 6- or the 2-carbonyl group, or both, of uracil can exist in an enol form, and loses a proton in the vicinity of *p*H 10. As the source of the latter is the 1-nitrogen, the capacity of this group to serve as a proton donor for a hydrogen bond, as postulated by Felsenfeld *et al.*[3], would thereby be eliminated.

It is desirable to point out that the preceding results refer explicitly to polyadenylic acid and polyuridylic acid of quite high degrees of polymerization. Further work will be necessary to ascertain the lower limits of molecular weights for which the preceding observations are applicable. For these preparations in any event the linear variation of ε_{259} with adenylic : uridylic mole ratio would appear to make any abrupt transition from a doubly to a triply stranded structure unlikely. It appears to be entirely possible that it is the triply stranded structure which is formed at all adenylic : uridylic ratios under these conditions.

INDUCED POLYPLOIDY IN EGYPTIAN AND INDIAN CLOVERS

By S. M. SIKKA, M. S. SWAMINATHAN and R. K. MEHTA

Indian Agricultural Research Institute, New Delhi

EGYPTIAN clover or berseem (*Trifolium alexandrinum* L.) and Indian clover or senji (*Melilotus indica* All.) are the important fodder plants of north India under irrigated and rain-fed conditions respectively. Both are cross-pollinated and have the somatic chromosome number 16. Four different strains of berseem and two of senji were treated with colchicine in 1954 and plants with $2n = 32$ were thus obtained. The techniques which gave the highest percentage of tetraploids in berseem and senji were the immersion of shoots of one-week-old seedlings in 0·1 per cent colchicine for 8 hr. and the immersion of whole seedlings of a similar age in 0·05 per cent colchicine for 4–8 hr. respectively. The treatments were carried out at room temperature (75–80° F.). The tetraploid plants showed all the characteristic features usually associated with chromosome doubling such as increase in size of cells, stomata, pollen and seed, and reduction in pollen and seed fertility. Seeds were collected from the tetraploid plants in April 1955, and two subsequent generations were raised during the winter seasons of 1955 and 1956. The following is a summary of the observations made in them.

Berseem. The tetraploids were consistently superior to the diploids in growth and yield (Fig. 1). In randomized row trials, the tetraploids gave 2–3 times more yield of green fodder per cutting than the corresponding diploids. The average percentage dry matter content in the fodder was 25·71 in the diploids

Table 1. CELL SIZE IN DIPLOIDS AND TETRAPLOIDS OF BERSEEM AND SENJI

Species	Somatic chromosome No.	Average size of epidermal cells in microns from					
		Stem		Petioles		Leaves	
		Length	Width	Length	Width	Length	Width
T. alexandrinum	16	19·33	13·45	17·94	13·11	29·98	19·32
	32	26·91	17·60	30·02	19·32	43·47	24·84
M. indica	16	25·19	16·91	25·88	23·12	46·23	21·39
	32	34·16	20·01	37·26	29·88	56·93	31·05

and 17·57 in the tetraploids. There was, however, a wide variation among the tetraploids in dry matter content and several tetraploid plants with 25–27 per cent dry matter also occurred. Nodule and root development was found to be better in the tetraploids. Chemical analysis showed that the diploids and tetraploids did not differ in the content of nitrogen and phosphorus per unit weight of fodder. Lime content was, on the other hand, much higher in the tetraploids, the average value being 3·06 per cent as against 1·54 per cent in the diploid. The study of meiosis in microsporocytes showed that a maximum of 6 quadrivalents per cell occurred at diakinesis and metaphase I in tetraploids, the mean frequency being 2·8 per cell. At metaphase II, ·39 per cent of the gametes had unbalanced chromosome numbers. Seed setting as measured by the number of seeds per inflorescence was 17·8–55·7 per cent of that found in the diploids. The tetraploids had, however, nearly twice as many inflorescences per plant as the diploids; thus, some tetraploid plants produced more seeds per plant than the diploids. Among the seeds obtained from tetraploid inflorescences some were small in size. These were also very hard and did not germinate when sown either in Petri dishes or in the soil. Chromosome numbers were determined in 421 C_2 and 1120 C_3 plants in oxyquinoline-orcein root tip squashes[1]. The number was found to be 32 in most and 24 in a few. In controlled pollinations, it was found that tetraploids and diploids were cross-compatible and this would account for the occurrence of triploids. Since all tetraploid plants had $2n = 32$, there obviously exists some mechanism for the elimination of aneuploid gametes and zygotes. It is possible that the small, inviable seeds found in tetraploids have aneuploid embryos.

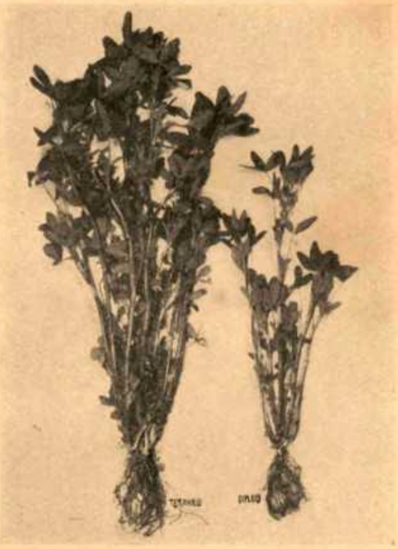

Fig. 1. Eight weeks old seedlings of diploid and tetraploid berseem

Senji. The tetraploid plants were compact and uniformly slow in growth. The yield of fodder was low owing to poor tillering and vigour. The tetraploids were further found to be preferentially disposed to the attack of aphids and downy mildew. There was a mean quadrivalent frequency of 3 per cell at diakinesis, and seed-setting ranged from 25·2 to 45·5 per cent of that found in diploids. The tetraploids and diploids were found to be capable of crossing with each other.

From the results so far obtained, the outlook for evolving tetraploid strains of berseem, superior in yield to the existing diploid varieties, is hopeful. The improvement of seed fertility and the selection of cultures with a good fodder yield as well as a high percentage dry-matter content would be the chief problems requiring attention in future generations. In red clover (*Trifolium pratense*), Julen[2] has stated that no tetraploid strain has yet been released to the market in spite of the pronounced superiority of the tetraploids over diploids in vegetative growth, because of the low seed-setting ability of the tetraploid. In berseem the tetraploids fortunately show an increase in the number of inflorescences per plant and also a low coefficient of realization of multivalents. The ability to cross with each other would, however, necessitate the growing of diploid and tetraploid strains in isolation.

Berseem being an important fodder crop in many sub-tropical regions, the results of the present study may be of interest to several individuals and institutions and we would be glad to supply small quantities of tetraploid seeds to interested workers.

The reasons for the differential growth pattern observed in tetraploids of berseem and senji are not clear. Among the many factors known to condition individual crop response to chromosome doubling, berseem and senji differ prominently only in cell size (Table 1). From the results in Table 1, it is clear that diploid senji has nearly the same cell size as tetraploid berseem. An examination of the available strains of senji for cell size did not reveal any significant intra-specific variability with reference to this character. These results would, thus, support Schwanitz's[3] view that once a species has attained an optimum cell volume, any increase in it would only lead to a depression in growth.

We are grateful to Dr. B. P. Pal for his interest and encouragement and to Dr. N. B. Das for carrying out the chemical analysis.

Effective Magnetic Meridian for Cosmic Rays

RECENT latitude surveys of cosmic-ray intensity made with neutron intensity monitors appear to confirm an earlier suspicion that the dipole approximation to the Earth's magnetic field fails to account accurately for the observed distribution of cosmic rays over the Earth's surface[1-3]. This has been revealed as a result of the much greater latitude variation observed with these instruments compared with charged-particle detectors. The Lemaître–Vallarta theory of the geomagnetic effect predicts a minimum in the cosmic-ray intensity coincident with the geomagnetic equator. Simpson *et al.*[2] have collected the available observations of the equatorial minimum and conclude that the 'cosmic ray equator' fits more accurately the equator of a dipole rotated about the Earth's axis 40°–45° to the west of the 'best fit' dipole. Rothwell and Quenby[3], on the other hand, find the magnetic dip equator fits adequately, and suggest that the Earth's real field rather than the dipole approximation accounts for the observed distribution.

New evidence can be obtained from a determination of the 'cosmic-ray meridian' or line on the Earth's surface along which the rate of change of cosmic-ray intensity is greatest. Depending on which theory proves most acceptable, this might be expected to coincide with the geomagnetic meridian, the meridian of Simpson's rotated dipole, or with the magnetic declination. A determination of the cosmic-ray meridian through Melbourne has been carried out at the University of Tasmania using a monitor counting the disintegration-product neutrons from the local production of stars in lead. The monitor uses two counters and follows closely the design proposed by Simpson. It was installed in a Lincoln bomber provided for the work by the Royal Australian Air Force.

The cosmic-ray meridian was determined by flying the aircraft in a triangular circuit with a vertex at Melbourne (lat. 38° S., long. 145° E., geomagnetic lat. 47° S.) and the base to the north. The aircraft flew at a pressure altitude of 20,000 ft. and completed the circuit twice on June 4, 1957.

If θ is the bearing of the cosmic-ray meridian and r the rate of change of intensity along the meridian then θ and r are related to θ_1 and r_1, the bearing of the first leg of the flight and rate of change along the leg respectively, by the equation: $r_1 = r\cos(\theta - \theta_1)$.

From the six legs, six independent equations in the two unknowns r and θ were obtained. The method of least squares gave the following best values for r and θ: $r = 2{\cdot}4 \pm 0{\cdot}2$ per cent deg.$^{-1}$ latitude; $\theta = 10° \pm 4°$, east of north. The errors are standard errors.

This value of θ can be compared with the following magnetic data for Melbourne: magnetic declination, 10° east of north; geomagnetic meridian, 9·5° east of north; meridian of dipole rotated 45° to west, 14·5° east of north.

It is clearly not possible to choose between the magnetic declination and the geomagnetic meridian; but the experiment suggests the rotated dipole theory may be wrong. It is unfortunate that nowhere in Australia does the difference between the declination and the geomagnetic meridian exceed 2°, and it will be necessary to repeat the experiment elsewhere in order to distinguish between the rival theories. In order to obtain a sufficient rate of change of intensity with latitude, observations should be made between geomagnetic latitudes 30° and 50° north or south. Within these bands suitable localities can be found in the northern hemisphere over the Mediterranean, while Cape Town seems promising in the southern hemisphere. Even more suitable, but rather inaccessible, is the region to the west of the south tip of South America, represented by the point (90° W., 50° S.) in Table 1, which compares the merits of selected localities.

Table 1

	Magnetic declination	Geomagnetic declination	Rotated geomagnetic dipole declination
Melbourne	+ 10°	+ 9·5°	+ 14·5°
Rome	− 2·5	− 16	− 14·5
Istanbul	+ 2	− 15	− 8·5
Cape Town	− 24	− 14	− 12
90° W., 50° S.	+ 24·5	+ 5·5	− 6

Declinations to the east of north are positive.

The experiment described here seems capable of providing new evidence on the influence of the Earth's magnetic field on cosmic rays, and although it cannot be fruitfully pursued in Australia there is every reason to expect valuable results if it is performed in more suitable localities.

Single-Hop Propagation of Radio Waves to a Distance of 5,300 km.

IT has been established that radio waves can be propagated between Ottawa in Canada and Slough in England by a single ionospheric reflexion. The one-hop mode of propagation is seen on the accompanying ionogram (Fig. 1) at frequencies between 27 and 33 Mc./s. This ionogram was recorded at 1800 G.M.T., September 11, 1957. The low-angle part of the one-hop mode is intercepted by the Earth. The high-angle portion is associated with reflexion at apparent heights of 600 to more than 900 km. The other traces correspond to two- and three-hop propagation.

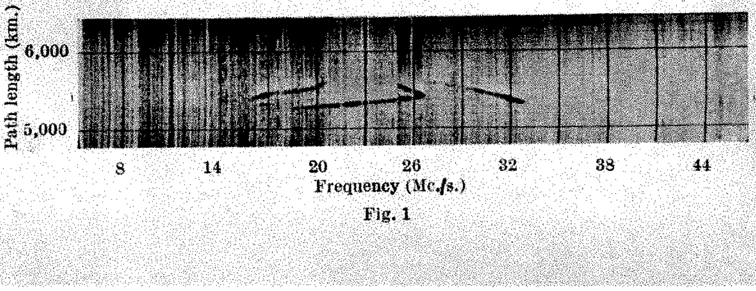

Fig. 1

The identity of the second- and third-hop modes was established by computing the vertical incidence *h'f* curves from the oblique incidence record, a process which involves making a tentative identification of the modes of propagation indicated by the oblique record. If these identifications are correct, the vertical incidence *h'f* curves from the different traces will be congruent; otherwise not.

The possibilities which remain for the mode between 27 and 33 Mc./s. are one-hop, *M*- and *N*-type propagation paths. The *M*- and *N*-type paths involve a reflexion from the *E* layer. Because of the curvature of the Earth, the greatest angle of incidence a radio wave can make with the *E* layer is 81 degrees. The maximum critical frequency for the *E* layer at these latitudes on September 11 was 4·0 Mc./s. As a result, the maximum frequency that could have been reflected from the *E* layer was 25·6 Mc./s. The possibility of the *M*- and *N*-type paths is therefore eliminated. Further, the vertical incidence curve computed from the one-hop is continuous with that from the second- and third-hop modes.

Although one-hop propagation over this distance was known to be a possibility, it was thought to be unlikely, and the greatest distance for one-hop propagation was set[1], for prediction purposes, at 4,000 km. Since the records obtained to date indicate that the one-hop mode occurs with the same reliability as the two- and three-hop modes at times between about 1200 and 2020 G.M.T., a revision of the prediction method for long circuits may have to be considered.

Because predictions at present are made on the assumption of at least two hops for these distances, the frequencies for which regular reflexion from the ionosphere occurs are considerably greater than those anticipated. The maximum usable frequencies run almost daily above 49 Mc./s. at the present time. The mutual interference problem can become serious for users of scatter and other very-high-frequency circuits on frequencies less than 50 Mc./s.

This investigation of propagation modes was made possible by the efforts of the other members of the Applied Propagation Section of the Defence Research Telecommunications Establishment, Canada.

Ionospheric Drift in the *F*2 Region near the Magnetic Equator

It has been suggested recently[1] that the drift of ionization in the *F*2 region of the ionosphere, known to exist from measurements made at middle latitudes[2], is caused directly by the electric field associated with the *S* system of currents in the 'dynamo' region of the atmosphere. The presence of these currents was originally invoked to explain the daily variations in the geomagnetic elements; recent ionospheric analysis[3,4] and direct experiments using rockets have shown that this dynamo region corresponds in height with the ionospheric *E* region. According to Martyn, magnetic lines of force linking the *E* and *F* regions represent directions of high electric conductivity and can be considered as equipotentials. Thus a horizontal north–south electric field in the *E* region can give rise to a vertical component of electric field in the *F*2 region which is greatest at the magnetic equator, where it may exceed by several times the horizontal *E* region field. If this field exists it must give rise to a horizontal drift of ionization in the *F* region in an east–west direction. Martyn[5] has proposed on theoretical grounds that, except in the immediate vicinity of the magnetic equator, the eastward drift velocity resulting from the diurnal potential in the dynamo region should be given approximately by

$$v = [27 \sin\theta(1 - 3\cos^2\theta)\cos\varphi]/H \text{ m./sec.}$$

where θ is the geomagnetic co-latitude of the point in the *F* region, φ is longitude measured positively eastward from the midnight meridian and H is the vertical geomagnetic field component. This equation predicts for high and middle latitudes a drift toward the east by day and to the west by night, which is in agreement with observations. At geomagnetic latitudes less than 35°, however, a phase reversal of this drift should take place, and near the magnetic equator the westward drift by day should reach large values of the order of 200 m./sec.

Results are now available from over a period of years to test these predictions. Drifts in the *F*2 region of the ionosphere have been measured in Singapore (geographic lat. 1·4° N., long. 103·7° E.), 10·0° south of the magnetic equator, over the period September 1953–August 1956. The method used was that originated by Mitra[6] using a pulse transmitter and three receiving aerials, the latter being spaced roughly a wave-length apart along two directions. Records of the variation of the three signal amplitudes in time were obtained on film moving across a display tube at a speed of 10 cm./min. These records were analysed by the method of identifying similarities in the fading patterns[7] and, providing that the fading was of a suitable irregular type, mean time displacements of the signals relative to one another were interpreted as revealing a constant drift of irregular patches of ionization in the *F* region, at or near the height of reflexion of the pulsed signal. A frequency in the range 5·5–6·5 Mc./s. was used according to conditions: records taken when a sporadic *E* echo was present on the same frequency are not included in the present analysis. Measurements were made mostly on three selected days each month over the three-year period, and during this time some 1,000 film records were obtained of average duration ten minutes each. Extreme difficulty was experienced in obtaining results during the midday period from about 10 to 14 hr. local mean time (105° E.) owing to inadequate transmitter power (300 watts peak) and to high absorption in the lower regions of the ionosphere. Of these records only 172 showed irregular fading of a suitable rate ranging from 5 to 25 maxima per minute: many were rejected for showing a very slow fading-rate, indicating uniform horizontal conditions in the ionosphere. The useful ones were reasonably well distributed throughout the year as shown in Table 1, but the number of results in each seasonal grouping itself is insufficient to permit a search for seasonal variations. Consequently the mean annual diurnal variation of drift was examined by grouping the results in hour intervals, centred upon each hour of local mean time. The resultant of each group of drift vectors was found by vector

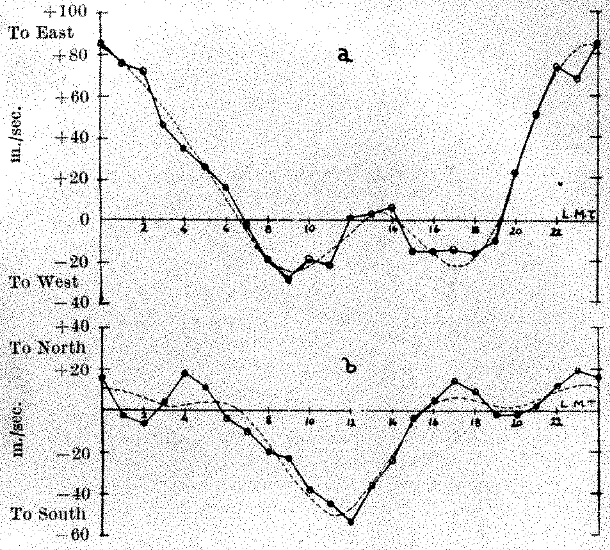

Fig. 1. Diurnal variation: (*a*) east–west drift; (*b*) north–south drift. —⊙—, Experimental results, 3-hr. smoothed values; – – – –, 3-term harmonic approximation (see text)

addition and the mean diurnal variations were plotted of the drift magnitude and direction, and of the east–west and north–south components, following the convention that drifts toward the east and the north are considered positive. The latter two curves were then smoothed by taking a 3-hr. running mean, the value at hour t being averaged with those at $t - 1$ and $t + 1$. This process removes short-period variations and makes the longer-period trends more obvious.

Table 1. Seasonal Distribution of Data

Winter solstice (Nov., Dec., Jan., Feb.)	44
Summer solstice (May, June, July, Aug.)	61
Equinoxes (Mar., Apr., Sept., Oct.)	67

The resulting diurnal variations of the easterly and the northerly components are shown in Fig. 1. The east–west component shows a predominant 24-hr. period, with drifts of up to about 90 m./sec. directed toward the east during the night-time period of 20–06 hr. (ground local mean time) and a smaller drift to the west during daylight hours and up to about an hour after ground sunset. A tendency for the westward drift to be reversed for a short period of 12–14 hr. is shown, although great reliance cannot be placed on this finding due to the shortage of data during this part of the day. Harmonic analysis of the data in terms of 24-, 12- and 8-hr. components yields the following representation:

$$v(E - W) = 18 + 45 \sin \frac{\pi}{12}(t + 5\cdot6) + 22 \sin \frac{\pi}{6}(t + 2\cdot5) + 10 \sin \frac{\pi}{4}(t + 4\cdot1) \text{ m./sec.}$$

with t in hours ($\varphi = 15t°$). The dominant periodicity is thus in phase with the dynamo S field within a few degrees.

The north–south component is much smaller at all times than its east–west counterpart and its daily trend is less well defined. The results for the part of the day containing the most reliable data, from about 14 hr. through midnight to 10 hr., shows no marked trend except for a tendency for northward drifts at night and southward ones by day, each of the order of only 20 m./sec. This is confirmed by the harmonic analysis of the results which yields:

$$v(N - S) = -7 + 23 \sin \frac{\pi}{12}(t + 6\cdot9) + 12 \sin \frac{\pi}{6}(t + 9\cdot9) + 8 \sin \frac{\pi}{4}(t + 2\cdot7) \text{ m./sec.}$$

The results strongly suggest that, subject to statistical uncertainties, the drift of ionization in the $F2$ region at Singapore is predominantly in an east–west direction with consistent easterly drifts during the night of up to about 90 m./sec. and less consistent westerly drifts during the day of up to about 30 m./sec. These movements are in clear phase opposition to those determined at higher latitudes[2] and provide a confirmation, at least in qualitative terms, of the predictions of Martyn[1] concerning the electromagnetic coupling between the E and F regions of the ionosphere.

Fuller details of this work will be published elsewhere. I am indebted to Mr. B. W. Osborne for some of the earlier observations and to Dr. Thong Saw Pak for assistance in maintaining a continuous period of observation.

A New Spectral Characteristic in Solar Radio Emission

The intense radio emissions from active areas on the Sun have been studied since 1942 on 'single' fixed frequencies; but the first 'spectral' or sweep frequency observations were not initiated until 1949, when Wild and McCready[1] at Sydney commenced observations with equipment sweeping the band 70–130 Mc./s. These observations, which were later[2] extended to 40–240 Mc./s., marked a notable advance in solar radio techniques, and greatly simplified the classification of solar radio phenomena.

The purpose of this communication is to describe briefly a new sweep-frequency experiment, brought into operation at the beginning of September 1956 at the Harvard Radio Astronomy Station, and to discuss a new type of solar burst which has recently been observed.

The equipment covers the band 100–580 Mc./s. Its antenna comprises a 8·55 m. (28 ft.) diameter paraboloid, equatorially mounted, with three broad-band primary arrays coaxially mounted at its focus; the collecting area is 41 sq. m. at 100 Mc./s. and 45 sq. m. at 500 Mc./s. The primary arrays are individually connected to three sweep-frequency receivers covering the bands 100–180, 170–330 and 300–580 Mc./s. The receiver noise figures are respectively 6, 7 and 8 db., their bandwidths 0·3, 0·5 and 1·0 Mc./s., and each sweeps its respective octave band three times per second. The receiver outputs are displayed on three intensity-modulated cathode-ray tubes of high resolving power, and are photographed by a continuous-motion 35 mm. camera in which the film moves at approximately 12 mm. per min. Time marks are inserted on the film every minute, and the absolute timing is accurate to ±1 sec. The antenna tracks the Sun automatically, and the equipment records the solar emissions daily from sunrise to sunset[3].

The films record the intensity of the solar radio emissions as a function of frequency and time. It is possible to interpret the frequency co-ordinate in terms of height in the solar atmosphere, if the assumption is made that, for the band 100–580 Mc./s., the radio emission from the Sun at a given frequency originates near a level in the solar atmosphere where the plasma frequency corresponds to that of the emitting frequency. At the present maximum of the solar cycle the frequency band 100–580 Mc./s. is thus transformed to a height-range of approximately 500–50 thousand km. above the photosphere. However, it must be remarked that above an active area the exact heights which are to be assigned to given plasma frequencies are at present uncertain.

Analysis of the records so far obtained reveals the common phenomena of noise storms caused by localized disturbances in the solar corona above sunspot areas: the isolated fast bursts at present attributed to disturbances moving outward through the solar atmosphere with velocities of the order of 30,000 km./sec.; and slow bursts, at present attributed to disturbances moving with velocities of the order of 1,000 km./sec. The radio data recorded during the past twelve months at Fort Davis have been correlated with the occurrence of flares, sprays, and other optical phenomena on the solar disk as recorded at the Sacramento Peak Observatory. It has been found, for example, that the fast bursts, which were previously unassigned to any optical phenomena, are quite commonly associated in time with minor flares. Detailed results of this comparison will be published elsewhere[4].

Fig. 1 shows a remarkable new type of burst, which appears on the records in the form of an inverted U. The essential characteristics define it as a fast burst, and it is typical of 43 such bursts which were recorded during the first 12 months observations. This particular example covers a period of 8 seconds, its turning frequency is 130 Mc./s. and it shows a noticeable broadening on the return path. Of the remaining 42 U bursts, 32 had turning points between 100–150 Mc./s., 6 between 150–250 Mc./s., and 4 between 250–580 Mc./s. The duration of all the bursts was between 3 and 10 sec. Broadening on the return path is rare, and may be caused by dispersion in the velocity components of some fast travelling disturbance which gives rise to the bursts.

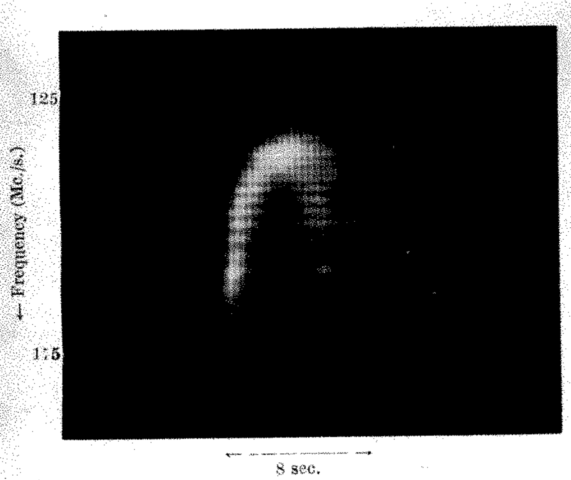

Fig. 1. Inverted U burst: November 29, 1956, 23h. 17m. U.T.

The occurrence of the U bursts has been correlated in time with flares on the solar disk. The radio observations covered 95 per cent of the possible observing time, with one photographic record taken every $\frac{1}{3}$ sec., whereas the optical observations covered approximately 50 per cent of the possible observing time, with photographic exposures in H_α light made on the average once every 2·5 min. Of the 28 U bursts that were recorded during periods of optical observations, 19 coincided with class 1 and 1 − flares, 2 with class 2 flares, and 1 with a class 3 + flare; in 75 per cent of these cases the U bursts occurred not more than 5 min. after the commencement of the flare and within 3 min. of its maximum phase. Six of the bursts had no apparent optical counterparts.

In considering the origin of the fast U bursts it is useful first to examine the possible mechanisms which may give rise to the ordinary fast bursts. Wild, Roberts and Murray[5] have attributed the latter to the motion of a corpuscular stream outward through the corona at a velocity of 30–100 thousand km./sec. (0·1–0·3 c). They tentatively identified such streams with cosmic rays of solar origin, although the velocities are very low compared with those deduced by cosmic ray investigators. The U bursts, on this basis, would require the motion of the stream to be reversed, presumably by a magnetic field. A new theory recently suggested by M. Krook (private communication) considers the problem in terms of fast-travelling shock waves. This theory, which we now briefly outline, neither denies nor precludes the existence of fast-travelling corpuscular streams, although it may be noted that there is no direct experimental evidence confirming the existence of such streams. There is, indeed, as yet no direct evidence showing that the frequency drifts are definitely caused by travelling disturbances—that is, that the change in frequency is associated with a systematic change in position—but at present this is the most plausible interpretation.

The new theory assumes that the prime origin of radio bursts is some gross instability or explosion at a low level in the solar atmosphere near, but not in, an active area. Such areas have strong magnetic fields extending into the chromosphere and corona. The explosion gives rise to large-amplitude waves the actual mode of propagation of which through the solar plasma depends on the strength and configuration of the magnetic field. In considering the propagation of these waves in terms of non-linear theory, Krook shows that an initial transverse disturbance in the region of the magnetic field gives rise to large-amplitude waves propagated along the direction of the field. In this case electron plasma and certain 'transverse' shock waves are associated with large velocities of propagation. These disturbances are strongly coupled with the radio-frequency field because of the presence of the magnetic field, and this coupling gives rise to electromagnetic radiation which can escape, if it is above the plasma frequency. The fast radio bursts are thus associated with the propagation of the electron plasma or transverse shock waves. The U bursts are caused by these waves being guided around the magnetic field lines between regions of opposite polarity.

One would therefore predict that the U bursts should originate from activity in the region of bipolar sunspots. This prediction is confirmed by the observations, which show that 80 per cent of the U bursts were associated with flares, and of these flares 80 per cent occurred over bipolar areas. (This latter result, however, is not unexpected, as nearly 80 per cent of all flares occur over bipolar areas[6].)

This work forms part of a research programme which is supported by financial assistance from the Geophysics Research Directorate of the United States Air Force. We wish to thank Dr. M. Krook for permission to refer to his unpublished work and for many valuable discussions, and Prof. D. H. Menzel for his interest in the experiments. One of us (A. Maxwell) gratefully acknowledges the award of a Fulbright travel scholarship.

Electron Emission from Silicon *p–n* Junctions

It is well known that silicon *p–n* junctions emit infra-red radiation when operated in the forward direction[1] and visible light in the breakdown region of the blocking direction[2,3]. The experimental study of non-thermionic electron emission from solids showed that there is often a correlation between the electron emission and the luminescence, as was stressed particularly in the work by Bohun[4,5]. The question now arises whether the electroluminescence in *p–n* junctions is accompanied by emission of electrons.

The experiments were carried out with grown silicon *p–n* junctions of about 0·2 cm. × 0·2 cm. cross-section cut from a single crystal and etched in a hot mixture of concentrated nitric acid (1 part) and hydrofluoric acid (2 parts). The junctions had a breakdown voltage of about 100. The point of a Geiger counter, operated at normal air pressure (as described in refs. 4, 6), was placed at a distance of 2–7 mm. from the junction; the voltage was about 2,000. With the current flowing in the forward direction we failed to observe any electron emission. This is not surprising, as it is scarcely possible to imagine how the electrons could gain an energy of several electron volts necessary for them to escape from the crystal. However, in the breakdown region of the blocking direction, we did observe emission of electrons. It was accompanied by the usual emission of light. First, it was necessary to ascertain whether the electron emission observed was not caused by the ionizing action of the light emitted from the junction. That this is not the case was shown by covering the emitting junction with a thin sheet of lithium fluoride transparent to visible and ultra-violet light, which immediately stopped the emission. Further, it was verified that the electron emission is not caused by the rise in temperature of the junction when electric current is flowing, but is connected with the current flow itself. Finally, it is considered improbable that the effect is caused by an external gas discharge across the junction, as the voltage was below the sparking potential of air[7].

In the exploratory experiments reported here, no simple relation was found between the intensity of the light emitted and the number of electrons emitted per unit time. The electron emission seems to arise from the spots situated on the surface which emit white light. When only red spots are observed, emission of electrons is either small or is not detectable. However, when the junction breakdown was made 'soft' by slightly working the surface, bright white spots appeared at a low voltage (cf. ref. 2), which were often poor electron-emitters. Maximum emission was observed on freshly etched junctions with 'hard' characteristics operated in the avalanche breakdown region, when the whole junction appeared as an almost continuous bright white line.

In the blocking direction, the electrons in the conduction band can gain considerable excess kinetic energy from the electric field. From the point of view of energies involved, it is plausible that some electrons can leave the crystal if one compares the depth of the conduction band as determined by Esaki[8] (3·47 eV.) with the light emission spectrum from silicon *p–n* junctions, which, according to Chynoweth and McKay[3], extends over photon energies greater than 3·2 eV.

I thank Z. Trousil for preparation of the silicon *p–n* junctions, A. Bohun for his generous help with advice and measuring set and A. Abrahám for his help with the experimental work.

Vacuum Breakdown in Dielectric-loaded Wave-guides

A slow wave structure suitable for an electron linear accelerator or a high-power travelling-wave tube can be obtained by loading a metal wave-guide with a dielectric, either in the form of a coaxial tube or a series of disks.

A low-loss dielectric must be used, and it is also advantageous for the dielectric constant to be high. To meet these and other requirements a most promising material is a titanium dioxide ceramic which has a loss tangent of about 0·0003 and a dielectric constant of about 90 at a frequency of 3,000 Mc./s. In principle it is possible to design structures[1,2] using this material which have a higher efficiency and better frequency characteristics than can be obtained by the conventional method of loading by means of metal disks.

Experimental work at Malvern[1] indicated that when operated at electric field strengths of the order

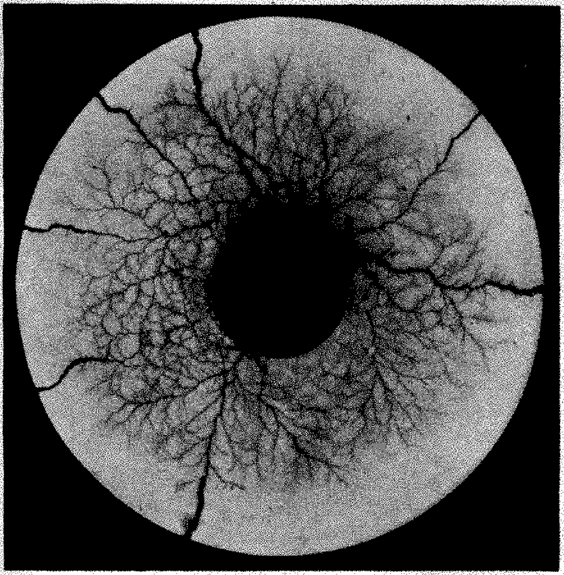

Fig. 1. The disk shown is 3 in. in diameter

of 10^4 V./cm., wave-guides loaded with dielectric disks tended suddenly to develop very high losses. This was thought to be due to a multipactor effect and appeared to occur more readily if vacuum-pump oil were present in the system.

Further experiments have been carried out at Queen Mary College using a resonant cavity 20 cm. long loaded with four dielectric disks arranged at half-wave intervals, power being fed to the cavity by a 2-MW. magnetron operating at a frequency of 3,000 Mc./s. The dielectric disks were of thickness 0·25 in., outer diameter 3 in. and each had a central hole $\frac{7}{8}$ in. in diameter. The cavity was excited in an *E*-mode, the electric field being most intense along the axis. The field was approximately normal to the plane surfaces of the disks, the maximum value of the radial component occurring inside each disk at its mid-plane.

At an axial electric field strength of less than 10^5 V./cm. and at a pressure of about 10^{-5} mm. mercury it is found that a breakdown is liable to occur. This is accompanied by a sudden increase in X-ray output from the cavity; by reducing the field strength the incidence of this breakdown is delayed, but even at an intensity of 10^4 V./cm. it is not entirely eliminated.

The disks sustain an entirely superficial damage, a reduction of the titanium dioxide to a lower, semiconducting oxide taking place. In some cases heavy black tracks containing copper deposits, indicating intense local heating, radiate from the copper wall, ending in a diffuse tree-like formation. Quite distinct from this, more diffuse tracks occur around the central hole, and whereas on some disks these two patterns merge (Fig. 1) on other disks they are found to occur separately. Similar discharge lines were also observed in the work at Malvern.

To avoid poor contact between disk and wall (which could give rise to intense local fields) tests were carried out with disks which had been silvered on their outer edge, but breakdown was not greatly affected.

In recent experiments the disks were coated with a layer of glaze, and a most remarkable breakdown strength resulted. The glaze is a well-known green resistor enamel consisting mainly of lead borate. It is sprayed on and then baked, giving a final thickness of a few thousandths of an inch. Tests carried out with the cavity loaded with such glazed disks gave no breakdown at an electric intensity of 3×10^5 V./cm., the limit attainable with the available power source. Further tests, using two glazed and two unglazed disks in the same cavity, showed no change in the glazed disks despite intense bombardment accompanying the breakdown of the unglazed pair. This field strength is higher than that used in any electron linear accelerator, to our knowledge.

The investigation was supported by a grant from the Atomic Energy Research Establishment.

Absorption Spectra of Rare Earths in Glasses

ABSORPTION spectra of rare-earth ions have been increasingly studied over recent years because of their presentation of band and line absorption in the visible region. Much work has been carried out in both aqueous and non-aqueous solutions, with and without the presence of complexing ions, which demonstrates the influence of these complexing or hydrating ions upon the absorption spectrum and hence upon electron transitions involving the partially filled, lower-lying (4*f*) electron shell to which the band absorption is attributable[1]. Few studies have, however, been reported upon variations in absorption spectra of rare-earth compounds in glassy compositions.

Use of rare earths in optical filters has long been exploited, but the consensus of hitherto known results has indicated that the presence of anions or cations in the glassy state has relatively little effect upon the position, intensity, etc., of neodymium or praseodymium absorption bands in the visible region[2]. Wiedert[3] and Fedotieff and Lebedeff[4] examined the absorption spectra of silicate glasses containing neodymium and found the position and intensity of the main absorption band to be affected by alkali and divalent ions. The effect produced being to some degree dependent upon the ionic size of these ions, band-shifts were attributed partially to inhomogeneities produced in the glass, but Weyl[5] concluded that ionic size of these alkali and divalent ions could not be the only factor influencing the electronic perturbation or transition responsible for the absorption spectra.

In the process of fundamental research on the effect upon physical properties of the inclusion of rare earths in glasses, we have examined, on a preliminary basis, the absorption spectra of a phosphate glass containing varying concentrations of the rare earths. The glass was 'Corning 4600', containing: P_2O_5, 77·6; Fe_2O_3, 2·52; B_2O_3, 8·26; CaO, 5·07; Al_2O_3, 3·98; MgO, 0·91.

As shown in the accompanying spectrograph (Fig. 1), it is evident that, in the phosphate environment, both dissection and wave-length shift occur for the neodymium 576 and 522-mμ bands, absorption

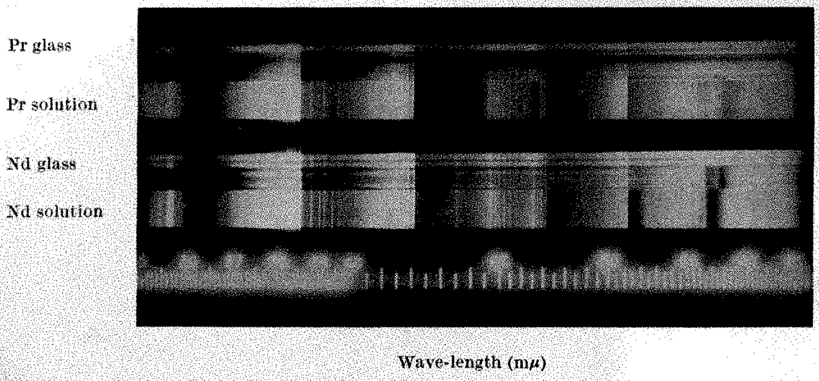

Fig. 1. Absorption spectra of Pr^{3+} and Nd^{3+} in phosphate glass

peaks being shifted to longer wave-lengths. The praseodymium 480-mμ band shifts to a lower wave-length and, while the 440-mμ complex also shows evidence of shift and dissection, both bands are decreased in intensity. Loci and density are compared in both instances with aqueous solutions of the same concentration of rare-earth ion. By analogy with known effects of complex formation upon lanthanon absorption spectra it may be considered, therefore, that in phosphate glasses evidence is obtained indicating the possible existence in this environment of complexed ions of the type $[Ln(PO^4)_x]^{y+}$. Primary comparative evidence correlating band-shift and dissection with thermodynamic stability of complexes suggests that the spectrophotographic data now obtained indicate appreciable difference in the stabilities of the phosphate complexes formed. Application of the simple de Broglie–Schrödinger equation to the wave-length shifts found show the praseodymium and neodymium complexes to differ by some $4 \cdot 55 \times 10^{-5}$ volts in thermodynamic stability, and it is significant that, where phosphate complexes have been employed in rare-earths separation, appreciable separation factors have been obtained[6].

The lanthanons are known to function as network modifiers in phosphate glasses[7], that is, the lanthanon ions are enclosed in PO_4 tetrahedra, but do not play any part in the development or breaking of oxygen bridges. Complex formation would suggest, therefore, the development of a structure such as is shown in Fig. 2.

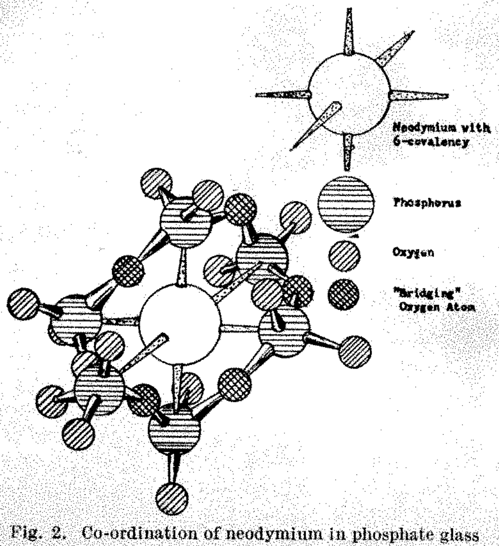

Fig. 2. Co-ordination of neodymium in phosphate glass

It is hoped to extend this preliminary evidence for complex formation in phosphate glasses to the wider field of rare-earth phosphate complexes generally, but any further observations cannot be expected to be available for some time. This communication is therefore presented for the immediate interest of workers in this and allied fields.

Structure and Density of Glass

FROM the chemical composition and density of several hundred glasses[1] the volume v associated with an oxygen ion has been calculated in $A.^3$ or 10^{-24} cm.^{3} units. This volume amounts in simple glass-forming oxides, that is, SiO_2, B_2O_3, P_2O_5, to $21 \cdot 1$–$22 \cdot 7$ $A.^3$.

SiO_2–B_2O_3 mixed glasses show a linear relation between v and R, which is the number of oxygen ions per network-forming atom:

$$R = \frac{O}{Si + B + Al + \ldots} \tag{1}$$

where the chemical symbols stand for the gram atoms present in a given quantity of glass (for example, 100 gm.) of the respective elements. For SiO_2–B_2O_3-glasses the equation

$$v = 3 \cdot 8\,R + 15 \cdot 25 \tag{2}$$

holds with a maximal error of $0 \cdot 3$ per cent.

Sodium silicate glasses yield the equation

$$v = 3 \cdot 8\,R + 14 \cdot 9 \tag{3}$$

with R between $2 \cdot 051$ and $3 \cdot 053$ with a maximal error of $0 \cdot 65$ per cent.

For potassium silicate glasses

$$v = 12\,R - 1 \cdot 2 \tag{4}$$

(maximal error $0 \cdot 7$ per cent). Similar equations have been found for calcium silicate and strontium silicate glasses. The volume v in lead glasses can be approximated with three linear equations for different ranges of R.

If we introduce another network-forming oxide, for example, BeO, Al_2O_3, in sodium silicate glass, the equation (4) remains valid, only the additive constant being modified to a small extent; for sodium silicate glasses containing alumina

$$v = 3{\cdot}8\,R + 15{\cdot}1$$

and for those containing BeO

$$v = 3{\cdot}8\,R + 14{\cdot}6$$

The equation for sodium silicate glasses containing boron trioxide is somewhat more complicated.

Three-component glasses containing network-modifiers such as CaO, MgO, etc., are contracted by ions of smaller size and higher charge and this can be accounted for in a simple way. If we denote the number of moles present in 100 gm. of glass of a network-modifying oxide by Mg*, Ca*, etc., then the contraction brought about by them is proportional to Mg*, Ca*, etc. For soda–lime glasses

$$v = 3{\cdot}8\,R - 5\,\mathrm{Ca}^* + 14{\cdot}9$$

for soda–barium oxide glasses

$$v = 3{\cdot}8\,R - 0{\cdot}5\,\mathrm{Ba}^* + 14{\cdot}9$$

and so forth. If the glass contains also alumina, it must be considered when calculating R. The maximal error is 0·9 per cent.

The case of three-component glasses derived from potassium silicate is similar, only the coefficients of Ca*, etc., being different. For potash–lime glasses an equation derived from (4)

$$v = 12\,R - 12\,\mathrm{Ca}^* - 1{\cdot}1$$

holds with a maximal error of 1·1 per cent. Similar equations have been found for potassium glasses containing other network-modifying oxides.

Calculations for four-component glasses are being made with good results and it is proposed to extend them for five- and multi-component silicate, borate and other glasses.

This makes it possible to calculate the densities of glasses from the composition with an accuracy much greater than the equations proposed earlier allow. Standard errors of the above equations are of course much smaller than maximal errors.

It is evident that the volume of the non-periodic tetrahedral network in glasses is extended when R increases, because R is the measure of the bridging of tetrahedra; the greater R, the fewer corners of tetrahedra are bridged, that is, connected with other tetrahedra. Therefore with increasing R the network expands. Our results show that this expansion is linear, therefore each 'molecule' of Na_2O expands the SiO_2-network by the same amount, but the introduction of a K_2O causes a different amount of expansion. Network-modifying ions contract the network according to the size and charge; the factors are different for sodium glasses and potassium glasses:

Ion	Factor for sodium glasses	Factor for potassium glasses
Mg^{2+}	5	13
Ca^{2+}	5	12
Ba^{2+}	0·5	9
Zn^{2+}	2	—
Ti^{4+}	10	—
Zr^{4+}	10	—

A detailed account of this work is to appear in *Acta Physica*, Budapest.

Large Sand Waves near the Edge of the Continental Shelf

Trains of large ridges, made mostly of sand and orientated normal to tidal streams, occur at many places in the shallow waters around Britain and in other parts of the world. The largest features of this form have recently been found by echo-sounding during cruises of R.R.S. *Discovery II* and R.V. *Sarsia* near the edge of the continental shelf, in depths of about 90 fathoms. It may be useful to describe the work carried out by the former ship on La Chapelle Bank in the neighbourhood of 47° 41′ N., 7° 13′ W.

The patch of sand waves, about 12 miles long, ended abruptly at the edge of the continental shelf (Fig. 1) while the eastern limit was rather ill-defined. The patch extended laterally for 5 miles, but was probably rather more extensive than this for the ridges were large at the limits of the region sounded.

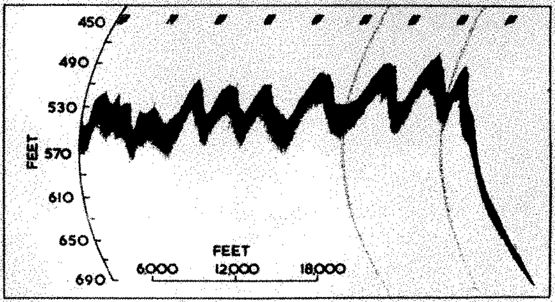

Fig. 1. Sand waves on La Chapelle Bank showing their abrupt termination at the edge of the continental shelf. Section is approximately normal to the crests. The slopes are distorted by the curvature and exaggeration of the depth scale

The crests have an average height of about 25 ft., 40 ft. being the maximum value observed. The mean separation of the crests was about 2,800 ft., although there was considerable variation. The survey consisted of seven lines arranged in a star-like pattern over the ridges. From the differences in the apparent separation of the crests, on sounding lines of different orientation, it was possible to derive the direction giving a true profile. The orientation of the crests was about 110° true, and so the ridges were parallel to the general line of the edge of the shelf.

A large sample taken from a ridge and from a trough, by conical dredge, showed that sand together with some shell gravel were the chief components (median diameter about 0·5 mm.).

These sand waves are of interest for a number of reasons. Their crests have a separation about three times greater than for similar ridges in shallower water. Their presence suggests that the tidal streams on La Chapelle Bank, even at 90 fathoms, are strong enough to transport sand and gravel along the floor. From a study of the slight asymmetry of the profiles of the ridges it was inferred that there must be a net westward transport of sediment. The abrupt western limit of the ridges at the edge of the shelf may mean that the material, once it reaches the top of the continental slope, is carried away (perhaps periodically) into deeper water.

We shall be pleased to hear of other places where such features occur, since we hope to make a more general study.

Absorption Spectrum of the OBr Radical

USING the flash photolysis technique of Norrish and Porter[1,2] I have discovered a spectrum consisting of a series of roughly equidistant diffuse absorption bands which is attributed to the OBr radical. This spectrum was observed when mixtures of the vapours of bromo-substituted methanes and oxygen were irradiated by a flash discharge. Chloro-bromo-methane provided the most intense absorption bands, but they also appeared with the following compounds: CCl_3Br, CCl_2HBr, CBr_2H_2, CBr_4; the strongest bands were also weakly visible in mixtures of oxygen and ethyl bromide.

The intensity of the absorption decayed with a half-life of ½–1 msec., which falls into the range observed for radicals and metastable states. About fifteen diffuse absorption bands have been observed; the maxima, accurate to about 1 A., are given in Table 1.

Table 1

Wave-length (A.)	Frequency	Intensity	$\delta\nu$
3547	28,190 cm.$^{-1}$	weak	
3484	28,700 cm.$^{-1}$	weak	510 cm.$^{-1}$
3435	29,110 cm.$^{-1}$	weak	410 cm.$^{-1}$
3383	29,560 cm.$^{-1}$	strong*	450 cm.$^{-1}$
3336	29,975 cm.$^{-1}$	medium	415 cm.$^{-1}$
3291	30,385 cm.$^{-1}$	medium	410 cm.$^{-1}$
3250	30,770 cm.$^{-1}$	medium	385 cm.$^{-1}$
3209	31,160 cm.$^{-1}$	medium*	390 cm.$^{-1}$
3170	31,545 cm.$^{-1}$	strong*	385 cm.$^{-1}$
3138	31,870 cm.$^{-1}$	medium	325 cm.$^{-1}$
3105	32,205 cm.$^{-1}$	weak	335 cm.$^{-1}$
3070	32,575 cm.$^{-1}$	weak	370 cm.$^{-1}$
3041	32,885 cm.$^{-1}$	weak	310 cm.$^{-1}$
3015	33,165 cm.$^{-1}$	weak	280 cm.$^{-1}$
2990	33,445 cm.$^{-1}$	weak	280 cm.$^{-1}$

* Fairly sharp limit on the short wave-length side.

It is surprising that this band system has never been observed during explosions sensitized by the flash-photolysis of bromine. In an investigation on the emission spectrum of flames to which bromine or methyl bromide had been added, Coleman and Gaydon[3] observed some unidentified faint bands. They mention that the strongest heads appear to be at 3333 and 3384 A. These wave-lengths coincide with two of the strongest bands given in Table 1.

The presence of oxygen, either as a mixture component or as an impurity in the added gas, is a prerequisite for the occurrence of the spectrum. The participation of bromine in the absorbing radical may be inferred from the fact that all the compounds from which the spectrum can arise must contain bromine. An absorber, consisting of more than two atoms, will probably result in a more complex spectrum, and it is difficult to see which common substance, other than BrO·, can result from the various mixtures of substituted bromomethanes and oxygen. Consequently, the radical OBr has been identified as the absorbing species although it is realized that no definite proof has been given.

The assignment of the spectrum to OBr also gives an explanation for the diffuseness of the bands, since it may be expected that the O—Br bond is very weak and thus easily dissociated. Predissociation from the high energy-level of the upper state is very probable. The fact that no absorption spectrum was observed when bromine was flashed in the presence of oxygen (in contrast to the corresponding case of Cl_2–O_2) can also be due to the weakness of the O—Br bond, which makes the reaction:

$$O_2 + Br\cdot \rightarrow BrO\cdot + O$$

energetically impossible. This is also an indication that BrO_2, which is unstable at room temperature, is not the absorbing species. On the other hand, oxygen atoms will not react with bromine atoms in the formation of OBr radicals, since they cannot lose their energy. Indeed, no OBr bands were observed in an experiment in which a mixture of bromine and nitrogen dioxide was flash-irradiated.

It is believed that the formation of the OBr radical is possible in the present experiments as a result of the following occurrence. The flash dissociates the bromo-compound (RBr) into a bromine atom and a radical ($R\cdot$). This will occur only if the bromo-compound has a sufficiently strong absorption. The introduction of more halogen atoms into the molecule increases the extinction coefficient, but decreases the vapour pressure. The maximum concentration of OBr will be greatest for that compound for which the product of extinction coefficient and vapour pressure is optimal. This is the case with $CBrClH_2$ and CBr_2H_2. The radical $R\cdot$ formed reacts with oxygen in the formation of $ROO\cdot$ in which the O—O bond is weakened to a large extent. On a subsequent collision with a bromine atom the OBr radical is formed.

My thanks are due to Prof. R. G. W. Norrish for his interest in the investigation and for the facilities provided in his laboratory, and to the management of the Koninklijke/Shell-Laboratorium, Amsterdam, for the opportunity given to me to undertake this investigation.

Effects of Nuclear Irradiation upon the Decomposition of Lead Styphnate Monohydrate

THE thermal decomposition of lead styphnate monohydrate has been re-investigated prior to a study of the effects of gamma-ray and reactor irradiation upon the decomposition. The two previous studies[1,2] of this decomposition gave quite divergent results.

A decomposition apparatus similar to those employed by other workers[3] was used. Lead styphnate monohydrate was found to decompose reproducibly in the range found by the other investigators, that is, 197–228° C. Because of this small range of temperature available it was controlled to 0·1° C.

The decomposition curves of the present study fell into group *C* described by Garner and Haycock[3]; this group of decompositions is characterized by an initial small, fast gas evolution. This is followed by a linear period which develops into the acceleratory period. The initial gas evolution in lead styphnate monohydrate corresponded to about 1 per cent of the total gas evolved; this phase was followed by a linear region which developed into a parabolic acceleratory period. The inflexion point corresponded to 29 per cent reaction and was followed by a first-order deceleratory period. Rate constants for the acceleratory period were calculated from

$$(P - P_0) = k(t - t_0)^2$$

P_0 was close to the pressure at the end of the linear period and was determined exactly by the method described by Garner *et al.*[3]. The activation energy for $k^{1/2}$ was 36·0 kcal./mol.; this is close to the value of 33 kcal./mol. determined by Tompkins and Young[2]. Many of the present results were similar to those of Tompkins and Young, that is, the general shape of the curves, the location of the inflexion point, the nature of the acceleratory period and its activation energy. However, the initial small gas evolution and linear period were absent in their curves. This discrepancy may be due to the small size of the crystals used in the present work; the average particle size was 7·7μ.

A series of cobalt-60 gamma irradiations (25° C.) up to $1\cdot 8 \times 10^8$ r. did not significantly alter the subsequent thermal decomposition curves. Negligible gas was evolved during an irradiation of 3×10^7 r.; this agrees with a recent finding[4], namely, the total gas evolved from lead styphnate monohydrate was 1/50 that of lead azide after a 3×10^7 r. room temperature irradiation from the 0·41 MeV. gamma-rays of gold-198. The stability of lead styphnate monohydrate towards ionizing radiation as reflected in its subsequent thermal decomposition curves is in marked contrast to lead azide; Groocock[5] has found that X-ray doses of 10^7 r. double the maximum decomposition-rate of α-lead azide. He also found that smaller doses altered the decomposition-rates.

Reactor irradiation greatly affected the subsequent decomposition curves (Fig. 1). Small samples of lead styphnate monohydrate were irradiated in a water-cooled hole of the Brookhaven National Laboratory reactor. Negligible difference was found in the decomposition curves of samples irradiated *in vacuo* and in air; consequently most samples were irradiated in air. A sample decomposed 8 days after irradiation gave a decomposition curve nearly identical with one stored for 49 days and then decomposed; this indicates that the radiation damage which affected the decomposition curves was not removed by storage at room temperature. Negligible decomposition occurred during irradiation; less than 1 micron of gas (Fig. 1) was evolved during irradiation of the sample used for curve *C*.

The maximum rate of decomposition for the longest irradiation period (curve *A*, Fig. 1) is nearly three times that of the unirradiated sample. It is of interest that the maximum decomposition-rate of irradiated samples which did not detonate or show evidence of self-heating was almost twice that of an unirradiated decomposition which showed no tendency to self-heat or detonate. The irradiated material is decomposing at a large number of evenly distributed sites formed from fast-particle damage in the crystal; the unirradiated decomposition is proceeding at a smaller number of more localized regions, for example, cracks, grain boundaries, and other imperfections. Evidently at a given overall reaction-rate the probability of detonation or self-heating is much greater in the latter case.

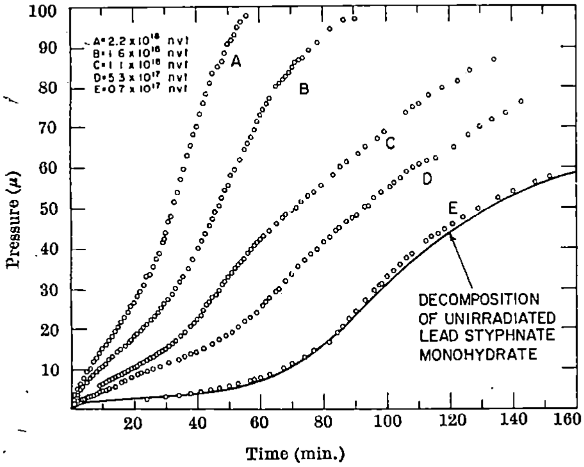

Fig. 1. The thermal decomposition curves of reactor-irradiated lead styphnate monohydrate (222·5° C.)

Further details of this work will appear elsewhere. This work was done at Brookhaven National Laboratory and was supported jointly by the U.S. Atomic Energy Commission and Picatinny Arsenal. I am indebted to Drs. P. W. Levy and J. V. R. Kaufman for their advice and interest.

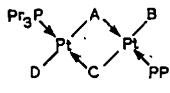
Isomerism among Binuclear Thiocyanato-bridged Complexes

WE earlier described[1] two isomeric platinous complexes of the general formula $(PPr^n_3)_2Pt_2(SCN)_2Cl_2$, which we designated α (melting point, 144–152° C.) and β (melting point, 173–174·5° C.). These were shown to have *trans*-symmetrical structures of type (I), where *A*, *B*, *C* and *D* represent the thiocyanato- and chloro-groups.

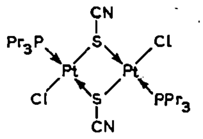
Later, an examination of their infra-red spectra[2] showed that the SCN groups were in bridging positions in both isomers, and hence that both isomers had formula (I) with $A = C =$ SCN and $B = D =$ Cl. It was then suggested that the isomerism must be geometrical and depended upon whether the SCN groups were in a *cis* or *trans* relationship to each other about the PtS_2Pt ring in a molecule of structure (II). This seemed probable because it had always been assumed that the SCN group bridges only through the sulphur atom in platinum(II) and palladium(II) complexes, and because the difference between the frequencies of the SCN stretching modes of vibration in the two isomers is only 7 cm.$^{-1}$.

The possibility that our isomers might be structural, depending upon the structural arrangement of the SCN groups in the bridge as in formulæ (II) and (III), or geometrical as in (III) and (IV) also arose however, together with other less probable possibilities.

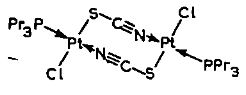
Recently, Lindqvist[3] has found that silver thiocyanate consists of infinite chains of structure $\cdots Ag{-}S{-}C{\equiv}N{\rightarrow}Ag{-}S{-}C{\equiv}N{\rightarrow}Ag\cdots$, in which



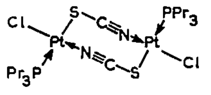
(I)



(II)



(III)



(IV)

the thiocyanate bridge is formed through both the sulphur and nitrogen atoms. We have therefore examined its infra-red spectrum and find that the SCN stretching vibration frequency (2,149 cm.$^{-1}$) is closely similar to those observed in our isomers (α, 2,162 cm.$^{-1}$; β, 2,169 cm.$^{-1}$). This supports the possibility of bridging by $Pt—S—C\equiv N\rightarrow Pt$ in our isomers, and if they have structures (II) and (III) we might expect (III) to be the unstable α-isomer.

We have now examined the structure of the α-isomer by X-rays and do indeed find that it has structure (III). Until we know the structure of the β-isomer, which is now under investigation, the exact nature of the isomerism is uncertain, but it is not a geometrical isomerism of the type previously proposed[2].

We have sought this type of isomerism in other similar complexes and find that the tetrathiocyanate (I; $A = B = C = D =$ SCN) also exists in two isomeric forms. In this case the unstable form is too labile to be isolated in a pure condition.

Full details will be published elsewhere.

A New Superstructure in Gamma-Ferric Oxide

Since 1935 it has been generally accepted that gamma-ferric oxide has the structure of magnetite (spinel structure) with cation vacancies[1]. The vacancies were assumed to be randomly distributed on *all* octahedral iron sites of magnetite. Magnetite contains 8 molecules of Fe_3O_4 in the face-centred cubic unit cell and has the space group $Fd3m$. Gamma-ferric oxide contains $10\frac{2}{3}$ molecules of Fe_2O_3 in the unit cell. Due to the occurrence of a number of extra reflexions in the X-ray diagram of gamma-ferric oxide also occurring in the diagram of ordered lithium ferrite $Fe_8[Li_4Fe_{12}]O_{32}$, and to the fact that the material he used contained some water, P. B. Braun[2] of this Laboratory suggested that in these gamma-ferric oxide specimens the same superstructure occurs as in ordered lithium ferrite. The ideal composition for ordering would be $Fe_8[H_4Fe_{12}]O_{32}$. For compositions between $Fe_8[H_4Fe_{12}]O_{32}$ and $Fe_8[(Fe_{1\frac{1}{3}}\square_{2\frac{2}{3}})Fe_{12}]O_{32}$ the same superstructure reflexions were observed. (The square brackets [ ] denote the cations on octahedral sites, the ordinary brackets ( ) those on the Li-sites in ordered $LiFe_5O_8$.)

If the $1\frac{1}{3}$ Fe-atoms and the $2\frac{2}{3}$ vacancies are randomly distributed on the positions of the four lithium atoms in ordered lithium ferrite the space group of gamma-ferric oxide would be the same as that of ordered lithium ferrite, namely, $P4_13$ (or $P4_33$). This is a sub-group of $Fd3m$. The extra reflexions found by Braun are compatible with a primitive cubic unit cell, but not with the face-centred cubic cell of spinel.

In the X-ray diagrams of a number of commercial samples of gamma-ferric oxide of different origin and in the diagrams of a number of our own preparations we have found a faint reflexion between $\Sigma h^2 = 6$ and $\Sigma h^2 = 8$. In order to be certain that this reflexion is not caused by an impurity we prepared[3] gamma-ferric oxide by decomposing very pure ferrous oxalate dihydrate in an atmosphere of steam and nitrogen followed by oxidation with a mixture of nitrogen and air at 250° C. The water content is less than one-half weight per cent.

In the X-ray diagram made of this material on a 'Norelco' diffractometer with cobalt K_α radiation, even the strongest reflexion of alpha-iron oxide could not be detected. Beside the superstructure reflexions found by Braun, the reflexion between $\Sigma h^2 = 6$ and $\Sigma h^2 = 8$ mentioned above and fourteen others between 12° and 46° (2θ) have been found.

It has been possible to assign indices to all the reflexions using a tetragonal unit cell having $c/a = 3$ and $a_0 = 8{\cdot}33$ A. Absence of the reflexions $00l$ with $l \neq 4n$ points to a fourfold screw axis with a translation of $\frac{1}{4}$ c. There are no indications of a non-primitive unit cell.

On the assumption that the structure is still practically that of spinel, the new unit cell must contain 32 molecules of Fe_2O_3, and the space group is $P4_1$ (or $P4_3$). This is a subgroup of $P4_13$.

The position of the $3 \times 1\frac{1}{3} = 4$ iron atoms and the $3 \times 2\frac{2}{3} = 8$ vacancies distributed on the $3 \times 4 = 12$ lithium sites is determined by the fourfold screw axis. (Iron at $4a$: x,y,z; $\bar{x},\bar{y},\frac{1}{2} + z$; $\bar{y},x,\frac{1}{4} + z$; $y,\bar{x},\frac{3}{4} + z$.) A verification of the proposed structure by calculation of the intensities is in progress and will be published in detail.

In the course of the present work a paper by R. Collongues came to our attention[4]. He found a number of superstructure lines compatible with a tetragonal unit cell with $c/a = 2$. The discrepancy between his and our results is due to the fact that he has observed a smaller number of extra reflexions and because his samples contain alpha-ferric oxide.

Mineralogy and Crystal Structure of Greenalite

Greenalite, a hydrous ferrous silicate, was first described in detail by Leith[1]; heavy contamination by other constituents of the iron-ore in which it occurred made analysis difficult. Discrepancies between analyses of the mineral by Leith and by Jolliffe[2] were ascribed by Gruner[3] to different methods of correcting for insoluble silica. Gruner found the X-ray pattern to be very similar to that of chrysotile, but different from chlorite, micas and chamosite. Gruner ascribed to greenalite a unit cell similar to chrysotile, although he found it impossible to tell whether the β-angle differed from that of chrysotile, 93° 16′. Gruner's analysis corresponded to a structural formula of $Fe^{2+}{}_{4\cdot5}Fe^{3+}{}_{1\cdot0}(Si_4O_{10})(OH)_8$.

Recent research[4] on chamosite from sedimentary ironstones, also a hydrous ferrous silicate, has shown it to be a member of the kaolin–antigorite group with an orthohexagonal unit cell, and layers stacked in an orthohexagonal, monoclinic or disordered sequence[5]. Since greenalite and chamosite were similar in composition, Gruner's finding that their X-ray patterns differed was unexpected, and a re-examination of greenalite was made with a Brindley powder camera. The greenalite diagram closely resembled chamosite, much more so than chrysotile. Contaminants gave sharp lines, while the greenalite gave broader lines which were due to the principal orthohexagonal indices. In particular, the clarity of the $20l$ series showed that, unlike many chamosites[6], greenalite has little or no a-disorder. No monoclinic form was observed.

In comparing cell dimensions, the a_0 and c_0 values for chrysotile have been transposed, but the double b_0 and c_0 dimensions have not been altered (Table 1).

Table 1

	Chrysotile (Gruner)	Greenalite (Gruner)	Greenalite (present work)	Lateritic chamosite (Brindley)	Ironstone chamosite (Brindley and Youell)
a_0	5·32	5·32	5·54	5·38	5·40 kX.
b_0	18·6	18·6	9·59	9·31	9·36 kX.
c_0	14·5	14·5	7·19	7·03	7·10 kX.
β	93° 16′	? 93° 16′	90°	90°	90°

The hydrous ferrous silicates vary considerably in chemical composition, giving rise to differences in unit cell dimensions even among specimens of the same mineral. Two factors are important in comparing the unit cells of greenalite and chamosite. Greenalite has very little replacement of tetrahedral Si by Al, compared with chamosite. This factor by itself would produce a reduction of a_0 and b_0 by the same fraction, and a c_0 increase of about twice this fraction. The octahedral sites in the greenalite structure are nearly all filled by the large ferrous ion, whereas in chamosite appreciable substitution by the smaller Al ion occurs. Greenalite would be expected to have larger values of a_0, b_0 and c_0 due to this factor, with the effect about four times as great for a_0 and b_0 as for c_0. Combination of these two factors in greenalite produces a structure in which all parameters are greater than in chamosite, the increase being 3 per cent for a_0 and b_0 and 2·3 per cent for c_0.

Greenalite oxidizes and becomes dehydrated to a high-temperature ferric form, but this is not so well defined as in chamosite. The oxidized and sometimes partially leached form of chamosite occurs extensively in weathered sedimentary ironstones. It seems likely that a similar phenomenon occurs with greenalite in the field, giving rise to Jolliffe's 'Mineral X'. Despite the similarity of the two minerals, greenalite is virtually free from alumina, whereas in most chamosites, the ratio Al/Si is very nearly 1. In view of the differences in environment and deposition of greenalite and chamosite, resemblance in all respects would not be expected. In both cases, however, the low iron content of the hydrous silicates relative to iron oxides and siderite, and the high silica content, render rocks containing a high proportion of these minerals unworkable as iron ores, and intractable to beneficiation processes based on physical methods.

A full account of this work will be published later.

Rapid Sedimentation of Proteins through Starch

Packed potato starch, which has been widely used for zone electrophoresis, offers certain advantages when employed as a supporting medium in the ultracentrifuge. Boundaries are stabilized, making recovery of fractions easier, and the proteins thus far studied sediment at least twice as rapidly in starch as in free solution. This has been shown in experiments with rat hæmoglobin (1 per cent) or bovine serum albumin (1–5 per cent) stained with bromphenol blue centrifuged in starch and in free solution under identical conditions. Centrifugation was done in the 'Spinco' Model *L* centrifuge by use of an *SW* 391 swinging-bucket rotor at approximately 20°. A 0·1 ionic strength *p*H 7·5 phosphate–sodium chloride buffer was used in each instance. The 'Lusteroid' centrifuge tubes were completely filled with a slurry of starch–protein mixture and accelerated briefly to 20,000 r.p.m. After deceleration, excess fluid was removed and more starch slurry added. The packing procedure was repeated a second time and excess fluid again removed. It is important that the starch suspensions be freshly made, since part of the starch appears to dissolve slowly with time, destroying the effect observed here.

In the experiment shown in Fig. 1, tube *a* was filled with 5 per cent bovine serum albumin and tube *b* with 5 per cent stained bovine serum albumin in starch. After 5 hr. at 37,000 r.p.m., the rotor was decelerated without braking and the tubes gently removed. The distance the protein sedimented in free solution was measured by a method previously described[1]; the sedimentation distance in starch was estimated visually. Comparison of tubes *a* and *b* reveals that the protein moves through starch with a fairly well resolved trailing edge at about twice the rate observed in free solution. Tubes *c* and *d* contain uncentrifuged stained bovine serum albumin in starch and starch in buffer for comparison with tube *b*. No colour was observed in the upper fourth of tube *b*. Sectioning of the tube showed that the

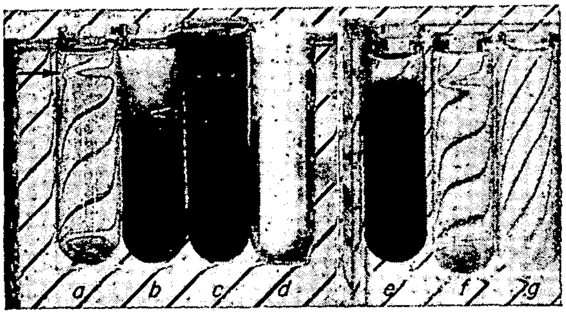

Fig. 1. 'Lustcroid' centrifuge tubes containing (*a*) 5 per cent albumin sedimented 5 hr. at 38,000 r.p.m.; (*b*) 5 per cent stained albumin in packed starch after 5 hr. at 38,000 r.p.m.; (*c*) 5 per cent stained albumin in starch after brief centrifugal packing; (*d*) starch in buffer for comparison with upper portion of tube *b*; (*e* and *f*) 5 per cent albumin centrifuged 6 hr. at 37,000 r.p.m. Presence of stain in tube *e* does not change sedimentation-rate appreciably. Tube *g* contains water

sedimentation was not confined to the edges. Staining the bovine serum albumin does not alter its sedimentation noticeably, as is shown in a separate experiment (tubes *e* and *f*). Further refinements will be required for more accurate measurements, since, in these observations, the effect of reversible packing of the starch during centrifugation could not be measured and has been neglected. One effect of such packing would be to increase the distance the boundary must sediment through free solution before entering the starch. This could decrease the sedimentation-rate observed because of slower sedimentation in free solution, or could increase the observed rate because fluid expressed from the starch during centrifugation would fill a greater length of the tube while in starch than when overlaying it. We checked the latter point by sedimenting the protein all the way to the bottom. The results confirm the finding of a more rapid sedimentation-rate in starch by at least a factor of 2. Experiments are now in progress to adapt the analytical ultracentrifuge cell to the solution of the problem of reversible packing.

The presence of the starch granules might be expected to decrease the sedimentation-rate by increasing the length of the path the protein must travel and by interacting weakly with it. The opposite effect observed (an increase in sedimentation-rate) is believed to be caused by the presence of a local increase in protein concentration on the centripetal side of the starch grains caused by collision of the sedimenting protein molecules with the starch particles. Since the average velocity caused by Brownian movement of the proteins studied here (and actually up to a molecular weight of several million) exceeds the sedimentation velocity obtainable in the 'Spinco' Model *L* ultracentrifuge, the protein molecules would not be held firmly against the starch, but would form small zones or caps of slightly higher concentration. These zones would tend to decant off the starch grains and flow or stream down between them until collision with another starch grain or randomization by diffusion occurred. Flow of this type may be termed 'microdecantation'. The experiments reported were originally carried out to see whether such flow could be exploited. Microdecantation offers a number of rather unusual possibilities, since it appears that an optimum particle-size exists the sedimentation-rate of which in starch will be faster than those of either larger or smaller particles. The application of these findings to equilibrium centrifugation, to continuous preparative ultracentrifugation, and to the sedimentation of larger molecules such as deoxyribonucleic acid will be discussed elsewhere.

The Anionic Polyelectrolyte, Polyethylene Sulphonate, as a New Anti-neoplastic Agent

Heparin and related sulphomucopolysaccharides have been recognized as mitotic inhibitors for many years. Although heparin has been shown to inhibit cell division in many biological systems, including animal tumours[1,2], its anticoagulant activity diminishes the likelihood of its producing anti-neoplastic activity in man at safe dose-levels.

The pharmacological properties of several potential substitutes for heparin have been explored in man. Alopecia, ulceration of the gastro-intestinal tract, and finger-nail alteration observed as toxic manifestations in some patients who received these compounds may have been evidence of antimitotic effects on normal rapidly growing epithelium[3]. Screening studies of anti-neoplastic activity of several of these anionic polyelectrolytes, originally synthesized as heparin substitutes for their anticoagulant or lipolytic activity *in vivo*, have been undertaken in this Institute.

This communication concerns the polyethylene sulphonates (provided through the courtesy of the Upjohn Company, Kalamazoo, Michigan), sodium salts of polymers of ethylene-sulphonic acid. For equivalent anticoagulant activity, many of the polymers of polyethylene sulphonate have greater lipolytic activity than heparin (Coleman, L. L., personal communication). These same polymers, active in lipolysis, have been shown in our work to produce substantial suppression of growth in mouse tumours. Several such polymers with molecular weights ranging between 15,000 and 35,000 have the same anti-neoplastic activities, and are considered here as one compound.

Ehrlich ascites tumour clone 2 and Krebs 2 carcinoma in ascitic form have been maintained and studied in Swiss mice. Uniform saline suspensions of ascites tumours were transplanted subcutaneously along the chest wall. Leukemias *L* 1210, and strains of *L* 5178, sensitive and resistant to amethopterin, were maintained in *dba* 2 mice in ascites form and transplanted subcutaneously. Carcinoma 755 in *C* 57 black mice and sarcoma 180 in Swiss mice were maintained and transplanted as solid tumours. Tumour transplantation into mice of one sex was performed; the mice were then allocated 3–5 to a cage at random. Treatment began one day after tumour inoculation, except with *Ca* 755, where there was an interval of seven days after inoculation. Solutions of polyethylene sulphonate, maintained in the frozen state until use, were injected in 0·5 cm.^{3} saline into the dorsal subcutaneous tissue. Volume of injected material and distance from tumour site were such that local effect of the drug from high concentration in the vicinity of the tumour transplant was improbable. Subcutaneous tumours were excised and weighed one day after termination of drug treatment, on the

* Percentage inhibition = (control weight − treated weight)/control weight × 100

† *Ca* 755—Treatment began seven days after tumour inoculation

sixth or eighth day. Treated and control groups numbered 10–20 mice. Sex of the host was apparently not a factor influencing response to administration of the drug.

A total of sixty-two consecutive experiments using polyethylene sulphonate at dose-levels of 100–200 mgm./kgm./day in one subcutaneous injection were performed. Eight of these were considered unsuitable for analysis because of deaths from hæmorrhage in excess of 33 per cent. The degree of observed inhibition in these eight experiments, however, was comparable with the other fifty-four. The results of the remaining fifty-four experiments are shown in Table 1. The overall survival-rate for controls was 98 per cent and for treated mice 88 per cent (range 67–100 per cent). In forty-eight of the fifty-four experiments average loss in weight of treated animals did not exceed 10 per cent of their initial weight. Intraperitoneal injection of polyethylene sulphonate produced inhibition of tumours of similar extent to subcutaneous administration, but at greater cost in toxicity. The inhibition of Krebs 2 and Ehrlich 2 tumours, although moderate, is highly significant on statistical analysis. The observed suppression of growth in the other five tumours is substantially greater. Increase of dose to 200 mgm./kgm. inhibited growth more than treatment at 100 mgm./kgm. in all tumours studied, although usually at greater cost in toxicity (93 per cent survival at 100 mgm./kgm./day versus 83 per cent survival for 200 mgm./kgm./day). Further increase in dosage caused greater tumour inhibition, but the greater mortality from hæmorrhage was prohibitive.

The anti-neoplastic effect of polyethylene sulphonate can be recognized without encountering anticoagulant properties of the compound. In fifteen of the fifty-four experiments in Table 1, inhibition of tumour growth up to 50 per cent (average 33 per cent) was seen without hæmorrhagic deaths.

Survival studies involving Krebs 2 tumour in the ascites form were considerably foreshortened by intraperitoneal hæmorrhage from drug toxicity. Studies of combinations of polyethylene sulphonate with protamine, and with other polycations which can reverse the anticoagulant properties of the drug, are in progress.

At equivalent weights of drug administered, polyethylene sulphonate produces tumour inhibition of greater degree with less toxicity than does heparin in unpublished studies of our own. In addition to inhibition of tumour growth, anticoagulant effect and lipolysis, polyethylene sulphonate has also been shown to share certain physiological properties with heparin: the production of diastolic cardiac arrest in isolated frog-heart preparations, reversible by calcium, production of bone disease resembling osteoporosis and gastro-intestinal ulceration on chronic administration (Coleman, L. L., personal communication). Studies could reasonably be extended by others to establish whether polyethylene sulphonate shares other characteristics of heparin: diminishing the activities of hyaluronidase[4], fumarase[5], ribonuclease[6], deoxyribonuclease I[6], and antagonism by adenosine triphosphate in several biological systems[3,7]. Polyethylene sulphonate and heparin in low concentrations have already been shown to inhibit deoxyribonuclease II of human leukæmic leucocytes and mouse tumours (Tunis, M., Regelson, W., Weinfeld, H., and Sandberg, A., unpublished work).

Pathological study of treated mice, aside from hæmorrhages, showed only reticuloendothelial hyperplasia in the spleens of animals which received the polymers of polyethylene sulphonate with higher molecular weights. There are no apparent histological differences between treated and non-treated tumours as seen with hæmatoxylin–eosin or Sudan III staining.

We have observed that polyethylene sulphonate, a polymer with many chemical and physiological properties similar to heparin, has produced inhibition of growth in seven transplanted mouse tumours. This activity can be separated from the lethal anticoagulant effects of the compound by adjustment of dose. Exploration of the possible anti-neoplastic activity of other anionic polyelectrolytes has begun in this Institute, and is indicative of a new class of anti-neoplastic agents.

This investigation was supported in part by a research grant, C–2821, from the National Cancer Institute, National Institutes of Health, Public Health Service.

α-Amino*iso*butyric Acid, β-Hydroxyleucine, and γ-Methylproline from the Hydrolysis of a Natural Product

We have been examining the structure of an antibiotic supplied to us by the Pharmaceuticals Division of I.C.I., Ltd.; but the work has now had to be suspended for lack of material. As there will be a considerable delay before it can be resumed, some of the results, which may have a wider interest, are recorded here.

The antibiotic (I.C.I. No. 13959), which is unusually active against infections of *Trypanosoma congolense* in mice, was produced by a strain of *Paecilomyces*. It was extracted by ethyl acetate and purified by chromatography on silica and then on magnesium carbonate. The second column separated two non-crystalline fractions with antibiotic activity, eluted by benzene and methanol respectively. Most of our work has been done with the former; but a cursory examination suggests that the latter has similar structural features to those reported below.

Several neutral amino-acids were produced from the antibiotic by hydrolysis with 6 *N* hydrochloric acid at 100° for 48 hr. They were separated by ascending two-dimensional paper chromatography with butan-1-ol (10) : ethanol (10) : water (5) : propionic acid (2) and then butan-1-ol (10) : acetone (10) : water (5) : di*cyclo*hexylamine (2)[1]. Five spots were produced with the following ninhydrin colours and R_F's in the two systems: *A*, blue, 0·60, 0·65; *B*, blue appearing only on heating to 100°, 0·50, 0·36; *C*, yellow, 0·45, 0·42; *D*, grey–green, 0·49, 0·86; *E*, greenish blue, 0·33, 0·35. On a semi-micro scale these amino-acids were separated almost completely by a 61-cm. column of 'Dowex'-50 × 2 cation-exchange resin[2]. They were eluted by *N* hydrochloric acid in the order *E*, *B*, *D*, *C*, *A*, and then recovered from their hydrochlorides with the aid of a short column of 'Dowex'-1 × 2 anion-exchange resin; amino-acids *A*, *B*, and *D* were obtained crystalline.

The identification of *A* with L-leucine was made by elementary analysis, infra-red spectrum, optical rotation and paper chromatography in six solvent systems. Likewise, *B* was found to be α-amino*iso*butyric acid. This amino-acid has not previously been obtained from natural sources; its closest relatives are α-methylserine, also a component of an antibiotic[3], and 1-amino*cyclo*propane carboxylic acid, which has recently been found among the free amino-acids of pears and cowberries[4].

Like proline and hydroxyproline, amino-acid *C* gave a yellow colour with ninhydrin and a blue one with isatin, but was clearly differentiated from them by paper chromatography. It was partly crystalline but could not be recrystallized satisfactorily; the crystalline reineckate had an analysis (C, 25·4; H, 4·4; N, 21·9 per cent) not far from that required for a homologue of proline ($C_6H_{11}O_2N.Cr(SCN)_4(NH_3)_2H$ requires C, 26·8; H, 4·0; N, 21·8 per cent). As amino-acid *C* was distinguished from pipecolic acid by paper chromatography and the ninhydrin colour, the most likely structure was that of γ-methylproline, which has previously been found among the free amino-acids of apples[5]. Indeed, it appeared on paper chromatography to be identical with one component of a partially purified extract from apple juice, generously supplied by Mr. L. F. Burroughs of Long Ashton, Bristol. We therefore regard *C* as γ-methylproline; but proper identification must await comparison with a synthetic sample. Synthesis, which we are undertaking, may also answer the problems of diastereoisomerism and optical activity.

The conversions of amino-acid *D* into leucine by hydriodic acid and into glycine by sodium hydroxide[6], and its rapid destruction by periodate, were consistent with its formulation as β-hydroxyleucine. The DL-*threo* and *erythro* isomers of this amino-acid were synthesized by a method similar to one devised for the threonines[7]. As they were readily separable by paper chromatography in butan-1-ol saturated with 10 per cent aqueous diethylamine[8], it was possible to assign the structure D- or L-*threo*-β-hydroxyleucine to the natural product; its infra-red spectrum resembled that of the DL-*threo*-amino-acid but they were not identical. This is the first time that β-hydroxyleucine has been obtained from natural sources. Amino-acid *E* was shown to be β-alanine by paper chromatographic comparison and by the mixed melting point (140–141°) of its β-naphthalenesulphonyl derivative.

Hydrolysis of the antibiotic also produces basic substances; but discussion of their structures and of that of the antibiotic itself would be premature.

We thank Dr. W. A. Sexton for making available the antibiotic which had been extracted and purified by Dr. A. D. Ainley and Dr. C. T. Calam. We are also grateful to the Salters' Company for a Fellowship (to R. C. S.).

3β-Methoxy-5-androsten-16β-ol: a Cytostatic and Fungistatic Steroid

In our search for a superior 'androgenic' steroid for use in human cancer of the breast, we have submitted many such steroids to study in the zebra fish-egg test[1]. Using this bioassay method for determination of cytostatic activity, intensely cytostatic compounds in the C-19 or 'androgenic' steroids are difficult to find. To date, our most active compound is 3β-methoxy-5-androsten-16β-ol[2], this steroid having *LD*50 of 1–2 parts per million. It is very interesting that this compound is the exact analogue of the steroidal œstrogen 3-methoxyœstra-1-3,5(10)-trien-16β-ol[3], which had been previously selected by us for use against cancer of the prostate, based on fish-egg cytostasis[4]. Also of much interest in steroidal cytostasis is the fact that methyl ether formation at C_3 of 5-androstene-3β,16β-diol[2] so strongly enhances the activity of this diol, which itself is virtually inactive (*LD*50 > 10 p.p.m.). Methyl ether formation at C_3 of 1,3,5(10)-œstratrien-3,16β-diol[3] had also caused an enhancement (100 per cent) of cytostatic activity in the fish-egg test.

We have also found 3β-methoxy-5-androsten-16β-ol to be among the strongest of fungistatic steroids so far tested by us. It is particularly active against

Histoplasma capsulatum tested in 'Difco' Sabouraud's dextrose agar in culture plates[5], having a fungistatic effect equal to that of stilbamidine di-isethionate.

Table 1 summarizes the comparative effect of 3β-methoxy-5-androsten-16β-ol and stilbamidine di-isethionate, assayed simultaneously against *H. capsulatum*.

Curiously, 3-methoxyœstra-1,3,5(10)-trien-16β-ol is relatively ineffective against *H. capsulatum* in the culture plate, producing only partial fungistasis at 10 parts per million.

We wish to express our appreciation for the generous support of this research by the Lasdon Foundation, Inc., Yonkers, New York.

A Colour Reaction of Vitamin E with Vitamin K and Cysteine

A FEW crystals of vitamin K (2-hydroxy-3-methyl-1,4-naphthoquinone) and of cysteine (chlorhydrate) are added to a solution containing 7–20 µgm./ml. of vitamin E (sodium phosphate of alpha-tocopherol). The solution is heated up to boiling point. About one minute after boiling the solution takes a blue tint. The intensity of colour is proportional to the content of vitamin E and increases during the following three minutes, finally rendering the solution opaque.

The reaction was not obtained when we tried to replace cysteine by the following substances : cystine, ascorbic acid, sodium hydrosulphite, glutathione, glucuronic acid, methionine, and thiourea.

Nor was the reaction obtained, moreover, when we tried to replace vitamin K by the following compounds : 1,4-naphthoquinone, 2-methyl-1,4-naphthoquinone, sodium-beta-naphthoquinone-4-sulphonate ; 2,4-dinitro-1-naphthol-7-sulphonic acid, 2-methyl-1,4-dipropyl-1,4-naphthoquinone, 1,8-dihydroxy-naphthalene-3,6-disulphonic acid, dimethyl-alpha-naphthylamine, alpha-naphthol and beta-naphthol.

The colour reaction is completely inhibited by *p*H 2 (hydrochloric acid) or *p*H 11 (sodium hydroxide).

If cysteine or vitamin K is added not as crystals but as a solution, even when recently prepared, only an indefinite tint is produced and the solution immediately becomes opaque.

Vitamin E must be the first substance present in the solution and the crystals of cysteine and vitamin K must be added simultaneously before heating. This sequence is fundamental.

Raising the temperature accelerated greatly the completion of the colour reaction, but the latter is produced also without heating.

The solution containing vitamin E, vitamin K and cysteine exhibits a yellow fluorescence, the intensity of which is not apparently proportional to the concentrations of any of the three ingredients. The same fluorescence is produced without vitamin E, but not in the absence of vitamin K.

Extraction with organic solvents added to the solution of the three compounds was tried. Ether takes a red tint ; the intensity of the colour is apparently proportional to the quantity of vitamin E present in the solution. The red ether solution gives a blue fluorescence. Petroleum-ether or acetone do not influence the results with ether. A drop of $N/10$ sodium hydroxide extinguishes the red tint of the supernatant ether almost completely, whereas the blue tint of the original solution takes on a colour between green and yellow, depending on the amount of vitamin E present. Variations of fluorescence are very slight.

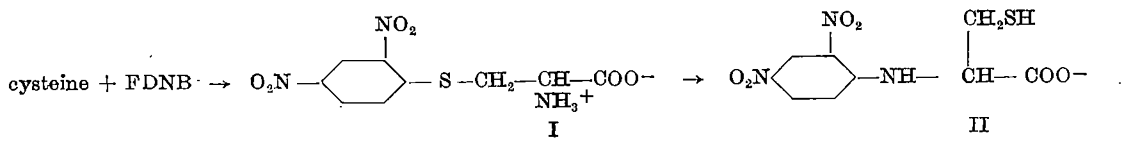
Molecular Rearrangement in the Reaction of Cysteine with 1-Fluoro-2,4-Dinitrobenzene

SINCE 1-fluoro-2,4-dinitrobenzene has fungicidal properties[1] and is useful for the end-group and sequential analysis of proteins, its reaction with cysteine was investigated as part of a study of the mechanism of action of toxicants which function as alkylating agents. In the presence of ten molecular equivalents of cysteine the reaction was first order with respect to the disappearance of 1-fluoro-2,4-dinitrobenzene in dilute aqueous buffer. At *p*H 7·0



and 29° C. the half-time for the reaction was about 38 min. at an initial concentration of $2 \cdot 7 \times 10^{-5}$ mole of 1-fluoro-2,4-dinitrobenzene per litre. When the reaction was followed by measuring the formation of the final product by absorption readings at 360 mμ, first-order kinetics were not strictly obeyed and the half-time was about 40 per cent longer. This suggested the presence of a transient intermediate.

Since it was known that 1-fluoro-2,4-dinitrobenzene reacted with cysteine and other sulphydryl compounds about 10^3 times more rapidly than with compounds containing only primary amino- and carboxyl-groups[2], it was suspected that alkylation of the mercaptan group occurred initially followed by a rearrangement to yield an N-substituted product. Thus the sequence of events was probably as indicated in the scheme above.

Measurements made with a recording spectrophotometer revealed that the absorption maximum of the products shifted from 340–345 mμ at the beginning of the reaction to 360 mμ after it was complete. These values agreed very closely with the maxima observed for the reaction products of 1-fluoro-2,4-dinitrobenzene with mercaptoacetic acid and glycine, respectively, indicating that alkylation of the amino group was preceded by alkylation of the sulphydryl group in the case of cysteine.

Further evidence for a rearrangement was obtained by acidifying a reaction mixture with hydrochloric acid at half-time and extracting with an equal volume of benzene. After separation of the phases, yellow colours appeared in both the aqueous and hydrocarbon layers. However, when the aqueous layer was re-extracted 15 min. later, all the colour appeared in the benzene layer. This can be explained if it is assumed that product I was positively charged in the acid medium because it contained a primary amino group, while product II was uncharged because the electronegative dinitrophenyl group reduced the basicity of the amino group. Thus product I should remain in the aqueous phase while product II should be extracted into the benzene since the ionization of its carboxyl and sulphydryl groups would also be repressed by the presence of hydrochloric acid. The first extraction should prevent any further formation of I since the reactants (cysteine and 1-fluoro-2,4-dinitrobenzene) would appear in different phases. Therefore, after sufficient time had elapsed for I to become rearranged to II, all the yellow-coloured material should migrate to the benzene layer on re-extraction.

The final reaction product was isolated from excess cysteine by solvent extraction from an acid medium. It gave an intensely coloured yellow precipitate with silver nitrate, a positive nitroprusside test, and reduced iodine, thus providing evidence for the presence of a free sulphydryl group.

It is not known whether this occurrence is of any importance in the alkylation of enzymes or other proteins by toxicants, but it suggests a mechanism by which otherwise unreactive receptor sites could be activated by adjacent groups. Thus the amino-group of cysteine was alkylated indirectly at a rate about 10^3 times faster than was observed for the direct alkylation of the amino-groups of methionine and other similar compounds.

Detection of α-Ketoglutaric Acid and Other Keto-Acids on Paper Chromatograms with Ninhydrin

NUMEROUS paper chromatographic methods exist for the detection of keto-acids as their 2,4-dinitrophenylhydrazone, semicarbazone, and quinoxaline derivatives or as the free acids[1]. By the ninhydrin spray test for amino-acids on paper chromatograms, it is now possible to detect as little as 1 μgm. per sq. cm. of α-ketoglutaric acid on chromatograms of plant extracts. The procedure described here thus permits simultaneous detection of the amino-acids on the same chromatogram.

Soluble plant extracts or known keto-acids were chromatographed on Whatman No. 1 paper, water-saturated phenol being used as the first solvent and *n*-butanol–propionic acid–water[2] for the second. After drying, the chromatograms were sprayed with 0·1 per cent solution of ninhydrin in 95 per cent ethanol containing 2 drops of 2,6-lutidine per 100 ml. of reagent. The chromatograms were heated at 90° C. for 3–5 min. for development of the amino-acid colours, after which the papers were allowed to stand in the dark at room temperature for at least 24 hr. The resultant reaction with α-ketoglutaric acid (recrystallized from acetone and benzene) was observed as an intense yellow fluorescent colour under 3660-A. light or as a faint yellow colour in visible light. α-Ketoglutaric acid migrates near glutamic acid with an R_F in water-saturated phenol of about 0·2 and in *n*-butanol–propionic acid–water of 0·3.

A number of other keto-acids were also tried (Table 1). Only certain α-keto-acids reacted; none of the β-keto-acids gave positive reactions. Other organic acids such as citric, malic, fumaric, lactic, glyceric, succinic, and glycolic failed to react. Less than 1 μgm. of α-ketoglutaric acid, when spotted on a paper, could easily be detected by the procedure; however, 10–20 μgm. were chromatographed for testing. For further exploration of the variables influencing the reaction, only α-ketoglutaric acid was used since the reaction with this acid was more sensitive and faster than those with the other keto-acids tested.

The reaction with ninhydrin was apparently specific in that hydrindantin and alloxan did not react under the conditions used. Substitution of 1,3-indane-dione in the procedure gave a light yellow

Table 1. COLOUR REACTIONS OF VARIOUS KETO-ACIDS WITH NINHYDRIN ON PAPER*

Acid	Colour after 24 hr.†	
	in white light	in 3660 A.
Glyoxylic	None	None
Pyruvic	Pale Yellow	Yellow
α-Ketobutyric	Faint yellow	Blue-white
α-Ketoglutaric	Pale yellow	Intense yellow
2-Ketogluconic	None	Blue-white‡
Oxalacetic	Faint yellow	Faint yellow§
β-Ketoglutaric	Pale yellow	None

* Papers heated 30 min. at 90–95° C. after ninhydrin application.

† The visible colour in all cases was too weak to be useful as a diagnostic test. The fluorescence in 3660 A. light was of sufficient intensity for easy detection.

‡ 2-Ketogluconic acid in the absence of ninhydrin fluoresced with equal intensity.

§ This was probably caused by the formation of pyruvic acid by decarboxylation.

colour on a faint pinkish background with α-ketoglutaric acid; but the spot did not fluoresce in ultra-violet light.

A trace of pyridine derivative in the ninhydrin spray promoted more rapid development of the yellow fluorescence. Collidine, lutidine, the picolines, and pyridine were all effective in varying degrees. Neither sodium hydroxide nor sodium acetate were effective replacements for the pyridine base under the conditions used. In the absence of the pyridine base, the yellow fluorescent colour developed more slowly over a period of days. The colour reaction between amino-acids and ninhydrin on paper chromatograms is also affected by the presence of pyridine derivatives[3]. In our experience, the presence of collidine or lutidine, or both, in the ninhydrin spray promotes a variety of colours that are characteristic of the specific amino-acids.

Although heating paper chromatograms after spraying with ninhydrin markedly accelerates the colour reaction with amino-acids, the maximum production of the yellow fluorescence with α-keto-acids is best achieved with time in addition to heat. For example, small concentrations (<20 μgm.) of α-ketoglutaric acid reacted after a few minutes of heating to produce little visible colour but some blue-white fluorescence. On standing at room temperature, the intense yellow fluorescence became increasingly apparent in one to a few days. The initial blue-white fluorescence is promoted by increased time of heating to about 30 min., but not longer. When concentrations of α-ketoglutarate are large (>20 μgm.), the yellow fluorescence is producible within 30 min. of heating, but intensifies on standing.

Development of the yellow fluorescence occurred to the greatest extent in the dark. When the chromatograms were exposed to continuous illumination from a 'G. E. Daylight' fluorescent lamp over several days, little of the yellow fluorescent material developed and, instead, a less-intense dull orange colour in 3660 A. light was formed. The colour formed by reaction of ninhydrin with amino-acids is also known to be destroyed by light with time[4].

The yellow complex is easily eluted with water from the paper chromatograms, but only a broad band of light absorption was observed, possibly because of contaminants from the spray or the paper.

When 1 μgm. of α-ketoglutaric acid was added to plant extracts of *Ricinis communis* and then chromatographed, a marked increase occurred in the yellow fluorescence in the position of α-ketoglutarate as compared to the original plant extract. Large amounts of α-ketoglutaric acid have been shown to be present in the stems of *Mentha piperita*[5]. Paper chromatograms of soluble extracts from that tissue also revealed considerable amounts of α-ketoglutaric acid when they were sprayed with ninhydrin according to the procedure described. Smaller amounts of α-ketoglutaric acid were detected by the ninhydrin method in the chromatographed extracts of other plants.

Enzymatic Dehydrogenation of Hydroxypurines and Hydroxypteridines

ONE of the steps of the biosynthesis of guanylic acid from adenylic acid involves the diphosphopyridine nucleotide-linked dehydrogenation of inosinic acid to xanthylic acid[1-3]: inosinic acid + diphosphopyridine nucleotide+ → xanthylic acid + reduced diphosphopyridine nucleotide. When this reaction was studied with chicken-liver enzyme extracts by following the appearance of the absorption peak at 340 mμ characteristic of reduced diphosphopyridine nucleotide, a strong reduction of the coenzyme was observed not only in the presence of inosinic acid but also with the corresponding purine base hypoxanthine.

In order to study this effect further, an assay was set up in which 0·5 μ*M* hypoxanthine, 1·0 μ*M* of diphosphopyridine nucleotide and 10 μ*M* of *tris* (*tris*hydroxymethylaminomethane, Sigma Chemical Co.) buffer *p*H 9·0 in a final volume of 0·5 ml. were incubated for 30 min. at 37° C. with the enzyme. The reaction was stopped by adding 0·1 ml. of 2 *M* acetate buffer *p*H 6·0, and the optical density at 340 mμ was measured in a Beckman *DU* spectrophotometer after diluting to 3·0 ml. and removing any precipitated protein by centrifugation. Controls without hypoxanthine were run at the same time and their optical density at 340 mμ subtracted from that of the experimental tubes. The difference of the two values appears in Tables 1, 2 and 3 as Δ^{340}. The *p*H of 9·0 was chosen for the assay because it is the lowest value at which full activity of the enzyme was observed. A series of experiments designed to

Table 3. Effects of SH-Group Inhibitors and of Glutathione

The concentrations are the final concentrations in the reaction mixtures. Assay as described in text

Glutathione	*p*-Chloromercuribenzoate	*o*-Iodosobenzoate	Δ^{340}
—	—	—	0·310
10^{-3} *M*	—	—	0·280
10^{-4} *M*	—	—	0·310
—	10^{-4} *M*	—	0·000
10^{-3} *M*	10^{-4} *M*	—	0·300
10^{-4} *M*	10^{-4} *M*	—	0·315
—	—	10^{-4} *M*	0·000
10^{-3} *M*	—	10^{-4} *M*	0·315
10^{-4} *M*	—	10^{-4} *M*	0·000
—	—	10^{-5} *M*	0·030
10^{-3} *M*	—	10^{-5} *M*	0·285
10^{-4} *M*	—	10^{-5} *M*	0·310

determine the optimal *p*H of the enzymatic reaction showed essentially no activity at *p*H 8·0, followed by a rapid rise in activity between *p*H 8·0 and 9·0, with the activity remaining constant thereafter until past *p*H 11·0.

To prepare the enzyme, chicken liver acetone powder was extracted with 0·1 *M tris* buffer *p*H 7·3 containing 0·2 *M* potassium chloride. After centrifugation, the supernatant liquid was dialysed overnight against 0·005 *M tris p*H 7·3–0·02 *M* potassium chloride and centrifuged again. An approximately twenty-fold purification of the enzyme with an overall yield of about 25 per cent was obtained by the fractionation steps outlined in Table 1.

When the specificity of the enzyme system was examined, it was found that hypoxanthine and xanthine are equally good substrates (Table 2), indicating that the oxidation of the hypoxanthine must proceed to uric acid through xanthine. Adenine, purine, uracil and thymine were inert in the system. 4-Hydroxypteridine and 2,4-dihydroxypteridine, however, reacted almost as effectively as their purine analogues hypoxanthine and xanthine (Table 2). This is of interest since relatively little information on the metabolism of the hydroxypteridines is available. When 2-hydroxypteridine was used as a substrate increased formation of reduced diphosphopyridine nucleotide was noted. 2-Hydroxypteridine has been shown to be covalently hydrated across the 3,4 double bond and to be more prone to permanganate oxidation than the other hydroxypteridines[4], and it is tempting to speculate that the 3,4-hydrate structure may also be responsible for the greater ease of the enzymatic dehydrogenation. It does not seem that the same enzyme acts on both hydroxypurines and hydroxypteridines since the partially purified enzyme has lost some of its activity towards the hydroxypteridines (Table 2). The enzyme system responsible for the oxidation of the hydroxypteridines is now being studied.

Both *p*-chloromercuribenzoate and *o*-iodosobenzoate completely inhibited the enzyme at concentrations of 10^{-4} *M* and 10^{-5} *M* respectively (Table 3). This, as well as the fact that the inhibition is completely reversed by glutathione, indicates that the chicken liver hypoxanthine dehydrogenase belongs to the group of sulphhydryl enzymes.

We are grateful to Prof. A. Albert, of the Australian National University, Canberra, for the generous gift of the hydroxypteridines used in this work.

Microchemical Method for the Determination of Sakaguchi-positive Antibiotics

ANTIBIOTICS of actinomycete origin containing a guanidine group (such as streptomycin and viomycin) are known to have an antitubercular action. Recently a new antibiotic, primycin, was described[1] as an agent active against various mycobacteria and Gram-positive pathogens (0·02 μgm./ml.), and also giving a positive Sakaguchi reaction.

The colour test (1-naphthol and sodium hypobromite) developed for arginine thirty years ago[2,3] has been modified by using 8-hydroxyquinoline[3] and naphthol-1-sulphonic-8 acid[4], respectively. However, the reproducibility of this reaction was affected to a great extent by the concentration of bromine and hypobromite, respectively. Ziegler[5] was the first to mention a selective bromine substitution with the use of N-bromosuccinimide. This well-defined crystalline compound proved to be extremely well suited for the production of nascent hypobromite in an alkaline medium: on the alkaline hydrolysis of N-bromosuccinimide, the bromine acts as a cation and combines with hydroxyl to form hypobromite.

The optimum concentrations of the reactive components were established, using arginine as a test substance. Light-absorption did not change when 1-naphthol was added to the system directly as an alkaline solution. Under identical conditions, lower values were obtained with 8-hydroxyquinoline. The shape of the arginine curves was similar whether sodium hypobromite or N-bromosuccinimide were used. On increasing the concentration of alcohol from 5 to 80 per cent in the system, the extinction values of the solutions showed a linear decrease. The method of adding the N-bromosuccinimide (dropwise addition, pouring, etc.) affected the intensity of the colour developed. A mean of thirty determinations of arginine (20 μgm./ml.) was $\varepsilon = 0·644$, with a standard deviation of ± 0·0122. Thus, the relative error of the method was ± 0·4 per cent.

The naphthol reagent (0·01 per cent) was prepared by adding to 5 ml. of a 0·2 per cent ethanolic solution of 1-naphthol (anal. grade) a 10 per cent aqueous

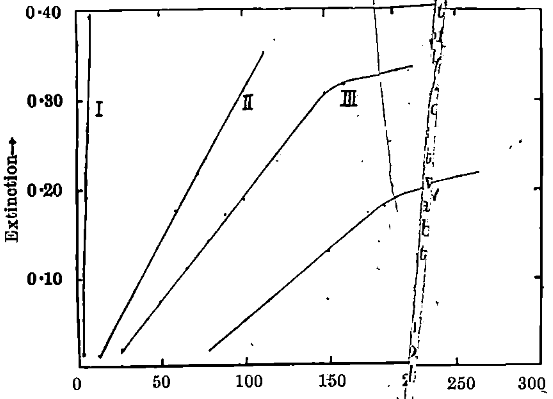

Fig. 1. Curve I, arginine; II, primycin; streptomycin; IV, viomycin

solution of sodium hydroxide (anal ade) to make up exactly 100 ml. The reagent i ble for seven days at 0° C. For the N-bromosu mide reagent, 448 mgm. of that substance (anal. e), equivalent to 200 mgm. bromine, was made in 100 ml. of 10 per cent ethanol; it is stable days at 0° C. A 40 per cent aqueous solution rea was used. The standard solution of arginin s a solution of arginine chlorohydrate (anal. e, La Roche) (10–20 µgm./ml.).

The solutions and reagents a ooled to 0° C. (30 min.), then 5 ml. of the solu to be tested is pipetted into ordinary numbered tubes (1). For a blank test, distilled water and gents were used. Then 2 ml. of naphthol reagent added, the tubes shaken and allowed to stand 3 min. In the meantime, 0·5-ml. portions of bromosuccinimide reagent are pipetted into sep e glass-stoppered test-tubes (2) placed parallel t t-tubes (1), and a medical syringe is filled with a d solution of urea. Then the liquid in test-tubes (1) ution to be tested + naphthol reagent) is rapidly p l into the N-bromosuccinimide reagent in tubes (A vivid red colour appears, the blank remaining urless. Afterwards, the tubes (2) are vigorously s n and 1 ml. of urea solution added in 15 sec. inction values were read in 5 min., against b s, using a Unicam photoelectric colorimeter wi blue filter.

The N-bromosuccinimide nod has been used for the determination of prin , streptomycin and viomycin. The content active substance in unknown solutions was ob d by extrapolation of the standard curves of s ons of known concentration (see Fig. 1). Anti cs dissolved in organic solvents immiscible with er, such as *n*-butanol, may be investigated direct rovided they are shaken with the cooled solution the reagents. In this case, the red colour ap s in the organic phase. Arginine could not be tr erred into the butanolic phase. A close correlati as found to exist between the intensity of biologi action of antibiotics and the ε-values read.

The detection by pa chromatography of Sakaguchi-positive antibiot and arginine was carried out also with the use N-bromosuccinimide. The paper strips were dipp to a 0·01 per cent solution of 1-naphthol in 5 per c methanolic sodium hydroxide, dried in air, the ts developed by a cooled 0·5 per cent solutio f N-bromosuccinimide and stabilized by a 40 per t solution of urea.

Details of the present work will be published elsewhere.

Activity of Glucose-1-phosphate on Liver Steatosis

FOUR groups of rats were employed in studying the influence of glucose-1-phosphate on liver steatosis, induced by a high-fat, low-protein diet in rats: one, which served as control, was on a normal diet, and the remaining groups were placed on the steatogenous diet of Handler[1] for 30 days. Of the latter groups one did not receive any treatment, one was treated with 3 gm./kgm. of glucose *per os* daily and the last one was treated with 3 gm./kgm. of glucose-1-phosphate daily. Treatment with glucose or glucose-1-phosphate was started 15 days after the administration of the steatogenous diet. The effect of treatment was studied by determining the liver content of total lipids, glycogen and easily hydrolysable phosphorus.

The following procedures were adopted: method of van der Vies for glycogen[2], method of Fenn for total lipids[3], method of Le Page for hydrolysable phosphorus[4].

Table 1

Treatment	No. of animals	Content of rat livers		
		Total lipids (gm./ 100 gm.)	Glycogen (gm./ 100 gm.)	Hydrolysable phosphorus* (mgm./ 100 gm.)
Normal diet	15	4·88±0·23	3·97±0·27	15·22±0·75
Steatogenous diet	10	16·16±0·47	2·21±0·21	7·28±0·32
Steatogenous diet+glucose†	11	12·22±0·37	2·39±0·26	8·09±0·29
Steatogenous diet+glucose-1-phosphate†	12	7·77±0·29	3·77±0·24	13·65±0·58

Data represent the mean ± the standard errors of the means. The differences between groups 1 and 2, 2 and 3, 2 and 4, 3 and 4 were tested statistically. In all cases $P < 0·05$.

* Phosphorus hydrolysable in 7 min. in *N* hydrochloric acid at 100° C.

† Treatment began 15 days after the administration of the steatogenous diet. Glucose and glucose-1-phosphate were administered *per os* at the daily dosage of 3 gm./kgm. Rats were killed 30 days after the beginning of the steatogenous diet.

Glucose-1-phosphate was more effective than glucose both in preventing fatty infiltration of the liver and in bringing it back to normal when steatosis was already established. In the latter case glucose did not show any appreciable activity (see Table 1).

Inhibiting Effect of Chlorpromazine on the Experimental Production of Liver Cancer

RECENTLY, Griffin, Rinfret and Corsigilia[1] reported that development of hepatic tumours in rats fed on a diet containing 0·06 per cent 3′-methyl-4-dimethyl-aminoazobenzene may be effectively inhibited by hypophysectomy. Chlorpromazine is a phenothiazine derivative, which is used medicinally as a potent depressant for the interbrain. Aron, Guelfi and Voisin[2] reported an atonic effect of this drug on the sensibility of the pituitary gland induced by stress.

The present communication deals with the results of the subcutaneous injection of chlorpromazine on the incidence and growth of tumours induced by 4-dimethyl-aminoazobenzene. In these experiments chlorpromazine injection was begun with a dose of 100 μgm. in 1 ml. of cold sterile distilled water and continued at intervals of two days, increasing by 100 μgm. per dose after about every four injections. A group of fifteen rats of mixed breed weighing 70–153 gm. were fed for the first month with a diet containing 0·02 per cent 4-dimethyl-aminoazobenzene, during the second month with one containing 0·04 per cent, and thereafter with a diet containing 0·06 per cent, until the dose for each rat totalled about 500–600 mgm. In addition, 1 ml. of distilled water was injected every two days over a period of six months (group 1). A second group of twenty rats was given the same diet but with injections of chlorpromazine (group 2). A third group consisted of fifteen rats fed on the basal diet without 4-dimethylaminoazobenzene but given chlorpromazine. The basal diet consisted of unpolished rice containing 2·71 mgm. riboflavin per kgm. and 73·7 gm. protein per kgm., supplemented by unlimited quantities of water and some greenstuff, daily. The amounts of basal diet consumed totalled 1,011–1,154 gm. per rat. The experiments, which began on June 16, were terminated six months later.

During the course of this investigation, it was noted that, among the animals which received chlorpromazine until they died or those killed at the end of the experiment, rats weighing 70–100 gm. showed more decrease in weight and higher mortality due to respiratory infections than those weighing 110–153 gm., suggesting toxicity of the drugs. Most of the thirteen rats which were given about 505–599 mgm. of 4-dimethyl-aminoazobenzene for a period of 162–183 days (group 1) developed hepatic cancer (Fig. 1). On the other hand, the group given chlorpromazine as well (group 2) showed carcinoma of the liver in 1 out of 6 rats which survived the same period. Further, in group 1, the induced liver cancer attained considerable size after six months when compared with the livers of group 2, and metastases sometimes appeared in the abdominal lymph nodes and lungs. These results may suggest delay due to chlorpromazine in the formation of hepatic neoplasia induced by 4-dimethyl-aminoazobenzene.

Histologically, noticeable alterations were found in the hypophysis and adrenal glands as well as the liver. Ine two goups treated with chlorpromazine, atrophy the pititary gland was noticed, and the anterior be conisted largely of the chief cells (chromopbes) vith the number of chromophils markedly creasd. In the adrenal glands, pycnosis of nucleu and vcuolation of cytoplasm were seen in the coal cels. Parenchymal cells of the liver were somhat arophic and degenerative. Precancerous cges, such as nodular hyperplasia or cholangioosis, were rarely seen except in one case where hepma developed, although cirrhotic changes of the livere observed.

Recentl Peters, Gärtner and Krais[3] have shown that a conation of radium therapy and chlorpromazine ngs about in mice an increase in the effect of ration on ascitic tumours, and that the effect of thrug is based on an increased inhibition of mitoses, reduction of the excitatory reactions produced bradiation and an increased incidence of damageds and of cells in the stages of division. It may be posed, therefore, that the inhibitory effect of tdrug for carcinogenesis induced by 4-dimethyl-aoazobenzene is due to the delay in transition from tl recancerous to the cancerous stages.

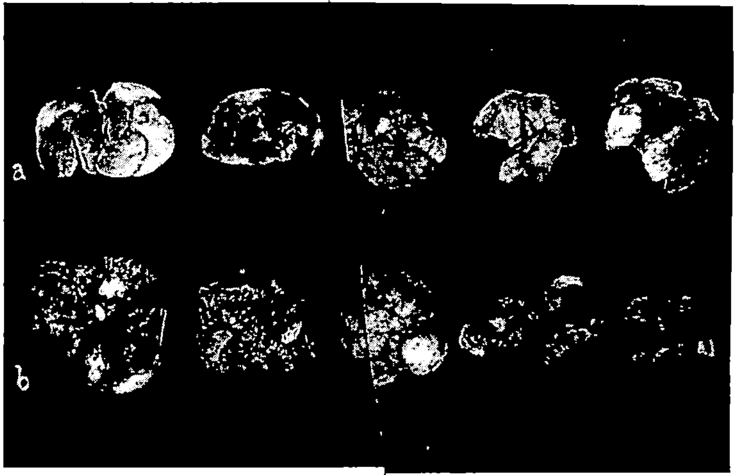

Fig. 1. Livers obtained after 180–183 days. Upw: group 2 (4-dimethyl-aminoazobenzene and chlorpromazine). Lower row: gro 4-dimethyl-aminoazobenzene)

Longer experim with more experimental animals are under with the view of obtaining definite conclusions.

We thank Shion and Co., Ltd., for the gift of chlorpromazine ('termin'), and Prof. K. Hotta and Dr. T. Oyama their encouragement and advice. This work assisted by a grant from the Niihama Psychiatric spital Foundation (Dr. Y. Fujita).

Antibody Formation by Isolated Cells of Hen Spleen after mixing with Antigen *in vitro* and Transfer to Chicks

Recently, Šterzl[1] used newborn animals as recipients for the transfer of tissues producing antibodies as infant animals cannot produce antibodies after administration of antigens during the early post-natal period[2]. This experimental model has been used successfully by Mitchison[3], who evoked antibody production in chicks after transfer of spleen tissue from strongly immunized hens. Dixon and Weigle[4], however, were unable to demonstrate the usefulness of infant animals for the demonstration of antibody formation after transfer of tissue from animals immunized 24 hr. previously. In further work, when cells mixed with antigen *in vitro* were transferred, results were again negative[5]. In the work reported here, the possibility of using infant animals soon after birth as recipients was tested.

Normal white Leghorn hens (weight 1·5–2 kgm.) were used as donors of spleen cells. No antibodies to *Salmonella paratyphi* B and *Brucella suis* could be found in their serum by agglutination. These were used as antigen. Spleen cells were isolated according to Šterzl[6]. Isolated spleen cells were diluted quantitatively (6 × 10^7) according to counts in a Bürcker chamber either with phosphate physiological saline or directly into a suspension of heat-inactivated bacteria (*Salmonella paratyphi* B 12 × 10^7; *Brucella suis* 36 × 10^7). After 10 min of incubation at room temperature they were injected by the intraperitoneal route into Leghorn chicks 48–56 hr. after hatching. 1 ml. of suspension was administered to each bird. Blood from the chicks was obtained by cardiac puncture 3, 5, 7, 9, 12, 16, 24 and 31 days after transfer of a mixture of spleen cells and bacterial antigen. Further details of the layout of the experiment and results are apparent from Table 1. Positive results were obtained with the mixtures; but results were negative when only a suspension of bacteria or spleen cells alone was given.

Cells must be transferred to animals of the same species. Results were negative when spleen cells from rabbits mixed *in vitro* with antigen *Brucella suis* was given to chicks (Table 1).

The results of Dixon and Weigle[4,5] are not in agreement with ours. These authors conclude that infant animals are not suitable as recipients and that the environment of infant animals cannot provide conditions necessary for the realization of the first phase of antibody formation. On the other hand, the results presented here, together with those of Šterzl[1,6], are supported by the work of Simonsen[7], who injected reticulo-endothelial cells from adult hens into chick embryos and young chicks. Using the Coombs test he detected antibodies produced by adult cells against the antigens of the recipient.

It is concluded that infant animals incapable of an antibody reaction to an antigenic stimulus are suitable for studying the conditions for antibody formation by isolated mesenchymal cells.

Presence of Plasma Globulins in the Hyaline Tissue in Cases of Silicosis

Previous chemical results[1] obtained by one of us show that the hyaline tissue in cases of silicosis contains appreciable amounts of non-collagenous proteins. In fact the determination of the amino-acid composition, and the ultra-violet absorption spectrum of the residue left after extraction of collagen by autoclaving, suggested the presence of proteins chemically related to β- or γ-plasma globulins. These proteins constitute up to one-half of the total protein content of the original tissue. In order to ascertain beyond all doubt the presence in silicosis hyaline tissue of plasma globulins, it was decided to investigate whether proteins having the immunological properties of plasma globulins could be identified in it. Hyaline tissue was therefore isolated carefully from the pulmonary nodules of three cases of typical silicosis immediately after autopsy. The tissue was washed and homogenized in saline with a blade blendor (15 min. at 30,000 rev./min., excessive heat being prevented by water cooling). The resulting suspension was then washed and homogenized six further times with saline to remove all traces of serum or lymph. The serum of a rabbit previously immunized with normal human serum was absorbed twice with a third of its own volume of homogenized and washed silicosis hyaline tissue and was then used as antiserum for immunoelectrophoresis (using the technique of Grabar and Williams[2]). The antigens used were a pooled normal human serum electrophoretically separated in an agar plate; as a control, the same antiserum was absorbed with an equal amount of normal human lung treated in the same way as the silicosis hyaline tissue.

The results of these experiments are shown in Fig. 1; while the unabsorbed immune rabbit serum reacts against the human pherogram with fourteen different bands of precipitation (not all visible in Fig. 1, 2,4,5) and no changes are observed after absorption with normal lung (Fig. 1, 1), the band of reaction with the protein fraction electrophoretically spread in the zones of β- and γ-globulins disappears when the immune serum has been absorbed with silicosis hyaline tissue, all other bands remaining unmodified (Fig. 1, 3). It is concluded that a single type of rabbit antibodies against human serum proteins has been removed by absorption with silicosis hyaline tissue.

As a more quantitative test, aliquots of the anti-human rabbit serum, (i) untreated, (ii) absorbed with normal lung homogenate, and (iii) absorbed with silicosis hyaline tissue have been titrated against *D*-sensitized Rh-positive red cells (indirect Coombs test). It is apparent from Table 1 that the same amounts of silicosis hyaline tissue homogenates absorb about thirty times more anti-γ-globulin antibodies than the normal lung homogenate. Three different samples of normal lungs and the hyaline tissue from three cases of silicosis have been analysed by these techniques, giving identical results.

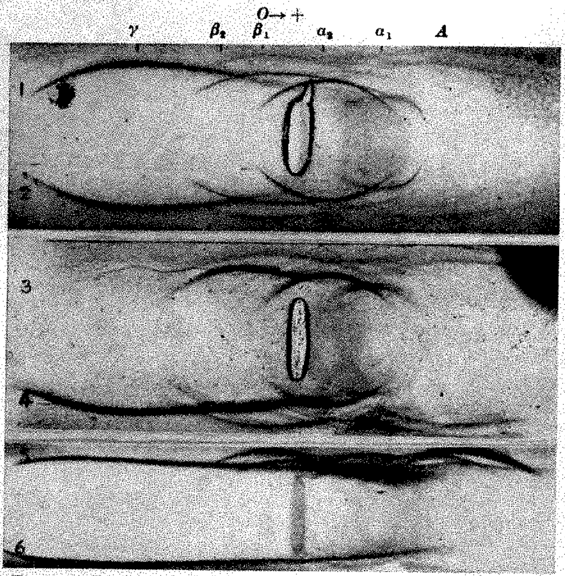

Fig. 1. Immunoelectrophoresis in agar plates (Grabar's technique). Antigen subjected to electrophoresis: whole normal human serum. Immune sera (in the longitudinal wells). (2, 4, 5) Serum of rabbit immunized with whole human serum, untreated; (1) same, absorbed with homogenate of normal human lung; (3) same, absorbed with homogenate of silicotic nodule; (6) serum of rabbit immunized with homogenate of silicotic nodule. *A*, Albumin; α_1, α_2, β_1, β_2 and γ refer to the respective globulins

Table 1. The antiglobulin serum is titrated against Rh-positive red cells, strongly sensitized with an incomplete anti-D serum. Red cells (normal and sensitized), homogenates of normal lung and of silicotic nodules, were washed ten times before being used for absorption. 5, 4, 3, 2, 1 = decreasing degrees of agglutination; 0 = no agglutination

	Anti-human globulin serum									
Absorbed (0 gm./ml.) with	Dilutions									
	2^{-3}	2^{-4}	2^{-5}	2^{-6}	2^{-7}	2^{-8}	2^{-9}	2^{-10}	2^{-11}	2^{-12}
Non-sensitized red cells	5	5	5	5	5	5	4	3	2	2
Rh-sensitized red cells	5	4	5	4	4	3	2	1	0	0
Normal lung	5	5	5	4	3	3	2	1	0	0
Normal lung	5	5	5	5	5	5	4	3	2	1
Normal lung	5	5	5	5	5	5	4	2	1	0
Hyaline silicotic tissue	3	2	1	0	0	0	0	0	0	0
Hyaline silicotic tissue	1	0	0	0	0	0	0	0	0	0
Hyaline silicotic tissue	3	3	1	0	0	0	0	0	0	0

Homogenized and washed silicosis hyaline tissue, prepared similarly to that used in absorption experiments, was then injected intraperitoneally into rabbits, and antisera were quickly obtained which reacted with normal human serum electrophoretically separated in an agar plate, giving a single line of precipitation extending through the zone of β- and γ-globulins (see Fig. 1, 6). The occurrence in these anti-silicosis hyaline tissue sera of antibodies specific for antigens peculiar to the silicotic nodule, but absent from normal human serum, is being investigated.

We can therefore assume that the acellular silicosis hyaline tissue contains a globulin fraction which may be identified with a plasma-globulin having definite antigenic properties and an electrophoretic mobility corresponding to that of β- or γ-globulins. It is well known that circulating antibodies[3] and properdin[4] belong precisely to this fraction.

Our results are therefore consistent with the hypothesis that an antigen–antibody or a properdin-substrate precipitation plays a part in the genesis of silicosis hyaline tissue. Further details will be published elsewhere[5].

Transfer of Sheep Keds, *Melophagus ovinus* (L.), from Ewes to their Lambs

It has regularly been stated[1,2] that sheep keds (presumably of all ages) are transferred from ewes to their lambs. To this transfer has been attributed much of the decline in ked populations on ewes during the spring and summer[3]. In detailed studies of behaviour of sheep keds on ewes after parturition, it has been observed at Lethbridge that only newly emerged keds are transferred to the lambs. The older keds on the ewes gradually die off as a result of infection with *Trypanosoma melophagium*[3]. These conclusions were drawn from observations that no puparia appeared on lambs until the latter were 4–6 weeks old, and that all keds seen on lambs up to four weeks of age were small ones. Bequaert[4] has summarized the work of other authors, and claims that the ked deposits its first offspring in 14–30 days after it has emerged. On 10 lambs examined at Lethbridge, there were found an average of 11·6 ± 6·53 keds and no puparia on lambs two weeks of age, 43·3 ± 23·2 keds and 1·5 ± 1·8 puparia at four weeks of age, and 137·3 ± 59·84 keds and 25·5 ± 18·34 puparia at six weeks of age.

Effect of Age of Young Dairy Calves on Dry-Matter Digestibility of Alfalfa Pellets

Successful attempts to rear dairy calves on high-quality forage (dry-matter digestibility more than 70 per cent) without grain feeding have been reported by McCullough *et al.*[1], McMeekan[2] and Roy *et al.*[3]. Utilizing similar forage, Preston *et al.*[4] investigated the effect of age on digestibility and intake with calves 3–9 weeks old. Their findings suggested that: "(*a*) rumen development is anatomical; (*b*) the development of microflora—in respect of their ability to ferment and digest grass dry matter—is instantaneous or practically so, and is dependent on there being a suitable substrate in the rumen".

Since all previous work with young calves had been done with highly digestible forage, it seemed desirable to determine the apparent effect of age on the digestibility of a lower-quality forage. Four Guernsey calves were fed whole milk at 10 per cent of birth weight and alfalfa meal pellets free choice from birth to 12 weeks of age. Morrison[5] lists the *TDN* of similar alfalfa as 57 per cent. Dry-matter digestibility was determined from grab samples at weekly intervals from 6 to 12 weeks of age. Previous work by Kane *et al.*[6] and Cook *et al.*[7] had shown the chromogen technique[8] to be suitable for similar hays, and the work of Preston *et al.*[4] had indicated that milk fed simultaneously with forage did not affect the digestion of grass. The pellets were unpalatable to the calves and intake was low until the calves were 10–12 weeks of age. The mean intake was 7 lb. whole milk and 2·0 lb. of pellets.

Table 1. Dry-Matter Digestibility of Forage and Average Daily Gain of Calves

	4	53	54	54	57	54	55	55
Average digestibility (per cent)		53	55	55	55	55	56	55
Average daily gain (lb.)		0·6	0·7	0·2	0·0	1·3	0·9	1·4

Average dry-matter digestibilities and daily gains for the four calves are shown in Table 1.

The results seem to indicate little or no change in apparent dry-matter digestibility from 6 to 12 weeks. The improved rate of gain after 10 weeks corresponds with the observation that the calves were unable or unwilling to consume enough alfalfa pellets for good growth before this age. The results seem to agree with the observations of Preston[4] and emphasize the ability of the calf to utilize forage at a very early age.

Sacculina gonoplaxae Guérin–Ganivet, 1911, a Rhizocephalan Parasite New to British Waters

Sacculina gonoplaxae Guérin–Ganivet, 1911, is a Rhizocephalan parasite on *Goneplax angulata* (Pennant) [= *Gonoplax rhomboides*, L.]. Full details of the taxonomy of the genera of the family Sacculinidae and of the species of the genus *Sacculina* are given by Boschma (1955)[1].

On April 29, 1957, a single specimen was found on a *Goneplax angulata*, taken from the stomach contents of a cod trawled in 50–57 fathoms (about 100 m.) approximately eight miles north-west of Bradda Head, Isle of Man. The host had a carapace breadth of 23 mm. Apparently digestion of the crab had not yet taken place, suggesting that it had been recently swallowed. The dimensions of the parasite were: larger diameter, 13 mm., smaller diameter, 7 mm.

Dr. R. B. Pike, of the Marine Station, Millport, Isle of Cumbrae, in a personal communication, informs me that he obtained a *Sacculina* on *Goneplax angulata* on November 3, 1955, which he had provisionally identified as *Sacculina gonoplaxae*. This specimen was collected by Mr. Latham, and was taken in the Fairlie Channel, Firth of Clyde, in about 30–40 m. Dr. Pike's specimen conformed to the following measurements: width of the carapace of *Goneplax angulata* (host), 19 mm.; greatest width of parasite, 12 mm.

Both specimens were sent to Dr. Boschma, who identified them as *Sacculina gonoplaxae*.

Up to now, *Sacculina gonoplaxae* has been recorded from the Gulf of Cadiz, from off the Atlantic coast of Morocco, and from various localities in the Mediterranean. The distribution of the parasite can now be extended northwards to the Irish Sea and the Firth of Clyde.

I wish to thank Dr. H. Boschma, director, Rijksmuseum van Natuurlijke Historie, Leyden, Netherlands, for his help in identifying the specimen, and Dr. Pike for allowing his specimen to be used.

Influence of Photoperiod on Imaginal Diapause in Acridids

It has recently been shown[1] that the rate of sexual maturation in the desert locust (*Schistocerca gregaria* Forsk.) in the laboratory in London is influenced by the length of the daily photoperiod. Adults emerging in winter or kept in artificial photoperiods corresponding with winter day-length mature more rapidly than those emerging in summer or kept in artificial summer day-length.

The red locust (*Nomadacris septemfasciata* Serv.) has its main outbreak area in the Rukwa Valley of Tanganyika, between latitudes 7 and 9° S. The adults emerge in March or April and undergo a prolonged diapause of 8 or 9 months, finally laying their eggs during the rainy season in November and December. Uvarov[2] and Hamilton[3] showed that this diapause was not obligatory and that rapid oviposition could be induced by keeping the locusts at high temperatures. Hamilton found, however, that this could only be done for one generation, after which diapause intervened in spite of high temperature. A series of breedings which has been carried out in this laboratory over a period of three years has shown that the occurrence of diapause in conditions of constant temperature and humidity is seasonal. Locusts which emerge as adults in spring and summer mature fairly rapidly in 5–10 weeks, whereas those which emerge after the end of July or the middle of August fail to mature until the following March or April. They have, therefore, a diapause of 7–8 months, comparable with that of field locusts. Whether or not a group enters diapause depends entirely on the time of the year and not on the generation. Thus the latest members of the *F*1 progeny of overwintered parents may enter diapause at the same time as the *F*2 progeny ; on the other hand, the earliest emerging *F*2 progeny may emerge before August, in which case a third generation is produced without diapause.

The windows of the breeding-room are not screened, and it has been shown that the occurrence of the diapause is entirely governed by length of day. Two artificially lit cabinets were set up, in one of which the daily photoperiod was gradually increased as in spring and in the other it was decreased as in autumn. Newly emerged adults were kept at various times in these two cabinets, and it was found that, whatever the time of the year, maturation periods appropriate to the artificial seasons were induced. Adults, for example, which emerged in the 'spring' cabinet when the photoperiod had increased to 11½ hr. (as in mid-March) matured in 69 days, while those which emerged in the 'autumn' cabinet when the photoperiod had decreased to 12½ hr. (as in mid-September) took 223 days to mature. Continuous breeding without the intervention of diapause has now been maintained for more than two years by the use of artificial lighting. Full details of the experiments will be published later.

Maturation of natural diapause adults occurs in spring ; but it has been shown that the lengthening days are not required for the termination of diapause, which occurs at the same time if the locusts are deprived of the extra hours of daylight after the shortest day.

Seasonal change in length of day at the northern end of the Rukwa Valley (about 7° S.) amounts to only 50 min. in the year ; but the most rapid decrease in length of day occurs in March, at the time when the adults are emerging. From March 1 to April 1 length of day falls by 14 min., from 12 hr. 12 min. to 11 hr. 58 min. It has not so far been practicable artificially to reduce photoperiod by such small amounts. Preliminary experiments with stationary photoperiods suggest that these are less effective in establishing prolonged diapause than decreasing ones, even although the latter may start at a much higher level. Stationary 8-hr. photoperiods allow maturation in 5 or 6 months, and in one experiment adults kept with photoperiods of 8, 11 and 13½ hr. matured in 163, 154 and 78 days respectively. This suggests that there is a critical field for effects on maturation lying between 11 and 13½ hr. Since length of day in the natural habitat varies from about 11½ to 12½ hr. the possibility that it is responsible for the establishment of diapause must be considered.

The grasshopper *Anacridium aegyptium* L., which inhabits the Mediterranean region, normally has only one generation in the year, the adults emerging in July and August but not ovipositing until the following spring. This species, like *Nomadacris*, also enters diapause in the constant laboratory environment. Adults which emerge in spring mature in 7–12 weeks, whereas those which emerge after the end of May usually do not mature until January, February or March. Here again rapid maturation of summer-emerged individuals can be induced by keeping them in artificially increasing day-length. In this species diapause appears so early in the year that it is necessary to suppose that it is only the increasing spring day-length which allows rapid maturation and that it is inhibited by the long days of summer as well as by the decreasing day-length of autumn. This has been shown by Corbet[4] to be the position in the larval diapause of the emperor dragonfly, in which immediate metamorphosis from the last larval instar to the adult occurs in increasing photoperiods, but is inhibited both by diminishing and by stationary long photoperiods.

Ultra-Structure of the Choanocyte Collar-Cells in Freshwater Sponges

As early as 1896 Bidder[1] mentioned the presence of fibrils in the collars of the relatively large collar cells of calcareous sponges. Later, the very existence of such a structure was denied by several authors though confirmed by a few, particularly De Saedeleer[2] and Dubosq and Tuzet[3]. Kilian[4] has succeeded in demonstrating the existence of fibrillar struc-

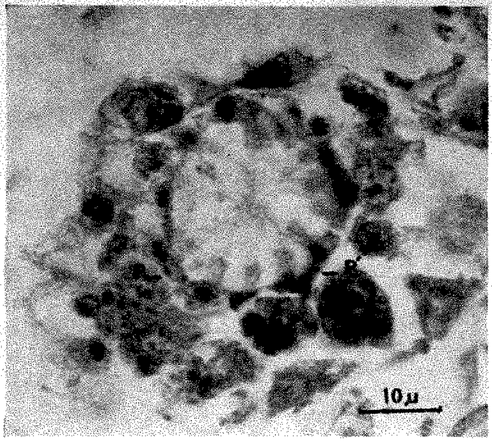

Fig. 1. General view of a 'vibratile nest' of *E. fluviatilis*, as observed with the optical microscope (immersion). *P–P'* represents the plane through which a similar 'vibratile nest' has been sectioned for observation with the electron microscope

tures in the much smaller collars of siliceous sponge collar cells. That author observed by means of the electron microscope whole Spongillidae collar cells which were previously dilacerated and fixed. Yet he stated himself that the fixatives he used caused severe contractions of the collars. De Saedeleer[2] is the only one who suggested that the collar should be considered as an 'eel-trap' made up from separate tentacles.

It was generally admitted that the fibrils were embedded in a common hyaline wall, which they would sustain and eventually make contractile.

We tried to solve the problem of the true structure of the collars by the observation of ultra-thin sections with the electron microscope.

The specimen of Spongillidae studied here was probably *Ephydatia fluviatilis*. The absence of gemmulæ in the sample collected made a more accurate determination so far impossible. The material was fixed in a solution of 2 per cent osmium tetroxide buffered at a pH of 7·4.

Fig. 1, representing a 'vibratile nest' of *E. fluviatilis* as observed with an optical microscope, will allow a better and easier interpretation of the electron micrographs. In Fig. 2 one can see that the collar consists only of about thirty fibrils, which have a diameter of 0·10–0·15μ. They are heterogeneous, visibly consisting of an osmiophil sheath, surrounding a less dense pith, itself coated by a less dense layer. Their insertion in the cytoplasm does not show any particular differentiation.

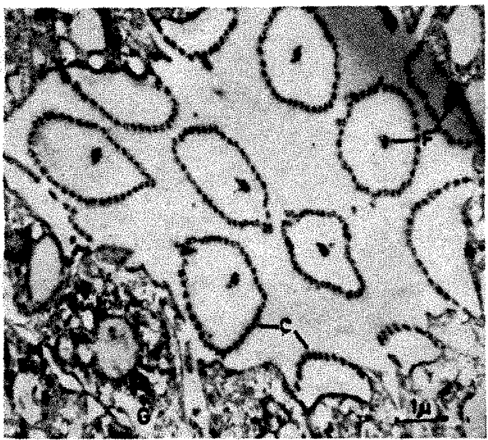

Fig. 2. Electron micrograph of a vibratile nest, cut as indicated in Fig. 1. *C*, collars; *F*, flagella; *G*, Golgi apparatus; *M*, mitochondria

In structure, as well as in diameter, they are like the microvilosities observed on the surface of the flagellated cells in various invertebrate tissues, for example, in the gut-cells of earthworms[5]. The collar seems to be composed of these fibrils only; nowhere can they be seen to be embedded in any common sheath. Nevertheless, sometimes two, or less frequently several, fibrils may be welded together by bridgelike structures. Moreover, such bridges seem also to exist between microvilosities in the gill-cells of freshwater mussels[5].

Several micrographs which have so far been examined strongly suggest that the interfibrillar bridges exist only near the bases of the fibrils, which would be completely free along their length. We have not seen, either in longitudinal or in transverse sections, any evidence which could support the idea of fibrils, consisting of alternate more and less dense parts. Such a structure, as mentioned by Kilian[4], seems to be an artefact due to contraction, as he indeed suggested himself.

As it seems to be established from our present investigations that the collars really have a web-like structure, this has impelled us to reconsider the so far generally accepted hypothesis of the functioning of these collars.

A more detailed account of this work, which is still in progress, together with further observations of the ultra-structure of the complete collar-cells, will be published elsewhere.

Relationship between Some Clovers and *Ditylenchus destructor* Thorne, 1945

In a previous communication[1] the nematode *Ditylenchus destructor* Thorne, 1945, was recorded from the roots of a number of plants commonly found on Prince Edward Island. Two of these plants, *Trifolium pratense* L. and *T. hybridum* L., are abundant in most grass fields on the Island. Further examinations of roots of these two species from fields infested with *D. destructor* showed that there were considerable numbers of the nematode in the rhizospheres (the soil adhering to the roots after they have been dug and gently shaken) and some within mature roots of these plants but very few in or about young roots. Adults and larvæ were both present in the rhizospheres of plants taken from a frozen field in February, suggesting that there may be no special

	July 27	Sept. 7	June 21	July 15	Sept. 5
Trifolium pratense	1	1	185	5,430	9,651
T. hybridum	1	6	528	3,589	—
T. repens	1	1	174	1,233	—
Melilotus officinalis	0	3	22	305	2,666*
Medicago sativa	5	0	72	225	43

* One plot (four plants) only.

overwintering stage of the nematode such as is found in *D. dipsaci*.

In 1953 counts of *D. destructor* in an infested field showed that in samples taken from bare soil 5–8 cm. distant from *T. pratense* there was one specimen in 10 c.c. of soil, whereas in the rhizospheres of these plants there were more than 2,000.

In 1954 a small-plot experiment was commenced in a field infested with *D. destructor* to determine the species of plants that favour an increase in the nematode population. The plots were arranged in a balanced incomplete block design in four replications and planted in June 1954 with 13 species : *Trifolium repens*, *T. pratense*, *T. hybridum*, *Medicago sativa*, *Melilotus officinalis*, *Agrostis alba*, *Phalaris arundinaceae*, *Phleum pratense*, oats, barley, soy bean and potato. The annual species were replanted in 1955 in the same plots as in 1954. Random samples of four plants from each plot were examined at intervals during the summer of 1954 and of 1955. In 1956 samples of *T. pratense*, *M. officinalis*, *M. sativa*, *P. arundinaceae* and *Phleum pratense* were taken in September only. The numbers of *D. destructor* in the rhizospheres of each sample were determined by a modified Baermann funnel technique. The roots were stained with hot acid-fuchsin lacto-phenol for subsequent examination.

In 1954 fewer than one of *D. destructor* per sample were found in the rhizospheres of any plant species. None was found in the stained roots. Root necrosis was not observed.

In the same plots in 1955 *D. destructor* was abundant in the rhizospheres of the legumes, particularly of the three species of *Trifolium* (Table 1). The numbers found in the rhizospheres of the other plants were similar to those in 1954. Root necrosis was observed in the three species of *Trifolium*, but not in *M. officinalis* or *M. sativa*.

In 1956 large numbers of *D. destructor* were again found in rhizospheres of *T. pratense* and also of *M. officinalis* but not of *M. sativa*. Root necrosis was present in *M. officinalis* but was not as severe as in *T. pratense*. No necrosis was observed in *M. sativa* roots.

Examination of the stained roots of the three species of *Trifolium*, sampled in July 1955, showed that the cortical tissues of the main root had decayed and that the epidermis, although dead, still surrounded the cortex. A very large number of nematodes, including *D. destructor*, were found beneath the dead epidermis. Necrosis of the cortex of clover roots seems to be common in Prince Edward Island and is not confined to fields infested with *D. destructor*. The cause of the root necrosis is not known although the symptoms are similar to those described by Fezer[3] of a root rot caused by *Fusarium* spp.

These observations suggest that the increase in numbers of *D. destructor* may be associated with the root necrosis of the clovers. *D. destructor* is able to live on fungi[2] and hence the mature clover plant, affected by root necrosis, may provide a favourable environment for fungi upon which the nematode is able to feed, thus leading to a large increase in the nematode population.

A Method for isolating *Pseudomonas mors-prunorum* Phages from the Soil

BACTERIOPHAGES active against plant pathogenic bacteria have been isolated from various sources, including diseased plant material[1], seed[2] and the soil[3]. We have found the soil beneath diseased cherry, plum, and apricot trees to be a prolific source of phages for *Pseudomonas mors-prunorum* Wormald, the organism causing the bacterial canker disease of stone fruits. Phages were isolated by the following method.

About 150 gm. of soil, consisting of several smaller samples taken from near the crowns of young trees in cultivated stone-fruit orchards, were placed in sterile glass jars and enriched with a 48-hr. culture of *Ps. mors-prunorum* (strain *NA*3) in nutrient broth plus 2 per cent glycerine. This appears to be essential, as attempts at recovering phages from unenriched soils were unsuccessful. The mixture was shaken periodically during the next 48 hr., after which the free liquid was decanted and partially clarified by ordinary filtration followed by centrifuging at 3–4,000 rev./min. for 30 min. Next, 5 ml. of the supernatant liquid was transferred to a stoppered 20-ml. bottle and shaken vigorously with 0·1 ml. of chloroform to kill the bacteria[4]. After the chloroform had settled out, 1 ml. of the treated soil extract was withdrawn and examined for plaque formation by the poured plate method[5], using *NA*3 as the propagating strain and a 1 per cent agar medium containing peptone (0·5 per cent), yeast extract (0·3 per cent) and glycerine (2 per cent), adjusted to *p*H 7·2 with a phosphate buffer. The surface of the agar was dried thoroughly at 37° C. and the plates incubated at 25° C. Plaques, varying in number with different soil samples from a few to several hundred per plate, were observed after 24 or 48 hr. Single plaques were picked off and the phages propagated on young cultures of *NA*3 in a broth of the same constitution as the plating medium. The phages were purified by streaking, with a glass rod, a small drop of a lysed culture across the dried surface of an agar plate sown with 1 ml. of a 48-hr. culture of *NA*3. Isolated plaques thus obtained were cut from the agar and re-propagated in broth culture. The whole process was repeated 2–3 times and the phages finally brought to high titre by serial transmissions in broth cultures.

Chloroform treatment was used as an alternative to filter-sterilization and proved very effective ; contaminant bacteria were rarely encountered on the isolation plates and never in sufficient numbers to interfere with plaque formation. By avoiding filtration the isolation procedure was considerably simpli-

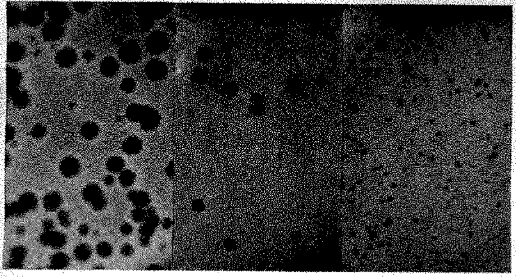

Fig. 1. Phages with different plaque forms, isolated from orchard soils using a single propagating strain, *NA3*, of *Ps. mors-prunorum* (actual size)

fied and several soil samples could be handled simultaneously. Heat treatment (58° C. for 30 min.) was also tried as an alternative to filtration, but led to inactivation of the phages.

In a test of the method on twelve soil samples taken from beneath cherry, plum and apricot trees in several different localities, phages were isolated from nine of the samples. The isolates were classified into three groups on the basis plaque morphology (Fig. 1), namely, large (2 mm.) circular plaques with a 'halo'; medium sized (1 mm.) irregularly-shaped plaques; small (0·5 mm.) pin-point plaques. These groups, which have been further differentiated by cross-resistance tests, were obtained using a single enrichment strain, *NA* 3, of *Ps. mors-prunorum.*

Occurrence of Soft Rot Bacteria in Scottish Soils

A method of isolating soft rot bacteria from soil using immature potato tubers as a form of enrichment medium was described by Kerr[1]. He found that of twenty Scottish soils examined all contained Gram-negative bacteria capable of rotting potato tuber slices.

When the term 'soft rot bacteria' is employed most workers generally assume that this implies 'coliform soft rot bacteria', that is, *Erwinia carotovora* and related species. With this assumption is associated the prevalent view that soft rot coliforms are commonly present in soils, and can be isolated readily from them. On this basis it is usually considered that the organisms isolated by Kerr were *Erwinia* spp., although he did not identify the genus to which his isolates belonged.

A study of the soft rot bacteria in Scottish soils was undertaken in connexion with investigations on black leg disease of potato, caused by *E. atroseptica*. During the years 1956 and 1957, seventeen soil samples, taken from different localities, and including peaty, shale, sandy and clay types, all under current cropping, were tested for the presence of soft rot bacteria. Kerr's technique was used, and soil suspensions were plated out directly on the salicin agar described by Noble and Graham[2], and on the pectate gel mentioned by Dowson[3]. A number of isolates were obtained from each soil sample by all three methods, which were capable of rotting potato tuber slices at 26° C. Most of these were Gram-negative bacteria, and further examination showed them to be members of the genus *Pseudomonas*. Many of these pseudomonads do not produce a fluorescent pigment on meat infusion agar, but will do so in a medium containing inorganic salts plus an organic acid such as gluconic acid, treated with 8-hydroxyquinoline to reduce the heavy metal content, after the method devised by Paton[4]. Such organisms are therefore easily confused with coliforms unless adequate tests are applied.

In other experiments, heavy suspensions of a mixture of two strains of *E. atroseptica* were poured on to 500 gm. of various soils (sandy, clay, shale, peat and unsterilized John Innes compost) contained in Kilner jars with loose-fitting lids. The jars were buried up to the neck in soil in the open during November 1955 and 1956, while others were kept at room temperature. Using Kerr's method and the salicin agar technique, isolations from all jars, in May 1956 and 1957, yielded only soft rot organisms of the genus *Pseudomonas*, none of which could be specifically identified. Similar pseudomonads have been obtained from naturally rotting tissues of a number of plants, including potato, carrot, leek, celery and cauliflower.

Some Gram-positive organisms were associated with rotting when Kerr's technique was used for isolation, and all were members of the genus *Bacillus*. *B. polymyxa* (Voges–Proskauer positive) was fairly common, but *B. macerans* (Voges–Proskauer-negative) was obtained on two occasions only.

It is concluded that in enrichment cultures from Scottish soils the dominant soft rot organisms are pseudomonads, and not coliform bacteria.

Pectin-decomposing Strains of *Pseudomonas*

The ability of certain members of the genus *Pseudomonas* to cause a soft rot of plant tissue or to degrade pectin preparations has been known for some time[1]. It is surprising that this character of the pseudomonads has not been given more attention, considering the very common occurrence of members of this genus in Nature and the economic importance of soft rots in plant tissue.

While investigating cases of tomato stem necrosis or soft rot, commonly ascribed to *Erwinia carotovora*, it became evident that the coliform types of pectolytic bacteria could not be determined in the majority of specimens. The isolates most frequently obtained were members of the genus *Pseudomonas* as characterized by Dowson[2]. Two or more members of this genus were usually present in each case as could be shown by colony appearances on a nutrient agar containing sucrose. At least one strain from each specimen of tomato was found to be active in rotting sections of tomato stem and it produced the typical disease symptoms on inoculation into vigorously growing tomato plants. Cucumber, turnip and potato slices were actively rotted and inoculation into the stems of healthy potato plants resulted in a condition similar in appearance to that known as 'black leg' (*E. atroseptica*). These strains liquefied a 2 per cent pectate gel (A.S.P. Chemical Co.) superimposed on a calcium agar base as in the double layer method of Wieringa[3]. This is at variance with the statement of Dowson[2] that species of *Pseudomonas* do not liquefy pectate gel.

Following this observation, approximately 400 strains of *Pseudomonas*, isolated over a number of years from a variety of sources such as soil, water and the gut of the earthworm as well as healthy and diseased plants, were screened for active pectolysis on cucumber slices. A culture was considered active if the tissue was reduced to a pulp after 24 hr. incubation in a Petri dish containing damp filter paper at 27° C. On this basis about 5 per cent of the strains tested were actively pectolytic and a further 5 per cent produced a slower (2 days) but similar action. As these strains were not selected originally on the basis of any association with soft rots in plants it would appear that the occurrence of pectolytic pseudomonads in Nature is commoner than has been supposed. The evidence so far collected suggests that such organisms may be of greater significance than the better-known group of coliform-like organisms in causing some types of soft rot in plants. These strains of *Pseudomonas* are now the subject of a more detailed bacteriological examination, the results of which will be published elsewhere.

Red Cell Agglutinability affected by Disease

Moskowitz and Carb[1], studying the effects of formalin on red cells, noted that formalin "was capable of completely inhibiting the agglutinability of red cells by antisera without destroying the antigens". They also directed attention to a number of papers recently published describing red cells of type A, which are only weakly agglutinated, or not agglutinated, by anti-A sera, and it appears that the agglutinability of the red cells can be modified in a number of different ways, both by disease and by genetic effects. In a case described by Weiner *et al.*[2], for example, it was considered that modifying genes were responsible for this. The most interesting case, however, was that described by van Loghem *et al.*[3], who thought it "might be possible that the blood group of the patient had changed in the course of his disease".

In a similar case, which we are investigating, the patient, S.M., has hypoplastic anæmia and has received multiple blood transfusions. His blood groups are A?, R_1R_2, $M.N.S$, $P+$, $Le(a+b-)$, $K-$, $Fy(a-)$, $Jk(a+)$.

The ABO group of this patient is of considerable interest since his red cells do not react with human anti-A of natural or immune variety, nor with immune rabbit anti-A serum, but only with human serum from certain group O individuals at 16° C. There is no agglutination with anti-B sera. No anti-A is present in the patient's serum, but his anti-B has a titre of 32. He is a non-secretor of A and H. If his red cells are mixed with anti-A serum and washed, anti-A antibody may be eluted from the treated cells. During his Army career, the patient was grouped as a normal blood group A. His wife is group O, with both anti-A and anti-B in the serum, and his daughter is a normal group A_1. Some difficulties were encountered in determining the patient's other groups owing to the large number of transfused cells present in his blood, but blood from the bone marrow was tested as well as the peripheral blood and no difference was detected. Recently, transfusions have been purposely given of selected groups, so that his own peripheral cells can be examined more readily. At this preliminary stage we have no evidence to suggest that antigens other than the A antigen are affected. In this case, we feel that this man's cells originally reacted as normal group A and that it is only recently that his cells have begun to have these peculiar reactions.

Polyagglutinability is another rare condition that arises during infections of various kinds, although on occasion the condition has been found in people who are apparently healthy at the time they were tested. It may be of a transient nature and appear and disappear in a short period of time[4]. The person's red cells so affected react with a proportion of normal sera at a lower temperature but not at 37° C. and not with their own serum. Two recent cases, both associated with infection, showed unusual features.

In the first case, the patient had a pelvic abscess of long standing. Her red cells showed the typical changes of polyagglutinability, but the unusual feature was that her own red cells reacted weakly with her own serum at lower temperatures. Her serum contained a pan-agglutinin active at lower temperatures but inactive at 37° C. This was without blood group specificity. It seems possible in this case that this pan-agglutinin arose from some effect on the patient's serum similar to that which caused the change in her red cells.

In the second case, the patient's red cells showed the typical changes of polyagglutinability, but unlike other cases these red cells were agglutinated by a number of sera at 37° C. The direct Coombs test was negative. The patient's serum contained no atypical antibody, but cultures of fæces showed a growth of *Staphylococcus aureus*. She had a severe anæmia of doubtful etiology and died before further investigations could be undertaken; it was not possible to establish that the *in vitro* reactions had any counterpart *in vivo*.

Bessis *et al.*[5] have commented on the fact that in sickle-cell anæmia the agglutinability of the red cells is much reduced or even abolished when the cells are sickled, but is normal when they are not sickled.

These observations show at least three ways in which disease can affect the agglutinability of red cells. In the first and last instances, there is a decrease of agglutinability, but in the first case we have been unable to establish any decreased agglutinability in respect of any antigen other than the *A*-antigen. This is unlike the experiments of Moskowitz and Carb, where the decrease in agglutinability appears to be of a more general nature. The change in polyagglutinability is an actual change in the antigenic constitution of the red cell; indeed, we have prepared sera in rabbits which will agglutinate certain polyagglutinable cells. It is of importance in blood grouping work to consider whether disease has affected red cell agglutinability in a particular case, and it seems possible that study of the mechanism by which disease can produce these effects could help one to understand the way in which modifying genes operate in the production of similar effects.

Caudal Necrosis in Suckling Rats

THE communication by Njaa *et al.*[1] concerning the presence of 'ringtail' in newborn rats has prompted us to report similar observations in the colony maintained at these Laboratories. During the winter of 1954–55 signs of 'ringtail' were noticed in many suckling rats. Generally, these symptoms were seen in 8-day-old young rats, the first signs being a marked scaliness of the tail and reddening of the tail tip (Fig. 1). In many cases the condition of the tail deteriorated, resulting in necrosis followed by its severance from the body. Microscopic examination of sections of the tails revealed in the early stages a marked hyperkeratosis and parakeratosis (Fig. 2). There was œdema (spongiosis) and hyperplasia of the prickle cell layer, resulting in acanthosis. In some of the specimens, the prickle cells at all levels contained large amounts of keratohyaline granules. The hair follicles were slightly dilated and were filled with keratinized invaginations of the cornified layers of the epidermis. The corium was œdematous and often congested with blood. In the more advanced lesions, there was extensive eosinophilic necrosis of both the epidermis and the corium, accompanied by leucocytic infiltration. In general, these histological characters closely resemble those observed in the ring tails of rats born to mothers deprived of essential fatty acids[2].

The phenomenon of 'ringtail' observed in the newborn rats of our stock colony had the following interesting features: (1) The condition was not attributable to any significant fluctuations in the relative humidity as revealed by a careful study of the weather records. Actually, these cases of ringtail occurred during and after the winter 'monsoon' period, when the relative humidity ranged between 68 and 83 per cent. (2) Surprisingly enough, after the age of 17 days the condition of animals exhibiting 'ringtail' showed signs of retardation without any further aggravation. It is well recognized[3] that after the seventeenth day the young are not entirely dependent upon maternal milk supply, and, possibly, the retardation in the condition could be attributed to the nibbling of the stock ration. (3) The sudden outbreak of 'ringtail' was traceable to a minor alteration in the stock ration. The practice of incorporating crude shark liver oil in the stock ration (the fat content of which was 3 per cent, which is admittedly low) as a source of vitamin A, which also is known to be a rich source of unsaturated fatty acids, but comparatively poor in essential fatty acids, was stopped. Instead, a concentrate of vitamin A acetate ('Vanitin', manufactured by Hoffmann–LaRoche and Co., Ltd.) was introduced. (4) When the fat content of the diet was increased to more than 6 per cent by the addition of the peanut oil, there was a dramatic response resulting in the complete eradication of 'ringtail' in the suckling rats. None has been seen for the past three years.

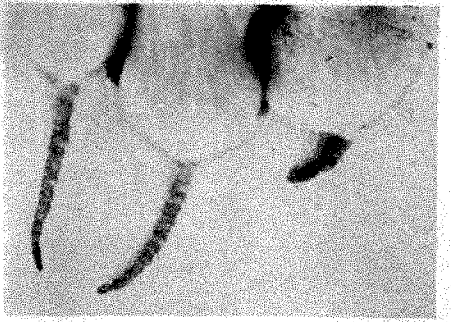

Fig. 1. Ringtails of newborn rats at various stages of development

These features would indicate that probably the nutritional status of the mother rats, particularly with regard to the essential fatty acid content of the stock diet, plays an important part in the development of 'ringtail' in newborn rats. It is not unlikely, however, that besides inadequacy of fat, environmental factors such as the one suggested by Njaa *et al.* (*loc. cit*) might also play a part. In this connexion it may be pertinent to mention that the skin

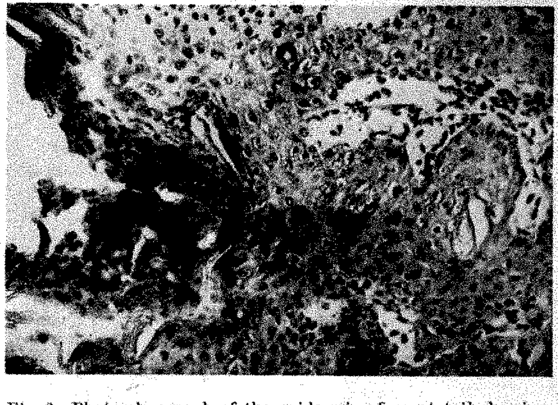

Fig. 2. Photomicrograph of the epidermis of a rat tail showing marked hyperkeratosis, parakeratosis and acanthosis. Hæmatoxylin and eosin. (×180)

lesions of essential fatty acid deficiency are known to be enhanced by a lowering of the relative humidity[4].

An Electrical Receptor in Fishes

CERTAIN families of fishes, namely the Mormyridæ of tropical Africa and the Gymnotidæ of Central and South America, possess a small electric organ which exhibits intermittent activity. Lissmann[1] found that *Gymnarchus niloticus* Cuv., swimming freely, emitted pulses at an even rhythm of about 300 per sec.; the frequency was unaffected by the activity of the fish. Similar observations have been made on six species of the Gymnotidæ by Coates *et al.*[2] and Coates[3], who found regular rhythmic discharges the frequency of which varied with the species and ranged between 65 and 1,000 per sec. Again, the rhythm was unaffected by the activity of the fish. Coates[4] also reported a low-voltage discharge at about 50 per sec. from *Electrophorus electricus*. *Mormyrus kannume* has been reported to discharge pulses at a low rate when resting and at 80–100 pulses per min. when disturbed[5,6].

We have found that *Mormyrus kannume* discharges at about 1 per sec. when quiescent in a tank; but the discharge accelerates when the fish is disturbed and when it swims about. The frequency often increases to 30 per sec. under these conditions. The discharge continues at a declining rate during anæsthetization with urethane, but only disappears completely when the level of surgical anæsthesia is reached.

All these fishes are reported to react to conductivity changes caused by placing metal objects in their neighbourhood and also to electrical pulses delivered from electrodes[1].

It has been suggested that these impulses form part of a sensory system by which the fish detects local changes in its environment. Such a suggestion implies the possession of some form of receptor for electrical pulses. We wish to report some evidence for the existence of an electrical receptor in *Mormyrus kannume*.

Fish of about 30 cm. in length have been used in these experiments. It was necessary to keep the fish immersed throughout, and since the procedures involved exposing tissues to the fluid, frog Ringer's solution was used in the experimental bath. Although this solution is almost certainly 'unphysiological' for *Mormyrus* it was sufficiently close for minimal tissue damage. The fish were anæsthetized with urethane at a concentration of 1 : 400 in the bath and oxygen was bubbled through the solution. Spontaneous respiration remained throughout the experiments.

In *Mormyrus*, a pair of cranial nerves leaves the hind-brain and after sending a branch ventrally each nerve runs along the back, deep to the dorsal fin, sending off branches which terminate close to the base of the dorsal fin. The general arrangement is shown in Fig. 1. This nerve has been exposed on one side close to its entry into the skull but distal to the ventral branch, sectioned, and the cut peripheral end placed upon platinum electrodes. The nerve on the electrodes was isolated from the bath solution by a petroleum-jelly barrier and covered in liquid paraffin. The electrodes were connected via a cathode follower to a condenser-coupled pre-amplifier and Cossor oscilloscope.

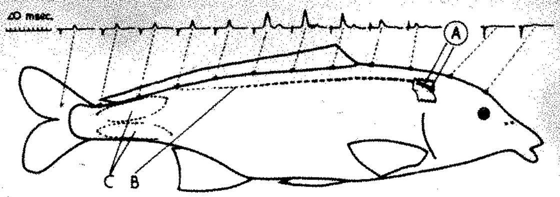

Fig. 1. Diagram showing the experimental arrangement. The recording electrodes *A* are shown in position on the dorsal nerve *B*. The recorded monophasic action potentials have been traced and are shown attached to the site occupied by the stimulating electrodes which elicited them. *C* is the electric organ

Electrical pulses of 0·1 msec. duration from an isolating transformer were delivered between silver electrodes placed in the bath but not in contact with the fish. This pulse duration approximates the natural discharge from the electric organ. The bath solution was earthed throughout. Using electrodes of 0·8 mm. diameter, 5 mm. long, and 10 mm. apart, placed horizontally 10 mm. from the fish on a level with the base of the dorsal fin in the middle region, a stimulus pulse of about 5 volts was followed by the appearance of an action potential in the dorsal nerve. Increasing the electrode size, the inter-electrode distance and/or the pulse amplitude caused an increase in amplitude and duration of the action potential. Using a fixed inter-electrode distance and stimulus intensity, but moving the electrodes forwards or backwards while retaining their position relative to the surface of the fish, caused a change in the action potential amplitude depicted in the diagram. The potential was at a maximum when the stimulating electrodes were in the vicinity of the headward part of the dorsal fin at the level of its base; it decreased tailwards and it decreased headwards near the emerging nerve and beyond it. Raising or lowering the electrodes reduced the potential amplitude. The time-interval between the stimulus artefact and the origin or peak of the action potential decreased over the region of the dorsal fin as the stimulating electrodes approached the recording ones. If it is a fair assumption that the current spread between the electrodes and the excitation processes are constant, then the plot of the time-interval against distance gives a velocity of about 100 m. per sec. at the bath temperature of about 23° C. for conduction along the nerve. Since the nerve contains many large myelinated fibres this seems reasonable. Also, towards the caudal end of the dorsal fin and beyond it, the action potential amplitude decreased, but the time interval to peak remained constant. This means that the site of excitation was no longer moving with the electrodes.

These results are necessarily incomplete. With larger stimulus amplitudes, the shape of the action potential becomes more complex, showing other fibre groups or the result of a wider stimulus spread. It has not been possible yet to obtain a discharge in part of the nerve and thus information about the localization of receptors, because the nerve deteriorates when its sheath is removed. Again, the substitution of Ringer's solution for fresh water will affect the distribution of current pulses in relation to the fish and its environment. Further experiments are in progress, and will be reported in detail elsewhere.

However, we consider that the results so far indicate that a receptor system exists in *Mormyrus kannume* which is sensitive to electrical stimuli not delivered directly to it and that the receptor system is localized to the region of the base of the dorsal fin.

Effect of Ultra-Violet Irradiation on Electrophoretic Properties of Serum Protein

In the course of an investigation of the complement and antibody activities of animal sera (to be reported elsewhere) the effect of several agents on the serum protein has been examined by paper electrophoresis. It has recently been demonstrated that while controlled heat modified in various ways the electrophoretic pattern of serum protein it also affected differently the reactiveness of the serum with complement[1]. It has also been reported[2] that ultra-violet irradiation of immune serum would either impair or completely destroy the ability to lyse, to agglutinate, to combine with toxins, to precipitate, to fix complement, or to confer passive anaphylaxis.

Preliminary experiments with ultra-violet irradiation of sera showed that the complement activity of guinea pig serum was completely destroyed by irradiating it for 6 hr. at 3° C. On the other hand, the complement-fixing antibody to canine hepatitis virus in canine serum was active, after it had been irradiated for 8 hr. at room temperature. All irradiated sera acquired a characteristic odour resembling burnt wool; otherwise no alteration in the appearance or in *p*H of the serum was observed. However, electrophoretic analysis suggested that some modification of the protein had taken place and, since no observations could be found in the literature, it was decided to examine electrophoretically the effect of ultra-violet irradiation on the protein of sera obtained from healthy adult human subjects and three animal species (the dog, rabbit and guinea pig).

Undiluted serum was irradiated either at room temperature or at 3° C. in a 'Vycor' glass tube, sealed with a rubber stopper. The tube was placed horizontally at a distance of 15 cm. from a 15-W. mercury vapour lamp ('Hanovia') emitting predominantly at 2537 A. The irradiation was controlled by varying the times of exposure. Serum aliquots in 'Vycor' tubes protected from irradiation with tinfoil served as controls. Serum aliquots exposed to irradiation were withdrawn at intervals and stored, together with the controls, at 3° C. until irradiation had been completed. 0·01-ml. aliquots of the control and irradiated sera were streaked on filter-paper strips for electrophoretic analysis. Paper electrophoresis was carried out essentially as described previously[1], using 3 *MM* Whatman paper strips. Electrophoresis was conducted at constant current (11 m.amp. for six strips) for 28 hr. at room temperature using sodium 5,5-diethylbarbiturate buffer, *p*H 8·6. The proteins were stained with bromophenol blue, and evaluated by direct photometry of the paper strip.

The results with rabbit serum (Fig. 1) show that the protein was similarly modified in all sera irradiated either at 3° C. or at room temperature. The migration velocities and probably dye-binding ability of the protein were affected by irradiation for 2 hr. Prolonged irradiation resulted in a complete change in the electrophoretic pattern.

Detailed analysis of the relationships between the mechanism of electrical transport of the protein and the activity *in vitro* of either antibody or complement must clearly await further experimental studies. The present work shows, however, that regardless of mechanism, electrophoretic analysis of native and modified serum protein may provide a better understanding of the activities of antibodies and complement. It shows also that serum protein is considerably denatured by ultra-violet irradiation, as judged by paper electrophoresis.

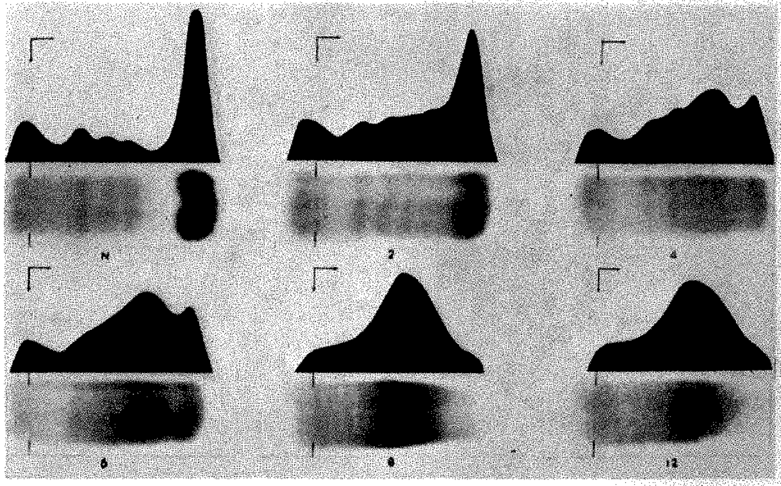

Fig. 1. Effect of ultra-violet irradiation upon proteins of normal rabbit serum. Paper electrophoretic pattern of control serum aliquot (*N*) compared with the patterns of aliquots irradiated for 2, 4, 6, 8 and 12 hr. Arrows indicate site of application and direction of run

I am grateful to Dr. C. B. V. Walker, of the Cambridge Blood Transfusion Centre, for samples of normal human serum, and to Mr. W. G. Orbell and Miss M. Baker of these laboratories for technical assistance.

Transmembrane Potentials of Single Fibres of the Atrio-ventricular Node

Records of the electrical activity of the atrio-ventricular node obtained with extracellular electrodes[1,2] have not provided a clear picture of the mechanism of normal atrio-ventricular delay or the changes responsible for partial and complete atrio-ventricular dissociation. In the experiments to be described the trans-membrane potentials of single fibres of the atrio-ventricular node and bundle of His have been recorded by means of intracellular micro-electrodes in order to obtain an answer to these questions. The atrio-ventricular node and His bundle have been studied either in the intact perfused rabbit heart or in isolated preparations of the right atrium and interatrial septum of the same heart. A modified Tyrode solution maintained at 33° C. was employed in both types of experiments. In most instances two intracellular micro-electrodes were employed simultaneously to demonstrate conduction delay and site of origin of activity. Similar results were obtained from both intact and isolated preparations.

A micro-electrode inserted in a single atrial muscle fibre just proximal to the atrio-ventricular node records an action potential typical of this tissue[3]. Another electrode, inserted only 1 mm. away in a single fibre of the atrio-ventricular node, records, after a conduction delay of 20 msec., an action potential similar in voltage-time course to those of the sino-atrial node[4] (top trace, Fig. 1, *A*). This action potential differs from that of atrial muscle in that the rising velocity is low and diastolic depolarization is prominent. If this electrode is moved 1 mm. towards the bundle of His and re-inserted in a single fibre of the atrio-ventricular node, the action potential is virtually unchanged in configuration but appears only after an additional delay of 20 msec. (Fig. 1, *B*).

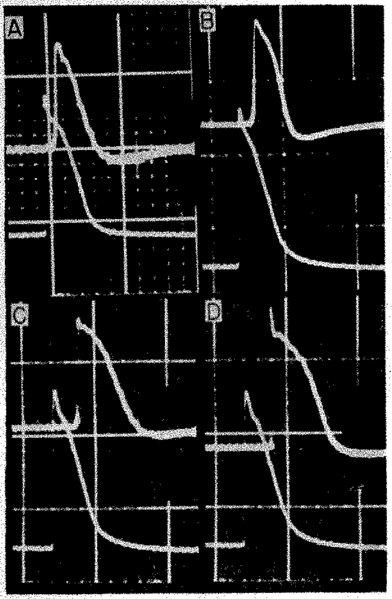

Fig. 1. On the bottom trace are trans-membrane potentials recorded from atrial muscle just proximal to the atrio-ventricular node. The same fibre is employed for records *B*, *C* and *D*. On the top trace are action potentials recorded from single fibres in the proximal (*A*), middle (*B*) and distal portions (*C*) of the atrio-ventricular node and in the His bundle just distal to the node (*D*). Calibration grid represents 10 mV. and 40 msec./division.

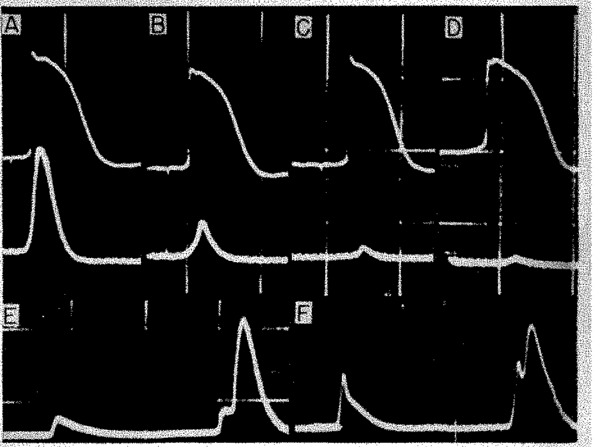

Fig. 2. *A*–*D*: On the bottom trace are trans-membrane potentials recorded from a single fibre of the atrio-ventricular node before (*A*) and after (*B*–*D*) application of acetylcholine. Records of single-fibre activity in the His bundle (top trace) show the driven response (*A*–*E*) and the onset of pacemaker activity (*D*). *E* and *F* show activity of a single fibre of the atrio-ventricular node under hypoxic conditions. Activity originates in the sino-atrial node in *E* and in the His bundle in *F*

Action potentials recorded from the atrio-ventricular node just proximal to the His bundle show an additional conduction delay of 20–30 msec. and also an increase in duration, increased velocity of rise and diminished phase of slow diastolic depolarization (Fig. 1, *C*). Finally, when the micro-electrode is inserted in a single fibre of the His bundle, the action potential resembles that of a Purkinje fibre[5]. Tracings obtained from fibres of the His bundle distal to this site show no additional conduction delay of the same order of magnitude as demonstrated within the node. Under conditions associated with pacemaker activity of the His bundle, the conduction time from the pacemaker site to the atrium is similar to that seen during normal atrio-ventricular transmission.

If the atrium is driven at a regular rate by means of electrical stimuli and acetylcholine is added to the perfusion fluid, records of the trans-membrane potential of single nodal fibres show several changes of interest. The action potential decreases progressively in amplitude and velocity of rise (bottom trace, Fig. 2, *A* and *B*) until conduction fails (Fig. 2, *C*). This failure of depolarization appears in the absence of an appreciable change in the level of the resting potential. During the period of complete conduction block, pacemaker activity originates in fibres of the His bundle and is propagated to the ventricle (Fig. 2, *D*). If the concentration of acetylcholine is low enough there is some spread of activity in a retrograde direction and small depolarizations are recorded from atrio-ventricular nodal fibres (bottom trace, Fig. 2, *D*). Graded activity of this type is a prominent aspect of nodal activity not only under the influence of acetylcholine but also during hypoxia. At times, under conditions of poor oxygenation, nodal action potentials arise out of every other one of a series of small local depolarizations both when activity originates in the sino-atrial node (Fig. 2, *E*) and it originates in the His bundle (Fig. 2, *F*).

These experiments show that normal atrio-ventricular nodal delays result from slow conduction within the node rather than from refractoriness of nodal tissue[6] or from some synaptic-like delay at the junction of nodal fibres with those of the atrium or

His bundle. The slow conduction is undoubtedly caused by the low velocity of rise of the nodal action potential. Conduction block caused by acetylcholine results from a failure of regenerative depolarization of nodal fibres; slowing of propagation due to the same agent is due to changes in the voltage-time course of the nodal action potential. During so-called escape from acetylcholine inhibition, the pacemaker site is in the His bundle rather than in the fibres of the atrio-ventricular node. The mechanism for partial block (2 : 1 response) demonstrated also constitutes an additional mechanism for conduction delay which may be of importance in the diseased heart. Finally, graded activity appears to be a frequent occurrence in fibres of the atrio-ventricular node.

Physical Bases of the Electrohysterogram

INTERPRETATION of the electrical activity associated with the uterine contractions of labour has been beset with many difficulties. For the most part, the studies have concentrated on certain fast components[1], and did not readily lend themselves to physiological interpretation. In this laboratory a uterine electrical complex bearing a one-to-one relationship to the uterine contractions of labour has been demonstrated, and the techniques described[2].

With the aid of multichannel recording techniques now under development, additional information about the appearance of the electrohysterogram has been obtained. With two-channel recording of the electrical activity on the right and left sides of the uterus in active developing labour, the wave-forms have been observed to be repetitive on each side, yet with interesting differences as between the sides. On the left side the wave-form shows an initial large spike-like variation, followed by a sharp diphasic reversal and thereafter slow recovery. On the right side, activity seems to begin earlier, and to consist of an oscillatory repetitive discharge during most of the contractile epoch, followed by a fast monophasic shift and a slow recovery.

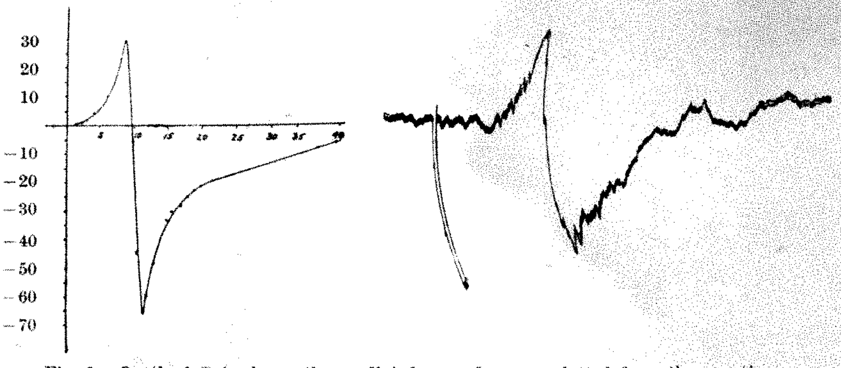

Fig. 1. On the left is shown the predicted wave-form, as plotted from the equations developed by Wilson. On the right is shown the left-sided wave-form, as recorded in a normally developing labour. The spike-like initial variation was correlated with a visible, palpable contraction. The calibration signal shown represents 5 mV., and the time of this complete complex along the horizontal axis is about 4 min.

In an investigation of the theoretical implications of these wave-forms, the cardiac investigations of F. N. Wilson have been utilized[3]. He considered theoretically the electrical effects of radial excitation. Wilson had in mind the auricle, with excitation spreading from the sinus node, but the mathematical approach is perfectly general and applies to any system in which excitation may be presumed to be spreading radially from a source, the excitation wave being considered by him to be preceded by sources and followed by sinks, that is, to be based upon dipole considerations.

The following equation for the potential of an exploring electrode was developed:

$$V_p = \frac{4c'\mu(x+a)}{\sqrt{(x+a+s)^2+b^2}}\int_0^{\frac{\pi}{2}}\frac{d\varphi}{\sqrt{1-k_1{}^2\sin^2\varphi}} - \frac{4c'\mu(x+a)}{\sqrt{(x-a+s)^2+b^2}}\int_0^{\frac{\pi}{2}}\frac{d\varphi}{\sqrt{1-k_2{}^2\sin^2\varphi}}$$

the integrals being complete elliptic integrals (of Legendre; cf. ref. 3). With evaluation, a predicted wave-form was plotted[3]. In Fig. 1, the mathematically predicted wave-form is shown on the left, and the experimentally observed wave-form of the left side of the uterus is shown on the right half of the figure. The excellent correspondence between the left-sided wave-forms observed in the human electrohysterogram and the wave-form as developed from theoretical considerations is evident. From this agreement between theory and experimental evidence the following tentative conclusions may be drawn: (1) The human uterus in developing labour behaves electrically like an auricle, namely, as a single-chambered organ in which electrical excitation spreads radially from a single source. (2) The uterus in developing labour is normally under the hegemony of a single pace-maker. (3) Dipole considerations have validity only if the measurement is being made at distances relatively far from the source: hence the observed wave-form picked up on the left side of the uterus is presumably relatively far from the source.

In the effort to elucidate the wave-forms from the right side, work on the electrical activity at the cardiac sinus node was of interest. Van Der Kooi *et al.*[4] showed that an oscillatory discharge was associated with the specific activity of the node. We made a comparison, similar to that of Fig. 1, of the activity at the sinus node and the right-sided uterine wave-forms, and found good agreement. From this interesting evidence, as well as from the measurements cited above, arises the suggestion that the particular wave-form observed on the right side is associated with pace-maker activity.

Thus an electric wave-form which is synchronous with the uterine contraction can be demonstrated at some time during developing labour. The wave-form is dominantly monophasic in certain areas, and diphasic elsewhere. In the area of monophasic wave-form, higher-frequency components may be seen which may be related to the focus of activity.

On the basis of the available electrical evidence, the following hypotheses may be suggested: (1) The human uterus in labour behaves electrically as a single-chambered, auricle-like structure. (2) The contractions of the human uterus under the given conditions are controlled by a single pace-maker. (3) Under ordinary conditions, this pace-maker seems to be on the right side. (4) Excitation of the uterus is basically radial in normally developing labour.

Shaking of Honeybee Queens prior to Flight

Recently Hammann[1] has published a description of the way in which worker honeybees push, pull and shake their unmated queen before she leaves the hive on her mating flights. After each of these flights the 'attacks' subside somewhat, but they increase in frequency once again before the next flight, only ceasing finally when the queen commences egg-laying. Hammann lists several types of movement which the workers make around the unmated queen, and of these she found that shaking was by far the most frequent. This movement has been described previously[2,3] (although no evidence as to its function has been put forward), and consists basically of a rapid vertical vibration of the worker's body lasting 1–2 sec. while its legs grasp either the queen or another worker.

Hammann states that she has never seen an established queen shaken by the workers, and I would agree that for much of the year the queen is not normally shaken. The important exception, apart from the period between emergence and egg-laying, is during the swarming season. At this time the colony makes extensive preparations which culminate in the departure of the mated queen with the swarm[3], and during this period the queen may very frequently be shaken, as shown in Fig. 1, in which is recorded the number of times per hour the workers of a small but otherwise normal colony in an observation hive shook their queen. Observations began on April 11 and the earliest record of shaking was on May 30, but it was only after the formation of the first queen cup on June 23 that shaking reached any major proportions. From then on the frequency rose rapidly to a peak on July 13, when the queen left the hive with the swarm. A similar sequence of events was observed, though in rather less detail, in two other colonies.

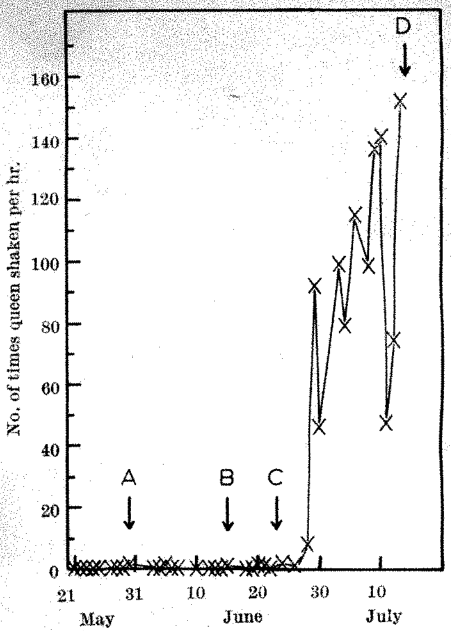

Fig. 1. Shaking of the honeybee queen by the workers. *A*, First record of shaking; *B*, first drone eggs laid; *C*, first queen cup built; *D*, departure of swarm

From the coincident occurrence of swarm preparations and the shaking of the queen it would seem evident that the two events are closely connected; furthermore, it is surely not by chance that the only times when the queen is shaken are before she flies out from the hive, either with the swarm or on a mating flight. It would therefore appear that shaking is a mechanism in some way preparing the queen for flight. It may also be assumed that the incidence of the shaking of the queen is governed at least partly by an internal (colony) factor since it occurs at definite stages in colony development. It may also possibly be influenced by external factors such as weather conditions.

As already mentioned it is known that workers may shake other workers, but little information apart from a description of the process is available on this subject. It is hoped shortly to publish elsewhere the results of a series of observations on the shaking of workers, but at present it can be stated that, in contrast to the shaking of the queen, this occurs relatively frequently throughout the year. Moreover it, too, appears to have a connexion with flight activity.

FORTHCOMING EVENTS

Monday, January 6

INSTITUTION OF POST OFFICE ELECTRICAL ENGINEERS (at the Institution of Electrical Engineers, Savoy Place, London, W.C.2), at 5 p.m.—Mr. A. J. Thompson and Mr. N. Walker: "The Intro-
uction of Subscriber Trunk Dialling".

SOCIETY OF CHEMICAL INDUSTRY, LONDON SECTION (at 14 Belgrave
quare, London, S.W.1), at 6.30 p.m.—Prof. G. E. Coates: "Organo-
etallic Co-ordination Compounds".

Tuesday, January 7

BRITISH COMPUTER SOCIETY (at the Northampton College of
dvanced Technology, St. John Street, London, E.C.1), at 2.30 p.m.
—Mr. D. W. Davies: "The Logical Design of the ACE Computer at
e N.P.L.".

NSTITUTION OF ELECTRICAL ENGINEERS, MANAGEMENT AND SUPPLY
TIONS (at Savoy Place, London, W.C.2), at 5.30 p.m.—Dr. R.
ancox and Dr. H. Tropper: "The Breakdown of Transformer Oil under Impulse Voltages".

BRITISH INSTITUTION OF RADIO ENGINEERS (in the Lecture Theatre
the London School of Hygiene and Tropical Medicine, Gower Street,
ondon, W.C.1), at 6.30 p.m.—Discussion on "Mass Production
chniques for Television Tuners", opened by Mr. P. C. Ganderton.

Wednesday, January 8

SOCIETY FOR APPLIED BACTERIOLOGY (in the Barnes Hall, Royal Society of Medicine, 1 Wimpole Street, London, W.1), at 10 a.m.—Winter Meeting.

At 2.15 p.m.—(in conjunction with the MICROBIOLOGY GROUP of the
OCIETY OF CHEMICAL INDUSTRY)—Meeting on "New Techniques in
icroscopy".

GEOLOGICAL SOCIETY OF LONDON (at Burlington House, Piccadilly
ndon, W.1), at 5 p.m.—Prof. F. W. Shotton, F.R.S., and Dr. I.
rachan: "The Investigation of a Peat Moor at Rodbaston, Penk-
dge, Staffordshire"; Dr. D. Flinn: "On the Nappe Structure of
orth-East Shetland" (to be read by Prof. R. M. Shackleton).

INSTITUTION OF CIVIL ENGINEERS (at Great George Street, London,
S.W.1), at 6.30 p.m.—Mr. W. R. Hockaday: "Lifting Equipment"
Dugald Clerk Lecture).]

Thursday, January 9

INSTITUTION OF NAVAL ARCHITECTS (in the Weir Lecture Hall, 10 Upper Belgrave Street, London, S.W.1), at 4.45 p.m.—Dr. J. Ramsay Gebbie: Amos Ayre Lecture.

INSTITUTION OF ELECTRICAL ENGINEERS (at Savoy Place, London, W.C.2), at 5.30 p.m.—Scientific Papers.

Friday, January 10

SOCIETY OF DYERS AND COLOURISTS, LONDON SECTION (joint meeting with the LONDON SECTION of the OIL AND COLOUR CHEMISTS' ASSOCIATION, at the Royal Society, Burlington House, Piccadilly, London, W.1), at 6 p.m.—Prof. W. D. Wright: "Colour for the Dyer".

NORTH EAST COAST INSTITUTION OF ENGINEERS AND SHIPBUILDERS (in the Lecture Theatre of the Mining Institute, Newcastle upon Tyne), at 6.15 p.m.—Prof. G. H. Chambers: "University Education in Marine Engineering".

SOCIETY OF CHEMICAL INDUSTRY, FINE CHEMICALS GROUP (at 14 Belgrave Square, London, S.W.1), at 6.30 p.m.—Prof. R. M. Barrer, F.R.S.: "Molecular Sieves".

Saturday, January 11

BRITISH MYCOLOGICAL SOCIETY (in the Large Physics Lecture
heatre, Birkbeck College, Malet Street, London, W.C.1), at 11 a.m.—
cientific Papers.

APPOINTMENTS VACANT

APPLICATIONS are invited for the following appointments on or
fore the dates mentioned:

ADMINISTRATIVE ASSISTANT (graduate of a British university) IN
E DEPARTMENT OF PHYSICS—The Registrar, The University,
anchester 13 (January 11).

SSISTANT LECTUR R (Grade III) or JUNIOR FELLOW IN (VETER-
) PHARMACOLOGY—The Registrar and Secretary, The University,
l (January 15).

HAIR OF PURE MATHEMATICS—The Secretary, The University,
eter (January 15).

SCIENTIF IOR SCIENTIFIC OFFICER (with a first- or second-
ass h e or equivalent, and a knowledge of one or more of
al chemistry, radiochemistry, low-level counting
e National Physical Laboratory (D.S.I.R.),
nto dating by radioactive methods including
r measurement of carbon-14 in archæo-
ry of Labour and National Service,
K), 26 King Street, London, S.W.1,

d research experience in the
RY at the University of
on of Universities of the
don, W.C.1 (Australia,

JUNIOR LECTURER IN CIVIL ENGINEERING—The Registrar, Trinity College, Dublin (January 20).

PHYSICISTS (with an honours degree or equivalent qualification and preferably experience in one or more branches of non-destructive testing) at the Research Laboratories, Central Electricity Authority, Leatherhead, for research into the non-destructive testing of all types of materials used in the Electricity Supply Industry—The Director of Establishments, Central Electricity Authority, Winsley Street, London, W.1, quoting Ref. N/514 (January 20).

LECTURER or ASSISTANT LECTURER IN GEOGRAPHY at the University of Malaya—The Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1 (January 30).

BRITISH COKE RESEARCH ASSOCIATION FELLOW (honours graduate in chemistry, physics, or applied science relating to fuel technology), to work on the physical chemistry of carbon, under the direction of Prof. W. F. K. Wynne-Jones—The Registrar, King's College (University of Durham), Newcastle-upon-Tyne (January 31).

CHAIR OF CHEMISTRY in the University College of Ghana—The Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1 (January 31).

LECTURER IN CHEMISTRY at the University College of Ghana—The Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1 (January 31).

LECTURER IN MATHEMATICS—The Secretary of University Court, The University, Glasgow (January 31).

LECTURER IN THE DEPARTMENT OF ZOOLOGY, Victoria University, Wellington, New Zealand—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (New Zealand, January 31).

LECTURER/SENIOR LECTURER (with a principal interest in morphological, physiological or chemical cytology) IN HISTOLOGY AND EMBRYOLOGY at the University of Sydney, Australia—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Australia, January 31).

LECTURERS IN CHEMISTRY (INORGANIC AND PHYSICAL)—The Registrar, The Manchester College of Science and Technology Manchester 1 (January 31).

LECTURER or ASSISTANT LECTURER IN BOTANY at Makerere College, The University College of East Africa—The Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1 (February 3).

SENIOR LECTURER or LECTURER IN RADIOLOGY in the Faculty of Medicine, University College, Ibadan, Nigeria—The Secretary, Senate Committee on Colleges Overseas in Special Relation, University of London, Senate House, London, W.C.1 (February 3).

NUFFIELD INVESTIGATOR (with a degree in metallurgy, chemistry or physics, and experience in research) IN THE METALLURGY DEPARTMENT, to conduct research on his own account and help in running the Nuffield Research Group in Extraction Metallurgy—Prof. F. D. Richardson, Imperial College, London, S.W.7 (February 15).

SENIOR RESEARCH OFFICER (graduate in mining/metallurgical engineering from a recognized university or with equivalent qualifications, and research experience in milling and treatment problems) IN THE DEPARTMENT OF MINING AND METALLURGICAL ENGINEERING, University of Queensland, Australia—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Australia, February 15).

BABCOCK AND WILCOX RESEARCH FELLOW IN NUCLEAR ENGINEERING—The Registrar, Queen Mary College (University of London), Mile End Road, London, E.1 (February 28).

REGIUS PROFESSOR OF PHYSIOLOGY in the University of Aberdeen—The Private Secretary, St. Andrew's House, Edinburgh 1 (February 28).

LECTURER (graduate with an interest in electronics) IN THE DEPARTMENT OF TEXTILE INDUSTRIES—The Registrar, The Manchester College of Science and Technology, Manchester 1 (March 1).

PROFESSOR OF PURE MATHEMATICS in the Durham Division of the University—The Registrar, University Office, 46 North Bailey, Durham (March 1).

ASSISTANT CHEMIST (with a university degree in agriculture or pure science with postgraduate training or experience in agriculture or agricultural science) IN THE DEPARTMENT OF SCIENCE AND AGRICULTURE, Barbados, to undertake agronomical investigations—The Director of Recruitment, Colonial Office, London, S.W.1, quoting BCD.63/28/09.

ASSISTANT, Grade B (with a good honours degree), FOR MATHEMATICS—The Clerk to the Governors, South-East Essex Technical College, Longbridge Road, Dagenham.

BIOCHEMIST, Senior or Basic grade (with a B.Sc. degree with honours in chemistry or biochemistry or equivalent qualification)—The Group Secretary, Royal Hospital, Wolverhampton.

LABORATORY TECHNICIAN FOR MEDICAL RESEARCH—mainly chemical and histological—The Secretary, Welsh National School of Medicine, 34 Newport Road, Cardiff.

MICRO-ANALYST (Senior Technician grade) IN THE ORGANIC LABORATORIES of the Department of Chemistry—Chief Technician, Department of Chemistry, The University, Oxford Road, Manchester 13.

PHYSICISTS, Scientific Officer or Senior Scientific Officer grade (with a first- or second-class honours degree in physics or equivalent), AT THE ROAD RESEARCH LABORATORY, D.S.I.R., Harmondsworth, Middlesex, for research on (*a*) rheology of solid–liquid systems and viscous and visco-elastic fluids to provide basic information for the design of bituminous road mixtures; and (*b*) the physical properties of concrete including various aspects of its rheology, effect of changes on construction procedures and properties of hardened concrete—The Ministry of Labour and National Service, Technical and Scientific Register (K), 26 King Street, London, S.W.1, quoting A.362/7A.

SCIENTIFIC OFFICER (with a good honours degree or equivalent in chemistry, agricultural chemistry or biochemistry, with postgraduate research experience to Ph.D. level), for research in mineral metabolism, with special reference to Vitamin D—The Secretary, Rowett Research Institute, Bucksburn, Aberdeenshire.

UNIVERSITY DEMONSTRATOR AND LECTURER (preferably with research experience or interest in spectrochemical analysis, X-ray crystallography or geochemistry) IN MINERALOGY—The Reader in Mineralogy, University Museum, Oxford.
